PO: (Tablets, Micronized): ADULTS: Initially 0.75–3 mg/day. May increase by 1.5 mg/day at wkly intervals. **Maintenance:** 0.75–12 mg/day as a single dose or in divided doses. **Maximum:** 12 mg/day.

ELDERLY: Initially, 0.75 mg daily. Conservative initial and maintenance doses are recommended to avoid hypoglycemic reactions.

Dosage in Renal Impairment

Not recommended for pts with creatinine clearance less than 60 mL/min.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Rare (less than 3%): Altered taste, dizziness, drowsiness, weight gain, constipation, diarrhea, heartburn, nausea, vomiting, headache, photosensitivity, peeling of skin, pruritus, rash.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose or insufficient food intake may produce hypoglycemia (esp. in pts with increased glucose demands). Cholestatic jaundice, leukopenia, thrombocytopenia, pancytopenia, agranulocytosis, aplastic or hemolytic anemia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check serum glucose level. Discuss lifestyle to determine extent of learning, emotional needs. Ensure follow-up instruction if pt or family does not thoroughly understand diabetes management or glucose testing technique.

INTERVENTION/EVALUATION

Monitor serum glucose level, food intake. Assess for hypoglycemia (cool/wet skin, tremors, dizziness, anxiety, headache, tachycardia, perioral numbness, hunger, diplopia); hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, dim vision, fatigue, deep or rapid breathing). Be alert to conditions that alter glucose requirements (fever, increased activity or stress, trauma, surgical procedure).

PATIENT/FAMILY TEACHING

- Diet and exercise are principal parts of treatment; do not skip or delay meals.
- Avoid alcohol.
- Carry candy, sugar packets, other quick-acting sugar supplements for immediate response to hypoglycemia.
- Wear medical alert identification.
- Check with physician when glucose demands are altered (fever, infection, trauma, stress, heavy physical activity).
- Avoid direct exposure to sunlight.

golimumab

goe-**lim**-ue-mab
(Simponi, Simponi Aria)

BLACK BOX ALERT ■ Tuberculosis (TB), invasive fungal infections, other opportunistic infections reported. Discontinue treatment if active infection or sepsis occurs. Test for TB prior to and during treatment, regardless of initial result; if positive, start treatment for TB prior to initiating therapy. Lymphoma, other malignancies reported in pts treated with tumor necrosis factor blockers.

Do not confuse Simponi (SQ) with Simponi Aria (IV)

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. Tumor necrosis factor (TNF) blocking agent. **CLINICAL:** Antipsoriatic agent, antirheumatic, disease-modifying agent.

USES

Simponi, Simponi Aria: Used alone or in combination with methotrexate for the treatment of adult pts with active psoriatic arthritis. Used in combination with methotrexate for the treatment of adult pts with moderately to severely active rheumatoid arthritis. Used alone or in combination with methotrexate for the treatment of adult pts with active ankylosing spondylitis. **Simponi: (Additional)** Treatment of moderate to severe active ulcerative colitis in pts with corticosteroid dependence or who are refractory/intolerant to aminosaliclates, oral steroids, azathioprine, or 6-mercaptopurine.

PRECAUTIONS

Contraindications: Hypersensitivity to golimumab. **Cautions:** Elderly, concomitant immunosuppressants, co-morbid conditions predisposing to infections (e.g., diabetes). Residence or travel from areas of endemic mycosis; tuberculosis, underlying hematologic disorders, pre-existing or recent-onset demyelinating disorders (e.g., multiple sclerosis, polyneuropathy), pts with HF or decreased left ventricular function. Avoid concomitant use with live vaccines, abatacept, or anakinra (increased incidence of serious infections). Do not start during an active infection.

ACTION

Binds specifically to tumor necrosis factor (TNF) alpha, blocking its interaction with cell surface TNF receptors. **Therapeutic Effect:** Alters biologic activity of TNF alpha, reduces inflammation, may alter pathophysiology of rheumatoid arthritis.

PHARMACOKINETICS

Serum concentration reaches steady state by wk 12. Elimination pathway not specified. **Half-life:** 12–14 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Must either discontinue drug or discontinue breastfeeding. **Children:** Safety and efficacy not established. **Elderly:** May have increased risk of serious infections, malignancy.

INTERACTIONS

DRUG: Anakinra, anti-TNF agents, baricitinib, pimecrolimus, rituximab, tacrolimus (topical), tocilizumab may increase adverse effects. May decrease therapeutic effect of BCG (intravesical), vaccines (live). May increase levels, adverse effects of belimumab, natalizumab, tofacitinib, vaccines (live). **HERBAL:** Echinacea may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase ALT, AST. May decrease Hgb, leukocytes, neutrophils, platelets.

AVAILABILITY (Rx)

Injection Solution: (*Simponi*): 50 mg/0.5 mL, 100 mg/mL in single-dose prefilled autoinjector or prefilled syringe. **Injection Solution:** (*Simponi Aria*): 50 mg/4 mL per single-use vial (12.5 mg/mL).

ADMINISTRATION/HANDLING**Simponi SQ**

- Remove prefilled syringe or autoinjector from refrigerator. Allow to sit at room temperature for 30 min; do not warm in any other way.
- Avoid areas where skin is scarred, tender, bruised, red, scaly, hard. Recommended injection site is front of middle thighs, although lower abdomen 2 inches below navel or outer, upper arms are acceptable.
- Inject within 5 min after cap has been removed.

Autoinjector

- Push open end of autoinjector firmly against skin at 90-degree angle.
- Do

not pull autoinjector away from skin until a first “click” sound is heard and then a second “click” sound (injection is finished and needle is pulled back). This usually takes 3 to 6 sec but may take up to 15 sec for the second “click” to be heard. If autoinjector is pulled away from skin before injection is completed, full dose may not be administered.

Prefilled Syringe

- Gently pinch skin and hold firmly. Use a quick, dart-like motion to insert needle into pinched skin at a 45-degree angle.

Storage

- Refrigerate; do not freeze. Do not shake.
- Solution appears slightly opalescent, colorless to light yellow. Discard if cloudy or contains particulate.

Simponi Aria

ALERT Use in-line 0.22-micron filter.

Reconstitution

- Calculate dosage and number of vials needed based on pt weight.
- Visually inspect for particulate matter.
- Dilute in 100 mL 0.9% NaCl.
- Prior to mixing, withdraw and discard volume of 0.9% NaCl equal to the volume of patient-dosed solution.
- Slowly inject solution into bag and gently mix.
- Do not shake.

Rate of administration

- Infuse over 30 min using an in-line low protein-binding 0.22-micron filter.

Storage

- Refrigerate vials, prefilled syringes.
- Vial solution should be colorless to light yellow and opalescent.
- It is normal for solution to develop fine translucent particles since drug is a protein.
- Do not use if opaque particles, discoloration, or other foreign particles are present.
- May store diluted solution at room temperature up to 4 hrs.

IV INCOMPATIBILITIES

Do not infuse concomitantly with other drugs.

INDICATIONS/ROUTES/DOSAGE

Active Psoriatic Arthritis

Note: Use alone or in combination with methotrexate or other nonbiologic DMARD. **SQ: (*Simponi*): ADULTS, ELDERLY:** 50 mg once monthly.

IV infusion: (*Simponi Aria*): ADULTS, ELDERLY: 2 mg/kg at wk 0, 4 then q8wks thereafter.

Moderate to Severe Active Rheumatoid Arthritis (with methotrexate)

SQ: (*Simponi*): ADULTS, ELDERLY: 50 mg once monthly.

IV infusion: (*Simponi Aria*): ADULTS, ELDERLY: 2 mg/kg at wk 0 and wk 4. Then, decrease frequency to q8wks.

Active Ankylosing Spondylitis

Note: Use alone or in combination with methotrexate or other nonbiologic DMARD. **SQ: (*Simponi*): ADULTS, ELDERLY:** 50 mg once monthly.

IV infusion: (*Simponi Aria*): ADULTS, ELDERLY: 2 mg/kg at wk 0, 4 then q8wks thereafter.

Ulcerative Colitis

SQ: (*Simponi*): ADULTS, ELDERLY: Initially, 200 mg, then 100 mg 2 wks later, and then 100 mg q4wks thereafter.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (13%): Laryngitis, nasopharyngitis, pharyngitis, rhinitis, upper respiratory tract infection. **Occasional (3%–2%):** Bronchitis, hypertension, rash, pyrexia. **Rare (less than 1%):** Dizziness, paresthesia, constipation.

ADVERSE EFFECTS/TOXIC REACTIONS

Neutropenia, lymphopenia may increase risk of infection. New-onset psoriasis, exacerbation of preexisting psoriasis have been reported. Serious infections including sepsis, pneumonia, cellulitis, TB, invasive fungal infections reported. May increase risk of lymphoma, melano-

noma, new malignancies. New onset or exacerbation of CNS demyelinating disorders, including multiple sclerosis, or worsening of HF have occurred. Viral reactivation of herpes zoster, HIV, hepatitis B virus infection may occur. Pts who receive TNF blockers have risk of auto-antibody formation (immunogenicity). Hypersensitivity reactions including anaphylaxis reported. May induce lupus-like symptoms (butterfly rash, new joint pain, peripheral edema, UV sensitivity).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline LFT, CBC, vital signs, urine pregnancy. Obtain B-type natriuretic peptide (BNP) level and review echocardiogram in pts with history of HF. Do not initiate therapy if active infection suspected. Evaluate for active TB and test for latent infection prior to and during treatment. Induration of 5 mm or greater with tuberculin skin test should be considered a positive result when assessing for latent TB. Antifungal therapy should be considered for those who reside or travel to regions where mycoses are endemic. Question history of anemia, HF, CNS disorders, hepatic impairment, HIV, malignancies. Assess skin for moles, lesions. Receive full medication history including herbal products.

INTERVENTION/EVALUATION

Monitor CBC, LFT every 4–8 wks, then periodically. Screen pts for TB (night sweats, hemoptysis, weight loss, fever) regardless of baseline tuberculin skin test result. Monitor hepatitis B virus carriers during treatment and several mos after treatment. If any viral reactivation occurs, interrupt treatment and consider antiviral therapy. Discontinue treatment if acute infection, opportunistic infection, or sepsis occurs, and initiate appropriate antimicrobial therapy. Routinely assess skin for new lesions. Peripheral edema, difficulty breathing, coarse crackles on lung auscultation, elevated BNP may indicate worsening HF. Monitor for hypersensitivity reactions.

PATIENT/FAMILY TEACHING

• Treatment may depress your immune system and reduce your ability to fight infection. Report symptoms of infection such as body aches, chills, cough, fatigue, fever. Avoid those with active infection. • Do not receive live vaccines. • Report history of HIV, fungal infections, HF, hepatitis B, multiple sclerosis, TB, or close relatives who have active TB. Report travel plans to possible endemic areas. Blood levels, TB screening will be routinely monitored. • Hives, swelling of face, difficulty breathing may indicate allergic reaction. • Do not breastfeed. • Abdominal pain, yellowing of skin or eyes, dark-amber urine, clay-colored stools, fatigue, loss of appetite may indicate liver problems. • Decreased platelet count may increase risk of bleeding. • Swelling of hands or feet, difficulty breathing may indicate HF.

G

goserelin**HIGH
ALERT**

goe-se-rel-in
(Zoladex, Zoladex LA )

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Gonadotropin-releasing hormone analogue.

CLINICAL: Antineoplastic.

USES

Treatment of locally confined prostate cancer. Palliative treatment of advanced carcinoma of prostate as alternative when orchiectomy, estrogen therapy is either not indicated or unacceptable. In combination with an antiestrogen before and during radiation therapy for early stages of prostate cancer. Management of endometriosis. Treatment of advanced breast cancer in premenopausal and perimenopausal women. Endometrial thinning before ablation for dysfunctional uterine bleeding.

PRECAUTIONS

Contraindications: Hypersensitivity to goserelin, GnRH, GnRH agonist analogues. Pregnancy (except when used for palliative treatment of advanced breast cancer). **Cautions:** Women of childbearing potential until pregnancy has been excluded. Pts at risk for decreased bone density; diabetes.

ACTION

Initially, stimulates release of luteinizing hormone (LH) and follicle-stimulating hormone (FSH) from anterior pituitary. Chronic administration causes a sustained suppression of pituitary gonadotropins. **Therapeutic Effect:** In females, reduces ovarian, uterine, mammary gland size; regresses hormone-responsive tumors. In males, decreases testosterone level, reduces growth of abnormal prostate tissue.

PHARMACOKINETICS

Protein binding: 27%. Metabolized in liver. Excreted in urine. **Half-life:** 4.2 hrs (male); 2.3 hrs (female).

 **LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: Crosses placenta; unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Medications prolonging the QT interval (e.g., amiodarone, azithromycin, ceritinib, haloperidol, moxifloxacin) may increase risk of QT interval prolongation, cardiac arrhythmias. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum prostatic acid phosphatase, testosterone, calcium; Hgb A1c.

AVAILABILITY (Rx)

Injection, Implant: (Zoladex): 3.6 mg, 10.8 mg.

ADMINISTRATION/HANDLING**SQ Implant**

• Administer implant by inserting needle at 30- to 45-degree angle into anterior abdominal wall below the navel line. Do not attempt to eliminate air bubbles or aspirate prior to injection. Do not penetrate into muscle or peritoneum.

INDICATIONS/ROUTES/DOSAGE**Prostatic Carcinoma, Advanced**

SQ: ADULTS OLDER THAN 18 YRS, ELDERLY: 3.6 mg every 28 days or 10.8 mg q12wks subcutaneously into upper abdominal wall.

Prostate Carcinoma, Locally Confined

SQ: ADULTS, ELDERLY: (in combination with an antiestrogen and radiotherapy, begin 8 wks prior to radiotherapy): 3.6 mg once, 28 days after initial dose, give 10.8 mg or 3.6 mg q28days for 4 doses.

Breast Carcinoma, Endometriosis

SQ: ADULTS: 3.6 mg every 28 days (6 mos for endometriosis). Subcutaneously into upper abdominal wall.

Endometrial Thinning

SQ: ADULTS: 3.6 mg subcutaneously into upper abdominal wall as a single dose or in 2 doses 4 wks apart.

Endometriosis

SQ: ADULTS: 3.6 mg every 28 days for 6 mos.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (60%–13%): Headache, hot flashes, depression, diaphoresis, sexual dysfunction, impotence, lower urinary tract symptoms. **Occasional (10%–5%):** Pain, lethargy, dizziness, insomnia, anorexia, nausea, rash, upper respiratory tract infection, hirsutism, abdominal pain. **Rare:** Pruritus.

ADVERSE EFFECTS/TOXIC REACTIONS

Arrhythmias, HF, hypertension occur rarely. Ureteral obstruction, spinal cord compression have been observed (immediate orchiectomy may be necessary). Hypersensitivity reactions, including anaphylaxis, may occur. Hyperglycemia, new-onset diabetes occurred in men taking GnRH antagonists. Increased risk of MI, sudden cardiac death was reported. Injection site injuries including hematoma, hemorrhage, hemorrhagic shock may require blood transfusion or surgical intervention.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Question history of diabetes, cardiovascular disease, recent MI, prior hypersensitivity reaction. Receive full medication history; screen for QT interval–prolonging medications, anticoagulant medications. Screen for conditions predisposing to QT interval prolongation. In males, question history of urethral obstruction, urinary retention, spinal cord compression, spinal stenosis. Obtain urine pregnancy. If applicable, obtain bone density test.

INTERVENTION/EVALUATION

Monitor pt closely for worsening signs/symptoms of prostatic cancer, esp. during first mo of therapy.

PATIENT/FAMILY TEACHING

• Use nonhormonal methods of contraception during therapy. • Report suspected pregnancy or if regular menstruation does not cease. • Breakthrough menstrual bleeding may occur if dose is missed. • Immediately report sudden weakness, paralysis, numbness, tingling; difficulty urinating, bladder distention. • Do not take newly prescribed medications unless approved by prescriber who originally started treatment. • Severe bleeding may occur at the injection site, esp. in pts who take blood-thinning medication. • Pts with heart disease are at an increased risk of heart attack or sudden death.

granisetron

gra-nis-e-tron
(Sancuso, Sustol)

Do not confuse granisetron with alosetron, cilansetron, dolasetron, ondansetron, or palonosetron.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective serotonin receptor antagonist (5-HT₃). **CLINICAL:** Antiemetic.

USES

Prevention of nausea/vomiting associated with emetogenic cancer therapy and cancer radiation therapy. **OFF-LABEL:** Prevention, treatment of postop nausea, vomiting. Breakthrough treatment of chemotherapy-associated nausea/vomiting.

PRECAUTIONS

Contraindications: Hypersensitivity to granisetron. Hypersensitivity to other 5-HT₃ receptor antagonists. **Cautions:** Congenital QT prolongation, concomitant administration of medications that prolong QT interval, electrolyte abnormalities, cumulative high-dose anthracycline therapy. Following abdominal surgery or in chemotherapy-induced nausea, vomiting (may mask progressive ileus or gastric distention), hepatic disease.

ACTION

Selectively blocks serotonin stimulation at receptor sites centrally in chemoreceptor trigger zone, peripherally on vagal nerve terminals. **Therapeutic Effect:** Prevents nausea/vomiting.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	1–3 min	N/A	24 hrs

Rapidly, widely distributed to tissues. Protein binding: 65%. Metabolized in liver. Excreted in urine (48%), feces (38%).

Half-life: 10–12 hrs (increased in elderly).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established in pts younger than 2 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: QT interval–prolonging medications (e.g., amiodarone, azithromycin, ceritinib, haloperidol, moxifloxacin) may increase risk of QT interval prolongation, cardiac arrhythmias. **SSRIs** (e.g., escitalopram, PARoxetine, sertraline), **SNRIs** (e.g., DULoxetine, venlafaxine) may increase risk of serotonin syndrome. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST.

AVAILABILITY (Rx)

Injection: (Extended-Release [Sustol]): 10 mg/0.4 mL single-dose syringe. **Injection Solution:** 1 mg/mL. **Tablets:** 1 mg. **Transdermal Patch: (Sancuso):** 52-cm² patch containing 34.3 mg granisetron delivering 3.1 mg/24 hrs.

ADMINISTRATION/HANDLING

Reconstitution • May be given undiluted or dilute with 20–50 mL 0.9% NaCl or D₅W. Do not mix with other medications.

Rate of administration • May give undiluted as IV push over 30 sec. • For IV piggyback, infuse over 5–10 min depending on volume of diluent used.

Storage • Appears as a clear, colorless solution. • Store at room temperature. • After dilution, stable for 3 days at room temperature or 7 days if refrigerated. • Inspect for particulates, discoloration.

PO

• Give 30 min to 1 hr prior to initiating chemotherapy.

SQ

Administer in skin of back of upper arm, abdomen (at least 1 inch away from umbilicus). Avoid areas of compromised skin. Administer over 20–30 sec.

Transdermal

- Apply to clean, dry intact skin on upper outer arm.
- Remove immediately from pouch before application.
- Do not cut patch.

IV INCOMPATIBILITIES

Amphotericin B (Fungizone).

IV COMPATIBILITIES

Allopurinol (Aloprim), bumetanide (Bumex), calcium gluconate, CARBOplatin (Paraplatin), CISplatin (Platinol), cyclophosphamide (Cytoxan), cytarabine (Ara-C), dacarbazine (DTIC-Dome), dexamethasone (Decadron), dexmedetomidine (Precedex), diphenhydramine (Benadryl), DOCEtaxel (Taxotere), DOXOrubicin (Adriamycin), etoposide (VePesid), gemcitabine (Gemzar), magnesium, mitoXANTRONE (Novantrone), PACLitaxel (Taxol), potassium.

INDICATIONS/ROUTES/DOSAGE**Prevention of Chemotherapy-Induced Nausea/Vomiting**

PO: ADULTS, ELDERLY: 2 mg up to 1 hr before chemotherapy or 1 mg up to 1 hr before chemotherapy, with a second dose 12 hrs later.

IV: ADULTS, ELDERLY, CHILDREN 2 YRS AND OLDER: 10 mcg/kg/dose (**Maximum:** 1 mg/dose) within 30 min of chemotherapy. **Maximum:** 1 mg.

SQ: ADULTS, ELDERLY: In combination with dexamethasone: 10 mg at least 30 min before chemotherapy. Do not repeat more frequently than 7 days.

Transdermal: ADULTS, ELDERLY: Apply 24–48 hrs prior to chemotherapy. Remove minimum 24 hrs after completion of chemotherapy. May be worn up to 7 days, depending on chemotherapy duration.

Prevention of Radiation-Induced Nausea/Vomiting

PO: ADULTS, ELDERLY: 2 mg once daily, given 1 hr before radiation therapy.

Postop Nausea/Vomiting

IV: ADULTS, ELDERLY: 0.35–3 mg (5–20 mcg/kg) given at end of surgery.

Dosage in Renal/Hepatic Impairment

No dose adjustment. (**Sustol**): **Moderate impairment:** No more frequently than 14 days. **Severe impairment:** Not recommended.

SIDE EFFECTS

Frequent (21%–14%): Headache, constipation, asthenia. **Occasional (8%–6%):** Diarrhea, abdominal pain. **Rare (less than 2%):** Altered taste, fever.

ADVERSE EFFECTS/TOXIC REACTIONS

Hypersensitivity reaction, hypertension, hypotension, arrhythmias (sinus bradycardia, atrial fibrillation, AV block, ventricular ectopy), ECG abnormalities occur rarely. Increased risk of serotonin syndrome reported in pts taking concomitant serotonergic drugs (e.g., SSRIs, SNRIs). May prolong QTc interval.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Assess hydration status. Ensure that granisetron is given within 30 min of starting chemotherapy. Receive full medication history and screen for interactions. Screen for QT interval–prolonging conditions.

INTERVENTION/EVALUATION

Monitor for therapeutic effect. Assess for headache. Monitor for dehydration due to recurrent vomiting. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

- Granisetron is effective shortly following administration; prevents nausea/vomiting.
- Transitory taste disorder may occur.

guselkumab

gue-sel-koo-mab
(Tremfya)

Do not confuse guselkumab with golimumab, infliximab, secukinumab.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Interleukin-23 inhibitor. Monoclonal antibody. **CLINICAL:** Antipsoriasis agent.

G

USES

Treatment of moderate to severe plaque psoriasis in adult pts who are candidates for systemic therapy or phototherapy.

PRECAUTIONS

Contraindications: Hypersensitivity to guselkumab. **Cautions:** Hepatic impairment, active infection until resolved, history of chronic or recurrent infections, conditions predisposing to infection (e.g., diabetes, immunocompromised pts, open wounds), prior tuberculosis exposure (do not give to pts with active TB infection). Concomitant use of live vaccines not recommended.

ACTION

Selectively binds to interleukin-23 receptor reducing levels of IL-17A, IL-17F, IL-22. IL-23 is a cytokine that is involved in inflammatory and immune responses. **Therapeutic Effect:** Inhibits release of pro-inflammatory cytokines and chemokines.

PHARMACOKINETICS

Widely distributed. Degraded into small peptides and amino acids via catabolic pathways. Peak plasma concentration: 5.5 days. Elimination not specified. **Half-life:** 15–18 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk; however, human immunoglobulin G (IgG) is pres-

ent in breast milk and is known to cross placenta. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May enhance adverse/toxic effects, diminish therapeutic effects of **natalizumab, vaccines (live)**. May decrease therapeutic effect of **BCG (intravesical)**. **HERBAL:** **Echinacea** may decrease effect. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST.

AVAILABILITY (Rx)

Injection, Solution: 100 mg/mL in pen-injector, prefilled syringe.

ADMINISTRATION/HANDLING

SQ

Preparation • Remove prefilled syringe from refrigerator and allow to warm to room temperature (approx. 30 mins) with needle cap intact. • Visually inspect for particulate matter or discoloration. Solution should appear clear, colorless to slightly yellow in color; may contain small translucent particles. Do not use if solution is cloudy, discolored, or if large particles are observed. • Discard unused portions.

Administration • Insert needle subcutaneously into back of upper arms, front of thighs, or into lower abdomen (except for 2 inches around navel), and inject solution. • Do not inject into areas of the skin where it is tender, bruised, red, hard, thick, scaly, or affected by psoriasis. • Rotate injection sites.

Storage • Refrigerate prefilled syringes in original carton until time of use. • Do not freeze. • Do not shake. • Protect from light.

INDICATIONS/ROUTES/DOSAGE

Plaque Psoriasis

SQ: ADULTS, ELDERLY: 100 mg at wk 0, wk 4, and then q8wks thereafter.

Dosage in Renal/Hepatic Impairment

Not specified; use caution.

SIDE EFFECTS

Occasional (5%–2%): Headache, tension headache, arthralgia, diarrhea.

ADVERSE EFFECTS/TOXIC REACTIONS

May increase risk of tuberculosis infection. Other infections including upper respiratory tract infection, nasopharyngitis, pharyngitis, viral upper respiratory tract infection (14% of pts), gastroenteritis, viral gastroenteritis (1% of pts), tinea infections (1% of pts), herpes simplex virus (1% of pts) may occur. Mild to moderate elevated serum ALT, AST reported in 3% of pts. Immunogenicity (auto-guselkumab antibodies) occurred in 6% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain LFT in pts with hepatic impairment. Question history of hepatic impairment, herpes zoster infection, parasitic infection. Screen for active infection. Pts should be evaluated for active tuberculosis and tested for latent infection prior to initiating treatment and periodically during therapy. Induration of 5 mm or greater with tuberculin skin testing should be considered a positive test result when assessing if treatment for latent tuberculosis is necessary. Conduct

dermatologic exam; record characteristics of psoriatic lesions. Assess pt's willingness to self-inject medication.

INTERVENTION/EVALUATION

Monitor LFT periodically. Monitor for symptoms of tuberculosis, including those who tested negative for latent tuberculosis infection prior to initiating therapy. Interrupt or discontinue treatment if serious infection, opportunistic infection, or sepsis occurs, and initiate appropriate antimicrobial therapy. Assess skin for improvement of lesions.

PATIENT/FAMILY TEACHING

- A health care provider will show you how to properly prepare and inject your medication. You must demonstrate correct preparation and injection techniques before using medication at home.
- Treatment may depress your immune system response and reduce your ability to fight infection. Report symptoms of infection such as body aches, chills, cough, fatigue, fever. Avoid those with active infection.
- Do not receive live vaccines.
- Expect frequent tuberculosis screening. Report travel plans to possible endemic areas.
- Report liver problems such as abdominal pain, bruising, clay-colored stool, yellowing of the skin or eyes.

haloperidol

hal-o-per-i-dol

(Haldol, Haldol Decanoate, Novo-Peridol )

BLACK BOX ALERT Increased risk of mortality in elderly pts with dementia-related psychosis with use of injections.

Do not confuse Haldol with Halcion or Stadol.

CLASSIFICATION

PHARMACOTHERAPEUTIC: First-generation (typical) antipsychotic.
CLINICAL: Antipsychotic, antiemetic, antidyskinetic.

H

USES

Treatment of schizophrenia, Tourette's disorder (controls tics and vocal utterances), severe behavioral problems in children with combative explosive hyperexcitability without immediate provocation. Management of psychotic disorder, short-term treatment of hyperactive children. **OFF-LABEL:** Treatment of nonschizophrenic psychosis, alcohol dependence, psychosis/agitation related to Alzheimer's dementia, emergency sedation of severely agitated/psychotic pts.

PRECAUTIONS

Contraindications: Hypersensitivity to haloperidol, CNS depression, coma, Parkinson's disease. **Cautions:** Renal/hepatic impairment, cardiovascular disease, history of seizures, prolonged QT syndrome, medications that prolong QT interval, hypothyroidism, thyrotoxicosis, electrolyte imbalance (e.g., hypokalemia, hypomagnesemia), EEG abnormalities, narrow-angle glaucoma, elderly, pts at risk for pneumonia, decreased GI motility, urinary retention, BPH, visual disturbances, myelosuppression. Pts at risk for orthostatic hypotension (e.g., cerebrovascular disease).

ACTION

Nonselectively blocks postsynaptic dopamine receptors in brain. **Therapeutic Effect:** Produces tranquilizing effect. Strong extrapyramidal, antiemetic effects; weak anticholinergic, sedative effects.

PHARMACOKINETICS

Readily absorbed from GI tract. Protein binding: 92%. Metabolized in liver. Excreted in urine. Not removed by hemodialysis. **Half-life:** 20 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Children:** More susceptible to dystonias; not recommended in pts younger than 3 yrs. **Elderly:** More susceptible to orthostatic hypotension, anticholinergic effects, sedation; increased risk for extrapyramidal effects. Decreased dosage recommended.

INTERACTIONS

DRUG: Alcohol, other CNS depressants (e.g., diphenhydramine, gabapentin, lorazepam, morphine) may increase CNS depression. **CYP3A4 inducers** (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration. **Medications prolonging QT interval** (e.g., amiodarone, ciprofloxacin, ondansetron) may increase risk of QT prolongation. **Acidinium, ipratropium, tiotropium, umecclidinium** may increase anticholinergic effect. **Metoclopramide** may increase adverse effects. **HERBAL:** Herbals with sedative properties (e.g., chamomile, kava, kava, valerian) may increase CNS depression. **St. John's wort** may decrease concentration/effect. **FOOD:** None known. **LAB VALUES:** None significant. **Therapeutic serum level:** 0.2–1 mcg/mL; **toxic serum level:** Greater than 1 mcg/mL.

AVAILABILITY (Rx)

Injection, Oil: (Decanoate): 50 mg/mL, 100 mg/mL. **Injection, Solution: (Lactate):** 5 mg/mL. **Oral Concentrate:** 2 mg/mL. **Tablets:** 0.5 mg, 1 mg, 2 mg, 5 mg, 10 mg, 20 mg.

ADMINISTRATION/HANDLING

ALERT Only haloperidol lactate is given IV.

Note: For IV administration, ECG monitoring for QT prolongation/arrhythmias is recommended.

Reconstitution • May give undiluted. • May add to 50–100 mL of D₅W.

Rate of administration • Give IV push at rate of 5 mg/min. • Infuse IV piggyback over 30 min. • For IV infusion, up to 25 mg/hr has been used (titrated to pt response).

Storage • Discard if precipitate forms, discoloration occurs. • Store at room temperature; do not freeze. • Protect from light.

IM

Parenteral administration • Pt should remain recumbent for 30–60 min to minimize hypotensive effect. • Prepare Decanoate IM injection using 21-gauge needle. • Do not exceed maximum volume of 3 mL per IM injection site. • Inject slow, deep IM into upper outer quadrant of gluteus maximus.

PO

• Give without regard to food. • Scored tablets may be crushed. • Dilute oral concentrate with water or juice. • Avoid skin contact with oral concentrate; may cause contact dermatitis.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), fluconazole (Diflucan), foscarnet (Foscavir), heparin, nitroprusside (Nipride), piperacillin/tazobactam (Zosyn).

IV COMPATIBILITIES

DOBUtamine (Dobutrex), DOPamine (Intropin), fentaNYL (Sublimaze), HYDROmorphine (Dilaudid), lidocaine, LO-Razepam (Ativan), midazolam (Versed),

morphine, nitroglycerin, norepinephrine (Levophed), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

IM: (Lactate): ADULTS, ELDERLY: 2–5 mg q4–8h as needed. **CHILDREN 6–12 YRS:** 1–3 mg/dose q4–8h as needed. **Maximum:** 0.15 mg/kg/day. Change to PO as soon as possible. **(Decanoate): ADULTS, ELDERLY:** Initially, 10–20 times stabilized oral dose. **Maximum Initial Dose:** 100 mg (doses greater than 100 mg should be given as 2 separate injections 3–7 days apart). **Maintenance:** 10–15 times daily oral dose or 50–200 mg q4wks.

PO: ADULTS: 0.5–5 mg 2–3 times/day. **Usual dose:** 5–20 mg/day. **Maximum:** 100 mg/day. **ELDERLY:** 0.2–2 mg/day. **Usual dose:** 5–20 mg/day. **Maximum:** 100 mg/day. **CHILDREN WEIGHING MORE THAN 40 KG, ADOLESCENTS:** 0.5–15 mg/day in 2–3 divided doses. May increase at no less than 5–7 days. **Maximum:** 15 mg/day. **CHILDREN 3–12 YRS, 15–40 KG:** Initially, 0.5 mg/day in 2–3 divided doses. May increase by 0.5 mg q5–7days. Range: 0.05–0.15 mg/kg/day in 2–3 divided doses. **Maximum:** 15 mg/day.

Tourette's Disorder

PO: CHILDREN 3–12 YRS, 15–40 KG: Initially, 0.25–0.5 mg/day in 2–3 divided doses. May increase by 0.5 mg/day every 5–7 days to usual dose of 1–4 mg/day. **CHILDREN WEIGHING MORE THAN 40 KG, ADOLESCENTS:** Initially, 0.25–0.5 mg/day in 2–3 divided doses. May increase as needed every 5–7 days to usual dose of 1–4 mg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Blurred vision, constipation, orthostatic hypotension, dry mouth, swelling or soreness of female breasts, peripheral edema. **Occasional:** Allergic reaction, difficulty urinating, decreased thirst, dizziness, diminished sexual function, drowsiness, nausea, vomiting, photosensitivity, lethargy.

ADVERSE EFFECTS/TOXIC REACTIONS

Extrapyramidal symptoms (EPS) appear to be dose related and typically occur in first few days of therapy. Marked drowsiness/lethargy, excessive salivation, fixed stare may be mild to severe in intensity. Less frequently noted are severe akathisia (motor restlessness), acute dystonias: torticollis (neck muscle spasm), opisthotonos (rigidity of back muscles), oculogyric crisis (rolling back of eyes). Tardive dyskinesia (tongue protrusion, puffing of cheeks, chewing/puckering of the mouth) may occur during long-term therapy or after drug discontinuance and may be irreversible. Elderly female pts have greater risk of developing this reaction. May increase risk of QT interval prolongation, cardiac arrhythmias.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content. Assess mental status. Screen for co-morbidities as listed in Precautions (esp. seizure disorder, long QT syndrome).

INTERVENTION/EVALUATION

Monitor B/P, heart rate/rhythm. Monitor ECG, QT interval. Supervise suicidal-risk pts closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Monitor for rigidity, tremor, mask-like facial expression, fine tongue movement. Assess for therapeutic response (interest in surroundings, improvement in self-care, increased ability to concentrate, relaxed facial expression). **Therapeutic serum level:** 0.2–1 mcg/mL; **toxic serum level:** greater than 1 mcg/mL.

PATIENT/FAMILY TEACHING

- Full therapeutic effect may take up to 6 wks.
- Do not abruptly withdraw from long-term drug therapy.
- Sugarless gum, sips of water may relieve dry mouth.
- Drowsiness generally subsides during continued therapy.
- Avoid tasks that

require alertness, motor skills until response to drug is established.

- Avoid alcohol.
- Report muscle stiffness, lip puckering, tongue protrusion, restlessness.
- Avoid overheating, dehydration, exposure to sunlight (increased risk of heatstroke).

heparin

HIGH ALERT

hep-a-rin
(Hepalean Leo )

Do not confuse heparin with Hespan.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Blood modifier. **CLINICAL:** Anticoagulant.

USES

Prophylaxis and treatment of thromboembolic disorders and thromboembolic complications associated with atrial fibrillation; anticoagulant for extracorporeal and dialysis procedures; maintain patency of IV devices. Prevents clotting in arterial and cardiac surgery. **OFF-LABEL:** STEMI, non-STEMI, unstable angina, anticoagulant used during percutaneous coronary intervention.

PRECAUTIONS

Contraindications: Hypersensitivity to heparin. Severe thrombocytopenia, uncontrolled active bleeding (unless secondary to disseminated intravascular coagulation [DIC]), history of heparin-induced thrombocytopenia (HIT), heparin-induced thrombocytopenia with thrombosis (HITT), or pts who test positive for HIT antibody. **Cautions:** Allergy to pork. Pts at risk for bleeding (e.g., congenital/acquired bleeding disorders, active GI ulcerative disease, hemophilia, concomitant platelet inhibitors, severe hypertension, menses, recent lumbar puncture or spinal anesthesia; recent major surgery, trauma). Use of preservative-free heparin recommended in neonates, infants, pregnant or nursing mothers.

ACTION

Potentiates action of antithrombin III. Interferes with blood coagulation by blocking conversion of prothrombin to thrombin and fibrinogen to fibrin. **Therapeutic Effect:** Prevents further extension of existing thrombi or new clot formation. No effect on existing clots.

PHARMACOKINETICS

Well absorbed following SQ administration. Protein binding: Very high. Metabolized in liver. Removed from circulation via uptake by reticuloendothelial system. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 1–6 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Use with caution, particularly during last trimester, immediate postpartum period (increased risk of maternal hemorrhage). Does not cross placenta. Not distributed in breast milk. **Children:** No age-related precautions noted. Benzyl alcohol preservative may cause gasping syndrome in infants. **Elderly:** More susceptible to hemorrhage. Age-related renal impairment may increase risk of bleeding.

INTERACTIONS

DRUG: Anticoagulants (e.g., apixaban, dabigatran, rivaroxaban, warfarin) may increase anticoagulant effect; risk of bleeding. **platelet aggregation inhibitors** (e.g., aspirin), **thrombolytics** (e.g., tissue plasminogen activator [TPA]) may increase risk of bleeding. **HERBAL:** Herbals with anticoagulant/antiplatelet properties (e.g., garlic, ginger, ginkgo biloba) may increase risk of bleeding. **FOOD:** None known. **LAB VALUES:** May increase free fatty acids, serum ALT, AST; aPTT. May decrease serum cholesterol.

AVAILABILITY (Rx)

Injection Solution: 10 units/mL, 100 units/mL, 1,000 units/mL, 5,000 units/mL, 10,000 units/mL, 20,000 units/mL. **Premix**

Solution for Infusion: 25,000 units/250 mL infusion, 25,000 units/500 mL infusion.

ADMINISTRATION/HANDLING

◀ALERT▶ Do not give by IM injection (pain, hematoma, ulceration, erythema).

◀ALERT▶ Used in full-dose therapy. Intermittent IV dosage produces higher incidence of bleeding abnormalities. Continuous IV route preferred.

Reconstitution • Premix solution requires no reconstitution.

Rate of administration • Infuse and titrate per protocol using infusion pump.

Storage • Store at room temperature.

SQ

◀ALERT▶ Used in low-dose therapy. • After withdrawal of heparin from vial, change needle before injection (prevents leakage along needle track). • Inject above iliac crest or in abdominal fat layer. Do not inject within 2 inches of umbilicus or any scar tissue. • Withdraw needle rapidly, apply prolonged pressure at injection site. Do not massage or apply heat/cold to injection site. • Rotate injection sites.

IV INCOMPATIBILITIES

Amiodarone (Cordarone), amphotericin B complex (Abelcet, AmBisome, Amphotec), ciprofloxacin (Cipro), dacarbazine (DTIC), diazepam (Valium), DOBUTamine (Dobutrex), DOXORubicin (Adriamycin), filgrastim (Neupogen), gentamicin (Garamycin), haloperidol (Haldol), IDARubicin (Idamycin), labetalol (Trandate), niCARDipine (Cardene), phenytoin (Dilantin), quiNIDine, tobramycin (Nebcin), vancomycin (Vancocin).

IV COMPATIBILITIES

Ampicillin/sulbactam (Unasyn), aztreonam (Azactam), calcium gluconate, ceFAZolin (Acef), ceftAZidime (Fortaz), ceTRIAXone (Rocephin), dexmedetomidine (Precedex), digoxin (Lanoxin), dilTIAZem (Cardizem), DOPamine (Intropin), enalapril (Vasotec), famotidine (Pepcid), fentaNYL (Sublimaze), furosemide (Lasix), HYDROMorphone (Dilaudid), insulin,

lidocaine, LORazepam (Ativan), magnesium sulfate, methylPREDNISolone (Solu-Medrol), midazolam (Versed), milrinone (Primacor), morphine, nitroglycerin, norepinephrine (Levophed), oxytocin (Pitocin), piperacillin/tazobactam (Zosyn), procainamide (Pronestyl), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Line Flushing

IV: ADULTS, ELDERLY, CHILDREN: 100 units as needed. **INFANTS WEIGHING LESS THAN 10 KG:** 10 units as needed.

Acute Coronary Syndrome

IV infusion: ADULTS, ELDERLY: 60 units/kg bolus (**Maximum:** 4,000 units), then 12 units/kg/hr (**Maximum:** 1,000 units/hr as continuous infusion).

Cardiothoracic Surgery

IV: ADULTS, ELDERLY: Initially, 300–400 units/kg before arterial or venous cannulation. Titrate to ACT. Bypass initiated once ACT is at least 400 seconds.

Treatment of DVT/PE

IV infusion: ADULTS, ELDERLY: 80 units/kg bolus (**Maximum:** 5,000 units), then 18 units/kg/hr adjusted according to aPTT.

Usual Pediatric/Neonatal Dose

IV infusion: 75 units/kg bolus over 10 min, then initial maintenance dose of 28 units/kg/hr. Adjust dose according to aPTT per protocol.

Thromboembolic Prophylaxis

SQ: ADULTS, ELDERLY: 5,000 units q8–12h.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional: Pruritus, burning (particularly on soles of feet) caused by vaso-spastic reaction. **Rare:** Pain, cyanosis of extremity 6–10 days after initial therapy lasting 4–6 hrs, hypersensitivity reaction (chills, fever, pruritus, urticaria, asthma, rhinitis, lacrimation, headache).

ADVERSE EFFECTS/TOXIC REACTIONS

Bleeding complications ranging from local ecchymoses to major hemorrhage (cutaneous/GI/genitourinary/intracranial/nasal/oral/pharyngeal/urethral/vaginal bleeding) occur more frequently in high-dose therapy, intermittent IV infusion, women 60 yrs and older. HIT can cause life-threatening thromboembolism such as CVA, MI, DVT, pulmonary embolism, renal artery thrombosis, mesenteric thrombosis. **Antidote:** Protamine sulfate 1–1.5 mg IV for every 100 units heparin SQ within 30 min of overdose, 0.5–0.75 mg for every 100 units heparin SQ if within 30–60 min of overdose, 0.25–0.375 mg for every 100 units heparin SQ if 2 hrs have elapsed since overdose, 25–50 mg if heparin was given by IV infusion.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, PT/INR, aPTT. Cross-check dose with co-worker. Assess for bleeding risk. Question history of recent trauma, head injuries, GI/GU bleeding. Ensure that pt has not received spinal anesthesia, spinal procedures.

INTERVENTION/EVALUATION

Monitor CBC, PT/INR daily. Obtain aPTT 6 hrs after initiation or any change in dosage (or per clinical standards) until maintenance dose is established, then check aPTT q24hrs (or per clinical standards). In long-term therapy, monitor 1–2 times/mo. Diligently assess for bleeding. If platelet count decreases more than 50% from baseline, obtain stat HIT antibody test. If HIT antibody positive, discontinue heparin and consider treatment with direct thrombin inhibitor (e.g., argatroban); avoid all heparin products and place heparin allergy on chart. Monitor urine and stool for occult blood. Assess for decrease in B/P, increase in pulse rate, complaint of abdominal/back pain, severe headache

(may be evidence of hemorrhage). Question for increase in amount of discharge during menses. Assess peripheral pulses; skin for ecchymosis, petechiae. Check for excessive bleeding from minor cuts, scratches. Assess gums for erythema, gingival bleeding. Assess urine output for hematuria. Avoid IM injections due to potential for hematoma. When converting to warfarin (Coumadin) therapy, monitor PT/INR results (will be 10%–20% higher while heparin is given concurrently).

PATIENT/FAMILY TEACHING

- Use electric razor, soft toothbrush to prevent bleeding.
- Report red or dark urine, black or red stool, coffee-ground vomitus, blood-tinged mucus from cough, signs of stroke, nosebleeds, or increase in menstruation.
- Do not use any OTC medication without physician approval (may interfere with platelet aggregation).
- Wear or carry identification that notes anticoagulant therapy.
- Inform dentist, other physicians of heparin therapy.
- Limit alcohol.

hydrALAZINE

hye-dral-a-zeen
(Apresoline )

Do not confuse hydrALAZINE with hydrOXYzine.

FIXED-COMBINATION(S)

Apresazide: hydrALAZINE/hydroCHLORothiazide (a diuretic): 25 mg/25 mg, 50 mg/50 mg, 100 mg/100 mg. **BiDil:** hydrALAZINE/isosorbide (a nitrate): 37.5 mg/20 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Vasodilator. **CLINICAL:** Antihypertensive.

USES

Management of moderate to severe hypertension. **OFF-LABEL:** Hypertension

secondary to eclampsia, preeclampsia. Treatment of HF with reduced ejection fraction, postoperative hypertension.

PRECAUTIONS

Contraindications: Hypersensitivity to hydrALAZINE. Coronary artery disease, mitral valvular rheumatic heart disease.

Cautions: Advanced renal impairment, cerebrovascular accident, suspected coronary artery disease. Pts with mitral valvular disease, positive ANA titer, pulmonary hypertension.

ACTION

Direct vasodilating effects on arterioles. **Therapeutic Effect:** Decreases B/P, systemic vascular resistance.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	20–30 min	N/A	Up to 8 hrs
IV	5–20 min	N/A	1–4 hrs

Well absorbed from GI tract. Widely distributed. Protein binding: 85%–90%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 3–7 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug crosses placenta. Unknown if distributed in breast milk. Thrombocytopenia, leukopenia, petechial bleeding, hematomas have occurred in newborns (resolved within 1–3 wks). **Children:** No age-related precautions noted. **Elderly:** More sensitive to hypotensive effects. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Diuretics (e.g., furosemide, HCTZ), other antihypertensives (e.g., aMLODIPine, cloNIDine, lisinopril, valsartan) may increase hypotensive effect. **HERBAL:** Herbals with hypertensive properties (e.g., licorice, yohimbe) or hypotensive properties

(e.g., garlic, ginger, ginkgo biloba) may alter effects. **FOOD:** Any foods may increase absorption. **LAB VALUES:** May produce positive direct Coombs' test.

AVAILABILITY (Rx)

Injection Solution: 20 mg/mL. **Tablets:** 10 mg, 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

Rate of administration • May give undiluted. • Administer slowly: maximum rate 5 mg/min (0.2 mg/kg/min for children).
Storage • Store at room temperature.

PO

• Best given with food at regularly spaced meals. • Tablets may be crushed.

IV INCOMPATIBILITIES

Ampicillin (Polycillin), furosemide (Lasix).

IV COMPATIBILITIES

DOBUtamine (Dobutrex), heparin, hydrocortisone (Solu-Cortef), nitroglycerin, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO; ADULTS, ELDERLY: Initially, 10 mg 4 times/day for first 2–4 days. May increase to 25 mg 4 times/day balance of first wk. May increase by 10–25 mg/dose gradually q2–5 days to 50 mg 4 times/day. Usual range: 100–200 mg/day in 2–3 divided doses. **CHILDREN:** Initially, 0.75 mg/kg/day in 2–4 divided doses. May increase over 3–4 wks. **Maximum:** 7.5 mg/kg/day (7.5 mg/kg/day in infants). **Maximum daily dose:** 200 mg/day in divided doses.

IV, IM; ADULTS, ELDERLY: Initially, 10–20 mg/dose q4–6h. May increase to 40 mg/dose. **CHILDREN:** Initially, 0.1–0.2 mg/kg/dose. Usual range: 0.2–0.6 mg/kg/dose q2–6h as needed. **Maximum dose:** 20 mg.

Dosage in Renal Impairment

Dosage interval is based on creatinine clearance.

Creatinine Clearance	Dosage
10–50 mL/min	q8h
Less than 10 mL/min	q12–24h

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional: Headache, anorexia, nausea, vomiting, diarrhea, palpitations, tachycardia, angina pectoris. **Rare:** Constipation, ileus, edema, peripheral neuritis (paresthesia), dizziness, muscle cramps, anxiety, hypersensitivity reactions (rash, urticaria, pruritus, fever, chills, arthralgia), nasal congestion, flushing, conjunctivitis.

ADVERSE EFFECTS/TOXIC REACTIONS

High dosage may produce lupus erythematosus–like reaction (fever, facial rash, muscle/joint aches, glomerulonephritis, splenomegaly). Severe orthostatic hypotension, skin flushing, severe headache, myocardial ischemia, cardiac arrhythmias may develop. Profound shock may occur with severe overdosage.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P, pulse immediately before each dose, in addition to regular monitoring (be alert to fluctuations).

INTERVENTION/EVALUATION

Monitor B/P, pulse. Monitor for headache, palpitations, tachycardia. Assess for peripheral edema of hands, feet.

PATIENT/FAMILY TEACHING

• To reduce hypotensive effect, go from lying to standing slowly. • Report muscle/joint aches, fever (lupus-like reaction), flu-like symptoms. • Limit alcohol use.

hydroCHLORothiazide

hye-dro-klor-oh-thy-ah-zide
(Urozide )

Do not confuse Microzide with Maxzide.

FIXED-COMBINATION(S)

Accuretic: hydroCHLORothiazide/quinapril (an angiotensin-converting enzyme [ACE] inhibitor): 12.5 mg/10 mg, 12.5 mg/20 mg, 25 mg/20 mg. **Aldactazide:** hydroCHLORothiazide/spironolactone (a potassium-sparing diuretic): 25 mg/25 mg, 50 mg/50 mg. **Aldoril:** hydroCHLORothiazide/methyldopa (an antihypertensive): 15 mg/250 mg, 25 mg/250 mg, 30 mg/500 mg, 50 mg/500 mg. **Amturnide:** hydroCHLORothiazide/aliskiren (renin inhibitor)/amlODIPine (calcium channel blocker): 12.5 mg/150 mg/5 mg, 12.5 mg/300 mg/5 mg, 25 mg/300 mg/5 mg, 12.5 mg/300 mg/10 mg, 25 mg/300 mg/10 mg. **Apresazide:** hydroCHLORothiazide/hydrALAZINE (a vasodilator): 25 mg/25 mg, 50 mg/50 mg, 50 mg/100 mg. **Atacand HCT:** hydroCHLORothiazide/candesartan (an angiotensin II receptor antagonist): 12.5 mg/16 mg, 12.5 mg/32 mg. **Avalide:** hydroCHLORothiazide/irbesartan (an angiotensin II receptor antagonist): 12.5 mg/150 mg, 12.5 mg/300 mg, 25 mg/300 mg. **Benicar HCT:** hydroCHLORothiazide/olmesartan (an angiotensin II receptor antagonist): 12.5 mg/20 mg, 12.5 mg/40 mg, 25 mg/40 mg. **Capozide:** hydroCHLORothiazide/captopril (an ACE inhibitor): 15 mg/25 mg, 15 mg/50 mg, 25 mg/25 mg, 25 mg/50 mg. **Diovan HCT:** hydroCHLORothiazide/valsartan (an angiotensin II receptor antagonist): 12.5 mg/80 mg, 12.5 mg/160 mg. **Dutoprol:** hydroCHLORothiazide/metoprolol (a beta blocker): 12.5 mg/25 mg, 12.5 mg/50 mg, 12.5 mg/100 mg. **Dyazide/Maxide:** hydroCHLORO-

thiazide/triamterene (a potassium-sparing diuretic): 25 mg/37.5 mg, 25 mg/50 mg, 50 mg/75 mg. **Exforge HCT:** hydroCHLORothiazide/amlODIPine (a calcium channel blocker)/valsartan (an angiotensin II receptor blocker): 12.5 mg/5 mg/160 mg, 25 mg/5 mg/160 mg, 12.5 mg/10 mg/160 mg, 25 mg/10 mg/160 mg, 25 mg/10 mg/320 mg. **Hyzaar:** hydroCHLORothiazide/losartan (an angiotensin II receptor antagonist): 12.5 mg/50 mg, 12.5 mg/100 mg, 25 mg/100 mg. **Inderide:** hydroCHLORothiazide/propranolol (a beta blocker): 25 mg/40 mg, 25 mg/80 mg, 50 mg/80 mg, 50 mg/120 mg, 50 mg/160 mg. **Lopressor HCT:** hydroCHLORothiazide/metoprolol (a beta blocker): 25 mg/50 mg, 25 mg/100 mg, 50 mg/100 mg. **Lotensin HCT:** hydroCHLORothiazide/benazepril (an ACE inhibitor): 6.25 mg/5 mg, 12.5 mg/10 mg, 12.5 mg/20 mg, 25 mg/20 mg. **Micardis HCT:** hydroCHLORothiazide/telmisartan (an angiotensin II receptor antagonist): 12.5 mg/40 mg, 12.5 mg/80 mg. **Moduretic:** hydroCHLORothiazide/aMILoride (a potassium-sparing diuretic): 50 mg/5 mg. **Normozide:** hydroCHLORothiazide/labeltalol (a beta blocker): 25 mg/100 mg, 25 mg/300 mg. **Prinzide/Zestoretic:** hydroCHLORothiazide/lisinopril (an ACE inhibitor): 12.5 mg/10 mg, 12.5 mg/20 mg, 25 mg/20 mg. **Tekturna HCT:** hydroCHLORothiazide/aliskiren (a renin inhibitor): 12.5 mg/150 mg, 25 mg/300 mg. **Teveten HCT:** hydroCHLORothiazide/eprosartan (an angiotensin II receptor antagonist): 12.5 mg/600 mg, 25 mg/600 mg. **Timolide:** hydroCHLORothiazide/timolol (a beta blocker): 25 mg/10 mg. **Tribenzor:** hydroCHLORothiazide/olmesartan/amlODIPine: 12.5 mg/20 mg/5 mg, 12.5 mg/40 mg/5 mg, 25 mg/40 mg/5 mg, 12.5 mg/40 mg/10 mg, 25 mg/40 mg/10 mg. **Uniretic:** hydroCHLORothiazide/moexipril (an ACE inhibitor): 12.5 mg/7.5

H

mg, 25 mg/15 mg. **Vaseretic:** hydroCHLORothiazide/enalapril (an ACE inhibitor): 12.5 mg/5 mg, 25 mg/10 mg. **Ziac:** hydroCHLORothiazide/bisoprolol (a beta blocker): 6.25 mg/5 mg, 6.25 mg/10 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Sulfonamide derivative. Thiazide diuretic.

CLINICAL: Antihypertensive.

H

USES

Treatment of mild to moderate hypertension, edema in HF, hepatic cirrhosis, renal dysfunction (e.g., nephrotic syndrome). **OFF-LABEL:** Treatment of calcium nephrolithiasis.

PRECAUTIONS

Contraindications: Hypersensitivity to hydroCHLORothiazide. Anuria, history of hypersensitivity to sulfonamides or thiazide diuretics. **Cautions:** Severe renal/hepatic impairment, prediabetes or diabetes, elderly or debilitated, history of gout, moderate to high serum cholesterol, hypercalcemia, hypokalemia.

ACTION

Inhibits sodium reabsorption in distal renal tubules, causing excretion of sodium, potassium, hydrogen ions, water.

Therapeutic Effect: Promotes diuresis; reduces B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (diuretic)	2 hrs	4–6 hrs	6–12 hrs

Variably absorbed from GI tract. Primarily excreted unchanged in urine. Not removed by hemodialysis. **Half-life:** 5.6–14.8 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Small amount distributed in breast milk. Breastfeeding not recommended.

Children: No age-related precautions noted, except jaundiced infants may be at risk for hyperbilirubinemia. **Elderly:** May be more sensitive to hypotensive, electrolyte effects. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Bile acid sequestrants (e.g., cholestyramine, colestipol) Anti-hypertensives (e.g., amLODIPine, cloNIDine, lisinopril, valsartan) may increase hypotensive effect. May increase risk of digoxin toxicity. May increase risk of lithium toxicity. **HERBAL:** Herbals with hypertensive properties (e.g., licorice, yohimbe) or hypotensive properties (e.g., garlic, ginger, ginkgo biloba) may alter effects. **Licorice** may increase hypokalemic effect. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, cholesterol, LDL, bilirubin, calcium, creatinine, uric acid, triglycerides. May decrease urinary calcium, serum magnesium, potassium, sodium.

AVAILABILITY (Rx)

Capsules: 12.5 mg. **Tablets:** 12.5 mg, 25 mg, 50 mg.

ADMINISTRATION/HANDLING

PO

- May take with or without food. If GI upset occurs, give with food or milk, preferably with breakfast (may prevent nocturia).
- Give last dose no later than 6 PM unless instructed otherwise.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS: Initially, 12.5–25 mg once daily. May increase up to 50 mg once daily. **ELDERLY:** Initially, 12.5 mg once daily. Titrate in 12.5 mg increments up to 50 mg/day in 1–2 divided doses.

Usual Pediatric Dosage (Edema/HTN)

PO: CHILDREN 2–12 YRS: 1–2 mg/kg/day. **Maximum:** 100 mg/day. **CHILDREN 6 MOS–2 YRS:** 1–2 mg/kg/day in 1–2 divided doses. **Maximum:** 37.5 mg/day. **CHILDREN YOUNGER THAN 6 MOS:** 1–2 mg/kg/day in 2 divided doses. **Maximum:** 37.5 mg/day.

Dosage in Renal Impairment

Creatinine clearance less than 30 mL/min: Generally not effective. Avoid use with creatinine clearance less than 10 mL/min.

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Expected: Increased urinary frequency (diminishes with continued use), urine volume. **Frequent:** Potassium depletion. **Occasional:** Orthostatic hypotension, headache, GI disturbances, photosensitivity.

ADVERSE EFFECTS/TOXIC REACTIONS

Vigorous diuresis may lead to profound water loss/electrolyte depletion, resulting in hypokalemia, hyponatremia, dehydration. Acute hypotensive episodes may occur. Hyperglycemia may occur during prolonged therapy. Pancreatitis, blood dyscrasias, pulmonary edema, allergic pneumonitis, dermatologic reactions occur rarely. Overdose can lead to lethargy, coma without changes in electrolytes or hydration.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Check vital signs, esp. B/P for hypotension, before administration. Assess baseline electrolytes, esp. for hypokalemia. Evaluate skin turgor, mucous membranes for hydration status. Evaluate for peripheral edema. Assess muscle strength, mental status. Note skin temperature, moisture. Obtain baseline weight. Monitor I&O.

INTERVENTION/EVALUATION

Continue to monitor B/P, vital signs, electrolytes, I&O, daily weight. Note extent of diuresis. Watch for changes from initial assessment (hypokalemia may result in weakness, tremor, muscle cramps, nausea, vomiting, altered mental status, tachycardia; hyponatremia may result in confusion, thirst, cold/clammy skin). Be esp. alert for potassium depletion in pts taking digoxin (cardiac arrhythmias). Potassium supplements are frequently ordered. Check for constipation (may occur with exercise diuresis).

PATIENT/FAMILY TEACHING

- Expect increased frequency (diminishes with continued use), volume of urination.
- To reduce hypotensive effect, go from lying to standing slowly.
- Eat foods high in potassium, such as whole grains (cereals), legumes, meat, bananas, apricots, orange juice, potatoes (white, sweet), raisins.
- Protect skin from sun, ultraviolet light (photosensitivity may occur).

HYDROcodone

TOP 100

HIGH ALERT

hye-droe-koe-done
(Hycodan , Hysingla ER, Robidone , Zohydro ER)

BLACK BOX ALERT Risk of opioid addiction, abuse, and misuse. Serious, life-threatening, or fatal respiratory depression may occur. Accidental ingestion by children can result in fatal overdose. Prolonged use during pregnancy may result in opioid withdrawal syndrome. Concomitant use of CYP3A4 inhibitors may increase concentration/effect. Discontinuation of CYP3A4 inducers may increase concentration/effect. Concomitant use of CNS depressants (e.g., benzodiazepines) may result in profound sedation, respiratory depression, coma, or death.

Do not confuse Hycodan with Vicodin.

FIXED-COMBINATION(S)

Hycet: HYDROcodone/acetaminophen: 7.5 mg/325 mg per 15 mL.

Hycodan: HYDROcodone/homatropine (an anticholinergic): 5 mg/1.5 mg.

Hycotuss, Vitussin: HYDROcodone/guaiFENesin (an expectorant): 5 mg/100 mg.

Norco: HYDROcodone/acetaminophen: 5 mg/325 mg, 7.5 mg/325 mg, 10 mg/325 mg.

Prexain CIII: HYDROcodone/ibuprofen (an NSAID): 5 mg/200 mg.

Rezira: HYDROcodone/pseudoephedrine (a nasal decongestant): 5 mg/60 mg per 5 mL.

Tussend: HYDROcodone/pseudoephedrine (a sympathomimetic)/guaiFENesin (an expectorant): 2.5 mg/30 mg/100 mg per 5 mL.

Vicodin: HYDROcodone/acetaminophen: 5 mg/300 mg.

Vicodin ES: HYDROcodone/acetaminophen: 7.5 mg/300 mg.

Vicodin HP: HYDROcodone/acetaminophen: 10 mg/300 mg.

Vicoprofen: HYDROcodone/ibuprofen (an NSAID): 7.5 mg/200 mg.

Xodol: HYDROcodone/acetaminophen: 5 mg/300 mg, 7.5 mg/300 mg, 10 mg/300 mg.

Zutripro: HYDROcodone/chlorpheniramine (an antihistamine)/pseudoephedrine (a nasal decongestant): 5 mg/4 mg/60 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Opioid agonist (Schedule III). **CLINICAL:** Narcotic analgesic.

USES

Relief of moderate to moderately severe pain. **Hysingla ER, Zohydro ER:** Around-the-clock management of moderate to severe chronic pain.

PRECAUTIONS

Contraindications: Hypersensitivity to HYDROcodone. Significant respiratory depression, acute or severe bronchial asthma or hypercarbia, GI obstruction

including paralytic ileus (known or suspected). **Cautions:** Adrenal insufficiency, biliary tract disease, pancreatitis, CNS depression/coma, acute alcoholism, hypothyroidism; severe renal, hepatic, or pulmonary impairment; urinary stricture, prostatic hypertrophy, seizures, elderly, debilitated, other CNS depressants, history of substance abuse.

ACTION

Binds with opioid receptors in CNS. **Therapeutic Effect:** Reduces intensity of incoming pain stimuli from sensory nerve endings, altering pain perception, emotional response to pain; suppresses cough reflex.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (analgesic)	10–20 min	30–60 min	4–6 hrs
PO (antitussive)	N/A	N/A	4–6 hrs

Well absorbed from GI tract. Metabolized in liver. Primarily excreted in urine. **Half-life:** 3.8 hrs (increased in elderly).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. May prolong labor if administered in latent phase of first stage of labor or before cervical dilation of 4–5 cm has occurred. Respiratory depression may occur in neonate if mother received opiates during labor. Regular use of opiates during pregnancy may produce withdrawal symptoms (irritability, excessive crying, tremors, hyperactive reflexes, fever, vomiting, diarrhea, yawning, sneezing, seizures) in the neonate. **Children:** Pts younger than 2 yrs may be more susceptible to respiratory depression. **Elderly:** May be more susceptible to respiratory depression, may cause paradoxical excitement. Age-related renal impairment, prostatic hypertrophy or obstruction may increase risk of urinary retention; dosage adjustment recommended.

INTERACTIONS

DRUG: CNS depressants (e.g., alcohol, morphine, oxyCODONE, zolpidem) may increase CNS depression. **MAOIs** (e.g., phenelzine, selegiline) may increase adverse effects. **CYP3A4 inhibitors** (e.g., clarithromycin, ketoconazole, ritonavir) may increase or prolong opioid effects. **HERBAL:** Herbs with sedative properties (e.g., chamomile, kava, kava, valerian) may increase CNS depression. **St. John's wort** may decrease concentration/effect. **FOOD:** None known. **LAB VALUES:** May increase serum amy-lase, lipase.

AVAILABILITY (Rx)

 **Capsules:** (*Extended-Release [Zohydro ER]*): 10 mg, 15 mg, 20 mg, 30 mg, 40 mg, 50 mg. **Tablets:** (*Extended-Release [Hysingla ER]*): 20 mg, 30 mg, 40 mg, 60 mg, 80 mg, 100 mg, 120 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.
- Extended-release capsules/tablets must be swallowed whole. Do not cut, crush, or dissolve.

INDICATIONS/ROUTES/DOSAGE

Analgesia (Combination Products)

PO: ADULTS, CHILDREN WEIGHING 50 KG OR MORE: Initially, 2.5–10 mg q3–4h as needed. **ADULTS, CHILDREN WEIGHING LESS THAN 50 KG:** Initially, 0.1–0.2 mg/kg q4–6h as needed. **ELDERLY:** 2.5–5 mg q4–6h.

Analgesia (Extended-Release)

PO: ADULTS, ELDERLY: (*Zohydro ER*): Initially, 10 mg q12h. May increase by 10 mg q12h q3–7 days to achieve adequate analgesia. (*Hysingla ER*): Initially, 20 mg q24h. May titrate in increments of 10–20 mg q3–5 days to achieve adequate analgesia.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent: Lethargy, hypotension, diaphoresis, facial flushing, dizziness, drowsiness. **Occasional:** Urine retention, blurred vision, constipation, dry mouth, headache, nausea, vomiting, difficult/painful urination, euphoria, dysphoria.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose results in respiratory depression, skeletal muscle flaccidity, cold/clammy skin, cyanosis, extreme drowsiness progressing to seizures, stupor, coma. Tolerance to analgesic effect, physical dependence may occur with repeated use. Prolonged duration of action, cumulative effect may occur in those with hepatic/renal impairment. **Antidote:** Naloxone (see Appendix J).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain vital signs. If respirations are 12/min or less (20/min or less in children), withhold medication, contact physician. **Analgesic:** Assess onset, type, location, duration of pain. Effect of medication is reduced if full pain recurs before next dose. **Antitussive:** Assess type, severity, frequency of cough.

INTERVENTION/EVALUATION

Palpate bladder for urinary retention. Monitor daily pattern of bowel activity, stool consistency. Initiate deep breathing and coughing exercises, particularly in pts with pulmonary impairment. Assess for clinical improvement; record onset of relief of pain, cough. Monitor LOC.

PATIENT/FAMILY TEACHING

- Go from lying to standing slowly to avoid orthostatic hypotension.
- Avoid tasks that require alertness, motor skills

until response to drug is established. • Avoid alcohol. • Tolerance or dependence may occur with prolonged use at high dosages. • Report nausea, vomiting, constipation, shortness of breath, difficulty breathing.

hydrocortisone

hye-droe-kor-ti-sone

(Anusol HC, Caldecort, Colocort, Cortaid, SOLU-Cortef, Cortenema, Cortizone-10, Preparation H Hydrocortisone, Proctocort, Westcort, Cortef)

Do not confuse hydrocortisone with hydroCHLORothiazide, HYDROcodone, or hydroxychloroquine, Cortef with Coreg, or SOLU-Cortef with SOLU-medrol.

FIXED-COMBINATION(S)

Cortisporin: hydrocortisone/neomycin/polymyxin (an anti-infective): 5 mg/10,000 units/5 mg, 10 mg/10,000 units/5 mg. **Lipsovir:** hydrocortisone/acyclovir (an antiviral): 1%/5%.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Corticosteroid. **CLINICAL:** Glucocorticoid.

USES

Systemic: Management of adrenocortical insufficiency, anti-inflammatory, immunosuppressive. **Topical:** Inflammatory dermatoses, adjunctive treatment of ulcerative colitis, atopic dermatitis, inflamed hemorrhoids. **OFF-LABEL:** Management of septic shock. Treatment of thyroid storm.

PRECAUTIONS

Contraindications: Hypersensitivity to hydrocortisone. Systemic fungal infections. Use in premature infants. Administration of live or attenuated virus vaccines. IM administration in idiopathic thrombocytopenia purpura. **Cautions:** Thyroid

dysfunction, cirrhosis, hypertension, osteoporosis, thromboembolic tendencies or thrombophlebitis, HF, seizure disorders, diabetes, respiratory tuberculosis, untreated systemic infections, renal/hepatic impairment, acute MI, myasthenia gravis, glaucoma, cataracts, increased intraocular pressure, elderly, immunocompromised pts (e.g., diabetes, renal failure, open wounds).

ACTION

Inhibits accumulation of inflammatory cells at inflammation sites, phagocytosis, lysosomal enzyme release, synthesis and/or release of mediators of inflammation. Reverses increased capillary permeability. **Therapeutic Effect:** Prevents/suppresses cell-mediated immune reactions. Decreases/prevents tissue response to inflammatory process.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	N/A	4–6 hrs	8–12 hrs

Well absorbed after IM administration. Widely distributed. Metabolized in liver. **Half-life:** Plasma, 1.5–2 hrs; biologic, 8–12 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. May produce cleft palate if used chronically during first trimester. Breastfeeding not recommended. **Children:** Prolonged treatment or high dosages may decrease short-term growth rate, cortisol secretion. **Elderly:** May be more susceptible to developing hypertension or osteoporosis.

INTERACTIONS

DRUG: May increase hypokalemic effects of **diuretics (e.g., furosemide)**. **CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifAMPin)** may decrease effects. **Live virus vaccines** may decrease pt's antibody response to vaccine, increase vaccine side effects,

potentiate virus replication. May decrease therapeutic effect of **aldesleukin**, **BCG (intravesical)**. May increase hyponatremic effect of **desmopressin**. **HERBAL: St. John's wort** may decrease concentration. **Echinacea** may decrease therapeutic effect. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, lipids, sodium. May decrease serum calcium, potassium, thyroxine; WBC count.

AVAILABILITY (Rx)

Cream, Rectal: (Cortizone-10, Preparation H Hydrocortisone): 1%, 2.5%. **Cream, Topical:** 0.5%, 1%, 2.5%. **Injection, Powder for Reconstitution: (Solu-Cortef):** 100 mg, 250 mg, 500 mg, 1 g. **Ointment, Topical:** 0.5%, 1%, 2.5%. **Suppository (Anusol HC):** 25 mg. **Suspension, Rectal: (Colocort, Cortenema):** 100 mg/60 mL. **Tablets: (Cortef):** 5 mg, 10 mg, 20 mg.

ADMINISTRATION/HANDLING

Hydrocortisone Sodium Succinate

Reconstitution • Initially, reconstitute vial per manufacturer's instructions. • May further dilute with D₅W or 0.9% NaCl. For IV push, dilute to 50 mg/mL; for intermittent infusion, dilute to 1 mg/mL. **Note:** 100–3,000 mg may be added to 50 mL D₅W or 0.9% NaCl.

Rate of administration • Administer IV push over 3–5 min (over 10 min for doses 500 mg or greater). Give intermittent infusion over 20–30 min.

Storage • Store at room temperature. • Once reconstituted, stable for 3 days at room temperature. Once further diluted with 0.9% NaCl or D₅W, stability is concentration dependent: 1 mg/mL (24 hrs), 2–60 mg/mL (4 hrs).

PO

• Give with food or milk if GI distress occurs.

Rectal

• Shake homogeneous suspension well. • Instruct pt to lie on left side with

left leg extended, right leg flexed. • Gently insert applicator tip into rectum, pointed slightly toward navel (umbilicus). Slowly instill medication.

Topical

• Gently cleanse area before application. • Use occlusive dressings only as ordered. • Apply sparingly; rub into area thoroughly.

IV INCOMPATIBILITIES

Ciprofloxacin (Cipro), diazepam (Valium), midazolam (Versed), phenytoin (Dilantin).

IV COMPATIBILITIES

Amphotericin, calcium gluconate, cefepime (Maxipime), digoxin (Lanoxin), diltiazem (Cardizem), diphenhydramine (Benadryl), dopamine (Intropin), insulin, lidocaine, lorazepam (Ativan), magnesium sulfate, morphine, norepinephrine (Levophed), procainamide (Pronestyl), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Acute Adrenal Insufficiency

IV: ADULTS, ELDERLY: 100 mg IV bolus, then 25–75 mg q6h for 24 hrs (or 200 mg/24h as continuous infusion), then taper slowly. **INFANTS, CHILDREN, ADOLESCENTS:** 50–100 mg/m² once, then 50–100 mg/m²/day in 4 divided doses.

Anti-inflammation, Immunosuppression

IV, IM: ADULTS, ELDERLY: 100–500 mg/dose at intervals of 2 hrs, 4 hrs, or 6 hrs. **CHILDREN:** 1–5 mg/kg/day in divided doses q12h.

PO: ADULTS, ELDERLY: 20–240 mg q12h. **CHILDREN:** 2.5–10 mg/kg/day in divided doses q6–8h.

Adjunctive Treatment of Ulcerative Colitis

Rectal: (Enema): ADULTS, ELDERLY: 100 mg at bedtime for 21 nights or until clinical and proctologic remission occurs (may require 2–3 mos of therapy).

(Rectal Foam): ADULTS, ELDERLY: 1 applicator 1–2 times/day for 2–3 wks, then every second day until therapy ends.

Usual Topical Dose

ADULTS, ELDERLY: Apply sparingly 2–4 times/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Insomnia, heartburn, anxiety, abdominal distention, diaphoresis, acne, mood swings, increased appetite, facial flushing, delayed wound healing, increased susceptibility to infection, diarrhea or constipation. **Occasional:** Headache, edema, change in skin color, frequent urination. **Topical:** Pruritus, redness, irritation. **Rare:** Tachycardia, allergic reaction (rash, hives), psychological changes, hallucinations, depression. **Topical:** Allergic contact dermatitis, purpura. **Systemic:** Absorption more likely with use of occlusive dressings or extensive application in young children.

ADVERSE EFFECTS/TOXIC REACTIONS

Long-term therapy: Hypocalcemia, hypokalemia, muscle wasting (esp. arms, legs), osteoporosis, spontaneous fractures, amenorrhea, cataracts, glaucoma, peptic ulcer, HE. **Abrupt withdrawal after long-term therapy:** Nausea, fever, headache, sudden severe joint pain, rebound inflammation, fatigue, weakness, lethargy, dizziness, orthostatic hypotension.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline weight, B/P, serum glucose, cholesterol, electrolytes. Screen for infections including fungal infections, TB, viral skin lesions. Question medical history as listed in Precautions.

INTERVENTION/EVALUATION

Assess for edema. Be alert to infection (reduced immune response): sore throat, fever, vague symptoms. Monitor

daily pattern of bowel activity, stool consistency. Monitor electrolytes, B/P, weight, serum glucose. Monitor for hypocalcemia (muscle twitching, cramps), hypokalemia (weakness, paresthesia [esp. lower extremities], nausea/vomiting, irritability, ECG changes). Assess emotional status, ability to sleep.

PATIENT/FAMILY TEACHING

- Report fever, sore throat, muscle aches, sudden weight gain, swelling, visual disturbances, behavioral changes.
- Do not take aspirin or any other medication without consulting physician.
- Limit caffeine; avoid alcohol.
- Inform dentist, other physicians of cortisone therapy now or within past 12 mos.
- Caution against overusing joints injected for symptomatic relief.
- **Topical:** Apply after shower or bath for best absorption.
- Do not cover or use occlusive dressings unless ordered by physician; do not use tight diapers, plastic pants, coverings.
- Avoid contact with eyes.

HYDRORMORPHONE

HIGH ALERT

hye-droe-mor-fone
(Dilaudid, Exalgo, Hydromorph Contin )

BLACK BOX ALERT ■ High abuse potential, life-threatening respiratory depression risk. Other opioids, alcohol, CNS depressants increase risk of potentially fatal respiratory depression. Highly concentrated form (Dilaudid HP, 10 mg/mL) not to be interchanged with less concentrated form (Dilaudid); overdose, death may result. Exalgo: For use in opioid-tolerant pts. Do not crush, break, chew, or dissolve. Swallow whole.

Do not confuse Dilaudid with Demerol or Dilantin, or HYDRORMORPHONE with HYDROcodone or morphine.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Opioid agonist (Schedule II). **CLINICAL:** Narcotic analgesic.

USES

Relief of moderate to severe pain. Extended-release tablet (Exalgo): Around the clock, continuous analgesia for extended period.

PRECAUTIONS

Contraindications: Hypersensitivity to HYDRomorphone. Acute or severe bronchial asthma, severe respiratory depression. GI obstruction including paralytic ileus (known or suspected). **Additional Product-Specific Contraindications:** Dilaudid **HP injection:** Opioid-intolerant pts. **Extended-Release Tablets:** Opioid-intolerant pts, preexisting GI surgery/diseases causing GI narrowing. **Cautions:** Severe hepatic, renal, respiratory disease; hypothyroidism, adrenal cortical insufficiency, seizures, acute alcoholism, head injury, intracranial lesions, increased intracranial pressure, prostatic hypertrophy, Addison's disease, urethral stricture, pancreatitis, biliary tract disease, cardiovascular disease, morbid obesity, delirium tremens, toxic psychosis, pts with CNS depression or coma, pts with depleted blood volume, obstructive bowel disorder.

ACTION

Binds to opioid receptors in CNS, reducing intensity of pain stimuli from sensory nerve endings. **Therapeutic Effect:** Alters perception, emotional response to pain; suppresses cough reflex.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30 min	90–120 min	4 hrs
IV	10–15 min	15–30 min	2–3 hrs
IM	15 min	30–60 min	4–5 hrs
SQ	15 min	30–90 min	4 hrs
Rectal	15–30 min	N/A	N/A

Well absorbed from GI tract after IM administration. Widely distributed. Metabolized in liver. Excreted in urine. **Half-life:** 2.6–4 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Unknown if distributed in breast

milk. May prolong labor if administered in latent phase of first stage of labor or before cervical dilation of 4–5 cm has occurred. Respiratory depression may occur in neonate if mother receives opiates during labor. Regular use of opiates during pregnancy may produce withdrawal symptoms in the neonate (irritability, excessive crying, tremors, hyperactive reflexes, fever, vomiting, diarrhea, yawning, sneezing, seizures). **Children:** Pts younger than 2 yrs may be more susceptible to respiratory depression. **Elderly:** May be more susceptible to respiratory depression, may cause paradoxical excitement. Age-related renal impairment, prostatic hypertrophy or obstruction may increase risk of urinary retention; dosage adjustment recommended.

INTERACTIONS

DRUG: CNS depressants (e.g., alcohol, morphine, oxyCODONE, zolpidem) may increase CNS depression. **MAOIs** (e.g., phenelzine, selegiline) may increase adverse effects. **HERBAL:** Herbals with sedative properties (e.g., chamomile, kava, kava, valerian) may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum amylase, lipase.

AVAILABILITY (Rx)

Injection, Solution: 1 mg/mL, 2 mg/mL, 4 mg/mL, 10 mg/mL. **Liquid, Oral:** 1 mg/mL. **Suppository:** 3 mg. **Tablets:** 2 mg, 4 mg, 8 mg.

 **Tablets: (Extended-Release [Exalgo]):** 8 mg, 12 mg, 16 mg, 32 mg.

ADMINISTRATION/HANDLING

ALERT High-concentration injection (10 mg/mL) should be used only in pts tolerant to opiate agonists, currently receiving high doses of another opiate agonist for severe, chronic pain due to cancer. **Reconstitution** • May give undiluted. • May further dilute with 5 mL Sterile Water for Injection or 0.9% NaCl.

Rate of administration • Administer IV push very slowly (over 2–3 min). • Rapid IV increases risk of severe adverse reactions (chest wall rigidity, apnea, peripheral circulatory collapse, anaphylactoid effects, cardiac arrest).

Storage • Store at room temperature; protect from light. • Slight yellow discoloration of parenteral form does not indicate loss of potency.

IM, SQ

• Subcutaneously or intramuscularly insert needle and inject solution. Pulling back the plunger before IM injection may ensure that drug is not delivered directly into bloodstream (however, this topic is currently debated). • Administer slowly; rotate injection sites. • Pts with circulatory impairment experience higher risk of overdosage due to delayed absorption of repeated administration.

PO

• Give without regard to food. • Tablets may be crushed. • Extended-release tablets must be swallowed whole; do not break, crush, dissolve, or divide.

Rectal

• Refrigerate suppositories. • Moisten suppository with cold water before inserting well up into rectum.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), ceFAZolin (Ancef, Kefzol), diazePAM (Valium), PHENobarbital, phenytoin (Dilantin).

IV COMPATIBILITIES

Dexmedetomidine (Precedex), diTIAZem (Cardizem), diphenhydrAMINE (Benadryl), DOBUtamine (Dobutrex), DOPamine (Intropin), fentaNYL (Sublimaze), furosemide (Lasix), heparin, LORazepam (Ativan), magnesium sulfate, metoclopramide (Reglan), midazolam (Versed), milrinone (Primacor), morphine, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Analgesia (Acute, Moderate to Severe)

PO: ADULTS: (Immediate-Release):

Initially 2–4 mg q4–6h as needed (tablets) or 2.5–10 mg q3–6h as needed (liquid).

ELDERLY: Use with caution; initiating at the low end of the dosage range is recommended. **CHILDREN, ADOLESCENTS WEIGHING MORE THAN 50 KG:** 1–2 mg q3–4h as needed. **CHILDREN OLDER THAN 6 MOS WEIGHING LESS THAN 50 KG:** 0.03–0.08 mg/kg/dose q3–4h as needed.

IV (For use in opiate-naive pts):

ADULTS, ELDERLY: 0.2–1 mg q2–3h (pts with prior opioid exposure may require higher doses). **CHILDREN, ADOLESCENTS WEIGHING MORE THAN 50 KG:** 0.2–0.6 mg/dose q2–4h as needed. **CHILDREN WEIGHING 50 KG OR LESS:** 0.015 mg/kg/dose q3–6h as needed.

Rectal: ADULTS, ELDERLY: 3 mg q6–8h.

Patient-Controlled Analgesia (PCA)

IV: ADULTS, ELDERLY: (Usual concentration: 0.2 mg/mL). Demand dose: Initially, 0.1–0.2 mg. Range: 0.05–0.4 mg. Lock-out interval: 6 min. Range: 5–10 min.

Epidural: ADULTS, ELDERLY: Bolus dose of 0.4–1 mg; infusion rate: 0.03–0.3 mg/hr; demand dose: 0.02–0.05 mg. Lock-out interval: 10–15 min.

Continuous Infusion

IV infusion: ADULTS, ELDERLY: 0.5–3 mg/hr.

Dosage in Renal/Hepatic Impairment

Decrease initial dose; use with caution.

SIDE EFFECTS

Frequent: Drowsiness, dizziness, hypotension (including orthostatic hypotension), decreased appetite. **Occasional:** Confusion, diaphoresis, facial flushing, urinary retention, constipation, dry mouth, nausea, vomiting, headache, pain at injection site. **Rare:** Allergic reaction, depression.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose results in respiratory depression, skeletal muscle flaccidity, cold/

clammy skin, cyanosis, extreme drowsiness progressing to seizures, stupor, coma. Tolerance to analgesic effect, physical dependence may occur with repeated use. Prolonged duration of action, cumulative effect may occur in those with hepatic/renal impairment. **Antidote:** Naloxone (see Appendix J).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain vital signs. If respirations are 12/min or less (20/min or less in children), withhold medication, contact physician. **Analgesic:** Assess onset, type, location, duration of pain. Effect of medication is reduced if full pain recurs before next dose. **Antitussive:** Assess type, severity, frequency of cough.

INTERVENTION/EVALUATION

Monitor vital signs; assess for pain relief, cough. To prevent pain cycles, instruct pt to request pain medication as soon as discomfort begins. Monitor daily pattern of bowel activity, stool consistency (esp. in long-term use). Initiate deep breathing and coughing exercises, particularly in pts with pulmonary impairment. Assess for clinical improvement; record onset of relief of pain, cough.

PATIENT/FAMILY TEACHING

- Avoid alcohol.
- Avoid tasks that require alertness/motor skills until response to drug is established.
- Tolerance or dependence may occur with prolonged use at high dosages.
- Change positions slowly to avoid orthostatic hypotension.
- Do not chew, crush, dissolve, or divide extended-release tablets.

hydrOXYzine

hye-drox-ee-zeen
(Apo-HydrOXYzine , Atarax ,
Novo-Hydroxyzin , Vistaril)

Do not confuse hydrOXYzine with hydrALAZINE or hydroxyurea, or Vistaril with Restoril, Versed, or Zestril.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Histamine H₁ antagonist. **CLINICAL:** Antihistamine, antianxiety, antispasmodic, antiemetic, antipruritic.

USES

Antiemetic, treatment of anxiety/agitation, antipruritic.

PRECAUTIONS

Contraindications: Hypersensitivity to hydroXYzine. Early pregnancy; SQ, IV administration; pts with prolonged QT interval. **Cautions:** Narrow-angle glaucoma, prostatic hypertrophy, bladder neck obstruction, asthma, COPD, elderly.

ACTION

Competes with histamine for receptor sites in GI tract, blood vessels, respiratory tract. **Therapeutic Effect:** Produces anxiolytic, anticholinergic, antihistaminic, analgesic effects; relaxes skeletal muscle; controls nausea, vomiting.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	15–30 min	N/A	4–6 hrs

Well absorbed from GI tract and after parenteral administration. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 3–7 hrs (increased in elderly, hepatic impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Not recommended in newborns or premature infants (increased risk of anticholinergic effects). Paradoxical excitement may occur. **Elderly:** Increased risk of dizziness,

sedation, confusion. Hypotension, hyperexcitability may occur.

INTERACTIONS

DRUG: QT interval—prolonging medications (e.g., amiodarone, azithromycin, ceritinib, haloperidol, moxifloxacin) may increase risk of QT interval prolongation, torsades de pointes. **CNS depressants (e.g., alcohol, morphine, oxyCODONE, zolpidem)** may increase CNS depression. **Acclidinium, ipratropium, tiotropium, umeclidinium** may increase anticholinergic effect. **HERBAL: Herbals with sedative properties (e.g., chamomile, kava, kava, valerian)** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May cause false-positive urine 17-hydroxycorticosteroid determinations.

AVAILABILITY (Rx)

Oral Solution: 10 mg/5 mL. **Syrup:** 10 mg/5 mL. **Tablets:** 10 mg, 25 mg, 50 mg.  **Capsules:** 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

- May give without regard to food. • Shake oral suspension well. • Scored tablets may be crushed; do not break, crush, or open capsule.

INDICATIONS/ROUTES/DOSAGE

Anxiety

Note: Initiate elderly dose at the lower end of recommended dosage.

PO: ADULTS, ELDERLY: 50–100 mg 4 times/day or 37.5–75 mg/day in divided doses. **CHILDREN 6 YRS AND OLDER:** 12.5–25 mg 3–4 times/day. **CHILDREN YOUNGER THAN 6 YRS:** 12.5 mg 3–4 times/day.

Pruritus

PO: ADULTS, ELDERLY: 25 mg 3–4 times/day. **CHILDREN 6 YRS AND OLDER:** 12.5–25 mg 3–4 times/day. **CHILDREN YOUNGER THAN 6 YRS:** 12.5 mg 3–4 times/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment. Change dosing interval to q24h in pts with primary biliary cirrhosis.

SIDE EFFECTS

Side effects are generally mild, transient. **Frequent:** Drowsiness, dry mouth, marked discomfort with IM injection. **Occasional:** Dizziness, ataxia, asthenia, slurred speech, headache, agitation, increased anxiety. **Rare:** Paradoxical reactions (hyperactivity, anxiety in children; excitement, restlessness in elderly or debilitated pts) generally noted during first 2 wks of therapy, particularly in presence of uncontrolled pain.

ADVERSE EFFECTS/TOXIC REACTIONS

Hypersensitivity reaction (wheezing, dyspnea, chest tightness) may occur. QT interval prolongation, torsades de pointes have been reported. Acute generalized exanthematous pustulosis (AGEP) may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Anxiety: Offer emotional support. Assess motor responses (agitation, trembling, tension), autonomic responses (cold/clammy hands, diaphoresis). **Anti-emetic:** Assess for dehydration (poor skin turgor, dry mucous membranes, longitudinal furrows in tongue).

INTERVENTION/EVALUATION

For pts on long-term therapy, CBC, BMP, LFT should be performed periodically. Monitor lung sounds for signs of hypersensitivity reaction. Monitor serum electrolytes in pts with severe vomiting. Assess for paradoxical reaction, particularly during early therapy. Assist with ambulation if drowsiness, light-headedness occur. Obtain ECG if palpitations occur or cardiac arrhythmia is suspected. Assess skin for rash, pustules.

PATIENT/FAMILY TEACHING

• Marked discomfort may occur with IM injection. • Sugarless gum, sips of water may relieve dry mouth. • Drowsiness usually diminishes with continued therapy. • Avoid tasks that require alertness, motor skills until response to

drug is established. • Treatment may cause life-threatening heart arrhythmias; report chest pain, difficulty breathing, palpitations, passing out. Do not take newly prescribed medications unless approved by prescriber who originally started treatment.

H

ibalizumab-uiyk

i-ba-liz-ue-mab-uiyk
(Trogarzo)

Do not confuse ibalizumab with atezolizumab, benralizumab, certolizumab, daclizumab, eculizumab, efalizumab, ibritumomab, ipilimumab, mepolizumab, ocrelizumab, pembrolizumab, tocilizumab, or vedolizumab.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: CD4-directed post-attachment HIV-1 inhibitor. Monoclonal antibody. **CLINICAL:** Antiviral (anti-HIV).

USES

Treatment of HIV-1 infection, in combination with other antiretrovirals, in heavily treatment-experienced adults with multi-drug-resistant HIV-1 infection who are failing their current antiretroviral regimen.

PRECAUTIONS

Contraindications: Hypersensitivity to ibalizumab. **Cautions:** Baseline anemia, leukopenia, neutropenia, thrombocytopenia. Pt at risk for hyperglycemia (e.g., diabetes, recent surgery, chronic use of corticosteroids).

ACTION

Selectively binds to domain 2 of CD4+, inhibiting post-attachment steps required for entry of HIV-1 virus particles into host cells. Blocks HIV-1 from infecting CD4+T cells without causing immunosuppression or depleting CD4+ cell counts. **Therapeutic Effect:** Interferes with HIV replication, slowing progression of HIV infection.

PHARMACOKINETICS

Widely distributed. Metabolism not specified. Steady state reached after first maintenance dose. Excretion not specified.

Half-life: 2.7–64 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Breastfeeding not recommended due to risk of post-natal HIV transmission. Unknown if distributed in breast milk. However, human immunoglobulin G (IgG) is present in breast milk and is known to cross the placenta. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May enhance adverse/toxic effect of **belimumab**. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin, creatinine, glucose, lipase, uric acid. May decrease Hgb, platelets, leukocytes, neutrophils.

AVAILABILITY (Rx)

Injection Solution: 200 mg/1.33 mL (150 mg/mL).

ADMINISTRATION/HANDLING

Preparation • Calculate the number of vials needed for each dose. • Visually inspect for particulate matter or discoloration. Solution should appear clear to slightly opalescent and colorless to slightly yellow in color. Do not use if solution is cloudy or discolored or if visible particles are observed. • Dilute in 250 mL 0.9% NaCl (do not dilute in other solutions).

Administration guidelines • Recommend infusion into cephalic vein of right or left arm. If cephalic vein cannot be used, an appropriate vein located elsewhere may be utilized. • Once infusion is complete, flush with 30 mL of 0.9% NaCl.

Rate of administration • Infuse loading dose over at least 30 min (or more). If no infusion-related reactions occur, may infuse maintenance doses over at least 15 min (or more). • Do not infuse as IV push or bolus.

Storage • Refrigerate unused vials. • Do not freeze. • Protect from light. • May refrigerate diluted solution for up to 24 hrs or store at room temperature for no

more than 4 hrs. • If refrigerated, allow diluted solution to warm to room temperature for at least 30 min before infusion.

INDICATIONS/ROUTES/DOSAGE

HIV-1 Infection (Heavily Treatment-Experienced)

IV: ADULTS, ELDERLY: Loading dose of 2,000 mg once. **Maintenance:** 800 mg q2wks. If a maintenance dose is missed by 3 days or more, readminister loading dose. Then, reschedule maintenance doses q2wks thereafter.

Dosage in Renal/Hepatic Impairment

Mild to severe impairment: Not specified; use caution.

SIDE EFFECTS

Occasional (8%–5%): Diarrhea, dizziness, nausea, rash (erythematous, generalized, macular, maculopapular, papular).

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia, leukopenia, neutropenia, thrombocytopenia are expected responses to therapy. May induce immune reconstitution syndrome (inflammatory response to dormant opportunistic infections, such as *Mycobacterium avium*, cytomegalovirus, PCP, or tuberculosis, or acceleration of autoimmune disorders, such as Graves' disease, polymyositis, Guillain-Barré). Immunogenicity (auto-ibalizumab antibodies) occurs rarely. Hyperglycemia (serum blood glucose greater than 250 mg/dL) reported in 3% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, CD4+ count, viral load, HIV-1 RNA level. Verify that pt is heavily treatment-experienced with multidrug resistance and failing their current HIV-1 antiretroviral regimen. Question history of diabetes, hyperglycemia. Assess usual bowel movement patterns, stool characteristics. Screen for active infection. Question history of infusion-related reactions before each infusion.

INTERVENTION/EVALUATION

Periodically monitor CBC for anemia, leukopenia, neutropenia, thrombocytopenia; serum bilirubin. Monitor CD4+ count, viral load, HIV-1 RNA level for treatment effectiveness. After loading dose is given, monitor all pts for infusion-related reactions for at least 1 hr. If no infusion-related reactions have occurred, may decrease postinfusion observation time to 15 min for subsequent infusions. Monitor daily pattern of bowel activity, stool consistency; I&Os.

PATIENT/FAMILY TEACHING

- Treatment does not cure HIV infection nor reduce risk of transmission. Practice safe sex with barrier methods or abstinence.
- As immune system strengthens, it may respond to dormant infections hidden within the body. Report any new fever, chills, body aches, cough, night sweats, shortness of breath.
- All pts must be observed for infusion reactions during infusion and after infusion is completed.
- Treatment may depress your immune system response and reduce your ability to fight infection. Report symptoms of infection such as body aches, chills, cough, fatigue, fever. Avoid those with active infection.
- Do not breastfeed.
- Report symptoms of elevated blood sugar levels (blurred vision, headache, increased thirst, frequent urination).

ibandronate

eye-ban-droe-nate
(Boniva)

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Bisphosphonate. **CLINICAL:** Calcium regulator.

USES

Treatment/prevention of osteoporosis in postmenopausal women. **OFF-LABEL:** Hypercalcemia of malignancy; reduces bone pain and skeletal complications from metastatic bone disease due to breast cancer.

PRECAUTIONS

Contraindications: Hypersensitivity to ibandronate, other bisphosphonates; oral tablets in pts unable to stand or sit upright for at least 60 min; pts with abnormalities of the esophagus that would delay emptying (e.g., stricture, achalasia), hypocalcemia.

Cautions: GI diseases (duodenitis, dysphagia, esophagitis, gastritis, ulcers [drug may exacerbate these conditions]), renal impairment with CrCl less than 30 mL/min.

ACTION

Inhibits bone resorption via activity on osteoclasts. **Therapeutic Effect:** Reduces rate of bone resorption, resulting in indirect increased bone mineral density.

PHARMACOKINETICS

Absorbed in upper GI tract. Extent of absorption impaired by food, beverages (other than plain water). Protein binding: 85%–99%. Rapidly binds to bone. Unabsorbed portion excreted in urine.

Half-life: **PO:** 37–157 hrs; **IV:** 5–25 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm/malformations. Unknown if distributed in breast milk. Breastfeeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Antacids, calcium, magnesium may decrease concentration/effect. **Aspirin, NSAIDs (e.g., ibuprofen, ketorolac, naproxen)** may increase adverse effects.

HERBAL: None significant. **FOOD:** Beverages (other than plain water), dietary supplements, dairy products, food interfere with absorption. **LAB VALUES:** May decrease serum alkaline phosphatase. May increase serum cholesterol.

AVAILABILITY (Rx)

Injection Solution: 3 mg/3 mL syringe.

Tablets: 150 mg.

ADMINISTRATION/HANDLING**PO**

• Give 60 min before first food or beverage of the day, on an empty stomach with 6–8 oz plain water (not mineral water) while pt is standing or sitting in upright position. • Pt cannot lie down for 60 min following administration. • Instruct pt to swallow whole; do not break, crush, dissolve, or divide tablet (potential for oropharyngeal ulceration).

• Give over 15–30 sec. • Give over 1 hr for metastatic bone disease; over 1–2 hrs for hypercalcemia of malignancy.

INDICATIONS/ROUTES/DOSAGE

Note: May consider discontinuing after 3–5 yrs in pts at low risk for fracture. Consider supplemental calcium and vitamin D if dietary intake is inadequate.

Osteoporosis

PO (Prevention/Treatment): ADULTS, ELDERLY: 150 mg once monthly.

IV (Treatment): ADULTS, ELDERLY: 3 mg q3mos.

Dosage in Renal Impairment

Not recommended for pts with CrCl less than 30 mL/min.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (13%–6%): Back pain, dyspepsia, peripheral discomfort, diarrhea, headache, myalgia. **IV:** Abdominal pain, dyspepsia, constipation, nausea, diarrhea. **Occasional (4%–3%):** Dizziness, arthralgia, asthenia. **Rare (2% or less):** Vomiting, hypersensitivity reaction.

ADVERSE EFFECTS/TOXIC REACTIONS

Upper respiratory infection occurs occasionally. Overdose results in hypocalcemia, hypophosphatemia, significant GI disturbances.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Hypocalcemia, vitamin D deficiency must be corrected before beginning therapy. Obtain laboratory baselines, esp. serum chemistries, renal function. Obtain results of bone density study.

INTERVENTION/EVALUATION

Monitor electrolytes, esp. serum calcium, phosphate. Monitor renal function tests.

PATIENT/FAMILY TEACHING

- Expected benefits occur only when medication is taken with full glass (6–8 oz) of plain water, first thing in the morning and at least 60 min before first food, beverage, medication of the day. Any other beverage (mineral water, orange juice, coffee) significantly reduces absorption of medication.
- Do not chew, crush, dissolve, or divide tablets; swallow whole.
- Do not lie down for at least 60 min after taking medication (potentiates delivery to stomach, reduces risk of esophageal irritation).
- Report swallowing difficulties, pain when swallowing, chest pain, new/worsening heartburn.
- Consider weight-bearing exercises; modify behavioral factors (e.g., cigarette smoking, alcohol consumption).
- Calcium and vitamin D supplements should be taken if dietary intake inadequate.

ibrutinib

eye-broo-ti-nib
(Imbruvica)

Do not confuse ibrutinib with axitinib, dasatinib, erlotinib, gefitinib, imatinib, nilotinib, PONATinib, SORafenib, SUNTininib, or vandetanib.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Bruton tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of pts with mantle cell lymphoma (MCL) who have received at least one prior therapy, chronic lymphocytic leukemia and small lymphocytic lymphoma (CLL/SLL) (as monotherapy or in combination with bendamustine and ritUXimab or with obinutuzumab), CLL/SLL with 17p deletion, treatment of Waldenstrom's macroglobulinemia (WM) (as monotherapy or in combination with rituximab). Marginal zone lymphoma (MZL) requiring systemic therapy and having received at least one prior anti-CD-20–based therapy. Treatment of chronic graft versus host disease (CGVHD) after failure of at least one line of systemic therapy.

PRECAUTIONS

Contraindications: Hypersensitivity to ibrutinib. **Cautions:** Hepatic/renal impairment, elderly, pregnancy, history of GI disease (e.g., bleeding, ulcers).

ACTION

Inhibits enzymatic activity of Bruton's tyrosine kinase (BTK), a signaling molecule that promotes malignant B-cell proliferation and survival. **Therapeutic Effect:** Decreases malignant B-cell proliferation and survival.

PHARMACOKINETICS

Readily absorbed following PO. Metabolized in liver. Peak plasma concentration: 1–2 hrs. Protein binding: 97%. Excreted in feces (80%), urine (10%). **Half-life:** 4–6 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Avoid pregnancy. Unknown if distributed in breast milk. Must either discontinue drug or discontinue breastfeeding. **Children:** Safety and efficacy not established. **Elderly:** Increased risk of cardiac events (atrial fibrillation, hypertension), infections (pneumonia, cellulitis), GI events (diarrhea, dehydration, bleeding).

INTERACTIONS

DRUG: Strong CYP3A4 inhibitors (e.g., ketoconazole, clarithromycin) may

increase plasma concentration/effect; avoid use. **Strong CYP3A4 inducers (e.g., carbamazepine, rifampin, phenytoin)** may decrease plasma concentration/effect; avoid use. **Anticoagulants (e.g., warfarin), antiplatelets (e.g., aspirin, clopidogrel), NSAIDs** may increase risk of bleeding. May decrease the therapeutic effect of **BCG (intravesical), vaccines (live)**. May increase adverse/toxic effects of **natalizumab, vaccines (live)**. **HERBAL: St. John's wort** may decrease concentration/effect. **FOOD: Grapefruit products, Seville oranges** may increase concentration/effect. **Bitter orange** may increase concentration/effect. **LAB VALUES:** May decrease Hgb, Hct, neutrophils, platelets.

AVAILABILITY (Rx)

 **Capsules:** 70 mg, 140 mg. **Tablets:** 140 mg, 280 mg, 420 mg, 560 mg.

ADMINISTRATION/HANDLING

PO

- Give with water.
- Swallow capsules/tablets whole. Do not break, cut, or open capsules. Do not break, cut, crush, or divide tablets. Capsules/tablets cannot be chewed.

INDICATIONS/ROUTES/DOSAGE

MCL, MZL

PO: ADULTS, ELDERLY: 560 mg once daily. Continue until disease progression or unacceptable toxicity.

CLL/SLL, WM, CGVD

PO: ADULTS, ELDERLY: 420 mg once daily. Continue until disease progression or unacceptable toxicity.

Dose Modification

Based on Common Terminology Criteria for Adverse Events (CTCAE).

Any Grade 3 or Greater Nonhematologic Event, Grade 3 or Greater Neutropenia with Infection or Fever, or Any Grade 4 Hematologic Toxicities

Interrupt treatment until resolution to Grade 1 or baseline, then restart at initial dose. If toxicity recurs, interrupt treatment

until resolution to Grade 1 or baseline, then reduce dose to 420 mg daily (one capsule less). If toxicity recurs, interrupt treatment until resolution to Grade 1 or baseline, then reduce dose to 280 mg once daily (one capsule less). If toxicity still occurs at 280 mg dose, discontinue treatment.

Concomitant Use of Moderate CYP3A4 Inhibitors (e.g., Fluconazole, DiTIAZem, Verapamil)

Start at reduced dose of 140 mg daily. If toxicity occurs, either discontinue treatment or find alternate agent with less CYP3A inhibition.

Concomitant Short-Term Use of Strong CYP3A4 Inhibitors (7 days or less) (e.g., Antifungals, Antibiotics)

Interrupt treatment until strong CYP3A medications no longer needed.

Concomitant Chronic Use of Strong CYP3A4 Inhibitors or Inducers

Treatment not recommended.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild impairment: Decrease dose to 140 mg. **Moderate to severe impairment:** Avoid use.

SIDE EFFECTS

Frequent (51%–23%): Diarrhea, fatigue, musculoskeletal pain, peripheral edema, nausea, bruising, dyspnea, constipation, rash, abdominal pain, vomiting. **Occasional (21%–11%):** Decreased appetite, cough, pyrexia, stomatitis, asthenia, dizziness, muscle spasms, dehydration, headache, dyspepsia, petechiae, arthralgia.

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia, lymphopenia, neutropenia, thrombocytopenia is expected response to therapy. Treatment-emergent myelosuppression (Grade 3–4 CTCAE) reported in 41% of pts: neutropenia (29%), thrombocytopenia (17%), anemia (9%).

Infections including upper respiratory tract infection, UTI, pneumonia, skin infection, sinusitis were reported. Hemorrhagic events including epistaxis, GI bleeding, hematuria, intracranial hemorrhage, subdural hematoma reported in 5% of pts. Serious and fatal cases of renal toxicity reported: increased serum creatinine 1.5 times upper limit of normal (ULN) (67% of pts), increased serum creatinine 1.53 times ULN (9% of pts). Second primary malignancies including skin cancer (4%), other carcinomas (1%) occurred.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline vital signs, CBC, serum chemistries, LFT, PT/INR if on anticoagulants. Question history of arrhythmias, HE, GI bleed, hepatic/renal impairment, peripheral edema, pulmonary disease. Obtain negative urine pregnancy before initiating treatment. Assess hydration status. Receive full medication history including herbal products. Assess skin for open/unhealed wounds, lesions, moles. Conduct baseline neurologic exam. Offer emotional support.

INTERVENTION/EVALUATION

Monitor CBC monthly; LFT, serum chemistries, renal function routinely. Monitor stool frequency, consistency, characteristics. Immediately report hemorrhagic events: epistaxis, hematuria, hemoptysis, melena. Encourage PO intake. Obtain ECG for arrhythmias, dyspnea, palpitations. Screen for possible intracranial hemorrhage: altered mental status, aphasia, hemiparesis, unequal pupils, homonymous hemianopsia (blindness of one half of vision on same side of both eyes). Monitor for renal toxicity (anuria, hypertension, generalized edema, flank pain). Assess skin for new lesions.

PATIENT/FAMILY TEACHING

- Blood levels will be monitored routinely.
- Difficulty breathing, fever, cough, burning with urination, body aches, chills may indicate acute infection.
- Avoid pregnancy.
- Report any black/tarry

stools, bruising, nausea, RUQ abdominal pain, yellowing of skin or eyes, palpitations, nose bleeds, blood in urine or stool, decreased urine output.

- Avoid alcohol.
- Do not take herbal products.
- Do not ingest grapefruit products.
- Severe diarrhea may lead to dehydration.
- Contact physician before any planned surgical/dental procedures.
- Immediately report neurological changes: confusion, one-sided paralysis, difficulty speaking, partial blindness.
- Do not receive live vaccines.
- Do not break, crush, or open capsule.

ibuprofen

eye-bue-**pro**-fen

(Advil, Caldolor, Motrin, NeoProfen)

BLACK BOX ALERT Increased risk of serious cardiovascular thrombotic events, including myocardial infarction, CVA. Contraindicated in setting of CABG surgery. Increased risk of severe GI reactions, including ulceration, bleeding, perforation.

Do not confuse Motrin with Neurontin or Advil with Aleve.

FIXED-COMBINATION(S)

Children's Advil Cold: ibuprofen/pseudoephedrine (a nasal decongestant): 100 mg/15 mg per 5 mL. **Combunox:** ibuprofen/oxyCODONE (a narcotic analgesic): 400 mg/5 mg. **Duexis:** ibuprofen/famotidine (an H₂ antagonist): 800 mg/26.6 mg. **Reprexain CIII:** ibuprofen/HYDROcodone (a narcotic analgesic): 200 mg/5 mg. **Vicoprofen:** ibuprofen/HYDROcodone (a narcotic analgesic): 200 mg/7.5 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: NSAID.

CLINICAL: Antirheumatic, analgesic, antipyretic, antidysmenorrheal, vascular headache suppressant.

USES

Oral: Treatment of fever, inflammatory disease, and rheumatoid disorders, osteoarthritis, mild to moderate pain, primary dysmenorrhea. **Caldolor:** Mild to moderate pain; severe pain in combination with an opioid analgesic; fever. **NeoProfen:** To close a clinically significant patent ductus arteriosus (PDA) in premature infants weighing between 500 and 1,500 g who are no more than 32 wks gestational age when usual medical management is ineffective.

OFF-LABEL: Treatment of cystic fibrosis, pericarditis. Juvenile idiopathic arthritis.

PRECAUTIONS

Contraindications: History of hypersensitivity to ibuprofen, aspirin, other NSAIDs. Treatment of perioperative pain in coronary artery bypass graft (CABG) surgery. Aspirin triad (bronchial asthma, aspirin intolerance, rhinitis). **NeoProfen:** Preterm neonates with proven or suspected untreated infection, elevated total bilirubin, congenital heart disease in whom patency of the patent ductus arteriosus is necessary for satisfactory pulmonary or systemic blood flow (e.g., pulmonary atresia), bleeding, thrombocytopenia, coagulation defects, proven or suspected necrotizing enterocolitis, significant renal impairment. **Cautions:** Pts with fluid retention, HF, dehydration, coagulation disorders, concurrent use with aspirin, anticoagulants, steroids; history of GI disease (e.g., bleeding, ulcers), smoking, use of alcohol, elderly, debilitated pts, hepatic/renal impairment, asthma.

ACTION

Reversibly inhibits COX-1 and COX-2 enzymes, resulting in decreased formation of prostaglandin precursors. **Therapeutic Effect:** Produces analgesic, anti-inflammatory effects; decreases fever.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (analgesic)	0.5 hr	N/A	4–6 hrs
PO (antirheumatic)	2 days	1–2 wks	N/A

Rapidly absorbed from GI tract. Protein binding: 90%–99%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2–4 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Avoid use during third trimester (may adversely affect fetal cardiovascular system: premature closure of ductus arteriosus). **Children:** Safety and efficacy not established in pts younger than 6 mos. **Elderly:** GI bleeding, ulceration more likely to cause serious adverse effects. Age-related renal impairment may increase risk of hepatic/renal toxicity; reduced dosage recommended.

INTERACTIONS

DRUG: May decrease effects of **anti-hypertensives** (e.g., **amLODIPine**, **lisinopril**, **valsartan**), **diuretics** (e.g., **furosemide**). **Aspirin**, other **salicylates** may increase risk of GI side effects, bleeding. May increase effect of **apixaban**, **dabigatran**, **edoxaban**, **rivaroxaban**, **warfarin**. **Bile acid sequestrants** (e.g., **cholestyramine**) may decrease absorption/effect. May increase nephrotoxic effect of **cycloSPORINE**. May increase concentration, risk of toxicity of **lithium**, **methotrexate**. **HERBAL:** **Glucosamine**, herbs with **anticoagulant/antiplatelet properties** (e.g., **garlic**, **ginger**, **ginseng**, **ginkgo biloba**) may increase concentration/effect. **FOOD:** None known. **LAB VALUES:** May prolong bleeding time. May alter serum glucose level. May increase serum BUN, creatinine, potassium, ALT, AST. May decrease serum calcium, glucose; Hgb, Hct, platelets.

AVAILABILITY (Rx)

Capsules: 200 mg. **Injection, Solution:** (**NeoProfen**): 10 mg/mL. (**Caldolor**): 100 mg/mL. **Suspension, Oral:** 100 mg/5 mL. **Suspension, Oral Drops:** 40 mg/mL. **Tablets:** 200 mg, 400 mg, 600 mg, 800 mg. **Tablets, Chewable:** 100 mg.

ADMINISTRATION/HANDLING

 **IV (Caldolor)**

Reconstitution • Dilute with D₅W or 0.9% NaCl to final concentration of 4 mg/mL or less.

Rate of administration • Infuse over at least 30 min.

Storage • Store at room temperature. • Stable for 24 hrs after dilution.

 **IV (Neoprofen)**

Reconstitution • Dilute to appropriate volume with D₅W or 0.9% NaCl. • Discard any remaining medication after first withdrawal from vial.

Rate of administration • Administer via IV port nearest the insertion site. • Infuse continuously over 15 min.

Storage • Store at room temperature. • Stable for 30 min after dilution.

PO

• Give with food, milk, antacids if GI distress occurs.

INDICATIONS/ROUTES/DOSAGE

Fever

PO: ADULTS, ELDERLY: 200–400 mg q4–6h prn. **CHILDREN 12 YRS AND OLDER, ADOLESCENTS:** 200–400 mg q4–6h prn. **Maximum daily dose:** 1,200 mg/day. **CHILDREN 6 MOS AND OLDER:**

Weight		Dosage	
kg	lbs	Age	(mg)
5.4–8.1	12–17	6–11 mos	50
8.2–10.8	18–23	12–23 mos	75
10.9–16.3	24–35	2–3 yrs	100
16.4–21.7	36–47	4–5 yrs	150
21.8–27.2	48–59	6–8 yrs	200
27.3–32.6	60–71	9–10 yrs	250
32.7–43.2	72–95	11 yrs	300

IV: ADULTS, ELDERLY: 400 mg q4–6h or 100–200 mg q4h prn. **Maximum:** 3.2 g/day. **CHILDREN 12–17 YRS:** 400 mg q4–6h prn. **Maximum:** 2,400 mg/day. **CHILDREN 6 MOS–11 YRS:** 10 mg/kg q4–6h prn. **Maximum dose:** 400 mg. **Maximum:** 40 mg/kg up to 2,400 mg/day.

Osteoarthritis, Rheumatoid Disorders

PO: ADULTS, ELDERLY: 400–800 mg 3–4 times/day. **Maximum:** 3.2 g/day.

Pain

PO: ADULTS, ELDERLY: 200–400 mg q4–6h prn. **Maximum:** 3,200 mg/day. **CHILDREN 12 YRS AND OLDER, ADOLESCENTS:** 200–400 mg q4–6h prn. **Maximum daily dose:** 1,200 mg/day. **CHILDREN 6 MOS–11 YRS:** See chart under Fever dosing.

IV: ADULTS, ELDERLY: 400–800 mg q6h prn. **Maximum:** 3.2 g/day. **CHILDREN, ADOLESCENTS: (12–17 yrs):** 400 mg q4–6h prn. **Maximum:** 2,400 mg/day. **(6 MOS–12 YRS):** 10 mg/kg (maximum dose: 400 mg) q4–6h prn. **Maximum:** 40 mg/kg/day or 2,400 mg, whichever is less.

Primary Dysmenorrhea

PO: ADULTS: 200–800 mg q4–6h prn. **Maximum:** 2,400 mg/day.

Patent Ductus Arteriosus (PDA)

IV: INFANTS: Initially, 10 mg/kg followed by 2 doses of 5 mg/kg at 24 hrs and 48 hrs. All doses based on birth weight.

Dosage in Renal Impairment

Hold if anuria or oliguria evident. Avoid use in severe impairment.

Dosage in Hepatic Impairment

Avoid use in severe impairment.

SIDE EFFECTS

Occasional (9%–3%): Nausea, vomiting, dyspepsia, dizziness, rash. **Rare (less than 3%):** Diarrhea or constipation, flatulence, abdominal cramps or pain, pruritus, increased B/P.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose may result in metabolic acidosis. Rare reactions with long-term use include peptic ulcer, GI bleeding, gastritis, severe hepatic reaction (cholestasis, jaundice), nephrotoxicity (dysuria, hematuria, proteinuria, nephrotic syndrome), severe hypersensitivity reaction (particularly in pts with systemic lupus erythematosus or

★ Canadian trade name

 Non-Crushable Drug

 High Alert drug

other collagen diseases). **NeoProfen:** Hypoglycemia, hypocalcemia, respiratory failure, UTI, edema, atelectasis may occur. **Caldolor:** Abdominal pain, anemia, cough, dizziness, dyspnea, edema, hypertension, nausea, vomiting have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain, inflammation. Inspect appearance of affected joints for immobility, deformities, skin condition. Assess temperature. Question medical history as listed in Precautions.

INTERVENTION/EVALUATION

Monitor for evidence of nausea, dyspepsia. Assess skin for rash. Observe for bleeding, bruising, occult blood loss. Evaluate for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength. Monitor for fever.

PATIENT/FAMILY TEACHING

- Avoid aspirin, alcohol during therapy (increases risk of GI bleeding).
- If GI upset occurs, take with food, milk, antacids.
- May cause dizziness.
- Report ringing in ears, persistent stomach pain, respiratory difficulty, unusual bruising/bleeding, swelling of extremities, chest pain/palpitations.

idelalisib

eye-del-a-lis-ib
(Zydelig)

BLACK BOX ALERT ■ Fatal and/or serious hepatotoxicity may occur. Monitor LFT prior to and during treatment. Fatal and/or serious and severe diarrhea or colitis may occur. Monitor for GI symptoms. Fatal and serious pneumonitis may occur. Monitor for pulmonary symptoms and bilateral interstitial infiltrates. Interrupt, then reduce or discontinue treatment if hepatotoxicity, severe diarrhea, or pneumonitis occurs. Fatal and serious intestinal

perforation may occur. Discontinue if perforation suspected.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Phosphatidylinositol 3-kinase inhibitor.
CLINICAL: Antineoplastic.

USES

Treatment of relapsed chronic lymphocytic leukemia (CLL), in combination with ritUXimab, in pts for whom ritUXimab alone would not be considered appropriate therapy due to other comorbidities. Treatment of relapsed follicular B-cell non-Hodgkin's lymphoma (FL) or relapsed small lymphocytic lymphoma (SLL) in pts who have received at least two prior systemic therapies.

PRECAUTIONS

Contraindications: History of serious allergic reactions to idelalisib (e.g., anaphylaxis, toxic epidermal necrolysis). **Cautions:** Baseline anemia, leukopenia, neutropenia, thrombocytopenia; GI bleeding, hepatic impairment. Pts with active infection, high tumor burden. Avoid concomitant use of hepatotoxic or promotility medications.

ACTION

Inhibits phosphatidylinositol 3-kinase, which is highly expressed in malignant lymphoid B cells. Inhibits several cell-signaling pathways, including B-cell receptor signaling and CXCR4 and CXCR5 signaling, which are involved in trafficking B cells to lymph nodes and bone marrow. **Therapeutic Effect:** Inhibits tumor cell growth and metastasis.

PHARMACOKINETICS

Well absorbed following PO administration. Metabolized in liver. Protein binding: 84%. Peak plasma concentration: 1.5 hrs. Excreted in feces (78%), urine (14%). **Half-life:** 8.3 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm; avoid pregnancy. Use effective

contraception during treatment and for at least 1 mo after discontinuation. Unknown if distributed in breast milk. Must either discontinue drug or discontinue breast-feeding. **Children:** Safety and efficacy not established. **Elderly:** May have increased risk of side effects/adverse reactions.

INTERACTIONS

DRUG: Strong CYP3A4 inducers (e.g., carbamazepine, rifampin, phenytoin) may decrease concentration/effect. Strong CYP3A4 inhibitors (clarithromycin, ketoconazole, ritonavir) may increase concentration/effect. May increase adverse effects of natalizumab, vaccines (live). May decrease therapeutic effect of BCG (intravesical), vaccines (live). **HERBAL:** St. John's wort may decrease concentration/effect. Echinacea may decrease therapeutic effect. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, bilirubin, GGT, triglycerides. May decrease Hgb, neutrophils, platelets, serum sodium. May increase or decrease lymphocytes, serum glucose.

AVAILABILITY (Rx)

Tablets: 100 mg, 150 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.
- Swallow tablets whole.

INDICATIONS/ROUTES/DOSAGE

Chronic Lymphocytic Leukemia (in Combination with RiTUXimab), Follicular B-cell Non-Hodgkin's Lymphoma, Small Lymphocytic Lymphoma

PO: ADULTS/ELDERLY: 150 mg twice daily. Continue until disease progression or unacceptable toxicity.

Dose Modification

Hepatotoxicity

Elevated serum ALT, AST 3–5 times upper limit of normal (ULN): Maintain dose. **5–20 times ULN:** Monitor serum ALT, AST wkly. Withhold until ALT, AST less than 1 times ULN, then resume at 100 mg twice daily. **Greater**

than 20 times ULN: Permanently discontinue.

Elevated Serum Bilirubin

1.5–3 times ULN: Monitor serum bilirubin wkly. Maintain dose. **3–10 times ULN:** Monitor serum bilirubin wkly. Withhold until bilirubin less than 1 times ULN, then resume at 100-mg dose. **Greater than 10 times ULN:** Permanently discontinue.

Diarrhea

Moderate diarrhea: Maintain dose. **Severe diarrhea or hospitalization:** Withhold until resolved, then resume at 100-mg dose. **Life-threatening diarrhea:** Permanently discontinue.

Neutropenia

ANC 1,000–1,500 cells/mm³: Maintain dose. **ANC 500–1,000 cells/mm³:** Monitor ANC wkly and maintain dose. **ANC less than 500 cells/mm³:** Permanently discontinue.

Thrombocytopenia

Platelets 50,000–75,000 cells/mm³: Maintain dose. **Platelets 25,000–50,000 cells/mm³:** Monitor platelet count wkly and maintain dose. **Platelets less than 25,000 cells/mm³:** Monitor platelet count wkly. Withhold until platelets greater than 25,000 cells/mm³, then resume at 100-mg dose.

Pneumonitis

Any symptoms: Permanently discontinue.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Use caution. See dose modification.

SIDE EFFECTS

CLL

Frequent (35%–21%): Pyrexia, nausea, diarrhea, chills. **Occasional (10%–5%):** Headache, vomiting, generalized pain, arthralgia, stomatitis, gastric reflux, nasal congestion.

Non-Hodgkin's Lymphoma

Frequent (47%–21%): Diarrhea, fatigue, nausea, cough, pyrexia, abdominal pain, rash.

Occasional (17%–10%): Dyspnea, decreased appetite, vomiting, asthenia, night sweats, insomnia, headache, peripheral edema.

ADVERSE EFFECTS/TOXIC REACTIONS

Thrombocytopenia, neutropenia, leukopenia, lymphopenia are expected responses to therapy, but more severe reactions, including bone marrow failure, febrile neutropenia, may occur. Fatal and/or serious events including hepatotoxicity (14% of pts), severe diarrhea or colitis (14% of pts), hypersensitivity reactions (including anaphylaxis), pneumonitis, intestinal perforation were reported. Neutropenia occurred in 31% of pts, which may greatly increase risk of infection. Severe skin reactions including toxic epidermal necrolysis, generalized rash, exfoliative rash were reported. Other infections may include bronchitis, *C. difficile* colitis, pneumonia, sepsis, UTI. Fatal and/or serious intestinal perforation may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain ANC, CBC, BMP, LFT, PT/INR, vital signs, urine pregnancy. Receive full medication history including herbal products. Question possibility of pregnancy, current breastfeeding status, use of contraceptive measures in female pts of reproductive potential. Question history of hypersensitivity reaction or acute skin reactions to drug class. Perform full dermatologic exam with routine assessment. Offer emotional support.

INTERVENTION/EVALUATION

Diligently monitor blood counts (esp. ANC, CBC, platelet count) frequently. Any interruption of therapy or dosage change may require wkly lab monitoring until symptoms resolve. Obtain *C. difficile* toxin PCR if severe diarrhea occurs. Screen for acute cutaneous reactions, allergic reactions, other acute infections (sepsis, UTI), hepatic impairment, pulmonary events (dyspnea, pneumonitis, pneumonia), or tumor lysis syndrome (electrolyte imbalance, uric acid nephropathy, acute renal

failure). Monitor strict I&O, hydration status, stool frequency and consistency.

PATIENT/FAMILY TEACHING

- Blood levels will be routinely monitored. Any change in dose or interruption of therapy may require blood draws every week.
- Avoid pregnancy; do not breastfeed.
- Report abdominal pain, amber or bloody urine, bruising, black/tarry stools, persistent diarrhea, yellowing of skin or eyes.
- Fever, cough, burning with urination, body aches, chills may indicate acute infection.
- Avoid alcohol.
- Immediately report difficult breathing, severe coughing, chest tightness.
- Therapy may cause severe allergic reactions, intestinal tearing, or skin rashes or severe diarrhea related to an infected colon.
- Do not take any over-the-counter medications including herbal products unless approved by your doctor.

ifosfamide

HIGH ALERT

eye-**fos**-fa-mide
(Ifex)

BLACK BOX ALERT Hemorrhagic cystitis may occur. Severe myelosuppressant. May cause CNS toxicity, including confusion, coma. Must be administered by personnel trained in administration/handling of chemotherapeutic agents. May cause severe nephrotoxicity, resulting in renal failure.

Do not confuse ifosfamide with cyclophosphamide.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkylating agent. **CLINICAL:** Antineoplastic.

USES

Treatment of germ cell testicular carcinoma (used in combination with other chemotherapy agents and with concurrent mesna for prophylaxis of hemorrhagic cystitis). **OFF-LABEL:** Small-cell lung,

non-small-cell lung, ovarian, cervical, bladder cancer; soft tissue sarcomas, Hodgkin's, non-Hodgkin's lymphomas; osteosarcoma; head and neck, Ewing's sarcoma.

PRECAUTIONS

Contraindications: Hypersensitivity to ifosfamide. Urinary outflow obstruction.

Cautions: Renal/hepatic impairment, compromised bone marrow reserve, active urinary tract infection, preexisting cardiac disease, prior radiation therapy. Avoid use in pts with WBCs less than 2,000 cells/mm³ and platelets less than 50,000 cells/mm³.

ACTION

Inhibits DNA, protein synthesis by cross-linking with DNA strands, preventing cell growth. **Therapeutic Effect:** Produces cellular death (apoptosis).

PHARMACOKINETICS

Metabolized in liver. Protein binding: negligible. Crosses blood-brain barrier (to a limited extent). Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 11–15 hrs (high dose); 4–7 hrs (low dose).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. Males must use effective contraception and not conceive a child during treatment and for at least 6 months after discontinuation. May cause fetal harm. Distributed in breast milk. Breastfeeding not recommended. **Children:** Not intended for this pt population. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Bone marrow depressants (e.g., cladribine) may increase myelosuppression. Live virus vaccines may potentiate virus replication, increase vaccine side effects, decrease pt's antibody

response to vaccine. **HERBAL:** Echinacea may decrease therapeutic effect. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, bilirubin, creatinine, uric acid, ALT, AST.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Ifex): 1 g, 3 g. **Injection, Solution:** 50 mg/mL.

ADMINISTRATION/HANDLING

◀ALERT▶ Hemorrhagic cystitis occurs if mesna is not given concurrently. Mesna should always be given with ifosfamide.

Reconstitution • Reconstitute vial with Sterile Water for Injection or Bacteriostatic Water for Injection to provide concentration of 50 mg/mL. Shake to dissolve. • Further dilute with 50–1,000 mL D₅W or 0.9% NaCl to provide concentration of 0.6–20 mg/mL.

Rate of administration • Infuse over minimum of 30 min. • Give with at least 2,000 mL PO or IV fluid (prevents bladder toxicity). • Give with protectant against hemorrhagic cystitis (i.e., mesna).

Storage • Store vials of powder at room temperature. • Refrigerate vials of solution. • After reconstitution with Bacteriostatic Water for Injection, vials and diluted solutions stable for 24 hrs if refrigerated.

IV INCOMPATIBILITIES

Cefepime (Maxipime), methotrexate.

IV COMPATIBILITIES

Granisetron (Kytrel), ondansetron (Zofran).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Dosage individualized based on clinical response, tolerance to adverse effects. When used in combination therapy, consult specific protocols for optimum dosage, sequence of drug administration.

Germ Cell Testicular Carcinoma

IV: ADULTS: 1,200 mg/m²/day for 5 consecutive days. Repeat q3wks or after recovery from hematologic toxicity. Administer with mesna and hydration (to prevent bladder toxicity).

Dosage in Renal/Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (83%–58%): Alopecia, nausea, vomiting. **Occasional (15%–5%):** Confusion, drowsiness, hallucinations, infection.

Rare (less than 5%): Dizziness, seizures, disorientation, fever, malaise, stomatitis (mucosal irritation, glossitis, gingivitis).

ADVERSE EFFECTS/TOXIC REACTIONS

Hemorrhagic cystitis with hematuria, dysuria occurs frequently if protective agent (mesna) is not used. Myelosuppression (leukopenia, thrombocytopenia) occurs frequently. Pulmonary toxicity, hepatotoxicity, nephrotoxicity, cardiotoxicity, CNS toxicity (confusion, hallucinations, drowsiness, coma) may require discontinuation of therapy.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain urinalysis before each dose. If hematuria occurs (greater than 10 RBCs per field), therapy should be withheld until resolution occurs. Obtain WBC, platelet count, Hgb before each dose. Offer emotional support.

INTERVENTION/EVALUATION

Monitor hematologic studies, urinalysis, renal function, LFT. Assess for fever, sore throat, signs of local infection, unusual bruising/bleeding from any site, symptoms of anemia (excessive fatigue, weakness). Monitor for toxicities.

PATIENT/FAMILY TEACHING

- Alopecia is reversible, but new hair growth may have a different color or texture.
- Drink plenty of fluids (protects against cystitis).
- Do not have immuni-

zations without physician's approval (drug lowers resistance).

- Avoid contact with those who have recently received live virus vaccine.
- Avoid crowds, those with infections.
- Report unusual bleeding/bruising, fever, chills, sore throat, joint pain, sores in mouth or on lips, yellowing skin or eyes.

iloperidone

eye-loe-per-i-doan

(Fanapt, Fanapt Titration Pack)

BLACK BOX ALERT Elderly pts with dementia-related psychosis are at increased risk for mortality due to cerebrovascular events.

Do not confuse iloperidone with amiodarone or dronedarone.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Second-generation (atypical) antipsychotic.

CLINICAL: Antipsychotic.

USES

Acute treatment of schizophrenia in adults.

PRECAUTIONS

Contraindications: Hypersensitivity to iloperidone. **Cautions:** Cardiovascular disease (HF, history of MI, ischemia, cardiac conduction abnormalities), cerebrovascular disease (increases risk of CVA in pts with dementia, seizure disorders). Pts at risk for orthostatic hypotension. Pts with bradycardia, hypokalemia, hypomagnesemia may be at greater risk for torsades de pointes. History of seizures, conditions lowering seizure threshold, high risk of suicide, risk of aspiration pneumonia, congenital QT syndrome, concurrent use of medications that prolong QT interval, decreased GI motility, urinary retention, BPH, xerostomia, visual problems, hepatic impairment, narrow-angle glaucoma, diabetes, elderly.

ACTION

Mixed combination of DOPamine type 2 (D_2) and serotonin type 2 ($5-HT_2$) antagonisms (thought to improve negative symptoms of psychosis). **Therapeutic Effect:** Diminishes symptoms of schizophrenia and reduces incidence of extrapyramidal side effects.

PHARMACOKINETICS

Steady-state concentration occurs in 3–4 days. Well absorbed from GI tract (unaffected by food). Protein binding: 95%. Metabolized in liver. Primarily excreted in urine, with a lesser amount excreted in feces. **Half-life:** 18–33 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is excreted in breast milk. Breastfeeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** More susceptible to postural hypotension. Increased risk of cerebrovascular events, mortality, including stroke in elderly pts with psychosis.

INTERACTIONS

DRUG: Alcohol, CNS depressants (e.g., diphenhydramine, lorazepam, morphine) may increase CNS depression. Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole, ritonavir), strong CYP2D6 inhibitors (e.g., fluoxetine, paroxetine) may increase concentration/effect. Medications causing prolongation of QT interval (e.g., amiodarone, dofetilide, sotalol) may increase effects on cardiac conduction, leading to malignant arrhythmias (torsades de pointes). **HERBAL:** Herbals with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum prolactin levels.

AVAILABILITY (Rx)

Tablets: 1 mg, 2 mg, 4 mg, 6 mg, 8 mg, 10 mg, 12 mg.

ADMINISTRATION/HANDLING**PO**

• Give without regard to food. • Tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Note: Titrate to the proper dose range with dosage adjustments not to exceed 2 mg twice daily (4 mg/day).

Schizophrenia

PO; ADULTS: To avoid orthostatic hypotension, begin with 1 mg twice daily, then adjust dosage to 2 mg twice daily, 4 mg twice daily, 6 mg twice daily, 8 mg twice daily, 10 mg twice daily, and 12 mg twice daily on days 2, 3, 4, 5, 6, and 7, respectively, to reach target daily dose of 12–24 mg/day in 2 divided doses. **Note:** Reduce dose by 50% when receiving strong CYP2D6 or CYP3A4 inhibitors or poor metabolizers of CYP2D6 (see Interactions).

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild impairment: No adjustment. **Moderate impairment:** Use caution. **Severe impairment:** Not recommended.

SIDE EFFECTS

Frequent (20%–12%): Dizziness, drowsiness, tachycardia. **Occasional (10%–4%):** Nausea, dry mouth, nasal congestion, weight increase, diarrhea, fatigue, orthostatic hypotension. **Rare (3%–1%):** Arthralgia, musculoskeletal stiffness, abdominal discomfort, nasopharyngitis, tremor, hypotension, rash, ejaculatory failure, dyspnea, blurred vision, lethargy.

ADVERSE EFFECTS/TOXIC REACTIONS

Extrapyramidal disorders, including tardive dyskinesia (protrusion of tongue, puffing of cheeks, chewing/puckering of the mouth), occur in 4% of pts. Upper respiratory infection occurs in 3% of pts. QT interval prolongation may produce torsades de pointes, a form of ventricular tachycardia. Neuroleptic malignant syndrome (e.g., hyperpyrexia, muscle rigidity, altered mental status, irregular pulse or B/P) has been noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess pt's behavior, appearance, emotional status, response to environment, speech pattern, thought content. ECG should be obtained to assess for QT prolongation before instituting medication. Question medical history as listed in Precautions.

INTERVENTION/EVALUATION

Monitor for orthostatic hypotension; assist with ambulation. Monitor for fine tongue movement (may be first sign of tardive dyskinesia, possibly irreversible). Monitor serum potassium, magnesium in pts at risk for electrolyte disturbances. Assess for therapeutic response (greater interest in surroundings, improved self-care, increased ability to concentrate, relaxed facial expression).

PATIENT/FAMILY TEACHING

- Avoid tasks that require alertness, motor skills until response to drug is established.
- Be alert to symptoms of orthostatic hypotension; slowly go from lying to standing.
- Report if feeling faint, if experiencing heart palpitations, or if fever or muscle rigidity occurs.
- Report extrapyramidal symptoms (e.g., involuntary muscle movements, tics) immediately.

imatinib

TOP
100 HIGH
ALERT

im-at-in-ib
(Gleevec)

Do not confuse imatinib with dasatinib, erlotinib, lapatinib, nilotinib, SORafenib, or SUNItinib.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: BCR-ABL tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic.

USES

Newly diagnosed chronic-phase Philadelphia chromosome positive chronic myeloid leukemia (Ph+ CML) in children and adults. Pts in blast crisis, accelerated phase, or chronic phase Ph+ CML who have already failed interferon therapy. Adults with relapsed or refractory Ph+ acute lymphoblastic leukemia (ALL). Treatment in children with Ph+ ALL. Adults with myelodysplastic/myeloproliferative disease (MDS/MPD) associated with platelet-derived growth factor receptor (PDGFR) gene rearrangements. Adults with aggressive systemic mastocytosis (ASM) without mutation of the D816V c-Kit or unknown mutation status of the c-Kit. Adults with hypereosinophilic syndrome (HES) and/or chronic eosinophilic leukemia (CEL) with positive, negative, or unknown FIP1L1-PDGFR fusion kinase. Adults with dermatofibrosarcoma protuberans (DFSP) that is unresectable, recurrent, and/or metastatic. Pts with malignant gastrointestinal stromal tumors (GIST) that are unresectable and/or metastatic. Prevention of cancer recurrence in pts following surgical removal of GIST. **OFF-LABEL:** Treatment of desmoid tumors (soft tissue sarcoma). Post-stem cell transplant (allogeneic), follow-up treatment in recurrent CML. Treatment of advanced or metastatic melanoma.

PRECAUTIONS

Contraindications: Hypersensitivity to imatinib. **Cautions:** Hepatic/renal impairment, thyroidectomy pts, hypothyroidism, gastric surgery pts. Pts in whom fluid accumulation is poorly tolerated (e.g., HF, hypertension, pulmonary disease).

ACTION

Inhibits Bcr-Abl tyrosine kinase, an enzyme created by Philadelphia chromosome abnormality found in pts with chronic myeloid leukemia. **Therapeutic Effect:** Blocks tumor cell proliferation and induces cellular death (apoptosis).

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: 95%. Metabolized in liver. Eliminated in feces (68%), urine (13%). **Half-life:** 18 hrs; metabolite, 40 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Breastfeeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** Increased frequency of fluid retention.

INTERACTIONS

DRUG: CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole, ritonavir) may increase concentration/effect. **Bone marrow depressants** (e.g., cladribine) may increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. May decrease effect of warfarin. **HERBAL:** Echinacea may decrease therapeutic effect. St. John's wort decreases concentration. **FOOD:** Grapefruit products may increase concentration. **LAB VALUES:** May increase serum bilirubin, ALT, AST, creatinine. May decrease platelet count, RBC, WBC count; serum potassium, albumin, calcium.

AVAILABILITY (Rx)

Tablets: 100 mg, 400 mg.

ADMINISTRATION/HANDLING

PO

• Give with a meal and large glass of water. • Tablets may be dispersed in water or apple juice (stir until dissolved; give immediately). Do not crush or chew tablets.

INDICATIONS/ROUTES/DOSAGE

Ph+ Chronic Myeloid Leukemia (CML) (Chronic Phase)

PO: ADULTS, ELDERLY: 400 mg once daily; may increase to 600 mg/day. **Maximum:** 800 mg. **CHILDREN:** 340 mg/m²/day. **Maximum:** 600 mg.

Ph+ CML (Accelerated Phase)

PO: ADULTS, ELDERLY: 600 mg once daily. May increase to 800 mg/day in 2 divided doses (400 mg twice daily). **CHILDREN:** 340 mg/m²/day. **Maximum:** 600 mg.

Ph+ Acute Lymphoblastic Leukemia (ALL)

PO: ADULTS, ELDERLY: 600 mg once daily.

Gastrointestinal Stromal Tumors (GIST) (Following Complete Resection)

PO: ADULTS, ELDERLY: 400 mg once daily for 3 yrs.

GIST (Unresectable)

PO: ADULTS, ELDERLY: 400 mg once daily. May increase up to 400 mg twice daily.

Aggressive Systemic Mastocytosis (ASM) with Eosinophilia

PO: ADULTS, ELDERLY: Initially, 100 mg/day. May increase up to 400 mg/day.

ASM Without Mutation of the D816V C-Kit or Unknown Mutation Status of C-Kit

PO: ADULTS, ELDERLY: 400 mg once daily.

Dermatofibrosarcoma Protuberans (DFSP)

PO: ADULTS, ELDERLY: 400 mg twice daily.

**Hypereosinophilic Syndrome (HES)/
Chronic Eosinophilic Leukemia (CEL)****PO: ADULTS, ELDERLY:** 400 mg once daily.**HES/CEL with Positive or Unknown
FIP1L1-PDGFR Fusion Kinase****PO: ADULTS, ELDERLY:** Initially, 100 mg/day. May increase up to 400 mg/day.**Myelodysplastic/Myeloproliferative
Disease (MDS/MPD)****PO: ADULTS, ELDERLY:** 400 mg once daily.**Usual Dosage for Children (2 Yrs and
Older)****Ph+ CML (Chronic Phase, Recurrent, or
Resistant)****PO:** 340 mg/m²/day. **Maximum:** 600 mg/day.**Ph+ CML (Chronic Phase, Newly
Diagnosed, Ph+ ALL)****PO:** 340 mg/m²/day. **Maximum:** 600 mg/day.**Dosage with Strong CYP3A4 Inducers**

Increase dose by 50% with careful monitoring.

Dosage in Renal Impairment**Creatinine****Clearance** **Maximum Dose**

40–59 mL/min	600 mg
20–39 mL/min	400 mg
Less than 20 mL/min	100 mg

Dosage in Hepatic Impairment**Mild to moderate impairment:** No adjustment. **Severe impairment:** Reduce dosage by 25%.**SIDE EFFECTS****Frequent (68%–24%):** Nausea, diarrhea, vomiting, headache, fluid retention, rash, musculoskeletal pain, muscle cramps, arthralgia. **Occasional (23%–10%):** Abdominal pain, cough, myalgia, fatigue, fever, anorexia, dyspepsia, constipation, night sweats, pruritus, dizziness, blurred vision,somnia. **Rare (less than 10%):** Nasopharyngitis, petechiae, asthenia, epistaxis.**ADVERSE EFFECTS/TOXIC
REACTIONS**

Severe fluid retention (pleural effusion, pericardial effusion, pulmonary edema, ascites), hepatotoxicity occur rarely. Neutropenia, thrombocytopenia are expected responses to the therapy. Respiratory toxicity is manifested as dyspnea, pneumonia. Heart damage (left ventricular dysfunction, HF) may occur.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain baseline CBC, serum chemistries, renal function test. Monitor LFT before beginning treatment, monthly thereafter. Offer emotional support.

INTERVENTION/EVALUATION

Assess periorbital area, lower extremities for early evidence of fluid retention. Monitor for unexpected, rapid weight gain. Offer antiemetics to control nausea, vomiting. Monitor daily pattern of bowel activity, stool consistency. Monitor CBC wkly for first mo, biweekly for second mo, periodically thereafter for evidence of neutropenia, thrombocytopenia; assess hepatic function tests for hepatotoxicity. Monitor renal function, serum electrolytes. Duration of neutropenia or thrombocytopenia ranges from 2–4 wks.

PATIENT/FAMILY TEACHING

- Avoid crowds, those with known infection.
- Avoid contact with anyone who recently received live virus vaccine; do not receive vaccinations.
- Take with food and a full glass of water.
- Avoid grapefruit products.
- Report chest pain, swelling of extremities, weight gain greater than 5 lb, easy bruising/bleeding.
- Avoid tasks that require alertness, motor skills until response to drug is established.

immune globulin IV (IGIV)

im-mune glob-u-lin

(Bivigam, Carimune NF, Flebogamma DIF, Gammagard Liquid, Gammagard S/D, Gammaplex, Gamunex-C, Hizentra, Octagam 5%, Privigen)

BLACK BOX ALERT Acute renal impairment characterized by increased serum creatinine, oliguria, acute renal failure, osmotic nephrosis, particularly pts with any degree of renal insufficiency, diabetes mellitus, volume depletion, sepsis, and those older than age 65 yrs. Thrombosis may occur (administer at the minimum dose and minimum infusion rate; ensure adequate hydration).

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Immune globulin, blood product. **CLINICAL:** Immunizing agent.

USES

Treatment of pts with primary humoral immunodeficiency syndromes, acute/chronic immune idiopathic thrombocytopenic purpura (ITP), prevention of coronary artery aneurysms associated with Kawasaki disease, prevention of recurrent bacterial infections in pts with hypogammaglobulinemia associated with B-cell chronic lymphocytic leukemia (CLL). Treatment of chronic inflammatory demyelinating polyneuropathies. Provide passive immunity in pts with hepatitis A, measles, rubella, varicella. **OFF-LABEL:** Guillain-Barré syndrome; myasthenia gravis; prevention of acute infections in immunosuppressed pts; prevention, treatment of infection in high-risk, preterm, low-birth-weight neonates; treatment of multiple sclerosis, HIV-associated thrombocytopenia.

PRECAUTIONS

Contraindications: Hypersensitivity to immune globulin. Selective IgA defi-

ciency, hyperprolinemia (Hizentra, Privigen), severe thrombocytopenia, coagulation disorders where IM injections contraindicated. Hypersensitivity to corn (Octagam); infants/neonates for whom sucrose or fructose tolerance has not been established (Gammaplex). **Cautions:** Cardiovascular disease, history of thrombosis, renal impairment.

ACTION

Replacement therapy for primary/secondary immunodeficiencies and IgG antibodies against bacteria, viral antigens; interferes with receptors on cells of reticuloendothelial system for autoimmune cytopenias/idiopathic thrombocytopenia purpura (ITP); increases antibody titer and antigen-antibody reaction potential. **Therapeutic Effect:** Provides passive immunity replacement for immunodeficiencies, increases antibody titer.

PHARMACOKINETICS

Evenly distributed between intravascular and extravascular space. **Half-life:** 21–23 days.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Live virus vaccines may increase vaccine side effects, potentiate virus replication, decrease pt's antibody response to vaccine. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: (*Carimune NF*): 3 g, 6 g, 12 g. (*Gammagard S/D*): 5 g, 10 g. **Injection, Solution:** (*Bivigam 10%*, *Flebogamma DIF 5%*, *10%*, *Gammagard Liquid 10%*, *Gammaplex 5%*, *Gamunex-C 10%*, *Octagam 5%*, *Privigen 10%*).

ADMINISTRATION/HANDLING

◀ALERT▶ Monitor vital signs, B/P diligently during and immediately after IV administration (precipitous fall in B/P may indicate anaphylactic reaction). Stop infusion immediately. EPINEPHrine should be readily available.

Reconstitution • Reconstitute only with diluent provided by manufacturer. • Discard partially used or turbid preparations.

Rate of administration • Give by infusion only. • After reconstitution, administer via separate tubing. • Rate of infusion varies with product used.

Storage • Refer to individual IV preparations for storage requirements, stability after reconstitution.

IV INCOMPATIBILITIES

Do not mix with any other medications.

INDICATIONS/ROUTES/DOSAGE**Primary Immunodeficiency Syndrome**

IV: ADULTS, ELDERLY, CHILDREN: (*Privigen*): 200–800 mg/kg q3–4wks. (*Carium NF*): 400–800 mg/kg q3–4 wks. (*Flebogamma DIF, Gammagard, Gamunex-C, Octagam*): 300–600 mg/kg/q3–4wks. (*Bivigam, Gammaplex*): 300–800 mg/kg q3–4wks.

Idiopathic Thrombocytopenic Purpura (ITP)

IV: ADULTS, ELDERLY, CHILDREN: (*Carium NF*): 400 mg/kg/day for 2–5 days. **Maintenance:** 400–1,000 mg/kg/dose to maintain platelet count or control bleeding. (*Gammagard*): 1,000 mg/kg: up to 3 total doses may be given on alternate days based on pt response and/or platelet count. (*Gammaplex, Octagam, Flebogamma DIF*): 1,000 mg/kg once daily for 2 consecutive days.

Kawasaki Disease

Note: Must be used with aspirin.

IV: CHILDREN: (*Gammagard*): 1,000 mg/kg as single dose or 400 mg/kg/day

for 4 consecutive days. Begin within 7 days of onset of fever. **American Heart Association guidelines:** 2,000 mg/kg as a single dose given over 10–12 hrs within 10 days of disease onset.

Chronic Lymphocytic Leukemia (CLL)

IV: ADULTS, ELDERLY, CHILDREN: (*Gammagard*): 400 mg/kg/dose q3–4wks.

Chronic Inflammatory Demyelinating Polyneuropathy

IV: ADULTS, ELDERLY, CHILDREN: (*Gamunex-C*): **Loading Dose:** 2 g/kg divided over 2–4 days (consecutive). **Maintenance:** 1 g/kg/day q3wks or 500 mg/kg for 2 consecutive days q3wks. (*Privigen*): **Loading Dose:** 2 g/kg in divided doses over 2–5 consecutive days. **Maintenance:** 1 g/kg q3wks or 500 mg/kg for 2 consecutive days q3wks.

Dosage in Renal Impairment

Caution when giving IV.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Tachycardia, backache, headache, arthralgia, myalgia. **Occasional:** Fatigue, wheezing, injection site rash/pain, leg cramps, urticaria, bluish color of lips/nailbeds, light-headedness.

ADVERSE EFFECTS/TOXIC REACTIONS

Anaphylactic reactions occur rarely, but incidence increases with repeated injections. EPINEPHrine should be readily available. Overdose may produce chest tightness, chills, diaphoresis, dizziness, facial flushing, nausea, vomiting, fever, hypotension. Hypersensitivity reaction (anxiety, arthralgia, dizziness, flushing, myalgia, palpitations, pruritus) occurs rarely.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Inquire about exposure history to disease for pt/family as appropriate. Have

EPINEPHrine readily available. Pt should be well hydrated prior to administration.

INTERVENTION/EVALUATION

Control rate of IV infusion carefully; too-rapid infusion increases risk of precipitous fall in B/P, signs of anaphylaxis (facial flushing, chest tightness, chills, fever, nausea, vomiting, diaphoresis). Assess pt closely during infusion, esp. first hr; monitor vital signs continuously. Stop infusion if aforementioned signs noted. For treatment of idiopathic thrombocytopenic purpura (ITP), monitor platelet count.

PATIENT/FAMILY TEACHING

- Explain rationale for therapy.
- Report sudden weight gain, fluid retention, edema, decreased urine output, shortness of breath.

indacaterol/ glycopyrrolate

in-da-ka-ter-ol/glye-koe-pir-oh-late
(Utibron Neohaler, Ultibro
Breezhaler )

BLACK BOX ALERT Long-acting beta₂-adrenergic agonists (LABAs) have an increased risk of asthma-related deaths. Not indicated for treatment of asthma.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Beta₂-adrenergic agonist, anticholinergic.

CLINICAL: Bronchodilator.

USES

Long-term maintenance treatment of airflow obstruction in pts with chronic obstructive pulmonary disease (COPD), including chronic bronchitis and emphysema.

PRECAUTIONS

ALERT Not indicated for the treatment of asthma, acute exacerbations of COPD.

Contraindications: Hypersensitivity to indacaterol. Monotherapy in treatment of asthma. **Cautions:** Cardiovascular disease (coronary insufficiency, arrhythmias, hypertension, history of hypersensitivity to sympathomimetics), seizure disorders, hyperthyroidism, hypokalemia, diabetes. May cause paradoxical bronchospasm, severe asthma.

ACTION

Indacaterol: Stimulates beta₂-adrenergic receptors in lungs, resulting in relaxation of bronchial smooth muscle. **Glycopyrrolate:** Inhibits action of acetylcholine at muscarinic receptor. **Therapeutic Effect:** Relieves bronchospasm, reduces airway resistance, improves bronchodilation.

PHARMACOKINETICS

Extensive activation of systemic beta₂-adrenergic receptors; acts primarily in lungs. Protein binding: 94%–95%. Metabolized in liver. Steady-state level: 12–15 days. Primarily excreted in feces. **Half-life:** 45–126 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to tremor, tachycardia due to age-related increased sympathetic sensitivity.

INTERACTIONS

DRUG: Acridinium, ipratropium, tiotropium, umeclidinium may increase anticholinergic effect. **Beta blockers** (e.g., atenolol, carvedilol, metoprolol) may decrease therapeutic effect. May increase concentration/effects of **corticosteroids** (e.g., dexamethasone, prednisONE), **loop diuretics** (e.g., bumetanide, furosemide), **thiazide/thiazide-like diuretics** (e.g., hydroCHLORothiazide). **QT interval-prolonging drugs** (e.g., amiodarone, ciprofloxacin, haloperidol), **MAOIs** (e.g., phenelzine, selegiline) may increase concentration/effect.

HERBAL: None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum potassium. May increase serum glucose.

AVAILABILITY (Rx)

Capsule for Inhalation: (indacaterol/glycopyrrolate) 27.5 mcg/15.6 mcg.

ADMINISTRATION/ HANDLING

Inhalation

- Do not shake or prime.
- Open cap of Neohaler by pulling upward, then open mouthpiece.
- Remove capsule from blister package and place in center of chamber. Firmly close until click is heard.
- Hold inhaler upright and pierce capsule by pressing side buttons once only.
- Instruct pt to exhale completely. Place mouthpiece into mouth, close lips, and inhale quickly and deeply through mouth (this causes capsule to spin, dispensing the drug). A slight whirring noise should occur. If not, this may indicate capsule is stuck. Gently tap inhaler to loosen and reattempt.
- Pt should hold breath as long as possible before exhaling.
- Check capsule to ensure that all the powder is gone. Instruct pt to reinhale if powder remains.

Storage • Store at room temperature. • Maintain capsules within individual blister pack until time of use. • Do not store capsules in Neohaler device.

INDICATIONS/ROUTES/ DOSAGE

Maintenance Therapy and Prevention of COPD

Inhalation: ADULTS, ELDERLY: 1 capsule inhaled twice daily.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (7%–5%): Cough, nasopharyngitis, headache. **Rare (2%):** Oropharyngeal pain, nausea.

ADVERSE EFFECTS/TOXIC REACTIONS

Peripheral edema, diabetes mellitus, hyperglycemia, sinusitis, URI reported in greater than 2% of pts. Excessive sympathomimetic stimulation, hypokalemia may produce palpitations, arrhythmias, angina pectoris, tachycardia, muscle cramps, weakness. Hyperglycemia symptoms present with increased thirst, polyuria, dry mouth, drowsiness/confusion, blurred vision. Severe shortness of breath may indicate paradoxical bronchospasm, deteriorating COPD. Serious asthma-related events, including death, reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess rate, depth, rhythm, type of respirations. Monitor ECG, serum potassium, ABG determinations, O₂ saturation, pulmonary function test. Assess lung sounds for wheezing (bronchoconstriction), rales. Obtain baseline electrolytes, blood glucose. Receive full medication history and screen for possible drug interactions. Question for history of asthma, angina pectoris, diabetes, peripheral edema.

INTERVENTION/EVALUATION

Routinely monitor serum electrolytes, blood glucose, O₂ saturation. Recommend discontinuation of short-acting beta₂-agonists (use only for symptomatic relief of acute respiratory symptoms). Monitor for palpitations, tachycardia, serum hypokalemia. Inspect oropharyngeal cavity for irritation.

PATIENT/FAMILY TEACHING

- Follow manufacturer guidelines for proper use of inhaler.
- Increase fluid intake (decreases lung secretion viscosity).
- Rinse mouth with water after inhalation to decrease mouth/throat irritation.
- Avoid excessive use of caffeine derivatives (chocolate, coffee, tea, cola).
- An immediate cough lasting 15 sec may occur after inhaler use.
- Report any fever, productive cough, body aches, difficulty breathing.

indapamide

in-**dap**-a-mide
(Lozide )

Do not confuse indapamide with Iopidine.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Thiazide.

CLINICAL: Diuretic, antihypertensive.

USES

Management of mild to moderate hypertension. Treatment of edema associated with HE. **OFF-LABEL:** Calcium nephrolithiasis.

PRECAUTIONS

Contraindications: Hypersensitivity to indapamide. Anuria, sulfonamide-derived drugs. **Cautions:** History of hypersensitivity to sulfonamides or thiazide diuretics. Severe renal disease, hepatic impairment, history of gout, prediabetes, diabetes, elderly, severe hyponatremia, elevated serum cholesterol.

ACTION

Diuretic: Blocks reabsorption of water, sodium, potassium at cortical diluting segment of distal renal tubule. **Antihypertensive:** Reduces plasma, extracellular fluid volume, and peripheral vascular resistance by direct effect on blood vessels. **Therapeutic Effect:** Promotes diuresis, reduces B/P.

PHARMACOKINETICS

Almost completely absorbed following PO administration. Protein binding: 71%–79%. Metabolized in liver. Excreted in urine. **Half-life:** 14–18 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to hypotensive, electrolyte effects.

INTERACTIONS

DRUG: May increase risk of lithium toxicity. **Bile acid sequestrants (e.g., cholestyramine)** may decrease absorption/effect. May increase QT interval—prolonging effect of **dofetilide**. May increase the hypokalemic effect of **topiramate**. **HERBAL:** Licorice may increase the hypokalemic effect. **Herbals with hypotensive properties (e.g., garlic, ginger, ginkgo biloba)** or **hypertensive properties (e.g., yohimbe)** may alter effect. **FOOD:** None known. **LAB VALUES:** May increase uric acid, plasma renin activity. May decrease protein-bound iodine; serum calcium, potassium, sodium.

AVAILABILITY (Rx)

Tablets: 1.25 mg, 2.5 mg.

ADMINISTRATION/ HANDLING

PO

- Give with food, milk if GI upset occurs, preferably with breakfast (may prevent nocturia).

INDICATIONS/ROUTES/ DOSAGE

Edema

PO: ADULTS: Initially, 2.5 mg/day, may increase to 5 mg/day after 1 wk.

Hypertension

PO: ADULTS, ELDERLY: Initially, 1.25 mg. May increase to 2.5 mg/day after 4 wks or 5 mg/day after additional 4 wks. Usual dose: 1.25–2.5 mg/day.

Dosage in Renal/Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (5% and greater): Fatigue, paresthesia of extremities, tension, irritability, agitation, headache, dizziness, lightheadedness, insomnia, muscle cramps. **Occasional (less than 5%):** Urinary frequency, urticaria, rhinorrhea, flushing, weight loss, orthostatic hypotension,

depression, blurred vision, nausea, vomiting, diarrhea, constipation, dry mouth, impotence, rash, pruritus.

ADVERSE EFFECTS/TOXIC REACTIONS

Vigorous diuresis may lead to profound water and electrolyte depletion, resulting in hypokalemia, hyponatremia, dehydration. Acute hypotensive episodes may occur. Hyperglycemia may be noted during prolonged therapy. Pancreatitis, blood dyscrasias, pulmonary edema, allergic pneumonitis, dermatologic reactions occur rarely. Overdose can lead to lethargy, coma without changes in electrolytes or hydration.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain vital signs, esp. B/P for hypotension, before administration. Assess baseline electrolytes, particularly hypokalemia. Observe for edema; assess skin turgor, mucous membranes for hydration status. Assess muscle strength, mental status. Note skin temperature, moisture. Obtain baseline weight.

INTERVENTION/EVALUATION

Continue to monitor B/P, vital signs, electrolytes, I&O, weight. Note extent of diuresis. Watch for electrolyte disturbances (hypokalemia may result in weakness, tremor, muscle cramps, nausea, vomiting, altered mental status, tachycardia; hyponatremia may result in confusion, thirst, cold/clammy skin).

PATIENT/FAMILY TEACHING

- Expect increased frequency, volume of urination (diminishes with long-term use).
- To reduce hypotensive effect, go slowly from lying to standing.
- Eat foods high in potassium such as whole grains (cereals), legumes, meat, bananas, apricots, orange juice, potatoes (white, sweet), raisins.
- Take early in the day to avoid nocturia.

indomethacin

in-doe-meth-a-sin
(Indocin, Tivorbex)

BLACK BOX ALERT ■ Increased risk of serious cardiovascular thrombotic events, including myocardial infarction, CVA. Increased risk of severe GI reactions, including ulceration, bleeding, perforation.

Do not confuse Indocin with Imodium, Minocin, or Vicodin.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: NSAID.
CLINICAL: Anti-inflammatory, analgesic.

USES

Indocin: Treatment of active stages of rheumatoid arthritis, osteoarthritis, ankylosing spondylitis, acute gouty arthritis. Relieves acute bursitis, tendinitis.
Tivorbex: Treatment of mild to moderate acute pain in adults. **IV:** For closure of hemodynamically significant patent ductus arteriosus of premature infants weighing between 500 and 1,750 g when 48-hr usual medical management is ineffective. **OFF-LABEL:** Management of preterm labor.

PRECAUTIONS

Contraindications: Hypersensitivity to aspirin, indomethacin, other NSAIDs. Perioperative pain in setting of CABG surgery. History of asthma, urticaria, allergic reactions after taking aspirin, other NSAIDs.
Suppositories: History of proctitis, recent rectal bleeding. **Injection:** In preterm infants with untreated/systemic infection or congenital heart disease where patency of PDA necessary for pulmonary or systemic blood flow; bleeding, thrombocytopenia, coagulation defects, necrotizing enterocolitis, significant renal dysfunction. **Cautions:** Cardiac dysfunction, fluid retention, HF, hypertension, renal/hepatic impairment, epilepsy;

concurrent aspirin, steroids, anticoagulant therapy. Treatment of juvenile rheumatoid arthritis in children. History of GI disease (bleeding or ulcers), elderly, debilitated, asthma, depression, Parkinson's disease.

ACTION

Reversibly inhibits COX-1 and COX-2 enzymes. Produces antipyretic, analgesic, anti-inflammatory effects by inhibiting prostaglandin synthesis. **Therapeutic Effect:** Reduces inflammatory response, fever, intensity of pain. Closure of patent ductus arteriosus.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30 min	—	4–6 hrs

Well absorbed from GI tract. Protein binding: 99%. Metabolized in liver. Excreted in urine. **Half-life:** 4.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. Avoid use during third trimester. **Children:** Safety and efficacy not established in those younger than 14 yrs. **Elderly:** Increased risk of serious adverse effects; GI bleeding, ulceration.

INTERACTIONS

DRUG: May increase risk of bleeding; adverse effects of **apixaban, dabigatran, edoxaban, rivaroxaban. Bile acid sequestrants (e.g., cholestyramine)** may decrease absorption/effect. May increase nephrotoxic effect of **cyclosporine**. May increase concentration/effect of **lithium**. May decrease effect of **loop diuretics (e.g., bumetanide, furosemide)**. **HERBAL:** Glucosamine, herbals with anticoagulant/antiplatelet properties (e.g., garlic, ginger, ginseng, ginkgo biloba) may increase concentration/effect. **FOOD:** None known. **LAB VALUES:** May prolong bleeding time. May alter serum glucose.

May increase serum BUN, creatinine, potassium, ALT, AST. May decrease serum sodium, platelet count, leukocytes.

AVAILABILITY (Rx)

Capsules: 25 mg, 50 mg. (*Tivorbex*): 20 mg, 40 mg. **Injection, Powder for Reconstitution: (Indocin IV):** 1 mg. **Oral Suspension: (Indocin):** 25 mg/5 mL. **Suppository:** 50 mg.

 **Capsules, Extended-Release:** 75 mg.

ADMINISTRATION/HANDLING

 IV

Reconstitution • To 1-mg vial, add 1–2 mL preservative-free Sterile Water for Injection or 0.9% NaCl to provide concentration of 1 mg/mL or 0.5 mg/mL, respectively. • Do not further dilute.

Rate of administration • Administer over 20–30 min.

Storage • Use IV solution immediately following reconstitution. • IV solution appears clear; discard if cloudy or precipitate forms. • Discard unused portion.

PO

• Give after meals or with food, antacids. • Do not break, crush, or open extended-release capsule. Swallow whole.

IV INCOMPATIBILITIES

Amino acid injection, calcium gluconate, DOBUTamine (Dobutrex), DOPamine (Intropin), gentamicin (Garamycin), tobramycin (Nebcin).

IV COMPATIBILITIES

Insulin, potassium.

INDICATIONS/ROUTES/ DOSAGE

Moderate to Severe Rheumatoid Arthritis (RA), Osteoarthritis, Ankylosing Spondylitis

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 14 YRS: (Immediate-Release): Ini-

tially, 25 mg 2–3 times/day; increased by 25–50 mg/wk up to 150–200 mg/day. (**Extended-Release**): Initially, 75 mg once daily. May increase to 75 mg twice daily. **Maximum**: 150 mg/day. **CHILDREN 2 YRS AND OLDER: (Immediate-Release)**: 1–2 mg/kg/day in 2–4 divided doses. **Maximum**: 4 mg/kg/day not to exceed 150–200 mg/day.

Acute Gouty Arthritis

PO, rectal: ADULTS, ELDERLY: (Immediate-Release): 50 mg 3 times/day for 5–7 days until pain is tolerable, then rapidly reduce dose to complete cessation of medication.

Acute Bursitis, Tendonitis

PO: ADULTS, ELDERLY: (Immediate-Release): 75–150 mg/day in 3–4 divided doses for 7–14 days. (**Extended-Release**): 75–150 mg/day in 1–2 doses/day for 7–14 days.

Acute Pain

PO: ADULTS, ELDERLY: (Tivorbex): 20 mg 3 times/day or 40 mg 2–3 times/day.

Patent Ductus Arteriosus

IV: NEONATES: Initially, 0.2 mg/kg. Subsequent doses are based on age, as follows: **NEONATES OLDER THAN 7 DAYS**: 0.25 mg/kg for 2nd and 3rd doses. **NEONATES 2–7 DAYS**: 0.2 mg/kg for 2nd and 3rd doses. **NEONATES YOUNGER THAN 48 HRS**: 0.1 mg/kg for 2nd and 3rd doses. In general, dosing interval is 12 hrs if urine output is greater than 1 mL/kg/hr after prior dose, 24 hrs if urine output is less than 1 mL/kg/hr but greater than 0.6 mL/kg/hr. Dose is held if urine output is less than 0.6 mL/kg/hr or if neonate is anuric.

Dosage in Renal Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment**: Not recommended.

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (11%–3%): Headache, nausea, vomiting, dyspepsia, dizziness. **Occasional (less than 3%)**: Depression, tinnitus, diaphoresis, drowsiness, constipation, diarrhea. **Patent ductus arteriosus**: Bleeding abnormalities. **Rare**: Hypertension, confusion, urticaria, pruritus, rash, blurred vision.

ADVERSE EFFECTS/TOXIC REACTIONS

Paralytic ileus, ulceration of esophagus, stomach, duodenum, small intestine may occur. Pts with renal impairment may develop hyperkalemia with worsening of renal impairment. May aggravate depression or other psychiatric disturbances, epilepsy, parkinsonism. Nephrotoxicity (dysuria, hematuria, proteinuria, nephrotic syndrome) occurs rarely. Metabolic acidosis/alkalosis, bradycardia occur rarely in neonates with patent ductus arteriosus.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain, fever, inflammation. Inspect appearance of affected joints for immobility, deformities, skin condition. Question medical history as listed in Precautions.

INTERVENTION/EVALUATION

Monitor serum BUN, creatinine, potassium, LFT. Monitor for evidence of nausea, dyspepsia. Assist with ambulation if dizziness occurs. Evaluate for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength. Observe for weight gain, edema, bleeding, bruising. In neonates, also monitor heart rate, heart sounds for murmur, B/P, urine output, ECG, serum sodium, glucose, platelets.

PATIENT/FAMILY TEACHING

- Avoid aspirin, alcohol during therapy (increases risk of GI bleeding).
- If GI

upset occurs, take with food, milk.

- Avoid tasks that require alertness, motor skills until response to drug is established.
- Report ringing in ears, persistent stomach pain, unusual bruising/bleeding.

inFLIXimab

TOP
100

in-**flix**-i-mab

(Remicade, Inflectra, Renflexis)

BLACK BOX ALERT Risk of severe/fatal opportunistic infections (tuberculosis, sepsis, fungal), reactivation of latent infections. Rare cases of very aggressive, usually fatal hepatosplenic T-cell lymphoma reported in adolescents, young adults with Crohn's disease. **Do not confuse inFLIXimab with riTUXimab, or Remicade with Reminyl.**

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Tumor necrosis factor (TNF) blocking agent. Monoclonal antibody. **CLINICAL:** Antirheumatic, disease-modifying, GI, immunosuppressant agent.

USES

In combination with methotrexate, reduces signs/symptoms, inhibits progression of structural damage, improves physical function in moderate to severe active rheumatoid arthritis (RA). Treatment of psoriatic arthritis. Reduces signs/symptoms, induces and maintains remission in moderate to severe active Crohn's disease. Reduces number of draining enterocutaneous/rectovaginal fistulas, maintains fistula closure in fistulizing Crohn's disease. Reduces sign/symptoms of active ankylosing spondylitis. Treatment of chronic severe plaque psoriasis in pts who are candidates for systemic therapy. Reduces sign/symptoms, induces and maintains clinical remission and mucosal healing, eliminates

corticosteroid use in moderate to severe active ulcerative colitis.

PRECAUTIONS

Contraindications: Hypersensitivity to inFLIXimab. Moderate to severe HF (doses greater than 5 mg/kg should be avoided). Sensitivity to murine proteins, sepsis, serious active infection. **Cautions:** Hematologic abnormalities, history of COPD, preexisting or recent-onset CNS demyelinating disorders, seizures, mild HE, history of recurrent infections, conditions predisposing pt to infections (e.g., diabetes), pts exposed to tuberculosis, elderly pts, chronic hepatitis B virus infection.

ACTION

Binds to tumor necrosis factor (TNF), inhibiting functional activity of TNF (induction of proinflammatory cytokines, enhanced leukocytic migration, activation of neutrophils/eosinophils). **Therapeutic Effect:** Prevents disease and allows diseased joints to heal.

PHARMACOKINETICS

Absorbed into GI tissue; primarily distributed in vascular compartment. **Half-life:** 8–9.5 days.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Use cautiously due to higher rate of infection.

INTERACTIONS

DRUG: Anakinra, anti-TNF agents, baricitinib, pimecrolimus, riTUXimab, tacrolimus (topical), tocilizumab may increase adverse effects. May decrease therapeutic effect of BCG (intravesical), vaccines (live). May increase levels, adverse effects of belimumab, natalizumab, tofacitinib, vaccines (live). **HERBAL:** Echinacea may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST, bilirubin.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 100 mg.

ADMINISTRATION/HANDLING

Reconstitution • Reconstitute each vial with 10 mL Sterile Water for Injection, using 21-gauge or smaller needle. Direct stream of Sterile Water for Injection to glass wall of vial. • Swirl vial gently to dissolve contents (do not shake). • Allow solution to stand for 5 min and inject into 250-mL bag 0.9% NaCl; gently mix. Concentration should range between 0.4 and 4 mg/mL. • Begin infusion within 3 hrs after reconstitution.

Rate of administration • Administer IV infusion over at least 2 hrs using a low protein-binding filter.

Storage • Refrigerate vials. • Solution should appear colorless to light yellow and opalescent; do not use if discolored or if particulate forms.

IV INCOMPATIBILITIES

Do not infuse in same IV line with other agents.

**INDICATIONS/ROUTES/
DOSAGE**

◀ALERT▶ Premedicate with antihistamines, acetaminophen, steroids to prevent/manage infusion reactions.

Rheumatoid Arthritis (RA)

IV infusion: ADULTS, ELDERLY: In combination with methotrexate: 3 mg/kg followed by additional doses at 2 and 6 wks after first infusion, then q8wks thereafter. Range: 3–10 mg/kg repeated at 4- to 8-wk intervals.

Crohn's Disease

IV infusion: ADULTS, ELDERLY, CHILDREN 6 YRS AND OLDER: 5 mg/kg followed by additional doses at 2 and 6 wks after first infusion, then q8wks thereafter. For

adults who respond then lose response, consideration may be given to treatment with 10 mg/kg.

Ankylosing Spondylitis

IV infusion: ADULTS, ELDERLY: 5 mg/kg followed by additional doses at 2 and 6 wks after first infusion, then q6wks thereafter.

Psoriatic Arthritis

IV infusion: ADULTS, ELDERLY: 5 mg/kg followed by additional doses at 2 and 6 wks after first infusion, then q8wks thereafter. May be used with or without methotrexate.

Plaque Psoriasis

IV infusion: ADULTS, ELDERLY: 5 mg/kg followed by additional doses at 2 and 6 wks after first infusion, then q8wks thereafter.

Ulcerative Colitis

IV infusion: ADULTS, ELDERLY, CHILDREN 6 YRS AND OLDER: 5 mg/kg followed by additional doses at 2 and 6 wks after first infusion, then q8wks thereafter.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (22%–10%): Headache, nausea, fatigue, fever. **Occasional (9%–5%):** Fever/chills during infusion, pharyngitis, vomiting, pain, dizziness, bronchitis, rash, rhinitis, cough, pruritus, sinusitis, myalgia, back pain. **Rare (4%–1%):** Hypotension or hypertension, paresthesia, anxiety, depression, insomnia, diarrhea, UTI.

ADVERSE EFFECTS/TOXIC REACTIONS

Serious infections, including sepsis, occur rarely. Potential for hypersensitivity reaction, lupus-like syndrome, severe hepatic reaction, HF.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Evaluate baseline hydration status (skin turgor urinary status). Question history of CNS disorders, COPD, HF. Screen for active infection. Pts should be evaluated for active tuberculosis and tested for latent infection prior to initiating treatment and periodically during therapy. Induration of 5 mm or greater with tuberculin skin test should be considered a positive test result when assessing if treatment for latent tuberculosis is necessary. Verify that pt has not received live vaccines prior to initiation.

INTERVENTION/EVALUATION

Monitor urinalysis, erythrocyte sedimentation rate (ESR), B/P. Monitor for signs of infection. Monitor daily pattern of bowel activity, stool consistency. **Crohn's disease:** Monitor C-reactive protein, frequency of stools. Assess for abdominal pain. **Rheumatoid arthritis (RA):** Monitor C-reactive protein. Assess for decreased pain, swollen joints, stiffness.

PATIENT/FAMILY TEACHING

- Report persistent fever, cough, abdominal pain, swelling of ankles/feet.
- Treatment may depress your immune system and reduce your ability to fight infection.
- Report symptoms of infection such as body aches, chills, cough, fatigue, fever. Avoid those with active infection.
- Do not receive live vaccines.
- Expect frequent tuberculosis screening.
- Report travel plans to possible endemic areas.

inotuzumab ozogamicin

in-oh-too-z-ue-mab oh-zoe-ga-mye-sin
(Besponsa)

BLACK BOX ALERT Hepato-toxicity, including fatal hepatic veno-occlusive disease may occur, esp. in pts who underwent hematopoietic stem cell transplant (HSCT) or underwent HSCT conditioning regimens containing two alkylating agents and had a total bilirubin level greater than ULN. Other risk factors for hepatic veno-occlusive disease may include advanced age, prior hepatic disease, later salvage lines, greater number of treatment cycles. Permanently discontinue in pts who develop hepatic veno-occlusive disease. LFT elevations may require treatment interruption, dose reduction, or permanent discontinuation. Increased occurrence of post-HSCT nonrelapse mortality was reported.

Do not confuse inotuzumab with ado-trastuzumab, alemtuzumab, atezolizumab, benralizumab, dinutuximab, elotuzumab, gemtuzumab, ipilimumab, obinutuzumab, pertuzumab, trastuzumab.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Anti-CD22. Antibody drug conjugate (ADC). Monoclonal antibody. **CLINICAL:** Antineoplastic.

USES

Treatment of adults with relapsed or refractory B-cell precursor acute lymphoblastic leukemia (ALL).

PRECAUTIONS

Contraindications: Hypersensitivity to inotuzumab. Administration of live vaccines. **Cautions:** Conditions predisposing to infection (e.g., diabetes, immunocompromised pts, renal failure, open wounds), elderly. Pts at risk for hepatic veno-occlusive disease (e.g., advanced age, prior HSCT, prior hepatic disease (e.g., cirrhosis, hepatitis), later salvage lines, greater number of treatment cycles). Pts at risk for QT interval prolongation or torsades de pointes (congenital

long QT syndrome, medications that prolong QT interval, hypokalemia, hypomagnesemia). Pts at risk for hemorrhage (e.g., history of intracranial/GI bleeding, coagulation disorders, recent trauma; concomitant use of anticoagulants, antiplatelets, NSAIDs). Pts at risk for tumor lysis syndrome (high tumor burden).

ACTION

Binds to and internalizes ADC-CD22 complex in CD22-expressing tumor cells, promoting cellular release of N-acetyl-gamma-calicheamicin dimethylhydrazide (a cytotoxic agent). Activation of N-acetyl-gamma-calicheamicin dimethylhydrazide induces breakage of double-strand DNA, resulting in cell cycle arrest and apoptosis. **Therapeutic Effect:** Inhibits tumor cell growth and metastasis in ALL.

PHARMACOKINETICS

Widely distributed. N-acetyl-gamma-calicheamicin dimethylhydrazide metabolized by nonenzymatic reduction. Protein binding: 97%. Steady state reached by treatment cycle 4. Excretion not specified. **Half-life:** 12.3 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm. Unknown if distributed in breast milk. Females of reproductive potential must use effective contraception during treatment and for at least 8 mos after discontinuation. Males with female partners of reproductive potential must use effective contraception during treatment and for at least 5 mos after discontinuation. Breastfeeding not recommended during treatment and for at least 2 mos after discontinuation. May impair fertility in females. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: QT interval—prolonging medications (e.g., amiodarone, azithromycin, ciprofloxacin, haloperidol, sotalol) may increase risk of QT interval

prolongation, torsades de pointes. May diminish therapeutic effect of **nivolumab**. May increase adverse effects of **natalizumab**, **vaccines (live)**. May decrease therapeutic effect of **BCG (intravesical)**, **vaccines (live)**. **HERBAL:** *Echinacea* may decrease concentration/effect. **FOOD:** None known. **LAB VALUES:** May decrease Hgb, leukocytes, lymphocytes, neutrophils, platelets. May increase serum alkaline phosphatase, ALT, amylase AST, bilirubin, GGT, lipase, uric acid. May decrease diagnostic effect of *Coccidioides immitis* skin test.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 0.9 mg.

ADMINISTRATION/HANDLING

Premedication • Premedicate with a corticosteroid, antipyretic, and antihistamine before each dose.

Reconstitution • Must be prepared by personnel trained in aseptic manipulations and admixing of cytotoxic drugs. • Calculate the number of vials required for dose. • Reconstitute each vial with 4 mL Sterile Water for Injection for a final concentration of 0.25 mg/mL that delivers 3.6 mL (0.9 mg). • Gently swirl vial until completely dissolved. • Do not shake or agitate. • Visually inspect for particulate matter or discoloration. Solution should appear clear to opalescent, colorless to slightly yellow in color. Do not use if solution is cloudy or discolored, or if visible particles are observed. • Calculate required volume of reconstituted solution according to body surface area. • Dilute in 50 mL 0.9% NaCl polyvinyl chloride (PVC) infusion bag made of (DEHP or non-DEHP), polyolefin, or ethylene vinyl acetate. • Mix by gently inversion. Do not shake or agitate. • Discard unused portions.

Rate of administration • Infuse over 60 min via dedicated IV line. • In-line

filters are not required. However, if an in-line filter is used, filters made of polyethersulfone (PES), polyvinylidene fluoride (PVDF), or hydrophilic polysulfone (HPS) are recommended. Do not use filters made of nylon or mixed cellulose ester (MCE). • Do not administer as IV push or bolus.

Storage • Refrigerate unused vials in original carton. • Protect vial, reconstituted solution, diluted solution from light. • Do not freeze. • Reconstitution solution must be diluted within 4 hrs. • Diluted solution may be stored at room temperature for up to 4 hrs or refrigerated for up to 3 hrs. • If refrigerated, allow diluted solution to warm to room temperature (approx. 1 hr). • Infusion must be completed within 8 hrs of reconstitution.

INDICATIONS/ROUTES/ DOSAGE

ALL (Relapsed or Refractory)

IV; ADULTS, ELDERLY: Induction cycle 1: 0.8 mg/m² on day 1, then 0.5 mg/m² on day 8 and day 15 of 21-day cycle (total cycle dose: 1.8 mg/m² per cycle, given in 3 divided doses). May extend duration of induction cycle to 28 days if pt achieves complete remission (CR), complete remission with incomplete hematologic recovery (CRI), or to allow time for recovery of toxicity. **Subsequent cycles in pts with CR or CRI:** 0.5 mg/m² on days 1, 8, and 15 of 28-day cycle (total cycle dose: 1.5 mg/m² per cycle, given in 3 divided doses). **Subsequent cycles in pts who have not achieved CR or CRI:** 0.8 mg/m² on day 1, then 0.5 mg/m² on day 8 and day 15 of 28-day cycle (total cycle dose: 1.8 mg/m² per cycle, given in 3 divided doses). Recommend discontinuation in pts who do not achieve CR or CRI within 3 cycles. **Proceeding to HCST:** Treatment duration of 2 cycles. May consider a third cycle in pts who do not achieve CR or CRI and minimal residual disease after 2 cycles. **Not proceeding to HCST:** May consider up to a maximum of 6 cycles.

Dose Modification

Note: Doses within a treatment cycle (e.g., day 8, day 15) do not require interruption if related to neutropenia or thrombocytopenia. Treatment interruptions within a cycle are recommended for nonhematological toxicities. Do not re-escalate reduced doses that are related to toxicity.

Duration of Dose Interruption (Nonhematological Toxicities)

Less than 7 days within a cycle: Interrupt the next dose (ensure a minimum of 6 days between doses). **7 days or more:** Skip the next dose within the cycle. **14 days or more:** Once toxicity is adequately resolved, decrease total dose of subsequent cycle by 25%. May further reduce to 2 doses per cycle for subsequent cycles if further dose modification is required. If unable to tolerate a total dose reduction of 25%, followed by a reduction to 2 doses per cycle, permanently discontinue. **More than 28 days:** Consider permanent discontinuation.

Hematologic Toxicities

ANC greater than or equal to 1,000 cells/mm³ (prior to treatment): If ANC decreases, interrupt next cycle until ANC is greater than or equal to 1,000 cells/mm³. Discontinue treatment if ANC is less than 1,000 cells/mm³ for more than 28 days (and related to treatment). **Platelet count greater than or equal to 50,000 cells/mm³ (prior to treatment):** If platelet count decreases, interrupt next cycle until platelet count is greater than or equal to 50,000 cells/mm³. Discontinue treatment if platelet count is less than 50,000 cells/mm³ for more than 28 days (and related to treatment). **ANC less than 1,000 cells/mm³ and/or platelet count less than 50,000 cells/mm³ (prior to treatment):** If ANC or platelet count decreases, interrupt next cycle until one of following occurs: ANC and platelet count recover to at least baseline of the prior cycle; ANC is greater than or equal to 1,000 cells/mm³ and platelet count is greater than or equal

to 50,000 cells/mm³; disease is improved or stable, and the decrease of ANC and platelet count is not related to treatment.

Hepatotoxicity

Serum ALT/AST greater than 2.5 times ULN and serum bilirubin greater than 1.5 times ULN: Interrupt treatment until serum ALT/AST is less than or equal to 2.5 times ULN and serum bilirubin is less than 1.5 times ULN prior to each dose (unless related to Gilbert's syndrome or hemodialysis). Permanently discontinue if serum ALT/AST does not recover to less than or equal to 2.5 times ULN or serum bilirubin does not recover to less than 1.5 times ULN. **Hepatic veno-occlusive disease, severe liver injury:** Permanently discontinue.

Other Nonhematologic Toxicities

Any CTCAE Grade 2 nonhematologic toxicities: Withhold treatment until recovery to Grade 1 or pretreatment grade levels before each dose.

Dosage in Renal Impairment

Mild impairment: No dose adjustment to initial dose. **Severe to moderate impairment:** Not specified; use caution.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment to initial dose. **Severe impairment, ESRD, HD:** Use caution.

SIDE EFFECTS

Frequent (35%–17%): Fatigue, asthenia, headache, migraine, sinus headache, pyrexia, nausea, abdominal pain, esophageal pain, abdominal tenderness, hepatic pain. **Occasional (16%–11%):** Constipation, vomiting, stomatitis, aphthous ulcer, mucosal inflammation, mouth ulceration, oral pain, oropharyngeal pain, chills.

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia, leukopenia, lymphopenia, neutropenia, thrombocytopenia are expected responses to therapy, but more severe reactions, including bone marrow failure, febrile neutropenia, may

be life-threatening. Hemorrhagic events including contusion, ecchymosis, epistaxis, gingival bleeding, hematemesis, hematochezia, hematotympanum, hematuria, metrorrhagia, subdural hematoma, postprocedural hematoma, hemorrhagic shock, hemorrhage (conjunctival, gastric, GI, hemorrhoidal, intra-abdominal, intracranial, lip, mesenteric, mouth, muscle, rectal, SQ, vaginal) have occurred. Hepatotoxicity, including fatal hepatic veno-occlusive disease, may occur, esp. in pts who underwent HSCT or underwent HSCT conditioning regimens containing two alkylating agents and had a total bilirubin level greater than ULN. An increased occurrence of post-HSCT nonrelapse mortality was reported. Serious, sometimes fatal, infections including neutropenic sepsis, pneumonia, sepsis, pseudomonas occurred in 5% of pts. Tumor lysis syndrome may present as acute renal failure, hypocalcemia, hyperuricemia, hyperphosphatemia. May cause QT interval prolongation, esp. in pts with history of long QTc prolongation or in pts taking medications known to prolong QT interval. Immunogenicity (anti-inotuzumab antibodies) occurred in 3% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain ANC, CBC, LFT; ECG before each dose. Calculate body surface area. Obtain pregnancy test in females of reproductive potential. Assess plans of breastfeeding. Screen for active infection. Assess risk for bleeding, hemorrhage, hepatic veno-occlusive disease, infection, QT prolongation. Due to risk of tumor lysis syndrome, assess adequate hydration before initiation. Receive full medication history and screen for interactions. Offer emotional support.

INTERVENTION/EVALUATION

Monitor ANC, CBC for myelosuppression. Monitor ECG for QT interval prolongation. LFTs should be obtained before

each dose and correlated with symptoms of hepatic veno-occlusive disease (ascites, serum bilirubin elevation, hepatomegaly, rapid weight gain). Diligently monitor pts who underwent HSCT or are planning HSCT. Monitor for infusion-related reactions (e.g., chills, dyspnea, fever, rash) during infusion and for at least 1 hr after infusion is completed. If infusion-related reaction occurs during administration, interrupt infusion and provide medical support. Severe reactions may require administration of antihistamines, corticosteroids. Permanently discontinue treatment if severe or life-threatening reactions occur. Be alert for serious infection, opportunistic infection, sepsis (fever, decreased urinary output, hypotension, tachycardia, tachypnea). If infection occurs, provide anti-infective therapy as appropriate. Monitor for hemorrhagic events including intracranial hemorrhage (altered mental status, aphasia, blindness, hemiparesis, unequal pupils, seizures), GI bleeding (hematemesis, melena, rectal bleeding), epistaxis. Tumor lysis syndrome may present as acute renal failure, hypocalcemia, hyperuricemia, hyperphosphatemia. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

- Treatment may depress your immune system response and reduce your ability to fight infection. Report symptoms of infection such as body aches, chills, cough, fatigue, fever. Avoid those with active infection.
- Report symptoms of bone marrow depression such as bruising, fatigue, fever, shortness of breath, weight loss; bleeding easily, bloody urine or stool.
- Therapy may cause life-threatening tumor lysis syndrome (a condition caused by the rapid breakdown of cancer cells), which can cause kidney failure. Report decreased urination, amber-colored urine; confusion, difficulty breathing, fatigue, fever, muscle or joint pain, palpitations, seizures, vom-

- Avoid pregnancy using effective contraception. Treatment may cause fetal harm. Do not breastfeed during treatment and for at least 2 mos after last dose.
- Life-threatening bleeding may occur; report bloody stool, bloody urine; rectal bleeding, nosebleeds, vomiting up blood; symptoms of hemorrhagic stroke (confusion, blindness, difficulty speaking, paralysis, seizures).
- Do not take any newly prescribed medications unless approved by doctor who originally started treatment.
- Report symptoms of long QT syndrome such as chest pain, dizziness, fainting, palpitations, shortness of breath.
- Report liver problems such as abdominal pain, bruising, clay-colored stool, amber or dark-colored urine, yellowing of the skin or eyes.
- Pts who have had HSCT or are planning HSCT have an increased risk of mortality.

insulin

TOP 100 HIGH ALERT

in-su-lin

Do not confuse NovoLOG with HumaLOG or NovoLIN.

Rapid-acting: (Afrezza): **INHALATION POWDER, INSULIN ASPART:** (Fiasp, NovoLOG), **INSULIN GLULISINE:** (Apidra), **INSULIN LISPRO:** (HumaLOG)

Short-acting: REGULAR INSULIN: (HumuLIN R , NovoLIN R) **Intermediate-acting: NPH:** (HumuLIN N , NovoLIN N)

Long-acting: INSULIN DEGLUDEC: (Tresiba), **INSULIN DETEMIR:** (Levemir), **INSULIN GLARGINE:** (Basaglar, Lantus , Toujeo)

■ **BLACK BOX ALERT** ■ (Afrezza): Acute bronchospasms reported in pts with asthma and COPD.

FIXED-COMBINATION(S)

HumaLOG Mix 75/25: lispro suspension 75% and lispro solution 25%.

HumuLIN Mix 50/50: NPH 50% and regular 50%. **HumuLIN 70/30, No-**

voLIN 70/30: NPH 70% and rapid-acting regular 30%. **NovoLOG Mix 70/30:** aspart suspension 70% and aspart solution 30%. **Ryzodeg 70/30:** degludec suspension 70% and aspart solution 30%. **Soliqua 100/33:** glargine 100 units/mL and lixisenatide (a glucagon-like peptide 1 [GLP-1] receptor agonist) 33 mcg/mL. **Xultophy 100/3.6:** degludec 100 units/mL and liraglutide (a GLP-1 receptor agonist) 3.6 mg/mL.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Exogenous insulin. **CLINICAL:** Antidiabetic.

USES

Treatment of type 1 diabetes (insulin-dependent) and type 2 diabetes (non-insulin-dependent) to improve glycemic control. **OFF-LABEL:** Insulin aspart, insulin lispro, insulin regular: Gestational diabetes, mild to moderate diabetic ketoacidosis, mild to moderate hyperosmolar hyperglycemic state. **Insulin NPH:** Gestational diabetes.

PRECAUTIONS

Contraindications: Hypersensitivity to insulin, use during episodes of hypoglycemia. **Afrezza:** Chronic lung disease. **Cautions:** Pts at risk for hypokalemia; renal/hepatic impairment, elderly. **Afrezza:** Must be used with a long-acting insulin in type 1 diabetes. Not recommended for use in diabetic ketoacidosis or in smokers. Pts with active lung cancer, history of lung cancer, or at risk for lung cancer.

ACTION

Acts via specific receptor to regulate metabolism of carbohydrates, protein, and fats. Acts on liver, skeletal muscle, and adipose tissue. **Liver:** Stimulates hepatic glycogen synthesis, synthesis of fatty acids. **Muscle:** Increases protein, glycogen synthesis. **Adipose tissue:** Stimulates lipoproteins to provide free fatty acids,

triglyceride synthesis. **Therapeutic Effect:** Controls serum glucose levels.

PHARMACOKINETICS

Rapid-Acting

	Onset (min)	Peak (hrs)	Duration (hrs)
Fiasp	12–18	1.5–2.2	5–7
Aspart (NovoLOG)	10–20	1–3	3–5
Glulisine (Apidra)	5–15	0.75–1.25	2–4
Insulin Human (Afrezza)	15–30	1	2
Lispro (HumaLOG)	15–30	0.5–2.5	3–6.5

Short-Acting

	Onset (min)	Peak (hrs)	Duration (hrs)
Regular (HumuLIN R)	30–60	1–5	6–10
Regular (NovoLIN R)	30–60	1–5	6–10

Intermediate-Acting

	Onset (hrs)	Peak (hrs)	Duration (hrs)
NPH (HumuLIN N)	1–2	6–14	16–24+
NPH (NovoLIN N)	1–2	6–14	16–24+

Long-Acting

	Onset (hrs)	Peak (hrs)	Duration (hrs)
Degludec (Tresiba)	0.5–1.5	12	42
Detemir (Levemir)	3–4	3–9	6–23
Glargine (Lantus)	3–4	No peak	24
Glargine (Toujeo)	Over 6	No peak	Over 24

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Insulin is the drug of choice for diabetes in pregnancy; close medical supervision is needed. Following delivery, insulin needs may drop for 24–72 hrs, then rise to prepregnancy levels. Not distributed in breast milk; lactation may decrease insulin

requirements. **Children:** No age-related precautions noted. **Elderly:** Decreased vision, fine motor tremors may lead to inaccurate self-dosing.

INTERACTIONS

DRUG: Alcohol may increase risk of hypoglycemia. **Beta blockers** (e.g., carvedilol, metoprolol) may alter effects; may mask signs, prolong periods of hypoglycemia. **glucagon-like peptide 1 (GLP-1) agents** (e.g., liraglutide), **dipeptidyl peptidase (DPP)-4 agents** (e.g., linagliptin), **thiazolidinediones** (e.g., pioglitazone), **pramlintide** may increase hypoglycemic effect. **HERBAL:** Herbs with hypoglycemic properties (e.g., fenugreek) may increase hypoglycemic effect. **FOOD:** None known. **LAB VALUES:** May decrease serum magnesium, phosphate, potassium.

AVAILABILITY (RX)

Rapid-Acting

Inhalation Powder: (*Afrezza*): 4 units, 8 units, 12 units as single-use inhalation cartridges. **Aspart (NovoLOG):** 100 units/mL vial, 3-mL cartridge, 3-mL Flex-Pen. **Glulisine (Apidra):** 100 units/mL vial, 3-mL cartridge. **Lispro (HumaLOG):** 100 units/mL vial, 3-mL cartridge, 3-mL pen.

Short-Acting

Regular: (*Humulin R*): 100 units/mL vial, U-500 Kwik Pen. **Regular:** (*NovoLIN R*): 100 units/mL vial, 3-mL cartridge, 3-mL Innolet prefilled syringe.

Intermediate-Acting

NPH: (*Humulin N*): 100 units/mL vial, 3-mL pen. **NPH:** (*NovoLIN N*): 100 units/mL vial, 3-mL cartridge, 3-mL Innolet prefilled syringe.

Long-Acting

Detemir: (*Levemir*): 100 units/mL vial, 3-mL Flex-Pen. **Glargine:** (*Lantus*): 100 units/mL vial, 3-mL cartridge. **Glargine:** (*Toujeo SoloStar*): 300 units/mL. (*Basaglar KwikPen*): 100 units/mL.

Intermediate- and Short-Acting Mixtures:

HumuLIN 50/50, HumuLIN 70/30, HumaLOG Mix 75/25, HumaLOG Mix 50/50, NovoLIN 70/30, NovoLOG Mix 70/30.

ADMINISTRATION/HANDLING

Regular and Insulin Glulisine:

- (*Apidra*): Use only if solution is clear.
- May give undiluted.

Rapid-Acting • (*Afrezza*): Administer using a single inhalation/cartridge. Give at beginning of a meal. • (*Aspart [NovoLOG]*): May give SQ, IV

infusion. • Can mix with NPH (draw aspart into syringe first; inject immediately after mixing). • After first use, stable at room temperature for 28 days. • Administer 5–10 min before meals. • **Glulisine (Apidra):** May mix with NPH (draw glulisine into syringe first; inject immediately after mixing). • After first use, stable at room temperature for 28 days. • Administer 15 min before or within 20 min after starting a meal. • (*Lispro [HumaLOG]*): For SQ use only. • May mix with NPH. Stable for 28 days at room temperature; syringe is stable for 14 days if refrigerated. • After first use, stable at room temperature for 28 days. • Administer 15 min before or immediately after meals.

Short-Acting

Regular • (*Humulin R, NovoLIN R*): May give SQ, IM, IV. • May mix with NPH for immediate use or for storage for future use. Stable for 1 mo at room temperature, 3 mos if refrigerated. • Can mix with Sterile Water for Injection or 0.9% NaCl. • After first use, stable at room temperature for 28 days. • Administer 30 min before meals.

Intermediate-Acting

NPH • (*Humulin N, NovoLIN N*): For SQ use only. • May mix with as-

part (NovoLOG) or lispro (HumaLOG). Draw aspart or lispro first and use immediately. • May mix with regular (HumuLIN R, NovoLIN R) insulin. Draw regular insulin first, use immediately or may store for future use (up to 28 days). • After first use, stable at room temperature for 28 days. • Administer 15 min before meals when mixed with aspart or lispro; 30 min before meals when mixed with regular insulin.

Long-Acting

• (**Degludec [Tresiba]**): For SQ use only. • Do not mix with other insulins. • After first use, stable at room temperature for 56 days. • May take once daily any time of day. • (**Detemir [Levemir]**): For SQ use only. • Do not mix with other insulins. • After first use, stable at room temperature for 42 days. • Evening dose given at dinner or at bedtime. Twice-daily regimens can be given 12 hrs after morning dose. • (**Glargine [Lantus, Toujeo]**): For SQ use only. • Do not mix with other insulins. • After first use, stable at room temperature for 28 days. • Administer once daily at same time. Meal timing is not applicable.

SQ

• Check serum glucose concentration before administration; dosage highly individualized. • SQ injections may be given in thigh, abdomen, upper arm, buttocks, upper back if there is adequate adipose tissue. • Rotation of injection sites is essential; maintain careful record. • Prefilled syringes should be stored in vertical or oblique position to avoid plugging; plunger should be pulled back slightly and syringe rocked to remix solution before injection.

IV INCOMPATIBILITIES

DiTIAZem (Cardizem), DOPamine (Intropin), nafcillin (Nafcil).

IV COMPATIBILITIES

Amiodarone (Cordarone), ampicillin/sulbactam (Unasyn), ceFAZolin (Ancef),

digoxin (Lanoxin), DOBUTamine (Dobutrex), famotidine (Pepcid), gentamicin, heparin, magnesium sulfate, metoclopramide (Reglan), midazolam (Versed), milrinone (Primacor), morphine, nitroglycerin, potassium chloride, propofol (Diprivan), vancomycin (Vancocin).

INDICATIONS/ROUTES/DOSAGE

Note: Insulin requirements vary dramatically among pts, requiring dosage adjustment.

Type 1 Diabetes

Multiple daily injections, guided by glucose monitoring or continuous SQ insulin infusions, is standard of care. **Usual initial dose:** 0.4–0.5 unit/kg/day in divided doses. **Usual maintenance:** 0.4–1 units/kg/day in divided doses.

Type 2 Diabetes

Initially, 4–6 units or 0.1–0.2 units/kg given before largest meal of day. Adjust dose by 2 units q3days to reach fasting glucose target (while avoiding hypoglycemia). General goal is to achieve Hgb A_{1c} less than 7% using safe medication titration. Dual therapy (metformin and a second antihyperglycemic agent) is recommended in pts who fail to achieve glycemic goals after 3 mos with lifestyle interventions and metformin monotherapy. (**Afrezza**): Dosage based on metabolic needs, blood glucose results, glycemic goal control.

Dosage in Renal Impairment

Creatinine

Clearance	Dose
10–50 mL/min	75% normal dose
Less than 10 mL/min	25%–50% normal dose

Dosage in Hepatic Impairment

Insulin requirement may be reduced.

SIDE EFFECTS

Occasional: Localized redness, swelling, itching (due to improper insulin injection technique), allergy to insulin cleansing solution. **Infrequent:** Somogyi effect (rebound hyperglycemia) with chronically excessive insulin dosages. Systemic allergic reaction (rash, angioedema, anaphylaxis), lipodystrophy (depression at injection site due to breakdown of adipose tissue), lipohypertrophy (accumulation of SQ tissue at injection site due to inadequate site rotation). **Rare:** Insulin resistance.

ADVERSE EFFECTS/TOXIC REACTIONS

Severe hypoglycemia (due to hyperinsulinism) may occur with insulin overdose, decrease/delay of food intake, excessive exercise, pts with brittle diabetes. Diabetic ketoacidosis may result from stress, illness, omission of insulin dose, long-term poor insulin control.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain serum glucose level, Hgb A1c. Discuss lifestyle to determine extent of learning, emotional needs. If given IV, obtain serum chemistries (esp. serum potassium).

INTERVENTION/EVALUATION

Assess for hypoglycemia (refer to pharmacokinetics table for peak times and duration): cool, wet skin, tremors, dizziness, headache, anxiety, tachycardia, numbness in mouth, hunger, diplopia. Assess sleeping pt for restlessness, diaphoresis. Check for hyperglycemia: polyuria (excessive urine output), polyphagia (excessive food intake), polydipsia (excessive thirst), nausea/vomiting, dim vision, fatigue, deep and rapid breathing (Kussmaul respirations). Be alert to conditions altering glucose requirements: fever, trauma, increased activity/stress, surgical procedure.

PATIENT/FAMILY TEACHING

- Instruct on proper technique for drug administration, testing of glucose, signs/symptoms of hypoglycemia and hyperglycemia.
- Diet and exercise are essential parts of treatment; do not skip/delay meals.
- Carry candy, sugar packets, other sugar supplements for immediate response to hypoglycemia.
- Wear or carry medical alert identification.
- Check with physician when insulin demands are altered (e.g., fever, infection, trauma, stress, heavy physical activity).
- Do not take other medication without consulting physician.
- Weight control, exercise, hygiene (including foot care), not smoking are integral parts of therapy.
- Protect skin, limit sun exposure.
- Inform dentist, physician, surgeon of medication before any treatment is given.

interferon alfa-2b HIGH ALERT

in-ter-fer-on
(Intron-A)

BLACK BOX ALERT ■ May cause or aggravate fatal or life-threatening autoimmune disorders, ischemia, neuropsychiatric symptoms (profound depression, suicidal thoughts/behaviors), infectious disorders.

Do not confuse interferon alfa-2b with interferon alfa-2a, interferon alfa-n3, or peginterferon alfa-2b, or Intron with Peg-Intron.

FIXED-COMBINATION(S)

Rebtron: interferon alfa-2b/ribavirin (an antiviral): 3 million units/200 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Biologic response modifier, immunomodulator. **CLINICAL:** Antineoplastic.

USES

Treatment of hairy cell leukemia, condylomata acuminata (genital, venereal warts), malignant melanoma, AIDS-related Kaposi's sarcoma, chronic hepatitis C virus infection (including children 3 yrs of age and older), chronic hepatitis B virus infection (including children 1 yr and older), follicular non-Hodgkin's lymphoma. **OFF-LABEL:** Treatment of bladder, cervical, renal carcinoma; chronic myelocytic leukemia; laryngeal papillomatosis; multiple myeloma; cutaneous T-cell lymphoma; mycosis fungoides; West Nile virus.

PRECAUTIONS

Contraindications: Hypersensitivity to interferon alfa-2b. Decompensated hepatic disease, autoimmune hepatitis. **In combination with ribavirin:** Women who are pregnant, men with pregnant partners, pts with hemoglobinemias (e.g., sickle cell anemia), CrCl less than 50 mL/min). **Cautions:** Renal/hepatic impairment, seizure disorder, compromised CNS function, cardiac diseases, myelosuppression, concurrent use of medications causing myelosuppression, pulmonary impairment, multiple sclerosis, diabetes, thyroid disease, coagulopathy, hypertension, preexisting eye disorders, history of psychiatric disorders. History of autoimmune disorders, MI, arrhythmias, cardiac abnormalities.

ACTION

Binds to a specific receptor on cell membrane to initiate intracellular activity, including suppression of cell proliferation, augmenting specific cytotoxicity of lymphocytes and increasing phagocyte activity. **Therapeutic Effect:** Prevents rapid growth of malignant cells; inhibits hepatitis virus.

PHARMACOKINETICS

Well absorbed after IM, SQ administration. Undergoes proteolytic degradation during reabsorption in kidneys. **Half-life:** 2–3 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy. Breastfeeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** Neurotoxicity, cardiotoxicity may occur more frequently. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Bone marrow depressants (e.g., cladribine) may increase myelosuppression. May increase concentration/effect of tiZANidine. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase PT, aPTT, LDH, serum alkaline phosphatase, ALT, AST. May decrease Hgb, Hct, leukocyte, platelet counts.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 10 million units, 18 million units, 50 million units.

Injection, Solution: 6 million units/mL, 10 million units/mL.

ADMINISTRATION/HANDLING

Reconstitution • Prepare immediately before use. • Reconstitute with diluent provided by manufacturer. • Withdraw desired dose and further dilute with 100 mL 0.9% NaCl to provide final concentration of at least 10 million international units/100 mL.

Rate of administration • Administer over 20 min.

Storage • Refrigerate unopened vials. • Following reconstitution, stable for 24 hrs if refrigerated.

IM, SQ

IM • Rotate sites. Preferred sites are anterior thigh, deltoid, and superolateral buttock. Administer in evening (if possible).

SQ • Reconstitute with recommended amount of Sterile Water for Injection.

Agitate gently; do not shake. Rotate sites. Preferred sites are anterior thigh, abdomen (except around navel), outer upper arm.

IV INCOMPATIBILITIES

D₅W. Do not mix with other medications via Y-site administration.

IV COMPATIBILITIES

0.9% NaCl, lactated Ringer's.

INDICATIONS/ROUTES/ DOSAGE

Hairy Cell Leukemia

IM, SQ: ADULTS: 2 million units/m² 3 times/wk on alternating days for up to 6 mos. May continue treatment for sustained response. If severe adverse reactions occur, modify dose or temporarily discontinue drug. Discontinue for disease progression or failure to respond after 6 months.

Condylomata Acuminata

Intralesional: ADULTS: 1 million units/lesion 3 times/wk on alternating days for 3 wks. May administer a second course at 12–16 wks. Use only 10 million–unit vial, and reconstitute with no more than 1 mL diluent. **Maximum:** 5 lesions per treatment.

AIDS-Related Kaposi's Sarcoma

IM, SQ: ADULTS: 30 million units/m² 3 times/wk on alternating days. Use only 50 million–unit vials. Continue until disease progression or maximal response achieved after 16 wks. If severe adverse reactions occur, modify dose or temporarily discontinue drug.

Chronic Hepatitis B Virus Infection

IM, SQ: ADULTS: 30–35 million units/wkly, either as 5 million units/day or 10 million units 3 times/wk for 16 wks.

SQ: CHILDREN 1–17 YRS: 3 million units/m² 3 times/wk for 1 wk, then 6 million units/m² 3 times/wk for 16–24 wks. **Maximum:** 10 million units 3 times/wk.

Malignant Melanoma

IV: ADULTS: Initially, 20 million units/m² 5 times/wk for 4 wks. **Maintenance:** 10 million units subcutaneously 3 times/wk for 48 wks.

Follicular Non-Hodgkin's Lymphoma

SQ: ADULTS: 5 million units 3 times/wk for up to 18 mos.

Dosage in Renal Impairment

Do not use when combined with ribavirin.

Dosage in Hepatic Impairment

No dose adjustment (see Contraindications).

SIDE EFFECTS

Frequent: Flu-like symptoms (fever, fatigue, headache, myalgia, anorexia, chills), rash (hairy cell leukemia, Kaposi's sarcoma only). **Pts with Kaposi's sarcoma:** All previously mentioned side effects plus depression, dyspepsia, dry mouth or thirst, alopecia, rigors. **Occasional:** Dizziness, pruritus, dry skin, dermatitis, altered taste. **Rare:** Confusion, leg cramps, back pain, gingivitis, flushing, tremor, anxiety, eye pain.

ADVERSE EFFECTS/TOXIC REACTIONS

Hypersensitivity reactions occur rarely. Severe flu-like symptoms appear dose-related.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

CBC, blood chemistries, urinalysis, renal function, LFT should be performed before initial therapy and routinely thereafter.

INTERVENTION/EVALUATION

Offer emotional support. Monitor all levels of clinical function (numerous side effects). Encourage PO intake, particularly during early therapy. Monitor for worsening depression, suicidal ideation, associated behaviors.

PATIENT/FAMILY TEACHING

- Clinical response occurs in 1–3 mos.
- Flu-like symptoms tend to diminish with continued therapy.
- Some symptoms may be alleviated or minimized by bedtime doses.
- Do not have immunizations without physician's approval (drug lowers resistance).
- Avoid contact with those who have recently received live virus vaccine.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Sips of tepid water may relieve dry mouth.
- Report depression, thoughts of suicide, unusual behavior.

TOP
100**interferon beta-1a**

in-ter-feer-on
(Avonex, Rebif)

Do not confuse Avonex with Avelex, or interferon beta-1a with interferon beta-1b.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Biologic response modifier. **CLINICAL:** Multiple sclerosis agent.

USES

Treatment of relapsing multiple sclerosis to slow progression of physical disability, decrease frequency of clinical exacerbations.

PRECAUTIONS

Contraindications: Hypersensitivity to natural or recombinant interferon, human albumin (only for albumin-containing products). **Cautions:** Depression, severe psychiatric disorders, hepatic impairment, increased serum ALT at baseline, alcohol abuse, cardiovascular disease, seizure disorders, myelosuppression.

ACTION

Exact mechanism unknown. Alters expression and response to surface antigens and may enhance immune cell activity. **Therapeutic Effect:** Slows progression of multiple sclerosis.

PHARMACOKINETICS

Peak serum levels attained 3–15 hrs after IM administration. Biologic markers increase within 12 hrs and remain elevated for 4 days. **Half-life:** 10 hrs (Avonex); 69 hrs (Rebif).

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Has abortifacient potential. Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No information available.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, BUN, alkaline phosphatase, bilirubin, calcium, ALT, AST. May decrease Hgb, neutrophil, platelet, WBC.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: (Avonex): 30 mcg. **Injection Solution, Prefilled Syringe:** (Rebif): 22 mcg/0.5 mL, 44 mcg/0.5 mL. (Avonex): 30 mcg/0.5 mL. **Titration Pack, Prefilled Syringe:** (Rebif): 8.8 mcg/0.2 mL, 22 mcg/0.5 mL.

ADMINISTRATION/HANDLING**IM (Avonex) Syringe**

- Refrigerate syringe.
- Allow to warm to room temperature before use.
- May store up to 7 days at room temperature.

IM (Avonex) Vial

- Refrigerate vials (may store at room temperature up to 30 days).
- Following reconstitution, may refrigerate again but use within 6 hrs if refrigerated.
- Reconstitute 30-mcg MicroPin (6.6 million

international units) vial with 1.1 mL diluent (supplied by manufacturer). • Gently swirl to dissolve medication; do not shake. • Discard if discolored or particulate forms. • Discard unused portion (contains no preservative).

SQ (Rebif)

• Refrigerate. May store at room temperature up to 30 days. Avoid heat, light. • Administer at same time of day 3 days each wk. Separate doses by at least 48 hrs.

INDICATIONS/ROUTES/DOSAGE

Relapsing Multiple Sclerosis

IM: (Avonex): ADULTS: 30 mcg once wkly.

SQ: (Rebif): ADULTS: Target dose 44 mcg 3 times/wk: Initially, 8.8 mcg 3 times/wk for 2 wks, then 22 mcg 3 times/wk for 2 wks, then 44 mcg 3 times/wk thereafter. **Target dose 22 mcg 3 times/wk:** Initially, 4.4 mcg 3 times/wk for 2 wks, then 11 mcg 3 times/wk for 2 wks, then 22 mcg 3 times/wk thereafter.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment (Rebif)

Use with caution in pts with history of active hepatic disease or ALT more than 2.5 times upper limit of normal (ULN).

SIDE EFFECTS

Frequent (67%–11%): Headache, flu-like symptoms, myalgia, upper respiratory tract infection, depression with suicidal ideation, generalized pain, asthenia, chills, sinusitis, infection. **Occasional (9%–4%):** Abdominal pain, arthralgia, chest pain, dyspnea, malaise, syncope.

Rare (3%): Injection site reaction, hypersensitivity reaction.

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia occurs in 8% of pts. Hepatic failure has been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, BMP, LFT. Assess home situation for support of therapy.

INTERVENTION/EVALUATION

Assess for headache, flu-like symptoms, myalgia. Periodically monitor lab results, re-evaluate injection technique. Assess for depression, suicidal ideation.

PATIENT/FAMILY TEACHING

• Do not change schedule, dosage without consulting physician. • Follow guidelines for reconstitution of product and administration, including aseptic technique. • Use puncture-resistant container for used needles, syringes; dispose of used needles, syringes properly. • Injection site reactions may occur. These do not require discontinuation of therapy, but type and extent should be carefully noted. Report flu-like symptoms (fever, chills, fatigue, muscle aches).

TOP
100

interferon beta-1b

in-ter-**feer**-on
(Betaseron, Extavia)

Do not confuse interferon beta-1b with interferon beta-1a.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Biologic response modifier. **CLINICAL:** Multiple sclerosis agent.

USES

Reduces frequency of clinical exacerbations in pts with relapsing-remitting multiple sclerosis (recurrent attacks of neurologic dysfunction).

PRECAUTIONS

Contraindications: Hypersensitivity to albumin, interferon. **Cautions:** Depression, severe psychiatric disorders, hepatic/renal impairment, alcohol abuse, cardiovascular disease, seizure disorders, myelosuppression, pulmonary disease.

ACTION

Exact mechanism unknown. Immunomodulator effects include enhanced suppression of T-cell activity, reduced pro-inflammatory cytokines, reduced movement of lymphocytes into CNS. **Therapeutic Effect:** Improves MRI lesions, decreases relapse rate and disease severity in multiple sclerosis.

PHARMACOKINETICS

Slowly absorbed following SQ administration. **Half-life:** 8 min–4.3 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Spontaneous abortions reported. Discontinuation of the drug before conception is recommended. Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No information available.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase bilirubin, ALT, AST. May decrease neutrophil, lymphocyte, WBC.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 0.3 mg.

ADMINISTRATION/HANDLING**SQ**

- Store vials at room temperature.
- After reconstitution, stable for 3 hrs if refrigerated.
- Use within 3 hrs of reconstitution.
- Discard if discolored or precipitate forms.
- Reconstitute

0.3-mg (9.6 million international units) vial with 1.2 mL diluent (supplied by manufacturer) to provide concentration of 0.25 mg/mL (8 million units/mL). • Gently swirl to dissolve medication; do not shake. • Withdraw 1 mL solution and inject subcutaneously into arms, abdomen, hips, thighs using 27-gauge needle. • Discard unused portion (contains no preservative).

**INDICATIONS/ROUTES/
DOSAGE****Relapsing-Remitting Multiple Sclerosis**

SQ: ADULTS: Initially, 0.0625 mg (0.25 mL) every other day; gradually increase by 0.0625 mg every 2 wks. Target dose: 0.25 mg every other day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (85%–21%): Injection site reaction, headache, flu-like symptoms, fever, asthenia, myalgia, sinusitis, diarrhea, dizziness, altered mental status, constipation, diaphoresis, vomiting. **Occasional (15%–4%):** Malaise, drowsiness, alopecia.

**ADVERSE EFFECTS/TOXIC
REACTIONS**

Seizures occur rarely.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain CBC, BMP, LFT. Assess home situation for support of therapy.

INTERVENTION/EVALUATION

Periodically monitor lab results, re-evaluate injection technique. Assess for nausea (high incidence). Monitor sleep pattern. Monitor daily pattern of bowel activity, stool consistency. Assist with ambulation if dizziness occurs. Monitor food intake.

PATIENT/FAMILY TEACHING

- Report flu-like symptoms (fever, chills, fatigue, muscle aches); occur commonly but decrease over time.
- Wear sunscreen, protective clothing if exposed to sunlight, ultraviolet light until tolerance known.

interleukin-2 (aldesleukin)

**HIGH
ALERT**

in-ter-**loo**-kin
(Proleukin)

■ **BLACK BOX ALERT** ■ High-dose therapy is associated with capillary leak syndrome resulting in significant hypotension and reduced organ perfusion. Use restricted to pts with normal cardiac/pulmonary function. Increased risk of disseminated infection (sepsis, bacterial endocarditis). Withhold treatment for pts developing moderate-to-severe lethargy or drowsiness (continued treatment may result in coma). Must be administered by personnel trained in administration/handling of chemotherapeutic agents.

Do not confuse aldesleukin with oprelvekin.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Biologic response modifier. **CLINICAL:** Antineoplastic.

USES

Treatment of metastatic renal cell carcinoma, metastatic melanoma. **OFF-LABEL:** Treatment of acute myeloid leukemia (AML).

PRECAUTIONS

Contraindications: Hypersensitivity to aldesleukin. Abnormal pulmonary function or thallium stress test results, bowel ischemia or perforation, coma or toxic psychosis lasting longer than 48 hrs, GI bleeding requiring surgery, intubation

lasting more than 72 hrs, pts who have had an organ allograft, cardiac tamponade, renal dysfunction requiring dialysis for longer than 72 hrs, repetitive or difficult-to-control seizures; retreatment in pts who experience any of the following toxicities: angina, MI, recurrent chest pain with ECG changes, sustained ventricular tachycardia, uncontrolled or unresponsive cardiac rhythm disturbances. **Extreme Caution:** Pts with normal thallium stress tests and pulmonary function tests who have history of cardiac or pulmonary disease. **Cautions:** Pts with fixed requirements for large volumes of fluid (e.g., those with hypercalcemia), history of seizures, renal/hepatic impairment, autoimmune disease, inflammatory disorders.

ACTION

Promotes proliferation, differentiation, recruitment of T and B cells, natural killer cells, thymocytes. **Therapeutic Effect:** Enhances cytolytic activity in lymphocytes and subsequent interaction between the immune system and malignant cells. Can stimulate lymphokine-activated killer (LAK) cells and tumor-infiltrating lymphocyte cells.

PHARMACOKINETICS

Primarily distributed into plasma, lymphocytes, lungs, liver, kidney, spleen. Metabolized to amino acids in cells lining the kidneys. **Half-life:** 80–120 min.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid use in those of either sex not practicing effective contraception. **Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment; will not tolerate toxicity.

INTERACTIONS

DRUG: Corticosteroids (e.g., dexamethasone, prednisONE) may decrease therapeutic effect. Cladribine may increase myelosuppressive effect. **HERBAL:** Herbs with hypotensive properties (e.g.,

garlic, ginger, ginkgo biloba) may alter effects. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, bilirubin, creatinine, ALT, AST. May decrease serum calcium, magnesium, phosphorus, potassium, sodium.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Proleukin): 22 million units (1.3 mg) (18 million units/mL = 1.1 mg/mL when reconstituted).

ADMINISTRATION/HANDLING

⚠️ ALERT Hold administration in pts who develop moderate to severe lethargy or drowsiness (continued administration may result in coma).

IV

Reconstitution • Reconstitute 22 million units vial with 1.2 mL Sterile Water for Injection to provide concentration of 18 million units/mL (1.1 mg/mL). • Bacteriostatic Water for Injection or NaCl should not be used to reconstitute because of increased aggregation. • During reconstitution, direct Sterile Water for Injection at the side of vial. Swirl contents gently to avoid foaming. Do not shake.

Rate of administration • Further dilute dose in 50 mL D₅W to a final concentration between 0.49 and 1.1 million international units/mL (30–70 mcg/mL) and infuse over 15 min. Do not use an in-line filter. • Solution should be warmed to room temperature before infusion. • Monitor diligently for drop in mean arterial B/P (sign of capillary leak syndrome [CLS]). Continued treatment may result in significant hypotension (less than 90 mm Hg or a 20 mm Hg drop from baseline systolic pressure), edema, pleural effusion, altered mental status.

Storage • Refrigerate vials; do not freeze. • Reconstituted solution is stable for 48 hrs refrigerated or at room temperature (refrigeration preferred).

IV INCOMPATIBILITIES

Ganciclovir (Cytovene), pentamidine (Pentam), prochlorperazine (Compazine), promethazine (Phenergan).

IV COMPATIBILITIES

Calcium gluconate, DOPamine (Intropin), heparin, LORazepam (Ativan), magnesium, potassium.

INDICATIONS/ROUTES/DOSAGE

Metastatic Melanoma, Metastatic Renal Cell Carcinoma

IV: ADULTS 18 YRS AND OLDER: 600,000 units/kg q8h for 14 doses; followed by 9 days of rest, then another 14 doses for a total of 28 doses per course. Course may be repeated if tumor shrinkage observed after rest period of at least 7 wks from date of hospital discharge.

Dosage in Renal/Hepatic Impairment

No dose adjustment. Do not initiate if serum creatinine greater than 1.5 mg/dL.

Dosage Modification for Toxicity

Withhold or interrupt therapy; do not reduce dose. Retreatment contraindicated with the following toxicities: sustained ventricular tachycardia, uncontrolled arrhythmias; chest pain/ECG changes consistent with angina or MI; cardiac tamponade, repetitive/refractory seizures; GI bleeding; bowel ischemia/perforation; renal failure requiring dialysis; coma lasting more than 48 hrs.

SIDE EFFECTS

Side effects are generally self-limited and resolve within 2–3 days after discontinuing therapy. **Frequent (89%–48%):** Fever, chills, nausea, vomiting, hypotension, diarrhea, oliguria/anuria, altered mental status, irritability, confusion, depression, sinus tachycardia, pain (abdominal, chest, back), fatigue, dyspnea, pruritus. **Occasional (47%–17%):** Edema, erythema, rash, stomatitis, anorexia, weight gain, infection (UTI, injection site, catheter tip), dizziness. **Rare (15%–4%):** Dry

skin, sensory disorders (vision, speech, taste), dermatitis, headache, arthralgia, myalgia, weight loss, hematuria, conjunctivitis, proteinuria.

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia, thrombocytopenia, leukopenia occur commonly. GI bleeding, pulmonary edema occur occasionally. Capillary leak syndrome (CLS) results in hypotension (systolic pressure less than 90 mm Hg or a 20 mm Hg drop from baseline systolic pressure), extravasation of plasma proteins and fluid into extravascular space, loss of vascular tone. May result in cardiac arrhythmias, angina, MI, respiratory insufficiency. Fatal malignant hyperthermia, cardiac arrest, CVA, pulmonary emboli, bowel perforation/gangrene, severe depression leading to suicide occur in less than 1% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pts with bacterial infection and with indwelling central lines should be treated with antibiotic therapy before treatment begins. All pts should be neurologically stable with a negative CT scan before treatment begins. CBC, BMP, LFT, chest X-ray should be performed before therapy begins and daily thereafter.

INTERVENTION/EVALUATION

Monitor CBC with differential, amylase, electrolytes, renal function, LFT, weight, pulse oximetry. Discontinue medication at first sign of hypotension and hold for moderate to severe lethargy (physician must decide whether therapy should continue). Assess for altered mental status (irritability, confusion, depression), weight gain/loss. Maintain strict I&O. Assess for extravascular fluid accumulation (rales in lungs, edema in dependent areas).

PATIENT/FAMILY TEACHING

- Nausea may decrease during therapy.
- At home, increase fluid intake (protects against renal impairment).
- Do not have immunizations without physician's approval (drug lowers resistance).
- Avoid exposure to persons with infection.
- Report fever, chills, lower back pain, difficulty with urination, unusual bleeding/bruising, black tarry stools, blood in urine, petechial rash (pinpoint red spots on skin).
- Report symptoms of depression or suicidal ideation immediately.

ipilimumab

ip-i-**lim**-ue-mab
(Yervoy)

BLACK BOX ALERT ■ Severe and fatal immune-mediated adverse reactions due to T-cell activation and proliferation are capable of involving any organ system. Specific reactions include enterocolitis, hepatitis, dermatitis, neuropathy, endocrinopathy. Majority of immune-mediated reactions may initially manifest during treatment or weeks to months after treatment. Permanently discontinue treatment and initiate high-dose corticosteroid therapy for severe immune-mediated adverse reactions. Assess all pts for signs/symptoms of enterocolitis, hepatitis, dermatitis (including toxic epidermal necrolysis), neuropathy, endocrinopathy, and evaluate clinical chemistries, including hepatic function tests and thyroid tests at baseline and before each treatment.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Human cytotoxic T-lymphocyte antigen 4 (CTLA-4)-blocking antibody. Monoclonal antibody. **CLINICAL:** Antineoplastic.

USES

Treatment of unresectable or metastatic melanoma in adults and children 12 yrs of age and older. Adjuvant treatment of pts with cutaneous melanoma with pathologic involvement of regional lymph nodes and who have undergone complete resection, including total lymphadenectomy. Treatment of metastatic colorectal cancer (in combination with nivolumab). Treatment of advanced renal cell carcinoma (in combination with nivolumab).

PRECAUTIONS

Contraindications: Hypersensitivity to ipilimumab. **Cautions:** Hepatic impairment, chronic peripheral neuropathy, thyroid/adrenal/pituitary dysfunction, autoimmune disorders (ulcerative colitis, Crohn's disease, lupus, sarcoidosis).

ACTION

Augments T-cell activation and proliferation. Binds to cytotoxic T-lymphocyte-associated antigen 4 (CTLA-4) and blocks interaction of CTLA-4 with its ligands, allowing for enhanced T-cell activation and proliferation. **Therapeutic Effect:** May indirectly mediate T-cell immune responses against tumors.

PHARMACOKINETICS

Metabolized in liver. Steady state reached by third dose. **Half-life:** 14.7 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Use effective contraception during treatment and for at least 3 mos after discontinuation. Unknown if distributed in breast milk. Discontinue drug or discontinue breastfeeding. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase hepatotoxic effect of **vemurafenib**. **HERBAL:** None significant. **FOOD:** None known. **LAB**

VALUES: May increase serum ALT, AST, bilirubin; eosinophils.

AVAILABILITY (Rx)

Injection, Solution: 5 mg/mL (10 mL, 40 mL vials).

ADMINISTRATION/HANDLING

◀ALERT▶ Use sterile, nonpyrogenic, low protein-binding in-line filter. Use dedicated line only.

Reconstitution • Calculate number of vials needed for injection. • Inspect for particulate matter or discoloration. • Allow vials to stand at room temperature for approximately 5 min. • Withdraw proper volume and transfer to infusion bag. Dilute in NaCl or D₅W with final concentration ranging from 1–2 mg/mL. • Mix diluted solution by gentle inversion. Do not shake or agitate.

Rate of administration • Infuse over 90 min. Flush with 0.9% NaCl or D₅W at end of infusion.

Storage • Solution should be translucent to white or pale yellow with amorphous particles. • Discard vial if cloudy or discolored. • Refrigerate vials until time of use. • May store diluted solution either under refrigeration or at room temperature for no more than 24 hrs.

INDICATIONS/ROUTES/DOSAGE**Metastatic Melanoma**

IV: ADULTS, CHILDREN 12 YRS AND OLDER: 3 mg/kg q3wks for maximum of 4 doses. Doses may be delayed due to toxicity, but all doses must be given within 16 wks of initial dose.

◀ALERT▶ Pts presenting with severe immune-mediated adverse reactions must immediately discontinue drug therapy and start predniSONE 1 mg/kg/day.

Cutaneous Melanoma

IV: ADULTS: 10 mg/kg q3wks for 4 doses, then 10 mg/kg q12wks for up to 3 yrs. If toxicity occurs, doses are omitted (not delayed).

Colorectal Cancer

IV: ADULTS, CHILDREN 12 YRS AND OLDER: 1 mg/kg q3wks for up to 4 combination doses, followed by nivolumab monotherapy.

Renal Cell Cancer

IV: ADULTS: 1 mg/kg q3wks for up to 4 combination doses, followed by nivolumab monotherapy.

Dosage Modification

Hold scheduled dose for moderate immune-mediated adverse reactions. Pts with complete or partial resolution of adverse reactions and who are receiving less than 7.5 mg/day of predniSONE may resume scheduled doses. Permanently discontinue for persistent moderate adverse reactions or inability to reduce corticosteroid dose to 7.5 mg/day, failure to complete full treatment course in 16 wks, any severe or life-threatening adverse reactions.

Hepatotoxicity During Treatment

ALT/AST greater than 2.5 times upper limit of normal (ULN) or bilirubin greater than 1.5–3 times ULN: Withhold treatment. **ALT/AST greater than 5 times ULN or bilirubin greater than 3 times ULN:** Permanently discontinue.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (42%): Fatigue. **Occasional (32%–29%):** Diarrhea, pruritus, rash, colitis.

ADVERSE EFFECTS/TOXIC REACTIONS

Severe and fatal immune-mediated adverse reactions have occurred. Enterocolitis (7% of pts) may present with fever, ileus, abdominal pain, GI bleeding, intestinal perforation, severe dehydrating diarrhea. Endocrinopathies (4% of pts), including hypopituitarism, adrenal insufficiency, hypogonadism, hypothyroidism, may present with fatigue, headache, mental status change, unusual bowel habits, hypotension and may require emergent hormone

replacement therapy. Dermatitis including toxic epidermal necrolysis (2% of pts) may present with full-thickness ulceration or necrotic, bullous, hemorrhagic manifestations. Hepatotoxicity (1% of pts), defined as LFT greater than 2.5–5 times ULN, may present with right upper abdominal pain, jaundice, black/tarry stools, bruising, dark-colored urine, nausea, vomiting. Neuropathy (1% of pts), including Guillain-Barré syndrome or myasthenia gravis, may present with weakness, sensory alterations, paresthesia, paralysis. Other serious adverse reactions such as pneumonitis, meningitis, nephritis, eosinophilia, pericarditis, myocarditis, angiopathy, temporal arteritis, vasculitis, polymyalgia rheumatica, conjunctivitis, blepharitis, episcleritis, scleritis, leukocytoclastic vasculitis, erythema multiforme, psoriasis, pancreatitis, arthritis, autoimmune thyroiditis reported. Anti-ipilimumab antibodies reported in 1.1% of pts. All severe immune-mediated adverse reactions require immediate high-dose corticosteroid therapy.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, complete metabolic profile, LFT, TSH, free T₄, urine pregnancy. Screen for history of hepatic impairment, chronic neuropathy, thyroid/adrenal/pituitary dysfunction, autoimmune disorders. Focused assessment relating to possible adverse reactions includes abdominal area (inspection, auscultation, percussion, palpation, bowel pattern, symmetry), skin (color, lesions, mucosal inspection, edema), neurologic (mental status, gait, numbness, tingling, pain, strength, visual acuity), hormonal glands (lymph node inspection/palpation, pyrexia, goiter, palpitations). Question possibility of pregnancy or plans of breastfeeding. Receive full medication history including herbal products.

INTERVENTION/EVALUATION

Monitor vital signs, LFT, thyroid panel before each dose. Continue focused assessment and screen for life-threatening

immune-mediated adverse reactions. If adverse reactions occur, immediately notify physician and initiate proper treatment. Report suspected pregnancy. Obtain CBC, blood cultures for fever, suspected infection. ECG for palpitations, chest pain, difficulty breathing, dizziness. If prednisone therapy initiated, monitor capillary blood glucose and screen for side effects.

PATIENT/FAMILY TEACHING

- Inform pt that serious and fatal adverse reactions indicate inflammation to certain systems: intestines (diarrhea, dark/tarry stools, abdominal pain), liver (yellowing of the skin, dark-colored urine, right upper quadrant pain, bruising), skin (rash, mouth sores, blisters, ulcers), nerves (weakness, numbness, tingling, difficulty breathing, paralysis), hormonal glands (headaches, weight gain, palpitations, changes in mood or behavior, dizziness), eyes (blurry vision, double vision, eye pain/redness).
- Prednisone therapy may be started if adverse reactions occur.
- May cause fetal harm, stillbirth, premature delivery.
- Blood levels will be drawn before each dose.
- Report any chest pain, palpitations, fever, swollen glands, stomach pain, vomiting, or any sign of adverse reactions.

ipratropium

TOP 100

ip-ra-troe-pee-um
(Atrovent HFA, Apo-Ipratropium )

Do not confuse Atrovent with Alupent or Serevent, or ipratropium with tiotropium.

FIXED-COMBINATION(S)

Combivent, DuoNeb: ipratropium/albuterol (a bronchodilator): *Aerosol:* 18 mcg/90 mcg per actuation. *Solution:* 0.5 mg/2.5 mg per 3 mL.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticholinergic. **CLINICAL:** Bronchodilator.

USES

Inhalation, Nebulization: Maintenance treatment of bronchospasm due to COPD, bronchitis, emphysema, asthma. Not indicated for immediate bronchospasm relief. **Nasal Spray:** Symptomatic relief of rhinorrhea associated with the common cold and allergic/nonallergic rhinitis.

PRECAUTIONS

Contraindications: History of hypersensitivity to ipratropium, atropine. **Cautions:** Narrow-angle glaucoma, prostatic hypertrophy, bladder neck obstruction, myasthenia gravis.

ACTION

Blocks action of acetylcholine at parasympathetic sites in bronchial smooth muscle. Application to nasal mucosa inhibits serous/seromucous gland secretions. **Therapeutic Effect:** Causes bronchodilation, inhibits nasal secretions.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Inhalation	1–3 min	1.5–2 hrs	Up to 4 hrs
Nasal	5 min	1–4 hrs	4–8 hrs

Minimal systemic absorption after inhalation. Metabolized in liver (systemic absorption). Primarily excreted in feces. **Half-life:** 1.5–4 hrs (nasal).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Anticholinergics (e.g., acclidinium, ipratropium, tiotropium, umeclidinium), medications with anticholinergic properties may increase toxicity. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Aerosol for Oral Inhalation: (Atrovent HFA): 17 mcg/actuation. **Solution, Intranasal Spray:** 0.03%; 0.06%. **Solution for Nebulization:** 0.02% (500 mcg).

ADMINISTRATION/HANDLING

Inhalation

- Do not shake. Prime before first use or if not used for more than 3 days.
- Instruct pt to exhale completely, place mouthpiece between lips, inhale deeply through mouth while fully depressing top of canister. Hold breath as long as possible before exhaling slowly.
- Allow at least 1 minute between inhalations.
- Rinse mouth with water immediately after inhalation (prevents mouth/throat dryness).

Nebulization

- May be administered with or without dilution in 0.9% NaCl.
- Stable for 1 hr when mixed with albuterol.
- Give over 5–15 min.

Nasal

- Store at room temperature.
- Initial pump priming requires 7 actuations of pump.
- If used regularly as recommended, no further priming is required. If not used for more than 4 hrs, pump will require 2 actuations, or if not used for more than 7 days, the pump will require 7 actuations to reprime.

INDICATIONS/ROUTES/DOSAGE

Bronchodilator for COPD

Inhalation: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 2 inhalations 4 times/day. **Maximum:** 12 inhalations per 24 hrs. **Nebulization:** ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 500 mcg (1 unit dose vial) 3–4 times/day (doses 6–8 hrs apart).

Asthma Exacerbation

Note: Should be given in combination with a short-acting beta-adrenergic agonist. **Inhalation:** ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 8 inhalations q20min as needed for up to 3 hrs. **CHILDREN 6–12 YRS:** 4–8 inhalations q20min as needed for up to 3 hrs. **CHILDREN 5 YRS OR YOUNGER:** 2 inhalations q20 min for 1 hr. **Nebulization:** ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 500 mcg q20min for 3 doses, then as needed. **CHILDREN**

6–12 YRS: 250–500 mcg q20min for 3 doses, then as needed. **CHILDREN 5 YRS OR YOUNGER:** 250 mcg q20 min for 1 hr.

Rhinorrhea (Perennial Allergic/Nonallergic Rhinitis)

Intranasal: (0.03%): ADULTS, ELDERLY, CHILDREN 6 YRS AND OLDER: 2 sprays per nostril 2–3 times/day.

Rhinorrhea (Common Cold)

Intranasal: (0.06%): ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 2 sprays per nostril 3–4 times/day for up to 4 days. **CHILDREN 5–11 YRS:** 2 sprays per nostril 3 times/day for up to 4 days.

Rhinorrhea (Seasonal Allergy)

Intranasal: (0.06%): ADULTS, ELDERLY, CHILDREN 5 YRS AND OLDER: 2 sprays per nostril 4 times/day for up to 3 wks.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: **Inhalation (6%–3%):** Cough, dry mouth, headache, nausea. **Nasal:** Dry nose/mouth, headache, nasal irritation. **Occasional:** **Inhalation (2%):** Dizziness, transient increased bronchospasm. **Rare (less than 1%):** **Inhalation:** Hypotension, insomnia, metallic/unpleasant taste, palpitations, urinary retention. **Nasal:** Diarrhea, constipation, dry throat, abdominal pain, nasal congestion.

ADVERSE EFFECTS/TOXIC REACTIONS

Worsening of angle-closure glaucoma, acute eye pain, hypotension occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Auscultate lung sounds. Question history of glaucoma, urinary retention, myasthenia gravis.

INTERVENTION/EVALUATION

Monitor rate, depth, rhythm, type of respiration; quality, rate of pulse. Assess

lung sounds for rhonchi, wheezing, rales. Monitor ABGs. Observe for retractions (clavicular, sternal, intercostal), hand tremor. Evaluate for clinical improvement (quieter, slower respirations, relaxed facial expression, cessation of retractions). Monitor for improvement of rhinorrhea.

PATIENT/ FAMILY TEACHING

- Increase fluid intake (decreases lung secretion viscosity).
- Do not take more than 2 inhalations at any one time (excessive use may produce paradoxical bronchoconstriction, decreased bronchodilating effect).
- Rinsing mouth with water immediately after inhalation may prevent mouth and throat dryness.
- Avoid excessive use of caffeine derivatives (chocolate, coffee, tea, cola, cocoa).

irbesartan

ir-be-sar-tan
(Avapro)

BLACK BOX ALERT May cause fetal injury, mortality if used during second or third trimester of pregnancy. Discontinue as soon as possible once pregnancy is detected.

Do not confuse Avapro with Anaprox.

FIXED-COMBINATION(S)

Avalide: irbesartan/hydroCHLOROTHIAZIDE (a diuretic): 150 mg/12.5 mg, 300 mg/12.5 mg, 300 mg/25 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin II receptor antagonist. **CLINICAL:** Antihypertensive.

USES

Treatment of hypertension alone or in combination with other antihypertensives. Treatment of diabetic nephropathy in pts with type 2 diabetes. **OFF-LABEL:** Reduce proteinuria in children with chronic kidney disease.

PRECAUTIONS

Contraindications: Hypersensitivity to irbesartan. Concomitant use with aliskiren in pts with diabetes. **Cautions:** Renal impairment, unstented unilateral or bilateral renal artery stenosis, dehydration, HF, idiopathic or hereditary angioedema or angioedema associated with ACE inhibitor therapy.

ACTION

Blocks vasoconstriction, aldosterone-secreting effects of angiotensin II, inhibiting binding of angiotensin II to AT₁ receptors. **Therapeutic Effect:** Produces vasodilation, decreases peripheral resistance, decreases B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	—	1–2 hrs	Greater than 24 hrs

Rapidly, completely absorbed after PO administration. Protein binding: 90%. Metabolized in liver. Excreted in feces (80%), urine (20%). Not removed by hemodialysis. **Half-life:** 11–15 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. May cause fetal or neonatal morbidity or mortality. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Aliskiren may increase hypokalemic effect. May increase adverse of ACE inhibitors (e.g., benazepril, lisinopril). NSAIDs (e.g., ibuprofen, ketorolac, naproxen) may decrease antihypertensive effect. **HERBAL:** Herbs with hypertensive properties (e.g., licorice, yohimbe) or hypotensive properties (e.g., garlic, ginger, ginkgo biloba) may alter effects. **FOOD:** None known. **LAB VALUES:** May slightly increase serum BUN, creatinine. May decrease Hgb.

AVAILABILITY (Rx)

Tablets: 75 mg, 150 mg, 300 mg.

ADMINISTRATION/HANDLING**PO**

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE**Hypertension**

PO: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: Initially, 75–150 mg/day. May increase to 300 mg/day. **CHILDREN 6–12 YRS:** Initially, 75 mg/day. May increase to 150 mg/day.

Diabetic Nephropathy

PO: ADULTS, ELDERLY: 300 mg once daily.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (9%–3%): Upper respiratory tract infection, fatigue, diarrhea, cough.

Rare (2%–1%): Heartburn, dizziness, headache, nausea, rash.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose may manifest as hypotension, syncope, tachycardia. Bradycardia occurs less often.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain B/P, apical pulse immediately before each dose in addition to regular monitoring (be alert to fluctuations). Question possibility of pregnancy. Assess medication history (esp. diuretic therapy).

INTERVENTION/EVALUATION

Maintain hydration (offer fluids frequently). Assess for evidence of upper respiratory infection. Assist with ambulation if dizziness occurs. Monitor electrolytes, renal function, urinalysis, B/P, pulse. Assess for hypotension.

PATIENT/ FAMILY TEACHING

- May cause fetal or neonatal morbidity or mortality.
- Avoid tasks that require alertness, motor skills until response to drug is established (possible dizziness effect); ensure that appropriate birth control measures are in place.
- Report any sign of infection (sore throat, fever).
- Avoid exercising during hot weather (risk of dehydration, hypotension).

irinotecan

eye-ri-noe-tee-kan

(Camptosar, Onivyde)

■ BLACK BOX ALERT ■ (Camptosar, Onivyde): Can induce both early and late forms of severe diarrhea. Early diarrhea (during or shortly after administration) accompanied by salivation, rhinitis, lacrimation, diaphoresis, flushing. Late diarrhea (occurring more than 24 hrs after administration) can be prolonged and life-threatening. **(Camptosar):** May produce severe, profound myelosuppression. Administer under supervision of experienced cancer chemotherapy physician. **(Onivyde):** Severe, life-threatening, or fatal neutropenic fever/sepsis occurred. Withhold for ANC below 1,500 cells/mm³ or neutropenic fever. Monitor blood cell counts.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Topoisomerase inhibitor. **CLINICAL:** Anti-neoplastic.

USES

Camptosar: Treatment of metastatic carcinoma of colon or rectum. **Onivyde:** Treatment of metastatic adenocarcinoma of the pancreas (in combination with 5-fluorouracil and leucovorin) after disease progression following gemcitabine-based therapy. **OFF-LABEL:** Non–small-cell lung cancer; small-cell lung cancer; CNS tumor; cervical, gastric, pancreatic, ovarian, esophageal cancer; Ewing's sarcoma; brain tumor.

PRECAUTIONS

Contraindications: Hypersensitivity to irinotecan. **Cautions:** Pt previously receiving pelvic, abdominal irradiation (increased risk of myelosuppression), pts older than 65 yrs, hepatic dysfunction, hyperbilirubinemia, renal impairment, preexisting pulmonary disease.

ACTION

Binds reversibly with topoisomerase I, an enzyme that relieves torsional strain in DNA by inducing reversible single-strand breaks. Prevents religation of these single-stranded breaks, resulting in damage to double-strand DNA, cell death. **Therapeutic Effect:** Produces cytotoxic effect on cancer cells.

PHARMACOKINETICS

Metabolized in liver. Protein binding: 95% (metabolite). Excreted in urine and eliminated by biliary route. **Half-life:** 6–12 hrs; metabolite, 10–20 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. Breastfeeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** Risk of diarrhea significantly increased.

INTERACTIONS

DRUG: Strong CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole, ritonavir) may increase concentration/effect. May decrease the therapeutic effect of BCG (intravesical), vaccines (live). May increase adverse effects of vaccines (live). UGT1A1 inhibitors (e.g., erlotinib, nilotinib) may increase concentration/effect. **HERBAL:** St. John's wort may decrease concentration/effect. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, AST. May decrease Hgb, leukocytes, platelets.

AVAILABILITY (Rx)

Injection Solution: (Conventional): 20 mg/mL (2 mL, 5 mL, 15 mL, 25 mL). **(Liposomal):** 43 mg/10 mL.

ADMINISTRATION/HANDLING

Camptosar

Reconstitution • Dilute in D₅W (preferred) or 0.9% NaCl to concentration of 0.12–2.8 mg/mL.

Rate of administration • Administer all doses as IV infusion over 30–90 min. • Assess for extravasation (flush site with Sterile Water for Injection, apply ice if extravasation occurs).

Storage • Store vials at room temperature, protect from light. • Solution diluted with D₅W is stable for 24 hrs at room temperature or 48 hrs if refrigerated. • Solution diluted with 0.9% NaCl is stable for 24 hrs at room temperature. • Do not refrigerate solution if diluted with 0.9% NaCl.

Onivyde

Reconstitution • Withdraw dose from vial and dilute with 500 mL D₅W or 0.9% NaCl. Mix gently.

Rate of administration • Infuse over 90 min.

Storage • Refrigerate vials; do not freeze. • Protect from light. • Stable for 4 hrs at room temperature or 24 hrs refrigerated.

IV INCOMPATIBILITIES

Gemcitabine (Gemzar).

INDICATIONS/ROUTES/DOSAGE

Note: Genotyping of UGT1A1 available. Pts who are homozygous for the UGT1A1*28 allele are at increased risk for neutropenia. Decreased dose is recommended.

Carcinoma of the Colon, Rectum (Camptosar)

IV: (Single-Agent Therapy): ADULTS, ELDERLY: (WEEKLY REGIMEN): Initially, 125 mg/m² once wkly for 4 wks, followed by a rest period of 2 wks. Additional courses may be repeated q6wks. Dosage may be

adjusted in 25–50 mg/m² increments/decrements to as high as 150 mg/m² or as low as 50 mg/m². (**3-WEEK REGIMEN**): 350 mg/m² q3wks. Dosage may be adjusted to as low as 200 mg/m² in decrements of 25–50 mg/m².

(*In Combination with Leucovorin and 5-Fluorouracil*): **REGIMEN 1**: 125 mg/m² on days 1, 8, 15, 22. Dose may be adjusted to 100 mg/m², then 75 mg/m², then decrements of approximately 20%. **REGIMEN 2**: 180 mg/m² on days 1, 15, 29. Dose may be adjusted to 150 mg/m², then 120 mg/m², then decrements of approximately 20%.

Pancreatic Cancer (Onivyde)

IV Infusion: ADULTS, ELDERLY: 70 mg/m² once q2wks (in combination with leucovorin and 5-fluorouracil).

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Serum Bilirubin	Dose
Greater than ULN to 2 mg/dL:	Reduce dose one level
Greater than 2 mg/dL:	Not recommended

SIDE EFFECTS

Expected (64%–32%): Nausea, alopecia, vomiting, diarrhea. **Frequent (29%–22%)**: Constipation, fatigue, fever, asthenia, skeletal pain, abdominal pain, dyspnea. **Occasional (19%–16%)**: Anorexia, headache, stomatitis, rash.

ADVERSE EFFECTS/TOXIC REACTIONS

Hematologic toxicity characterized by anemia, leukopenia, thrombocytopenia, and neutropenia, sepsis occur frequently. Camptosar may cause severe/fatal interstitial lung disease.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support. Assess hydration status, electrolytes, CBC before each

dose. Premedicate with antiemetics on day of treatment, starting at least 30 min before administration. Inform pt of possibility of alopecia.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Monitor hydration status, I&O, electrolytes, CBC, renal function, LFT. Monitor infusion site for signs of inflammation. Assess skin for rash.

PATIENT/ FAMILY TEACHING

- Report diarrhea, vomiting, fever, light-headedness, dizziness.
- Do not have immunizations without physician's approval (drug lowers resistance).
- Avoid contact with those who have recently received live virus vaccine.
- Avoid crowds, those with infections.

isavuconazonium

eye-sa-vue-kon-a-zoe-nee-um
(Cresemba)

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Azole antifungal derivative. **CLINICAL**: Antifungal.

USES

Treatment of invasive aspergillosis and invasive mucormycosis in pts 18 yrs and older.

PRECAUTIONS

Contraindications: Hypersensitivity to isavuconazonium or isavuconazole, concomitant use of strong CYP3A inhibitors (e.g., ketoconazole, high-dose ritonavir), strong CYP3A inducers (e.g., carbamazepine, rifampin, St. John's wort), history of short QT syndrome. **Cautions**: Renal/hepatic impairment, hypersensitivity to other azoles. Pts at risk for acute pancreatitis; concomitant use of nephrotoxic medications; pts at risk for hypokalemia, hypomagnesemia. Concomitant use of medications that prolong QT interval.

ACTION

Isavuconazonium is the prodrug of isavuconazole. Interferes with fungal cytochrome activity, decreasing ergosterol synthesis, inhibiting fungal cell membrane formation. **Therapeutic Effect:** Damages fungal cell wall membrane.

PHARMACOKINETICS

Widely distributed. Metabolized in liver. Protein binding: greater than 99%. Peak plasma concentration: 2–3 hrs. Excreted in feces (46%), urine (46%). **Half-life:** 130 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Avoid pregnancy. Avoid breastfeeding while taking Cresemba. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole, ritonavir) may increase concentration/effect. Strong CYP3A4 inducers (e.g., carbamazepine, rifampin) may decrease concentration/effect. May increase concentration/effects of cyclosporine, digoxin, eplerenone, estrogen, everolimus, midazolam, mycophenolate sirolimus, tacrolimus. May decrease therapeutic effect of *Saccharomyces boulardii*. **HERBAL:** St. John's wort may decrease concentration/effect. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST, bilirubin. May decrease serum potassium, magnesium.

AVAILABILITY (Rx)

Injection Powder: 372 mg/vial (equivalent to 200 mg isavuconazole). **Capsules:** 186 mg (equivalent to 100 mg isavuconazole).

ADMINISTRATION/HANDLING

Reconstitution • Reconstitute vial with 5 mL Sterile Water for Injection. • Gently shake until completely dissolved. • Visually inspect for particulate matter or discoloration. Solution may contain visible translucent to white particles. • Inject reconstituted solution into 250 mL 0.9% NaCl or 5% Dextrose injection. • Gently invert bag to mix. Do not shake or agitate. Do not use pneumatic transport system. • Diluted solution may also contain visible translucent to white particles (which will be removed by in-line filter).

Administration • Do not give as IV push or bolus. Flush IV line with 0.9% NaCl or 5% Dextrose injection prior to and after infusion.

Rate of administration • Infuse over 60 min (minimum) using 0.2- to 1.2-micron in-line filter.

Storage • Diluted solution may be stored at room temperature up to 6 hrs or refrigerated up to 24 hrs. • Do not freeze.

PO

• Give without regard to food. • Do not cut, crush, divide, or open capsules.

INDICATIONS/ROUTES/DOSAGE

Note: 372 mg is equivalent to 200 mg isavuconazole. Duration of therapy: minimum of 6–12 wks.

Invasive Aspergillosis, Invasive Mucormycosis

IV: ADULTS, ELDERLY: Loading dose: 372 mg q8h for 6 doses (48 hrs). **Maintenance:** 372 mg once daily. Start maintenance dose 12–24 hrs after last loading dose. **PO: ADULTS, ELDERLY: Loading dose:** 372 mg (2 capsules) q8h for 6 doses (48 hrs). **Maintenance:** 372 mg (2 capsules) once daily. Start maintenance dose 12–24 hrs after last loading dose.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Not specified; use caution.

SIDE EFFECTS

Frequent (28%–17%): Nausea, vomiting, diarrhea, abdominal pain, headache, dyspnea. **Occasional (15%–6%):** Peripheral edema, constipation, fatigue, insomnia, back pain, delirium, agitation, confusion, disorientation, chest pain, rash, pruritus, hypotension, anxiety, dyspepsia, injection site reaction, decreased appetite.

ADVERSE EFFECTS/TOXIC REACTIONS

Severe hepatic injury including cholestasis, hepatitis, hepatic failure reported in pts with underlying medical conditions (e.g., hematologic malignancies). Infusion-related reactions including chills, dizziness, dyspnea, hypoesthesia, hypotension, paresthesia may occur. Acute respiratory failure, renal failure, Stevens-Johnson syndrome, serious hypersensitivity reaction (including anaphylaxis) were reported.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain baseline LFT. Confirm negative pregnancy test before initiating treatment. Specimens for fungal culture, histopathology should be obtained prior to initiating therapy. Receive full medication history and screen for interactions/contraindications. Question history of hypersensitivity reaction, hepatic impairment.

INTERVENTION/EVALUATION

Monitor BMP, LFT periodically. Monitor for infusion-related reactions, hypersensitivity reactions, anaphylaxis. Monitor I&O. Report worsening of hepatic/renal function.

PATIENT/FAMILY TEACHING

- Swallow capsule whole; do not chew, crush, cut, or open capsules.
- Treatment may cause fetal harm. Females of

reproductive potential should use effective contraception. Immediately report suspected pregnancy.

- Do not take herbal products such as St. John's wort.
- Report liver problems such as upper abdominal pain, bleeding, dark or amber-colored urine, nausea, vomiting, or yellowing of the skin or eyes.
- Report decreased urinary output, extremity swelling, dark-colored urine; skin changes such as rash, skin bubbling, or sloughing.

isoniazid

eye-soe-nye-a-zid
(Isotamine )

BLACK BOX ALERT Severe, potentially fatal hepatitis may occur.

FIXED-COMBINATION(S)

Rifamate: isoniazid/rifAMPin (antitubercular): 150 mg/300 mg.

Rifater: isoniazid/pyrazinamide/rifAMPin (antitubercular): 50 mg/300 mg/120 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Isonicotinic acid derivative. **CLINICAL:** Antitubercular.

USES

Treatment of susceptible active tuberculosis due to *Mycobacterium tuberculosis*. Treatment of latent tuberculosis caused by *Mycobacterium tuberculosis*.

PRECAUTIONS

Contraindications: Hypersensitivity to isoniazid (including drug-induced hepatitis), acute hepatic disease, hepatic injury or severe adverse reactions with previous isoniazid therapy.

Cautions: Chronic hepatic disease, alcoholism, severe renal impairment. Pregnancy, pts at risk for peripheral

neuropathy, HIV infection, history of hypersensitivity reactions to latent TB infection medications.

ACTION

Inhibits mycolic acid synthesis. Causes disruption of bacterial cell wall, loss of acid-fast properties in susceptible mycobacteria. **Therapeutic Effect:** Bactericidal against actively growing intracellular, extracellular susceptible mycobacteria.

PHARMACOKINETICS

Note: Isoniazid is metabolized by acetylation. The rate of acetylation is genetically determined (e.g., 50% of black and Caucasian pts are slow inactivators; Eskimo and Asian pts are rapid inactivators. Slower inactivation may lead to higher blood levels and increased adverse effects.

Readily absorbed from GI tract. Protein binding: 10%–15%. Widely distributed (including to CSF). Metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** (Fast acetylators): 30–100 min; (slow acetylators): 2–5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Prophylaxis usually postponed until after delivery. Crosses placenta. Distributed in breast milk. **Children:** No age-related precautions noted. **Elderly:** More susceptible to developing hepatitis.

INTERACTIONS

DRUG: May increase concentration/effect of **carbamazepine, fosphenytoin, lomitapide, phenytoin. Hepatotoxic medications (e.g., acetaminophen, rifampin)** may increase risk of hepatotoxicity. May decrease **ketconazole** concentration. **HERBAL:** None significant. **FOOD:** Foods containing **tyramine** may cause hypertensive crisis. **LAB VALUES:** May increase serum bilirubin, ALT, AST.

AVAILABILITY (Rx)

Solution, Injection: 100 mg/mL. **Syrup, Oral:** 50 mg/5 mL. **Tablets:** 100 mg, 300 mg.

ADMINISTRATION/HANDLING

PO

- Give 1 hr before or 2 hrs following meals (may give with food to decrease GI upset, but will delay absorption).
- Administer at least 1 hr before antacids, esp. those containing aluminum.

INDICATIONS/ROUTES/DOSAGE

Active Tuberculosis (in Combination with One or More Antituberculars)

IM/PO: ADULTS, ELDERLY, CHILDREN WEIGHING 40 KG OR MORE: 5 mg/kg once daily. **Usual dose:** 300 mg. **CHILDREN WEIGHING LESS THAN 40 KG:** 10–15 mg/kg once daily. **Maximum:** 300 mg.

Note: Give isoniazid with rifampin, pyrazinamide, and with or without ethambutol for 8 wks, then give with rifampin for 18 wks.

Latent Tuberculosis

Note: Give for 9 mos.

IM/PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 5 mg/kg once daily (**Maximum:** 300 mg) or 15 mg/kg twice wkly (**Maximum:** 900 mg). **CHILDREN LESS THAN 12 YRS:** 10–20 mg/kg/day as a single daily dose. **Maximum:** 300 mg/day or 20–40 mg/kg 2 times/wk. **Maximum:** 900 mg/dose.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Use caution. Contraindicated with acute hepatic disease.

SIDE EFFECTS

Frequent: Nausea, vomiting, diarrhea, abdominal pain. **Rare:** Pain at injection site, hypersensitivity reaction.

ADVERSE EFFECTS/TOXIC REACTIONS

Neurotoxicity (ataxia, paresthesia), optic neuritis, hepatotoxicity occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of hypersensitivity reactions, hepatic injury or disease, sensitivity to nicotinic acid or chemically related medications. Ensure collection of specimens for culture, sensitivity. Evaluate initial LFT.

INTERVENTION/EVALUATION

Monitor LFT, assess for hepatitis: anorexia, nausea, vomiting, weakness, fatigue, dark urine, jaundice (withhold concurrent INH therapy and inform physician promptly). Assess for paresthesia of extremities (pts esp. at risk for neuropathy may be given pyridoxine prophylactically: malnourished, elderly, diabetics, pts with chronic hepatic disease [including alcoholics]). Be alert for fever, skin eruptions (hypersensitivity reaction).

PATIENT/FAMILY TEACHING

- Do not skip doses; continue to take isoniazid for full length of therapy (6–24 mos).
- Take preferably 1 hr before or 2 hrs following meals (with food if GI upset).
- Avoid alcohol during treatment.
- Do not take any other medications, including antacids, without consulting physician.
- Must take isoniazid at least 1 hr before antacid.
- Avoid tuna, sauerkraut, aged cheeses, smoked fish (consult list of tyramine-containing foods), which may cause hypertensive reaction (red/itching skin, palpitations, light-headedness, hot or clammy feeling, headache).
- Report any new symptom, immediately for vision difficulties, nausea/vomiting, dark urine, yellowing of skin/eyes (jaundice), fatigue, paresthesia of extremities.

isosorbide dinitrate

eye-soe-sor-bide
(ISDN , Dilatrate-SR, Isordil)

isosorbide mononitrate

(Apo-ISMN , Imdur )

Do not confuse Imdur with Imuran, Inderal, or K-Dur, Isordil with Inderal, Isuprel, or Plendil.

FIXED-COMBINATION(S)

BiDil: isosorbide dinitrate/hydrALAZINE (a vasodilator): 20 mg/37.5 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Nitrate.

CLINICAL: Antianginal.

USES

Dinitrate: Prevention of angina pectoris due to coronary artery disease. **Mononitrate:** Treatment (immediate-release only) and prevention of angina pectoris due to coronary artery disease.

PRECAUTIONS

Contraindications: Hypersensitivity to nitrates, concurrent use of sildenafil, tadalafil, vardenafil, or riociguat. **Cautions:** Inferior wall MI, head trauma, increased intracranial pressure (ICP), orthostatic hypotension, blood volume depletion from diuretic therapy, systolic B/P less than 90 mm Hg, hypertrophic cardiomyopathy, alcohol consumption.

ACTION

Activates intracellular cyclic guanosine monophosphate. **Therapeutic Effect:** Relaxes vascular smooth muscle of arterial, venous vasculature. Decreases preload, afterload, cardiac oxygen demand.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Dinitrate			
Sublingual	3 min	N/A	1–2 hrs
PO	45–60 min	N/A	up to 8 hrs
Mononitrate			
PO (extended-release)	30–60 min	N/A	12–24 hrs

Dinitrate poorly absorbed and metabolized in liver to its active metabolite isosorbide mononitrate. Mononitrate well absorbed after PO administration. Primarily excreted in urine. **Half-life:** Dinitrate, 1–4 hrs; mononitrate, 4 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to hypotensive effects. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Alcohol, **riociguat**, **sildenafil**, **tadalafil**, **varafenafil** may potentiate hypotensive effects (concurrent use of these agents is contraindicated). **Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole, ritonavir)** may increase concentration/effect. **HERBAL:** **St. John's wort** may decrease concentration/effect. **FOOD:** None known. **LAB VALUES:** May increase urine catecholamine, urine vanillylmandelic acid levels.

AVAILABILITY (RX)

Dinitrate

Tablets: 5 mg, 10 mg, 20 mg, 30 mg, 40 mg.

 **Capsules, Extended-Release:** 40 mg.

 **Tablets, Extended-Release:** 40 mg.

Mononitrate

Tablets: 10 mg, 20 mg.

 **Tablets, Extended-Release:** 30 mg, 60 mg, 120 mg.

ADMINISTRATION/HANDLING

PO

- Best if taken on an empty stomach.
- Do not administer around the clock.
- Oral tablets may be crushed. • Do not crush/break sustained-, extended-release form.

INDICATIONS/ROUTES/DOSAGE

Angina

Note: Dinitrate used only for prevention.

PO: (Isosorbide Dinitrate) (Immediate-

Release): ADULTS, ELDERLY: Initially, 5–20 mg 2–3 times/day. **Maintenance:** 10–40 mg (or between 5–80 mg) 2–3 times/day.

(Sustained-Release): ADULTS, ELDERLY: 40 mg 1–2 times/day. A nitrate-free interval of greater than 18 hrs is recommended. **Maximum:** 160 mg/day.

PO: (Isosorbide Mononitrate) (Immediate-Release): ADULTS, ELDERLY: 20 mg twice daily given 7 hrs apart to decrease tolerance development. In pts with small stature, may start at 5 mg twice daily and titrate to at least 10 mg twice daily in first 2–3 days of therapy. **(Sustained-Release):** Initially, 30–60 mg/day in morning as a single dose. May increase dose at 3-day intervals to 120 mg once daily. **Maximum daily single dose:** 240 mg.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Headache (may be severe) occurs mostly in early therapy, diminishes rapidly in intensity, usually disappears during continued treatment. **Sublingual:** Burning, tingling at oral point of dissolution. **Occasional:** Transient flushing of face/neck, dizziness, weakness, orthostatic hypotension, nausea, vomiting, restlessness. GI upset, blurred vision, dry mouth.

ADVERSE EFFECTS/TOXIC REACTIONS

Discontinue if blurred vision occurs. Severe orthostatic hypotension manifested by syncope, pulselessness, cold/clammy skin, diaphoresis has been reported. Tolerance may occur with repeated, prolonged therapy, but may not occur with extended-release form. Minor tolerance with intermittent use of sublingual tablets. High dosage tends to produce severe headache.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Record onset, type (sharp, dull, squeezing), radiation, location, intensity, duration of anginal pain; precipitating factors (exertion, emotional stress). If head-

ache occurs during management therapy, administer medication with meals.

INTERVENTION/EVALUATION

Assist with ambulation if light-headedness, dizziness occurs. Assess for facial/neck flushing. Monitor number of anginal episodes, orthostatic B/P.

PATIENT/FAMILY TEACHING

- Do not chew, crush, dissolve, or divide sublingual, extended-release, sustained-release forms.
- Take sublingual tablets while sitting down.
- Go from lying to standing slowly (prevents dizziness effect).
- Take oral form on empty stomach (however, if headache occurs during management therapy, take medication with meals).
- Dissolve sublingual tablet under tongue; do not swallow.
- Avoid alcohol (intensifies hypotensive effect).
- If alcohol is ingested soon after taking nitrates, possible acute hypotensive episode (marked drop in B/P, vertigo, pallor) may occur.
- Report signs/symptoms of hypotension, angina.

itraconazole

it-ra-kon-a-zole
(Sporanox, Tolsura)

BLACK BOX ALERT ■ Serious cardiovascular events, including HF, ventricular tachycardia, torsades de pointes, death, have occurred due to concurrent use with colchicine (pts with renal/hepatic impairment), dofetilide, dronedarone, eplerenone, ergot alkaloids, felodipine, fesoterodine, irinotecan, ivabradine, levome-thadyl, lovastatin, lurasidone, methadone, midazolam (oral), pimo-zide, quiniDine, ranolazine, simvastatin, solifenacin, ticagrelor, or triazolam. Negative inotropic effects observed following IV administration. Contraindicated for treatment of onychomycosis in pts with HF, ventricular dysfunction.

Do not confuse itraconazole with fluconazole, ketoconazole, miconazole, posaconazole,

voriconazole, or Sporanox with Suprax or Topamax.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Imidazole/triazole type antifungal. **CLINICAL:** Antifungal.

USES

Oral capsules: Treatment of aspergillosis, blastomycosis, esophageal and oropharyngeal candidiasis, empiric treatment in febrile neutropenia, histoplasmosis, onychomycosis. **Oral solution:** Treatment of oral and esophageal candidiasis. **Oral tablet:** Treatment of onychomycosis of toenail.

PRECAUTIONS

Contraindications: Hypersensitivity to itraconazole, other azoles. Treatment of onychomycosis in pts with evidence of ventricular dysfunction (e.g., HF or history of HF); concurrent use of dofetilide, dronedarone, eplerenone, ergot derivatives, felodipine, irinotecan, lovastatin, lurasidone, methadone, midazolam (oral), pimo-zide, ranolazine, simvastatin, ticagrelor, triazolam, quiniDine; concurrent use with colchicine, fesoterodine, solifenacin in pts with renal/hepatic impairment; treatment of onychomycosis in women who are pregnant or are intending to become pregnant. **Cautions:** Preexisting hepatic impairment (not recommended in pts with active hepatic disease, elevated LFTs), renal impairment, pts with risk factors for HF (e.g., COPD, myocardial ischemia).

ACTION

Inhibits synthesis of ergosterol (vital component of fungal cell formation). **Therapeutic Effect:** Damages fungal cell membrane, altering its function. Fungistatic.

PHARMACOKINETICS

Moderately absorbed from GI tract. Absorption is increased when taken with food. Protein binding: 99%. Widely distributed, primarily in fatty tissue, liver,

kidneys. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 16–26 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May increase concentration/toxicity of **aliskiren, calcium channel–blocking agents (e.g., felodipine, NIFEdipine), cycloSPORINE, digoxin, dofetilide, eplerenone, ergot alkaloids, HMG-CoA reductase inhibitors (e.g., lovastatin, simvastatin), midazolam, sirolimus, tacrolimus, warfarin.** Strong CYP3A4 inhibitors (e.g., **clarithromycin, ketoconazole, ritonavir**) may increase concentration/effect. Strong CYP3A4 inducers (e.g., **carbamazepine, phenytoin, rifampin**) may decrease concentration/effect. May inhibit metabolism of **DOCetaxel, vinca alkaloids.** **Antacids, H2 antagonists, proton pump inhibitors** may decrease absorption. **HERBAL:** **St. John's wort** may decrease concentration/effect. **FOOD:** **Grapefruit products** may alter absorption. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, ALT, AST, LDH. May decrease serum potassium.

AVAILABILITY (Rx)

Capsules: (*Sporanox*): 100 mg. (*Tolsura*): 65 mg. **Oral Solution:** (*Sporanox*): 10 mg/mL.

ADMINISTRATION/HANDLING

PO

- Give capsules with food (increases absorption).
- Give solution on empty stomach. Swish vigorously in mouth, then swallow.

INDICATIONS/ROUTES/DOSAGE

Note: Capsules/tablets are not bioequivalent with oral solution.

Blastomycosis, Histoplasmosis

PO: ADULTS, ELDERLY: (*Sporanox*

[Capsule]): Initially, 200 mg once daily. May increase in increments of 100 mg/day up to 400 mg/day. **Life-threatening infections:** 200 mg 3 times/day for first 3 days of therapy. Continue for at least 3 mos. (*Tolsura*): 130 mg once daily; if no improvement or evidence of progressive fungal infection, increase dose in 65 mg increments to a maximum of 260 mg/day given in 2 divided doses. For life threatening infections, give a loading dose of 130 mg 3 times/day for the first 3 days of treatment. Treatment should be continued for 3 mos or greater.

Aspergillosis

PO: ADULTS, ELDERLY: (*Sporanox [Capsule]):* 200–400 mg daily for 3 mos. **Life-threatening infections:** 200 mg 3 times/day for first 3 days of therapy. Continue 200–400 mg/day for at least 3 mos. (*Tolsura*): 130 mg 1–2 times/day. For life threatening infections, give a loading dose of 130 mg 3 times/day for the first 3 days of treatment. Treatment should be continued for at least 3 mos.

Esophageal Candidiasis

PO: ADULTS, ELDERLY: Swish 100–200 mg (10–20 mL) in mouth for several seconds, then swallow once daily for a minimum of 3 wks. Continue for 2 wks after resolution of symptoms. **Maximum:** 200 mg/day.

Oropharyngeal Candidiasis

PO: ADULTS, ELDERLY: 200 mg (10 mL) oral solution, swish and swallow once daily for 7–14 days.

Onychomycosis (Fingernail)

PO: ADULTS, ELDERLY: (*Capsule*): 200 mg twice daily for 7 days, off for 21 days, repeat 200 mg twice daily for 7 days.

Onychomycosis (Toenail)

PO: ADULTS, ELDERLY: (*Tablet*): 200 mg once daily for 12 wks.

Dosage in Renal/Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (11%–9%): Nausea, rash.

Occasional (5%–3%): Vomiting, headache, diarrhea, hypertension, peripheral edema, fatigue, fever. **Rare (2% or less):** Abdominal pain, dizziness, anorexia, pruritus.

ADVERSE EFFECTS/TOXIC REACTIONS

Hepatitis (anorexia, abdominal pain, unusual fatigue/weakness, jaundiced skin/sclera, dark urine) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Determine baseline temperature, LFT. Assess allergies. Receive full medication history (numerous contraindications/cautions).

INTERVENTION/EVALUATION

Assess for signs, symptoms of hepatic dysfunction. Monitor LFT in pts with pre-existing hepatic impairment.

PATIENT/ FAMILY TEACHING

- Take capsules with food, liquids if GI distress occurs.
- Therapy will continue for at least 3 mos, until lab tests, clinical presentation indicate infection is controlled.
- Immediately report unusual fatigue, yellow skin, dark urine, pale stool, anorexia, nausea, vomiting.
- Avoid grapefruit products.

ivabradine

eye-vab-ra-deen
(Corlanor)

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Hyperpolarization-activated cyclic nucleotide-gated (HCN) channel blocker.

CLINICAL: Reduces risk of worsening HF.

USES

To reduce the risk of hospitalization for worsening HF in pts with stable, symp-

tomatic chronic HF with left ventricular ejection fraction less than or equal to 35%, who are in sinus rhythm with a resting heart rate greater than or equal to 70 bpm, and either are on maximally tolerated dose of beta blockers or have a contraindication to beta blocker use.

PRECAUTIONS

Contraindications: Hypersensitivity to ivabradine. Acute decompensated HF, B/P less than 90/50 mm Hg, sick sinus syndrome; sinoatrial block or third-degree AV block (unless a functional pacemaker is present), resting heart rate less than 60 bpm prior to initiation, severe hepatic impairment, pacemaker dependence (heart rate maintained exclusively by a pacemaker), concomitant use of strong CYP3A4 inhibitors. **Cautions:** History of atrial fibrillation, hypertension. Avoid concomitant use of diltiazem or verapamil. Avoid use in pts with second-degree heart block (unless a functioning pacemaker is present). Pts at risk for bradycardia. Not recommended with pacemakers set to rate of 60 bpm or greater.

ACTION

Reduces spontaneous pacemaker activity of the cardiac sinus node by blocking HCN channels that are responsible for cardiac current, which regulates heart rate. Does not affect ventricular repolarization or myocardial contractility. Also inhibits retinal current involved in reducing bright light in retina. **Therapeutic Effect:** Reduces heart rate.

PHARMACOKINETICS

Widely distributed. Metabolized in liver and intestines. Protein binding: 70%. Peak plasma concentration: 1 hr. Eliminated in feces, urine (% not specified). **Half-life:** 6 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Females of reproductive potential should use effective contraception. Unknown if distributed in breast

milk. Must either discontinue drug or discontinue breastfeeding. If treatment is decided to be absolutely necessary, pregnant pts should be closely monitored for destabilizing HF, esp. during the first trimester. Pregnant women with chronic HF in the third trimester should be closely monitored for preterm birth. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: DiTIAZem, verapamil may increase concentration/effect; may further increase risk of bradycardia. **Strong CYP3A4 inhibitors** (e.g., clarithromycin, ketoconazole, ritonavir) may increase concentration/effect. **Strong CYP3A4 inducers** (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. **HERBAL:** St. John's wort may decrease concentration/effect. **FOOD:** Grapefruit products may increase concentration/effect. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 5 mg, 7.5 mg.

ADMINISTRATION/HANDLING

PO

- Give with meals. May divide 5-mg tablet, providing 2.5-mg dose.

INDICATIONS/ROUTES/DOSAGE

HF

PO: ADULTS, ELDERLY: Initially, 5 mg twice daily for 14 days, then adjust dose to resting heart rate of 50–60 bpm. Further adjustments based on resting heart rate and tolerability. **Maximum:** 7.5 mg twice daily. (See Dose Modification). **Pts with history of conduction defects, pts in whom bradycardia could lead to hemodynamic compromise:** Initiate therapy at 2.5 mg twice daily.

Dose Modification

Adjust dose to maintain a resting heart between 50–60 bpm as follows:

Heart Rate	Dose Adjustment
Greater than 60 bpm	Increase by 2.5 mg (given twice daily) up to maximum dose of 7.5 mg daily.
50–60 bpm	Maintain dose.
Less than 50 bpm or symptomatic bradycardia	Decrease by 2.5 mg (given twice daily); if current dose is 2.5 mg twice daily, permanently discontinue.

Dosage in Renal Impairment

Mild to moderate impairment: CrCl 15 mL/min or greater: No dose adjustment. **Severe impairment: CrCl less than 15 mL/min:** Use caution.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Contraindicated.

SIDE EFFECTS

Occasional (10%–3%): Bradycardia, hypertension, phosphenes (visual disturbances, luminous phenomena), visual brightness.

ADVERSE EFFECTS/TOXIC REACTIONS

May increase risk of atrial fibrillation (8.3% of pts). Bradycardia, sinus arrest, or heart block may occur. Bradycardia occurred in 10% of pts. Risk factors for bradycardia may include sinus node dysfunction, conduction defects (e.g., first- or second-degree AV block, bundle branch block), ventricular dys-synchrony, or use of negative chronotropic drugs. Phosphenes, a transient enhanced brightness in the visual field (which may include halos, stroboscopic or kaleidoscopic effect, colored bright lights, or multiple images) may occur. Phosphenes are usually triggered by sudden variations in light intensity and generally occur within the first 2 mos of treatment. Other adverse reactions such

as angioedema, diplopia, erythema, hypotension, pruritus, rash, syncope, urticaria, vertigo, visual impairment occur rarely. Overdose may lead to severe and prolonged bradycardia requiring temporary cardiac pacing or infusion of IV beta-stimulating agents.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline HR, B/P. Confirm negative pregnancy test before initiating therapy. Receive full medication history and screen for interactions. Screen for contraindications as listed in Precautions. Question history of atrial fibrillation, bradycardia, hypertension.

INTERVENTION/EVALUATION

Frequently monitor HR, B/P. Diligently monitor for atrial fibrillation, bradycardia, syncope. If symptomatic bradycardia occurs, temporary cardiac pacing or infusion of beta-stimulating agents may be warranted. Immediately report suspected pregnancy. Monitor for hypersensitivity reaction. Monitor for visual changes. Initiate fall precautions.

PATIENT/FAMILY TEACHING

- Take medication with meals.
- Avoid grapefruit products, herbal supplements such as St. John's wort.
- Treatment may cause fetal harm. Female pts of reproductive potential should use effective contraception during treatment.
- Report symptoms of low heart rate such as confusion, dizziness, fatigue, fainting, low blood pressure, pallor.
- Report symptoms of atrial fibrillation such as chest pressure, palpitations, shortness of breath.
- Treatment may cause luminous phenomena (phosphenes), a transient visual brightness that may include halos, light sensitivity, or colored bright lights.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Report allergic reactions such as hives, itching, rash, tongue swelling.

ivacaftor

eye-va-kaf-tor
(Kalydeco)

FIXED-COMBINATION(S)

Orkambi: ivacaftor/lumacaftor (cystic fibrosis transmembrane conductance regulator): 125 mg/200 mg.

Symdeko: ivacaftor/tezacaftor (cystic fibrosis transmembrane conductance regulator): 50 mg/75 mg, 100 mg/150 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Cystic fibrosis transmembrane conductance regulator potentiator. **CLINICAL:** Cystic fibrosis agent.

USES

A cystic fibrosis transmembrane regulator (CFTR) potentiator used for the treatment of cystic fibrosis (CF) in pts 6 mos of age and older having one mutation in the CFTR gene that is responsive to ivacaftor.

PRECAUTIONS

Contraindications: Hypersensitivity to ivacaftor. **Cautions:** Moderate to severe hepatic/renal impairment.

ACTION

Potentiates a specific protein to facilitate, regulate chloride ions, water transport. In cystic fibrosis pts with a specific gene mutation (G551D), a defect in chloride and water transport results in formation of thick mucus in lungs. **Therapeutic Effect:** Improves lung function, fewer respiratory exacerbations.

PHARMACOKINETICS

Readily absorbed. Peak concentration occurs in 4 hrs. Metabolized in liver. Protein binding: 99%. Primarily excreted in feces. **Half-life:** 12 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Children:** Safety and efficacy not established in children younger than 2 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A4 inducers (e.g., carbamazepine, rifampin) substantially decrease concentration/effects. Concurrent use not recommended. Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole) significantly increase concentration. Moderate CYP3A4 inhibitors (e.g., erythromycin, fluconazole) may increase concentration and should not be given concurrently. **HERBAL:** St. John's wort may decrease concentration/effect. Bitter orange may increase concentration/effect. **FOOD:** Grapefruit products, Seville oranges should be avoided (increases concentration). High-fat meals increase absorption. **LAB VALUES:** May increase serum ALT, AST.

AVAILABILITY (Rx)

Oral Granules: 25 mg, 50 mg, 75 mg. **Tablets, Film-Coated:** 150 mg.

ADMINISTRATION/HANDLING

PO

- Give with a high-fat meal (e.g., eggs, butter, peanut butter, cheese pizza).

INDICATIONS/ROUTES/ DOSAGE

Cystic Fibrosis

PO: ADULTS, CHILDREN 6 YRS AND OLDER: One 150-mg tablet q12h with fat-containing food. **Total daily dose:** 300 mg. **CHILDREN 6 MOS TO YOUNGER THAN 6 YRS, WEIGHING 14 KG OR MORE:** (Granules): 75-mg packet q12hr. **CHILDREN 6 MOS TO YOUNGER THAN 6 YRS, WEIGHING 7–13 KG:** 50-mg packet q12hr. **CHILDREN 6 MOS TO YOUNGER THAN 6 YRS, WEIGHING 5–6 KG:** 25-mg packet q12h.

Concurrent Use with Moderate CYP3A4 Inhibitors (e.g., fluconazole)

PO: ADULTS, CHILDREN 6 YRS AND OLDER: 150 mg once daily. **CHILDREN 6 MOS TO YOUNGER THAN 6 YRS, WEIGHING 14 KG OR MORE:** 75-mg granule packet once daily. **7–13 KG:** 50-mg granule packet once daily. **5–6 KG:** 25-mg granule packet once daily.

Concurrent Use with Strong CYP3A4 Inhibitors (e.g., clarithromycin, ketoconazole)

PO: ADULTS, CHILDREN 6 YRS AND OLDER: 150 mg twice wkly. **CHILDREN 6 MOS TO YOUNGER THAN 6 YRS, WEIGHING 14 KG OR MORE:** 75-mg granule packet twice wkly. **7–13 KG:** 50-mg granule packet twice wkly. **5–6 KG:** 25-mg granule packet twice wkly.

Dosage in Renal Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment, ESRD:** Use caution.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate impairment: ADULTS, ELDERLY:** 150 mg once daily. **CHILDREN WEIGHING 14 KG OR MORE:** 75 mg once daily. **CHILDREN WEIGHING LESS THAN 14 KG:** 50 mg once daily. **Severe impairment:** 150 mg once daily or q48h. Use caution.

SIDE EFFECTS

Frequent (24%–10%): Headache, nasal congestion, abdominal discomfort, diarrhea, nausea, rash. **Occasional (6%–5%):** Rhinitis, dizziness, arthralgia, bacteria in sputum. **Rare (4% or less):** Myalgia, wheezing, acne.

ADVERSE EFFECTS/TOXIC REACTIONS

Upper respiratory infection occurs in 22% of pts, nasopharyngitis in 15%. Increase in ALT, AST occurs in 6% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

If the pt's genotype is unknown, an FDA-cleared CF mutation test should be used to detect presence of a CFTR mutation. Assess LFT prior to and periodically during therapy.

INTERVENTION/EVALUATION

Patients who develop increased serum ALT, AST levels should be closely monitored until the abnormalities resolve. Dosing should be interrupted if transaminases (serum ALT or AST) are greater than 5 times upper limit of normal. Transaminases should be obtained every 3 mos during the first year of treatment and annually thereafter.

PATIENT/FAMILY TEACHING

- Always take medication with fatty food.
- Avoid grapefruit products and Seville oranges.
- Adhere to routine laboratory testing as a part of treatment regimen.
- Report headache, diarrhea, rash, signs and symptoms of respiratory infection.

ivosidenib

eye-voe-sid-e-nib
(Tibsovo)

BLACK BOX ALERT Life-threatening and/or fatal differentiation syndrome with symptoms including fever, dyspnea, hypoxia, pulmonary infiltrates, pleural or pericardial effusion, rapid weight gain or peripheral edema, hypotension, renal dysfunction may occur. Initiate corticosteroid therapy and hemodynamic monitoring in pts suspected of differentiation syndrome until symptoms resolve.

Do not confuse ivosidenib with enasidenib, ibrutinib, idelalisib, imatinib or ixazomib.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Isocitrate dehydrogenase-1 (IDH1) inhibitor.
CLINICAL: Antineoplastic.

USES

Treatment of acute myeloid leukemia (AML) with a susceptible IDH1 mutation in adults with newly diagnosed AML who are 75 yrs or older or who have comorbidities that preclude use of intensive induction chemotherapy. Treatment of AML with a susceptible IDH1 mutation in adults with relapsed or refractory AML.

PRECAUTIONS

Contraindications: Hypersensitivity to ivosidenib. **Cautions:** Baseline leukopenia, hypotension; active infection, cardiac disease, hepatic/renal impairment, electrolyte imbalance; conditions predisposing to infection (e.g., diabetes, renal failure, immunocompromised pts, open wounds); pts at risk for QTc interval prolongation, cardiac arrhythmias (congenital long QT syndrome, HF, QT interval-prolonging medications, hypokalemia, hypomagnesemia); concomitant use strong or moderate CYP3A inhibitors, strong CYP3A inducers; dehydration; pts at high risk for tumor lysis syndrome (high tumor burden).

ACTION

Inhibits IDH1 enzymes on mutant IDH1 variants, decreasing 2-hydroxyglutarate (2-HG) levels and restoring myeloid differentiation. **Therapeutic Effect:** Reduces blast counts; increases percentage of myeloid cells. Inhibits tumor growth and proliferation.

PHARMACOKINETICS

Widely distributed. Metabolized in liver. Protein binding: 92%–96%. Peak plasma concentration: 3 hrs. Steady state reached in 14 days. Excreted in feces (77%), urine (17%). **Half-life:** 93 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm. Recommendations for contraception not specified. Unknown if distributed in breast milk. Breastfeeding not recommended during treatment and for at least 30 days after

discontinuation. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole), moderate CYP3A4 inhibitors (e.g., erythromycin, diTIAZem, fluconazole) may increase concentration/effect. Strong CYP3A4 inducers (e.g., carBAMazepine, phenytoin, rifAMPin) may decrease concentration/effect. QT interval—prolonging medications (e.g., amiodarone, azithromycin, citalopram, clarithromycin, escitalopram, haloperidol) may increase risk of QTc interval prolongation. May increase QT prolongation effect of dronedarone. May decrease effect of oral contraceptives. **HERBAL:** St. John's wort may decrease concentration/effect. **FOOD:** High-fat meals may increase concentration/effect. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST, bilirubin, creatinine, uric acid. May decrease Hgb, WBCs; serum magnesium, phosphate, potassium, sodium.

AVAILABILITY (Rx)

Tablets: 250 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to low-fat food.
- Do not give with a high-fat meal.
- Administer whole; do not break, cut, crush, or divide tablets.
- Tablets cannot be chewed.
- If vomiting occurs after administration, give next dose at regularly scheduled time.
- If a dose is missed, administer as soon as possible
- Do not give a missed dose within 12 hrs of next dose.

INDICATIONS/ROUTES/DOSAGE

Acute Myeloid Leukemia

PO: ADULTS, ELDERLY: 500 mg once daily for at least 6 mos. Continue until disease progression or unacceptable toxicity.

Dose Modification

Based on Common Terminology Criteria for Adverse Events (CTCAE).

Differentiation Syndrome

Withhold treatment if symptoms are severe and persist for more than 48 hrs after initiation of corticosteroids. Resume treatment when symptoms improve to Grade 2 or less.

Guillain-Barré Syndrome

Permanently discontinue.

Noninfectious Leukocytosis

WBC count greater than 25,000 cells/mm³ or absolute increase in total WBC count greater than 15,000 cells/mm³ from baseline: If indicated, treat with hydroxyurea and leukapheresis. Taper hydroxyurea after leukocytosis improves or resolves. If leukocytosis does not improve with hydroxyurea, withhold treatment until resolved, then resume at same dose.

QT Interval Prolongation

QTc interval 481–500 msec: Withhold treatment. Assess and replete electrolyte levels. Assess and adjust concomitant use of medications known to cause QTc interval prolongation. When QTc interval prolongation improves to 480 msec or less, resume at same dose and monitor ECG at least wkly for 2 wks. **QTc interval greater than 500 msec:** Withhold treatment. Assess and replete electrolyte levels. Assess and adjust concomitant use of medications known to cause QTc interval prolongation. When QTc interval returns to within 30 msec of baseline or 480 msec or less, resume at reduced dose of 250 mg. **QTc interval prolongation with life-threatening arrhythmia:** Permanently discontinue.

Other Adverse Reactions

Any Grade 3 or higher toxicity: Withhold treatment until improved to Grade 2, then resume at reduced dose of 250 mg. May increase to 500 mg if toxicities

further improve to Grade 1 or 0. **Recurrent Grade 3 or higher toxicity:** Permanently discontinue.

Concomitant Use of CYP3A4 Inhibitor

If concomitant CYP3A4 inhibitor cannot be discontinued, reduce ivosidenib dose to 250 mg. If CYP3A inhibitor is discontinued for 3–5 half-lives, increase ivosidenib dose to 500 mg.

Dosage in Renal Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Not specified; use caution.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Not specified; use caution.

SIDE EFFECTS

Frequent (39%–18%): Fatigue, asthenia, arthralgia, diarrhea, dyspnea, edema, nausea, abdominal pain, mucositis, rash, pyrexia, cough, constipation, vomiting, decreased appetite, myalgia. **Occasional (16%–12%):** Chest pain, headache, neuropathy, hypotension.

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia, leukopenia is an expected response to therapy. Life-threatening and/or fatal differentiation syndrome, a condition with rapid proliferation and differentiation of myeloid cells, reported in 19%–25% of pts. QT interval prolongation with QTc interval greater than 500 msec (9% of pts) and QTc interval greater than 60 msec from baseline (14% of pts) have occurred. Guillain-Barré syndrome occurred in less than 1% of pts. Noninfectious leukocytosis reported in 12% of pts. Tumor lysis syndrome may present as acute renal failure, hypocalcemia, hyperuricemia, hyperphosphatemia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, BMP, LFTs; ECG; pregnancy test in female pts of reproductive potential. Replete electrolytes if applicable. Confirm presence of IDH1 mutations in the blood or bone marrow. Assess adequate hydration prior to initiation due to increased risk of tumor lysis syndrome, diarrhea, vomiting. Screen for active infection. Receive full medication history (including herbal products) and screen for interactions. Concomitant use of other medications may need to be adjusted. Assess risk for QT interval prolongation, tumor lysis syndrome. Question history of cardiac/hepatic/renal disease, cardiac arrhythmias. Offer emotional support.

INTERVENTION/EVALUATION

Monitor CBC, BMP, LFTs at least wkly for 4 wks, then every other wk for 4 wks, then monthly until discontinuation. Monitor CK levels wkly for at least 4 wks. An increase of serum creatinine greater than 0.4 mg/dL from baseline may indicate renal impairment. Monitor serum uric acid level if tumor lysis syndrome (acute renal failure, electrolyte imbalance, cardiac arrhythmias, seizures) is suspected. Monitor ECG at least wkly for 3 wks, then monthly until discontinuation. If QT interval—prolonging medications cannot be withheld, diligently monitor ECG; serum potassium, magnesium for QT interval prolongation, cardiac arrhythmias. Monitor B/P for hypotension, esp. in pts taking antihypertensives. Monitor for symptoms of differentiation syndrome (dyspnea, fever hypotension, hypoxia, pulmonary infiltrates, pleural or pericardial effusion, rapid weight gain or peripheral edema, renal dysfunction, or concomitant febrile neutropenic dermatosis). If differentiation syndrome is suspected, initiate corticosteroids and hemodynamic monitoring until symptoms resolve for at least 3 days. Monitor for symptoms of Guillain-Barré syndrome

(dysphagia, dysarthria, dyspnea, motor weakness, paresthesia, sensory alterations). Diligently monitor for infection. Assess skin for skin reactions, rash. Monitor daily pattern of bowel activity, stool consistency. Ensure adequate hydration, nutrition.

PATIENT/FAMILY TEACHING

- Treatment may depress your immune system response and reduce your ability to fight infection. Report symptoms of infection such as body aches, chills, cough, fatigue, fever. Avoid those with active infection.
- Report symptoms of bone marrow depression such as bruising, fatigue, fever, shortness of breath, weight loss; bleeding easily, bloody urine or stool.
- Report palpitations, chest pain, shortness of breath, dizziness, fainting; may indicate arrhythmia.
- Therapy may cause life-threatening tumor lysis syndrome (a condition caused by the rapid breakdown of cancer cells), which can cause kidney failure. Report decreased urination, amber-colored urine; confusion, difficulty breathing, fatigue, fever, muscle or joint pain, palpitations, seizures, vomiting.
- Treatment may cause life-threatening differentiation syndrome as early as 2 days after starting therapy. Report difficulty breathing, fever, low blood pressure, rapid weight gain, swelling of the hands or feet, decreased urine output.
- Report liver problems (abdominal pain, bruising, clay-colored stool, amber- or dark-colored urine, yellowing of the skin or eyes), kidney problems (decreased urine output, flank pain, darkened urine), skin reactions (rash, skin eruptions).
- There is a high risk of interactions with other medications. Do not take newly prescribed medications unless approved by prescriber who originally started treatment.
- Avoid grapefruit products, herbal supplements (esp. St. John's wort).
- Report suspected pregnancy. Do not breast-feed.
- Drink plenty of fluids.
- Avoid high-fat meals during administration.

ixabepilone

ix-ab-ep-i-lone
(Ixempra)

BLACK BOX ALERT ■ Combination therapy with capecitabine is contraindicated in pts with serum ALT or AST greater than 2.5 times upper limit of normal (ULN) or bilirubin greater than 1 times ULN due to increased risk of toxicity, neutropenia-related mortality.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Etoposide microtubule inhibitor, antimetabolic agent. **CLINICAL:** Antineoplastic.

USES

Combination therapy with capecitabine for treatment of metastatic or locally advanced breast cancer in pts after failure of anthracycline, taxane therapy. As monotherapy, treatment of metastatic or locally advanced breast cancer in pts after failure of anthracycline, taxane, and capecitabine therapy. **OFF-LABEL:** Treatment of endometrial cancer.

PRECAUTIONS

Contraindications: Hypersensitivity to ixabepilone. Severe hypersensitivity reaction (Grade 3 or 4) to Cremophor, baseline neutrophil count less than 1,500 cells/mm³ or platelet count less than 100,000 cells/mm³. **Combination Capecitabine Therapy:** Serum ALT or AST greater than 2.5 times the upper limit of normal, bilirubin greater than 1 times the upper limit of normal. **Cautions:** Diabetes, existing moderate to severe neuropathy, history of cardiovascular disease. **Mono-therapy:** Serum ALT or AST greater than 5 times upper limit of normal bilirubin greater than 3 times upper limit of normal.

ACTION

Binds directly on microtubules during active stage of G2 and M phases of cell cycle, preventing formation of microtu-

bules, an essential part of the process of separation of chromosomes. **Therapeutic Effect:** Blocks cells in mitotic phase of cell division, leading to cell death.

PHARMACOKINETICS

Metabolized in liver. Protein binding: 77%. Excreted in feces (65%), urine (21%). **Half-life:** 52 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Higher incidence of severe adverse reactions in those older than 65 yrs.

INTERACTIONS

DRUG: Strong CYP3A4 Inhibitors (e.g., clarithromycin, ketoconazole, ritonavir) may increase concentration/effect. Strong CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. **HERBAL:** St. John's wort may decrease concentration/effect. **FOOD:** Grapefruit products may increase concentration/effect. **LAB VALUES:** May increase serum ALT, AST, bilirubin. May decrease WBCs, Hgb, platelets.

AVAILABILITY (Rx)

Injection, Solution, Kit: 15-mg kit supplied with diluent for Ixempra, 8 mL; 45 mg supplied with diluent for Ixempra, 23.5 mL.

ADMINISTRATION/HANDLING

Reconstitution • Withdraw diluent and slowly inject into vial. • Gently swirl and invert until powder is completely dissolved. • Further dilute with 250 mL lactated Ringer's. • Solution may be stored in vial for a maximum of 1 hr at room temperature. • Final concentration for infusion must be between 0.2 mg/mL and 0.6 mg/mL. • Mix infusion bag by manual rotation.

Rate of administration • Administer through an in-line filter of 0.2 to 1.2 microns. • Infuse over 3 hrs. Administration must be completed within 6 hrs of reconstitution.

Storage • Refrigerate kit. • Prior to reconstitution, kit should be removed from refrigerator and allowed to stand at room temperature for approximately 30 min. • When vials are initially removed from refrigerator, a white precipitate may be observed in the diluent vial. • This precipitate will dissolve to form a clear solution once diluent warms to room temperature. • Once diluted with lactated Ringer's, solution is stable at room temperature and room light for a maximum of 6 hrs.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ An H₁ antagonist (diphenhydramine 50 mg PO or equivalent) and an H₂ antagonist (ranitidine 150–300 mg PO or equivalent) must be given prior to beginning treatment with ixabepilone. Pts who experienced a previous hypersensitivity reaction to ixabepilone require pretreatment with corticosteroids (e.g., dexamethasone 20 mg IV 30 min before infusion, or PO 1 hr before infusion) in addition to pretreatment with H₁ and H₂ antagonists.

Breast Cancer (Monotherapy or in Combination with Capecitabine)

IV; ADULTS, ELDERLY: 40 mg/m² infused over 3 hrs q3 wks. **Maximum:** 88 mg. Continue until disease progression or unacceptable toxicity.

Monotherapy Dosage Adjustments for Hepatic Impairment

Mild Hepatic Impairment (ALT and AST Less Than 2.5 Times Upper Limit of Normal [ULN] and Bilirubin Less Than 1 Time ULN)

IV; ADULTS, ELDERLY: 40 mg/m² infused over 3 hrs q3 wks.

Mild Hepatic Impairment (ALT and AST Greater Than 2.5 Times ULN and Less Than 10 Times ULN and Bilirubin Greater Than 1 Time ULN and Less Than 1.5 Times ULN)

IV; ADULTS, ELDERLY: 32 mg/m² infused over 3 hrs q3 wks.

Moderate Hepatic Impairment (ALT and AST Less Than 10 Times ULN and Bilirubin Greater Than 1.5 Times ULN and Less Than 3 Times ULN)

IV infusion: ADULTS, ELDERLY: 20–30 mg/m² infused over 3 hrs q3 wks (initiate at 20 mg/m²; may increase up to a maximum of 30 mg/m² in subsequent cycles if tolerated).

Dosage with Strong CYP3A4 Inhibitors/Inducers

Inhibitors: Consider dose reduction to 20 mg/m².

Inducers: Consider dose increase to 60 mg/m².

Dosage in Renal Impairment

No dose adjustment.

Dose Modification

Dosage adjustment based on grade of neuropathy, hematologic conditions.

Hematologic

Neutrophils less than 500 cells/mm³ for 7 days or longer: Reduce dose by 20%. **Neutropenic fever:** Reduce dose by 20%. **Platelets less than 25,000 cells/mm³ (less than 50,000 cells/mm³ with bleeding):** Reduce dose by 20%.

Neuropathy

Grade 2 for 7 days or longer or Grade 3 for less than 7 days: Reduce dose by 20%. **Grade 3 for 7 days or longer:** Discontinue treatment. **Grade 3 (other than neuropathy):** Reduce dose by 20%. **Grade 4:** Discontinue treatment.

SIDE EFFECTS

Common (62%): Peripheral sensory neuropathy. **Frequent (56%–46%):** Fatigue, asthenia, myalgia, arthralgia, alopecia, nausea. **Occasional (29%–11%):** Vomiting, stomatitis, mucositis, diarrhea, musculoskeletal pain, anorexia, constipation, abdominal pain, headache. **Rare (9%–5%):** Skin rash, nail disorder,

edema, hand-foot syndrome (blistering/rash/peeling of skin on palms of hands, soles of feet), pyrexia, dizziness, pruritus, gastroesophageal reflux disease (GERD), hot flashes, taste disorder, insomnia.

ADVERSE EFFECTS/TOXIC REACTIONS

Neuropathy occurs early during treatment; 75% of new onset or worsening neuropathy occurred during first 3 cycles. Diabetics may be at increased risk for severe neuropathy manifested as Grade 4 neutropenia. Neutropenia, leukopenia occur commonly; anemia, thrombocytopenia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question possibility of pregnancy. Obtain baseline CBC, serum chemistries, LFT before treatment begins as baseline and monitor for hepatotoxicity, peripheral neuropathy (most frequent cause of drug discontinuation). Offer emotional support.

INTERVENTION/EVALUATION

Monitor for symptoms of neuropathy (burning sensation, hyperesthesia, hypoaesthesia, paresthesia, discomfort, neuropathic pain). Assess hands and feet for erythema. Monitor CBC for evidence of neutropenia, thrombocytopenia; LFT for hepatotoxicity. Assess mouth for stomatitis, mucositis.

PATIENT/FAMILY TEACHING

- Avoid crowds, those with known infection.
- Avoid contact with those who have recently received live virus vaccine.
- Do not have immunizations without physician's approval (drug lowers resistance).
- Promptly report fever over 100.5°F, chills, numbness, tingling, burning sensation, erythema of hands/feet.

ixazomib

ix-az-oh-mib
(Ninlaro)

Do not confuse ixazomib with bortezomib, carfilzomib, idelalisib, or ixekizumab.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Proteasome inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of multiple myeloma (in combination with lenalidomide and dexamethasone) in pts who have received at least 1 prior therapy.

PRECAUTIONS

Contraindications: Severe hypersensitivity to ixazomib. **Cautions:** Baseline neutropenia, thrombocytopenia; hepatic/renal impairment, chronic peripheral edema, predisposing factors to infection (e.g., diabetes, renal failure, open wounds). Concomitant use of strong CYP3A inducers not recommended.

ACTION

Inhibits activity of beta 5 subunit of the 20S proteasome, leading to cell cycle arrest and tumor cell death (apoptosis). **Therapeutic Effect:** Inhibits tumor cells growth and metastasis.

PHARMACOKINETICS

Well absorbed following oral administration. Widely distributed. Metabolized in liver. Protein binding: 99%. Peak plasma concentration: 1 hr. Excreted in urine (62%), feces (22%). Not removed by hemodialysis. **Half-life:** 9.5 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm/malformations. Female and male pts of

reproductive potential should use effective contraception during treatment and up to 3 mos after discontinuation. Unknown if distributed in breast milk. Breastfeeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect; avoid use. May decrease effect of oral contraceptives. **HERBAL:** St. John's wort may decrease concentration/effect. **FOOD:** High-fat meals may decrease absorption/concentration. **LAB VALUES:** Expected to decrease neutrophils, platelets.

AVAILABILITY (Rx)

Capsules: 2.3 mg, 3 mg, 4 mg.

ADMINISTRATION/HANDLING

PO

- Capsule contents are hazardous; use cytotoxic precautions during handling and disposal.
- Administer capsule whole; do not break, cut, crush, or open.
- Give at least 1 hr before or 2 hrs after food.
- Give on the same day each wk and at the same time that day. If a dose is missed, do not administer within 72 hrs of next scheduled dose.
- If vomiting occurs after dosing, do not readminister; give dose at next scheduled time.

INDICATIONS/ROUTES/DOSAGE

Multiple Myeloma

Note: ANC should be 1,000 cells/mm³ or greater, platelets 75,000 cells/mm³ or greater, nonhematologic toxicities at baseline or Grade 1 or less prior to initiating a new cycle of therapy.

PO: ADULTS, ELDERLY: 4 mg once wkly on days 1, 8, and 15 of 28-day cycle, in combination with lenalidomide 25 mg daily (on days 1–21 of 28-day cycle) and dexamethasone 40 mg (on days 1, 8, 15,

and 22 of 28-day cycle). Continue until disease progression or unacceptable toxicity.

Dose Reduction Schedule

Initial dose: 4 mg. **First dose reduction:** 3 mg. **Second dose reduction:** 2.3 mg. **Unable to tolerate 2.3-mg dose:** Permanently discontinue.

Dose Modification

Based on Common Terminology Criteria for Adverse Events (CTCAE).

Thrombocytopenia

Platelet count less than 30,000 cells/mm³: Withhold ixazomib and lenalidomide until platelet count is 30,000 cells/mm³ or greater, then resume ixazomib at the same dose and resume lenalidomide at reduced dose level (see manufacturer guidelines).

Recurrence of platelet count less than 30,000 cells/mm³: Withhold ixazomib and lenalidomide until platelet count is 30,000 cells/mm³ or greater, then resume ixazomib at reduced dose level and resume lenalidomide at the same dose. **Additional occurrences:** Alternate dose modification of ixazomib and lenalidomide.

Neutropenia

Absolute neutrophil count (ANC) less than 500 cells/mm³: Withhold ixazomib and lenalidomide until ANC is 500 cells/mm³ or greater, then resume ixazomib at the same dose and resume lenalidomide at reduced dose level (see manufacturer guidelines).

Recurrence of ANC less than 500 cells/mm³: Withhold ixazomib and lenalidomide until ANC is 500 cells/mm³ or greater, then resume ixazomib at reduced dose level and resume lenalidomide at the same dose. **Additional occurrences:** Alternate dose modification of ixazomib and lenalidomide.

Rash

Grade 2 or 3 rash: Withhold lenalidomide until resolved to Grade 1 or 0, then

resume lenalidomide at next lower dose level (see manufacturer guidelines) and resume ixazomib at the same dose.

Recurrence of Grade 2 or 3 rash: Withhold ixazomib and lenalidomide until recovery to Grade 1 or 0, then resume ixazomib at reduced dose level and resume lenalidomide at the same dose. **Grade 4 rash:** Permanently discontinue. **Additional occurrences:** Alternate dose modification of ixazomib and lenalidomide.

Peripheral Neuropathy

Grade 1 (with pain) or Grade 2: Withhold ixazomib until resolved to baseline or improved to Grade 1 or 0 without pain (at prescriber's discretion), then resume ixazomib at the same dose. **Grade 2 (with pain) or Grade 3:** Withhold ixazomib until resolved to baseline or improved to Grade 1 or 0 without pain (at prescriber's discretion), then resume ixazomib at reduced dose level. **Grade 4:** Permanently discontinue.

Any Other Nonhematologic Toxicity

Grade 3 or 4: Withhold ixazomib until resolved to baseline or improved to Grade 1 or 0 (at physician's discretion), then resume ixazomib at reduced dose level.

Dosage in Renal Impairment

Mild to moderate impairment: Not specified; use caution. **Severe impairment (CrCl less than 30 mL/min), end-stage renal disease:** Reduce starting dose to 3 mg.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment:** Reduce starting dose to 3 mg.

SIDE EFFECTS

Frequent (42%–26%): Diarrhea, constipation, nausea. **Occasional (22%–5%):** Vomiting, back pain, blurry vision, dry eye.

ADVERSE EFFECTS/TOXIC REACTIONS

Neutropenia, thrombocytopenia are expected responses to therapy. Thrombocytopenia reported in 78% of pts; neutropenia in 67% of pts. Severe diarrhea may lead to discontinuation of treatment. Peripheral neuropathy reported in 28% of pts (sensory neuropathies were the most common type). Peripheral edema occurred in 28% of pts. Dermatologic toxicities including maculopapular and macular rash may occur. Infectious processes including upper respiratory tract infection (19% of pts), conjunctivitis (6% of pts) may occur. Other toxic reactions including neutrophilic dermatosis, posterior reversible encephalopathy, Stevens-Johnson syndrome, thrombotic thrombocytopenic purpura, transverse myelitis, treatment-induced hepatotoxicity, tumor lysis syndrome, occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain ANC, CBC (esp. platelet count), renal function test (in pts with renal impairment), LFT; pregnancy test in female pts of reproductive potential. Screen for active infection. Question history of peripheral neuropathy, peripheral edema, hepatic/renal impairment, current hemodialysis status. Receive full medication history including herbal supplements. Offer emotional support. Assess hydration status. Obtain baseline visual acuity. Obtain dietary consult for nutritional support. Offer emotional support.

INTERVENTION/EVALUATION

Monitor ANC, platelet count at least monthly, more frequently during first 3 cycles; LFT in pts with hepatic impairment. Consider concomitant granulocyte colony-stimulating factor (e.g., filgrastim, pegfilgrastim) in pts with neutropenia. Monitor for dehydration, electrolyte imbalance if diarrhea

occurs. Offer antiemetics for nausea, antidiarrheals for diarrhea. Monitor for infection (esp. in pts with neutropenia); dermal toxicity, skin rashes, petechiae; peripheral neuropathy (with or without pain); peripheral edema. Monitor daily pattern bowel activity, stool consistency. Monitor for side effects of dexamethasone (e.g., hyperglycemia, weight loss, decreased appetite), lenalidomide (see prescribing information). Reversible posterior leukoencephalopathy syndrome should be considered in pts with altered mental status, confusion, headache, seizures, visual disturbances. Obtain visual acuity if vision becomes blurry.

PATIENT/FAMILY TEACHING

- Treatment may depress your immune system and reduce your ability to fight infection. Report symptoms of infection such as body aches, chills, cough, fatigue, fever. Avoid those with active infection.
- Female and male pts of reproductive potential should use effective contraception during treatment and up to 3 mos after last dose. Do not breastfeed. Immediately report suspected pregnancy.
- Do not take ixazomib and dexamethasone at the same time. Take dexamethasone with food to minimize GI upset.
- Swallow capsules whole; do not chew, crush, or open. Take dose at least 1 hr before or 2 hrs after any food.
- Do not expose the capsule contents to the skin or eyes. If eyes are exposed to the capsule powder, thoroughly flush eyes with water. If skin is exposed to the capsule powder, thoroughly wash skin with soap and water.
- Treatment may cause nerve pain; extreme sensitivity to touch; muscle weakness; or prickling, tingling, numbness in your hands and feet.
- Report swelling of the legs, ankles, feet.
- Report neurologic changes such as blurry vision, confusion, headache, seizures; may indicate life-threatening brain swelling.
- Treatment may increase risk of bleeding.
- Do not take herbal supplements, esp. St. John's wort.

ixekizumab

ix-ee-kiz-ue-mab
(Taltz)

Do not confuse ixekizumab with daclizumab, eculizumab, gevokizumab, secukinumab, or ustekinumab.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Human interleukin-17A antagonist. Monoclonal antibody. **CLINICAL:** Antipsoriasis agent.

USES

Treatment of moderate to severe plaque psoriasis in adults who are candidates for systemic therapy or phototherapy. Treatment of active psoriatic arthritis in adults. Treatment of active ankylosing spondylitis.

PRECAUTIONS

Contraindications: Hypersensitivity to ixekizumab. **Cautions:** Baseline neutropenia, thrombocytopenia; inflammatory bowel disease (Crohn's disease, ulcerative colitis), HIV infection, concomitant immunosuppressant therapy, conditions predisposing to infection (e.g., diabetes, renal failure, open wounds), pts who have been exposed to tuberculosis. Concomitant use of live vaccines not recommended.

ACTION

Binds to and inhibits interaction of interleukin-17A receptor, a cytokine that is involved in inflammatory and immune response. May reduce epidermal neutrophils in psoriatic plaques. **Therapeutic Effect:** Alters biologic immune response; inhibits release of proinflammatory cytokines and chemokines.

PHARMACOKINETICS

Widely distributed. Degraded into small peptides and amino acids via catabolic pathway. Peak plasma concentration: 4

days. Steady state reached in 8–10 wks. Elimination not specified. **Half-life:** 13 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. However, human immunoglobulin G is present in breast milk and is known to cross placenta. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease therapeutic response of **BCG (intravesical)**, **live vaccines**. May enhance the adverse/toxic effects of **belimumab**, **natalizumab**, **live vaccines**. **HERBAL:** **Echinacea** may decrease effect. **FOOD:** None known. **LAB VALUES:** May decrease neutrophils, platelets. May decrease diagnostic effect of *Coccidioides immitis* skin test.

AVAILABILITY (Rx)

Auto-injector Pen: 80 mg/mL. **Prefilled Syringe:** 80 mg/mL.

ADMINISTRATION/HANDLING

SQ

- Follow instructions for preparation according to manufacturer guidelines.
- Remove auto-injector or prefilled syringe from refrigerator and allow to warm to room temperature (approx. 30 mins) with needle cap intact.
- Visually inspect for particulate matter or discoloration. Solution should appear clear, colorless to slightly yellow in color. Do not use if solution is cloudy, discolored, or if visible particles are observed.
- Administration**
- Insert needle subcutaneously into upper arms, outer thigh, or abdomen, and inject solution.
- Do not inject into areas of active skin disease or injury such as sunburns, skin rashes, inflammation, skin infections, or active psoriasis.
- Rotate injection sites.
- Storage**
- Refrigerate until time of use.
- Do not freeze.
- Do not shake.
- Protect from light.

INDICATIONS/ROUTES/DOSAGE

Ankylosing Spondylitis

SO: ADULTS, ELDERLY: 160 mg (two 80-mg injections) once, then 80 mg q4wks.

Plaque Psoriasis

SO: ADULTS, ELDERLY: Initially, 160 mg (two injections of 80 mg) once, then 80 mg at wks 2, 4, 6, 8, 10, 12, then 80 mg once q4wks.

Psoriatic Arthritis

Note: For pts with coexisting plaque psoriasis, use dosage for plaque psoriasis.

SO: ADULTS, ELDERLY: 160 mg once, then 80 mg q4wks. May give alone or in combination with conventional disease-modifying antirheumatic drugs (e.g., methotrexate).

Dosage in Renal/Hepatic Impairment

Not specified; use caution.

SIDE EFFECTS

Occasional (17%): Injection site reactions (pain, erythema). **Rare (2%):** Nausea.

ADVERSE EFFECTS/TOXIC REACTIONS

May increase risk of infection including tuberculosis. Infections including upper respiratory tract infection (14% of pts), nasopharyngitis (14% of pts), tinea infections (2% of pts) have occurred. Cytopenias including neutropenia (11% of pts), thrombocytopenia (3% of pts) were reported. May cause exacerbation of Crohn's disease and ulcerative colitis. Hypersensitivity reactions, including angioedema, occur rarely. Immunogenicity (auto-ixekizumab antibodies) occurred in less than 9% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC in pts with known history of neutropenia, thrombocytopenia. Screen for active infection. Pts should be evaluated for active tuberculosis and tested for

latent infection prior to initiating treatment and periodically during therapy. Induration of 5 mm or greater with tuberculin skin testing should be considered a positive test result when assessing if treatment for latent tuberculosis is necessary. Consider administration of age-appropriate immunizations (if applicable) before initiation. Question history of Crohn's disease, ulcerative colitis, hypersensitivity reaction. Conduct dermatologic exam; record characteristics of psoriatic lesions.

INTERVENTION/EVALUATION

Monitor for symptoms of tuberculosis, including pts who tested negative for latent tuberculosis infection prior to initiating therapy. Interrupt or discontinue treatment if serious infection, opportunistic infection, or sepsis occurs, and initiate appropriate antimicrobial therapy. Assess skin for improvement of lesions. Monitor for hypersensitivity reaction, symptoms of inflammatory bowel disease.

PATIENT/FAMILY TEACHING

- A healthcare provider will show you how to properly prepare and inject your medication. You must demonstrate correct preparation and injection techniques before using medication at home.
- Treatment may depress your immune system response and reduce your ability to fight infection. Report symptoms of infection such as body aches, chills, cough, fatigue, fever. Avoid people with active infection.
- Do not receive live vaccines.
- Expect frequent tuberculosis screening.
- Report travel plans to possible endemic areas.
- Immediately report difficulty breathing, itching, hives, rash, swelling of the face or tongue; may indicate allergic reaction.
- Treatment may cause worsening of Crohn's disease or cause inflammatory bowel disease. Report abdominal pain, diarrhea, weight loss.

ketorolac

kee-toe-role-ak

(Acular, Acular LS, Acuvail, Apo-Ketorolac , Sprix, Toradol )

BLACK BOX ALERT ■ Increased risk of serious cardiovascular thrombotic events, including myocardial infarction, CVA. Increased risk of severe GI reactions, including ulceration, bleeding, perforation.

Do not confuse Acular with Acthar or Ocular, ketorolac with Ketalar, or Toradol with Foradil, Inderal, TEGretol, or traMADol.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: NSAID.

CLINICAL: Analgesic, intraocular anti-inflammatory.

USES

PO: injection, nasal: Short-term (5 days or less) relief of mild to moderate pain. **Ophthalmic:** Relief of ocular itching due to seasonal allergic conjunctivitis. Treatment postop for inflammation following cataract extraction, pain following incisional refractive surgery. **OFF-LABEL:** Prevention, treatment of ocular inflammation (ophthalmic form).

PRECAUTIONS

Contraindications: Hypersensitivity to ketorolac, aspirin, or other NSAIDs. Intracranial bleeding, hemorrhagic diathesis, incomplete hemostasis, high risk of bleeding; concomitant use of aspirin, NSAIDs, probenecid, or pentoxifylline; labor and delivery, advanced renal impairment or risk of renal failure, active or history of peptic ulcer disease, chronic inflammation of GI tract, recent or history of GI bleeding/ulceration. Perioperative pain in setting of CABG surgery. Prophylaxis before major surgery. **Cautions:** Hepatic impairment, history of GI tract disease, asthma, coagulation disorders, receiving anticoagulants,

fluid retention, HF, renal impairment, inflammatory bowel disease, smoking, use of alcohol, elderly, debilitated.

ACTION

Inhibits COX-1 and COX-2 enzymes, resulting in decreased prostaglandin synthesis; reduces prostaglandin levels in aqueous humor. **Therapeutic Effect:** Produces analgesic, antipyretic, anti-inflammatory effect; reduces intraocular inflammation.

PHARMACOKINETICS

Well absorbed (100%) following oral administration. Protein binding: 99%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 5–9 hrs (increased in renal impairment, in elderly).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Avoid use during third trimester (may adversely affect fetal cardiovascular system: premature closure of ductus arteriosus). **Children:** Safety and efficacy not established, but doses of 0.5 mg/kg have been used. **Elderly:** GI bleeding, ulceration more likely to cause serious adverse effects. Age-related renal impairment may increase risk of hepatic/renal toxicity; decreased dosage recommended.

INTERACTIONS

DRUG: May decrease effects of antihypertensives (e.g., amlODIPine, lisinopril), diuretics (e.g., furosemide, HCTZ). Aspirin, NSAIDs, other salicylates may increase risk of GI side effects, bleeding. May increase risk of bleeding with heparin, oral anticoagulants (e.g., warfarin). May increase concentration, risk of toxicity of lithium. May increase effect of apixaban, dabigatran, edoxaban, rivaroxaban. Bile acid sequestrants (e.g., cholestyramine) may decrease absorption/effect. May increase nephrotoxic effect of cycloSPORINE. **HERBAL:** Glucosamine, herbs with anticoagulant/antiplatelet properties (e.g., garlic, ginger, ginseng, ginkgo

biloba) may increase concentration/efficacy. **FOOD:** None known. **LAB VALUES:** May prolong bleeding time. May increase serum ALT, AST, BUN, potassium, creatinine.

AVAILABILITY (Rx)

Injection Solution: 15 mg/mL, 30 mg/mL. **Nasal Spray: (Sprix):** 1.7-g bottle provides 8 sprays (15.75 mg/spray). **Ophthalmic Solution: (Acular LS):** 0.4%, (**Acuvail**): 0.45%, (**Acular**): 0.5%. **Tablets:** 10 mg.

ADMINISTRATION/HANDLING

- Give undiluted as IV push. • Give over at least 15 sec.

IM

- Give deep IM slowly into large muscle mass.

PO

- Give with food, milk, antacids if GI distress occurs.

Ophthalmic

- Place gloved finger on lower eyelid and pull out until pocket is formed between eye and lower lid. Place prescribed number of drops into pocket. • Instruct pt to close eye gently for 1–2 min (so that medication will not be squeezed out of the sac) and to apply digital pressure to lacrimal sac at inner canthus for 1 min to minimize system absorption.

IV INCOMPATIBILITIES

Promethazine (Phenergan).

IV COMPATIBILITIES

FentaNYL (Sublimaze), HYDROmorphone (Dilaudid), morphine, nalbuphine (Nubain).

INDICATIONS/ROUTES/DOSAGE

Note: Total duration is 5 days (parenteral and oral). Do not increase dose/frequency; supplement with low-dose opioids if needed.

Pain Management

PO: ADULTS, ELDERLY: Initially, 20 mg (10 mg for elderly), then 10 mg q4–6h. **Maximum:** 40 mg/24 hrs.

IM: ADULTS YOUNGER THAN 65 YRS: 60 mg once or 30 mg q6h. **Maximum:** 120 mg/24 hrs. **ADULTS 65 YRS AND OLDER, PTS WITH RENAL IMPAIRMENT, PTS WEIGHING LESS THAN 50 KG:** 30 mg once or 15 mg q6h. **Maximum:** 60 mg/24 hrs.

IV: ADULTS YOUNGER THAN 65 YRS: 30 mg once or 30 mg q6h. **Maximum:** 120 mg/24 hrs. **ADULTS 65 YRS AND OLDER, PTS WITH RENAL IMPAIRMENT, PTS WEIGHING LESS THAN 50 KG:** 15 mg once or 15 mg q6h. **Maximum:** 60 mg/24 hrs.

Nasal spray: ADULTS YOUNGER THAN 65 YRS, PTS WEIGHING 50 KG OR MORE: One spray (15.75 mg) in each nostril (total dose: 31.5 mg) q6–8h. **Maximum dose:** Four sprays (126 mg/day). **ADULTS 65 YRS AND OLDER, PTS WEIGHING LESS THAN 50 KG:** One spray (15.75 mg) in each nostril (total dose: 15.75 mg) q6–8h. **Maximum dose:** Four sprays (63 mg/day).

Allergic Conjunctivitis

Ophthalmic: ADULTS, ELDERLY, CHILDREN 2 YRS AND OLDER: 1 drop (0.5%) 4 times/day.

Cataract Extraction

Ophthalmic: ADULTS, ELDERLY: 1 drop (0.5%) 4 times/day. Begin 24 hrs after surgery and continue for 2 wks.

Corneal Refractive Surgery

Ophthalmic: ADULTS, ELDERLY: 1 drop (0.4%) 4 times/day for up to 4 days after surgery.

Dosage in Renal Impairment

See dosage section.

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (17%–12%): Headache, nausea, abdominal cramps/pain, dyspepsia. **Occasional (9%–3%):** Diarrhea. **Nasal:** Nasal discomfort, rhinalgia, increased

lacrimation, throat irritation, rhinitis.

Ophthalmic: Transient stinging, burning. **Rare (3%–1%):** Constipation, vomiting, flatulence, stomatitis. **Ophthalmic:** Ocular irritation, allergic reactions (manifested by pruritus, stinging), superficial ocular infection, keratitis.

ADVERSE EFFECTS/TOXIC REACTIONS

Peptic ulcer, GI bleeding, gastritis, severe hepatic reaction (cholestasis, jaundice) occur rarely. Nephrotoxicity (glomerular nephritis, interstitial nephritis, nephrotic syndrome) may occur in pts with preexisting renal impairment. Acute hypersensitivity reaction (fever, chills, joint pain) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain. Obtain baseline renal/hepatic function tests.

INTERVENTION/EVALUATION

Monitor renal function, LFT, urinary output. Monitor daily pattern of bowel activity, stool consistency. Observe for occult blood loss. Assess for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength. Monitor for bleeding (may also occur with ophthalmic route due to systemic absorption).

PATIENT/ FAMILY TEACHING

- Avoid aspirin, alcohol.
- Report abdominal pain, bloody stools, or vomiting blood.
- If GI upset occurs, take with food, milk.
- **Ophthalmic:** Transient stinging, burning may occur upon instillation.
- Do not administer while wearing soft contact lenses.

labetalol

la-bayt-a-lol
(Trandate )

Do not confuse labetalol with atenolol, betaxolol, metoprolol or propranolol, or Trandate with traMADol or TRENtal.

FIXED-COMBINATION(S)

Normozide: labetalol/hydroCHLORothiazide (a diuretic): 100 mg/25 mg, 200 mg/25 mg, 300 mg/25 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Alpha-, beta-adrenergic blocker. **CLINICAL:** Antihypertensive.

USES

Management of hypertension. IV for severe hypertension. **OFF-LABEL:** Management of preeclampsia, severe hypertension in pregnancy, hypertension during acute ischemic stroke, pediatric hypertension.

PRECAUTIONS

Contraindications: Hypersensitivity to labetalol. Bronchial asthma, history of obstructive airway disease, cardiogenic shock, uncompensated HF, second- or third-degree heart block (except in pts with functioning pacemaker), severe bradycardia, conditions associated with severe, prolonged hypotension. **Cautions:** Compensated HF, severe anaphylaxis to allergens, myasthenia gravis, psychiatric disease, hepatic impairment, pheochromocytoma, diabetes; concurrent use with digoxin, verapamil, or diltiazem; arterial obstruction, elderly. Pts with peripheral vascular disease, Raynaud's disease.

ACTION

Blocks alpha-1, beta-1, beta-2 (large doses) adrenergic receptor sites. **Therapeutic Effect:** Decreases peripheral vascular resistance, B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	0.5–2 hrs	2–4 hrs	8–12 hrs
IV	2–5 min	5–15 min	2–4 hrs

Incompletely absorbed from GI tract. Bioavailability: 25%. Protein binding: 50%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 6–8 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug crosses placenta. Small amount distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Age-related peripheral vascular disease may increase susceptibility to decreased peripheral circulation. May have increased risk of orthostatic hypotension.

INTERACTIONS

DRUG: May decrease effects of **beta₂-adrenergic agonists** (e.g., arformoterol, salmeterol), **theophylline**. **Dronedarone, rivastigmine** may increase bradycardic effect. May increase bradycardic effect of **finlomidol**. **HERBAL:** **Herbals with hypertensive properties** (e.g., licorice, yohimbe) or **hypotensive properties** (e.g., garlic, ginger, ginkgo biloba) may alter effects. **FOOD:** None known. **LAB VALUES:** May increase serum antinuclear antibody titer (ANA), BUN, LDH, alkaline phosphatase, bilirubin, creatinine, potassium, triglycerides, lipoprotein, uric acid, ALT, AST.

AVAILABILITY (Rx)

Injection Solution: 5 mg/mL. **Tablets:** 100 mg, 200 mg, 300 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ Prolonged duration of action: Monitor several hrs after administration. Excessive administration may result in prolonged hypotension and/or bradycardia.

Reconstitution • For IV infusion, dilute in D₅W to provide concentration of 1–2 mg/mL.

Rate of administration • For IV push, administer at a rate of 10 mg/min. • For IV infusion, administer at rate of 2 mg/min initially. Rate is adjusted according to B/P. • Monitor B/P immediately before and q5–10min during IV administration (maximum effect occurs within 5 min).

Storage • Store at room temperature. • After dilution, IV solution is stable for 72 hrs. • Solution appears clear, colorless to light yellow. • Discard if discolored or precipitate forms.

PO

• Give without regard to food. • Tablets may be crushed.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), ceftazidime (Teflaro), ceftriaxone (Rocephin), furosemide (Lasix), heparin, nafcillin (Nafcil).

IV COMPATIBILITIES

Amiodarone (Cordarone), calcium gluconate, dexmedetomidine (Precedex), diltiazem (Cardizem), DOBUTAMINE (Dobutrex), DOPAMINE (Intropin), enalapril (Vasotec), fentanyl (Sublimaze), HYDROMORPHONE (Dilaudid), lidocaine, LORAZEPAM (Ativan), magnesium sulfate, midazolam (Versed), milrinone (Primacor), morphine, nitroglycerin, norepinephrine (Levophed), potassium chloride, potassium phosphate, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: Initially, 100 mg twice daily. Adjust in increments of 100 mg twice daily q2–3days. Usual dose: 200–800 mg/day in 2 divided doses. May require up to 2,400 mg/day. **CHILDREN:** 1–3 mg/kg/day in 2 divided doses. **Maximum:** 10–12 mg/kg/day up to 1,200 mg/day.

Severe Hypertension, Hypertensive Crisis

IV: ADULTS: Initially, 10–20 mg (bolus over 2 min). Additional doses of 40–80

mg may be given at 10-min intervals, up to total dose of 300 mg. **CHILDREN:** 0.2–1 mg/kg/dose. **Maximum:** 40 mg/dose.

IV infusion: ADULTS: Initially, 0.5–2 mg/min up to 10 mg/min. **CHILDREN:** 0.25–3 mg/kg/hr. **Maximum:** 3 mg/kg/hr.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (20%–11%): Drowsiness, dizziness, excessive fatigue. **Occasional (10% or less):** Dyspnea, peripheral edema, depression, anxiety, constipation, diarrhea, nasal congestion, weakness, diminished sexual function, transient scalp tingling, insomnia, nausea, vomiting, abdominal discomfort. **Rare:** Altered taste, dry eyes, increased urination, paresthesia.

ADVERSE EFFECTS/TOXIC REACTIONS

May precipitate, aggravate HF due to decreased myocardial stimulation. Abrupt withdrawal may precipitate myocardial ischemia, producing chest pain, diaphoresis, palpitations, headache, tremor. May mask signs, symptoms of acute hypoglycemia (tachycardia, B/P changes) in diabetic pts. Rapid reduction of blood pressure may cause CVA, optic nerve infarction, ischemic changes on ECG. May cause severe orthostatic hypotension.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline renal function, LFT. Assess B/P, apical pulse immediately before drug administration (if pulse is 60/min or less or systolic B/P is lower than 90 mm Hg, withhold medication, contact physician). Question history of bradycardia, HE, second- or third-degree heart block, myasthenia gravis.

INTERVENTION/EVALUATION

Monitor B/P for hypotension. Assess pulse for quality, irregular rate, bradycardia.

Monitor ECG for cardiac arrhythmias. Assist with ambulation if dizziness occurs. Assess for evidence of HF: dyspnea (particularly on exertion or lying down), night cough, peripheral edema, distended neck veins. Monitor I&O (increase in weight, decrease in urine output may indicate HF).

PATIENT/FAMILY TEACHING

- Do not discontinue drug except upon advice of physician (abrupt discontinuation may precipitate heart failure).
- Slowly go from lying to standing.
- Compliance with therapy regimen is essential to control hypertension, arrhythmias.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Report shortness of breath, excessive fatigue, weight gain, prolonged dizziness, headache.
- Do not use nasal decongestants, OTC cold preparations (stimulants) without physician approval.
- Limit alcohol.

lacosamide

la-koe-sa-myde
(Vimpat)

Do not confuse lacosamide with zonisamide.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Succinimide (Schedule V). **CLINICAL:** Anticonvulsant.

USES

Monotherapy or adjunctive therapy for treatment of partial-onset seizures in pts 4 yrs and older.

PRECAUTIONS

Contraindications: Hypersensitivity to lacosamide. **Cautions:** Renal/hepatic impairment, cardiac conduction problems (e.g., marked first-degree AV block, second-degree or higher AV block, sick sinus syndrome without pacemaker), myocardial ischemia, HF, pts at risk of suicide.

ACTION

Selectively enhances slow inactivation of sodium channels, stabilizing hyperexcitable neuronal membranes and inhibits neuronal firing. **Therapeutic Effect:** Reduces seizure frequency.

PHARMACOKINETICS

Completely absorbed following PO administration. Protein binding: 15%. Peak plasma concentration: 1–4 hrs after oral dosing and is reached at the end of IV infusion. Primarily excreted in urine. Steady-state levels achieved in 3 days. Removed by hemodialysis. **Half-life:** 13 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Use in pregnancy if benefits outweigh risk. Unknown if distributed in breast milk. **Children:** Safety and efficacy not established in pts younger than 17 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT; proteinuria.

AVAILABILITY (Rx)

Injection Solution: 10 mg/mL (20 mL).

Oral Solution: 10 mg/mL.

 **Tablets:** 50 mg, 100 mg, 150 mg, 200 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.
- Do not break, crush, dissolve, or divide film-coated tablets.
- Oral solution should be administered with a calibrated measuring device.
- Discard any unused portion after 7 wks.

IV

- Appears as a clear, colorless solution.
- Discard unused portion or if precipitate or discoloration is present. May give without further dilution.
- If mixing with

diluent, may be stored for 24 hrs at room temperature. Infuse over 30–60 min.

IV COMPATIBILITIES

0.9% NaCl, D₅W, lactated Ringer's.

INDICATIONS/ROUTES/DOSAGE

Note: IV dose is same as oral dose. May give undiluted or mixed in compatible diluent and infused over 30–60 min.

Partial-Onset Seizures

Monotherapy

PO/IV: ADULTS, ELDERLY: Initially, 100 mg twice daily. May increase by 50 mg twice daily at wkly intervals. **Maintenance:** 150–200 mg twice daily. **CHILDREN 4–17 YRS, WEIGHING 50 KG OR MORE:** Initially, 50 mg twice daily. May increase by 50 mg twice daily at wkly intervals. **Maintenance:** 150–200 mg twice daily. **WEIGHING 30–49 KG:** Initially, 1 mg/kg/dose twice daily. May increase by 1 mg/kg/dose twice daily at wkly intervals. **Maintenance:** 2–4 mg/kg/dose twice daily. **WEIGHING 11–29 KG:** Initially, 1 mg/kg/dose twice daily. May increase by 1 mg/kg/dose twice daily at wkly intervals. **Maintenance:** 3–6 mg/kg/dose twice daily.

Adjunctive Therapy

PO/IV: ADULTS, ELDERLY: Initially, 50 mg twice daily. May increase by 50 mg twice daily at wkly intervals. **Maintenance:** 100–200 mg twice daily. **Maximum:** 400 mg/day. **CHILDREN 4–17 YRS, WEIGHING 50 KG OR MORE:** Initially, 50 mg twice daily. **Maintenance:** 100–200 mg twice daily. **WEIGHING 30–49 KG:** Initially, 1 mg/kg/dose twice daily. **Maintenance:** 2–4 mg/kg/dose twice daily. **WEIGHING 11–29 KG:** Initially, 1 mg/kg/dose twice daily. **Maintenance:** 3–6 mg/kg/dose twice daily.

Switch from IV to PO

When switching from IV to PO form, use same equivalent daily dosage and frequency as IV administration.

Switch from PO to IV

When switching from PO to IV form, initial total daily IV dosage should be equivalent to total daily dosage and frequency of PO form and should be infused IV over 30–60 min.

Dosage in Renal Impairment

Use caution when titrating. **Mild to moderate impairment:** No dose adjustment. **Severe impairment, end-stage renal disease: Maximum:** 300 mg/day.

Dosage in Hepatic Impairment

Use caution when titrating. **Mild to moderate impairment: Maximum:** 300 mg/day. **Severe impairment:** Not recommended.

SIDE EFFECTS

Frequent (31%–13%): Dizziness, headache. **Occasional (11%–5%):** Nausea, double vision, vomiting, fatigue, blurred vision, ataxia, tremor, nystagmus. **Rare (4%–2%):** Vertigo, diarrhea, gait disturbances, memory impairment, depression, pruritus, injection site discomfort.

ADVERSE EFFECTS/TOXIC REACTIONS

Increased risk of suicidal ideation, behavior. Dose-dependent prolongations in PR interval noted. Leukopenia, anemia, thrombocytopenia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (intensity, frequency, duration, level of consciousness). Initiate seizure precautions. Renal function, LFT, CBC should be performed before therapy begins and periodically during therapy. Question history of cardiac conduction disorders, depression, suicidal ideation and behavior.

INTERVENTION/EVALUATION

Observe for recurrence of seizure activity. Assess for clinical improvement (decrease in intensity/frequency of seizures). Assist with ambulation if dizziness occurs. Assess for suicidal ideation, depression, behavioral changes. Drug should be withdrawn gradually (over a minimum of 1 wk) to minimize potential for increased seizure frequency. Monitor ECG for QT prolongation.

PATIENT/FAMILY TEACHING

- Strict maintenance of drug therapy is essential for seizure control.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Avoid alcohol.
- Report depression, suicidal ideation, unusual behavioral changes.

lactulose

lak-tyoo-lose

(Apo-Lactulose , Constulose, Enulose, Generlac, Kristalose)

Do not confuse lactulose with lactose.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Lactose derivative. **CLINICAL:** Hyperosmotic laxative, ammonia detoxicant.

USES

Prevention, treatment of portal-systemic encephalopathy (including hepatic precoma, coma); treatment of constipation.

PRECAUTIONS

Contraindications: Hypersensitivity to lactulose. Pts requiring a low-galactose diet. **Cautions:** Diabetes, hepatic impairment, dehydration.

ACTION

Inhibits diffusion of NH_3 into blood by converting NH_3 to NH_4^+ ; enhances diffusion of NH_3 from blood to gut, where it is converted to NH_4^+ ; produces osmotic effect in colon, resulting in colon distention, promoting peristalsis. **Therapeutic Effect:** Promotes increased peristalsis, bowel evacuation; decreases serum ammonia concentration.

PHARMACOKINETICS

Poorly absorbed from GI tract. Extensively metabolized in colon. Primarily excreted in feces.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Avoid use in pts younger than 6 yrs (usually unable to describe symptoms). **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum potassium (GI loss).

AVAILABILITY (Rx)

Packets: (Kristalose): 10 g, 20 g. **Solution, Oral:** 10 g/15 mL.

ADMINISTRATION/HANDLING

PO

- Store solution at room temperature.
- Solution appears pale yellow to yellow, viscous liquid. Cloudiness, darkened solution does not indicate potency loss.
- Drink water, juice, milk with each dose (aids stool softening, increases palatability).
- Mix packets with 4 oz water.

Rectal

- Lubricate anus with petroleum jelly before enema insertion.
- Insert carefully (prevents damage to rectal wall) with nozzle toward navel.
- Squeeze container until entire dose expelled.
- Instruct pt to retain 30–60 min in divided doses.
- **Maximum:** 60 mL/day (40 g/day).

INDICATIONS/ROUTES/DOSAGE

Constipation

PO: ADULTS, ELDERLY: 15–30 mL (10–20 g)/day, up to 60 mL (40 g)/day. **CHILDREN:** 1.5–3 mL/kg/day (1–2 g/kg/day) in 1–2 divided doses. **Maximum:** 60 mL/day.

Prevention of Portal-Systemic Encephalopathy

ADULTS, ELDERLY: 30–45 mL (20–30 g) 3–4 times/day. Adjust dose q1–2 days to produce 2–3 soft stools/day. **CHILDREN:** 40–90 mL/day (26.7–60 g/day)

in divided doses 3–4 times/day. **INFANTS:** 2.5–10 mL/day (1.7–6.7 g/day) in 3–4 divided doses. Adjust dose q1–2 days to produce 2–3 soft stools/day.

Treatment of Portal-Systemic Encephalopathy

PO: ADULTS, ELDERLY: Initially, 30–45 mL (20–30 g) every hr to induce rapid laxation. Then, 30–45 mL 3–4 times/day. Adjust dose q1–2 days to produce 2–3 soft stools/day.

Rectal Administration (as Retention Enema)

200 g (300 mL) diluted with 700 mL water or NaCl via rectal balloon catheter. Retain 30–60 min q4–6h. (Transition to oral prior to stopping rectal administration.)

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional: Abdominal cramping, flatulence, increased thirst, abdominal discomfort. **Rare:** Nausea, vomiting.

ADVERSE EFFECTS/TOXIC REACTIONS

Severe diarrhea may cause dehydration, electrolyte imbalance. Long-term use may result in laxative dependence, chronic constipation, loss of normal bowel function.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question usual stool pattern, frequency, characteristics. Conduct neurological exam in pts with elevated serum ammonia levels, symptoms of encephalopathy. Assess hydration status.

INTERVENTION/EVALUATION

Encourage adequate fluid intake. Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool consistency; record time of evacuation. Assess for abdominal disturbances. Monitor serum electrolytes in pts with prolonged, frequent, excessive use of medication. Monitor encephalopathic

pts for symptom improvement (alertness, orientation, ability to follow commands).

PATIENT/FAMILY TEACHING

- Evacuation occurs in 24–48 hrs of initial dose.
- Institute measures to promote defecation: increase fluid intake, exercise, high-fiber diet.
- Drink plenty of fluids.
- If therapy was started to treat high ammonia levels, notify physician if worsening of confusion, lethargy, weakness occurs.

lamivudine/ tenofovir

la-miv-ue-deen/ten-oh-foe-veer
(Cimduo)

BLACK BOX ALERT ■ Severe exacerbations of hepatitis B virus (HBV) reported in pts co-infected with HIV-1 and HBV following discontinuation. If discontinuation occurs, monitor hepatic function for at least several mos. Initiate anti-HBV therapy if warranted.

Do not confuse lamivudine/tenofovir (Cimduo) with lamivudine/nevirapine/zidovudine, efavirenz/emtricitabine/tenofovir (Atripla), efavirenz/lamivudine/tenofovir (Symfi Lo) abacavir/dolutegravir/lamivudine (Triumeq), abacavir/lamivudine/zidovudine (Trizivir), bictegravir/emtricitabine/tenofovir (Biktarvy).

FIXED-COMBINATION(S)

Cimduo: lamivudine/tenofovir (antiretrovirals): 300 mg/300 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Nucleoside reverse transcriptase inhibitor, nucleotide reverse transcriptase inhibitor. **CLINICAL:** Antiretroviral agent (anti-HIV).

USES

Treatment of HIV-1 infection in adult and pediatric pts weighing at least 35 kg, in combination with other antiretroviral agents.

PRECAUTIONS

Contraindications: Hypersensitivity to lamivudine, tenofovir. **Cautions:** Hepatic/renal impairment, hyperlipidemia, psychiatric illness (e.g., depression); history of pathological fracture, osteoporosis, osteopenia. History of pancreatitis (pediatric pts). Not recommended in pts with CrCl less than 50 mL/min, end-stage renal disease requiring hemodialysis.

ACTION

Lamivudine inhibits HIV reverse transcription via viral DNA chain termination; inhibits RNA- and DNA-dependent polymerase activities. Tenofovir interferes with HIV viral RNA-dependent DNA polymerase. **Therapeutic Effect:** Inhibits viral replication, slowing progression of HIV infection.

PHARMACOKINETICS

Widely distributed. Tenofovir metabolized by enzymatic hydrolysis, mediated by macrophages and hepatocytes. Protein binding: (lamivudine): less than 36%, (tenofovir): less than 1%. Lamivudine excreted primarily in urine. Tenofovir excreted primarily in urine (70–80%). **Half-life:** (lamivudine): 5–7 hrs; (tenofovir): 17 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Breastfeeding not recommended due to risk of postnatal HIV transmission. Lamivudine, tenofovir are secreted in breast milk. **Children:** Safety and efficacy not established in children weighing less than 35 kg. May have increased risk of pancreatitis. **Elderly:** May have increased risk of adverse reactions/toxic reactions.

INTERACTIONS

DRUG: **Adefovir** may decrease therapeutic effect/increase concentration of **tenofovir**. **Tenofovir** may decrease therapeutic effect of **didanosine**. **Lamivudine** may increase adverse/toxic effect of **emtricitabine**. **NSAIDs (e.g., ibuprofen, naproxen, ketorolac)** may increase nephrotoxic effect of tenofovir. **HERBAL:** None significant. **FOOD:** None

known. **LAB VALUES:** May increase serum amylase, ALT, AST, creatine kinase (CK), cholesterol, glucose, triglycerides. May decrease neutrophils.

AVAILABILITY (Rx)

Fixed-Dose Combination Tablets: lamivudine/tenofovir: 300 mg/300 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

HIV-1 Infection

PO: ADULTS, CHILDREN WEIGHING AT LEAST 35 KG: 1 tablet once daily (in combination with other antiretrovirals).

Dosage in Renal Impairment

CrCl greater than 50 mL/min: No dose adjustment. **CrCl less than 50 mL/min, ESRD requiring HD:** Not recommended.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Not recommended.

SIDE EFFECTS

Frequent (18%–11%): Rash, urticaria, headache, pain, diarrhea. **Occasional (9%–4%):** Back pain, nausea, fever, abdominal pain, asthenia, anxiety, insomnia, vomiting, arthralgia, dyspepsia. **Rare (3%–1%):** Myalgia, dizziness, peripheral neuropathy.

ADVERSE EFFECTS/TOXIC REACTIONS

May cause new or worsening renal failure including Fanconi syndrome (renal tubular injury, nonabsorption of essential electrolytes, acids, buffers in renal tubules). Renal tubular injury may lead to rhabdomyolysis, osteomalacia, muscle weakness, myopathy. May decrease bone mineral density, leading to pathological fractures. May cause redistribution/accumulation of body fat (lipodystrophy). Fatal lactic acidosis, severe hepatomegaly with steatosis (fatty liver) were reported. If therapy is discontinued, pts

co-infected with hepatitis B or C virus have an increased risk for viral replication, worsening of hepatic function, and may experience hepatic decompensation and/or failure. May induce immune recovery syndrome (inflammatory response to dormant opportunistic infections, such as *Mycobacterium avium*, cytomegalovirus, PCP, tuberculosis, or acceleration of autoimmune disorders including Graves' disease, polymyositis, Guillain-Barré). Fatal cases of pancreatitis may occur in pediatric pts with prior use of antiretroviral nucleosides or history of pancreatitis. Early virological failure and high rate of resistance substitutions may occur. Depression reported in 11% of pts. Hematuria occurred in 7% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain, BUN, serum creatinine, CrCl, eGFR, CD4+ count, viral load, HIV-1 RNA level; urine glucose, urine protein; pregnancy test in females of reproductive potential. Obtain serum phosphate level in pts with renal impairment. Test all pts for HBV infection. Receive full medication history and screen for contraindications/interactions. Question history of hepatic/renal impairment, hyperlipidemia, hypersensitivity reactions, decreased mineral bone density, osteopenia, depression; pancreatitis (in children). Offer emotional support.

INTERVENTION/EVALUATION

Monitor CD4+ count, viral load, HIV-1 RNA level for treatment effectiveness. Monitor LFT; assess for hepatic injury (bruising, hematuria, jaundice, right upper abdominal pain, nausea, vomiting, weight loss). If discontinuation of drug regimen occurs, monitor hepatic function for at least several mos. Initiate anti-HBV therapy if warranted. Obtain serum lactate level if lactic acidosis suspected. Monitor renal function as clinically indicated. An increase in serum creatinine

greater than 0.4 mg/dL from baseline may indicate renal impairment. Monitor for immune recovery syndrome, esp. after initiating treatment. Cough, dyspnea, fever, excess band cells on CBC may indicate acute infection (WBC may be unreliable in pts with uncontrolled HIV infection). Monitor daily pattern of bowel activity, stool consistency; I&Os. Screen for depression. Obtain serum amylase, lipase level if acute pancreatitis suspected (pediatric pts).

PATIENT/FAMILY TEACHING

- Treatment does not cure HIV infection nor reduce risk of transmission. Practice safe sex with barrier methods or abstinence.
- Drug resistance can form if treatment is interrupted; do not run out of supply.
- As immune system strengthens, it may respond to dormant infections hidden within the body. Report any new fever, chills, body aches, cough, night sweats, shortness of breath.
- Report symptoms of kidney inflammation or disease (decreased urine output, abdominal pain, darkened urine); toxic skin reactions (rash, pustules, skin eruptions).
- Pancreatitis can occur in children; report any new or worsening abdominal pain that radiates to the back or shoulder, with or without nausea/vomiting.
- Do not breastfeed.
- Decreased bone density may lead to pathological fractures; report bone/extremity pain, suspected fractures.
- Antiretrovirals may cause excess body fat in upper back, neck, breast, trunk, while also causing decreased body fat in legs, arms, face.
- Do not take newly prescribed medications, including OTC drugs, unless approved by prescriber who originally started treatment.

lamoTRlgine

la-moe-tri-jeen
(LaMICTal, LaMICTal ODT, LaMICTal XR, Subvenite)

BLACK BOX ALERT Severe, potentially life-threatening skin rashes have been reported, including Stevens-Johnson syndrome. Risk increased with coadministration with valproic acid and rapid-dose titration.

Do not confuse LaMICtal with LAMISIL or Lomotil, or lamoTRigine with labetalol or lamiVUDine.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Phenyl-triazine. **CLINICAL:** Anticonvulsant.

USES

Immediate-Release: Adjunctive therapy in adults and children 2 yrs of age and older with generalized tonic-clonic seizures, partial seizures, and generalized seizures of Lennox-Gastaut syndrome. Conversion to monotherapy in adults treated with another enzyme-inducing antiepileptic drug (EIAED) (e.g., valproic acid, carbAMazepine, phenytoin, PHENobarbital, or primidone as the single antiepileptic drug). Long-term maintenance treatment of bipolar disorder. Treatment of pts 2 yrs and older with primary generalized tonic-clonic seizures. **Extended-Release:** Adjunctive therapy for primary generalized tonic-clonic and partial-onset seizures in pts 13 yrs and older. Conversion to monotherapy in pt 13 yrs and older with partial seizures receiving treatment with a single antiepileptic drug (AED).

PRECAUTIONS

Contraindications: Hypersensitivity to lamoTRigine. **Cautions:** Renal/hepatic impairment, pts at high risk of suicide, pts taking estrogen-containing oral contraceptives, history of adverse hematologic reaction.

ACTION

Inhibits voltage-sensitive sodium channels, stabilizing neuronal membranes. Inhibits release of glutamide (an excitatory amino acid). **Therapeutic Effect:** Reduces frequency of seizure activity. Delays time to occurrence of acute mood episodes (mania, depression, hypomania).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. Breastfeeding not recommended. Increased fetal risk of oral cleft formation has been noted with use during pregnancy. **Children:** Safety and efficacy not established in pts younger than 18 yrs with bipolar disorder or in pts younger than 13 yrs with epilepsy. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: CarbAMazepine, PHENobarbital, primidone, phenytoin, rifAMPin may decrease concentration/effect. Valproic acid may increase concentration/effects. May increase adverse effects of carbAMazepine, dofetilide. **Estrogen (contraceptive)** may decrease concentration/effect. **CNS depressants** (e.g., alcohol, morphine, zolpidem) may increase CNS depression. **HERBAL:** Herbs with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 25 mg, 100 mg, 150 mg, 200 mg. **Tablets, Chewable:** 5 mg, 25 mg. **Tablets, Orally Disintegrating:** 25 mg, 50 mg, 100 mg, 200 mg.

 **Tablets, Extended-Release:** 25 mg, 50 mg, 100 mg, 200 mg, 250 mg, 300 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.
- Chewable tablets may be dispensed in water or diluted fruit juice, or swallowed whole.
- Extended-release tablets must be swallowed whole; do not break, crush, dissolve, or divide.
- Place orally disintegrating tablet on tongue, allow to dissolve. Pt must not break, cut, or chew. Can be swallowed without regard to food or water.

INDICATIONS/ROUTES/DOSAGE

Lennox-Gastaut, Primary Generalized Tonic-Clonic Seizures, Partial Seizures

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: Initially, 25 mg/day for 2 wks, then

increase to 50 mg/day for 2 wks. After 4 wks, may increase by 50 mg/day at 1- to 2-wk intervals. **Maintenance:** 225–375 mg/day in 2 divided doses. **CHILDREN 2–12 YRS:** **Note:** Only whole tablets should be used for dosing. Round dose down to nearest whole tablet. Initially, 0.3 mg/kg/day in 1–2 divided doses for 2 wks, then increase to 0.6 mg/kg/day in 1–2 divided doses for 2 wks. After 4 wks, may increase by 0.6 mg/kg/day at 1- to 2-wk intervals. **Maintenance:** 4.5–7.5 mg/kg/day in 2 divided doses. **Maximum:** 300 mg/day in 2 divided doses.

Adjusted Dosage with Antiepileptic Drugs Containing Valproic Acid

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: Initially, 12.5–25 mg every other day for 2 wks, then increase to 25 mg/day for 2 wks. After 4 wks, may increase by 25–50 mg/day at 1- to 2-wk intervals. **Maintenance:** 100–400 mg/day in 2 divided doses (100–200 mg/day when taking lamoTRlgine with valproic acid alone). **CHILDREN 2–12 YRS:** **Note:** Only whole tablets should be used for dosing. Round dose down to nearest whole tablet. Initially, 0.15 mg/kg/day in 1–2 divided doses for 2 wks, then increase to 0.3 mg/kg/day in 1–2 divided doses for 2 wks. After 4 wks, may increase by 0.3 mg/kg/day at 1- to 2-wk intervals. **Maintenance:** 1–5 mg/kg/day in 2 divided doses. **Maximum:** 200 mg/day in 2 divided doses.

Adjusted Dosage with EIAED without Valproic Acid

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: Initially, 50 mg/day for 2 wks, then increase to 100 mg/day in 2 divided doses for 2 wks. After 4 wks, may increase by 100 mg/day at 1- to 2-wk intervals. **Maintenance:** 300–500 mg/day in 2 divided doses. **CHILDREN 2–12 YRS:** **Note:** Only whole tablets should be used for dosing. Round dose down to nearest whole tablet. Initially, 0.6 mg/kg/day in 1–2 divided doses for 2 wks, then increase to 1.2 mg/kg/day in 1–2 divided doses for 2 wks. After 4 wks, may increase by 1.2 mg/kg/day at 1- to 2-wk intervals. **Maintenance:** 5–15 mg/kg/day in 2 divided doses. **Maximum:** 400 mg/day in 2 divided doses.

Usual Maintenance Range for Extended-Release Tablets

PT TAKING VALPROIC ACID: 200–250 mg once daily. **PT TAKING EIAED WITHOUT VALPROIC ACID:** 400–600 mg once daily. **PT NOT TAKING EIAED:** 300–400 mg once daily.

Conversion to Monotherapy for Pts Receiving EIAEDs

PO: ADULTS, ELDERLY, CHILDREN 16 YRS AND OLDER: 500 mg/day in 2 divided doses. Titrate to desired dose while maintaining EIAED at fixed level, then withdraw EIAED by 20% each wk over a 4-wk period.

Conversion to Monotherapy for Pts Receiving Valproic Acid

PO: ADULTS, ELDERLY, CHILDREN 16 YRS AND OLDER: Titrate lamoTRlgine to 200 mg/day, maintaining valproic acid dose. Maintain lamoTRlgine dose and decrease valproic acid to 500 mg/day, no greater than 500 mg/day, then maintain 500 mg/day for 1 wk. Increase lamoTRlgine to 300 mg/day and decrease valproic acid to 250 mg/day. Maintain for 1 wk, then discontinue valproic acid and increase lamoTRlgine by 100 mg/day each wk until maintenance dose of 500 mg/day reached.

Bipolar Disorder

PO: ADULTS, ELDERLY: Initially, 25 mg/day for 2 wks, then 50 mg/day for 2 wks, then 100 mg/day for 1 wk, then 200 mg/day beginning with wk 6.

Bipolar Disorder in Pts Receiving EIAEDs

PO: ADULTS, ELDERLY: 50 mg/day for 2 wks, then 100 mg/day for 2 wks, then 200 mg/day for 1 wk, then 300 mg/day for 1 wk, then up to usual maintenance dose 400 mg/day in divided doses.

Bipolar Disorder in Pts Receiving Valproic Acid

PO: ADULTS, ELDERLY: 25 mg/day every other day for 2 wks, then 25 mg/day for 2 wks, then 50 mg/day for 1 wk, then 100 mg/day. **Usual maintenance dose with valproic acid:** 100 mg/day.

Usual Dosage for LaMICtal XR

Adjunct therapy: Range: 200–600 mg/day.

Conversion to monotherapy: Range: 250–500 mg/day.

Discontinuation Therapy

◀ALERT▶ A dosage reduction of approximately 50%/wk over at least 2 wks is recommended.

Dosage in Renal Impairment

◀ALERT▶ Decreased dosage may be effective in pts with significant renal impairment.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment without ascites:** Reduce dose by 25%. **Severe impairment with ascites:** Reduce dose by 50%.

SIDE EFFECTS

Frequent (38%–14%): Dizziness, headache, diplopia, ataxia, nausea, blurred vision, drowsiness, rhinitis. **Occasional (10%–5%):** Rash, pharyngitis, vomiting, cough, flu-like symptoms, diarrhea, dysmenorrhea, fever, insomnia, dyspepsia. **Rare:** Constipation, tremor, anxiety, pruritus, vaginitis, hypersensitivity reaction.

ADVERSE EFFECTS/TOXIC REACTIONS

Abrupt withdrawal may increase seizure frequency. Serious rashes, including Stevens-Johnson syndrome, have been reported. May increase risk of suicidal thoughts and behavior. Hemophagocytic lymphohistiocytosis, a life-threatening syndrome of extreme systemic inflammation characterized by hepatosplenomegaly, lymphadenopathy, fever, rash, organ dysfunction, has occurred. Life-threatening eosinophilia and systemic symptoms (DRESS) may occur. May increase risk of aseptic meningitis. Abrupt withdrawal may increase frequency of seizures.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (type, onset, intensity, frequency, duration, LOC),

medication history (esp. other anticonvulsants), other medical conditions (e.g., renal impairment). Initiate seizure precautions. Assess baseline mood, behavior. Question history of suicidal thought and behavior.

INTERVENTION/EVALUATION

Report occurrence of rash (drug discontinuation may be necessary). Assist with ambulation if dizziness, ataxia occurs. Assess for clinical improvement (decreased intensity/frequency of seizures). Assess for visual abnormalities, headache. Monitor for suicidal ideation, depression, behavioral changes.

PATIENT/ FAMILY TEACHING

- Take medication only as prescribed; do not abruptly discontinue medication after long-term therapy.
- Avoid alcohol.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Carry identification card/bracelet to note anticonvulsant therapy.
- Strict maintenance of drug therapy is essential for seizure control.
- Report any rash, fever, swelling of glands, worsening depression, suicidal ideation, unusual changes in behavior, worsening of seizure control.
- May cause photosensitivity reaction; avoid exposure to sunlight, ultraviolet light.

lansoprazole

lan-soe-pra-zole
(Prevacid, Prevacid Solu-Tab, Prevacid 24HR)

Do not confuse lansoprazole with ARIPIprazole or dexlansoprazole, or Prevacid with Prava-chol, PriLOSEC, or Prinivil.

FIXED-COMBINATION(S)

Prevacid NapraPac: lansoprazole/naproxen (an NSAID): 15 mg/375 mg, 15 mg/500 mg. **Prevpac:** Combination card containing amoxicillin 500 mg (4 capsules), lansoprazole 30

mg (2 capsules), clarithromycin 500 mg (2 tablets).

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Proton pump inhibitor. **CLINICAL:** Anti-ulcer agent.

USES

Short-term treatment (4 wks and less) of healing, symptomatic relief of active duodenal ulcer; short-term treatment (8 wks and less) for healing, symptomatic relief of erosive esophagitis. Long-term treatment of pathologic hypersecretory conditions, including Zollinger-Ellison syndrome. Short-term treatment (8 wks and less) of active benign gastric ulcer, *H. pylori*-associated duodenal ulcer (part of multidrug regimen), maintenance treatment for healed duodenal ulcer. Treatment of gastroesophageal reflux disease (GERD), NSAID-associated gastric ulcer. Reduce risk of NSAID-associated gastric ulcer in pts with history of gastric ulcer requiring NSAIDs. **OTC:** Relief of frequent heartburn (2 or more days/wk). **IV:** Short-term treatment of erosive esophagitis. **OFF-LABEL:** Stress ulcer prophylaxis in critically ill.

PRECAUTIONS

Contraindications: Hypersensitivity to lansoprazole, other proton pump inhibitors. Concomitant use with rilpivirine. **Cautions:** Hepatic impairment. May increase risk of hip, wrist, spine fractures; GI infections.

ACTION

Inhibits the (H⁺, K⁺)-ATPase enzyme system, blocking the final step in gastric acid secretion. **Therapeutic Effect:** Suppresses gastric acid secretion.

PHARMACOKINETICS

Rapid, complete absorption (food may decrease absorption) once drug has left stomach. Protein binding: 97%. Distributed primarily to gastric parietal cells. Metabolized in liver. Excreted in bile and urine. Not removed by hemodialysis.

Half-life: 1.5 hrs (increased in hepatic impairment, elderly).

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted but doses greater than 30 mg not recommended.

INTERACTIONS

DRUG: May decrease concentration/effect of **atazanavir**. May increase effect of **warfarin**. May decrease effect of **clopidogrel**, **risedronate**. May decrease concentration/effects of **acalabrutinib**, **cefuroxime**, **erlotinib**, **neratinib**, **pazopanib**. **Strong CYP2C19 inducers (e.g., fluoxetine), strong CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifAMPin)** may decrease concentration/effect. **HERBAL:** **St. John's wort** may decrease concentration/effect. **FOOD:** **Food** may decrease absorption. **LAB VALUES:** May increase serum LDH, alkaline phosphatase, bilirubin, cholesterol, creatinine, ALT, AST, triglycerides, uric acid; Hgb, Hct. May produce abnormal albumin/globulin ratio, electrolyte balance, platelet, RBC, WBC count.

AVAILABILITY (Rx)

Tablets, Orally Disintegrating: 15 mg, 30 mg.

 **Capsules, Delayed-Release:** 15 mg, 30 mg.

ADMINISTRATION/HANDLING

PO

- Best if taken before breakfast
- Do not cut/crush delayed-release capsules.
- If pt has difficulty swallowing capsules, open capsules, sprinkle granules on 1 tbsp of applesauce, give immediately. Do not crush or allow pt to chew granules.

PO (Solu-Tab)

- Place tablet on tongue; allow to dissolve, then swallow.
- May give via oral syringe or nasogastric tube.
- May dissolve in 4 mL (15 mg) or 10 mL (30 mg) water.

INDICATIONS/ROUTES/DOSAGE**Duodenal Ulcer**

PO: ADULTS, ELDERLY: 15 mg/day, for up to 4 wks. **Maintenance:** 15 mg/day.

Erosive Esophagitis

PO: ADULTS, ELDERLY: 30 mg/day, for up to 8 wks. If healing does not occur within 8 wks may give for additional 8 wks. **Maintenance:** 15 mg/day. **CHILDREN 1–11 YRS, WEIGHING MORE THAN 30 KG:** 30 mg/day for up to 12 wks; **WEIGHING 30 KG OR LESS:** 15 mg/day for up to 12 wks.

Gastric Ulcer

PO: ADULTS: 30 mg/day for up to 8 wks.

NSAID Gastric Ulcer

PO: ADULTS, ELDERLY: Healing: 30 mg/day for up to 8 wks. **Prevention:** 15 mg/day for up to 12 wks.

Gastroesophageal Reflux Disease (GERD)

PO: ADULTS: 15 mg/day for up to 8 wks. **CHILDREN 12–17 YRS:** 30 mg/day up to 8 wks. **CHILDREN 1–11 YRS, WEIGHING MORE THAN 30 KG:** 30 mg/day for up to 8 wks; **WEIGHING 30 KG OR LESS:** 15 mg/day for up to 8 wks.

H. Pylori Infection

PO: ADULTS, ELDERLY: (triple drug therapy including amoxicillin, clarithromycin) 30 mg q12h for 10–14 days or (with amoxicillin) 30 mg 3 times/day for 14 days.

Pathologic Hypersecretory Conditions (Including Zollinger-Ellison Syndrome)

PO: ADULTS, ELDERLY: Initially, 60 mg/day. Individualize dosage according to pt needs and for as long as clinically indicated. Administer doses greater than 120 mg/day in divided doses.

Heartburn (OTC)

PO: ADULTS, ELDERLY: 15 mg once daily for 14 days. May repeat q4mos.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Consider dose reduction in severe impairment.

SIDE EFFECTS

Occasional (3%–2%): Diarrhea, abdominal pain, rash, pruritus, altered appetite. **Rare (1%):** Nausea, headache.

ADVERSE EFFECTS/TOXIC REACTIONS

Bilirubinemia, eosinophilia, hyperlipidemia occur rarely. May increase risk of *C. difficile* infection. Chronic use may increase risk of osteoporosis, fractures.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain baseline lab values. Assess for epigastric/abdominal pain, evidence of GI bleeding, ecchymosis.

INTERVENTION/EVALUATION

Monitor CBC, hepatic/renal function tests. Assess for therapeutic response (relief of GI symptoms). Question if diarrhea, abdominal pain, nausea occurs. Obtain *C. difficile* PCR test in pts with persistent diarrhea, fever, abdominal pain.

PATIENT/ FAMILY TEACHING

- Do not chew, crush delayed-release capsules.
- For pts who have difficulty swallowing capsules, open capsules, sprinkle granules on 1 tsp of applesauce, swallow immediately.

lapatinib

la-pa-tin-ib
(Tykerb)

BLACK BOX ALERT Hepatotoxicity (serum ALT or AST more than 3 times upper limit of normal [ULN] and total bilirubin more than 2 times ULN), possibly severe, has occurred. **Do not confuse lapatinib with dasatinib, erlotinib, or imatinib.**

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Epidermal growth factor receptor (EGFR) inhibitor. Tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic.

USES

Combination treatment with capecitabine for the treatment of human epidermal growth receptor type 2 (HER2)-overexpressing advanced or metastatic breast cancer in pts who have received prior therapy including an anthracycline, a taxane, and trastuzumab. Combination treatment with letrozole for treatment of postmenopausal women with *HER2*-overexpressing hormone receptor-positive metastatic breast cancer for whom hormonal therapy is indicated. **OFF-LABEL:** Treatment (in combination with trastuzumab) of *HER2*-overexpressing metastatic breast cancer that progressed on prior trastuzumab-containing therapy. Treatment of *HER2*-overexpressing metastatic breast cancer with brain metastasis.

PRECAUTIONS

Contraindications: Hypersensitivity to lapatinib. **Cautions:** Left ventricular function abnormalities, prolonged QT interval or medications known to prolong QT interval, hepatic impairment. History of treatment with anthracyclines, chest wall irradiation. Avoid concurrent use with strong CYP3A4 inhibitors or inducers.

ACTION

Inhibitory action against kinases targeting intracellular components of epidermal growth factor receptor ErbB1 and a second receptor, human epidermal receptor (HER2 [ErbB2]). **Therapeutic Effect:** Inhibits tumor cell growth and metastasis.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30 min	4 hrs	—

Steady-state level reached within 6–7 days. Incomplete and variable oral absorption. Undergoes extensive metabolism. Protein binding: 99%. Minimally excreted in feces and plasma. **Half-life:** 24 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast

milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: QT interval-prolonging medications (e.g., amiodarone, azithromycin, ceritinib, haloperidol, moxifloxacin) may increase risk of QT interval prolongation, cardiac arrhythmias. **CYP3A4 inhibitors** (e.g., clarithromycin, ketoconazole, ritonavir), dexamethasone may increase concentration/effect. **CYP3A4 inducers** (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. **HERBAL:** St. John's wort decreases concentration/effect. **FOOD:** Grapefruit products may increase concentration/effect. (potential for torsades, myelotoxicity). **LAB VALUES:** May increase serum ALT, AST, bilirubin. May decrease neutrophils, Hgb, platelets.

AVAILABILITY (Rx)

 **Tablets:** 250 mg.

ADMINISTRATION/HANDLING**PO**

- Do not break, crush, dissolve, or divide film-coated tablets.
- Give at least 1 hr before or 1 hr after food. Take full dose at same time each day.

INDICATIONS/ROUTES/DOSAGE**Breast Cancer**

PO: ADULTS, ELDERLY: With capecitabine: 1,250 mg (5 tablets) once daily. With letrozole: 1,500 mg once daily continuously with letrozole. Continue until disease progresses or unacceptable toxicity.

Dose Modification**Cardiac Toxicity**

Discontinue with decreased left ventricular ejection fraction Grade 2 or higher, or in pts with an ejection fraction that drops to lower limit of normal. May be started at a reduced dose (1,000 mg/day) at a minimum of 2 wks when ejection fraction returns to normal and pt is asymptomatic.

Pulmonary Toxicity

Discontinue with symptoms indicative of interstitial lung disease or pneumonitis Grade 3 or higher.

Severe Hepatic Impairment

With capecitabine: 750 mg/day. **With letrozole:** 1,000 mg/day.

CYP3A4 Inhibitors/Inducers

Concomitant use of CYP3A4 inhibitors may require dose reduction of lapatinib (e.g., decrease to 500 mg/day with careful monitoring); CYP3A4 inducers may require dose increase of lapatinib (e.g., increase to 4,500 mg with capecitabine or 5,500 mg with letrozole).

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** See dose modification.

SIDE EFFECTS

Common (65%–44%): Diarrhea, hand-foot syndrome (blistering/rash/peeling of skin on palms of hands, soles of feet), nausea. **Frequent (28%–26%):** Rash, vomiting. **Occasional (15%–10%):** Mucosal inflammation, stomatitis, extremity pain, back pain, dry skin, insomnia.

ADVERSE EFFECTS/TOXIC REACTIONS

Decreases in left ventricular ejection Grade 3 or higher have been observed; 20% decrease relative to baseline is considered toxic.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Screen for home medications that prolong QT interval. Obtain baseline ECG. Question for possibility of pregnancy. Obtain baseline CBC, serum chemistries before treatment begins and monthly thereafter.

INTERVENTION/EVALUATION

Offer antiemetics to control nausea, vomiting. Monitor daily pattern of bowel

activity, stool consistency. Monitor CBC (particularly Hgb, platelets, neutrophil count), LFT. Assess hands and feet for erythema/blistering/peeling. Monitor for shortness of breath, palpitations, fatigue (decreased cardiac ejection fraction). Monitor ECG for QT prolongation. Obtain CXR if pneumonitis suspected.

PATIENT/FAMILY TEACHING

- Avoid crowds, those with known infection.
- Avoid contact with those who recently received live virus vaccine.
- Do not have immunizations without physician's approval (drug lowers resistance).
- Promptly report fever, unusual bruising/bleeding from any site.
- Ensure use of appropriate birth control measures in women.
- Treatment may cause severe lung inflammation; report shortness of breath, severe cough, lung pain.
- Report liver problems such as upper abdominal pain, bleeding, dark or amber-colored urine, nausea, vomiting, or yellowing of the skin or eyes.

larotrectinib

lar-oh-trek-ti-nib
(Vitrakvi)

Do not confuse larotrectinib with alectinib, lapatinib, lenvatinib, or lorlatinib.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Tropomyosin receptor kinase (TRK) inhibitor. Tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of adult and pediatric pts with solid tumors that have a neurotrophic receptor tyrosine kinase (*NTRK*) gene fusion without a known acquired resistance mutation; are metastatic or where surgical resection is likely to result in severe morbidity; and have no satisfactory

alternative treatment or that have progressed following treatment.

PRECAUTIONS

Contraindications: Hypersensitivity to larotrectinib. **Cautions:** Baseline anemia, neutropenia; hepatic impairment, active infection, conditions predisposing to infection (e.g., diabetes, renal failure, immunocompromised pts, open wounds); concomitant use of strong CYP3A inhibitors, strong CYP3A inducers.

ACTION

Inhibits activation of tropomyosin receptor kinase (TRK) proteins resulting from *NTRK* gene fusions, deletion of protein regulatory domain, or in cells with overexpression of TRK proteins. **Therapeutic Effect:** Inhibits tumor cell proliferation and survival.

PHARMACOKINETICS

Widely distributed. Metabolized in liver. Protein binding: 70%. Excreted in feces (58%), urine (39%). **Half-life:** 2.9 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm. Female pts and male pts with female partners of reproductive potential must use effective contraception during treatment and for at least 1 wk after discontinuation. Unknown if distributed in breast milk. Breastfeeding not recommended during treatment and for at least 1 wk after discontinuation. May impair fertility. **Children:** May have increased risk of increased weight, neutropenia. **Elderly:** Not specified; use caution.

INTERACTIONS

DRUG: Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole) may increase concentration/effect. **Strong CYP3A4 inducers** (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. **HERBAL:** St. John's wort may decrease concentration/effect. **FOOD:** Grapefruit

products may increase concentration/effect. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST. May decrease serum albumin; Hgb, neutrophils, RBCs.

AVAILABILITY (Rx)

Capsules: 25 mg, 100 mg. **Solution, Oral:** 20 mg/mL.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Capsules/oral solution may be used interchangeably. • If vomiting occurs after administration, give next dose at regularly scheduled time. • Do not give a missed dose within 6 hrs of next dose. **Capsules:** Administer capsules whole with water; do not break, cut, or open. • Capsules cannot be chewed. **Solution, Oral:** Refrigerate glass bottle. Do not freeze. • Discard unused contents after 90 days of first opening bottle. • See manufacturer guidelines regarding preparation and administration of oral solution.

INDICATIONS/ROUTES/DOSAGE

Solid Tumors

PO: ADULTS, CHILDREN WITH BODY SURFACE AREA OF AT LEAST 1 m²: 100 mg twice daily. Continue until disease progression or unacceptable toxicity. **CHILDREN WITH BODY SURFACE AREA LESS THAN 1 m²:** 100 mg/m² twice daily.

Dose Reduction Schedule

Dose Reduction Reactions	Adults/ Children with Body Surface Area of at Least 1 m ²	Children with Body Surface Area Less Than 1 m ²
First	75 mg twice daily	75 mg/m ² twice daily
Second	50 mg twice daily	50 mg/m ² twice daily
Third	100 mg once daily	25 mg/m ² twice daily

Dose Modification

Based on Common Terminology Criteria for Adverse Events (CTCAE).

Any Grade 3 or 4 Adverse Reaction

Note (includes hepatotoxicity and neurotoxicity): Withhold treatment until resolved or improved to Grade 1, then resume at next lower dose level. If not resolved within 4 wks, permanently discontinue.

Concomitant Use of Strong CYP3A4**Inhibitor**

If strong CYP3A4 inhibitor cannot be discontinued, reduce larotrectinib dose by 50%. If strong CYP3A inhibitor is discontinued for 3–5 half-lives, resume larotrectinib dose prior to use of strong CYP3A4 inhibitor.

Concomitant Use of Strong CYP3A4**Inducer**

If strong CYP3A4 inducer cannot be discontinued, double the larotrectinib dose. If strong CYP3A inducer is discontinued for 3–5 half-lives, resume larotrectinib dose prior to use of strong CYP3A4 inducer.

Dosage in Renal Impairment

Mild to severe impairment: No dose adjustment.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment.

Moderate to severe impairment: Reduce starting dose by 50%.

SIDE EFFECTS

Frequent (37%–15%): Fatigue, nausea, dizziness, cough, vomiting, constipation, diarrhea, pyrexia, dyspnea, increased weight, peripheral edema. **Occasional (14%–11%):** Arthralgia, myalgia, muscular weakness, headache, abdominal pain, decreased appetite, back pain, extremity pain, nasal congestion, hypertension.

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia, neutropenia is an expected response to therapy. Neurotoxic events in-

cluding delirium (2% of pts), dysarthria (1% of pts), dizziness (1% of pts), gait disturbance (1% of pts), memory impairment (1% of pts), paresthesia (1% of pts), tremor (1% of pts) occurred in 53% of pts. Grade 4 encephalopathy reported in less than 1% of pts. Hepatotoxicity with transaminase elevations of any grade reported in 45%. Grade 3 hepatotoxicity reported in 6% of pts. Falls reported in 10% of pts.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain CBC, LFTs; pregnancy test in females of reproductive potential. Confirm presence of NTRK gene fusion in tumor specimen. Screen for active infection. Confirm compliance of effective contraception. Question history of hepatic impairment. Receive full medication history and screen for interactions. Initiate fall precautions. Offer emotional support.

INTERVENTION/EVALUATION

Monitor CBC for anemia, neutropenia periodically; LFTs for hepatotoxicity (bruising, hematuria, jaundice, right upper abdominal pain, nausea, vomiting, weight loss) q2wks for 4 wks, then monthly thereafter (or as clinically indicated). Monitor for neurotoxicities. If concomitant use of strong CYP3A inhibitor or strong CYP3A inducer is unavoidable, monitor for drug toxicities. Diligently screen for infections.

PATIENT/FAMILY TEACHING

- Treatment may depress your immune system response and reduce your ability to fight infection. Report symptoms of infection such as body aches, chills, cough, fatigue, fever. Avoid those with active infection.
- Nervous system changes including altered memory, confusion, delirium, difficulty speaking, gait disturbance, numbness, tremors may occur. Avoid tasks that require alertness, motor skills if neurologic effects are occurring.
- Female pts and male pts with female partners of childbearing potential

must use effective contraception during treatment and for at least 1 wk after last dose. Do not breastfeed. • Report liver problems (abdominal pain, bruising, clay-colored stool, amber- or dark-colored urine, yellowing of the skin or eyes). • There is a high risk of interactions with other medications. Do not take newly prescribed medications unless approved by prescriber who originally started treatment. • Avoid grapefruit products, herbal supplements (esp. St. John's wort).

ledipasvir/sofosbuvir

le-dip-as-vir/soe-fos-bue-vir
(Harvoni)

BLACK BOX ALERT ■ Test all pts for hepatitis B virus (HBV) infection prior to initiation. HBV reactivation was reported in HCV/ HBV co-infected pts who were undergoing or had completed treatment with HCV direct-acting antivirals and were not receiving HBV antiviral therapy. HBV reactivation may cause fulminant hepatitis, hepatic failure, and death.

Do not confuse ledipasvir with daclatasvir, elbasvir, or ombitasvir, or sofosbuvir with dasabuvir.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Combination nucleotide analog NS5A inhibitor and nucleotide analog NS5B polymerase inhibitor. **CLINICAL:** Antihepaticiviral.

USES

Treatment of chronic hepatitis C virus (HCV) in adults and children 12 yrs and older or weighing at least 35 kg with genotype 1, 4, 5, or 6 infection without cirrhosis or with compensated cirrhosis; genotype 1 infection in adults with decompensated cirrhosis, in combination with ribavirin; genotype 1 or 4 infection in adults who are liver transplant recipients

without cirrhosis or with compensated cirrhosis, in combination with ribavirin.

PRECAUTIONS

Note: If used with ribavirin, the Contraindications and Cautions for the use of ribavirin also apply.

Contraindications: Hypersensitivity to ledipasvir, sofosbuvir. **Cautions:** Advanced hepatic disease, HIV infection, hepatitis B virus infection. Concomitant use of amiodarone (with or without beta blockers) in pts with underlying cardiac disease. Concomitant use of P-glycoprotein (P-gp) inducers not recommended.

ACTION

Ledipasvir inhibits HCV NS5A protein, essential for viral replication. Sofosbuvir is converted to its active form and inhibits NS5B RNA-dependent RNA polymerase, also essential for viral replication. **Therapeutic Effect:** Inhibits viral replication of HCV.

PHARMACOKINETICS

Widely absorbed. Ledipasvir is metabolized by oxidative processes. Sofosbuvir is metabolized in liver. Protein binding: 99.8% (ledipasvir), 61%–65% (sofosbuvir). Peak plasma concentration: 4–4.5 hrs (ledipasvir), 0.8–1 hr (sofosbuvir). Ledipasvir is excreted in feces (87%) and urine (1%). Sofosbuvir is excreted in urine (80%), feces (14%). **Half-life:** 47 hrs (ledipasvir), 0.4 hr (sofosbuvir).

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if ledipasvir or sofosbuvir is distributed in breast milk. When administered with ribavirin, therapy is contraindicated in pregnant women and in men whose female partners are pregnant. **Children:** Safety and efficacy not established in pts younger than 12 yrs of age or weight less than 35 kg. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May enhance bradycardic effect of **amiodarone**. May increase

concentration of **rosuvastatin**. Aluminum- or magnesium-containing antacids, H₂-receptor antagonists (e.g., famotidine), proton pump inhibitors (e.g., omeprazole), anti-convulsants (e.g., carbamazepine), antimycobacterials (e.g., rifampin) may decrease concentration/effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin.

AVAILABILITY (Rx)

Tablets, Fixed-Dose Combination: 90 mg (ledipasvir)/400 mg (sofosbuvir).

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Hepatitis C Virus Infection

PO: ADULTS, ELDERLY, CHILDREN 12 YRS OF AGE AND OLDER, WEIGHING 35 KG OR MORE: 1 tablet (ledipasvir/sofosbuvir) once daily. See manufacturer guidelines for treatment with ribavirin.

Treatment Regimen and Duration for Adults

Genotype 1

Treatment-naïve without cirrhosis or with compensated cirrhosis (Child-Pugh A): Ledipasvir/sofosbuvir for 12 wks. Treatment for 8 wks may be considered in treatment-naïve genotype 1 pts without cirrhosis who have HCV-RNA level less than 6 million international units/mL prior to initiation. **Treatment-experienced without cirrhosis:** Ledipasvir/sofosbuvir for 12 wks. **Treatment-experienced with compensated cirrhosis (Child-Pugh A):** Ledipasvir/sofosbuvir plus ribavirin for 12 wks may be considered in treatment-experienced genotype 1 pts with cirrhosis who are eligible for ribavirin. **Treatment-naïve and treatment-experienced with decompensated cirrhosis (Child-Pugh B or C):** Ledipasvir/sofosbuvir plus ribavirin for 12 wks.

Genotype 1 or 4

Treatment-naïve and treatment-experienced liver transplant recipients without cirrhosis or with compensated cirrhosis (Child-Pugh A): Ledipasvir/sofosbuvir plus ribavirin for 12 wks.

Treatment Regimen and Duration for Children

Genotype 1

Treatment-naïve without cirrhosis or with compensated cirrhosis (Child-Pugh A): Ledipasvir/sofosbuvir for 12 wks. **Treatment-experienced without cirrhosis:** Ledipasvir/sofosbuvir for 12 wks. **Treatment-experienced with compensated cirrhosis (Child-Pugh A):** Ledipasvir/sofosbuvir for 24 wks.

Genotype 4, 5, or 6

Treatment-naïve and treatment-experienced without cirrhosis or with compensated cirrhosis (Child-Pugh A): Ledipasvir/sofosbuvir for 12 wks.

Dosage in Renal Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Not specified; use caution.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (16%–4%): Fatigue, headache, nausea, diarrhea. **Rare (3%):** Insomnia. **Ribavirin: Frequent (31%–29%):** Asthenia, headache. **Occasional (18%–5%):** Fatigue, myalgia, irritability, dizziness. **Rare (3%):** Dyspnea.

ADVERSE EFFECTS/TOXIC REACTIONS

HBV reactivation was reported in pts co-infected with HBV/HCV; may result in fulminant hepatitis, hepatic failure, death. Cardiac arrest, symptomatic bradycardia, pacemaker implantation was reported in pts taking concomitant amiodarone. Bradycardia usually occurred within hrs to days, but may occur up to 2 wks after

initiation. Pts with underlying cardiac disease, advanced hepatic disease, or pts taking concomitant beta blockers are at an increased risk for bradycardia when used concomitantly with amiodarone. Psychiatric disorders including depression may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain LFT, HCV-RNA level; pregnancy test in females of reproductive potential; CBC for pts treated with ribavirin. Confirm HCV genotype. Test all pts for HBV infection prior to initiation. Receive full medication history and screen for contraindications/interactions, esp. concomitant use of amiodarone. Question for history of chronic anemia, HBV infection, HIV infection, liver transplantation.

INTERVENTION/EVALUATION

Periodically monitor LFT, HCV-RNA level for treatment effectiveness. Closely monitor for exacerbation of hepatitis or HBV reactivation. If unable to discontinue amiodarone, consider inpatient cardiac monitoring for at least 48 hrs, followed by outpatient or self-monitoring of heart rate for at least 2 wks after initiation. Cardiac monitoring is also recommended in pts who discontinue amiodarone just prior to initiation. In females of reproductive potential who are taking concomitant ribavirin, reinforce birth control compliance and obtain monthly pregnancy tests. Monitor for new-onset or worsening of depression

PATIENT/FAMILY TEACHING

- Pts who take amiodarone (an antiarrhythmic) during therapy may require inpatient and outpatient cardiac monitoring (and in some cases pacemaker implantation) due to an increased risk of slow heart rate or cardiac arrest. If amiodarone therapy cannot be withheld or stopped, immediately report symptoms of slow heart rate such as chest pain, confusion, dizziness,

fainting, light-headedness, memory problems, palpitations, weakness. • Treatment may be used in combination with ribavirin (inform pt of contraindications/adverse effects of ribavirin therapy). If therapy includes treatment with ribavirin, females of reproductive potential and males with female partners of reproductive potential should avoid pregnancy during treatment. • Do not breastfeed. • There is an increased risk of drug interactions with other medications. • Do not take newly prescribed medications unless approved by prescriber who originally started treatment. • Do not take herbal products. • Avoid alcohol. • Report signs of depression.

leflunomide

lee-**floo**-noe-myde
(Apo-Leflunomide , Arava)

BLACK BOX ALERT Do not use during pregnancy. Women of childbearing potential must be counseled regarding fetal risk, use of reliable contraceptives confirmed, possibility of pregnancy excluded. Severe hepatic injury may occur.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Disease-modifying agent. **CLINICAL:** Antirheumatic.

USES

Treatment of active rheumatoid arthritis (RA). Improve physical function in pts with rheumatoid arthritis. **OFF-LABEL:** Treatment of cytomegalovirus (CMV) disease. Prevention of acute/chronic rejection in recipients of solid organ transplants.

PRECAUTIONS

Contraindications: Hypersensitivity to leflunomide. Pregnancy or plans for pregnancy. Severe hepatic impairment. Concomitant use with teriflunomide.

Cautions: Hepatic/renal impairment, hepatitis B or C virus infection, pts with immunodeficiency or bone marrow dysplasias, breastfeeding mothers, history of new/recurrent infections, latent TB, significant hematologic abnormalities, diabetes, concomitant use of neurotoxic medications, elderly pts.

ACTION

Inhibits pyrimidine synthesis, resulting in antiproliferative and anti-inflammatory effects. **Therapeutic Effect:** Reduces signs/symptoms of RA, retards structural damage.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: greater than 99%. Metabolized in GI wall, liver. Excreted through renal, biliary systems. Not removed by hemodialysis. **Half-life:** 16 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Can cause fetal harm. Contraindicated in pregnancy. Unknown if distributed in breast milk. Breastfeeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: RifAMPin may increase concentration/effects. **Hepatotoxic medications (e.g., acetaminophen, ketoconazole, simvastatin)** may increase risk of side effects, hepatotoxicity. May decrease the therapeutic effect of **BCG (intravesical), nivolumab, vaccines (live)**. May increase adverse effects of **natalizumab, vaccines (live)**. **HERBAL:** Echinacea may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, alkaline phosphatase, bilirubin.

AVAILABILITY (Rx)

Tablets: 10 mg, 20 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Rheumatoid Arthritis (RA)

PO: ADULTS, ELDERLY: Initially, 100 mg/day for 3 days, then 10–20 mg/day. (Loading dose may be omitted in pts at increased risk of hepatic or hematologic toxicity.)

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

ALT 2–3 times upper limit of normal (ULN): Not recommended. **Persistent ALT level greater than 3 times ULN:** Discontinue and initiate accelerated drug elimination. Cholestyramine 8 g 3 times/day for 11 days or activated charcoal 50 g q12h for 11 days.

SIDE EFFECTS

Frequent (20%–10%): Diarrhea, respiratory tract infection, alopecia, rash, nausea.

ADVERSE EFFECTS/TOXIC REACTIONS

May cause immunosuppression. Transient thrombocytopenia, leukopenia, hepatotoxicity occur rarely. Interstitial lung disease, peripheral neuropathy.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain pregnancy test in females of reproductive potential. Question plans of breastfeeding. Obtain baseline CBC, LFT. Assess limitations in activities of daily living due to rheumatoid arthritis (RA). Obtain baseline evaluation for active TB, latent TB.

INTERVENTION/EVALUATION

Monitor tolerance to medication. Assess symptomatic relief of RA (relief of pain; improved range of motion, grip strength, mobility). Monitor LFT, CBC, signs/symptoms of severe infection or pulmonary symptoms.

PATIENT/FAMILY TEACHING

- May take without regard to food.
- Improvement may take longer than 8 wks.
- Avoid pregnancy.

lenalidomide

len-a-**lid**-o-myde
(Revlimid)

BLACK BOX ALERT Analogue to thalidomide. High potential for significant birth defects. Hematologic toxicity (thrombocytopenia, neutropenia) occurs in 80% of pts. Greatly increases risk for DVT, pulmonary embolism in multiple myeloma pts.

Do not confuse lenalidomide with thalidomide.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiogenesis inhibitor. **CLINICAL:** Anti-neoplastic.

USES

Treatment of low- to intermediate-risk myelodysplastic syndrome (MDS) in pts with deletion 5q cytogenetic abnormality with transfusion-dependent anemia. Treatment of multiple myeloma (in combination with dexamethasone). Treatment of pts with mantle cell lymphoma that has relapsed or progressed after 2 prior therapies (one of which included bortezomib). Maintenance treatment for multiple myeloma (following autologous stem cell transplant). Treatment of previously treated follicular lymphoma (in combination with rITUXimab). Treatment of previously treated marginal zone lymphoma (in combination with rITUXimab). **OFF-LABEL:** Systemic amyloidosis, lower-risk myelodysplastic syndrome, non-Hodgkin's lymphoma. Relapsed or refractory chronic lymphocytic leukemia (CLL).

PRECAUTIONS

Contraindications: Hypersensitivity to lenalidomide. Pregnancy, women capable of becoming pregnant. **Cautions:** Renal/hepatic impairment. History of arterial thromboembolic events, hypertension, hyperlipidemia. Avoid use in pts with glucose intolerance, lactase deficiency.

ACTION

Inhibits secretion of pro-inflammatory cytokines, increases secretion of anti-inflammatory cytokines. Enhances cell-mediated immunity by stimulation of T cells. **Therapeutic Effect:** Inhibits myeloma cell growth; induces cell cycle arrest and cell death.

PHARMACOKINETICS

Well absorbed following PO administration. Protein binding: 30%. Excreted in urine. **Half-life:** 3 hrs (increased in renal impairment).

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in women who are or may become pregnant, who are not using two reliable forms of contraception, or who are not abstinent. Can cause severe birth defects, fetal death. Unknown if distributed in breast milk; breastfeeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require caution in dosage selection. Risk of toxic reactions greater in those with renal insufficiency.

INTERACTIONS

DRUG: May increase toxic effects of **abatacept, anakinra, bisphosphonate derivatives, canakinumab, leflunomide, natalizumab, nivolumab, rilonacept, tofacitinib, vedolizumab**. May increase immunosuppressive effects of **certolizumab, fingolimod, ocrelizumab**. **Denosumab, dipyrrone, pimecrolimus** may increase risk of toxicity. May decrease therapeutic effect of **nivolumab**. **Dexamethasone, erythropoiesis-stimulating agents, estrogens** may increase risk of thrombosis. **Ocrelizumab, roflumilast, tocilizumab** may increase immunosuppressive effects. May increase concentration effect of **digoxin**. May increase adverse effects/decrease therapeutic of **vaccines (live)**. **HERBAL:** **Echinacea** may decrease therapeutic effect. **FOOD:** None known. **LAB VALUES:** May decrease WBC count, Hgb,

Hct platelets, troponin I, serum creatinine, sodium, T₃, T₄. May decrease serum bilirubin, glucose, potassium, magnesium.

AVAILABILITY (Rx)

 **Capsules:** 2.5 mg, 5 mg, 10 mg, 15 mg, 20 mg, 25 mg.

ADMINISTRATION/HANDLING

- Store at room temperature.
- Do not break, crush, dissolve, or divide capsules.
- Swallow whole with water.

INDICATIONS/ROUTES/DOSAGE

Myelodysplastic Syndrome

PO: ADULTS, ELDERLY: 10 mg once daily. Continue until disease progression or unacceptable toxicity.

Dosage Adjustments for Myelodysplastic Syndrome

Platelets

Thrombocytopenia within 4 wks with 10 mg/day: Baseline platelets 100,000 cells/mm³ or greater: If platelets less than 50,000 cells/mm³, hold treatment. Resume at 5 mg/day when platelets return to 50,000 cells/mm³ or greater. **Baseline platelets less than 100,000 cells/mm³:** If platelets fall to 50% of baseline, hold treatment. Resume at 5 mg/day if baseline is 60,000 cells/mm³ or greater and platelets return to 50,000 cells/mm³ or greater. Resume at 5 mg/day if baseline is less than 60,000 cells/mm³ and platelets return to 30,000 cells/mm³ or greater.

Thrombocytopenia after 4 wks with 10 mg/day: If platelets less than 30,000 cells/mm³ OR less than 50,000 cells/mm³ with platelet transfusion, hold treatment. Resume at 5 mg/day when platelets return to 30,000 cells/mm³ or greater.

Thrombocytopenia developing with 5 mg/day: If platelets less than 30,000 cells/mm³ OR less than 50,000 cells/mm³ with platelet transfusion, hold treatment. Resume at 5 mg every other day when platelets return to 30,000 cells/mm³ or greater.

Neutrophils

Neutropenia within 4 wks with 10 mg/day: Baseline absolute

neutrophil count (ANC) 1,000/mcl or greater: If ANC less than 750 cells/mm³, hold treatment. Resume at 5 mg/day when ANC 1,000 cells/mm³ or greater. **Baseline ANC less than 1,000 cells/mm³:** If ANC less than 500 cells/mm³, hold treatment. Resume at 5 mg/day when ANC 500 cells/mm³ or greater.

Neutropenia after 4 wks with 10 mg/day: If ANC less than 500 cells/mm³ for 7 days or longer or associated with fever, hold treatment. Resume at 5 mg/day when ANC 500 cells/mm³ or greater.

Neutropenia developing with 5 mg/day: If ANC less than 500 cells/mm³ for 7 days or longer or associated with fever, hold treatment. Resume at 5 mg every other day when ANC 500 cells/mm³ or greater.

Follicular Lymphoma, Marginal Zone Lymphoma

PO: ADULTS, ELDERLY: 20 mg once daily for 21 days of 28-day cycle (in combination with ritUXimab) for up to 12 cycles.

Mantle Cell Lymphoma

PO: ADULTS, ELDERLY: 25 mg once daily on days 1–21 of repeated 28-day cycle. Continue until disease progression or unacceptable toxicity.

Multiple Myeloma

PO: ADULTS, ELDERLY: 25 mg/day on days 1–21 of repeated 28-day cycle (in combination with dexamethasone). Continue until disease progression or unacceptable toxicity. If eligible for transplant, HSCT mobilization should occur within 4 cycles of lenalidomide-containing therapy.

Multiple Myeloma Following Auto-HSCT

PO: ADULTS, ELDERLY: 10 mg once daily continuously on days 1–28 of repeated 28-day cycle. If tolerated, may increase to 15 mg once daily after 3 cycles.

Dosage Adjustments for Multiple Myeloma

Thrombocytopenia: If platelets fall to less than 30,000 cells/mm³, hold treatment, monitor CBC. Resume at 15 mg/day when platelets 30,000 cells/mm³ or greater. For each subsequent fall to less

than 30,000 cells/mm³, hold treatment and resume at 5 mg/day less than previous dose when platelets return to 30,000 cells/mm³ or greater. Do not dose to less than 5 mg/day.

Neutropenia: If neutrophils fall to less than 1,000 cells/mm³, hold treatment, add G-CSF, follow CBC wkly. Resume at 25 mg/day when neutrophils return to

1,000 cells/mm³ and neutropenia is the only toxicity. Resume at 15 mg/day if other toxicity is present. For each subsequent fall to less than 1,000 cells/mm³, hold treatment and resume at 5 mg/day less than previous dose when neutrophils return to 1,000 cells/mm³ or greater. Do not dose to less than 5 mg/day.

Dosage in Renal Impairment	Creatinine Clearance 30–59 mL/min	Creatinine Clearance Less Than 30 mL/min (Non-dialysis Dependent)	Creatinine Clearance Less Than 30 mL/min (Dialysis Dependent)
Myelodysplastic syndrome	5 mg once daily	2.5 mg once daily	2.5 mg once daily (give after dialysis)
Multiple myeloma	5 mg once daily	15 mg q48h	5 mg once daily (give after dialysis)

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (49%–31%): Diarrhea, pruritus, rash, fatigue. **Occasional (24%–12%):** Constipation, nausea, arthralgia, fever, back pain, peripheral edema, cough, dizziness, headache, muscle cramps, epistaxis, asthenia, dry skin, abdominal pain. **Rare (10%–5%):** Extremity pain, vomiting, generalized edema, anorexia, insomnia, night sweats, myalgia, dry mouth, ecchymosis, rigors, depression, dysgeusia, palpitations.

ADVERSE EFFECTS/TOXIC REACTIONS

Significant increased risk of deep vein thrombosis (DVT), pulmonary embolism. Thrombocytopenia occurs in 62% of pts, neutropenia in 59% of pts, and anemia in 12% of pts. Upper respiratory infection (nasopharyngitis, pneumonia, sinusitis, bronchitis, rhinitis), UTI occur occasionally. Cellulitis, peripheral neuropathy, hypertension, hypothyroidism occur in approximately 6% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC. Due to high potential for human birth defects/fetal death, female pts must avoid pregnancy 4 wks before therapy, during therapy, during dose interruptions, and 4 wks following therapy. Two reliable forms of contraception must be used even if pt has history of infertility unless it is due to hysterectomy or menopause that has occurred for at least 24 consecutive mos. Confirm two negative pregnancy tests before therapy initiation. Screen for risk of arterial, venous thrombosis. Offer emotional support.

INTERVENTION/EVALUATION

Monitor CBC, BMP, serum magnesium as appropriate. Perform pregnancy tests on women of childbearing potential: wkly during the first 4 wks, then at 4-wk intervals in pts with regular menstrual cycles or q2wks in pts with irregular menstrual cycles. Monitor for hematologic toxicity; obtain CBC wkly during first 8 wks of therapy and at least monthly thereafter. Observe for signs, symptoms of thromboembolism (shortness of

breath, chest pain, extremity pain, swelling, stroke-like symptoms).

PATIENT/FAMILY TEACHING

- Two reliable forms of birth control must be used at least 4 wks before, during, and for 4 wks following therapy.
- A pregnancy test must be performed within 10–14 days and 24 hrs before therapy begins.
- Males must always use a latex or synthetic condom during any sexual contact with females of childbearing potential even if they have undergone a successful vasectomy.
- Avoid crowds; avoid those with active infection.
- Treatment may cause blood clots in the arms, legs, or lungs; report arm or leg pain/swelling, difficulty breathing, chest pain.

lenvatinib

len-va-ti-nib
(Lenvima)

Do not confuse lenvatinib with dasatinib, ibrutinib, imatinib.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Vascular endothelial growth factor (VEGF) inhibitor. Tyrosine kinase inhibitor.
CLINICAL: Antineoplastic.

USES

Treatment of locally recurrent or metastatic, progressive, radioactive iodine–refractory differentiated thyroid cancer. Treatment of advanced renal cell carcinoma (RCC) in combination with everolimus after one course of another antineoplastic. First-line treatment of unresectable hepatocellular carcinoma (HCC). Treatment of advanced endometrial carcinoma (in combination with pembrolizumab).

PRECAUTIONS

Contraindications: Hypersensitivity to lenvatinib. **Cautions:** Electrolyte imbalance (hypokalemia, hypomagnesemia), hepatic/

renal impairment. History of cardiac dysfunction (HF, pulmonary edema, right or left ventricular dysfunction), GI perforation/hemorrhage, hypertension, long QT interval syndrome, medications that prolong QT interval, thromboembolic events (e.g., CVA, DVT), pituitary/thyroid disease.

ACTION

Inhibits tyrosine kinase receptor activity of vascular endothelial growth factor (VEGF) receptors. Inhibits tumor angiogenesis, growth, progression. **Therapeutic Effect:** Decreases tumor cell growth, slows cancer progression.

PHARMACOKINETICS

Rapidly absorbed. Metabolized in liver. Protein binding: 98%–99%. Peak plasma concentration: 1–4 hrs. Excreted in feces (64%), urine (25%). Not removed by dialysis. **Half-life:** 28 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm. Female pts of reproductive potential must use effective contraception during treatment for at least 2 wks after discontinuation. Potentially distributed in breast milk. Must either discontinue drug or discontinue breastfeeding. Treatment may reduce fertility in both female and male pts. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., ketoconazole, ritonavir) may increase concentration/effect. May increase QT-prolonging effect of amiodarone, citalopram, clarithromycin, moxifloxacin, nilotinib, quetiapine, ribociclib, thioridazine. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, ALT/AST, amylase, bilirubin, cholesterol, creatinine, lipase. May decrease serum albumin, glucose, magnesium; platelets. May increase or decrease serum calcium, potassium.

AVAILABILITY (Rx)**Capsules:** 4 mg, 10 mg.**ADMINISTRATION/HANDLING****PO**

• Give without regard to food. • Administer same time each day. • Do not cut, crush, divide, or open capsules. • Should be swallowed whole. May be dissolved with 15 mL water or apple juice by first adding whole capsule to liquid; leave for 10 min, stir for 3 min, then administer. Then add 15 mL to glass, swirl, swallow additional liquid.

INDICATIONS/ROUTES/DOSAGE**Thyroid Cancer**

PO: ADULTS, ELDERLY: 24 mg once daily. Continue until disease progression or unacceptable toxicity.

RCC

PO: ADULTS, ELDERLY: 18 mg once daily (in combination with everolimus). Continue until disease progression or unacceptable toxicity.

HCC

PO: ADULTS, ELDERLY: (60 KG OR GREATER): 12 mg once daily. **(LESS THAN 60 KG):** 8 mg once daily. Continue until disease progression or unacceptable toxicity.

Endometrial Carcinoma (Advanced)

PO: ADULTS, ELDERLY: 20 mg once daily (in combination with pembrolizumab). Continue until disease progression or unacceptable toxicity.

Dose Modification

Based on Common Terminology Criteria for Adverse Events (CTCAE).

Adverse Reaction	Modification	Adjusted Dose (Thyroid Cancer)
First occurrence	Interrupt until resolved to Grade 0 or 1 or baseline	20 mg once daily

Adverse Reaction	Modification	Adjusted Dose (Thyroid Cancer)
Second occurrence	Interrupt until resolved to Grade 0 or 1 or baseline	14 mg once daily
Third occurrence	Interrupt until resolved to Grade 0 or 1 or baseline	10 mg once daily

Adjusted dose for RCC is lower. 14 mg for first occurrence, 10 mg for second occurrence, 8 mg for third occurrence.

Arterial Thrombotic Event

Discontinue treatment.

Cardiac Dysfunction/Hemorrhagic Event

PO: ADULTS, ELDERLY: Interrupt treatment for Grade 3 event until improved to Grade 0 to 1 or baseline. Either resume at reduced dose or discontinue (depending on the severity and persistence). Discontinue for Grade 4 event.

GI Perforation/Fistula Formation

Discontinue treatment.

Hypertension

PO: ADULTS, ELDERLY: Interrupt treatment for Grade 3 hypertension that persists despite optimal antihypertensive therapy. Resume at reduced dose when hypertension is controlled at less than or equal to Grade 2. Discontinue for life-threatening hypertension.

Proteinuria

PO: ADULTS, ELDERLY: Interrupt treatment for greater than or equal to 2 g proteinuria/24 hrs. Resume at reduced dose when proteinuria less than 2 g/24 hrs. Discontinue if nephrotic syndrome occurs.

QT Prolongation

PO: ADULTS, ELDERLY: Interrupt treatment for Grade 3 or greater. Resume at reduced dose when QT prolongation resolved to Grade 0 or 1 or baseline.

Renal Failure/Impairment or Hepatotoxicity

PO: ADULTS, ELDERLY: Interrupt treatment for Grade 3 or 4 renal failure/impairment or hepatotoxicity until resolved to Grade 0 or 1 or baseline. Either resume at reduced dose or discontinue (depending on the severity and persistence). Discontinue if hepatic failure occurs.

Reversible Posterior

Leukoencephalopathy Syndrome (RPLS)

PO: ADULTS, ELDERLY: Interrupt treatment until fully resolved. Resume at reduced dose or discontinue (depending on the severity and persistence of neurologic symptoms).

Other Adverse Reactions

PO: ADULTS, ELDERLY: Reduce dose according to dose modification table. Due to limited data, there are no recommendations on resuming treatment in pts with Grade 4 adverse events that resolve.

Dosage in Renal/Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** 14 mg once daily.

SIDE EFFECTS

Frequent (73%–29%): Hypertension, diarrhea, fatigue, asthenia, malaise, arthralgia, myalgia, decreased appetite, weight decreased, nausea, stomatitis, glossitis, mouth ulceration, mucosal inflammation, headache, vomiting, dysphonia, abdominal pain, constipation. **Occasional (25%–7%):** Oral pain, glossodynia, cough, peripheral edema, rash, dysgeusia, dry mouth, dizziness, dyspepsia, insomnia, alopecia, hypotension, dehydration, hyperkeratosis.

ADVERSE EFFECTS/TOXIC REACTIONS

Serious adverse effects may include arterial thromboembolic events (5% of pts); cardiac dysfunction (7% of pts); dental and oral infections including gingivitis, parotitis, pericoronitis, periodontitis, sialoadenitis, tooth abscess, tooth infection (10% of pts); GI perforation/fistula formation (2% of pts); hemorrhagic events (35%

of pts); hepatotoxicity (4% of pts); hypertension (73% of pts); Grade 3 or greater hypocalcemia (9% of pts); impairment of thyroid-stimulating hormone (57% of pts); palmar-plantar erythrodysesthesia (32% of pts); proteinuria (34% of pts); QT interval prolongation (9% of pts); renal failure (14% of pts); urinary tract infection (11% of pts). Reverse posterior leukoencephalopathy occurs rarely. The median onset of hypertension was 16 days. The most frequently reported hemorrhagic event was epistaxis. The primary risk factor for renal failure was dehydration and hypovolemia related to diarrhea and vomiting.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, BMP, LFT; serum magnesium, phosphate, ionized calcium; urinalysis for proteinuria. Confirm negative pregnancy status before initiating treatment. Receive full medication history and screen for interactions. Question history of cardiac/pituitary/thyroid disease, CVA/DVT, hypertension, hepatic/renal impairment, long QT interval syndrome. Assess oral cavity for lesions, poor dentation. Ensure that B/P is controlled prior to initiation. Assess hydration status. Offer emotional support.

INTERVENTION/EVALUATION

Monitor B/P after 1 wk, then every 2 wks for the first 2 mos, then at least monthly thereafter. Monitor LFT every 2 wks for the first 2 mos, then at least monthly thereafter. Monitor for proteinuria periodically. If urine dipstick proteinuria is greater than or equal to 2+, obtain a 24-hr urine protein test. Monitor blood calcium levels at least monthly and replace as needed depending on severity, presence of ECG changes, persistence of hypocalcemia. Monitor and correct other electrolyte abnormalities as needed. Initiate medical management for nausea, vomiting, diarrhea prior to any interruption or dose reduction. Reversible posterior leukoencephalopathy syndrome should be considered in pts with altered mental status, confusion, headache, seizures, visual dis-

turbances. Immediately report abdominal pain, GI bleeding, hemoptysis (may indicate GI perforation/fistula formation). Obtain cardiac echocardiogram, ECG if cardiac decompensation is suspected.

PATIENT/FAMILY TEACHING

• Blood levels will be monitored regularly. • Treatment may cause fetal harm. Female pts of childbearing potential should use effective contraception during treatment and up to 2 wks following discontinuation. Immediately report suspected pregnancy. • Therapy may reduce fertility in both female and male pts. • Report liver problems such as upper abdominal pain, bruising, dark or amber-colored urine, nausea, vomiting, or yellowing of the skin or eyes; heart problems such as chest tightness, dizziness, fainting, palpitations, shortness of breath; kidney problems such as dark-colored urine, decreased urine output, extremity swelling, flank pain; skin changes such as rash, skin bubbling, sloughing. • Neurologic changes including blurry vision, confusion, headache, one-sided weakness, seizures, trouble speaking may indicate high blood pressure crisis, stroke, or life-threatening brain swelling. • Report mouth ulceration, jaw pain. • Swallow capsules whole; do not chew, crush, cut, or open capsules. • Treatment may increase risk of GI bleeding, nosebleeds. • Drink plenty of fluids.

letrozole

let-roe-zole
(Femara)

Do not confuse Femara with Famvir, Femhrt, or Provera, or letrozole with anastrozole.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Aromatase inhibitor, hormone. **CLINICAL:** Antineoplastic.

USES

First-line treatment of hormone receptor–positive or hormone receptor unknown locally advanced or metastatic breast cancer. Treatment of advanced breast cancer in postmenopausal women with disease progression following anti-estrogen therapy. Postsurgical treatment for postmenopausal women with hormone receptor–positive early breast cancer. Extended treatment of early breast cancer after 5 yrs of tamoxifen. **OFF-LABEL:** Treatment of ovarian (epithelial), endometrial cancer.

PRECAUTIONS

Contraindications: Hypersensitivity to letrozole, other aromatase inhibitors. Use in women who are or may become pregnant. **Cautions:** Hepatic impairment, hyperlipidemia.

ACTION

Decreases circulating estrogen by inhibiting aromatase, an enzyme that catalyzes the final step in estrogen production (inhibits conversion of androgens to estrogens). **Therapeutic Effect:** Inhibits growth of breast cancers stimulated by estrogens.

PHARMACOKINETICS

Rapidly, completely absorbed. Metabolized in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** Approximately 2 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. May cause fetal harm. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Tamoxifen may reduce concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum calcium, cholesterol, GGT, ALT, AST, bilirubin.

AVAILABILITY (Rx)

Tablets: 2.5 mg.

ADMINISTRATION/HANDLING**PO**

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE**Breast Cancer (Advanced)**

PO: ADULTS, ELDERLY: 2.5 mg/day. Continue until tumor progression is evident.

Breast Cancer (Early-Adjuvant Treatment)

PO: ADULTS, ELDERLY: (Postmenopausal): 2.5 mg/day for planned duration of 5 yrs. Discontinue at relapse.

Breast Cancer (Early-Extended Adjuvant Treatment)

PO: ADULTS, ELDERLY: (Postmenopausal): 2.5 mg/day for planned duration of 5 yrs (after 5 yrs of tamoxifen). Discontinue at relapse.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Severe Hepatic Impairment

PO: ADULTS, ELDERLY: 2.5 mg every other day.

SIDE EFFECTS

Frequent (21%–9%): Musculoskeletal pain (back, arm, leg), nausea, headache.

Occasional (8%–5%): Constipation, arthralgia, fatigue, vomiting, hot flashes, diarrhea, abdominal pain, cough, rash, anorexia, hypertension, peripheral edema. **Rare (4%–1%):** Asthenia, drowsiness, dyspepsia, weight gain, pruritus.

ADVERSE EFFECTS/TOXIC REACTIONS

Pleural effusion, pulmonary embolism, bone fracture, thromboembolic disorder, MI occur rarely.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain baseline CBC, chemistries, renal function, LFT. Obtain pregnancy test prior

to beginning therapy. Offer emotional support.

INTERVENTION/EVALUATION

Assist with ambulation if asthenia, dizziness occurs. Assess for headache. Offer antiemetic for nausea, vomiting. Monitor CBC, thyroid function, electrolytes, renal function, LFT. Monitor for evidence of musculoskeletal pain; offer analgesics for pain relief.

PATIENT/FAMILY TEACHING

- Report if nausea, asthenia, hot flashes become unmanageable.
- Discuss importance of negative pregnancy test prior to beginning therapy; discuss nonhormonal methods of birth control.
- Explain possible risk to fetus if pt is or becomes pregnant before or during therapy.

leucovorin

loo-koe-vor-in

Do not confuse leucovorin with Leukeran.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Rescue agent (chemotherapy). **CLINICAL:** Antidote.

USES

Treatment of megaloblastic anemias when folate deficient. Palliative treatment of advanced colon cancer (with fluorouracil). IV rescue therapy after high-dose methotrexate for osteosarcoma or orally to diminish toxicity and impaired methotrexate elimination. **OFF-LABEL:** Adjunctive cofactor therapy in methanol toxicity. Prevents pyrimethamine hematologic toxicity in HIV-positive pts.

PRECAUTIONS

Contraindications: Hypersensitivity to leucovorin. Pernicious anemia, other megaloblastic anemias secondary to vitamin B₁₂ deficiency. **Cautions:** Renal impairment.

ACTION

Actively competes with methotrexate for same transport processes into cells, displaces methotrexate from intracellular binding sites, and restores active folate stores necessary for DNA/RNA synthesis. **Therapeutic Effect:** Reverses toxic effects of folic acid antagonists. Reverses folic acid deficiency.

PHARMACOKINETICS

Readily absorbed from GI tract. Widely distributed. Metabolized in liver, intestinal mucosa. Primarily excreted in urine. **Half-life:** 15 min; metabolite, 30–35 min.

 **LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** May increase risk of seizures by counteracting anti-convulsant effects of **barbiturates, hydantoins**. **Elderly:** Age-related renal impairment may require dosage adjustment when used for rescue from effects of high-dose methotrexate therapy.

INTERACTIONS

DRUG: May decrease effects of **trimethoprim, anticonvulsants (e.g., phenytoin)**. May increase **5-fluorouracil** toxicity/effects when taken in combination. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease platelets, WBCs (when used in combination with 5-fluorouracil).

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 50 mg, 100 mg, 200 mg, 350 mg, 500 mg. **Injection, Solution:** 10 mg/mL. **Tablets:** 5 mg, 10 mg, 15 mg, 25 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ Strict adherence to timing of 5-fluorouracil following leucovorin therapy must be maintained.

Reconstitution • Reconstitute each 50-mg vial with 5 mL Sterile Water for Injection or Bacteriostatic Water for Injection containing benzyl alcohol to provide concentration of 10 mg/mL. • Due to benzyl alcohol in 1-mg ampule and in Bacteriostatic Water for Injection, reconstitute doses greater than 10 mg/m² with Sterile Water for Injection. • Further dilute with 100–1,000 mL D₅W or 0.9% NaCl.

Rate of administration • Do not exceed 160 mg/min if given by IV infusion (due to calcium content).

Storage • Store powdered vials for parenteral use at room temperature. • Refrigerate solution for injection vials. • Injection appears as clear, yellowish solution. • Use immediately if reconstituted with Sterile Water for Injection; stable for 7 days if reconstituted with Bacteriostatic Water for Injection. Diluted solutions stable for 24 hrs at room temperature or 4 days refrigerated.

PO

- Scored tablets may be crushed.

 **IV INCOMPATIBILITIES**

Amphotericin B complex (Abelcet, AmBisome, Amphotec), droperidol (Inapsine), foscarnet (Foscavir).

 **IV COMPATIBILITIES**

CISplatin (Platinol AQ), cyclophosphamide (Cytoxan), DOXOrubicin (Adriamycin), etoposide (VePesid), filgrastim (Neupogen), 5-fluorouracil, gemcitabine (Gemzar), granisetron (Kytril), heparin, methotrexate, metoclopramide (Reglan), mitoMYcin (Mutamycin), piperacillin and tazobactam (Zosyn), vinBLAStine (Velban), vinCRIStine (Oncovin).

INDICATIONS/ROUTES/DOSAGE**Rescue in High-Dose Methotrexate Therapy**

PO, IV, IM: ADULTS, ELDERLY, CHILDREN: 15 mg (approximately 10 mg/m²) started 24 hrs after starting methotrexate infusion; continue q6h for 10 doses, until methotrexate level is less than 0.05

micromole/L. Additional dose adjusted based on methotrexate levels.

Folic Acid Antagonist Overdose

PO: ADULTS, ELDERLY, CHILDREN: 5–15 mg/day.

Megaloblastic Anemia Secondary to Folate Deficiency

IM/IV: ADULTS, ELDERLY, CHILDREN: 1 mg or less per day.

Colon Cancer

◀ALERT▶ For rescue therapy in cancer chemotherapy, refer to specific protocols used for optimal dosage and sequence of leucovorin administration.

IV: ADULTS, ELDERLY: (In Combination with 5-fluorouracil): 200 mg/m² daily for 5 days. Repeat course at 4-wk intervals for 2 courses, then 4- to 5-wk intervals or 20 mg/m² daily for 5 days. Repeat course at 4-wk intervals for 2 courses, then 4- to 5-wk intervals.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: When combined with chemotherapeutic agents: diarrhea, stomatitis, nausea, vomiting, lethargy, malaise, fatigue, alopecia, anorexia. **Occasional:** Urticaria, dermatitis.

ADVERSE EFFECTS/TOXIC REACTIONS

Excessive dosage may negate chemotherapeutic effects of folic acid antagonists. Anaphylaxis occurs rarely. Diarrhea may cause rapid clinical deterioration.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, LFT, renal function. Give as soon as possible, preferably within 1 hr, for treatment of accidental overdosage of folic acid antagonists.

INTERVENTION/EVALUATION

Monitor for vomiting (may need to change from oral to parenteral therapy).

Observe elderly, debilitated closely due to risk for severe toxicities. Assess CBC, BMP, LFT.

PATIENT/FAMILY TEACHING

- Explain purpose of medication in treatment of cancer.
- Report allergic reaction, vomiting.

leuprolide

loo-proe-lide

(Eligard, Lupron , Lupron Depot, Lupron Depot-Ped)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Gonadotropin-releasing hormone (GnRH) analogue. **CLINICAL:** Antineoplastic.

USES

Palliative treatment of advanced prostate carcinoma. Management of endometriosis. Treatment of anemia caused by uterine leiomyomata (fibroids). Treatment of central precocious puberty. **OFF-LABEL:** Treatment of breast cancer, infertility.

PRECAUTIONS

Contraindications: Hypersensitivity to leuprolide, GnRH, GnRH-agonist analogue. Pregnancy or women who may become pregnant, breastfeeding (Lupron Depot 3.75 mg and 11.25 mg), abnormal, undiagnosed vaginal bleeding (Lupron Depot 3.75 mg and 11.25 mg). 22.5 mg, 30 mg, 45 mg Lupron Depot and Eligard (all strengths) not indicated for use in women. **Cautions:** History of psychiatric illness, QTc prolongation or medications that prolong QTc interval, preexisting cardiac disease, chronic alcohol use, steroid therapy, seizures or medications that decrease seizures threshold.

ACTION

Inhibits gonadotropin secretion; produces an initial increase in LH and FSH,

causing a transient increase in testosterone (males) and estrone/estradiol in premenopausal women. Continuous administration results in decreased levels of testosterone (male) and estrogen (females). **Therapeutic Effect:** Produces pharmacologic castration, decreases growth of abnormal prostate tissue in males; causes endometrial tissue to become inactive, atrophic in females; decreases rate of pubertal development in children with central precocious puberty.

PHARMACOKINETICS

Rapidly, well absorbed after SQ administration. Absorbed slowly after IM administration. Protein binding: 43%–49%.

Half-life: 3–4 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: **Depot:** Contraindicated in pregnancy. May cause spontaneous abortion. **Children:** Long-term safety not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: QT interval–prolonging medications (e.g., amiodarone, azithromycin, ceritinib, haloperidol, moxifloxacin) may increase risk of QT interval prolongation, cardiac arrhythmias.

HERBAL: None significant. **FOOD:** None known. **LAB VALUES:** May increase serum prostatic acid phosphatase (PAP). Initially increases, then decreases serum testosterone. May increase serum ALT, AST, alkaline phosphatase, glucose, LDH, LDL, cholesterol, triglycerides. May decrease platelets, WBC.

AVAILABILITY (Rx)

Injection Depot Formulation: (*Eligard*): 7.5 mg, 22.5 mg, 30 mg, 45 mg. (*Lupron Depot-Ped*): 7.5 mg, 11.25 mg (3-month), 11.25 (monthly), 15 mg, 30 mg. (*Lupron Depot*): 3.75 mg, 11.25 mg, 22.5 mg, 30 mg, 45 mg. **Injection Solution:** 5 mg/mL.

ADMINISTRATION/HANDLING

ALERT ▶ May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration.

IM

• (*Lupron Depot*): Store at room temperature. • Protect from light, heat. • Do not freeze vials. • Reconstitute only with diluent provided. Follow manufacturer's instructions for mixing. • Do not use needles less than 22 gauge; use syringes provided by the manufacturer (0.5-mL low-dose insulin syringes may be used as an alternative). • Administer immediately.

• (*Eligard*): Refrigerate. • Allow to warm to room temperature before reconstitution. • Follow manufacturer's instructions for mixing. • Following reconstitution, administer within 30 min.

SQ

• (*Lupron*): Refrigerate vials. • Injection appears clear, colorless. • Discard if discolored or precipitate forms. • Administer into deltoid muscle, anterior thigh, abdomen.

INDICATIONS/ROUTES/DOSAGE

Advanced Prostatic Carcinoma

IM: (*Lupron Depot*): **ADULTS, ELDERLY:** 7.5 mg q1mo, 22.5 mg q3mos, 30 mg q4mos, or 45 mg q6mos.

SQ: (*Eligard*): **ADULTS, ELDERLY:** 7.5 mg every mo, 22.5 mg q3mos, 30 mg q4mos, or 45 mg q6mos.

SQ: (*Lupron*): **ADULTS, ELDERLY:** 1 mg/day.

Endometriosis

IM: (*Lupron Depot*): **ADULTS, ELDERLY:** 3.75 mg/mo for up to 6 mos or 11.25 mg q3mos for up to 2 doses.

Uterine Leiomyomata

IM: (*with Iron [Lupron Depot]*): **ADULTS, ELDERLY:** 3.75 mg/mo for up to 3 mos or 11.25 mg as a single injection.

Precocious Puberty

IM: (Lupron Depot-Ped): CHILDREN WEIGHING MORE THAN 37.5 KG: 15 mg q1mo. **WEIGHING 25 KG TO 37.5 KG:** 11.25 mg q1mo. **WEIGHING 25 KG OR LESS:** 7.5 mg q1mo. Titrate dose upward by 3.75 mg/mo if down regulation not achieved. **LUPRON DEPOT-PED (3 MOS):** 11.25 mg or 30 mg q12wks.

SC: (Lupron): CHILDREN: Initially, 50 mcg/kg/day. Titrate upward by 10 mcg/kg/day if down regulation is not achieved.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Hot flashes (ranging from mild flushing to diaphoresis), migraines, hyperhidrosis. **Females:** Amenorrhea, spotting. **Occasional:** Arrhythmias, palpitations, blurred vision, dizziness, edema, headache, burning, pruritus, swelling at injection site, nausea, insomnia, weight gain. **Females:** Deepening voice, hirsutism, decreased libido, increased breast tenderness, vaginitis, altered mood. **Males:** Constipation, decreased testicle size, gynecomastia, impotence, decreased appetite, angina. **Rare:** **Males:** Thrombophlebitis.

ADVERSE EFFECTS/TOXIC REACTIONS

Occasionally, signs/symptoms of prostatic carcinoma worsen 1–2 wks after initial dosing (subsides during continued therapy). Increased bone pain and, less frequently, dysuria, hematuria, weakness, paresthesia of lower extremities may be noted. MI, pulmonary embolism occur rarely.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Question for possibility of pregnancy before initiating therapy. Obtain serum testosterone, prostatic acid phosphates (PAP) periodically during therapy. Serum testosterone, PAP should increase during first wk of therapy. Serum testosterone then should decrease to baseline

level or less within 2 wks, PAP within 4 wks. Question medical history as listed in Precautions. Offer emotional support.

INTERVENTION/EVALUATION

Monitor for arrhythmias, palpitations. Assess for peripheral edema. Assess sleep pattern. Monitor for visual difficulties. Assist with ambulation if dizziness occurs. Offer antiemetics if nausea occurs.

PATIENT/ FAMILY TEACHING

- Hot flashes tend to decrease during continued therapy.
- Temporary exacerbation of signs/symptoms of disease may occur during first few wks of therapy.
- Use contraceptive measures.
- Report persistent, regular menstruation; pregnancy.
- Avoid tasks that require alertness, motor skills until response to drug is established (potential for dizziness).

levalbuterol

lee-val-bue-ter-ole

(Xopenex, Xopenex HEA, Xopenex Concentrate)

Do not confuse Xopenex with Xanax.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Beta₂ agonist. **CLINICAL:** Bronchodilator.

USES

Treatment, prevention of bronchospasm due to reversible obstructive airway disease (e.g., asthma, bronchitis, emphysema). **OFF-LABEL:** Treatment of asthma in children younger than 4 yrs of age.

PRECAUTIONS

Contraindications: History of hypersensitivity to albuterol or levalbuterol. **Cautions:** Cardiovascular disorders (cardiac arrhythmias, HF), seizures, hypertension, hyperthyroidism, diabetes, glaucoma, hypokalemia.

ACTION

Stimulates beta₂-adrenergic receptors in lungs, resulting in relaxation of bronchial smooth muscle. **Therapeutic Effect:** Relieves bronchospasm, reduces airway resistance.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Inhalation	5–10 min	1.5 hrs	5–6 hrs
Nebulization	10–17 min	1.5 hrs	5–8 hrs

Half-life: 3.3–4 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in pts younger than 12 yrs. **Elderly:** Lower initial dosages recommended.

INTERACTIONS

DRUG: Beta blockers (e.g., carvedilol, metoprolol) antagonize effects; may produce severe bronchospasm. **MAOIs** (e.g., phenelzine, tranylcypromine), **tricyclic antidepressants** (e.g., amitriptyline, desipramine) may potentiate cardiovascular effects. **Diuretics** (e.g., furosemide, HCTZ) may increase hypokalemia. **Linezolid** may enhance the hypertensive effect. May increase adverse effects of **loxapine**. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum potassium.

AVAILABILITY (Rx)

Inhalation Aerosol: 45 mcg/activation. **Solution for Nebulization:** 0.31 mg in 3-mL vials, 0.63 mg in 3-mL vials, 1.25 mg in 3-mL vials, 1.25 mg in 0.5-mL vials.

ADMINISTRATION/HANDLING**Nebulization**

- No diluent necessary. • Protect from light, excessive heat. Store at room temperature. • Once foil is opened, use within 2 wks. • Use within 1 wk and protect from light after removal from pouch • Discard if solution is not col-

orless. • Do not mix with other medications. • Concentrated solution (1.25 mg in 0.5 mL) should be diluted with 2.5 mL 0.9% NaCl prior to use. • Give over 5–15 min.

Inhalation

- Shake well before inhalation. • Prime before initial use or if not used for more than 3 days. • Following first inhalation, wait 2 min before inhaling second dose (allows for deeper bronchial penetration). • Rinsing mouth with water immediately after inhalation prevents mouth/throat dryness.

INDICATIONS/ROUTES/DOSAGE**Treatment/Prevention of Bronchospasm**

Nebulization: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Initially, 0.63 mg 3 times/day 6–8 hrs apart. May increase to 1.25 mg 3 times/day with close monitoring. **CHILDREN 5–11 YRS:** Initially, 0.31 mg 3 times/day. **Maximum:** 0.63 mg 3 times/day. **CHILDREN 4 YRS OR YOUNGER:** 0.31–1.25 mg q4–6h as needed.

Inhalation: ADULTS, ELDERLY, CHILDREN 4 YRS AND OLDER: 1–2 inhalations q4–6h.

Acute Asthma Exacerbation

Nebulization: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 1.25–2.5 mg q20min for 3 doses, then 1.25–5 mg q1–4h as needed. **CHILDREN YOUNGER THAN 12 YRS:** 0.075 mg/kg (minimum dose: 1.25 mg) q20min for 3 doses, then 0.075–0.15 mg/kg (Maximum: 5 mg dose) q1–4h as needed.

Inhalation: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 4–8 puffs q20min for up to 4 hrs, then q1–4h. **CHILDREN YOUNGER THAN 12 YRS:** 4–8 puffs q20min for 3 doses, then q1–4h.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (11%–4%): Nervousness, tremor, rhinitis, flu-like illness. **Rare (less than 3%):** Tachycardia, dizziness, anxiety, viral infection, dyspepsia, dry mouth, headache, chest pain.

ADVERSE EFFECTS/TOXIC REACTIONS

Excessive sympathomimetic stimulation may produce palpitations, premature heart contraction, tachycardia, chest pain, slight increase in B/P followed by substantial decrease, chills, diaphoresis, blanching of skin. Too-frequent or excessive use may decrease bronchodilating effectiveness, lead to severe, paradoxical bronchoconstriction.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess lung sounds, pulse, B/P, oxygen saturation. Note color, amount of sputum.

INTERVENTION/EVALUATION

Monitor rate, depth, rhythm, type of respiration; quality/rate of pulse, ECG, serum potassium, ABG determinations. Assess lung sounds for wheezing (bronchoconstriction). Observe for paradoxical bronchospasm.

PATIENT/ FAMILY TEACHING

- Increase fluid intake (decreases lung secretion viscosity).
- Rinsing mouth with water immediately after inhalation may prevent mouth/throat dryness.
- Avoid excessive use of caffeine derivatives (chocolate, coffee, tea, cola, cocoa).
- Report if palpitations, tachycardia, chest pain, tremors, dizziness, headache occurs or shortness of breath is not relieved.

levETIRAcetam

lee-ve-tye-ra-se-tam

(Keppra, Keppra XR, Spritam)

Do not confuse Keppra with Kaletra, Keflex, or Keppra XR, or levETIRAcetam with levo-FLOXacin.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Pyrrolidine derivative. **CLINICAL:** Anticonvulsant.

USES

Adjunctive therapy in treatment of partial-onset, myoclonic, and/or primary generalized tonic-clonic seizures.

PRECAUTIONS

Contraindications: Hypersensitivity to levETIRAcetam. **Cautions:** Renal impairment, pts with depression at high risk for suicide.

ACTION

Exact mechanism unknown. May inhibit voltage-dependent calcium channels, facilitate GABA inhibitory transmission, reduce potassium current, or bind to synaptic proteins that modulate neurotransmitter release. **Therapeutic Effect:** Prevents seizure activity.

PHARMACOKINETICS

Rapidly, completely absorbed following PO administration. Protein binding: less than 10%. Metabolized primarily by enzymatic hydrolysis. Primarily excreted in urine as unchanged drug. **Half-life:** 6–8 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. Breastfeeding not recommended. **Children:** Safety and efficacy not established in children 4 yrs or younger. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: CNS depressants (e.g., alcohol, morphine, zolpidem) may increase CNS depression.

HERBAL: Herbals with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression.

FOOD: None known. **LAB VALUES:** May decrease Hgb, Hct, RBC, WBC.

AVAILABILITY (Rx)

Injection, Solution: 100 mg/mL. **Oral Solution:** 100 mg/mL. **Tablets:** 250 mg, 500 mg, 750 mg, 1,000 mg.

 **Tablets, Extended-Release:** 500 mg, 750 mg. **Tablets (ODT):** 250 mg, 500 mg, 750 mg, 1,000 mg.

ADMINISTRATION/HANDLING

Rate of infusion • Infuse over 15 min.
Reconstitution • Dilute with 100 mL 0.9% NaCl or D₅W.

Storage • Store at room temperature. • Stable for 24 hrs following dilution.

PO

• Give without regard to food. • **Oral Solution:** Use a calibrated measuring device. • **Tablet (immediate-release, extended-release):** Administer tablet whole; do not cut, break, or crush. • **Tablet (ODT):** Place whole tablet on tongue and follow with sip of liquid. Swallowing allowed only after tablet has disintegrated. • Use oral solution for pts weighing 20 kg or less. • Use tablets or oral solution for pts weighing more than 20 kg.

IV COMPATIBILITIES

DiazePAM (Valium), LORazepam (Ativan), valproate (Depacon).

INDICATIONS/ROUTES/DOSAGE

Partial-Onset Seizures

IV/PO: ADULTS, ELDERLY, CHILDREN 17 YRS AND OLDER: (*Immediate-Release Tablets, Oral Solution, Tablets for Oral Suspension*): Initially, 500 mg q12h. May increase by 1,000 mg/day q2wks. **Maximum:** 3,000 mg/day in 2 divided doses. (*Extended-Release Tablets*): 1,000 mg once daily. May increase in increments of 1,000 mg/day q2wks. **Maximum:** 3,000 mg once daily.

IV/PO: CHILDREN 4-16 YRS: (*Oral Solution, Tablets*): 20 mg/kg/day in 2 divided doses. May increase q2wks by 10 mg/kg/dose up to 60 mg/kg/day in 2 divided doses. **Maximum:** 3,000 mg/day. (*Tablets*): **WEIGHING MORE THAN 40 KG:** 500 mg twice daily. May increase q2wks by 500 mg/

dose. **Maximum:** 1,500 mg twice daily. **20-40 KG:** 250 mg twice daily. May increase q2wks by 250 mg/dose. **Maximum:** 750 mg twice daily. **CHILDREN 6 MOS TO YOUNGER THAN 4 YRS:** (*Oral Solution*): 20 mg/kg/day in 2 divided doses. May increase q2wks by 10 mg/kg/dose. **Maximum:** 50 mg/kg/day in 2 divided doses. **CHILDREN 1 MO TO YOUNGER THAN 6 MOS:** (*Oral Solution*): 14 mg/kg/day in 2 divided doses. May increase q2wks by 7 mg/kg/dose. **Maximum:** 42 mg/kg/day in 2 divided doses.

Myoclonic Seizures

PO, IV: CHILDREN 16 YRS AND OLDER: (*Immediate-Release Tablets, Oral Solution, Tablets for Oral Suspension*): Initially, 500 mg q12h. May increase by 1,000 mg/day q2wks. **Maximum:** 3,000 mg/day in 2 divided doses. **CHILDREN 6-15 YRS:** Initially, 10 mg/kg twice daily. May increase by 10 mg/kg/dose q2wks up to recommended dose of 30 mg/kg twice daily.

Tonic-Clonic Seizures

PO, IV: ADULTS, ELDERLY, CHILDREN 16 YRS AND OLDER: (*Immediate-Release Tablets, Oral Solution, Tablets for Oral Suspension*): Initially, 500 mg twice daily. May increase by 1,000 mg/day q2wks up to recommended dose of 1,500 mg 2 times/day. **CHILDREN 6-15 YRS:** Initially, 10 mg/kg twice daily. May increase by 20 mg/kg/day q2wks up to recommended dose of 30 mg/kg 2 times/day.

Dosage in Renal Impairment

Dosage is modified based on creatinine clearance. **Note: CrCl less than 50 mL/min:** Not recommended with Keppra XR.

	Dosage (Immediate- Release, IV)	Dosage (Extended- Release)
Greater than 80 mL/min:	500-1,500 mg q12h	1,000-3,000 mg q24h
50-80 mL/min:	500-1,000 mg q12h	1,000-2,000 mg q24h
30-49 mL/min:	250-750 mg q12h	500-1,500 mg q24h
Less than 30 mL/min:	250-500 mg q12h	500-1,000 mg q24h

Creatinine Clearance	Dosage (Immediate-Release, IV)	Dosage (Extended-Release)
End-stage renal disease using dialysis:	500–1,000 mg q24h; after dialysis, a 250– to 500–mg supplemental dose is recommended	NA
CRRT	250–750 mg q12h	

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (15%–10%): Drowsiness, asthenia, headache, infection. **Occasional (9%–3%):** Dizziness, pharyngitis, pain, depression, anxiety, vertigo, rhinitis, anorexia. **Rare (less than 3%):** Amnesia, emotional lability, cough, sinusitis, anorexia, diplopia.

ADVERSE EFFECTS/TOXIC REACTIONS

Acute psychosis, agitation, delirium, impulsivity have been reported. Sudden discontinuance increases risk of seizure activity. Serious dermatological reactions, including Stevens-Johnson syndrome and toxic epidermal necrolysis, have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (intensity, frequency, duration, LOC). Initiate seizure precautions. Question prior hypersensitivity reaction. Obtain renal function test.

INTERVENTION/EVALUATION

Observe for recurrence of seizure activity. Assess for clinical improvement (decrease in intensity/frequency of seizures). Monitor renal function tests. Observe for suicidal ideation, depression, behavioral

changes. Assist with ambulation if dizziness occurs.

PATIENT/ FAMILY TEACHING

- Drowsiness usually diminishes with continued therapy.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Avoid alcohol.
- Do not abruptly discontinue medication (may precipitate seizures).
- Strict maintenance of drug therapy is essential for seizure control.
- Report mood swings, hostile behavior, suicidal ideation, unusual changes in behavior.

levoFLOXacin

TOP
100

lee-voe-flox-a-sin

(Iquix, Levaquin, Quixin)

BLACK BOX ALERT May increase risk of tendonitis, tendon rupture. (Risk increased with concurrent corticosteroids, organ transplant, pts older than 60 yrs.) May exacerbate myasthenia gravis.

Do not confuse Levaquin with Levoxyl, Levsin/SL, or Lovenox, or levoFLOXacin with levETI-Acetam or levothyroxine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Fluoroquinolone. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to *S. pneumoniae*, *S. aureus*, *E. faecalis*, *H. influenzae*, *M. catarrhalis*, *Serratia marcescens*, *K. pneumoniae*, *E. coli*, *P. mirabilis*, *P. aeruginosa*, *C. pneumoniae*, *Legionella pneumophila*, *Mycoplasma pneumoniae*, including acute bacterial exacerbation of chronic bronchitis, acute bacterial sinusitis, community-acquired pneumonia, nosocomial pneumonia, complicated and uncomplicated UTI, acute pyelonephritis, complicated and uncomplicated mild to moderate skin/

skin structure infections, prostatitis. Inhalation anthrax (postexposure); plague. **Ophthalmic:** Treatment of superficial infections to conjunctiva (0.5%), cornea (1.5%). **OFF-LABEL:** Urethritis, traveler's diarrhea, diverticulitis, enterocolitis, Legionnaire's disease, peritonitis. Treatment of prosthetic joint infection.

PRECAUTIONS

Contraindications: Hypersensitivity to levoFLOXacin, other fluoroquinolones. **Cautions:** Known or suspected CNS disorders, seizure disorder, renal impairment, bradycardia, rheumatoid arthritis, elderly, hypokalemia, hypomagnesemia, myasthenia gravis, severe cerebral arteriosclerosis, prolonged QT interval, medications that potentiate QT interval prolongation, diabetes, pts at risk for tendon rupture, tendonitis (e.g., renal failure, concomitant use of corticosteroids, organ transplant recipient, rheumatoid arthritis, elderly, strenuous physical activity or exercise).

ACTION

Inhibits DNA enzyme gyrase in susceptible microorganisms, interfering with bacterial cell replication, repair. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Well absorbed after PO, IV administration. Protein binding: 50%. Widely distributed. Excreted unchanged in urine. Partially removed by hemodialysis. **Half-life:** 6–8 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. Avoid use in pregnancy. **Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Antacids; calcium, magnesium, iron preparations; sucralfate, zinc decrease absorption. **NSAIDs (e.g.,**

ibuprofen, ketorolac, naproxen) may increase risk of CNS stimulation, seizures. **Medications that prolong QT interval (e.g., amiodarone, haloperidol, sotalol)** may increase risk of arrhythmias. May increase effects of warfarin. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May alter serum glucose.

AVAILABILITY (Rx)

Infusion Premix: 250 mg/50 mL, 500 mg/100 mL, 750 mg/150 mL. **Injection, Solution:** 25 mg/mL. **Ophthalmic Solution:** 0.5%. **Oral Solution:** 25 mg/mL. **Tablets:** 250 mg, 500 mg, 750 mg.

ADMINISTRATION/HANDLING

Reconstitution • For infusion using single-dose vial, withdraw desired amount (10 mL for 250 mg, 20 mL for 500 mg). Dilute each 10 mL (250 mg) with minimum 40 mL 0.9% NaCl, D₅W, providing a concentration of 5 mg/mL.

Rate of administration • Administer no less than 60 min for 250 mg or 500 mg; 90 min for 750 mg.

Storage • Available in single-dose 20-mL (500-mg) vials and premixed with D₅W, ready to infuse. • Diluted vials stable for 72 hrs at room temperature, 14 days if refrigerated.

PO

• Do not administer antacids (aluminum, magnesium), sucralfate, iron or multivitamin preparations with zinc within 2 hrs of administration (significantly reduces absorption). • Give tablets without regard to food. • Give oral solution 1 hr before or 2 hrs after meals.

Ophthalmic

• Place a gloved finger on lower eyelid and pull out until a pocket is formed between eye and lower lid. • Place prescribed number of drops into pocket. • Instruct pt to close eye gently (so that medication will not be squeezed

out of the sac) and to apply digital pressure to lacrimal sac for 1–2 min to minimize systemic absorption.

IV INCOMPATIBILITIES

Furosemide (Lasix), heparin, insulin, nitroglycerin, propofol (Diprivan).

IV COMPATIBILITIES

Dexmedetomidine (Precedex), DOBUTamine (Dobutrex), DOPamine (Intropin), fentaNYL (Sublimaze), lidocaine, (Ativan), magnesium, morphine.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

PO, IV: ADULTS, ELDERLY: 250–500 mg q24h; 750 mg q24h for severe or complicated infections.

Bacterial Conjunctivitis

Ophthalmic: ADULTS, ELDERLY, CHILDREN 1 YR AND OLDER: (Quixin 0.5%): 1–2 drops q2h for 2 days while awake (up to 8 times/day), then 1–2 drops q4h while awake up to 4 times/day.

Dosage in Renal Impairment

Normal renal function dosage of 250 mg/day:

Creatinine

Clearance	Dosage
20–49 mL/min	No change
10–19 mL/min	250 mg initially, then 250 mg q48h

Normal renal function dosage of 500 mg/day:

Creatinine

Clearance	Dosage
50–80 mL/min	No change
20–49 mL/min	500 mg initially, then 250 mg q24h
10–19 mL/min	500 mg initially, then 250 mg q48h

For pts undergoing dialysis, 500 mg initially, then 250 mg q48h.

Normal renal function dosage of 750 mg/day:

Creatinine

Clearance	Dosage
50–80 mL/min	No change
20–49 mL/min	Initially, 750 mg, then 750 mg q48h
10–19 mL/min	Initially, 750 mg, then 500 mg q48h
Dialysis	500 mg q48h (administer after dialysis on dialysis days)
Continuous Renal Replacement Therapy	
CVVH	500–750 mg once, then 250 mg q24h
CVVHD	500–750 mg once, then 250–500 mg q24h
CVVHDT	500–750 mg once, then 250–750 mg q24h

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (3%–1%): Diarrhea, nausea, abdominal pain, dizziness, drowsiness, headache. **Ophthalmic:** Local burning/discomfort, margin crusting, crystals/scales, foreign body sensation, ocular itching, altered taste. **Rare (less than 1%):** Flatulence; pain, inflammation, swelling in calves, hands, shoulder; chest pain, difficulty breathing, palpitations, edema, tendon pain. **Ophthalmic:** Corneal staining, keratitis, allergic reaction, eyelid swelling, tearing, reduced visual acuity.

ADVERSE EFFECTS/TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may occur. Superinfection (genital/anal pruritus, ulceration/changes in oral mucosa, moderate to severe diarrhea) may occur from altered bacterial balance in GI tract. Hypersensitivity reactions, including photosensitivity (rash, pruritus, blisters, edema, sensation of burning skin), have occurred in pts receiving fluoroquinolones. May increase risk of tendonitis,

tendon rupture, peripheral neuropathy; CNS effects including agitation, anxiety, confusion, depression, dizziness, hallucinations, nightmares, paranoia, tremors, vertigo. May exacerbate muscle weakness in pts with myasthenia gravis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to levoFLOXacin, other fluoroquinolones. Question history as listed in Precautions. Receive full medication history, and screen for interactions, esp. medications that prolong QT interval. Obtain baseline ECG.

INTERVENTION/EVALUATION

Monitor serum glucose, renal function, LFT. Monitor daily pattern of bowel activity, stool consistency. Promptly report hypersensitivity reaction: skin rash, urticaria, pruritus, photosensitivity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Monitor for muscle weakness, voice dystonia in pts with myasthenia gravis; pain, swelling, bruising, popping of tendons.

PATIENT/ FAMILY TEACHING

- It is essential to complete drug therapy despite symptom improvement. Early discontinuation may result in antibacterial resistance or increase risk of recurrent infection.
 - Report any episodes of diarrhea, esp. the first few mos after final dose. Frequent diarrhea, fever, abdominal pain, blood-streaked stool may indicate infectious diarrhea, which may be contagious to others.
 - Severe allergic reactions, such as hives, palpitations, rash, shortness of breath, tongue swelling, may occur.
 - Tendon inflammation/swelling, tendon rupture may occur; report bruising, pain, swelling in tendon areas or snapping, popping of tendons.
 - Immediately report nervous system problems such as anxiety, confusion, dizziness, nervousness, nightmares, thoughts of suicide, seizures, tremors,

- trouble sleeping.
- Treatment may cause heart problems such as low heart rate, palpitations; permanent nerve damage such as burning, numbness, tingling, weakness.
- Do not take aluminum- or magnesium-containing antacids, multivitamins, zinc or iron products at least 2 hrs before or 6 hrs after dose.
- Drink plenty of fluids.

levothyroxine

**TOP
100**
lee-voe-thy-rox-een

 (Eltroxin , Euthyrox, Levoxl, Synthroid, Tirosint, Unithroid)

BLACK BOX ALERT Ineffective, potentially toxic for weight reduction. High doses increase risk of serious, life-threatening toxic effects, especially when used with some anorectic drugs.

Do not confuse levothyroxine with levoFLOXacin or liothyronine, or Synthroid with Symmetrel.

FIXED-COMBINATION(S)

 With liothyronine, T₃(Thyrolar).

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic isomer of thyroxine. **CLINICAL:** Thyroid hormone (T₄).

USES

PO: Treatment of hypothyroidism, pituitary thyroid-stimulating hormone (TSH) suppression. **IV:** Myxedema coma. **OFF-LABEL:** Management of hemodynamically unstable potential organ donors.

PRECAUTIONS

Contraindications: Hypersensitivity to levothyroxine. Acute MI, untreated subclinical or overt thyrotoxicosis, uncorrected adrenal insufficiency. **Capsule:** Inability to swallow capsules. **Cautions:** Elderly pts, angina pectoris, hypertension, other cardiovascular disease, adrenal

insufficiency, myxedema, diabetes mellitus and insipidus, swallowing disorders.

ACTION

Converts to T_3 , then binds to thyroid receptor proteins exerting metabolic effects through control of DNA transcription and protein synthesis. **Therapeutic Effect:** Involved in normal metabolism, growth and development. Increases basal metabolic rate, enhances gluconeogenesis, stimulates protein synthesis.

PHARMACOKINETICS

Variable, incomplete absorption from GI tract. Protein binding: greater than 99%. Widely distributed. Deiodinated in peripheral tissues, minimal metabolism in liver. Eliminated by biliary excretion. **Half-life:** 6–7 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Does not cross placenta. Minimal distribution in breast milk. **Children:** No age-related precautions noted. Caution in neonates in interpreting thyroid function tests. **Elderly:** May be more sensitive to thyroid effects; individualized dosage recommended.

INTERACTIONS

DRUG: Cholestyramine, colestipol, aluminum- and magnesium-containing antacids, calcium, iron may decrease absorption (do not administer within 4 hrs). **Estrogens** may decrease therapeutic effect. May enhance effects of **oral anticoagulants (e.g., warfarin)**. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Capsules: (Tirosint): 13 mcg, 25 mcg, 50 mcg, 75 mcg, 88 mcg, 100 mcg, 112 mcg, 125 mcg, 137 mcg, 150 mcg. **Injection, Powder for Reconstitution:** 100 mcg, 200 mcg, 500 mcg. **Tablets:** 25 mcg, 50 mcg, 75 mcg, 88 mcg, 100 mcg, 112 mcg, 125 mcg, 137 mcg, 150 mcg, 175 mcg, 200 mcg, 300 mcg.

ADMINISTRATION/HANDLING

◀ALERT▶ Do not interchange brands (known issues with bioequivalence between manufacturers).

Reconstitution • Reconstitute 200-mcg or 500-mcg vial with 5 mL 0.9% NaCl to provide concentration of 40 or 100 mcg/mL, respectively; shake until clear.

Rate of administration • Use immediately; discard unused portions. • Give each 100 mcg or less over 1 min.

Storage • Store vials at room temperature.

PO

• Administer in the morning on an empty stomach, 30 min before food. • Administer before breakfast to prevent insomnia. • Tablets may be crushed. • Take 4 hrs apart from antacids, iron, calcium supplements.

IV INCOMPATIBILITIES

Do not use or mix with other IV solutions.

INDICATIONS/ROUTES/DOSAGE

Note: Doses based on clinical response and laboratory parameters. IV dose is 75–80% of oral dose once daily.

Hypothyroidism

PO: ADULTS 60 YRS OR YOUNGER WITHOUT EVIDENCE OF CORONARY HEART DISEASE: 1.6 mcg/kg/day as single daily dose. Adjust dose by 12.5–25 mcg/day q3–6 wks. Usual maintenance: 100–125 mcg/day. **ADULTS OLDER THAN 60 YRS WITHOUT EVIDENCE OF CORONARY HEART DISEASE:** Initially, 25–50 mcg once daily. **ADULTS WITH CARDIAC DISEASE:** Initially, 12.5–50 mcg/day. Adjust dose by 12.5–25 mcg/day at 6–8-wk intervals. **CHILDREN OLDER THAN 12 YRS, GROWTH AND PUBERTY INCOMPLETE:** 2–3 mcg/kg/day. **CHILDREN 6–12 YRS:** 4–5 mcg/kg/day. **CHILDREN 1–5 YRS:** 5–6 mcg/kg/day. **CHILDREN 6–12 MOS:** 6–8 mcg/kg/day. **CHILDREN 3–5 MOS:** 8–10 mcg/kg/day.

CHILDREN YOUNGER THAN 3 MOS: 10–15 mcg/kg/day.

Myxedema Coma

IV: ADULTS, ELDERLY: Initially, 200–400 mcg, then 50–100 mcg once daily until able to tolerate PO administration.

Pituitary Thyroid-Stimulating Hormone (TSH) Suppression

PO: ADULTS, ELDERLY: Doses greater than 2 mcg/kg/day usually required to suppress TSH below 0.1 milliunits/L.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional: Reversible hair loss at start of therapy in children. **Rare:** Dry skin, GI intolerance, rash, urticaria, pseudotumor cerebri, severe headache in children.

ADVERSE EFFECTS/TOXIC REACTIONS

Excessive dosage produces signs/symptoms of hyperthyroidism (weight loss, palpitations, increased appetite, tremors, anxiety, tachycardia, hypertension, headache, insomnia, menstrual irregularities). Cardiac arrhythmias occur rarely. Long-term therapy may decrease bone mineral density.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline TSH, T₃, T₄, weight, vital signs. Signs/symptoms of diabetes, diabetes insipidus, adrenal insufficiency, hypopituitarism may become intensified. Treat with adrenocortical steroids before thyroid therapy in coexisting hypothyroidism and hypoadrenalism.

INTERVENTION/EVALUATION

Monitor pulse for rate, rhythm (report pulse greater than 100 or marked increase). Observe for tremors, anxiety. Assess appetite, sleep pattern. **Children: (Undertreatment):** May decrease intellectual development, linear growth. **(Overtreatment):** Adversely affects

brain maturation, accelerates bone age. Monitor thyroid function tests.

PATIENT/ FAMILY TEACHING

- Do not discontinue drug therapy; replacement for hypothyroidism is life-long.
- Follow-up office visits, thyroid function tests are essential.
- Take medication at the same time each day, preferably in the morning.
- Monitor pulse for rate, rhythm; report irregular rhythm or pulse rate over 100 beats/min.
- Promptly report chest pain, weight loss, anxiety, tremors, insomnia.
- Children may have reversible hair loss, increased aggressiveness during first few mos of therapy.
- Full therapeutic effect may take 1–3 wks.

lidocaine

TOP
100

lye-doe-kane
(Lidoderm, Xylocaine)

FIXED-COMBINATION(S)

EMLA: lidocaine/prilocaine (an anesthetic): 2.5%/2.5%. **Lidosite:** lidocaine/EPINEPHrine (a sympathomimetic): 10%/0.1%. **Lidocaine with EPINEPHrine:** lidocaine/EPINEPHrine (a sympathomimetic): 2%/1:50,000, 1%/1:100,000, 1%/1:200,000, 0.5%/1:200,000. **Syn-éra:** lidocaine/tetracaine (an anesthetic): 70 mg/70 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Amide anesthetic. **CLINICAL:** Class 1B antiarrhythmic, anesthetic.

USES

Antiarrhythmic: Rapid control of acute ventricular arrhythmias following MI, cardiac catheterization, cardiac surgery. **Local anesthetic:** Infiltration/nerve block for dental/surgical procedures, childbirth. **Topical anesthetic:** Local skin disorders (minor burns, insect

bites, prickly heat, skin manifestations of chickenpox, abrasions). Mucous membranes (local anesthesia of oral, nasal, laryngeal mucous membranes; local anesthesia of respiratory, urinary tracts; relief of discomfort of pruritus ani, hemorrhoids, pruritus vulvae). **Dermal patch:** Relief of chronic pain in postherpetic neuralgia, allodynia (painful hypersensitivity).

PRECAUTIONS

Contraindications: Hypersensitivity to lidocaine. Adams-Stokes syndrome, hypersensitivity to amide-type local anesthetics, supraventricular arrhythmias, Wolff-Parkinson-White syndrome. Severe degree of SA, AV, or intraventricular heart block (except in pts with functioning pacemaker). **Cautions:** Hepatic disease, marked hypoxia, severe respiratory depression, hypovolemia, incomplete heart. History of malignant hyperthermia, shock, elderly pts, HF.

ACTION

Anesthetic: Inhibits conduction of nerve impulses. **Therapeutic Effect:** Causes temporary loss of feeling/sensation. **Antiarrhythmic:** Suppresses automaticity of conduction tissue; increases electrical stimulation threshold of ventricle, His-Purkinje system; and spontaneous depolarization of ventricle during diastole. Blocks initiation/conduction of nerve impulses by decreasing neuronal membrane's permeability to sodium ions. **Therapeutic Effect:** Inhibits ventricular arrhythmias.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	30–90 sec	N/A	10–20 min
Local anesthetic	2.5 min	N/A	30–60 min

Completely absorbed after IV administration. Protein binding: 60%–80%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Minimally removed by hemodialysis. **Half-life:** 1–2 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Children:** No age-related precautions noted. **Elderly:** More sensitive to adverse effects. Dose, rate of infusion should be reduced. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole, ritonavir), CYP1A2 inhibitors (e.g., ciprofloxacin) may increase concentration/effect. Strong CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. **HERBAL:** St. John's wort may decrease concentration/effect. **FOOD:** None known. **LAB VALUES:** IM lidocaine may increase creatine kinase (CK) level. **Therapeutic serum level:** 1.5–6 mcg/mL; **toxic serum level:** greater than 6 mcg/mL.

AVAILABILITY (Rx)

Cream, Topical: 4%. **Infusion Premix:** 0.4% (4 mg/mL in 250 mL, 500 mL); 0.8% (8 mg/mL in 250 mL, 500 mL). **Injection, Solution:** 0.5% (5 mg/mL), 1% (10 mg/mL), 2% (20 mg/mL). **Jelly, Topical:** 2%. **Solution, Topical:** 4%. **Solution, Viscous:** 2%. **Transdermal, Topical: (Lidoderm):** 4%, 5%.

ADMINISTRATION/HANDLING

◀ALERT▶ Resuscitative equipment, drugs (including O₂) must always be readily available when administering lidocaine by any route.

◀ALERT▶ Use only lidocaine without preservative, clearly marked for IV use. **Reconstitution** • For IV infusion, prepare solution by adding 2 g to 250–500 mL D₅W or 0.9% NaCl to provide concentration of 8 mg/mL or 4 mg/mL, respectively. • Commercially available preparations of 0.4% and 0.8% may be

used for IV infusion. **Maximum concentration:** 4 g/250 mL (16 mg/mL).

Rate of administration • For IV push, use 1% (10 mg/mL) or 2% (20 mg/mL). • Administer IV push at rate of 25–50 mg/min. • Administer for IV infusion at rate of 1–4 mg/min (1–4 mL); use volume control IV set.

Storage • Store premix solutions at room temperature.

Topical

• Not for ophthalmic use. • For skin disorders, apply directly to affected area or put on gauze or bandage, which is then applied to the skin. • For mucous membrane use, apply to desired area per manufacturer's insert. • Administer lowest dosage possible that still provides anesthesia.

Dermal Patch

Avoid exposing to external heat source. Patch should not get wet (do not wear while bathing/swimming). Patch may be cut to appropriate size.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec).

IV COMPATIBILITIES

Amiodarone (Cordarone), calcium gluconate, dexmedetomidine (Precedex), digoxin (Lanoxin), dilTIAZem (Cardizem), DOBUtamine (Dobutrex), DO-Pamine (Intropin), enalapril (Vasotec), furosemide (Lasix), heparin, insulin, nitroglycerin, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Ventricular Arrhythmias

IV: ADULTS, ELDERLY: Initially, 1–1.5 mg/kg. Refractory ventricular tachycardia, fibrillation: Repeat dose at 0.5–0.75 mg/kg q10–15min after initial dose for a maximum of 3 doses. Total dose not to exceed 3 mg/kg. Follow with continuous infusion (1–4 mg/min) after return of circulation. Reappearance of arrhythmia during infusion: 0.5 mg/kg, reassess infusion.

CHILDREN, INFANTS: Initially, 1 mg/kg (**Maximum:** 100 mg). May repeat second dose of 0.5–1 mg/kg if start of infusion longer than 15 min. **Maintenance:** 20–50 mcg/kg/min as IV infusion.

Local Anesthesia

Infiltration, nerve block: ADULTS: Local anesthetic dosage varies with procedure, degree of anesthesia, vascularity, duration. **Maximum:** 4.5 mg/kg or 300 mg. Do not repeat within 2 hrs.

Topical Local Anesthesia

Topical: ADULTS, ELDERLY: Apply to affected areas as needed.

Treatment of Localized Pain

◀ALERT▶ Transdermal patch may contain conducting metal (e.g., aluminum). Remove patch prior to MRI.

Topical: (Dermal Patch): ADULTS, ELDERLY: Apply to intact skin over most painful area. **Maximum:** Up to 3 patches at a time for up to 12 hrs in a 24-hr period.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

CNS effects generally dose-related and of short duration. **Occasional: Infiltration/nerve block:** Pain at injection site. **Topical:** Burning, stinging, tenderness at application site. **Rare:** Generally associated with high dose: Drowsiness, dizziness, disorientation, light-headedness, tremors, apprehension, euphoria, sensation of heat, cold, numbness; blurred or double vision, tinnitus, nausea.

ADVERSE EFFECTS/TOXIC REACTIONS

Serious adverse reactions to lidocaine are uncommon, but high dosage by any route may produce cardiovascular depression, bradycardia, hypotension, arrhythmias, heart block, cardiovascular

collapse, cardiac arrest. Potential for malignant hyperthermia, CNS toxicity may occur, esp. with regional anesthesia use, progressing rapidly from mild side effects to tremors, drowsiness, seizures, vomiting, respiratory depression. Methemoglobinemia (evidenced by cyanosis) has occurred following topical application of lidocaine for teething discomfort and laryngeal anesthetic spray.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to lidocaine, amide anesthetics. Obtain baseline B/P, pulse, respiratory rate, ECG, serum electrolytes.

INTERVENTION/EVALUATION

Monitor ECG, vital signs closely during and following drug administration for cardiac performance. If ECG shows arrhythmias, prolongation of PR interval or QRS complex, inform physician immediately. Assess pulse for rhythm, rate, quality. Assess B/P for evidence of hypotension. Monitor for therapeutic serum level (1.5–6 mcg/mL). For lidocaine given by all routes, monitor vital signs, LOC. Drowsiness should be considered a warning sign of high serum levels of lidocaine. **Therapeutic serum level:** 1.5–6 mcg/mL; **toxic serum level:** greater than 6 mcg/mL.

PATIENT/ FAMILY TEACHING

- **Local anesthesia:** Due to loss of feeling/sensation, protective measures may be needed until anesthetic wears off (no ambulation, including special positions for some regional anesthesia).
- **Oral mucous membrane anesthesia:** Do not eat, drink, chew gum for 1 hr after application (swallowing reflex may be impaired, increasing risk of aspiration; numbness of tongue, buccal mucosa may lead to bite trauma).
- **IV infusions:** Report dizziness, numbness, double vision, nausea, pain/burning, respiratory difficulty.
- **Topical:** Report irritation, pain, numbness, swelling, blurred vision, tinnitus, respiratory difficulty.

linaclotide

lin-a-kloe-tide

(Constella , Linzess)

■ **BLACK BOX ALERT** ■ Contraindicated in pediatric pts 6 yrs of age and younger. Avoid use in pediatric patients 7 yrs through 17 yrs old.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Guanylate cyclase-C (cGMP) agonist.

CLINICAL: GI agent.

USES

Treatment of irritable bowel syndrome with constipation (IBS-C), chronic idiopathic constipation (CIC) in adults.

PRECAUTIONS

Contraindications: Hypersensitivity to linaclotide. Pediatric patients 6 yrs and younger, known or suspected mechanical GI obstruction. **Cautions:** Diarrhea.

ACTION

Binds on the luminal surface of GI epithelium. Increases cGMP, which stimulates chloride and bicarbonate into intestinal lumen. **Therapeutic Effect:** Increases intestinal fluid, accelerates transit.

PHARMACOKINETICS

Metabolized within GI tract. Minimal distribution beyond GI tissue. Minimal systemic absorption. **Half-life:** N/A.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Avoid use in pediatric pts 7 yrs through 17 yrs. Contraindicated in pediatric pts 6 yrs and younger. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

 **Capsules:** 72 mcg, 145 mcg, 290 mcg.

ADMINISTRATION/HANDLING**PO**

• Give on empty stomach at least 30 min prior to first meal of day. • Do not break or crush. • For pts with swallowing difficulty, capsule may be opened and sprinkled on applesauce or into 30 mL bottled water.

INDICATIONS/ROUTES/DOSAGE**Irritable Bowel Syndrome with Constipation**

PO: ADULTS 18 YRS AND OLDER, ELDERLY: 290 mcg once daily.

Chronic Idiopathic Constipation

PO: ADULTS 18 YRS AND OLDER, ELDERLY: 72–145 mcg once daily.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (16%): Diarrhea (may begin within first 2 wks of initiation of treatment). **Occasional (7%–2%):** Abdominal pain, flatulence, headache, abdominal distention. **Rare (1% and Less):** Gastroesophageal reflux, vomiting.

ADVERSE EFFECTS/TOXIC REACTIONS

Severe diarrhea was reported in 2% of pts. Viral gastroenteritis was noted in 3% of pts. Fecal incontinence, dehydration was reported in 1%. Dose reduced or suspended secondary to diarrhea, other GI adverse reaction.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Encourage adequate fluid intake. Assess bowel sounds for peristalsis. Assess for abdominal disturbances.

INTERVENTION/EVALUATION

For pts with irritable bowel syndrome, assess for improvement in symptoms

(relief from bloating, cramping, urgency, abdominal discomfort). Monitor daily bowel activity, stool consistency. Monitor serum electrolytes in pts with prolonged, frequent, or excessive use of medication.

PATIENT/FAMILY TEACHING

• Institute measures to promote defecation: increase fluid intake, exercise, high-fiber diet. • Report new/worsening episodes of abdominal pain, severe diarrhea. • Do not break, crush, or open capsule. Take whole.

linagliptin

lin-a-glip-tin
(Tradjenta)

Do not confuse linagliptin with SAXagliptin or SITagliptin.

FIXED-COMBINATION(S)

Glyxambi: linagliptin/empagliflozin (an antidiabetic): 5 mg/10 mg, 5 mg/25 mg. **Jentaducto:** linagliptin/metFORMIN (an antidiabetic): 2.5 mg/500 mg; 2.5 mg/850 mg; 2.5 mg/1,000 mg. **Jentaducto XR:** linagliptin/metFORMIN (extended-release): 2.5 mg/1,000 mg; 5 mg/1,000 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Dipeptidyl peptidase-4 (DDP-4) inhibitor (glip-tin). **CLINICAL:** Antidiabetic agent.

USES

Adjunctive treatment to diet and exercise to improve glycemic control in pts with type 2 diabetes alone or in combination with other antidiabetic agents.

PRECAUTIONS

Contraindications: Hypersensitivity to linagliptin, other DD4 inhibitors. **Cautions:** Concurrent use of other hypoglycemics. Not recommended for use in type 1

diabetes, diabetic ketoacidosis, history of pancreatitis, HF.

ACTION

Slows inactivation of incretin hormones by inhibiting DDP-4 enzyme. **Therapeutic Effect:** Incretin hormones increase insulin synthesis/release from pancreatic beta cells and decrease glucagon secretion from pancreatic alpha cells. Lowers serum glucose levels.

PHARMACOKINETICS

Rapidly absorbed following PO administration. Peak plasma concentration: 1.5 hrs. Extensive tissue distribution. Protein binding: 70%–99%. Minimal metabolism (90% excreted as unchanged metabolite). Excreted primarily in enterohepatic system (80%), urine (5%). **Half-life:** 12 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. **Antidiabetic agents** (e.g., insulin, metformin, saxagliptin, sitagliptin, sulfonylureas) may increase risk of hypoglycemia. **HERBAL:** Ginseng, ginger, other herbs with hypoglycemic activity may increase risk of hypoglycemia. **St. John's wort** may decrease concentration/effect. **FOOD:** None known. **LAB VALUES:** Decreases serum glucose. May increase serum uric acid.

AVAILABILITY (Rx)

Tablets: 5 mg.

ADMINISTRATION/HANDLING

PO

- May give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Note: Dose reduction of insulin and/or insulin secretagogues may be needed.

Type 2 Diabetes Mellitus

PO: ADULTS, ELDERLY: 5 mg once daily.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (5%): Nasopharyngitis. **Rare (less than 2%):** Cough, headache.

ADVERSE EFFECTS/TOXIC REACTIONS

Hypoglycemia reported in 7% of pts. Concomitant use of hypoglycemic medication may increase hypoglycemic risk. Pancreatitis, hypersensitivity reactions (angioedema, rash, urticaria, pruritus, bronchospasm) occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check blood glucose, hemoglobin A1c level. Assess pt's understanding of diabetes management, routine glucose monitoring. Receive full medication history including herbal products.

INTERVENTION/EVALUATION

Monitor blood glucose, hemoglobin A1c level. Assess for hypoglycemia (diaphoresis, tremors, dizziness, anxiety, headache, tachycardia, perioral numbness, hunger, diplopia, difficulty concentrating), hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, fatigue, Kussmaul breathing). Screen for glucose-altering conditions: fever, increased activity or stress, surgical procedures. Dietary consult for nutritional education.

PATIENT/FAMILY TEACHING

- Diabetes requires lifelong control.
- Diet and exercise are principal parts of treatment; do not skip or delay meals.
- Test blood glucose regularly.
- When taking combination drug therapy or when glucose demands are altered (fever, infection, trauma, stress, heavy physical activity), have hypoglycemic treatment available (glucagon, oral dextrose).
- Monitor daily calorie intake.

linezolid

lin-ez-oh-lid

(Apo-Linezolid , Zyvox, Zyvoxam )

Do not confuse Zyvox with Zosyn or Zovirax.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Oxazolidinone. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to aerobic and facultative, gram-positive microorganisms, including *E. faecium* (vancomycin-resistant strains only), *S. aureus* (including methicillin-resistant strains), *S. agalactiae*, *S. pneumoniae* (including multidrug-resistant strains), *S. pyogenes*. Treatment of pneumonia (community-acquired and hospital-acquired), skin, soft tissue infections (including diabetic foot infections), bacteremia caused by susceptible vancomycin-resistant (VRE) organisms. **OFF-LABEL:** Treatment of prosthetic joint infection. Septic arthritis.

PRECAUTIONS

Contraindications: Hypersensitivity to linezolid. Concurrent use or within 2 wks of MAOIs. **Cautions:** History of seizures, preexisting myelosuppression, medications that may cause bone marrow depression, uncontrolled hypertension, pheochromocytoma, carcinoid syndrome, untreated hyperthyroidism, diabetes, chronic infection; concurrent use of SSRIs, SNRIs, tricyclic antidepressants, triptans, buPROPion.

ACTION

Binds to bacterial ribosomal RNA sites, preventing formation of a complex essential for bacterial translation. **Therapeutic Effect:** Bacteriostatic against enterococci, staphylococci; bactericidal against streptococci.

PHARMACOKINETICS

Rapidly, extensively absorbed after PO administration. Protein binding: 31%. Metabolized in liver by oxidation. Excreted in urine. **Half-life:** 4–5.4 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Adrenergic medications (sympathomimetics) may increase effects. **SSRIs** (e.g., escitalopram, PARoxetine, sertraline), **SNRIs** (e.g., DULoxetine, venlafaxine) may increase risk of serotonin syndrome. **Alcohol, carbamazepine, maprotiline, tapentadol** may increase adverse effects. **HERBAL:** Supplements containing **caffeine, tyrosine, or tryptophan** may precipitate hypertensive crisis. **FOOD:** Excessive amounts of **tyramine-containing foods, beverages** may cause significant hypertension. **LAB VALUES:** May decrease Hgb, neutrophils, platelets, WBC. May increase serum ALT, AST, alkaline phosphatase, amylase, bilirubin, BUN, creatinine, LDH, lipase.

AVAILABILITY (Rx)

Injection Premix: 2 mg/mL in 100-mL, 300-mL bags. **Powder for Oral Suspension:** 100 mg/5 mL. **Tablets:** 600 mg.

ADMINISTRATION/HANDLING

Rate of administration • Infuse over 30–120 min. • Should be administered without further dilution.

Storage • Store at room temperature. • Protect from light. • Yellow color does not affect potency.

PO

• Give without regard to food. • Use suspension within 21 days after reconstitution. Gently invert 3–5 times before administration. • Do not shake.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), co-trimoxazole (Bactrim), diazepam (Valium), erythromycin (Erythrocin), pentamidine (Pentam IV), phenytoin (Dilantin).

IV COMPATIBILITIES

Calcium gluconate, dexmedetomidine (Precedex), heparin, magnesium, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Vancomycin-Resistant Infections (VRE)

PO, IV; ADULTS, ELDERLY, CHILDREN OLDER THAN 11 YRS: 600 mg q12h. **CHILDREN 11 YRS AND YOUNGER:** 10 mg/kg q8–12h. **Maximum:** 600 mg/dose.

Pneumonia, Complicated Skin/Skin Structure Infections

PO, IV; ADULTS, ELDERLY, CHILDREN OLDER THAN 11 YRS: 600 mg q12h. **CHILDREN 11 YRS AND YOUNGER:** 10 mg/kg q8h. **Maximum:** 600 mg/dose.

Uncomplicated Skin/Skin Structure Infections

PO; ADULTS, ELDERLY: 600 mg q12h. **CHILDREN OLDER THAN 11 YRS:** 600 mg q12h. **CHILDREN 5–11 YRS:** 10 mg/kg/dose q12h. **Maximum:** 600 mg/dose. **CHILDREN YOUNGER THAN 5 YRS:** 10 mg/kg q8h. **Maximum:** 600 mg/dose.

Usual Neonate Dosage

PO, IV; NEONATES: 10 mg/kg/dose q8–12h.

Dosage in Renal/Hepatic Impairment

No dose adjustment. Administer after HD on dialysis days.

SIDE EFFECTS

Occasional (9%–2%): Diarrhea, nausea, vomiting, insomnia, constipation, rash, dizziness, fever, headache. **Rare (less than 2%):** Altered taste, vaginal candidiasis, fungal infection, tongue discoloration.

ADVERSE EFFECTS/TOXIC REACTIONS

Thrombocytopenia, myelosuppression occur rarely. Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance in GI tract.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain appropriate culture specimens for sensitivity testing prior to therapy. Obtain baseline CBC, chemistries. Question medical history as listed in Precautions. Receive full medication history and screen for interactions.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable, but increasing severity may indicate onset of antibiotic-associated colitis. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Monitor CBC, platelets, Hgb, chemistries.

PATIENT/FAMILY TEACHING

- Continue therapy for full length of treatment.
- Doses should be evenly spaced.
- May cause GI upset (may take with food, milk).
- Excessive amounts of tyramine-containing foods (red wine, aged cheese) may cause severe reaction (severe headache, neck stiffness, diaphoresis, palpitations).
- Avoid alcohol.
- Report persistent diarrhea, nausea, vomiting.

liraglutide

TOP
100

leer-a-gloo-tide
(Saxenda, Victoza)

BLACK BOX ALERT Causes dose-dependent and treatment duration-dependent thyroid C-cell tumors, including medullary thyroid cancer.

FIXED-COMBINATION(S)

Xultophy: liraglutide 3.6 mg/mL and insulin degludec 100 units/mL.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Antihyperglycemic (glucagon-like peptide-1 [GLP-1]) receptor agonist. **CLINICAL:** Antidiabetic agent.

USES

Saxenda: Adjunct to diet and increased physical activity for chronic weight management in adults with body mass index (BMI) of 30 kg/m² or greater, or 27 kg/m² or greater, with at least one co-morbid condition (e.g., hypertension, diabetes, dyslipidemia). **Victoza:** Adjunct to diet and exercise to improve glycemic control in adults and children 10 yrs of age and older with type 2 diabetes. Reduce risk of major cardiovascular events (e.g., MI, stroke) in adults with type 2 diabetes and established cardiovascular (CV) disease.

PRECAUTIONS

Contraindications: Hypersensitivity to liraglutide. Personal or family history of medullary thyroid carcinoma (MTC), pts with multiple endocrine neoplasia syndrome type 2 (MEN2). **Saxenda:** Pregnancy. **Cautions:** History of pancreatitis, cholelithiasis, alcohol abuse, renal/hepatic impairment. History of angioedema to other GLP-1 receptor agonists. Do not use in type 1 diabetes or diabetic ketoacidosis. Medications requiring a narrow therapeutic index or requiring rapid GI absorption.

ACTION

Stimulates release of insulin from pancreatic beta cells, mimics enhancement of glucose-dependent insulin secretion, decreases inappropriate glucagon secretion, slows gastric emptying, decreases food intake. **Therapeutic Effect:** Improves glycemic control by increasing postmeal insulin secretion, emptying, increasing satiety.

PHARMACOKINETICS

Maximum concentration achieved in 8–12 hrs. Protein binding: 98%. Metabolized to large proteins without a specific organ as major route of elimination. **Half-life:** 13 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase hypoglycemic effect of **insulin, sulfonylureas**. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** Decreases glucose serum levels (when used in combination with insulin secretagogues [e.g., sulfonylureas]).

AVAILABILITY (Rx)

SQ, Solution (Prefilled Pen): (**Victoza**): 18 mg/3 mL. (**Saxenda**): 18 mg/3 mL. Delivers doses of 0.6 mg, 1.2 mg, 1.8 mg, 2.4 mg, or 3 mg.

ADMINISTRATION/HANDLING**SQ**

- Insert needle subcutaneously into upper arms, outer thigh, or abdomen, and inject solution.
- Do not inject into areas of active skin disease or injury such as sunburns, skin rashes, inflammation, skin infections, or active psoriasis.
- Rotate injection sites.

Storage

- Refrigerate prefilled pens.
- Discard if freezing occurs.
- Discard pen 30 days after initial use.

INDICATIONS/ROUTES/DOSAGE**Diabetes (Victoza) With or Without CV Disease**

SQ: ADULTS, ELDERLY, CHILDREN 10 YRS OF AGE AND OLDER: **Initial dose:** 0.6 mg once daily for at least 1 wk. (**Note:** This dose is intended to reduce GI symptoms during initial titration; it is not effective for glycemic control.) After 1 wk, increase dose to 1.2 mg. If 1.2-mg

dose does not result in acceptable glyce-mic control, dose can be increased to 1.8 mg.

Weight Management (Saxenda)

SO: ADULTS, ELDERLY: Initially, 0.6 mg once daily for 1 week. Increase wkly by 0.6 mg/day to a target dose of 3 mg once daily. **Note:** Evaluate change in weight 16 wks after initiation. Discontinue if less than 4% of baseline weight not achieved.

Dosage in Renal/Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (greater than 13%): Headache, nausea, diarrhea, liraglutide antibody resistance. **Occasional (13%–6%):** Diarrhea, vomiting, dizziness, nervousness, dyspepsia. **Rare (less than 6%):** Weakness, decreased appetite.

ADVERSE EFFECTS/TOXIC REACTIONS

Serious hypoglycemia may occur when used concurrently with insulin analogue (e.g., sulfonylurea); consider lowering dose.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check blood glucose concentration before administration. Discuss pt's lifestyle to determine extent of learning, emotional needs. Ensure follow-up instruction if pt/family does not thoroughly understand diabetes management or glucose testing technique. Dose is gradually increased to improve GI tolerance.

INTERVENTION/EVALUATION

Monitor blood glucose level, food intake. Assess for hypoglycemia (cool wet skin, tremors, dizziness, anxiety, headache, tachycardia, numbness in mouth, hunger, diplopia) or hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, dim vision, fatigue, deep rapid breathing). Be alert to conditions that alter glucose requirements (fever, increased

activity/stress, surgical procedures). Consider lowering dose of insulin analogue to reduce risk of hypoglycemia.

PATIENT/FAMILY TEACHING

- A health care provider will show you how to properly prepare and inject your medication. You must demonstrate correct preparation and injection techniques before using medication at home.
- Diabetes requires lifelong control.
- Prescribed diet, exercise are principal parts of treatment; do not skip/delay meals.
- Continue following dietary instructions, regular exercise program, regular testing of blood glucose level.
- Serious hypoglycemia may occur when used concurrently with insulin analogue (e.g., sulfonylurea).
- Have source of glucose available to treat symptoms of low blood sugar.

TOP
100

lisdexamfetamine

lis-dex-am-fet-a-meen
(Vyvanse)

BLACK BOX ALERT Potential for drug abuse dependency exists. Assess for abuse potential and monitor for abuse potential/dependence.

Do not confuse lisdexamfetamine with dextroamphetamine, or Vyvanse with Glucovance, Vivactil, or Vytorin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Amphetamine (Schedule II). **CLINICAL:** CNS stimulant.

USES

Treatment of attention-deficit/hyperactivity disorder (ADHD), moderate to severe binge eating disorder (BED).

PRECAUTIONS

Contraindications: Hypersensitivity to lisdexamfetamine, amphetamine products.

Concurrent use or within 2 wks of use of MAOI. **Cautions:** Hyperthyroidism, glaucoma, agitated states, cardiovascular conditions (hypertension, recent MI, ventricular arrhythmias), elderly, psychiatric/seizures, preexisting psychosis or bipolar disorder, Tourette syndrome. Avoid use in pts with serious structural cardiac abnormalities, cardiomyopathy, arrhythmias, CAD. History of alcohol or drug abuse.

ACTION

Exact mechanism unknown. Enhances action of DOPamine, norepinephrine by blocking reuptake from synapses, increasing levels in extraneuronal space. **Therapeutic Effect:** Improves attention span in ADHD. Reduces severity of BED.

PHARMACOKINETICS

Rapidly absorbed. Converted to dextro-amphetamine. Excreted in urine. **Half-life:** Less than 1 hr.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Has potential for fetal harm. Distributed in breast milk. **Children:** Safety and efficacy not established in pts younger than 6 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: MAOIs (e.g., phenelzine, selegiline) may increase hypertensive effect. May decrease sedative effect of antihistamines (e.g., diphenhydramine). May decrease hypotensive effects of antihypertensives (e.g., amlodipine, lisinopril, valsartan). Haloperidol, lithium, urinary acidifying agents (ammonium chloride, sodium acid phosphate) may decrease therapeutic effect. May decrease concentration/effect of phenobarbital, phenytoin. Tricyclic antidepressants (e.g., amitriptyline, doxepin) may increase stimulatory effects. **HERBAL:** None significant. **FOOD:** None known.

LAB VALUES: May increase plasma corticosteroid.

AVAILABILITY (Rx)

Capsules: 10 mg, 20 mg, 30 mg, 40 mg, 50 mg, 60 mg, 70 mg. **Tablets, Chewable:** 10 mg, 20 mg, 30 mg, 40 mg, 50 mg, 60 mg.

ADMINISTRATION/HANDLING

PO

- May be given in the morning without regard to food.
- Administer capsule whole; pt must not chew.
- Capsules may be opened and dissolved in water and taken immediately.
- **Chewable tablets:** Tablets must be chewed thoroughly before swallowing.

INDICATIONS/ROUTES/DOSAGE

ADHD

Note: Assess for cardiac disease and risk of abuse before initiating.

PO: ADULTS, CHILDREN 6 YRS AND OLDER: Initially, 30 mg once daily in the morning. May increase dosage in increments of 10 or 20 mg/day at wkly intervals until optimal response obtained. **Maximum:** 70 mg/day.

BED

PO: ADULTS, ELDERLY: Initially, 30 mg once daily in morning. May increase by 20 mg/day at wkly intervals to a target dose of 50–70 mg once daily. **Maximum:** 70 mg/day.

Dosage in Renal Impairment

CrCl 30 mL/min or greater: Maximum: 70 mg/day. **CrCl 15–29 mL/min: Maximum:** 50 mg/day. **CrCl less than 15 mL/min or end-stage renal disease: Maximum:** 30 mg/day.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (39%): Decreased appetite. **Occasional (19%–9%):** Insomnia, upper abdominal pain, headache, irritability, vomiting, weight decrease. **Rare (6%–2%):** Nausea, dry mouth, dizziness, rash, affect change, fatigue, tic.

ADVERSE EFFECTS/TOXIC REACTIONS

Abrupt withdrawal following prolonged administration of high dosage may produce extreme fatigue (may last for wks). Prolonged administration to children with ADHD may produce a suppression of weight and/or height patterns. May produce cardiac irregularities, psychotic syndrome.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess attention span, impulse control, interaction with others. Question history of cardiomyopathy, glaucoma, hypertension, hyperthyroidism, psychiatric disorder, renal impairment. Receive full medication history and screen for interactions.

INTERVENTION/EVALUATION

Monitor for CNS stimulation, increase in B/P, weight loss, pulse, sleep pattern, appetite; palpitations, cardiac arrhythmia. Observe for signs of hostility, aggression, depression.

PATIENT/FAMILY TEACHING

- Take early in day.
- May mask extreme fatigue.
- Report pronounced dizziness, decreased appetite, dry mouth, weight loss, new or worsened psychiatric problems, palpitations, dyspnea.
- Suddenly stopping treatment may cause extreme fatigue that can last for wks. Discontinuance must be done under the close supervision of health care professional.

lisinopril

TOP
100

lye-sin-o-pril
(Prinivil, Qbrelis, Zestril)

BLACK BOX ALERT ■ May cause fetal injury, mortality. Discontinue as soon as possible once pregnancy is detected.

Do not confuse lisinopril with fosinopril, or Prinivil with Plendil, Pravachol, Prevacid, PriLOSEC, Proventil, or Restoril, or Zestril with Desyrel, Restoril, Vistaril, Zetia, or Zostrix. Do not confuse lisinopril's combination form Zestoretic with PriLOSEC.

FIXED-COMBINATION(S)

Prinzide/Zestoretic: lisinopril/hydroCHLORothiazide (a diuretic): 10 mg/12.5 mg, 20 mg/12.5 mg, 20 mg/25 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: ACE inhibitor. **CLINICAL:** Antihypertensive.

USES

Treatment of hypertension in adults and children 6 yrs and older. Adjunctive therapy to reduce signs/symptoms of systolic HF. Treatment of acute MI within 24 hrs in hemodynamically stable pts to improve survival.

PRECAUTIONS

Contraindications: Hypersensitivity to lisinopril, other ACE inhibitors. History of angioedema from treatment with ACE inhibitors, idiopathic or hereditary angioedema. Concomitant use with aliskiren in pts with diabetes. Co-administration with or within 36 hrs of switching to or from a neprilysin inhibitor (e.g., sacubitril). **Cautions:** Renal impairment, unstented unilateral/bilateral renal artery stenosis, volume depletion, ischemic heart disease, cerebrovascular disease, severe aortic stenosis, hypertrophic cardiomyopathy, HF, systolic B/P less than 100, dialysis, hyponatremia; before, during, or immediately after major surgery. Concomitant use of potassium supplements.

ACTION

Competitive inhibitor of angiotensin-converting enzyme (ACE) (prevents

conversion of angiotensin I to angiotensin II, a potent vasoconstrictor; may inhibit angiotensin II at local vascular, renal sites). Decreases plasma angiotensin II, increases plasma renin activity, decreases aldosterone secretion. **Therapeutic Effect:** Reduces blood pressure.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	6 hrs	24 hrs

Incompletely absorbed from GI tract. Protein binding: 25%. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 12 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to hypotensive effects.

INTERACTIONS

DRUG: Aliskiren may increase hyperkalemic effect. May increase potential for allergic reactions to allopurinol. **Angiotensin receptor blockers** (e.g., losartan, valsartan) may increase adverse effects. May increase adverse effects of lithium, sacubitril. **HERBAL:** Herbals with hypertensive properties (e.g., licorice, yohimbe) or hypotensive properties (e.g., garlic, ginger, ginkgo biloba) may alter effects. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, bilirubin, creatinine, potassium, ALT, AST. May decrease serum sodium. May cause positive ANA titer.

AVAILABILITY (Rx)

Solution, Oral: (*Qbrelis*): 1 mg/mL. **Tablets:** 2.5 mg, 5 mg, 10 mg, 20 mg, 30 mg, 40 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.
- Tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS: Initially, 5–10 mg once daily. Evaluate response q4–6wks and titrate dose in 1-step increments prn (e.g., increase the daily dose by doubling), up to 40 mg once daily. **ELDERLY:** Initially, 2.5–5 mg once daily. Evaluate response q4–6wks and titrate dose in 1-step increments prn (e.g., increase the daily dose by doubling), up to 40 mg once daily. **CHILDREN 6 YRS OR OLDER:** Initially, 0.07 mg/kg once daily (up to 5 mg). Titrate at 1- to 2-wk intervals. **Maximum:** 0.6 mg/kg/day or 40 mg/day.

HF

PO: ADULTS, ELDERLY: Initially, 2.5–5 mg/day. May increase by no more than 10 mg/day at intervals of at least 2 wks to a target dose of 20–40 mg once daily.

Acute MI (to improve survival)

PO: ADULTS, ELDERLY: Initially, 2.5–5 mg, then titrate slowly to 10 mg/day or higher, if tolerated.

Dosage in Renal Impairment

CrCl less than 30 mL/min: Not recommended in children. Titrate to pt's needs after giving the following initial dose:

Hypertension

Creatinine Clearance	Initial Dose
10–30 mL/min	5 mg
Less than 10 mL/min or Dialysis	2.5 mg

HF

CrCl less than 30 mL/min or serum creatinine greater than 3 mg/dL: Initial dose: 2.5 mg.

Acute MI

CrCl 30 mL/min or less: Initial dose: 2.5 mg.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (12%–5%): Headache, dizziness, postural hypotension. **Occasional (4%–2%):** Chest discomfort, fatigue, rash, abdominal pain, nausea, diarrhea, upper respiratory infection. **Rare (1% or less):** Palpitations, tachycardia, peripheral edema, insomnia, paresthesia, confusion, constipation, dry mouth, muscle cramps.

ADVERSE EFFECTS/TOXIC REACTIONS

Excessive hypotension (first-dose syncope) may occur in pts with HF; severe salt/volume depletion. Angioedema (swelling of face and lips), hyperkalemia occur rarely. Agranulocytosis, neutropenia may be noted in pts with collagen vascular disease (scleroderma, systemic lupus erythematosus). Nephrotic syndrome may be noted in pts with history of renal disease.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain BMP (esp. serum BUN, creatinine, sodium, potassium; CrCl, GFR. Obtain B/P, apical pulse immediately before each dose in addition to regular monitoring (be alert to fluctuations). In pts with renal impairment, autoimmune disease, taking drugs that affect leukocytes or immune response, CBC and differential count should be performed before beginning therapy and q2wks for 3 mos, then periodically thereafter. Question history of aortic stenosis, cardiac disease, cardiomyopathy, renal impairment or stenosis.

INTERVENTION/EVALUATION

Monitor B/P, renal function tests, WBC, serum potassium. Assess for edema. Auscultate lungs for rales. Monitor I&O; weigh daily. Monitor daily pattern of bowel activity, stool consistency. Assist with ambulation if dizziness occurs. If excessive reduction in B/P occurs,

place pt in supine position, feet slightly elevated.

PATIENT/ FAMILY TEACHING

- To reduce hypotensive effect, go from lying to standing slowly.
- Limit alcohol intake.
- Report vomiting, diarrhea, diaphoresis, swelling of face/lips/tongue, difficulty in breathing, persistent cough.
- Limit salt intake.
- Maintain adequate hydration.
- Report decreased urinary output, dark-colored urine, swelling of the hands and feet.
- Immediately report allergic reactions, esp. life-threatening swelling of the face or tongue.

lithium

lith-ee-um

(Carbolith , Lithobid, Lithane , Lithmax )

■ BLACK BOX ALERT ■ Lithium toxicity is closely related to serum lithium levels and can occur at therapeutic doses. Routine determination of serum lithium levels is essential during therapy.

Do not confuse Lithobid with Levid or Lithostat.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Mood-stabilizing agent. **CLINICAL:** Antimanic.

USES

Management of bipolar disorder. Treatment of mania in pts with bipolar disorder. **OFF-LABEL:** Augmenting agent for depression.

PRECAUTIONS

Contraindications: Hypersensitivity to lithium. Severely debilitated pts, severe cardiovascular disease, concurrent use with diuretics, severe dehydration, severe

renal disease, severe sodium depletion or dehydration. **Cautions:** Mild to moderate cardiovascular disease, thyroid disease, elderly, mild to moderate renal impairment, medications altering sodium excretion, pregnancy, pts at risk for suicide, pts with significant fluid loss, pts receiving neuromuscular blocking agents.

ACTION

Exact mechanism unknown. Alters cation transport across cell membrane in nerve/muscle cells; influences reuptake of serotonin/norepinephrine. **Therapeutic Effect:** Stabilizes mood, reducing episodes of mania.

PHARMACOKINETICS

Rapidly, completely absorbed from GI tract. Protein binding: None. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 18–24 hrs (increased in elderly).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Freely crosses placenta. Distributed in breast milk. **Children:** May increase bone formation or density (alter parathyroid hormone concentrations). **Elderly:** More susceptible to develop lithium-induced goiter or clinical hypothyroidism, CNS toxicity. Increased thirst, urination noted more frequently; lower dosage recommended.

INTERACTIONS

DRUG: Diuretics (e.g., furosemide, hydroCHLORothiazide), NSAIDs (e.g., ibuprofen, naproxen, ketorolac), metronIDAZOLE, ACE inhibitors (e.g., enalapril, lisinopril), angiotensin II antagonists (e.g., losartan, valsartan), SSRIs (e.g., escitalopram, PARoxetine, sertraline), calcium channel blockers (e.g., amlodIPine, diLTIAZem, verapamil) may increase lithium concentration, risk of toxicity. May increase neurotoxic effect of tricyclic antidepressants (e.g., amitriptyline). MAOIs (e.g., phenelzine, selegiline) may increase

adverse effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, immunoreactive parathyroid hormone, calcium. **Therapeutic serum level:** 0.6–1.2 mEq/L; **toxic serum level:** greater than 1.5 mEq/L.

AVAILABILITY (Rx)

Capsules: 150 mg, 300 mg, 600 mg. **Oral Solution:** 8 mEq/5 mL (equivalent to 300 mg lithium carbonate). **Tablets:** 300 mg.

 **Tablets (Extended-Release):** 300 mg, 450 mg.

ADMINISTRATION/HANDLING

PO

- Administer with meals, milk to decrease GI upset.
- Do not break, crush, dissolve, or divide extended-release tablets.

INDICATIONS/ROUTES/DOSAGE

 **ALERT** During acute phase, a therapeutic serum lithium concentration of 0.6–1.2 mEq/L is required. For long-term control, desired level is 0.8–1 mEq/L. Monitor serum drug concentration, clinical response to determine proper dosage.

Usual Dosage

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: (*Immediate-Release*): 300 mg 3–4 times/day. Gradually increase (e.g., 300–600 mg q1–5 days) based on response/tolerability. Usual dose: (*Immediate-Release*): 900–1,800 mg/day in 1–3 divided doses. (*Extended-Release*): 450 mg twice daily. Gradually increase based on response/tolerability. Usual dose: (*Extended-Release*): 900–1,800 mg in 2 divided doses.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
10–50 mL/min	50%–75% normal dose
Less than 10 mL/min	25%–50% normal dose
End-stage renal disease with HD	Dose after HD

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

ALERT Side effects are dose related and seldom occur at lithium serum levels less than 1.5 mEq/L. **Occasional:** Fine hand tremor, polydipsia, polyuria, mild nausea. **Rare:** Weight gain, bradycardia, tachycardia, acne, rash, muscle twitching, peripheral cyanosis, pseudotumor cerebri (eye pain, headache, tinnitus, vision disturbances).

ADVERSE EFFECTS/TOXIC REACTIONS

Lithium serum concentration of 1.5–2.0 mEq/L may produce vomiting, diarrhea, drowsiness, confusion, incoordination, coarse hand tremor, muscle twitching, T-wave depression on ECG. Lithium serum concentration of 2.0–2.5 mEq/L may result in ataxia, giddiness, tinnitus, blurred vision, clonic movements, severe hypotension. Acute toxicity may be characterized by seizures, oliguria, circulatory failure, coma, death.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Question history of cardiac/thyroid disease, renal impairment. Assess hydration status. Assess mental status (e.g., mood, behavior). Serum lithium levels should be tested q3–4days during initial phase of therapy, q1–2mos thereafter, and wkly if there is no improvement of disorder or adverse effects occur.

INTERVENTION/EVALUATION

Clinical assessment of therapeutic effect, tolerance to drug effect is necessary for correct dosing-level management. Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content. Monitor serum lithium concentrations, CBC with differential, urinalysis, creatinine clearance. Monitor renal, hepatic, thyroid, cardiovascular function; serum electrolytes.

Assess for increased urinary output, persistent thirst. Report polyuria, prolonged vomiting, diarrhea, fever to physician (may need to temporarily reduce or discontinue dosage). Monitor for signs of lithium toxicity. Assess for therapeutic response (interest in surroundings, improvement in self-care, increased ability to concentrate, relaxed facial expression). Monitor lithium levels q3–4days at initiation of therapy (then q1–2mos). Obtain lithium levels 8–12 hrs postdose. **Therapeutic serum level:** 0.6–1.2 mEq/L; **toxic serum level:** greater than 1.5 mEq/L.

PATIENT/ FAMILY TEACHING

- Limit alcohol, caffeine intake.
- Avoid tasks requiring coordination until CNS effects of drug are known.
- May cause dry mouth.
- Maintain adequate salt, fluid intake (avoid dehydration).
- Report vomiting, diarrhea, muscle weakness, tremors, drowsiness, ataxia.
- Monitoring of serum level is necessary to determine proper dose.

lixisenatide

lix-i-sen-a-tide
(Adlyxin)

Do not confuse lixisenatide with exenatide, liraglutide.

FIXED-COMBINATION(S)

Soliqua: lixisenatide 33 mcg/mL and insulin glargine 100 units/mL.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Antihyperglycemic (glucagon-like peptide-1 [GLP-1] receptor agonist). **CLINICAL:** Antidiabetic agent.

USES

Adjunct to diet and exercise to improve glycemic controls in pts with type 2 diabetes mellitus.

PRECAUTIONS

Contraindications: Hypersensitivity to lixisenatide. **Cautions:** Renal impairment, severe gastroparesis, history of pancreatitis. Not recommended in pts with diabetic ketoacidosis, type 1 diabetes mellitus. Not a substitute for insulin. Medications with narrow therapeutic index or requiring rapid GI absorption.

ACTION

Increases glucose-dependent insulin secretion; decreases inappropriate glucagon secretion. Slows gastric emptying. **Therapeutic Effect:** Improves glycemic control by lowering fasting glucose and postprandial blood glucose.

PHARMACOKINETICS

Widely distributed. Protein binding: not specified. Peak plasma concentration: 1–3.5 hrs. Eliminated through glomerular filtration and proteolytic degradation.

Half-life: 3 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase hypoglycemic effect when added to **insulin or sulfonylureas**. May decrease concentration/effect of **oral contraceptives**. **Oral contraceptive** should be taken 1 hr before or 11 hrs after lixisenatide. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** Expected to decrease serum glucose, Hgb A1c.

AVAILABILITY (Rx)

Prefilled Injector Pens: 10 mcg/0.2 mL, 20 mcg/0.2 mL.

ADMINISTRATION/HANDLING

SQ

Preparation • Follow instructions for preparation according to manufacturer

guidelines. • Visually inspect for particulate matter or discoloration. Solution should appear clear and colorless. • Do not use if solution is cloudy or discolored or if visible particles are observed.

Administration • Administer within 1 hr before the first meal of the day, preferably the same time each day. If a dose is missed, administer within 1 hr prior to next meal. • Insert needle subcutaneously into upper arms, outer thigh, or abdomen, and inject solution. • Do not inject into areas of active skin disease or injury such as sunburns, skin rashes, inflammation, skin infections, or active psoriasis. • Rotate injection sites.

Storage • Refrigerate unused injector pens. • Once injector pen is activated, store at room temperature for up to 14 days. • Do not freeze. • Protect from light.

INDICATIONS/ROUTES/DOSAGE

Type 2 Diabetes Mellitus

SQ: ADULTS, ELDERLY: 10 mcg once daily for 14 days. Increase to 20 mcg once daily on day 15. **Maintenance:** 20 mcg once daily.

Dosage in Renal Impairment

Use caution.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (25%–10%): Nausea, vomiting. **Occasional (9%–1%):** Headache, diarrhea, dizziness, dyspepsia, constipation, abdominal distention, abdominal pain.

ADVERSE EFFECTS/TOXIC REACTIONS

May increase risk of acute renal failure or worsening of chronic renal impairment (esp. in pts with vomiting, dehydration). May increase risk of hypoglycemia when used with other hypoglycemic agents or insulin. Anaphylaxis reported in less than 1% of pts. Other hypersensitivity reactions including angioedema,

bronchospasm, laryngeal edema occur rarely. Acute pancreatitis, hemorrhagic or necrotizing pancreatitis were reported. Immunogenicity (auto-lixisenatide antibodies) occurred in 70% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline fasting glucose level, Hgb A1c; BMP. Question history of renal impairment, gastroparesis, hypersensitivity reaction. Screen for use of other hypoglycemic agents or insulin. Assess pt's understanding of diabetes management, routine home glucose monitoring, medication self-administration. Assess hydration status. Obtain dietary consult for nutritional education.

INTERVENTION/EVALUATION

Monitor capillary blood glucose levels, Hgb A1c; renal function test (esp. in pts with renal impairment who report diarrhea, gastroparesis, vomiting). Assess for hypoglycemia (anxiety, confusion, diaphoresis, diplopia, dizziness, headache, hunger, perioral numbness, tachycardia, tremors), hyperglycemia (confusion, fatigue, Kussmaul breathing, nausea, polyuria, vomiting). Screen for glucose-altering conditions: fever, stress, surgical procedures, trauma. Monitor for hypersensitivity reactions; abdominal pain that radiates to the back. Encourage fluid intake. Monitor I&O.

PATIENT/FAMILY TEACHING

- Diabetes requires lifelong control. Diet and exercise are principal parts of treatment; do not skip or delay meals.
- Test blood sugar regularly.
- Monitor daily calorie intake.
- When taking additional medications to lower blood sugar or when glucose demands are altered (fever, infection, stress trauma), have low blood sugar treatment available (glucagon, oral dextrose).
- Persistent, severe abdominal pain that radiates to the back (with or without vomiting) may indicate acute pancreatitis.
- Report allergic reactions of any kind, esp. difficulty breathing, itching,

rash, swelling of the face or throat.

- Oral contraceptives should be taken at least 1 hr before or 11 hrs after dose.
- Therapy may cause acute kidney injury or kidney failure; report decreased urine output, amber-colored urine, flank pain.

lomitapide

lom-i-ta-pide
(Juxtapid)

BLACK BOX ALERT May cause hepatotoxicity. May cause hepatic steatosis (increase in hepatic fat) regardless of serum ALT, AST elevation; may be risk factor for progressive hepatic disease, including steatohepatitis and cirrhosis.

Do not confuse lomitapide with loperamide.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Microsomal triglyceride transfer protein (MTP) inhibitor. **CLINICAL:** Antihyperlipidemic.

USES

Treatment of homozygous familial hypercholesterolemia (HoFH) in combination with low-fat diet and other lipid-lowering therapies, including LDL-C apheresis, to reduce LDL, total cholesterol, apoprotein B, non-HDL-C.

PRECAUTIONS

Contraindications: Hypersensitivity to lomitapide. Pregnancy, breastfeeding, moderate to severe hepatic impairment, active hepatic disease including unexplained persistent elevation of serum transaminases, concomitant use of strong CYP3A4 inhibitors. **Cautions:** Mild to moderate renal impairment, end-stage renal disease, mild hepatic impairment, alcohol consumption. Avoid use in pts with history of

glucose-galactose malabsorption, other agents having hepatotoxic potential (e.g., acetaminophen).

ACTION

Inhibits microsomal triglyceride transfer protein (MTP) in lumen of endoplasmic reticulum. Prevents assembly of apo-B-containing lipoproteins in enterocytes, hepatocytes; inhibits synthesis of chylomicrons, very low density lipoprotein (VLDL). **Therapeutic Effect:** Decreases plasma low-density lipoprotein cholesterol (LDL-C).

PHARMACOKINETICS

Well absorbed in GI tract. Metabolized in liver. Protein binding: 99%. Peak plasma concentration: 6 hrs. Primarily excreted in feces. **Half-life:** 40 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in pregnancy. May cause fetal harm. Must use effective contraception in addition to barrier methods. Unknown if distributed in breast milk. Must either discontinue breastfeeding or discontinue therapy. **Children:** Safety and efficacy not established. **Elderly:** Increased risk for side effects, adverse reactions.

INTERACTIONS

DRUG: Acetaminophen may increase risk for hepatotoxicity. **Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole, ritonavir)** contraindicated due to increased risk for myopathy, rhabdomyolysis. **Moderate CYP3A4 inhibitors (e.g., atorvastatin, oral contraceptives)** may increase concentration. May increase concentration of warfarin. **Ciprofloxacin** may increase concentration/effect. **HERBAL:** St. John's wort may decrease concentration/effect. **FOOD:** Grapefruit products may increase absorption, toxicity. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, ALT, AST.

AVAILABILITY (Rx)

 **Capsules:** 5 mg, 10 mg, 20 mg, 30 mg, 40 mg, 60 mg.

ADMINISTRATION/HANDLING

PO

• Give with water only. • Administer without food (at least 2 hrs after evening meal). • Administer whole; do not break, crush, or open capsules.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ To reduce risk for fat-soluble nutrient deficiency, recommend supplemental coadministration: vitamin E 400 international units PO daily, linolenic acid 200 mg PO daily, alpha-linolenic acid (ALA) 210 mg PO daily, eicosapentaenoic acid (EPA) 110 mg PO daily, docosahexaenoic acid (DHA) 80 mg PO daily. Because of risk for myopathy, concurrent use of simvastatin should not exceed 20–40 mg/day.

Homozygous Familial

Hypercholesterolemia (HoFH)

PO: ADULTS, ELDERLY: Initially, 5 mg once daily for minimum of 2 wks. Then, may increase dose to 10 mg once daily, then may increase dose at 4-wk (minimum) intervals to 20 mg once daily, then 40 mg once daily, then 60 mg once daily based on tolerability. **Maximum:** 60 mg/day.

Dose Modification

Elevated Hepatic Enzymes

If ALT, AST is between 3–5 times upper limit of normal (ULN), reduce dose until ALT, AST less than 3 times ULN. If ALT, AST is greater than 5 times ULN, withhold dose until less than 3 times ULN, then restart at reduced dose. If hepatotoxicity occurs or bilirubin level rises greater than 2 times ULN, discontinue treatment.

End-Stage Renal Disease Receiving Dialysis, Mild Hepatic Impairment

Do not exceed 40 mg/day.

Concurrent Use of Weak CYP3A4**Inhibitors**

Do not exceed 30 mg/day.

Concurrent Use of Oral Contraception

Do not exceed 40 mg/day.

Dosage in Renal Impairment

No dose adjustment. **End-stage renal disease: Maximum:** 40 mg/day.

Dosage in Hepatic Impairment

Mild impairment: Maximum: 40 mg/day. **Moderate to severe impairment:** Contraindicated.

SIDE EFFECTS

Frequent (79%–65%): Diarrhea, nausea. **Occasional (38%–10%):** Dyspepsia, vomiting, abdominal pain, weight loss, abdominal distention, constipation, flatulence, fatigue, back pain, gastric reflux, headache, dizziness.

ADVERSE EFFECTS/TOXIC REACTIONS

Progressive hepatic disease including steatohepatitis, cirrhosis has been reported in 6% of pts due to increased hepatic fat. May reduce absorption of fat-soluble nutrients; recommend daily supplemental replacement. Increased risk for myopathy including rhabdomyolysis (muscle pain/tenderness, weakness, dark or decreased urine output, elevated serum creatinine, CPK) when used with other antihyperlipidemics. May increase risk for supratherapeutic INR with warfarin. Infections including influenza, nasopharyngitis, gastroenteritis reported in 5% of pts. Palpitations, angina pectoris reported in 3% of pts. Increased risk for dehydration/malabsorption with galactose intolerance hereditary disorder, pancreatic disease, diarrhea.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain detailed dietary history, esp. fat consumption. Confirm negative pregnancy test before initiating treatment.

Obtain baseline laboratory studies: ALT, AST, alkaline phosphatase, bilirubin, serum cholesterol, triglycerides, PT/INR (if pt is on warfarin). Confirm positive history of homozygous familial hypercholesterolemia (HoFH). Receive full medication history including vitamins, minerals, herbal products. Screen for medical history as listed in Precautions.

INTERVENTION/EVALUATION

Maintain hydration; offer fluids frequently. Monitor INR routinely (with anticoagulants). Monitor LFT with any dosage change, then every month for first year when maintenance goal reached, then every 3 mos. Obtain ECG for palpitations, shortness of breath, dizziness. Monitor for bruising, hematuria, jaundice, right upper abdominal pain, fever, lethargy, melena.

PATIENT/FAMILY TEACHING

- Avoid pregnancy.
- Use appropriate contraception measures, including barrier precautions.
- If pregnancy occurs, inform physician immediately.
- Diarrhea may decrease effectiveness of oral contraception.
- Do not breastfeed.
- Maintain low-fat diet.
- Report yellowing of skin, bruising, black/tarry stool, right upper quadrant pain, fever, lethargy, chest pain, palpitations.
- Avoid alcohol.
- Avoid grapefruit products.
- Do not chew, crush, or open capsules.
- Report any newly prescribed medications.

loperamide

loe-per-a-myde

(Diamode, Diarr-Eze , Imodium A-D, Loperacap )

Do not confuse Imodium with Indocin, or loperamide with furosemide.

FIXED-COMBINATION(S)

Imodium Advanced: loperamide/simethicone (an antiflatulent): 2 mg/125 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Antidiarrheal agent. **CLINICAL:** Antidiarrheal.

USES

Controls, provides symptomatic relief of acute nonspecific diarrhea in pts 2 yrs and older, chronic diarrhea associated with inflammatory bowel disease; reduces volume of ileostomy discharge. **OTC:** Control symptoms of diarrhea, including traveler's diarrhea. **OFF-LABEL:** Chemotherapy-induced diarrhea, irinotecan-induced delayed diarrhea.

PRECAUTIONS

Contraindications: Hypersensitivity to loperamide. Abdominal pain without diarrhea; children younger than 2 yrs; acute dysentery, acute ulcerative colitis, bacterial enterocolitis caused by invasive organisms, including *Salmonella*, *Shigella*, *Campylobacter*; pseudomembranous colitis associated with broad-spectrum antibiotic use. **Cautions:** Hepatic impairment, use in young children. Avoid use when inhibition of peristalsis is undesirable (e.g., potential for ileus, megacolon). Avoid use in pts with risk factors for QT prolongation.

ACTION

Directly affects intestinal wall muscles through opioid receptor. **Therapeutic Effect:** Slows intestinal motility, prolongs transit time of intestinal contents by reducing fecal volume, diminishing loss of fluid, electrolytes, increasing viscosity, bulk of stool. Increases tone of anal sphincter.

PHARMACOKINETICS

Poorly absorbed from GI tract. Protein binding: 97%. Metabolized in liver. Excreted in feces (30%), urine (less than 2%). Not removed by hemodialysis. **Half-life:** 9–14 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Not recommended for pts younger than 2 yrs (infants younger than 3 mos more susceptible to CNS effects). **Elderly:** May mask dehydration, electrolyte depletion.

INTERACTIONS

DRUG: May increase concentration/effects of **QT-prolonging agents** (e.g., amiodarone, haloperidol, sotalol). **Ranolazine** may increase levels/effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: 2 mg. **Liquid:** 1 mg/5 mL, 1 mg/7.5 mL. **Suspension, Oral:** 1 mg/7.5 mL. **Tablet:** 2 mg.

ADMINISTRATION/HANDLING

Liquid

- When administering to children, use accompanying plastic dropper to measure the liquid.

INDICATIONS/ROUTES/DOSAGE

Acute Diarrhea

PO: (Capsules): ADULTS, ELDERLY: Initially, 4 mg, then 2 mg after each unformed stool. **Maximum:** 16 mg/day. **CHILDREN 9–12 YRS, WEIGHING MORE THAN 30 KG:** Initially, 2 mg 3 times/day for 24 hrs, then 0.1 mg/kg/dose after each loose stool. **Maximum:** 6 mg/day. **CHILDREN 6–8 YRS, WEIGHING 20–30 KG:** Initially, 2 mg twice daily for 24 hrs, then 0.1 mg/kg/dose after each loose stool. **Maximum:** 4 mg/day. **CHILDREN 2–5 YRS, WEIGHING 13–20 KG:** Initially, 1 mg 3 times/day for 24 hrs, then 0.1 mg/kg/dose after each loose stool. **Maximum:** 3 mg/day.

Chronic Diarrhea

PO: ADULTS, ELDERLY: Initially, 4 mg, then 2 mg after each unformed stool until diarrhea is controlled. Average maintenance dose: 4–8 mg/day. **Maximum:** 16 mg/day.

Traveler's Diarrhea

PO: ADULTS, ELDERLY: Initially, 4 mg, then 2 mg after each loose bowel movement (LBM). **Maximum:** 16 mg/day (OTC: 8 mg/day). **CHILDREN 9–11 YRS:** Initially, 2 mg, then 1 mg after each LBM. **Maximum:** 6 mg/day. **CHILDREN 6–8 YRS:** Initially, 2 mg, then 1 mg after each LBM. **Maximum:** 4 mg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Rare: Dry mouth, drowsiness, abdominal discomfort, allergic reaction (rash, pruritus).

ADVERSE EFFECTS/TOXIC REACTIONS

Toxicity results in constipation, GI irritation (nausea, vomiting), CNS depression. Activated charcoal is used to treat loperamide toxicity.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Do not administer if GI bleeding, mechanical obstruction is suspected. Investigate cause of diarrhea (infectious vs. noninfectious). The use of anti-diarrheals in the presence of *C. difficile*-associated diarrhea or other diarrhea caused by bacteria is controversial (drug may inhibit expulsion of toxic bacteria while elderly and debilitated pts are at an increased risk of mortality due to dehydration).

INTERVENTION/EVALUATION

Encourage adequate fluid intake. Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool consistency. Withhold drug, notify physician promptly in event of abdominal pain, distention, fever.

PATIENT/FAMILY TEACHING

- Do not exceed prescribed dose.
- May cause dry mouth.
- Avoid alcohol.
- Avoid tasks that require alertness, motor skills until response to drug

is established. • Report diarrhea lasting more than 3 days, abdominal pain with distention, new-onset fever.

loratadine

lor-at-a-deen

(Alavert, Apo-Loratadine , Claritin, Claritin Reditabs, Loradamed)

Do not confuse loratadine with clonidine, or Claritin with clarithromycin.

FIXED-COMBINATION(S)

Alavert Allergy and Sinus, Claritin-D: loratadine/pseudoephedrine (a sympathomimetic): 5 mg/120 mg, 10 mg/240 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: H₁ antagonist, second generation. **CLINICAL:** Antihistamine.

USES

Relief of nasal, non-nasal symptoms of seasonal allergic rhinitis (hay fever). Treatment of itching due to hives (urticaria).

PRECAUTIONS

Contraindications: Hypersensitivity to loratadine. **Cautions:** Renal/hepatic impairment.

ACTION

Competes with histamine for H₁ receptor sites on effector cells. **Therapeutic Effect:** Prevents allergic responses mediated by histamine (e.g., rhinitis, urticaria, pruritus).

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1–3 hrs	8–12 hrs	Longer than 24 hrs

Rapidly, almost completely absorbed from GI tract. Protein binding: 97%; metabolite, 73%–77%. Distributed mainly to

liver, lungs, GI tract, bile. Metabolized in liver. Excreted in urine (40%) and feces (40%). Not removed by hemodialysis. **Half-life:** 8.4 hrs; metabolite, 28 hrs (increased in elderly, hepatic impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Children:** Safety and efficacy not established in pts younger than 2 yrs. **Elderly:** More sensitive to anticholinergic effects (e.g., dry mouth, nose, throat).

INTERACTIONS

DRUG: Acclidinium, ipratropium, tiotropium, umeclidinium may increase anticholinergic effect. **HERBAL:** Herbals with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **FOOD:** All foods delay absorption. **LAB VALUES:** May suppress wheal, flare reactions to antigen skin testing unless drug is discontinued 4 days before testing.

AVAILABILITY (Rx)

Capsule: 10 mg. **Solution, Oral:** 5 mg/5 mL. **Syrup:** 5 mg/5 mL. **Tablets:** 10 mg. **Tablets, Chewable:** 5 mg. **Tablets, Orally Disintegrating:** 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

- May take without regard for food.

Orally Disintegrating Tablets

- Place under tongue.
- Disintegration occurs within seconds, after which tablet contents may be swallowed with or without water.

INDICATIONS/ROUTES/ DOSAGE

Allergic Rhinitis

PO: ADULTS, ELDERLY, CHILDREN 6 YRS AND OLDER: (*Claritin Reditabs*): 10 mg once daily or 5 mg twice daily. **CHILDREN 2-5 YRS:** 5 mg once daily.

Urticaria

PO: ADULTS, ELDERLY: Initially, 10 mg once daily. May increase to 10 mg twice daily.

Dosage in Renal Impairment (CrCl less than 30 mL/min)

PO: ADULTS, ELDERLY, CHILDREN 6 YRS AND OLDER: 10 mg every other day. **CHILDREN 2-5 YRS:** No dose adjustment.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (12%-8%): Headache, fatigue, drowsiness. **Occasional (3%):** Dry mouth, nose, throat. **Rare:** Photosensitivity.

ADVERSE EFFECTS/TOXIC REACTIONS

None significant.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess lung sounds for wheezing, skin for urticaria, other allergy symptoms.

INTERVENTION/EVALUATION

For upper respiratory allergies, increase fluids to decrease viscosity of secretions, offset thirst, replenish loss of fluids from increased diaphoresis. Monitor symptoms for therapeutic response.

PATIENT/FAMILY TEACHING

- Drink plenty of water (may cause dry mouth).
- Avoid alcohol.
- Avoid tasks that require alertness, motor skills until response to drug is established (may cause drowsiness).
- May cause photosensitivity reactions (avoid direct exposure to sunlight).

LORazepam

lor-az-e-pam

(Ativan, LORazepam Intensol)

Do not confuse Ativan with Ambien or Atarax, or LORazepam with ALPRAZolam, diazepam, Lovaza, temazepam, or zolpidem.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzodiazepine (Schedule IV). **CLINICAL:** Antianxiety, sedative-hypnotic, antiemetic, skeletal muscle relaxant, amnesiac, anticonvulsant, antitremor.

USES

PO: Management of anxiety disorders, short-term relief of symptoms of anxiety, anxiety associated with depressive symptoms. Insomnia due to anxiety or transient stress. **IV:** Status epilepticus, preanesthesia for amnesia, sedation. **OFF-LABEL:** Treatment of alcohol withdrawal, psychogenic catatonia, partial complex seizures, agitation (IV administration only), antiemetic for chemotherapy; rapid tranquilization of agitated pt, status epilepticus in children.

PRECAUTIONS

Contraindications: Hypersensitivity to LO-Razepam, other benzodiazepines. Acute narrow-angle glaucoma, severe respiratory depression (except during mechanical ventilation). **Cautions:** Neonates, renal/hepatic impairment, compromised pulmonary function, concomitant CNS depressant use, depression, history of drug dependence, alcohol abuse, or significant personality disorder, pts at risk for suicide.

ACTION

Enhances action of inhibitory neurotransmitter gamma-aminobutyric acid (GABA) in CNS, affecting memory, motor, sensory, cognitive function. **Therapeutic Effect:** Produces anxiolytic, anticonvulsant, sedative, muscle relaxant, antiemetic effects.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30–60 min	N/A	6–8 hrs
IV	5–20 min	N/A	6–8 hrs
IM	20–30 min	N/A	6–8 hrs

Well absorbed after PO, IM administration. Protein binding: 85%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 10–20 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cross placenta. May be distributed in breast milk. May increase risk of fetal abnormalities if administered during first trimester of pregnancy. Chronic ingestion during pregnancy may produce fetal toxicity, withdrawal symptoms, CNS depression in neonates. **Children:** Safety and efficacy not established in pts younger than 12 yrs. **Elderly:** Use small initial doses with gradual increases to avoid ataxia, excessive sedation, or paradoxical CNS restlessness, excitement. May be more susceptible to cognitive impairment, delirium, falls, fractures.

INTERACTIONS

DRUG: Valproic acid may increase concentration/effects. **Alcohol, other CNS depressants (e.g., morphine, PHENobarbital, zolpidem)** may increase CNS depression. **HERBAL:** Herbs with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **FOOD:** None known. **LAB VALUES:** None significant. **Therapeutic serum level:** 50–240 ng/mL; **toxic serum level:** unknown.

AVAILABILITY (Rx)

Injection Solution: 2 mg/mL, 4 mg/mL. **Oral Solution: (Lorazepam Intensol):** 2 mg/mL. **Tablets:** 0.5 mg, 1 mg, 2 mg.

ADMINISTRATION/HANDLING

Reconstitution • Dilute with equal volume of Sterile Water for Injection, D₅W, or 0.9% NaCl.

Rate of administration • Give by IV push into tubing of free-flowing IV infusion (0.9% NaCl, D₅W) at a rate not to exceed 2 mg/min.

Storage • Refrigerate parenteral form.
 • Do not use if discolored or precipitate forms. • Avoid freezing.

IM

• Give deep IM into large muscle mass.

PO

• Give with food. • Tablets may be crushed. • Dilute oral solution in water, juice, soda, or semisolid food.

IV INCOMPATIBILITIES

Aztreonam (Azactam), ondansetron (Zofran).

IV COMPATIBILITIES

Bumetanide (Bumex), cefepime (Maxipime), dexmedetomidine (Precedex), diltiazem (Cardizem), DOBUTamine (Dobutrex), DOPamine (Intropin), heparin, labetalol (Normodyne, Trandate), milrinone (Primacor), norepinephrine (Levophed), piperacillin and tazobactam (Zosyn), potassium, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE**Anxiety**

PO: ADULTS, ELDERLY: Initially, 0.5–1 mg 2–3 times/day. May gradually increase up to 6 mg/day in 2–4 divided doses.

Insomnia Due to Anxiety

PO: ADULTS: (less than 65 yrs): 0.5–2 mg at bedtime. (65 yrs and older): 0.5–1 mg at bedtime.

Status Epilepticus

IV: ADULTS, ELDERLY, CHILDREN: 0.1 mg/kg (maximum dose: 4 mg). Give at maximum rate of 2 mg/min. May repeat in 5–10 min.

Dosage in Renal/Hepatic Impairment

PO: No dose adjustment.

IM, IV: Mild to moderate impairment: Use caution. Not recommended in severe impairment.

SIDE EFFECTS

Frequent (16%–7%): Drowsiness, dizziness.

Rare (less than 4%): Weakness, ataxia, headache, hypotension, nausea, vomiting, confusion, injection site reaction.

ADVERSE EFFECTS/TOXIC REACTIONS

Abrupt or too-rapid withdrawal may result in pronounced restlessness, irritability, insomnia, hand tremor, abdominal cramping, muscle cramps, diaphoresis, vomiting, seizures. Overdose results in drowsiness, confusion, diminished reflexes, coma. **Antidote:** Flumazenil (see Appendix J for dosage).

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Offer emotional support to anxious pt. Pt must remain recumbent following parenteral administration to reduce hypotensive effect. Assess motor responses (agitation, trembling, tension), autonomic responses (cold or clammy hands, diaphoresis).

INTERVENTION/EVALUATION

Monitor B/P, respiratory rate, heart rate. For those on long-term therapy, hepatic/renal function tests, CBC should be performed periodically. Assess for paradoxical reaction, particularly during early therapy. Evaluate for therapeutic response: calm facial expression, decreased restlessness, insomnia, decrease in seizure-related symptoms. **Therapeutic serum level:** 50–240 ng/mL; **toxic serum level:** N/A.

PATIENT/ FAMILY TEACHING

• Drowsiness usually subsides during continued therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Smoking reduces drug effectiveness. • Do not abruptly discontinue medication after long-term therapy. • Do not use alcohol, CNS depressants. • Contraception recommended for long-term therapy. • Immediately report suspected pregnancy.

lorlatinib

lor-la-ti-nib
(Lorbrena)

Do not confuse lorlatinib with alectinib, brigatinib, ceritinib, crizotinib, erlotinib, lapatinib, neratinib, lenvatinib, loratidine, or lorazepam.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Anaplastic lymphoma kinase inhibitor. Tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of pts with anaplastic lymphoma kinase (ALK)-positive metastatic non-small-cell lung cancer (NSCLC) whose disease has progressed on crizotinib and at least one other ALK inhibitor for metastatic disease; or progressed on alectinib as the first ALK inhibitor therapy for metastatic disease; or progressed on ceritinib as the first ALK inhibitor therapy for metastatic disease.

PRECAUTIONS

Contraindications: Hypersensitivity to lorlatinib. Concomitant use of strong CYP3 inducers. **Cautions:** Baseline anemia, lymphopenia, thrombocytopenia; hyperlipidemia, cardiac or pulmonary disease, hepatic impairment, concomitant use of strong or moderate CYP3A inhibitors, moderate CYP3A inducers; pt at risk for atrioventricular (AV) block (idiopathic cardiac conduction disorders, ischemic heart disease, increased vagal tone, concomitant use of antiarrhythmics, beta blockers, calcium channel blockers); history of anxiety, depression, suicidal ideation and behavior, mood disorder.

ACTION

Inhibits ALK phosphorylation, ALK downstream signaling proteins, multiple mutant forms of ALK (activity against ALK,

ROS1, TYK1, FER, FPS, TRKA, TRKB, TRKC, FAK, FAK2, and ACK). Also has activity against cells expressing EML4-ALK. **Therapeutic Effect:** Expresses antitumor activity against ALK mutant forms in NSCLC in pts who have progressed with alectinib, ceritinib, or crizotinib.

PHARMACOKINETICS

Widely distributed. Metabolized in liver. Protein binding: 66%. Peak plasma concentration: 1.2–2 hrs. Excreted in urine (48%), feces (41%). **Half-life:** 24 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm. Female pts of reproductive potential must use effective nonhormonal contraception during treatment and for at least 6 mos after discontinuation. Hormonal contraception may become ineffective with treatment. Unknown if distributed in breast milk. Breastfeeding not recommended during treatment and for at least 7 days after discontinuation. **Males:** Male pts with female partners of reproductive potential must use barrier methods during treatment and for at least 3 mos after discontinuation. May impair fertility. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole) may increase concentration/effect. Strong CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect; use contraindicated due to risk of severe hepatotoxicity. Moderate CYP3A inducers (e.g., bosentan, nafcillin) may decrease concentration/effect. **HERBAL:** St. John's wort may decrease concentration/effect; use contraindicated. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST, amylase, cholesterol, glucose, lipase, potassium, triglycerides. May decrease Hgb, lymphocytes, platelets, RBCs; serum albumin, phosphate, magnesium.

AVAILABILITY (Rx)

Tablets: 25 mg, 100 mg.

ADMINISTRATION/HANDLING**PO**

• Give without regard to food. • Administer tablets whole; do not break, crush, cut, or divide. Tablets cannot be chewed. Do not give if tablet is broken, cracked, or not intact. • If vomiting occurs after administration, give next dose at regularly scheduled time. • If a dose is missed, administer as soon as possible. • Do not give a missed dose within 4 hrs of next dose.

INDICATIONS/ROUTES/DOSAGE**Non–Small-Cell Lung Cancer**

PO: ADULTS, ELDERLY: 100 mg once daily. Continue until disease progression or unacceptable toxicity.

Dose Reduction Schedule

First reduction: 75 mg once daily.

Second reduction: 50 mg once daily.

Unable to tolerate 50-mg dose: Permanently discontinue.

Dose Modification

Based on Common Terminology Criteria for Adverse Events (CTCAE).

Atrioventricular (AV) Block

Second-degree AV block: Withhold treatment until PR interval is less than 200 msec, then resume at reduced dose. **First occurrence of complete AV block:** Withhold treatment until PR interval is less than 200 msec or pacemaker is placed. If pacemaker is placed, resume at same dose. If pacemaker is not placed, resume at reduced dose. **Recurrent complete AV block:** Place pacemaker or permanently discontinue.

Central Nervous System (CNS) Effects

Grade 1 CNS effects: Maintain dose or withhold treatment until improved to baseline, then resume at same dose or reduced dose. **Grade 2 or 3 CNS effects:** Withhold treatment until improved to Grade 1 or 0, then resume at reduced dose.

Grade 4 CNS effects: Permanently discontinue.

Hyperlipidemia

Grade 4 hypercholesterolemia or hypertriglyceridemia: Withhold treatment until improved to Grade 2 or less, then resume at same dose. **Recurrent severe hypercholesterolemia or hypertriglyceridemia:** Resume at reduced dose.

Interstitial Lung Disease (ILD)

Any Grade treatment-related ILD: Permanently discontinue.

Other Adverse Reactions

Any Grade 1 or Grade 2 Reaction: Maintain dose or reduce dose.

Any Grade 3 or Grade 4 reaction: Withhold treatment until improved to Grade 2 or less (or baseline), then resume at reduced dose.

Concomitant Use of Strong CYP3A Inhibitors

If strong CYP3A inhibitor cannot be discontinued, reduce dose to 75 mg. If dose was reduced to 75 mg due to adverse reactions and a CYP3A inhibitor is started, reduce dose to 50 mg. If CYP3A inhibitor is discontinued for 3 half-lives, may resume dose prior to starting CYP3A inhibitor.

Concomitant Use of Moderate CYP3A Inducers

Note: Concomitant use of strong CYP3A inducers is contraindicated. If moderate CYP3A inducer cannot be discontinued, consider discontinuing CYP3A inducer or discontinuing treatment if Grade 2 or higher hepatotoxicity occurs.

Dosage in Renal Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Not specified; use caution.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment:** Not specified; use caution.

SIDE EFFECTS

Frequent (57%–18%): Edema (generalized, peripheral), peripheral neuropathy, cognitive effects (amnesia, memory impairment, disorientation), dyspnea, fatigue, asthenia, weight gain, mood effects (aggression, agitation, anxiety, depression, mood swings), arthralgia, diarrhea, headache, cough, nausea. **Occasional (17%–10%):** Myalgia, dizziness, vision disorder, constipation, rash, back pain, extremity pain, vomiting, speech effects (aphasia, dysarthria), pyrexia, sleep effects (abnormal dreams, insomnia, nightmares, sleep talking).

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia, lymphopenia, thrombocytopenia is an expected response to therapy. Concomitant use with moderate CYP3A inducers may increase risk of hepatotoxicity. CNS reactions including hallucinations, seizures, suicidal ideation, and changes in cognitive function, mental status, mood, sleep, speech reported in 54% of pts. Grade 3 or 4 elevations in total cholesterol, triglycerides reported in 18% of pts. AV block and PR interval prolongation reported in 1% of pts. Life-threatening ILD/pneumonitis reported in 2% of pts. Other adverse effects, including pneumonia, pulmonary edema, myocardial infarction, embolism, peripheral artery occlusion, respiratory failure, occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, LFTs, serum cholesterol, triglycerides, ECG; pregnancy test in female pts of reproductive potential. Verify ALK-positive NSCLC status. Discontinue strong CYP3A4 inducers for 3 half-lives prior to initiation. Consider initiating or increasing dose of antihyperlipidemic agents. Confirm compliance of effective contraception. Screen for active infection. Question history of anxiety, depression, mood disorder, suicidal ideation and

behavior; cardiac or pulmonary disease, hepatic impairment. Receive full medication history and screen for interactions/contraindications. Conduct baseline neurologic exam. Offer emotional support.

INTERVENTION/EVALUATION

Monitor CBC, LFTs periodically. Monitor serum cholesterol, triglycerides monthly for 2 mos, then periodically thereafter. Monitor ECG periodically (or more frequently if symptoms of AV block occur [dizziness, chest pain, syncope]). If moderate CYP3A inducer cannot be discontinued, monitor LFTs 48 hrs after initiation and for at least 3 times during the first week after initiation. Diligently monitor for suicidal ideation and behavior; new-onset or worsening of anxiety, depression, mood disorder. Consider mental health consultation if psychiatric disorder suspected. Conduct regular neurologic exams to rule out CNS effects. Consider ABG, radiologic test if ILD/pneumonitis (excessive cough, dyspnea, hypoxia) is suspected. If treatment related toxicities occur, consider referral to specialist. Assess skin for rash, dermatitis.

PATIENT/FAMILY TEACHING

- Treatment may depress your immune system response and reduce your ability to fight infection. Report symptoms of infection such as body aches, chills, cough, fatigue, fever. Avoid those with active infection.
- Seek immediate medical attention if thoughts of suicide, new-onset or worsening of anxiety, depression, or changes in mood occurs.
- Neurologic events including altered speech, hallucinations, seizures may occur.
- Report symptoms of heart block (dizziness, chest pain, fainting); liver problems (abdominal pain, bruising, clay-colored stool, amber or dark colored urine, yellowing of the skin or eyes); inflammation of the lung (excessive cough, difficulty breathing, chest pain); skin reactions (rash).
- Female pts of childbearing potential must use

effective contraception during treatment and up to 6 mos after last dose. Do not breastfeed. Male pts with female partners of childbearing potential must use effective contraception during treatment and for at least 3 mos after last dose. • There is a high risk of interactions with other medications. Do not take newly prescribed medications unless approved by prescriber that originally started therapy. • Avoid grapefruit products, herbal supplements (esp. St. John's wort).

losartan

loe-sar-tan
(Cozaar)

BLACK BOX ALERT ■ May cause fetal injury, mortality. Discontinue as soon as possible once pregnancy is detected.

Do not confuse Cozaar with Colace, Coreg, Hyzaar, or Zocor, or losartan with lorcaserin, valsartan.

FIXED-COMBINATION(S)

Hyzaar: losartan/hydroCHLOROthiazide (a diuretic): 50 mg/12.5 mg, 100 mg/12.5 mg, 100 mg/25 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin II receptor antagonist. **CLINICAL:** Antihypertensive.

USES

Treatment of hypertension in adults and children 6 yrs and older. Used alone or in combination with other antihypertensives. Treatment of diabetic nephropathy with an elevated creatinine and proteinuria (in pts with type 2 diabetes and history of hypertension), prevention of stroke in pts with hypertension and left ventricular hypertrophy. **OFF-LABEL:** Slow rate of progression of aortic root dilation in children with Marfan's syndrome. HF in pts intolerant of ACE inhibitors.

PRECAUTIONS

Contraindications: Hypersensitivity to losartan. Concomitant use of aliskiren in pts with diabetes. **Cautions:** Renal/hepatic impairment, unstented renal arterial stenosis, significant aortic/mitral stenosis. Concurrent use of potassium supplements. Pts with history of angioedema.

ACTION

Blocks vasoconstrictor, aldosterone-secreting effects of angiotensin II, inhibiting binding of angiotensin II to AT₁ receptors. **Therapeutic Effect:** Causes vasodilation, decreases peripheral resistance, decreases B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	N/A	6 hrs	24 hrs

Well absorbed after PO administration. Protein binding: 98%. Metabolized in liver. Excreted in urine (35%), feces (60%). Not removed by hemodialysis. **Half-life:** 2 hrs; metabolite, 6–9 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Has caused fetal/neonatal morbidity, mortality. Potential for adverse effects on breastfed infant. Breastfeeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to hypotensive effects.

INTERACTIONS

DRUG: NSAIDs (e.g., ibuprofen, ketorolac, naproxen) may decrease effects. Aliskiren may increase hyperkalemic effect. May increase adverse/toxicity of ACE inhibitors (e.g., benazepril, lisinopril). May increase levels/effects of lithium. **HERBAL:** Herbs with hypertensive properties (e.g., licorice, yohimbe) or hypotensive properties (e.g., garlic, ginger, ginkgo biloba) may alter effects. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin, ALT, AST, Hgb, Hct. May decrease serum glucose.

AVAILABILITY (Rx)

Tablets: 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING**PO**

- May give without regard to food.

INDICATIONS/ROUTES/DOSAGE**Hypertension**

PO: ADULTS, ELDERLY: Initially, 25–50 mg once daily. May increase as needed to 100 mg/day in 1–2 divided doses.

CHILDREN 6–16 YRS: Initially, 0.7 mg/kg (**maximum:** 50 mg) once daily. Adjust dose to BP response. **Maximum:** 1.4 mg/kg or 100 mg/day.

Diabetic Nephropathy

PO: ADULTS, ELDERLY: Initially, 50 mg/day. May increase to 100 mg/day based on B/P response.

Stroke Prevention (Hypertension with Left Ventricular Hypertrophy)

PO: ADULTS, ELDERLY: Initially, 50 mg/day. **Maximum:** 100 mg/day based on BP response. Should be used in combination with a thiazide diuretic.

Dosage in Renal Impairment

Not recommended if glomerular filtration rate (GFR) less than 30 mL/min.

Dosage in Hepatic Impairment

PO: ADULTS, ELDERLY: Initially, 25 mg/day. May increase up to 100 mg/day.

SIDE EFFECTS

Frequent (8%): Upper respiratory tract infection. **Occasional (4%–2%):** Dizziness, diarrhea, cough. **Rare (1% or less):** Insomnia, dyspepsia, heartburn, back/leg pain, muscle cramps, myalgia, nasal congestion, sinusitis, depression.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdosage may manifest as hypotension and tachycardia. Bradycardia occurs less often. Institute supportive measures.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain B/P, apical pulse immediately before each dose, in addition to regular monitoring (be alert to fluctuations). Question for possibility of pregnancy. Assess medication history (esp. diuretics).

INTERVENTION/EVALUATION

Maintain hydration (offer fluids frequently). Assess for evidence of upper respiratory infection, cough. Monitor B/P, pulse. Assist with ambulation if dizziness occurs. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

- Female pts of childbearing age should take measures to avoid pregnancy.
- Report pregnancy as soon as possible.
- Avoid tasks that require alertness, motor skills until response to drug is established (possible dizziness effect).
- Report any sign of infection (sore throat, fever), chest pain.
- Do not take OTC cold preparations, nasal decongestants.
- Do not stop taking medication.
- Limit salt intake.

lovastatin

loe-va-stat-in
(Altoprev)

Do not confuse lovastatin with atorvastatin, Leustatin, Lotensin, nystatin, pitavastatin, or pravastatin, or Mevacor with Benicar or Lipitor.

FIXED-COMBINATION(S)

Advisor: lovastatin/niacin: 20 mg/500 mg, 20 mg/750 mg, 20 mg/1,000 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: HMG-CoA reductase inhibitor. **CLINICAL:** Anti-hyperlipidemic.

USES

Adjunct to diet to decrease elevated serum total and LDL cholesterol in primary hypercholesterolemia; primary prevention of coronary artery disease; reduction of risk of MI, unstable angina, and in coronary revascularization procedures. Slows progression of coronary atherosclerosis in pts with coronary heart disease. Adjunct to diet in adolescent pts (10–17 yrs) with heterozygous familial hypercholesterolemia having LDL greater than 189 mg/dL or LDL greater than 160 mg/dL with positive family history of premature CV disease or LDL greater than 160 mg/dL with presence of at least 2 other CVD risk factors.

PRECAUTIONS

Contraindications: Hypersensitivity to lovastatin. Active hepatic disease, unexplained persistent elevations of serum transaminases. Pregnancy, breastfeeding. Concomitant use of strong CYP3A4 inhibitors. **Cautions:** History of heavy/chronic alcohol use, renal impairment, hepatic disease; concomitant use of amiodarone, cycloSPORINE, fibrates, gemfibrozil, niacin, verapamil (increased risk of myopathy), elderly.

ACTION

Inhibits HMG-CoA reductase, the enzyme that catalyzes the early step in cholesterol synthesis. **Therapeutic Effect:** Decreases LDL, VLDL, triglycerides; increases HDL.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (LDL, cholesterol reduction)	3 days	N/A	N/A

Incompletely absorbed from GI tract (increased on empty stomach). Protein binding: 95%. Hydrolyzed in liver. Primarily excreted in feces. Not removed by hemodialysis. **Half-life:** 1.1–1.7 hrs.

 **LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: Contraindicated in pregnancy (suppression of cholesterol biosynthesis may cause fetal toxicity) and lactation. Unknown if drug is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole, ritonavir) may increase concentration, risk of myopathy, rhabdomyolysis. **Colchicine, gemfibrozil** may increase risk of myopathy. **HERBAL:** St. John's wort may decrease concentration/effects. **FOOD:** Large quantities of grapefruit juice may increase risk of side effects (e.g., myalgia, weakness). **Red yeast rice** may increase concentration (2.4 mg lovastatin/600 mg rice). **LAB VALUES:** May increase serum ALT, AST, creatine kinase (CK).

AVAILABILITY (Rx)

Tablets: 10 mg, 20 mg, 40 mg.

 **Tablets: (Extended-Release [Alto-prev]):** 20 mg, 40 mg, 60 mg.

ADMINISTRATION/HANDLING**PO**

- Immediate-release tablet given with evening meal; extended-release at bedtime.
- Avoid intake of large quantities of grapefruit juice (greater than 1 quart).
- Do not break, crush, dissolve, or divide extended-release tablets.

INDICATIONS/ROUTES/DOSAGE

Hypercholesterolemia, Primary Prevention of CAD

PO: (Immediate-Release): ADULTS, ELDERLY: Initially, 20 mg/day. Adjust at 4-wk intervals. **Maintenance:** 10–80 mg once daily or in 2 divided doses. **Maximum:** 80 mg/day.

PO: (Extended-Release): ADULTS, ELDERLY: Initially, 20–60 mg once daily at bedtime. Adjust at 4-wk intervals. **Maximum:** 60 mg once daily at bedtime.

Heterozygous Familial Hypercholesterolemia

PO: (*Immediate-Release*): **CHILDREN 10–17 YRS:** (LDL reduction 20% or greater): Initially, 20 mg/day; (LDL reduction less than 20%): Initially, 10 mg/day. Adjust at 4-wk intervals. Range: 10–40 mg daily.

Dosage with Concurrent Medication

Amiodarone: **Maximum:** 40 mg/day.
Diltiazem, dronedarone, verapamil: **Maximum:** (*Immediate-Release*): 10 mg/day. (*Extended-Release*): 20 mg/day.
Lomitapide: Consider reduction in dose.

Dosage in Renal Impairment

Use caution.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Generally well tolerated. Side effects usually mild and transient. **Frequent (9%–5%):** Headache, flatulence, diarrhea, abdominal pain, abdominal cramping, rash, pruritus. **Occasional (4%–3%):** Nausea, vomiting, constipation, dyspepsia. **Rare (2%–1%):** Dizziness, heartburn, myalgia, blurred vision, eye irritation.

ADVERSE EFFECTS/TOXIC REACTIONS

Potential for cataract development. Occasionally produces myopathy manifested as muscle pain, tenderness, weakness with elevated creatine kinase (CK). Severe myopathy may lead to rhabdomyolysis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain dietary history. Question for possibility of pregnancy before initiating therapy. Obtain LFT, serum cholesterol, triglycerides.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Monitor for headache, dizziness, blurred vision. Assess for rash,

pruritus. Monitor serum cholesterol, triglycerides for therapeutic response. Be alert for malaise, muscle cramping/weakness. Monitor LFT.

PATIENT/FAMILY TEACHING

- Follow special diet (important part of treatment).
- Periodic lab tests are essential part of therapy.
- Maintain appropriate birth control measures.
- Avoid grapefruit juice, alcohol.
- Report severe gastric upset, vision changes, myalgia, weakness, changes in color of urine/stool, yellowing of eyes/skin, unusual bruising.

lurasidone

loo-ras-i-done
(Latuda)

BLACK BOX ALERT Elderly pts with dementia-related psychosis are at increased risk for mortality due to cardiovascular events, infectious diseases. Increased risk of suicidal thinking/behavior in children, adolescents, young adults.

CLASSIFICATION

PHARMACOTHERAPEUTIC: DOPamine, serotonin receptor antagonist.
CLINICAL: Second-generation (atypical) antipsychotic.

USES

Treatment of schizophrenia in adults and adolescents (13–17 yrs). Treatment of depression associated with bipolar I disorder as monotherapy (children 10 yrs and older, adults) and as adjunctive therapy (adults) with lithium or valproate.

PRECAUTIONS

Contraindications: Hypersensitivity to lurasidone. Concurrent use with strong CYP3A4 inhibitors (e.g., ketoconazole) and inducers (e.g., rifampin). **Cautions:** Cardiovascular disease (HF, history of MI, ischemia, conduction abnormalities),

cerebrovascular disease (history of CVA in pts with dementia, seizure disorders), diabetes, Parkinson's disease, renal/hepatic impairment, pts at risk for aspiration pneumonia, pts at risk for suicide, disorders where CNS depression is a feature, pts at risk for hypotension, elderly, head trauma, alcoholism, medications that lower seizure threshold.

ACTION

Antagonizes central DOPamine type 2 and serotonin type 2 receptors. **Therapeutic Effect:** Diminishes symptoms of schizophrenia. Reduces incidence of extrapyramidal side effects.

PHARMACOKINETICS

Absorbed in 1–3 hrs. Steady-state concentration occurs in 7 days. Well absorbed from GI tract (unaffected by food). Protein binding: 99%. Metabolized in liver. Excreted in feces (80%), urine (9%). **Half-life:** 18 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Breastfeeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** More susceptible to postural hypotension. Increased risk of cerebrovascular events (including stroke), mortality, in elderly pts with psychosis.

INTERACTIONS

DRUG: Alcohol, CNS depressants (e.g., LORazepam, morphine, zolpidem) may increase CNS depression. May enhance CNS depressant effect of azelastine (nasal). **Strong CYP3A4 inducers** (e.g., carBAMazepine, phenytoin, rifAMPin) decrease concentration/effects. **Strong CYP3A4 inhibitors** (e.g., clarithromycin, ketoconazole, ritonavir) may increase concentration/effects. **HERBAL:** Herbals with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **St. John's wort** may decrease concentration/effect. **FOOD:** Grapefruit

products may increase concentration/effect. **LAB VALUES:** May increase prolactin levels.

AVAILABILITY (Rx)

Tablets: 20 mg, 40 mg, 60 mg, 80 mg, 120 mg.

ADMINISTRATION/HANDLING

PO

• Give with food. • Tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Schizophrenia

PO: ADULTS, ELDERLY: Initially, 40 mg once daily with food. Increase dose based on response and tolerability. **Maximum:** 160 mg once daily with food. **ADOLESCENTS:** Initially, 40 mg once daily with food. **Maximum:** 80 mg once daily with food.

Bipolar Depression

PO: ADULTS, ELDERLY: (Monotherapy or adjunct to lithium or divalproex): Initially, 20 mg once daily, alone or in combination with lithium or divalproex. May increase in 20 mg increments q2–7 days. **Maximum:** 120 mg/day. **CHILDREN 10 YRS AND OLDER: (Monotherapy):** Initially, 20 mg once daily. May increase dose after 1 wk. **Maximum:** 80 mg/day.

Concomitant Use of Moderate CYP3A4 Inhibitors/Inducers

PO: ADULTS, ELDERLY: (Inhibitor): Initially, 20 mg/day. **Maximum:** 80 mg/day. **(Inducer):** May need to increase lurasidone dose if inducer used for 7 or more days.

Moderate to Severe Renal Impairment

CrCl less than 50 mL/min: Initially, 20 mg/day. **Maximum:** 80 mg/day.

Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate impairment:** Initially, 20 mg/day. **Maximum:** 80 mg/day. **Severe impairment:** Initially, 20 mg/day. **Maximum:** 40 mg/day.

SIDE EFFECTS

Frequent (15%–7%): Drowsiness, sedation, insomnia (paradoxical reaction).

Occasional (6%–3%): Nausea, vomiting, dyspepsia, fatigue, back pain, akathisia, dizziness, agitation, anxiety. **Rare (2%–1%):** Restlessness, salivary hypersecretion, tongue spasm, torticollis, trismus.

ADVERSE EFFECTS/TOXIC REACTIONS

Extrapyramidal disorder (including cogwheel rigidity, drooling, bradykinesia, tardive dyskinesia, tremors) occurs in 5% of pts. Neuroleptic malignant syndrome (fever, muscle rigidity, irregular B/P or pulse, altered mental status, visual changes, dyspnea) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question history as listed in Precautions. Assess behavior, appearance, emotional status, response to environment, speech

pattern, thought content. Renal function, LFT should be obtained before therapy as dose adjustment is required when initiating therapy.

INTERVENTION/EVALUATION

Supervise suicidal risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Monitor for potential neuroleptic malignant syndrome. Assess for therapeutic response (greater interest in surroundings, improved self-care, increased ability to concentrate, relaxed facial expression).

PATIENT/FAMILY TEACHING

- Avoid tasks that may require alertness, motor skills until response to drug is established (may cause drowsiness, dizziness).
- Avoid alcohol.
- Report trembling in fingers, altered gait, unusual muscle/skeletal movements, palpitations, severe dizziness, fainting, visual changes, rash, difficulty breathing.
- Report suicidal ideation, unusual changes in behavior.

magnesium**HIGH
ALERT**mag-*nee*-zee-um**magnesium chloride**

(Mag-Delay, Slow-Mag)

magnesium citrate(Citroma, Citro-Mag )**magnesium hydroxide**

(Milk of Magnesia)

magnesium oxide

(Mag-Ox 400, Uro-Mag)

magnesium sulfate

(Epsom salt, magnesium sulfate injection)

Do not confuse magnesium sulfate with morphine sulfate.**FIXED-COMBINATION(S)**With aluminum and simethicone, an antiflatulent (**Mylanta**).**◆ CLASSIFICATION****CLINICAL:** Antacid, anticonvulsant, electrolyte, laxative.**USES**

Magnesium chloride: Treatment/prevention of hypomagnesemia. Dietary supplement. **Magnesium citrate:** Evacuation of bowel before surgical, diagnostic procedures. Relieves occasional constipation. **Magnesium hydroxide:** Short-term treatment of constipation, symptoms of hyperacidity, laxative. **Magnesium oxide:** Relief of acid indigestion and upset stomach, short-term relief of constipation. Dietary supplement. **Magnesium sulfate:** Treatment/prevention of hypomagne-

mia; prevention and treatment of seizures in severe preeclampsia or eclampsia; pediatric acute nephritis, treatment of arrhythmias due to hypomagnesemia (ventricular fibrillation, ventricular tachycardia, or torsades de pointes). **OFF-LABEL: Magnesium sulfate:** Asthma exacerbation unresponsive to conventional treatment.

PRECAUTIONS

Contraindications: **Antacid:** Appendicitis, symptoms of appendicitis, ileostomy, intestinal obstruction, severe renal impairment. **Laxative:** Appendicitis, HF, colostomy, hypersensitivity, ileostomy, intestinal obstruction, undiagnosed rectal bleeding. **Systemic:** Heart block, myocardial damage, IV use for pre-eclampsia/eclampsia during the 2 hrs prior to delivery. **Cautions:** Safety in children younger than 6 yrs not known. **Antacids:** Undiagnosed GI/rectal bleeding, ulcerative colitis, colostomy, diverticulitis, chronic diarrhea. **Laxative:** Diabetes, pts on low-salt diet (some products contain sugar, sodium). **Systemic:** Severe renal impairment. Myasthenia gravis or other neuromuscular diseases.

ACTION

Antacid: Acts in stomach to neutralize gastric acid. **Therapeutic Effect:** Increases pH. **Laxative:** Osmotic effect primarily in small intestine, draws water into intestinal lumen. **Therapeutic Effect:** Promotes peristalsis, bowel evacuation. **Systemic (dietary supplement replacement):** Found primarily in intracellular fluids. **Therapeutic Effect:** Essential for enzyme activity, nerve conduction, muscle contraction. Maintains and restores magnesium levels. **Anticonvulsant:** Blocks neuromuscular transmission, amount of acetylcholine released at motor end plate. **Therapeutic Effect:** Produces seizure control.

PHARMACOKINETICS

Antacid, laxative: Minimal absorption through intestine. Absorbed dose primarily excreted in urine. **Systemic:** Widely distributed. Primarily excreted in urine.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: **Antacid:** Unknown if distributed in breast milk. **Parenteral:** Readily crosses placenta. Distributed in breast milk for 24 hrs after magnesium therapy is discontinued. Continuous IV infusion increases risk of magnesium toxicity in neonate. IV administration should not be used 2 hrs preceding delivery. **Children:** No age-related precautions noted. **Elderly:** Increased risk of developing magnesium deficiency (e.g., poor diet, decreased absorption, medications).

INTERACTIONS

DRUG: May decrease absorption of **quinolones** (e.g., **ciprofloxacin**, **levofloxacin**), **tetracycline**, **bisphosphonates**. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** **Antacid:** May increase gastrin production, pH. **Laxative:** May decrease serum potassium. **Systemic:** None significant.

AVAILABILITY (Rx)

MAGNESIUM CHLORIDE

Tablets: (*Mag-Delay*, *Slow-Mag*): 64 mg.

MAGNESIUM CITRATE

Oral Solution: (*Citroma*): 290 mg/5 mL.

Tablets: 100 mg.

MAGNESIUM HYDROXIDE

Suspension, Oral: (*Milk of Magnesia*): 400 mg/5 mL, 1,200 mg/15 mL.

Tablets: 400 mg.

MAGNESIUM OXIDE

Capsules: (*Uro-Mag*): 140 mg. **Tablets:** (*Mag-Ox 400*): 400 mg.

MAGNESIUM SULFATE

Infusion Solution: 10 mg/mL, 20 mg/mL, 40 mg/mL, 80 mg/mL. **Injection Solution:** 125 mg/mL, 500 mg/mL.

ADMINISTRATION/HANDLING

Reconstitution • Must dilute to maximum concentration of 20% for IV infusion. May give IV push, IV piggyback, or continuous infusion.

Rate of administration • For IV push (diluted): Give no faster than 150 mg/min. For IV infusion, maximum rate of infusion is 2 g/hr.

Storage • Store at room temperature.

IM

• For adults, elderly, use 250 mg/mL (25%) or 500 mg/mL (50%) magnesium sulfate concentration. • For infants, children, do not exceed 200 mg/mL (20% diluted solution).

PO (Antacid)

• Shake suspension well before use. • Chewable tablets should be chewed thoroughly before swallowing, followed by full glass of water.

PO (Laxative)

• Drink full glass of liquid (8 oz) with each dose (prevents dehydration). • Flavor may be improved by following with fruit juice, citrus carbonated beverage. • Refrigerate citrate of magnesia (retains potency, palatability).

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), lansoprazole (Prevacid), pantoprazole (Protonix).

IV COMPATIBILITIES

Amikacin (Amikin), ceFAZolin (Ancef), ciprofloxacin (Cipro), dexmedetomidine (Precedex), DOBUTamine (Dobutrex), enalapril (Vasotec), gentamicin, heparin, HYDROMorphone (Dilaudid), insulin, linezolid (Zyvox), metoclopramide (Reglan), milrinone (Primacor), morphine, piperacillin/tazobactam (Zosyn), potassium chloride, propofol (Diprivan), tobramycin (Nebcin), vancomycin (Vancocin).

INDICATIONS/ROUTES/DOSAGE

MAGNESIUM SULFATE

Hypomagnesemia

Mild to Moderate

IV: ADULTS, ELDERLY: 1–4 g as 1 g/hr.

Maximum: 12 g/12 hrs.

Severe Deficiency

IV: ADULTS, ELDERLY: 4–8 g as 1 g/hr.
IV: CHILDREN: 25–50 mg/kg/dose over 10–20 min. **Maximum single dose:** 2 g.

Usual Dose for Neonates

IM/IV: 25–50 mg/kg/dose q8–12h for 2–3 doses.

Eclampsia/Preeclampsia

IV: ADULTS: 4–6 g loading dose over 20–30 min, then 1–2 g/hr continuous infusion. **Maximum:** 40 g/24 hrs.

MAGNESIUM CHLORIDE**Dietary Supplement**

PO: ADULTS, ELDERLY: 2 tablets once daily.

MAGNESIUM CITRATE**Laxative**

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 195–300 mL once or in divided doses. **6–12 YRS:** 100–150 mL once or in divided doses. **2–5 YRS:** 60–90 mL once or in divided doses.

MAGNESIUM HYDROXIDE**Antacid**

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: (400 mg/5 mL): 5–15 mL as needed up to 4 times/day.

Laxative

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: (400 mg/5 mL): 30–60 mL at HS or in divided doses. (**Tablet**): 8 tabs/day in divided doses. **CHILDREN 6–11 YRS:** (400 mg/5 mL): 15–30 mL at HS. **CHILDREN 2–5 YRS:** 5–15 mL at HS.

MAGNESIUM OXIDE**Antacid/Dietary Supplement**

PO: ADULTS, ELDERLY: 1–2 tablets daily.

Dosage in Renal Impairment

Use caution.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Antacid: Chalky taste, diarrhea, laxative effect. **Occasional: Antacid:** Nausea, vomiting, stomach cramps. **Antacid, laxative:** Prolonged use or large doses in renal impairment may cause hypermagnesemia (dizziness, palpitations, altered mental status, fatigue, weakness). **Laxative:** Cramping, diarrhea, increased thirst, flatulence. **Systemic (dietary supplement, electrolyte replacement):** Reduced respiratory rate, decreased reflexes, flushing, hypotension, decreased heart rate.

ADVERSE EFFECTS/TOXIC REACTIONS

Magnesium as antacid, laxative has no known adverse reactions. Systemic use may produce prolonged PR interval, widening of QRS interval. Magnesium toxicity may cause loss of deep tendon reflexes, heart block, respiratory paralysis, cardiac arrest. **Antidote:** 10–20 mL 10% calcium gluconate (5–10 mEq of calcium).

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Assess sensitivity to magnesium. **Antacid:** Assess GI pain (duration, location, quality, time of occurrence, relief with food, causative/exacerbative factors). **Laxative:** Assess for weight loss, nausea, vomiting, history of recent abdominal surgery. **Systemic:** Assess renal function, serum magnesium.

INTERVENTION/EVALUATION

Antacid: Assess for relief of gastric distress. Monitor renal function (esp. if dosing is long term or frequent). **Laxative:** Monitor daily pattern of bowel activity, stool consistency. Maintain adequate fluid intake. **Systemic:** Monitor renal function, magnesium levels, ECG for cardiac function. Test patellar reflexes before giving repeated, rapid parenteral doses (used as

indication of CNS depression; suppressed reflexes may be sign of impending respiratory arrest). Patellar reflex must be present, respiratory rate should be 16/min or over before each parenteral dose. Initiate seizure precautions.

PATIENT/FAMILY TEACHING

- **Antacid:** Take at least 2 hrs apart from other medication.
- Do not take longer than 2 wks unless directed by physician.
- For peptic ulcer, take 1 and 3 hrs after meals and at bedtime for 4–6 wks.
- Chew tablets thoroughly, followed by 8 oz of water; shake suspensions well.
- Repeat dosing or large doses may have laxative effect.
- **Laxative:** Drink full glass (8 oz) liquid to aid stool softening.
- Use only for short term. Do not use if abdominal pain, nausea, vomiting is present.
- **Systemic:** Report symptoms of hypermagnesemia (altered mental status, difficulty breathing, dizziness, fatigue, palpitations, weakness).

mannitol

man-it-ol
(Resectisol, Osmitrol)

Do not confuse Osmitrol with esmolol.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Polyol (sugar alcohol). **CLINICAL:** Osmotic diuretic.

USES

Reduces increased ICP due to cerebral edema, IOP due to acute glaucoma. Promotes urinary excretion of toxic substances. **OFF-LABEL:** Improves renal transplant function. Severe, traumatic brain injury.

PRECAUTIONS

Contraindications: Hypersensitivity to mannitol. Severe dehydration, active intracranial bleeding (except during craniotomy), severe pulmonary edema, congestion, severe renal disease (anuria), progressive HF. **Cautions:** Concurrent nephrotoxic agents, conditions increasing sensitivity to bronchoconstriction (e.g., recent abdominal, thoracic surgery), sepsis, preexisting renal disease, hypernatremia.

ACTION

Increases osmotic pressure of glomerular filtrate, inhibiting tubular reabsorption of water and electrolytes, resulting in increased urine output. Reduces intracranial pressure by decreasing blood viscosity, thereby increasing cerebral blood flow/oxygen transport. **Therapeutic Effect:** Produces diuresis; reduces intraocular pressure (IOP), intracranial pressure (ICP), cerebral edema.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV (diuresis)	1–3 hrs	N/A	—
IV (reduced ICP)	15–30 min	N/A	1.5–6 hrs

Remains in extracellular fluid. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 4.7 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established in pts younger than 12 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May increase nephrotoxic effect of **aminoglycosides** (e.g., **amikacin**, **tobramycin**). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum phosphate, potassium. May increase serum sodium, serum osmolality.

AVAILABILITY (Rx)

Injection Solution: (*Osmitol*): 5%, 10%, 15%, 20%, 25%.

ADMINISTRATION/HANDLING

◀ALERT▶ Assess IV site for patency before each dose. Pain, thrombosis noted with extravasation. In-line filter (less than 5 microns) used for concentrations over 20%.

Rate of administration • Administer test dose for pts with oliguria. • Give IV push over 3–5 min; over 30–60 min for cerebral edema, elevated ICP. Maximum concentration: 25%. • Do not add KCl or NaCl to mannitol 20% or greater. Do not add to whole blood for transfusion.

Storage • Store at room temperature. • If crystals are noted in solution, warm bottle in hot water, shake vigorously at intervals. Cool to body temperature before administration. Do not use if crystals remain after warming procedure.

IV INCOMPATIBILITIES

Cefepime (Maxipime), filgrastim (Neupogen), imipenem-cilastatin (Primaxin).

IV COMPATIBILITIES

Cisplatin (Platinol), furosemide (Lasix), linezolid (Zyvox), ondansetron (Zofran), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE**USUAL DOSAGE****Elevated Intracranial Pressure**

IV: ADULTS, ELDERLY: 0.25–1 g/kg/dose. May repeat q6–8h as needed to maintain serum osmolality <300–325 mOsm/kg. **CHILDREN:** 0.25–1 g/kg/dose; repeat to maintain serum osmolality <300–320 mOsm/kg.

IOP Reduction

IV: ADULTS, ELDERLY: 1.5–2 g/kg over 30–60 min 1–1.5 hrs prior to surgery. **CHILDREN:** 1–2 g/kg over 30–60 min 1–1.5 hrs prior to surgery.

Dosage in Renal Impairment

Contraindicated with severe impairment; caution with underlying renal disease.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Dry mouth, thirst. **Occasional:** Blurred vision, increased urinary frequency/volume, headache, arm pain, backache, nausea, vomiting, urticaria, dizziness, hypotension, hypertension, tachycardia, fever, angina-like chest pain.

ADVERSE EFFECTS/TOXIC REACTIONS

Fluid, electrolyte imbalance may occur due to rapid administration of large doses or inadequate urine output resulting in overexpansion of extracellular fluid. Circulatory overload may produce pulmonary edema, HF. Excessive diuresis may produce hypokalemia. Fluid loss in excess of electrolyte excretion may produce hypernatremia, hyperkalemia.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain serum osmolality, sodium. Obtain baseline B/P, pulse. Assess skin turgor, mucous membranes, mental status, muscle strength. Obtain baseline weight. Assess hydration status.

INTERVENTION/EVALUATION

Monitor urinary output to ascertain therapeutic response. Monitor serum electrolytes, serum osmolality, ICP, renal function, LFT. Assess vital signs, skin turgor, mucous membranes. Weigh daily. Monitor for signs of hypernatremia (confusion, drowsiness, thirst, dry mouth, cold/clammy skin); signs of hypokalemia (changes in muscle strength, tremors, muscle cramps, altered mental status, cardiac arrhythmias). Signs of hyperkalemia include colic, diarrhea, muscle twitching followed by weakness, paralysis, arrhythmias.

PATIENT/FAMILY TEACHING

- Expect increased urinary frequency/volume.
- May cause dry mouth.

medroxyPROGES- TERone

me-**d**rox-ee-proe-**j**es-ter-one
(Depo-Provera, Depo-SubQ Provera 104, Provera)

■ BLACK BOX ALERT ■ Prolonged use (over 2 yrs) of contraceptive injection form may result in loss of bone mineral density. Limit long-term use (more than 2 yrs). May increase risk of dementia in postmenopausal women. Increased risk of invasive breast cancer in postmenopausal women in combination with conjugated estrogens.

Do not confuse medroxyPROGESTERone with HYDROXYprogesterone, methylPREDNISolone, or methylTESTOSTERone, or Provera with Covera, Femara, Parlodel, or Premarin.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Hormone. **CLINICAL:** Progestin, antineoplastic, contraceptive hormone.

USES

PO: Reduction of endometrial hyperplasia in nonhysterectomized postmenopausal women (concurrently given with estrogen to women with intact uterus), treatment of secondary amenorrhea, abnormal uterine bleeding due to hormonal imbalance. **IM:** Adjunctive therapy, palliative treatment of inoperable, recurrent, metastatic endometrial carcinoma; prevention of pregnancy, endometriosis-associated pain. **OFF-LABEL:** Treatment of paraphilia/hypersexuality.

PRECAUTIONS

Contraindications: Hypersensitivity to medroxyPROGESTERone. Breast cancer

(known, suspected or prior history), history of or active thrombotic disorders (thrombophlebitis, thromboembolic disorders), known or suspected pregnancy, severe hepatic impairment, undiagnosed abnormal vaginal bleeding, cerebrovascular disease. **Cautions:** Pts with conditions aggravated by fluid retention (asthma, seizures, migraine, cardiac/renal dysfunction), diabetes, history of mental depression, preexisting hypercholesterolemia, hypertriglyceridemia.

ACTION

Inhibits secretion of pituitary gonadotropins. **Therapeutic Effect:** Prevents follicular maturation, ovulation. Causes endometrial thinning.

PHARMACOKINETICS

Well absorbed after PO administration. Slowly absorbed after IM administration. Protein binding: 90%. Metabolized in liver. Primarily excreted in urine. **Half-life:** **PO:** 12–17 hrs. **IM:** 40–50 days.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid use during pregnancy, esp. first 4 mos (congenital heart, limb reduction defects may occur). Distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease effects. **HERBAL:** St. John's wort may decrease effect of progestin contraceptive. **Herbals with progestogenic properties** (e.g., bloodroot, chasteberry, yucca) may increase adverse effects. **FOOD:** None known. **LAB VALUES:** May alter serum thyroid, LFT, PT, HDL, total cholesterol, triglycerides; metapyrone test. May increase LDL.

AVAILABILITY (Rx)

Injection Suspension: (Depo-SubQ Provera 104): 104 mg/0.65 mL prefilled syringe.

(Depo-Provera): 150 mg/mL, 400 mg/mL.
Tablets: (Provera): 2.5 mg, 5 mg, 10 mg.

ADMINISTRATION/HANDLING

IM

- Shake vial immediately before administering (ensures complete suspension).
- Administer deep IM into gluteal or deltoid muscle.

SQ

- Shake vigorously prior to administration.
- Inject in upper thigh or abdomen (avoid bony areas and umbilicus).
- Give over 5–7 sec; do not rub injection area.

PO

- Give with food.

INDICATIONS/ROUTES/DOSAGE

Endometrial Hyperplasia

PO: ADULTS: 5–10 mg/day for 12–14 consecutive days each month starting on day 1 or 16 of cycle.

Secondary Amenorrhea

PO: ADULTS: 5–10 mg/day for 5–10 days, beginning at any time during menstrual cycle.

Abnormal Uterine Bleeding

PO: ADULTS: 5–10 mg/day for 5–10 days, beginning on calculated day 16 or day 21 of menstrual cycle.

Endometrial Carcinoma

IM: ADULTS, ELDERLY: Initially, 400–1,000 mg; repeat at 1-wk intervals.

Pregnancy Prevention

IM: (Depo-Provera): ADULTS: 150 mg q3mos (q13 wks).

SQ: (Depo-Subq Provera 104): ADULTS: 104 mg q3mos (q12–14wks).

Endometriosis

SQ: (Depo-Subq Provera 104): ADULTS: 104 mg q3mos (q12–14 wks). **ADULTS:**

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Contraindicated with severe impairment.

SIDE EFFECTS

Frequent: Transient menstrual abnormalities (spotting, change in menstrual flow/cervical secretions, amenorrhea) at initiation of therapy. **Occasional:** Edema, weight change, breast tenderness, anxiety, insomnia, fatigue, dizziness. **Rare:** Alopecia, depression, dermatologic changes, headache, fever, nausea.

ADVERSE EFFECTS/TOXIC REACTIONS

Thrombophlebitis, pulmonary/cerebral embolism, retinal thrombosis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain usual menstrual history. Question for hypersensitivity to progestins, possibility of pregnancy before initiating therapy. Obtain baseline weight, serum glucose, B/P.

INTERVENTION/EVALUATION

Check weight daily; report wkly gain of 5 lb or more. Assess B/P periodically. Assess skin for rash, urticaria. Report development of chest pain, sudden shortness of breath, sudden decrease in vision, migraine headache, pain (esp. with swelling, warmth, redness) in calves, numbness of arm/leg (thrombotic disorders) immediately.

PATIENT/FAMILY TEACHING

- Report sudden loss of vision, severe headache, chest pain, coughing up of blood (hemoptysis), numbness in arm/leg, severe pain/swelling in calf, unusually heavy vaginal bleeding, severe abdominal pain/tenderness.
- Depo-Provera Contraceptive injection should be used as long-term birth control method (e.g., longer than 2 yrs) only if other birth control methods are inadequate.

megestrol

**HIGH
ALERT**

meh-jes-trol
(Megace ES, Megace OS )

Do not confuse megestrol with mesalamine.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic hormone. **CLINICAL:** Antineoplastic, progestin, appetite stimulant.

USES

Palliative treatment of advanced endometrial or breast carcinoma; treatment of anorexia, cachexia, unexplained significant weight loss in pts with AIDS.

PRECAUTIONS

Contraindications: Hypersensitivity to megestrol. **Suspension:** Known or suspected pregnancy. **Cautions:** History of thrombophlebitis, elderly.

ACTION

Antiestrogenic; interferes with normal estrogen cycle by decreasing release of luteinizing hormone (LH) from anterior pituitary gland by inhibiting pituitary function. Antineoplastic effect may act through an antiluteinizing effect mediated via the pituitary. May increase appetite by antagonizing metabolic effects of catabolic cytokines. **Therapeutic Effect:** Reduces tumor size. Increases appetite.

PHARMACOKINETICS

Well absorbed from GI tract. Metabolized in liver. Excreted in urine. **Half-life:** 13–105 hrs (mean 34 hrs).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first 4 mos. Breastfeeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** Use caution.

INTERACTIONS

DRUG: May decrease effects of **anticoagulants** (e.g., warfarin). May increase concentration/effect of **dofetilide**. **HERBAL:** Avoid **black cohosh**, **dong quai** in estrogen-dependent tumors. Avoid **herbs with progestogenic properties** (e.g., bloodroot, chasteberry, yucca); may increase adverse effects. **FOOD:** None known. **LAB VALUES:** May alter serum thyroid, LFT, PT, HDL, total cholesterol, triglycerides. May increase LDL.

AVAILABILITY (Rx)

Oral Suspension: (Megace ES): 40 mg/mL, 625 mg/5 mL. **Tablets:** 20 mg, 40 mg.

ADMINISTRATION/HANDLING

PO

- Store tablets, oral suspension at room temperature.
- Shake suspension well before use.
- Oral suspension compatible with water, orange juice, apple juice.
- Administer without regard to food.

INDICATIONS/ROUTES/DOSAGE

Palliative Treatment of Advanced Breast Cancer

PO: ADULTS, ELDERLY: 40 mg 4 times/day for at least 2 mos.

Palliative Treatment of Advanced Endometrial Carcinoma

PO: ADULTS, ELDERLY: 40–320 mg/day in divided doses for at least 2 mos.

Anorexia, Cachexia, Weight Loss

PO: ADULTS, ELDERLY: Initially, 625 mg (125 mg/mL suspension) or 800 mg (40 mg/mL suspension) daily.

Dosage in Renal Impairment

Use caution.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Weight gain secondary to increased appetite. **Occasional:** Nausea, breakthrough menstrual bleeding,

backache, headache, breast tenderness, carpal tunnel syndrome. **Rare:** Feeling of coldness.

ADVERSE EFFECTS/TOXIC REACTIONS

Thrombophlebitis, pulmonary embolism occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for possibility of pregnancy. Provide support to pt, family, recognizing that this drug is palliative, not curative.

INTERVENTION/EVALUATION

Monitor for tumor response. Monitor pt weight, caloric intake (appetite stimulant).

PATIENT/FAMILY TEACHING

- Contraception is imperative.
- Report lower leg (calf) pain, difficulty breathing, vaginal bleeding.
- May cause headache, nausea, vomiting, breast tenderness, backache.

meloxicam

mel-ox-i-kam
(Mobic, Qmiiz, Vivlodex)

BLACK BOX ALERT Increased risk of serious cardiovascular thrombotic events, including myocardial infarction, CVA. Increased risk of severe GI reactions, including ulceration, bleeding, GI perforation.

CLASSIFICATION

PHARMACOTHERAPEUTIC: NSAID.

CLINICAL: Anti-inflammatory, analgesic.

USES

Relief of signs/symptoms of osteoarthritis, rheumatoid arthritis (RA). Treatment of juvenile idiopathic arthritis (JIA) in pts 2 yrs of age and older (suspension) and weighing 60 kg or more (tablets).

PRECAUTIONS

Contraindications: Hypersensitivity to meloxicam. Pts with aspirin triad (asthma, rhinitis, aspirin intolerance). History of asthma, urticaria with NSAIDs, perioperative pain in setting of CABG surgery. **Cautions:** Renal/hepatic impairment, asthma, coagulation disorders, hypertension, history of GI disease (bleeding or ulcers), concurrent use of anticoagulants, fluid retention, HF, dehydration, smoking, alcohol use, elderly, debilitated.

ACTION

Produces analgesic, antipyretic, anti-inflammatory effects by inhibiting prostaglandin synthesis. **Therapeutic Effect:** Reduces inflammatory response, intensity of pain.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (Analgesic)	30 min	4–5 hrs	N/A

Well absorbed after PO administration. Protein binding: 99%. Metabolized in liver. Excreted equally in urine, feces. Not removed by hemodialysis. **Half-life:** 15–20 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid use at 30 wks gestation or more (may cause premature closure of ductus arteriosus). Distributed in breast milk. **Children:** Safety and efficacy not established in children younger than 2 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment. More susceptible to GI toxicity; lower dosage recommended.

INTERACTIONS

DRUG: May increase anticoagulant effect of apixaban, dabigatran, edoxaban, rivaroxaban. Bile acid sequestrants (e.g., cholestyramine) may decrease absorption. May increase nephrotoxic effect of cycloSPORINE, tacrolimus, tenofovir. May decrease effect of loop diuretics (e.g., furosemide). **HERBAL:** Glucosamine, herbals

with anticoagulant/antiplatelet properties (e.g., garlic, ginger, ginkgo biloba, ginseng) may increase concentration/effect. **FOOD:** None known. **LAB VALUES:** May increase serum creatinine, ALT, AST.

AVAILABILITY (Rx)

Oral Suspension: (Mobic): 7.5 mg/5 mL. **Tablets: (Mobic):** 7.5 mg, 15 mg. **Cap-sules: (Vivlodex):** 5 mg, 10 mg. **Tablet ODT: (Qmiiz):** 7.5 mg, 15 mg.

ADMINISTRATION/HANDLING

PO

- Give with food or milk to minimize GI irritation.
- Shake oral suspension gently before administering.
- **ODT:** Do not remove from blister until ready to administer. Using dry hands, peel backing off the blister; do not push tablet through foil. Remove tablet and place in mouth or on tongue and allow to disintegrate. Swallow with saliva (with or without drinking liquid).

INDICATIONS/ROUTES/DOSAGE

Osteoarthritis, Rheumatoid Arthritis (RA)

PO: (Mobic): ADULTS, ELDERLY: Initially, 7.5 mg/day. **Maximum:** 15 mg/day (7.5 mg for pts on dialysis).

Osteoarthritis

PO: (Vivlodex): ADULTS, ELDERLY: Initially, 5 mg once daily. May increase to 10 mg once daily.

JIA

PO: (Suspension): CHILDREN, 2 YRS AND OLDER: 0.125 mg/kg once daily. **Maximum:** 7.5 mg. **(Tablets): CHILDREN WEIGHING 60 KG OR MORE:** 7.5 mg once daily.

Dosage in Renal Impairment

Not recommended with severe impairment.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (9%–7%): Dyspepsia, headache, diarrhea, nausea. **Occasional (4%–3%):** Dizziness, insomnia, rash, pruritus, flatulence, constipation, vomiting. **Rare (less**

than 2%): Drowsiness, urticaria, photosensitivity, tinnitus.

ADVERSE EFFECTS/TOXIC REACTIONS

In pts treated chronically, peptic ulcer, GI bleeding, gastritis, severe hepatic toxicity (jaundice), nephrotoxicity (hematuria, dysuria, proteinuria), severe hypersensitivity reaction (bronchospasm, angioedema) occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain/inflammation. Inspect appearance of affected joints for immobility, deformities, skin condition. Question history of GI bleeding, gastric or duodenal ulcers, hepatic/renal impairment, asthma.

INTERVENTION/EVALUATION

Monitor CBC, BMP, LFT. Assess skin for petechiae. Assess for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength. Monitor for abdominal pain, hematemesis.

PATIENT/FAMILY TEACHING

- Take with food, milk to reduce GI upset.
- Report tinnitus, persistent abdominal pain/cramping, severe nausea, vomiting, difficulty breathing, unusual bruising or bleeding, rash, peripheral edema, chest pain, palpitations.
- Avoid use after 30 wks gestation.

melphalan

HIGH ALERT

mel-fa-lan
(Alkeran, Evomela)

BLACK BOX ALERT Myelosuppression is common. Potentially mutagenic, leukemogenic. Hypersensitivity noted with IV administration. Must be administered by certified chemotherapy personnel.

Do not confuse Alkeran with Leukeran or Myleran, or melphalan with Mephyton or Myleran.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkylating agent. **CLINICAL:** Antineoplastic.

USES

Treatment of nonresectable epithelial ovarian carcinoma. Palliative treatment of multiple myeloma or high-dose conditioning treatment before hematopoietic stem cell transplantation (HSCT). **OFF-LABEL:** Hodgkin's lymphoma, malignant melanoma, neuroblastoma, induction regimen for bone marrow and stem cell transplantation, light chain amyloidosis, Ewing's sarcoma.

PRECAUTIONS

Contraindications: Hypersensitivity to melphalan (Alkeran). Resistance to prior melphalan therapy. **Cautions:** Preexisting bone marrow suppression, renal impairment, pregnancy, prior chemotherapy or irradiation.

ACTION

Inhibits DNA and RNA synthesis via carbonium ion formation, cross-links strands of DNA, acts on resting and rapidly dividing tumor cells. **Therapeutic Effect:** Disrupts nucleic acid function, producing tumor cell death.

PHARMACOKINETICS

Oral administration is highly variable. Incomplete intestinal absorption, variable first-pass metabolism, rapid hydrolysis may result. Protein binding: 60%–90%. Extensively metabolized in blood. Eliminated from plasma primarily by chemical hydrolysis. Partially excreted in feces; minimal elimination in urine. **Half-life:** **PO:** 1–1.25 hrs. **IV:** 1.5 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Bone marrow depressants (e.g., cladribine) may increase myelosuppression. May decrease the therapeutic effect of BCG (intravesical), vaccines (live). May increase adverse effects of natalizumab, vaccines (live). **HERBAL:** Echinacea may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase serum uric acid.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 50 mg. **Tablets: (Alkeran):** 2 mg.

ADMINISTRATION/HANDLING

Reconstitution • Reconstitute 50-mg vial with diluent supplied by manufacturer to yield 5 mg/mL solution. • Further dilute with 0.9% NaCl to final concentration not exceeding 0.45 mg/mL.

Rate of administration • Infuse over 15–30 min at rate not to exceed 10 mg/min (total infusion should be administered within 1 hr).

Storage • Store at room temperature; protect from light. • Once reconstituted, complete administration within 60 min.

PO

• Store tablets in refrigerator; protect from light. • Give on empty stomach (1 hr before or 2 hrs after meals).

⚠ IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec).

⚠ IV COMPATIBILITIES

Acyclovir, dexamethasone (Decadron), famotidine (Pepcid), furosemide (Lasix), LORazepam (Ativan), morphine.

INDICATIONS/ROUTES/DOSAGE

⚠ALERT WBC less than 3,000 cells/mm³, platelets less than 100,000 cells/mm³: Withhold treatment until recovery.

Ovarian Carcinoma

PO: ADULTS, ELDERLY: 0.2 mg/kg/day for 5 successive days. Repeat at 4- to 5-wk intervals.

Multiple Myeloma (Palliative Treatment)

PO: ADULTS: Initially, 6 mg once daily for 2–3 wks, followed by up to 4 wks rest, then maintenance dose of 2 mg daily as hematologic recovery begins **or** 10 mg daily for 7–10 days, then maintenance dose of 2 mg daily (after WBC greater than 4,000 cell/mm³ and platelets greater than 100,000 cells/mm³ titrated to hematologic response **or** 0.15 mg/kg/day for 7 days with 2–6 wks rest, then maintenance dose of 0.05 mg/kg/day **or** 0.25 mg/kg/day for 4 days, then repeated at 4- to 6-wk intervals as ANC and platelets return to normal.
IV: ADULTS: 16 mg/m²/dose every 2 wks for 4 doses, then repeat monthly after hematologic recovery.

Multiple Myeloma (Conditioning before HSCT)

IV: ADULTS, ELDERLY: (Evomela only): 100 mg/m² daily for 2 days on day 3 and 2 before autologous stem cell transplant on day 0.

Dosage in Renal Impairment

IV: BUN LEVEL GREATER THAN 30 MG/DL: Decrease dosage by 50%.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Nausea, vomiting (may be severe with large dose). **Occasional:** Diarrhea, stomatitis, rash, pruritus, alopecia.

ADVERSE EFFECTS/TOXIC REACTIONS

Myelosuppression manifested as hematologic toxicity (principally leukopenia, thrombocytopenia, and, to lesser extent, anemia, pancytopenia, agranulocytosis). Leukopenia may occur as early as 5 days after drug initiation. WBC, platelet counts return to normal during 5th wk after therapy, but leukopenia, thrombocytopenia may last more than 6 wks after

discontinuing drug. Hyperuricemia noted by hematuria, crystalluria, flank pain.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain CBC, then wkl thereafter. Dosage may be decreased or discontinued if WBC falls below 3,000 cells/mm³ or platelet count falls below 100,000 cells/mm³. Antiemetics may be effective in preventing/treating nausea, vomiting.

INTERVENTION/EVALUATION

Monitor CBC with differential, serum electrolytes. Monitor for stomatitis. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness), signs of hyperuricemia (hematuria, flank pain). Avoid IM injections, rectal temperatures, other traumas that may induce bleeding.

PATIENT/FAMILY TEACHING

- Increase fluid intake (may protect against hyperuricemia).
- Maintain strict oral hygiene.
- Hair loss is reversible, but new hair growth may have different color, texture.
- Avoid crowds, those with infections.
- Report fever, shortness of breath, cough, sore throat, bleeding, unusual bruising.
- May suppress ovarian function, leading to amenorrhea.

memantineTOP
100

me-man-teen

(Ebixa , Namenda, Namenda XR)**FIXED-COMBINATION(S)**

Namzarcic: memantine/donepezil (a cholinesterase inhibitor): 7 mg/10 mg; 14 mg/10 mg; 21 mg/10 mg; 28 mg/10 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: NMDA receptor antagonist. **CLINICAL:** Anti-Alzheimer's agent.

USES

Treatment of moderate to severe dementia of Alzheimer's type. **OFF-LABEL:** Treatment of mild to moderate vascular dementia.

PRECAUTIONS

Contraindications: Hypersensitivity to memantine. **Cautions:** Moderate to severe renal impairment, severe hepatic impairment, cardiovascular disease, seizure disorder, GU conditions that raise urine pH level.

ACTION

Decreases effects of glutamate, the principal excitatory neurotransmitter in the brain. Persistent CNS excitation by glutamate is thought to cause symptoms of Alzheimer's disease. **Therapeutic Effect:** May slow clinical deterioration in moderate to severe Alzheimer's disease.

PHARMACOKINETICS

Rapidly, completely absorbed after PO administration. Protein binding: 45%. Undergoes little metabolism; most of dose is excreted unchanged in urine. **Half-life:** 60–80 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Not prescribed for this pt population. **Elderly:** No age-related precautions noted, but use is not recommended in pts with severe renal impairment (CrCl less than 9 mL/min).

INTERACTIONS

DRUG: Urine alkalinizers (e.g., carbonic anhydrase inhibitors, sodium bicarbonate) may decrease renal elimination. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Oral Solution: 10 mg/5 mL. **Tablets:** 5 mg, 10 mg.

 **Capsules, Extended-Release:** (*Namenda XR*): 7 mg, 14 mg, 21 mg, 28 mg.

ADMINISTRATION/HANDLING**PO**

• Give without regard to food. • Administer oral solution using syringe provided. Do not dilute or mix with other fluids. • Give extended-release capsules whole. Do not crush. May open capsule and sprinkle on applesauce; give immediately.

INDICATIONS/ROUTES/DOSAGE**Alzheimer's Disease**

PO: ADULTS, ELDERLY: (*Immediate-Release*): Initially, 5 mg once daily. May increase dosage at intervals of at least 1 wk in 5-mg increments to 10 mg/day (5 mg twice daily), then 15 mg/day (5 mg and 10 mg as separate doses), and finally 20 mg/day (10 mg twice daily). Target dose: 20 mg/day. (*Extended-Release*): Initially, 7 mg once daily. May increase at intervals of at least 7 days in increments of 7 mg. **Maximum:** 28 mg once daily. Switching from immediate-release to extended-release: Begin the day following last dose of immediate-release. 10 mg twice daily: 28 mg once daily. 5 mg twice daily: 14 mg once daily.

Dosage in Renal Impairment

Creatinine Clearance	Dosage	
	Immediate-Release	Extended-Release
30 mL/min or greater	No adjustments	No adjustments
5–29 mL/min	5 mg twice daily or 10 mg once daily	14 mg once daily

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Use caution.

SIDE EFFECTS

Occasional (7%–4%): Dizziness, headache, confusion, constipation, hypertension, cough. **Rare (3%–2%):** Back pain, nausea,

fatigue, anxiety, peripheral edema, arthralgia, insomnia.

ADVERSE EFFECTS/TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess cognitive, behavioral, functional deficits of pt. Assess renal function. Question history of cardiovascular disease, hepatic/renal impairment, seizure disorder.

INTERVENTION/EVALUATION

Monitor cognitive, behavioral, functional status of pt. Monitor urine pH (alterations of urine pH toward the alkaline condition may lead to accumulation of the drug with possible increase in side effects). Monitor BUN, CrCl, serum creatinine lab values.

PATIENT/FAMILY TEACHING

- Do not reduce or stop medication; do not increase dosage without physician direction.
- Ensure adequate fluid intake.
- If therapy is interrupted for several days, restart at lowest dose, titrate to current dose at minimum of 1-wk intervals.
- Local chapter of Alzheimer's Disease Association can provide a guide to services.

meropenem

mer-oh-pen-em
(Merrem)

Do not confuse meropenem with doripenem, ertapenem, or imipenem.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Carbapenem. **CLINICAL:** Antibiotic.

USES

Treatment of multidrug-resistant infections; meningitis in children 3 mos and

older; intra-abdominal infections; complicated skin/skin structure infections caused by susceptible *S. aureus*, *S. pyogenes*, *S. agalactiae*, *S. pneumoniae*, *H. influenzae*, *N. meningitidis*, *M. catarrhalis*, *E. coli*, *Klebsiella*, *Enterobacter*, *Serratia*, *P. aeruginosa*, *B. fragilis*. **OFF-LABEL:** Febrile neutropenia, liver abscess, otitis external, prosthetic joint infection.

PRECAUTIONS

Contraindications: Hypersensitivity to meropenem, pts who experienced anaphylactic reactions to other beta-lactams. **Cautions:** Renal impairment, CNS disorders (particularly with history of seizures, concurrent use with valproic acid).

ACTION

Binds to penicillin-binding proteins. Inhibits bacterial cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

After IV administration, widely distributed into tissues and body fluids, including CSF. Protein binding: 2%. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 1 hr.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established in pts younger than 3 mos. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May decrease effects of valproic acid. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, LDH, ALT, AST, bilirubin. May decrease Hgb, Hct, WBC.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 500 mg, 1 g.

ADMINISTRATION/HANDLING

Reconstitution • Reconstitute each 500 mg with 10 mL Sterile Water for Injection, 0.9% NaCl, or D₅W to provide concentration of 50 mg/mL. • Shake to dissolve until clear. • May further dilute with 0.9% NaCl or D₅W to a concentration of 1–20 mg/mL.

Rate of administration • May give by IV push or IV intermittent infusion (piggyback). • If administering as IV intermittent infusion (piggyback), give over 15–30 min (may also give over 3 hrs); if administered by IV push, give over 3–5 min (at a concentration not greater than 50 mg/mL).

Storage • Store vials at room temperature. • After reconstitution of vials with 0.9% NaCl, stable for 2 hrs at room temperature or 18 hrs if refrigerated (with D₅W, stable for 1 hr at room temperature, 8 hrs if refrigerated). IV infusion with 0.9% NaCl stable for 4 hrs at room temperature or 24 hrs if refrigerated (with D₅W, 1 hr at room temperature or 4 hrs if refrigerated).

IV INCOMPATIBILITIES

Acyclovir (Zovirax), amphotericin B (Fungizone), diazepam (Valium), doxycycline (Vibramycin), metroNIDAZOLE (Flagyl), ondansetron (Zofran).

IV COMPATIBILITIES

Dexamethasone (Decadron), DOBUTamine (Dobutrex), DOPamine (Intropin), furosemide (Lasix), heparin, magnesium, morphine.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

IV: ADULTS, ELDERLY: 500 mg q6h or 1–2g q8h. (*Extended-Infusion*): 1–2 g over 3 hrs q8h. **CHILDREN, ADOLESCENTS:** 20 mg/kg/dose q8h. **Maximum dose:** 1,000 mg. **NEONATES:** 20 mg/kg/dose q8–12h.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance.

Creatinine

Clearance	Dosage	Interval
26–49 mL/min	Normal dose	q12h
10–25 mL/min	50% of normal dose	q12h
Less than 10 mL/min	50% of normal dose	q24h
Hemodialysis:	500 mg	q24h
Peritoneal dialysis:	Recommended dose (based on indication)	q24h

Continuous Renal Replacement Therapy (CRRT)

	Dosage	Interval
Continuous venovenous hemofiltration	1 gram then 500 mg OR 1 gram	q8h OR q12h
Continuous venovenous hemodialysis/continuous venovenous hemodiafiltration	1 gram then 500 mg OR 1 gram	q6–8h OR q8–12h

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (5%–3%): Diarrhea, nausea, vomiting, headache, inflammation at injection site. **Occasional (2%):** Oral candidiasis, rash, pruritus. **Rare (less than 2%):** Constipation, glossitis.

ADVERSE EFFECTS/TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance in GI tract. Anaphylactic reactions have been reported. Seizures may occur in pts with CNS disorders (e.g., brain lesions, history of seizures), bacterial meningitis, renal impairment.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question history of hypersensitivity, allergic reaction to penicillins, cephalosporins. Inquire about history of seizures.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Monitor for nausea, vomiting. Evaluate for inflammation at IV injection site. Assess skin for rash. Evaluate hydration status. Monitor I&O, renal function, LFT. Check mental status; be alert to tremors, possible seizures. Assess temperature, B/P twice daily, more often if necessary. Monitor serum electrolytes, esp. potassium.

PATIENT/FAMILY TEACHING

- Report persistent diarrhea, abdominal cramps, fever.

meropenem/ vaborbactam

mer-oh-pen-em/va-bor-bak-tam
(Vabomere)

Do not confuse meropenem/vaborbactam with ampicillin/sulbactam, certolozane/tazobactam, ceftazidime/avibactam, or piperacillin/tazobactam.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Carbapenem/beta-lactamase inhibitor. **CLINICAL:** Antibacterial.

USES

Treatment of pts 18 yrs and older with complicated urinary tract infections (UTIs), including pyelonephritis, caused by the following susceptible microorganisms: *E. coli*, *K. pneumoniae*, *Enterobacter cloacae* species.

PRECAUTIONS

Contraindications: Known hypersensitivity to meropenem, cephalosporins, penicillin; anaphylaxis to beta-lactams.

Cautions: History of renal impairment, seizure disorder, recent *Clostridium difficile* infection or antibiotic-associated colitis; prior hypersensitivity to carbapenem, PCN.

ACTION

Meropenem binds to penicillin-binding proteins, inhibiting cell wall synthesis. Vaborbactam protects meropenem from serine beta-lactamase degradation (vaborbactam has no antibacterial activity). **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Widely distributed into tissues and body fluids. Meropenem metabolized by hydrolysis. Vaborbactam does not undergo metabolism. Protein binding: (meropenem): less than 2%; (vaborbactam): 33%. Excreted unchanged in urine. **Half-life:** 1–2 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Meropenem is secreted in breast milk. Unknown if vaborbactam is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** May have increased risk of adverse effects in pts with renal impairment.

INTERACTIONS

DRUG: Probenecid may increase concentration/effect of meropenem. May decrease concentration/effect of valproic acid, divalproex. May decrease effect of BCG (intravesical). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST. May decrease eosinophils, leukocytes, lymphocytes; serum potassium. May result in positive Coombs' test. May decrease platelets in pts with renal impairment.

AVAILABILITY (Rx)

◀ALERT▶ Meropenem/vaborbactam is a combination product.

Injection, Powder for Reconstitution: meropenem/vaborbactam: 1 g/1 g.

ADMINISTRATION/HANDLING

Reconstitution • Calculate the number of vials needed for dose. • Reconstitute each vial with 20 mL 0.9% NaCl (withdrawn from infusion bag) to a final concentration of 0.05 g/mL of meropenem and 0.05 g/mL of vaborbactam. • Final volume of vial equals 21.3 mL. • Gently mix until powder is fully dissolved. • Visually inspect for particulate matter or discoloration. Solution should appear colorless to slightly yellow in color.

Dilution • **4-g dose (2 vials):** Dilute volume of each vial (21 mL/vial) in 0.9% NaCl bag with a volume of 250 mL (16 mg/mL), or 500 mL (8 mg/mL), or 1,000 mL (4 mg/mL). • **2-g dose (1 vial):** Dilute the volume of vial (21 mL) in 0.9% NaCl bag with a volume of 125 mL (16 mg/mL), or 250 mL (8 mg/mL), or 500 mL (4 mg/mL). • **1-g dose (1 vial):** Dilute half of the volume of vial (10.5 mL) in 0.9% NaCl bag with volume of 70 mL (14.3 mg/mL), or 125 mL (8 mg/mL), or 250 mL (4 mg/mL).

Rate of administration • Infuse over 3 hrs.

Storage • Refrigerate diluted solution for up to 22 hrs or store at room temperature for up to 4 hrs. • Diluted solution must be completely infused within 4 hrs.

IV INCOMPATIBILITIES

Acyclovir (Zovirax), amphotericin B (Fungizone), diazepam (Valium), doxycycline (Vibramycin), metronidazole (Flagyl), ondansetron (Zofran).

INDICATIONS/ROUTES/DOSAGE

Complicated Urinary Tract Infections Including Pyelonephritis

IV: ADULTS, ELDERLY: 4 g (meropenem 2 g/vaborbactam 2 g) q8h for up to 14 days.

Dosage in Renal Impairment

Note: Infuse after hemodialysis on hemodialysis days. Dosage is modified based on eGFR.

Estimated Glomerular

Filtration Rate	Dosage
eGFR 30–49 mL/min	2 g q8h
eGFR 15–29 mL/min	2 g q12h
eGFR less than 15 mL/min	1 g q12h

Dosage in Hepatic Impairment

Mild to severe impairment: No dose adjustment.

SIDE EFFECTS

Occasional (9%–4%): Headache, infusion site reactions (phlebitis, erythema, thrombosis). **Rare (3%–2%):** Diarrhea, pyrexia.

ADVERSE EFFECTS/TOXIC REACTIONS

Hypersensitivity reactions, including anaphylaxis, have been reported in pts treated with beta-lactam antibacterial drugs. Blood and lymphatic disorders such as agranulocytosis, hemolytic anemia, leukopenia, lymphocytosis, neutropenia, thrombocytopenia were reported. Seizures may occur in pts with CNS disorders (e.g., brain lesion, history of seizures, bacterial meningitis), renal impairment. Other CNS reactions may include tremor, paresthesia, lethargy. *Clostridium difficile*-associated diarrhea, with severity ranging from mild diarrhea to fatal colitis, was reported. *Clostridium difficile* infection may occur more than 2 mos after completion of treatment. May increase risk of development of drug-resistant bacteria when used in the absence of a proven or strongly suspected bacterial infection. Skin and SQ reactions including angioedema, erythema multiforme, pruritus, Stevens-Johnson syndrome, toxic epidermal necrolysis occur rarely. Secondary infections including pharyngitis, oral or vulvovaginal candidiasis may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain BUN, serum creatinine, CrCl, GFR in pt with renal impairment. Obtain urine culture and sensitivity. Question history of renal impairment, seizure disorder, recent *C. diff* infection; hypersensitivity reaction to beta-lactams, cephalosporins, PCN. Question pt's usual stool characteristics (color, frequency, consistency).

INTERVENTION/EVALUATION

Periodically monitor WBC. Monitor BUN, serum creatinine, CrCl, GFR, platelet count in pts with renal impairment. Observe daily pattern of bowel activity, stool consistency (increased severity may indicate antibiotic-associated colitis). If frequent diarrhea occurs, obtain *Clostridium difficile* toxin screen and initiate isolation precautions until test result confirmed; manage proper fluid levels/PO intake, electrolyte levels, protein intake. Antibacterial drugs that are not directed against *Clostridium difficile* infection may need to be discontinued. Report any signs of hypersensitivity reaction. Assess skin for toxic skin reactions. Monitor for seizure activity, CNS reactions, IV site reactions.

PATIENT/FAMILY TEACHING

- It is essential to complete drug therapy despite symptom improvement. Early discontinuation may result in antibacterial resistance or may increase risk of recurrent infection.
- Report any episodes of diarrhea, esp. the following months after last dose. Frequent loose stool, fever, abdominal pain, blood-streaked stool may indicate infectious diarrhea and may be contagious to others.
- Report abdominal pain, black/tarry stools, bruising, yellowing of skin or eyes; dark urine, decreased urine output; skin problems such as development of sores, rash, skin bubbling/necrosis.
- Report any nervous system

changes such as anxiety, confusion, hallucinations, muscle jerking, or seizure-like activity.

- Severe allergic reactions such as hives, palpitations, shortness of breath, rash, tongue swelling may occur.

mesalamine

me-sal-a-meen

(Apriso, Asacol HD, Canasa, Delzicol, Lialda, Mesasal , Pentasa, Rowasa, Salofalk , sRowasa)

Do not confuse Asacol with Os-Cal, Lialda with Aldara, or mesalamine with megestrol, memantine, or methenamine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Salicylic acid derivative. **CLINICAL:** Anti-inflammatory agent.

M

USES

PO: Treatment, maintenance of remission of mild to moderate active ulcerative colitis. **Rectal:** Treatment of active mild to moderate distal ulcerative colitis, proctosigmoiditis or proctitis. **OFF-LABEL:** Crohn's disease.

PRECAUTIONS

Contraindications: Hypersensitivity to mesalamine, salicylates. **Cautions:** Sulfasalazine, active peptic ulcer, pyloric stenosis, pericarditis, myocarditis, renal/hepatic impairment, elderly.

ACTION

Mechanism unknown. May modulate local mediators of inflammation, may inhibit tumor necrosis factor. **Therapeutic Effect:** Diminishes inflammation in colon.

PHARMACOKINETICS

Poorly absorbed from colon. Moderately absorbed from GI tract. Metabolized in liver. Unabsorbed portion excreted in

feces; absorbed portion excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 0.5–1.5 hrs; metabolite, 5–10 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Antacids, histamine H₂-receptor antagonists (e.g., famotidine, ranitidine), proton pump inhibitors (e.g., lansoprazole, pantoprazole) may decrease therapeutic effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST, bilirubin.

AVAILABILITY (Rx)

Rectal Suspension: (*Rowasa, sRowasa*): 4 g/60 mL. **Suppositories:** (*Canasa*): 1 g.

 **Capsules, Controlled-Release:** (*Pentasa*): 250 mg, 500 mg. **Extended-Release:** (*Apriso*): 375 mg. **Capsules, Delayed-Release:** (*Delzicol*): 400 mg.  **Tablets, Delayed-Release:** (*Asacol HD*): 800 mg. (*Lialda*): 1.2 g.

ADMINISTRATION/HANDLING

 **ALERT** Store rectal suspension, suppository, oral forms at room temperature.

PO

• Have pt swallow whole; do not break outer coating of tablet. • Give without regard to food. • **Apriso:** Do not administer with antacids. • **Lialda:** Administer once daily with meal.

Rectal

• Shake bottle well. • Instruct pt to lie on left side with lower leg extended, upper leg flexed forward. • Knee-chest position may also be used. • Insert applicator tip into rectum, pointing toward umbilicus. • Squeeze bottle steadily until contents are emptied. • Store suppositories at room temperature. Do not refrigerate.

INDICATIONS/ROUTES/DOSAGE

Treatment of Ulcerative Colitis

PO: (*Capsule [Pentasa]*): ADULTS, ELDERLY: 1 g 4 times daily.

PO: (*Capsule [Delzicol]*): ADULTS, ELDERLY: 800 mg 3 times daily. **CHILDREN 5 YRS AND OLDER, WEIGHING 54–90 KG:** 1,200 mg in morning and evening. **Maximum:** 2,400 mg/day. **33–53 KG:** 1,200 mg in morning and 800 mg in evening. **Maximum:** 2,000 mg/day. **17–32 KG:** 800 mg in morning and 400 mg in evening. **Maximum:** 1,200 mg/day.

PO: (*Tablet [Asacol HD]*): ADULTS, ELDERLY: 1.6 g 3 times daily.

PO: (*Tablet [Lialda]*): ADULTS, ELDERLY: 2.4–4.8 g once daily.

Maintenance of Remission in Ulcerative Colitis

PO: (*Capsule [Pentasa]*): ADULTS, ELDERLY: 1 g 4 times daily.

PO: (*Capsule [Delzicol]*): ADULTS, ELDERLY: 1.6 g/day in 2–4 divided doses.

PO: (*Capsule, Extended-Release [Apriso]*): ADULTS, ELDERLY: 1.5 g once daily in the morning.

PO: (*Tablet [Lialda]*): 2.4 g once daily with food.

Distal Ulcerative Colitis, Proctosigmoiditis, Proctitis

Rectal: (*Retention Enema*): ADULTS, ELDERLY: 60 mL (4 g) at bedtime; retained overnight for approximately 8 hrs for 3–6 wks.

Rectal: (*1 G Suppository*): ADULTS, ELDERLY: Once daily at bedtime. Continue therapy for 3–6 wks.

 **ALERT** Suppository should be retained for 1–3 hrs for maximum benefit.

Dosage of Renal/Hepatic Impairment

Use caution.

SIDE EFFECTS

Mesalamine is generally well tolerated, with only mild, transient effects. **Frequent (greater than 6%):** **PO:** Abdominal cramps/pain, diarrhea, dizziness, headache, nausea, vomiting, rhinitis, unusual

fatigue. **Rectal:** Abdominal/stomach cramps, flatulence, headache, nausea. **Occasional (6%–2%): PO:** Hair loss, decreased appetite, back/joint pain, flatulence, acne. **Rectal:** Alopecia. **Rare (less than 2%): Rectal:** Anal irritation.

ADVERSE EFFECTS/TOXIC REACTIONS

Sulfite sensitivity may occur in susceptible pts, manifested as cramping, headache, diarrhea, fever, rash, urticaria, pruritus, wheezing. Discontinue drug immediately. Hepatitis, pancreatitis, pericarditis occur rarely with oral forms.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain BUN, serum creatinine, LFT. Assess for abdominal pain, discomfort.

INTERVENTION/EVALUATION

Encourage adequate fluid intake. Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool consistency; record time of evacuation. Assess for abdominal disturbances. Assess skin for rash, urticaria. Discontinue medication if rash, fever, cramping, or diarrhea occurs.

PATIENT/FAMILY TEACHING

- Report rash, fever, abdominal pain, significant diarrhea.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- May discolor urine yellow-brown.
- Suppositories stain fabrics.

mesna

mess-na
(Mesnex, Uromitexan )

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Chemo-protective agent. **CLINICAL:** Antineoplastic adjunct, antidote.

USES

Detoxifying agent used as protectant against hemorrhagic cystitis induced by ifosfamide. **OFF-LABEL:** Reduce incidence of cyclophosphamide-induced hemorrhagic cystitis with high-dose cyclophosphamide.

PRECAUTIONS

Contraindications: Hypersensitivity to mesna. **Cautions:** Preexisting autoimmune disorders.

ACTION

Binds with, detoxifies urotoxic metabolites of ifosfamide/cyclophosphamide. **Therapeutic Effect:** Inhibits ifosfamide/cyclophosphamide-induced hemorrhagic cystitis.

PHARMACOKINETICS

Rapidly metabolized after IV administration to mesna disulfide, which is reduced to mesna in kidneys. Protein binding: 69%–75%. Excreted in urine. **Half-life:** 24 min; metabolite: 72 min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Information not available.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May produce false-positive test result for urinary ketones.

AVAILABILITY (Rx)

Injection Solution: 100 mg/mL. **Tablets:** 400 mg.

ADMINISTRATION/HANDLING

Reconstitution • Dilute with D₅W or 0.9% NaCl to concentration of 20 mg/mL. • May add to solutions containing ifosfamide or cyclophosphamide.

Rate of administration • Administer by IV infusion over 15–30 min or by continuous infusion.

Storage • Store parenteral form at room temperature. • After dilution, in 0.9% NaCl or D₅W, stable for 48 hrs at room temperature (solutions of mesna and cyclophosphamide in D₅W stable for 48 hrs if refrigerated or 6 hrs at room temperature). Discard unused medication.

PO

• Administer orally in either tablet formulation or parenteral solution. • Dilute mesna solution before PO administration to decrease sulfur odor. Can be diluted (1:1 to 1:10) in carbonated cola drinks, fruit juices, milk.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), CISplatin (Platinol).

IV COMPATIBILITIES

Allopurinol (Aloprim), DOCEtaxel (Taxotere), DOXOrubicin (Adriamycin), etoposide (VePesid), gemcitabine (Gemzar), granisetron (Kytril), methotrexate, ondansetron (Zofran), PACLitaxel (Taxol), vinorelbine (Navelbine).

INDICATIONS/ROUTES/DOSAGE

Prevention of Hemorrhagic Cystitis in Pts Receiving Ifosfamide

IV: ADULTS, ELDERLY: 20% of ifosfamide dose at time of ifosfamide administration and 4 and 8 hrs after each dose of ifosfamide. **Total dose:** 60% of ifosfamide dosage.

IV/PO: 100% of ifosfamide dose, given as 20% IV at start time of ifosfamide, followed by 40% dose given orally 2 and 6 hrs after start of ifosfamide.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (greater than 17%): Altered taste, soft stools. **Large doses:** Diarrhea, myalgia, headache, fatigue, nausea, hypotension, allergic reaction.

ADVERSE EFFECTS/TOXIC REACTIONS

Hematuria occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

ALERT Each dose must be administered with ifosfamide therapy.

INTERVENTION/EVALUATION

Assess morning urine specimen for hematuria. If such occurs, dosage reduction or discontinuation may be necessary. Monitor daily pattern of bowel activity, stool consistency; record time of evacuation. Monitor B/P for hypotension.

PATIENT/FAMILY TEACHING

• Report headache, myalgia, nausea.

metFORMIN

TOP 100 HIGH ALERT

met-for-min

(Fortamet, Glucophage, Glucophage XR, Glumetza, Glycon , Riomet, D-Care DM2)

BLACK BOX ALERT Lactic acidosis occurs very rarely, but mortality rate is 50%. Risk increases with degree of renal impairment, pt's age, those with diabetes, unstable HF or acute HF.

Do not confuse Glucophage with Glucotrol, or metFORMIN with metronIDAZOLE.

FIXED-COMBINATION(S)

Actoplus Met: metFORMIN/pioglitazone (an antidiabetic): 500 mg/15 mg, 850 mg/15 mg. **Avandamet:** metFORMIN/rosiglitazone (an antidiabetic): 500 mg/1 mg, 500 mg/2 mg, 500 mg/4 mg, 1,000 mg/2 mg, 1,000 mg/4 mg. **Glucovance:** metFORMIN/glyBURIDE (an antidiabetic): 250 mg/1.25 mg, 500 mg/2.5 mg, 500 mg/5 mg. **Invokamet:** metFORMIN/canagliflozin (an antidiabetic): 500 mg/50 mg, 500 mg/150 mg, 1,000 mg/50 mg, 1,000 mg/150 mg. **Janumet, Janumet**

XR: metFORMIN/SITagliptin (an antidiabetic): 500 mg/50 mg, 1,000 mg/50 mg. **Jentaducto, Jentaducto XR:** metFORMIN/linagliptin (an antidiabetic): 500 mg/2.5 mg; 1,000 mg/2.5 mg; 1,000 mg extended-release/2.5 mg; 1,000 mg extended-release/5 mg. **Kazano:** metFORMIN/allogliptin (an antidiabetic): 500 mg/12.5 mg; 1,000 mg/12.5 mg. **Kombiglyze XR:** metFORMIN/SAXagliptin (an antidiabetic): 500 mg/5 mg, 1,000 mg/5 mg, 1,000 mg/2.5 mg. **Metaglip:** metFORMIN/glipiZIDE (an antidiabetic): 250 mg/2.5 mg, 500 mg/2.5 mg, 500 mg/5 mg. **Qternmet XR:** metFORMIN/dapagliflozin (an antidiabetic)/saxagliptin (an antidiabetic): 1,000 mg/2.5 mg/2.5 mg; 1,000 mg/5 mg/2.5 mg; 1,000 mg/5 mg/5 mg; 1,000 mg/10 mg/5 mg. **PrandiMet:** metFORMIN/repaglinide (an antidiabetic): 500 mg/1 mg, 500 mg/2 mg. **Synjardy:** metFORMIN/empagliflozin (an antidiabetic): 500 mg/5 mg, 1,000 mg/5 mg, 500 mg/12.5 mg, 1,000 mg/12.5 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Biguanide antihyperglycemic. **CLINICAL:** Antidiabetic agent.

USES

Management of type 2 diabetes mellitus. **OFF-LABEL:** Polycystic ovarian syndrome, gestational diabetes mellitus. Prevention of type 2 diabetes.

PRECAUTIONS

◀ ALERT ▶ Lactic acidosis is a rare but potentially severe consequence of metformin therapy. Withhold in pts with conditions that may predispose to lactic acidosis (e.g., hypoxemia, dehydration, hypoperfusion, sepsis).

Contraindications: Hypersensitivity to metformin. Severe renal disease/dysfunction; acute or chronic metabolic acidosis (with or without coma). **Cautions:** HF, hepatic impairment, excessive acute/chronic

alcohol intake, elderly. Recommend temporary discontinuation at time of or before iodinated contrast imaging procedures in pts with CrCl of 30–60 mL/min, or with history of hepatic disease, alcoholism, HE.

ACTION

Decreases hepatic production of glucose. Decreases intestinal absorption of glucose, improves insulin sensitivity. **Therapeutic Effect:** Improves glyce-mic control, stabilizes/decreases body weight, improves lipid profile.

PHARMACOKINETICS

Slowly, incompletely absorbed after PO administration. Food delays, decreases extent of absorption. Protein binding: Negligible. Primarily distributed to intestinal mucosa, salivary glands. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 9–17 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Insulin is drug of choice during pregnancy. Distributed in breast milk in animals. **Children:** Safety and efficacy not established in children younger than 10 yrs. **Elderly:** Age-related renal impairment or peripheral vascular disease may require dosage adjustment or discontinuation.

INTERACTIONS

DRUG: Alcohol may increase adverse effects. Cimetidine, dolutegravir, rano-lazine may increase concentration/effect. **IV contrast dye** may increase risk of metformin-induced lactic acidosis, acute renal failure (discontinue metFORMIN 24–48 hrs prior to and up to 72 hrs after contrast exposure). **HERBAL:** Garlic may cause hypoglycemia. **FOOD:** None known. **LAB VALUES:** May alter cholesterol, LDL, triglycerides, HDL.

AVAILABILITY (Rx)

Oral Solution: (Riomet): 100 mg/mL. **Tablets:** 500 mg, 850 mg, 1,000 mg.

Tablets, Extended-Release: 500 mg, 750 mg, 1,000 mg.

ADMINISTRATION/HANDLING**PO**

• Give extended-release tablets whole. Do not break, crush, dissolve, or divide extended-release tablets. • Give with meals (to decrease GI upset). Give Fortamet with glass of water.

INDICATIONS/ROUTES/DOSAGE

◀**ALERT**▶ Allow 1–2 wks between dose titrations.

Diabetes Mellitus

PO: (Immediate-Release Tablets, Solution): ADULTS, ELDERLY: Initially, 500 mg twice daily or 850 mg once daily. Titrate in increments of 500 mg wkly or 850 mg every other wk. May also titrate from 500 mg twice daily to 850 mg twice daily after 2 wks. **Maintenance:** 1,000–2,550 mg/day in 2–3 divided doses. **Maximum:** 2,550 mg/day. **CHILDREN 10–16 YRS:** Initially, 500 mg twice daily. **Maintenance:** Titrate in 500-mg increments wkly. **Maximum:** 2,000 mg/day.

PO: (Extended-Release Tablets): ADULTS, ELDERLY: Initially, 500–1,000 mg once daily. May increase by 500 mg at 1-wk intervals. **Maximum:** 2,000 mg/day (Fortamet, Glucophage XR, Glumetza; 2,500 mg/day).

Dosage in Renal Impairment

Contraindicated in pts with serum creatinine greater than 1.5 mg/dL (males) or greater than 1.4 mg/dL (females). **Alternative recommendation: CrCl 45–60 mL/min:** Continue use; monitor renal function q3–6 mos. **CrCl 30–44 mL/min:** Use caution. Consider dose reduction; monitor renal function q3mos. **CrCl less than 30 mL/min:** Discontinue use.

Dosage in Hepatic Impairment

Avoid use (risk factor for lactic acidosis).

SIDE EFFECTS

Occasional (greater than 3%): GI disturbances (diarrhea, nausea, vomiting, abdominal bloating, flatulence, anorexia) that are transient and resolve spontaneously

during therapy. **Rare (3%–1%):** Unpleasant/metallic taste that resolves spontaneously during therapy.

ADVERSE EFFECTS/TOXIC REACTIONS

Lactic acidosis occurs rarely (0.03 cases/1,000 pts) but is a serious and often fatal (50%) complication. Lactic acidosis is characterized by increase in blood lactate levels (greater than 5 mmol/L), decrease in blood pH, electrolyte disturbances. Symptoms include unexplained hyperventilation, myalgia, malaise, drowsiness. May advance to cardiovascular collapse (shock), acute HF, acute MI, prerenal azotemia.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Verify pt has not received IV contrast dye within last 48 hrs. Obtain CBC, renal function test, fasting serum glucose, Hgb A1c.

INTERVENTION/EVALUATION

Monitor fasting serum glucose, Hgb A1c, renal function, CBC. Monitor folic acid, renal function tests for evidence of early lactic acidosis. If pt is on concurrent oral sulfonylureas, assess for hypoglycemia (cool/wet skin, tremors, dizziness, anxiety, headache, tachycardia, numbness in mouth, hunger, diplopia). Be alert to conditions that alter glucose requirements: fever, increased activity, stress, surgical procedure. If lactic acidosis occurs, withhold treatment.

PATIENT/FAMILY TEACHING

• Report symptoms of lactic acidosis (unexplained hyperventilation, muscle aches, extreme fatigue, unusual drowsiness). • Prescribed diet is principal part of treatment; do not skip, delay meals. • Diabetes requires lifelong control. • Avoid alcohol. • Report persistent headache, nausea, vomiting, diarrhea or if skin rash, unusual bruising/bleeding, change in color of urine or stool occurs. • Do not take dose for at least 48 hrs after receiving IV contrast dye with radiologic testing.

methadone

meth-a-done

(Dolophine, Metadol , Methadone Intensol, Methadose)

BLACK BOX ALERT ■ May prolong QT interval, which may cause serious arrhythmias. May cause serious, life-threatening, or fatal respiratory depression. Monitor for signs of misuse, abuse, addiction. Prolonged maternal use may cause neonatal withdrawal syndrome.

Do not confuse methadone with Mephyton, Metadate CD, Metadate ER, methylphenidate, or morphine.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Opioid agonist (Schedule II). **CLINICAL:** Opioid analgesic. Opioid dependency management.

USES

Oral: Moderate to severe pain when a continuous around-the-clock analgesic is needed. Detoxification/maintenance treatment of opioid addiction in conjunction with social/medical services. **Injection:** Management of pain severe enough to require an opioid analgesic when alternate options are inadequate.

PRECAUTIONS

Contraindications: Hypersensitivity to methadone. Severe respiratory depression, acute or severe bronchial asthma (in absence of resuscitative equipment or unmonitored setting), hypercarbia, GI obstruction including paralytic ileus (known or suspected). **Cautions:** Renal/hepatic impairment, elderly/debilitated pts, risk for QT prolongation, medications that prolong QT interval, conduction abnormalities, severe volume depletion, hypokalemia, hypomagnesemia, cardiovascular disease, depression, suicidal tendencies, history of drug abuse, respiratory disease, biliary tract dysfunction, acute pancreatitis,

hypothyroidism, Addison's disease, head injury, increased intracranial pressure.

ACTION

Binds with opioid receptors within CNS, causing inhibition of ascending pain pathways. **Therapeutic Effect:** Produces generalized CNS depression. Alters processes affecting analgesia, emotional response to pain; reduces withdrawal symptoms from other opioid drugs.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	0.5–1 hr	1.5–2 hrs	6–8 hrs
IM	10–20 min	1–2 hrs	4–5 hrs
IV	N/A	15–30 min	3–4 hrs

Well absorbed after IM injection. Protein binding: 85%–90%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 7–59 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. Respiratory depression may occur in neonate if mother received opiates during labor. Regular use of opiates during pregnancy may produce withdrawal symptoms in neonate (irritability, excessive crying, tremors, hyperactive reflexes, fever, vomiting, diarrhea, yawning, sneezing, seizures). **Children:** Paradoxical excitement may occur. Pts younger than 2 yrs more susceptible to respiratory depressant effects. **Elderly:** More susceptible to respiratory depressant effects. Age-related renal impairment may increase risk of urinary retention.

INTERACTIONS

DRUG: Alcohol, other CNS depressants (e.g., LORazepam, morphine, zolpidem) may increase CNS effects, respiratory depression, hypotension. **Strong CYP3A4 inducers** (e.g., carBAMazepine, phenytoin, rifAMPin) may decrease concentration/effects. **Strong CYP3A4 inhibitors** (e.g., rifAMPin,

clarithromycin, ketoconazole, ritonavir) may increase methadone level. Amiodarone, voriconazole may prolong QT interval. MAOIs (e.g., phenelzine, selegiline) may produce serotonin syndrome. **HERBAL:** Herbs with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **St. John's wort** may decrease concentration/effect. **FOOD:** Grapefruit products may alter concentration/effects. **LAB VALUES:** May increase serum amylase, lipase.

AVAILABILITY (Rx)

Injection Solution: 10 mg/mL. **Oral Concentrate:** 10 mg/mL. **Oral Solution:** 5 mg/5 mL, 10 mg/5 mL. **Tablets, Dispersible:** 40 mg. **Tablets:** 5 mg, 10 mg.

ADMINISTRATION/HANDLING

IM, SQ

◀ALERT▶ IM preferred over SQ route (SQ produces pain, local irritation, induration).

- Do not use if solution appears cloudy or contains a precipitate.
- Administer slowly.
- Those with circulatory impairment experience higher risk of overdose due to delayed absorption of repeated administration.

PO

- Give without regard to food.
- Oral dose for detoxification and maintenance may be given in fruit juice or water.
- Dispersible tablet should not be chewed or swallowed; add to liquid, allow to dissolve before swallowing.

INDICATIONS/ROUTES/DOSAGE

Analgesia

PO: ADULTS, ELDERLY: Initially, 2.5 mg q8–12 hrs. May increase by 2.5 mg/dose or 5 mg/day q5–7 days.

Dosage in Renal Impairment

CrCl less than 10 mL/min: 50–75% normal dose. Avoid in severe hepatic disease.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe Impairment:** Avoid use.

Detoxification

PO: ADULTS, ELDERLY: Initially, dose of 20–30 mg. An additional 5–10 mg may be provided if withdrawal symptoms have not been suppressed or if symptoms reappear after 2–4 hrs. Day 1 dose not to exceed 40 mg. **Maintenance range:** Titrate to a dose that prevents withdrawal symptoms for 24 hrs, reduces craving, reduces euphoria effect of self-administered opioids, while ensuring tolerance to sedative effects of methadone. Usual range: 80–120 mg/day. Dose reduction should be in increments of less than 10% of the maintenance dose every 10–14 days. **Short-term:** Initially, titrate to 40 mg/day in 2 divided doses. Continue 40-mg dose for 2–3 days. After 2–3 days of stabilization at 40 mg, gradually decrease dose to level keeping withdrawal symptoms tolerable.

SIDE EFFECTS

Frequent: Sedation, orthostatic hypotension, diaphoresis, facial flushing, constipation, dizziness, nausea, vomiting. **Occasional:** Confusion, urinary retention, palpitations, abdominal cramps, visual changes, dry mouth, headache, decreased appetite, anxiety, insomnia. **Rare:** Allergic reaction (rash, pruritus).

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose results in respiratory depression, skeletal muscle flaccidity, cold/clammy skin, cyanosis, extreme drowsiness progressing to seizures, stupor, coma. Early sign of toxicity presents as increased sedation after being on a stable dose. Cardiac toxicity manifested as QT prolongation, torsades de pointes. Tolerance to analgesic effect, physical dependence may occur with repeated use. **Antidote:** Naloxone (see Appendix J for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline ECG. Assess type, location, intensity of pain. **Detoxification:** Assess pt for opioid withdrawal. Pt should be in recumbent position before drug administration by parenteral route. Obtain vital signs before giving medication. If respirations are 12/min or less (20/min or less in children), withhold medication, contact physician.

INTERVENTION/EVALUATION

Monitor vital signs 15–30 min after SQ/IM dose, 5–10 min following IV dose. Oral medication is 50% as potent as parenteral. Assess for adequate voiding. Monitor daily pattern of bowel activity, stool consistency. Assess for clinical improvement, record onset of relief of pain. Provide support to pt in detoxification program; monitor for withdrawal symptoms.

PATIENT/FAMILY TEACHING

- Methadone may produce drug dependence, has potential for being abused.
- Avoid alcohol.
- Do not stop taking abruptly after prolonged use.
- May cause dry mouth, drowsiness.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Report severe drowsiness, respiratory depression.

methotrexate

HIGH ALERT

meth-o-trex-ate

(Otrexup, Rasuvo, Trexall, Xatmep)

■ **BLACK BOX ALERT** ■ May cause fetal abnormalities, death. May produce potentially fatal chronic hepatotoxicity, dermatologic reactions, acute renal failure, pneumonitis, myelosuppression, malignant lymphoma, aplastic anemia, GI toxicity. Do not use for psoriasis or rheumatoid arthritis treatment in pregnant women.

Do not confuse methotrexate with metOLazone, methylPREDNISolone, or mitoXANTRONE. MTX is

an error-prone abbreviation; do not use as an abbreviation.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimetabolite. **CLINICAL:** Antineoplastic, antirheumatic disease-modifying, immunosuppressant.

USES

Oncology-related: Treatment of breast, head/neck, non-small-cell lung, small-cell lung carcinomas; trophoblastic tumors, acute lymphocytic, meningeal leukemias; non-Hodgkin's lymphomas (lymphosarcoma, Burkitt's lymphoma), carcinoma of gastrointestinal tract, mycosis fungoides, osteosarcoma. **Non-oncology uses:** Psoriasis, rheumatoid arthritis (including juvenile idiopathic arthritis). **OFF-LABEL:** Treatment of acute myelocytic leukemia, bladder carcinoma, ectopic pregnancy, management of abortion, systemic lupus erythematosus, treatment of and maintenance of remission in Crohn's disease.

PRECAUTIONS

Contraindications: Hypersensitivity to methotrexate. Breastfeeding. **For pts with psoriasis, juvenile idiopathic arthritis or rheumatoid arthritis:** Pregnancy, hepatic disease, alcoholism, immunodeficiency syndrome, preexisting blood dyscrasias. **Cautions:** Peptic ulcer, ulcerative colitis, preexisting myelosuppression, history of chronic hepatic disease, alcohol consumption, obesity, diabetes, hyperlipidemia, use with other hepatotoxic medications, concomitant use of proton pump inhibitors. Use of NSAIDs or aspirin with lower methotrexate doses for rheumatoid arthritis.

ACTION

Competes with enzymes necessary to reduce folic acid to tetrahydrofolic acid, a component essential to DNA synthesis, repair, and cellular replication. **Therapeutic Effect:** Inhibits DNA, protein synthesis. Possesses anti-inflammatory and immune-modulating activity.

PHARMACOKINETICS

Variably absorbed from GI tract. Completely absorbed after IM administration. Protein binding: 50%–60%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Removed by hemodialysis but not by peritoneal dialysis. **Half-life:** 3–10 hrs (large doses, 8–15 hrs).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy during methotrexate therapy and minimum 3 mos after therapy in males or at least one ovulatory cycle after therapy in females. May cause fetal death, congenital anomalies. Distributed in breast milk. Breastfeeding not recommended. **Children/Elderly:** Renal/hepatic impairment may require dosage adjustment.

INTERACTIONS

DRUG: Alcohol, hepatotoxic medications (e.g., acetaminophen, acitretin) may increase risk of hepatotoxicity. Bone marrow depressants (e.g., cladribine) may increase myelosuppression. May decrease the therapeutic effect of vaccines (live). May increase adverse effects of natalizumab, vaccines (live). NSAIDs (e.g., ibuprofen, ketorolac, naproxen) may increase risk of toxicity. Probenecid, salicylates (e.g., aspirin) may increase concentration, risk of toxicity. **HERBAL:** Echinacea may decrease therapeutic effect. **FOOD:** None known. **LAB VALUES:** May increase serum uric acid, AST.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 1 g. **Injection, Autoinjector (Rasuvo):** 7.5 mg, 10 mg, 12.5 mg, 15 mg, 17.5 mg, 20 mg, 22.5 mg, 25 mg, 27.5 mg, 30 mg. **Injection Solution:** 25 mg/mL. **Injection, Syringe (Otrexup):** 7.5 mg/0.4 mL, 10 mg/0.4 mL, 15 mg/0.4 mL, 20 mg/0.4 mL, 25 mg/0.4 mL. **Solution, Oral (Xatmep):** 2.5 mg/mL. **Tablets:** 2.5 mg, 5 mg, 7.5 mg, 10 mg, 15 mg.

ADMINISTRATION/HANDLING

ALERT May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration. Wear gloves when preparing solution. If powder or solution comes in contact with skin, wash immediately, thoroughly with soap, water. May give IM, IV, intra-arterially, intrathecally.

Reconstitution • Reconstitute powder with D₅W or 0.9% NaCl to provide concentration of 25 mg/mL or less. • For intrathecal use, dilute with preservative-free 0.9% NaCl to provide a concentration not greater than 2–4 mg/mL.

Rate of administration • Give IV push at rate of 10 mg/min. • Give IV infusion at rate of 4–20 mg/hr (refer to specific protocol).

Storage • Store vials at room temperature. Diluted solutions stable for 24 hrs at room temperature.

IV INCOMPATIBILITIES

Droperidol (Inapsine), gemcitabine (Gemzar), idarubicin (Idamycin), midazolam (Versed), nalbuphine (Nubain).

IV COMPATIBILITIES

CISplatin (Platinol AQ), cyclophosphamide (Cytoxan), DAUNorubicin (DaunoXome), DOXOrubicin (Adriamycin), etoposide (VePesid), 5-fluorouracil, granisetron (Kytril), leucovorin, mitoMYcin (Muta-mycin), ondansetron (Zofran), PACLitaxel (Taxol), vinBLAStine (Velban), vinCRIStine (Oncovin), vinorelbine (Navelbine).

INDICATIONS/ROUTES/DOSAGE

Oncology Uses

ALERT Refer to individual specific protocols for optimum dosage, sequence of administration.

Head/Neck Cancer

PO, IV, IM: ADULTS, ELDERLY: 40 mg/m² once wkly. Continue until disease progression or unacceptable toxicity.

Breast Cancer

IV; ADULTS, ELDERLY: 40 mg/m² days 1 and 8 q4wks in combination with cyclophosphamide and fluorouracil.

Mycosis Fungoides

IM, PO; ADULTS, ELDERLY: 5–50 mg once wky or 15–37.5 mg twice wky.

Rheumatoid Arthritis (RA)

PO; ADULTS: Initially, 10–15 mg once wky. May increase by 5 mg q2–4wks to a maximum dose of 20–30 mg once weekly. **SQ/IM:** Initially, 7.5 mg/wk. Adjust dose gradually to optimal response. **ELDERLY:** Initially, 5–7.5 mg/wk. **Maximum:** 20 mg/wk.

Juvenile Rheumatoid Arthritis (JRA)

PO, IM, SQ; CHILDREN: Initially, 10 mg/m² once wky, then 20–30 mg/m²/wk as a single dose.

Psoriasis

PO; ADULTS, ELDERLY: Initially, 10–25 mg once wky or 2.5–5 mg q12h for 3 doses once wky. **IM/SQ:** 10–25 mg once wky. Adjust dose gradually to optimal response. Titrate to lowest effective dose.

Dosage in Renal Impairment

Creatinine Clearance	Reduce Dose to
61–80 mL/min	75% of normal
51–60 mL/min	70% of normal
10–50 mL/min	30–50% of normal
Less than 10 mL/min	Avoid use

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (10%–3%): Nausea, vomiting, stomatitis, burning/erythema at psoriatic site (in pts with psoriasis). **Occasional (3%–1%):** Diarrhea, rash, dermatitis, pruritus, alopecia, dizziness, anorexia, malaise, headache, drowsiness, blurred vision.

ADVERSE EFFECTS/TOXIC REACTIONS

High potential for various severe toxicities. GI toxicity may produce gingivitis, glossitis, pharyngitis, stomatitis, enteritis,

hematemesis. Hepatotoxicity more likely to occur with frequent small doses than with large intermittent doses. Pulmonary toxicity characterized by interstitial pneumonitis. Hematologic toxicity, resulting from marked myelosuppression, may manifest as leukopenia, thrombocytopenia, anemia, hemorrhage. Dermatologic toxicity may produce rash, pruritus, urticaria, pigmentation, photosensitivity, petechiae, ecchymosis, pustules. Severe nephrotoxicity produces azotemia, hematuria, renal failure.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Rheumatoid arthritis: Assess pain, range of motion. Obtain baseline CBC, BMP, LFT, rheumatoid factor. **Psoriasis:** Assess skin lesions. Question for possibility of pregnancy in pts with psoriasis, rheumatoid arthritis (RA). Obtain all functional tests before therapy, repeat throughout therapy. Antiemetics may prevent nausea, vomiting.

INTERVENTION/EVALUATION

Monitor CBC, BMP, LFT, urinalysis, chest X-rays, serum uric acid. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness). Assess skin for evidence of dermatologic toxicity. Keep pt well hydrated, urine alkaline. Avoid rectal temperatures, traumas that induce bleeding. Apply 5 full min of pressure to IV sites.

PATIENT/FAMILY TEACHING

- Maintain strict oral hygiene.
- Do not have immunizations without physician's approval (drug lowers resistance).
- Avoid crowds, those with infection.
- Avoid alcohol, aspirin.
- Avoid ultraviolet sunlight exposure.
- Use contraceptive measures during therapy and for 3 mos (males) or 1 ovulatory cycle (females) after therapy.
- Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site, diarrhea.
- Hair loss is reversible, but new hair growth may have different color, texture.
- Report persistent nausea/vomiting.

methylergonovine

meth-il-er-goe-noe-veen
(Methergine)

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Ergot alkaloid. **CLINICAL:** Oxytocic agent, uterine stimulant.

USES

Management of uterine atony, hemorrhage and subinvolution of uterus following delivery of placenta. Control uterine hemorrhage following delivery of anterior shoulder in second stage of labor.

PRECAUTIONS

Contraindications: Hypersensitivity to methylergonovine. Hypertension, pregnancy, toxemia. **Cautions:** Renal/hepatic impairment, coronary artery disease, pts at risk for coronary artery disease (diabetes, obesity, smoking, hypercholesterolemia), concurrent use with CYP3A4 inhibitors (e.g., protease inhibitors), occlusive peripheral vascular disease, sepsis, second stage of labor.

ACTION

Increases tone, rate, amplitude of contraction of uterine smooth muscle. **Therapeutic Effect:** Produces sustained contractions, which shortens third stage of labor, reduces blood loss.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	5–10 min	N/A	3 hrs
IV	Immediate	N/A	45 min
IM	2–5 min	N/A	3 hrs

Rapidly absorbed from GI tract after IM administration. Distributed rapidly to plasma, extracellular fluid, tissues. Metabolized in liver. Primarily excreted in urine. **Half-life:** 0.5–2 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated during pregnancy. Small amounts

distributed in breast milk. **Children/Elderly:** No information available.

INTERACTIONS

DRUG: May increase hypertensive effect of **DOPamine**, **norepinephrine**, **phenylephrine**, **vasopressin**. **Strong CYP3A4 inhibitors** (e.g., **clarithromycin**, **ketoconazole**, **ritonavir**) may increase concentration/effect. **Beta blockers** (e.g., **carvedilol**, **labetalol**, **metoprolol**) may increase vasoconstrictive effect of ergot derivatives. May decrease vasodilation effect of **nitroglycerin**. May increase vasoconstricting effect of **serotonin 5-HT_{1D} receptor agonists** (e.g., **SUMatriptan**). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum prolactin.

AVAILABILITY (Rx)

Injection Solution: 0.2 mg/mL. **Tablets:** 0.2 mg.

ADMINISTRATION/HANDLING

Reconstitution • Dilute with 0.9% NaCl to volume of 5 mL.

Rate of administration • Give over at least 1 min, carefully monitoring B/P.

Storage • Refrigerate ampules.

IV INCOMPATIBILITIES

None known.

IV COMPATIBILITIES

Heparin, potassium.

INDICATIONS/ROUTES/DOSAGE

Prevention/Treatment of Postpartum, Postabortion Hemorrhage

PO: ADULTS: 0.2 mg 3–4 times daily. Continue for up to 7 days.

IV, IM: ADULTS: Initially, 0.2 mg after delivery of anterior shoulder, after delivery of placenta, or during puerperium. May repeat q2–4h as needed.

Note: Initial dose may be given parenterally, followed by oral regimen.

IV use in life-threatening emergencies only.

Dosage in Renal/Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent: Nausea, uterine cramping, vomiting. **Occasional:** Abdominal pain, diarrhea, dizziness, diaphoresis, tinnitus, bradycardia, chest pain. **Rare:** Allergic reaction (rash, pruritus), dyspnea, severe or sudden hypertension.

ADVERSE EFFECTS/TOXIC REACTIONS

Severe hypertensive episodes may result in CVA, serious arrhythmias, seizures. Hypertensive effects are more frequent with pt susceptibility, rapid IV administration, concurrent use of regional anesthesia, vasoconstrictors. Peripheral ischemia may lead to gangrene.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Determine baseline serum calcium level, B/P, pulse. Assess for any evidence of bleeding before administration.

INTERVENTION/EVALUATION

Monitor uterine tone, bleeding, B/P, pulse q15min until stable (about 1–2 hrs). Assess extremities for color, warmth, movement, pain. Report chest pain promptly. Provide support with ambulation if dizziness occurs.

PATIENT/FAMILY TEACHING

- Avoid smoking: causes increased vasoconstriction.
- Report increased cramping, bleeding, foul-smelling lochia.
- Report pale, cold hands/feet (possibility of diminished circulation).

methylnaltrexone

meth-il-nal-trex-own
(Relistor)

Do not confuse methylnaltrexone with naltrexone.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Opioid receptor antagonist. **CLINICAL:** GI agent.

USES

Injection: Treatment of opioid-induced constipation in pts with advanced illness or pain caused by active cancer who require opioid dosage escalation for palliative care. **Injection/Tablets:** Treatment of opioid-induced constipation in pts with chronic pain unrelated to cancer.

PRECAUTIONS

Contraindications: Hypersensitivity to methylnaltrexone. Known or suspected GI obstruction. Pts at increased risk of recurrent GI obstruction. **Cautions:** Renal impairment, history of GI tract lesions (e.g., peptic ulcer disease, GI tract malignancies).

ACTION

Blocks binding of opioids to peripheral opioid receptors within GI tract. Inhibits opioid-induced decreased GI motility and delay in GI transit time. **Therapeutic Effect:** Decreases constipating effect of opioids.

PHARMACOKINETICS

Absorbed rapidly. Undergoes moderate tissue distribution. Protein binding: 11%–15%. Excreted in urine (50%), feces (35%). **Half-life:** 8 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk (not recommended). **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase adverse/toxic effects of **naloxegol, opioid antagonists.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 8 mg/0.4 mL, 12 mg/0.6 mL. **Tablets:** 150 mg.

ADMINISTRATION/HANDLING**PO**

- Administer with water on an empty stomach at least 30 min before first meal of day.

SQ

Preparation • Visually inspect for particulate matter or discoloration. Solution should appear colorless to pale yellow in color. Do not use if solution is cloudy, discolored, or if large particles are observed.

Administration • Insert needle subcutaneously into upper arms, outer thigh, or abdomen, and inject solution. • Do not inject into areas of active skin disease or injury such as sunburns, skin rashes, inflammation, skin infections, or active psoriasis. • Rotate injection sites.

Storage • Once solution is drawn into syringe, may be stored at room temperature. • Administer within 24 hrs.

INDICATIONS/ROUTES/DOSAGE

◀**ALERT**▶ Usual schedule is once every other day, as needed, but no more frequently than once every 24 hrs.

Constipation (Chronic Non-Cancer Pain)

PO: ADULTS, ELDERLY: 450 mg once daily in the morning. **SQ: ADULTS, ELDERLY:** 12 mg/day. **Note:** Discontinue all laxatives prior to use.

Constipation (Advanced Illness)

SQ: ADULTS, ELDERLY WEIGHING 38 KG TO LESS THAN 62 KG: 8 mg. **ADULTS, ELDERLY WEIGHING 62–114 KG:** 12 mg. **ADULTS, ELDERLY WHOSE WEIGHT FALLS OUTSIDE THESE RANGES:** Dose at 0.15 mg/kg (round dose up to nearest 0.1 mL of volume).

Dosage in Severe Renal Impairment (CrCl Less Than 60 mL/min)

SQ: ADULTS, ELDERLY: Administer 50% of recommended dose.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (29%–12%): Abdominal pain, flatulence, nausea. **Occasional (7%–5%):** Diarrhea, dizziness.

ADVERSE EFFECTS/TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Question characteristics of constipation, frequency of bowel movements. Assess bowel sounds. Question history of GI obstruction, perforation, baseline GI disease; renal impairment. Receive full medication history, including herbal products, and screen for interactions. Assess hydration status.

INTERVENTION/EVALUATION

30% of pts report defecation within 30 min after drug administration. Encourage fluid intake. Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool consistency. If opioid medication is stopped, drug should be discontinued. Assess for abdominal disturbances.

PATIENT/FAMILY TEACHING

• Laxative effect usually occurs within 30 min but may take up to 24 hrs after medication administration. • Common side effects include transient abdominal pain, nausea, vomiting. • Report persistent or worsening symptoms, or if severe or persistent diarrhea occurs.

methylphenidateTOP
100

meth-il-fen-i-date

(Aptensyr XR, Concerta, Cotempla XR, Daytrana, Metadate ER, Methylin, Quillichew ER, Quilivant XR, Ritalin, Ritalin LA)

■ **BLACK BOX ALERT** ■ Chronic abuse can lead to marked tolerance, psychological dependence. Abrupt withdrawal from prolonged use may lead to severe depression, psychosis.

Do not confuse Metadate ER with Metadate CD, methylphenidate with methadone, or Ritalin with Rifadin.

◆ **CLASSIFICATION**

PHARMACOTHERAPEUTIC: CNS stimulant (Schedule II). **CLINICAL:** CNS stimulant.

USES

Treatment of attention-deficit hyperactivity disorder (ADHD). Management of narcolepsy. **OFF-LABEL:** Secondary mental depression (especially elderly pts, medically ill).

PRECAUTIONS

Contraindications: Hypersensitivity to methylphenidate. Use during or within 14 days following MAOI therapy; marked anxiety, tension, agitation, motor tics; family history or diagnosis of Tourette’s syndrome, glaucoma. **Metadate:** Severe hypertension, HF, arrhythmia, hyperthyroidism, recent MI or angina. **Cautions:** Hypertension, seizures, acute stress reaction, emotional instability, history of drug dependence, HF, recent MI, hyperthyroidism or thyrotoxicosis, known structural cardiac abnormality, bipolar disorder, cardiomyopathy, arrhythmias, alcohol abuse.

ACTION

Blocks reuptake of norepinephrine, dopamine into presynaptic neurons. Stimulates cerebral cortex and subcortical structures. **Therapeutic Effect:** Decreases motor restlessness, fatigue. Increases motor activity, attention span, mental alertness. Produces mild euphoria.

PHARMACOKINETICS

Onset	Peak	Duration
Immediate-release	2 hrs	3–6 hrs
Sustained-release	4–7 hrs	8 hrs
Extended-release	N/A	12 hrs
Transdermal	2 hrs	N/A

Slowly, incompletely absorbed from GI tract. Protein binding: 15%. Metabolized in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 2–4 hrs.

 **LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** May be more susceptible to developing anorexia, insomnia, stomach pain, decreased weight. Chronic use may inhibit growth. Not approved for

children younger than 6 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: MAOIs (e.g., phenelzine, selegiline) may increase hypertensive effects. Other CNS stimulants (e.g., caffeine, dextroamphetamine, phentermine) may have additive effect. May inhibit metabolism of warfarin, anticonvulsants (e.g., carbamazepine, phenytoin), antidepressants. Alcohol may increase adverse effects. **HERBAL:** Ephedra may cause hypertension, arrhythmias. Yohimbe may increase CNS stimulation. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Oral Solution: (Methylin): 5 mg/5 mL, 10 mg/5 mL, 10 mg/1 mL. **Tablets, Chewable: (Methylin):** 2.5 mg, 5 mg, 10 mg. **Tablets: (Methylin, Ritalin):** 5 mg, 10 mg, 20 mg. **Topical Patch: (Daytrana):** 10 mg/9 hrs, 15 mg/9 hrs, 20 mg/9 hrs, 30 mg/9 hrs. **Powder for Suspension, Extended-Release: (Quilivant XR):** 25 mg/5 mL. **Capsules, Extended-Release 24 hr: (Aptensio XR):** 10 mg, 15 mg, 20 mg, 30 mg, 40 mg, 50 mg, 60 mg. **Capsules, Extended-Release: (Metadate ER, Methylin ER):** 10 mg, 20 mg, 30 mg, 40 mg, 50 mg, 60 mg. **Capsules, Extended-Release 24 hr: (Ritalin LA):** 10 mg, 20 mg, 30 mg, 40 mg. **Tablets, Extended-Release: (Concerta):** 18 mg, 27 mg, 36 mg, 54 mg, 72 mg. **Tablets, Extended-Release: (Metadate ER, Methylin ER):** 10 mg, 20 mg. **Tablets, Extended-Release: (Quillichev ER):** 20 mg, 30 mg, 40 mg. **Tablets, Extended-Release: (Aptensio XR):** 10 mg, 15 mg, 20 mg, 30 mg, 40 mg, 50 mg, 60 mg. **Capsules, Extended-Release: (Metadate ER, Methylin ER):** 10 mg, 20 mg, 30 mg, 40 mg, 50 mg, 60 mg. **Extended-Release: (Ritalin LA):** 10 mg, 20 mg, 30 mg, 40 mg. **Tablets, Extended-Release: (Concerta):** 18 mg, 27 mg, 36 mg, 54 mg, 72 mg. **(Metadate ER, Methylin ER):** 10 mg, 20 mg. **Sustained-Release: (Ritalin SR):** 20 mg. **Tablets, Extended-Release ODT: (Cotempla XR):** 8.6 mg, 17.3 mg, 25.9 mg. **Tablets, Chewable, Extended-Release: (Quillichev ER):** 20 mg, 30 mg, 40 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ Sustained-release, extended-release tablets may be given in place of regular tablets once the daily dose is titrated using regular tablets and the titrated dosage corresponds to sustained-release or extended-release tablet strength.

PO

• Do not give in afternoon or evening (may cause insomnia). • Do not crush, break extended-release capsules, extended- or sustained-release tablets. • Immediate-release tablets may be crushed. • Give dose 30–45 min before meals. • **Concerta**: Administer once daily in morning. May take without regard to food but must be taken with water, milk, or juice. • **Methylin Chewable**: Give with at least 8 oz of water or other fluid. • **Metadate CD, Ritalin LA**: • May be opened, sprinkled on applesauce. • Instruct pt to swallow applesauce without chewing. Do not crush or chew capsule contents. • **Quillivant XR**: Administer in morning with or without food. Shake bottle more than 10 sec prior to administration.

Patch

• To be worn daily for 9 hrs. • Replace daily in morning. • Apply to dry, clean area of hip. • Avoid applying to waistline (clothing may cause patch to rub off). • Alternate application site daily. • Press firmly in place for 30 sec to ensure patch is in good contact with skin. • Do not cut patch.

INDICATIONS/ROUTES/DOSAGE

ADHD

PO: ADULTS: (Immediate-Release): 5 mg twice daily, before breakfast and lunch. May increase by 5–10 mg/day at wkly intervals. **Maximum:** 60 mg/day in 2–3 divided doses. **CHILDREN 6 YRS AND OLDER:** Initially, 2.5–5 mg before breakfast and lunch. May increase by 5–10 mg/day at wkly intervals. **Usual dose:** 20–30 mg/day in 2–3 divided doses. **Maximum:** 60 mg/day.

PO: (Concerta): CHILDREN 6 YRS AND OLDER, ADULTS UP TO 65 YRS OF

AGE: Initially, 18 mg once daily; may increase by 18 mg/day at wkly intervals. **Maximum:** 54 mg/day in children 6–12 yrs of age (up to 72 mg/day in adolescents younger than 18 yrs).

PO: (Metadate CD): CHILDREN 6 YRS AND OLDER: Initially, 20 mg/day. May increase by 10–20 mg/day at wkly intervals. **Maximum:** 60 mg/day.

PO: (Quillichew ER): CHILDREN 6 YRS AND OLDER: Initially, 20 mg/day. May increase by 10 mg, 15 mg or 20 mg/day at wkly intervals. **Maximum:** 60 mg/day.

PO: (Quillivant XR): CHILDREN 6 YRS AND OLDER: Initially, 20 mg once daily in the morning. May increase in increments of 10–20 mg/day at wkly increments. **Maximum:** 60 mg/day.

PO: (Ritalin LA): CHILDREN 6 YRS AND OLDER: Initially, 20 mg/day. May increase by 10 mg/day at wkly intervals. **Maximum:** 60 mg/day.

PO: (Metadate ER, Methylin ER): CHILDREN 6 YRS AND OLDER: May replace regular tablets after daily dose is titrated and 8-hr dosage corresponds to sustained-release or extended-release tablet strength. **Maximum:** 60 mg/day.

PO: (Cotempla XR): CHILDREN, 6–18 YRS: Initially, 17.3 mg once daily. May increase in wkly intervals in 8.6 to 17.3 mg increments. **Maximum:** 51.8 mg/day.

Patch: (Daytrana): CHILDREN 6–12 YRS, ADOLESCENTS: Initially, 10 mg daily (applied and worn for 9 hrs). Dosage is titrated to desired effect. May increase dose no more frequently than every wk.

Narcolepsy

PO: ADULTS, ELDERLY: (Immediate-Release): Initially, 5 mg twice daily, before breakfast and lunch. May increase by 5–10 mg/day at wkly intervals. **Maximum:** 60 mg/day in 2–3 divided doses.

(Extended-Release): May be given once the immediate-release dose is titrated and the titrated 8-hr dose corresponds to sustained-release or extended-release tablet strength. **Maximum:** 60 mg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Anxiety, insomnia, anorexia.

Occasional: Dizziness, drowsiness, headache, nausea, abdominal pain, fever, rash, arthralgia, vomiting. **Rare:** Blurred vision, Tourette's syndrome (uncontrolled vocal outbursts, repetitive body movements, tics), palpitations, priapism.

ADVERSE EFFECTS/TOXIC REACTIONS

Prolonged administration to children with ADHD may delay normal weight gain pattern. Overdose may produce tachycardia, palpitations, arrhythmias, chest pain, psychotic episode, seizures, coma. Hypersensitivity reactions, blood dyscrasias occur rarely.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

ADHD: Assess attention span, impulsivity, interaction with others, distractibility. **Narcolepsy:** Observe/assess frequency of episodes. Question history of seizures.

INTERVENTION/EVALUATION

Monitor B/P, pulse, changes in ADHD symptoms. CBC with differential should be performed routinely during therapy. If paradoxical return of attention-deficit occurs, dosage should be reduced or discontinued. Monitor growth.

PATIENT/FAMILY TEACHING

- Avoid tasks that require alertness, motor skills until response to drug is established.
- Sugarless gum, sips of water may relieve dry mouth.
- Report any increase in seizures.
- Take daily dose early in morning to avoid insomnia.
- Report anxiety, palpitations, fever, vomiting, skin rash.
- Report new or worsened symptoms (e.g., behavior, hostility, concentration ability).
- Avoid caffeine.
- Do not stop taking abruptly after prolonged use.

methylPREDNISolone

meth-il-pred-nis-oh-lone
(Medrol)

methylPREDNISolone acetate

(DepoMedrol)

methylPREDNISolone sodium succinate

(SOLU-MEDROL)

Do not confuse DepoMedrol with Solu-Medrol, Medrol with Mebaral, or methylPREDNISolone with medroxyPROGESTERone or prednisolONE.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Adrenal corticosteroid. **CLINICAL:** Anti-inflammatory.

USES

Anti-inflammatory or immunosuppressant in the treatment of hematologic, allergic, neoplastic, dermatologic, endocrine, GI, nervous system, ophthalmic, renal, or rheumatic disorders. **OFF-LABEL:** Acute spinal cord injury.

PRECAUTIONS

Contraindications: Hypersensitivity to methylprednisolone. Administration of live or attenuated virus vaccines, systemic fungal infection. **IM:** Idiopathic thrombocytopenia purpura. Intrathecal administration. **Cautions:** Respiratory tuberculosis, untreated systemic infections, hypertension, HF, diabetes, GI disease (e.g., peptic ulcer), myasthenia gravis, renal/hepatic impairment, seizures, cataracts, glaucoma, following acute MI, thyroid disorder, thromboembolic tendencies, cardiovascular disease, elderly pts, psychiatric conditions, pts at risk for osteoporosis.

ACTION

Anti-inflammatory: Suppresses migration of polymorphonuclear leukocytes, reverses increased capillary permeability. Exerts effects on modulating carbohydrate, protein, lipid metabolism. Maintains fluid/electrolyte hemostasis. Influences CV, immunologic, endocrine, musculoskeletal, neurologic physiology. **Therapeutic Effect:** Decreases inflammation.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	Rapid	1–2 hrs	30–36 hrs
IM	Rapid	4–8 days	1–4 wks
IV	Rapid	N/A	N/A

Well absorbed from GI tract after IM administration. Widely distributed. Metabolized in liver. Excreted in urine. Removed by hemodialysis. **Half-life:** 3.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. May cause cleft palate (chronic use in first trimester). Breastfeeding not recommended. **Children:** Prolonged treatment or high dosages may decrease short-term growth rate, cortisol secretion. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase anticoagulant effects of warfarin. **Strong CYP3A inducers** (e.g., carbamazepine, phenytoin, rifampin) may decrease effects. **Live virus vaccines** may decrease pt's antibody response to vaccine, increase vaccine side effects, potentiate virus replication. May increase hyponatremic effect of desmopressin. **Strong CYP3A4 inhibitors** (e.g., clarithromycin, ketoconazole, ritonavir) may increase concentration/effect. **HERBAL:** Herbs with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, cholesterol, lipids, amylase, sodium. May decrease serum calcium, potassium, thyroxine, hypothalamic-pituitary-adrenal (HPA) axis.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: (SOLU): 40 mg, 125 mg, 500 mg, 1 g. **Injection, Suspension:** (DEPO): 20 mg/mL, 40 mg/mL, 80 mg/mL. **Tablets:** (Medrol): 2 mg, 4 mg, 8 mg, 16 mg, 32 mg. (Medrol Dosepak): 4 mg (21 tablets).

ADMINISTRATION/HANDLING

ALERT Do not give methylPREDNISolone acetate IV.

Reconstitution • For infusion, add to D₅W, 0.9% NaCl.

Rate of administration • Give IV push over 3–15 min. • Give IV piggyback. Dose of 250 mg over 15–30 min; dose of 500–999 mg over at least 30 min; dose of 1g or greater over 1 hr.

Storage • Store vials at room temperature. Diluted solution is stable for 48 hrs at room temperature or refrigerated.

IM

• MethylPREDNISolone acetate should not be further diluted. • MethylPREDNISolone sodium succinate should be reconstituted with Bacteriostatic Water for Injection. • Give deep IM in gluteus maximus (avoid injection into deltoid muscle).

PO

• Give with food, milk.

IV INCOMPATIBILITIES

Ciprofloxacin (Cipro), diltiazem (Cardizem), potassium chloride, propofol (Diprivan).

IV COMPATIBILITIES

Dexmedetomidine (Precedex), DOPamine (Intropin), heparin, midazolam (Versed), theophylline.

INDICATIONS/ROUTES/DOSAGE

Anti-inflammatory, Immunosuppressive

IV: ADULTS, ELDERLY: 10–40 mg. May repeat q4–6h as needed. **CHILDREN:** Initially, 0.11–1.6 mg/kg/day in 3–4 divided doses. Range: 0.5–1.7 mg/kg/day in 2–4 divided doses.

PO: ADULTS, ELDERLY: 4–48 mg/day in 1–4 divided doses. **CHILDREN:** 0.5–1.7 mg/kg/day or 5–25 mg/m²/day in 2–4 divided doses.

IM: (MethylPREDNISolone Succinate): ADULTS, ELDERLY: 10–40 mg/day.

IM: (Methylprednisolone Acetate): ADULTS, ELDERLY: 4–120 mg single dose.

Intra-articular, intralesional: ADULTS, ELDERLY: 4–80 mg q1–5wks.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Insomnia, heartburn, anxiety, abdominal distention, diaphoresis, acne, mood swings, increased appetite, facial flushing, GI distress, delayed wound healing, increased susceptibility to infection, diarrhea, constipation. **Occasional:** Headache, edema, tachycardia, change in skin color, frequent urination, depression. **Rare:** Psychosis, increased blood coagulability, hallucinations.

ADVERSE EFFECTS/TOXIC REACTIONS

Long-term therapy: Hypocalcemia, hypokalemia, muscle wasting (esp. in arms, legs), osteoporosis, spontaneous fractures, amenorrhea, cataracts, glaucoma, peptic ulcer, HE **Abrupt withdrawal after long-term therapy:** Anorexia, nausea, fever, headache, severe arthralgia, rebound inflammation, fatigue, weakness, lethargy, dizziness, orthostatic hypotension.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to any of the corticosteroids, components. Obtain baselines for height, weight, B/P, serum glucose, electrolytes. Check results of initial tests (tuberculosis [TB] skin test, X-rays, ECG). Question history as listed in Precautions.

INTERVENTION/EVALUATION

Monitor I&O, daily weight; assess for edema. Monitor daily pattern of bowel activity, stool consistency. Check vital signs

at least twice daily. Be alert for infection (sore throat, fever, vague symptoms). Monitor serum electrolytes, including B/P, glucose. Monitor for hypocalcemia (muscle twitching, cramps, positive Trousseau's or Chvostek's signs), hypokalemia (weakness, muscle cramps, numbness, tingling [esp. lower extremities]), nausea/vomiting, irritability, ECG changes). Assess emotional status, ability to sleep. Check lab results for blood coagulability, clinical evidence of thromboembolism.

PATIENT/FAMILY TEACHING

- Take oral dose with food, milk.
- Do not change dose/schedule or stop taking drug; must taper off gradually under medical supervision.
- Report fever, sore throat, muscle aches, sudden weight gain or loss, edema, loss of appetite, fatigue.
- Maintain strict personal hygiene; avoid exposure to disease, trauma.
- Severe stress (serious infection, surgery, trauma) may require increased dosage.
- Follow-up visits, lab tests are necessary.
- Children must be assessed for growth retardation.
- Inform dentist, other physicians of methylprednisolone therapy now or within past 12 mos.

metoclopramide

met-oh-kloe-pra-myde
(Metonia , Reglan)

BLACK BOX ALERT Prolonged use may cause tardive dyskinesia.

Do not confuse metoclopramide with metOLazone or metoprolol, or Reglan with Renegal.

CLASSIFICATION

PHARMACOTHERAPEUTIC: DOPAmine, serotonin receptor antagonist.
CLINICAL: GI agent, antiemetic.

USES

PO: Symptomatic treatment of diabetic gastroparesis, gastroesophageal reflux.

IV/IM: Symptomatic treatment of diabetic gastroparesis, prevent/treat nausea/vomiting with chemotherapy or after surgery.

PRECAUTIONS

Contraindications: Hypersensitivity to metoclopramide. Concurrent use of medications likely to produce extrapyramidal reactions. Situations in which GI motility may be dangerous (e.g., GI hemorrhage, GI perforation/obstruction), history of seizure disorder, pheochromocytoma. **Cautions:** Renal impairment, HF, cirrhosis, hypertension, depression, Parkinson's disease, elderly.

ACTION

Blocks dopamine/serotonin receptors in chemoreceptor trigger zone of the CNS. Enhances acetylcholine response in upper GI tract, causing increased motility and accelerated gastric emptying without stimulating gastric, biliary, or pancreatic secretions; increases lower esophageal sphincter tone. **Therapeutic Effect:** Accelerates intestinal transit, promotes gastric emptying. Relieves nausea, vomiting.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30–60 min	N/A	1–2 hrs
IV	1–3 min	N/A	1–2 hrs
IM	10–15 min	N/A	1–2 hrs

Well absorbed from GI tract. Metabolized in liver. Protein binding: 30%. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 4–6 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Children:** More susceptible to having dystonic reactions. **Elderly:** More likely to have parkinsonian dyskinesias after long-term therapy.

INTERACTIONS

DRUG: May increase adverse effects of antipsychotic (e.g., haloperidol), promethazine, SNRIs (e.g., DULoxetine, venlafaxine), SSRIs (e.g., citalopram, PARoxetine), tramadol,

tricyclic antidepressants (e.g., amitriptyline, doxepin). **Strong CYP2D6 inhibitors** (e.g., FLUoxetine, PARoxetine) may increase concentration/effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum aldosterone, prolactin.

AVAILABILITY (Rx)

Injection Solution: 5 mg/mL. **Solution, Oral:** 5 mg/5 mL. **Tablets:** 5 mg, 10 mg.

 **Tablets, Orally Disintegrating:** 5 mg, 10 mg.

ADMINISTRATION/HANDLING

Reconstitution • Dilute doses greater than 10 mg in 50 mL D₅W or 0.9% NaCl. **Rate of administration** • Infuse over 15–30 min. • May give undiluted slow IV push at rate of 10 mg over 1–2 min. • Too-rapid IV injection may produce intense feeling of anxiety, restlessness, followed by drowsiness.

Storage • Store vials at room temperature. • After dilution, IV infusion (piggyback) is stable for 24 hrs.

PO

• Give 30 min before meals and at bedtime. • Tablets may be crushed. • Do not cut, divide, break orally disintegrating tablets. Place on tongue, swallow with saliva.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), cefepime (Maxipime), furosemide (Lasix), propofol (Diprivan).

IV COMPATIBILITIES

Dexamethasone, dexmedetomidine (Precedex), dilTIAZem (Cardizem), diphenhydramine (Benadryl), fentaNYL (Sublimaze), heparin, HYDRomorphone (Dilaudid), morphine, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Prevention of Chemotherapy-Induced Nausea/Vomiting

PO: ADULTS, ELDERLY: 10 mg q6h prn.

Diabetic Gastroparesis

PO, IV: ADULTS, ELDERLY: 5–10 mg 30 min before meals and at bedtime for up to 12 wks.

Dosage in Renal Impairment

Dosage is modified based on creatinine clearance.

Creatinine Clearance Dosage

Less than 40 mL/min	50% of normal dose
---------------------	--------------------

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

▲ALERT▲ Doses of 2 mg/kg or greater, or increased length of therapy, may result in a greater incidence of side effects.

Frequent (10%): Drowsiness, restlessness, fatigue, lethargy. **Occasional (3%):** Dizziness, anxiety, headache, insomnia, breast tenderness, altered menstruation, constipation, rash, dry mouth, galactorrhea, gynecomastia. **Rare (less than 3%):** Hypotension, hypertension, tachycardia.

ADVERSE EFFECTS/TOXIC REACTIONS

Extrapyramidal reactions occur most frequently in children, young adults (18–30 yrs) receiving large doses (2 mg/kg) during chemotherapy and usually are limited to akathisia (involuntary limb movement, facial grimacing, motor restlessness). Neuroleptic malignant syndrome (diaphoresis, fever, unstable B/P, muscular rigidity) has been reported.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Antiemetic: Assess for dehydration (poor skin turgor, dry mucous membranes, longitudinal furrows in tongue). Assess for nausea, vomiting, abdominal distention, bowel sounds.

INTERVENTION/EVALUATION

Monitor for anxiety, restlessness, extrapyramidal symptoms (EPS) during IV administration. Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash. Evaluate for therapeutic response from gastroparesis (nausea, vomiting, bloating). Monitor renal function, B/P, heart rate.

PATIENT/FAMILY TEACHING

- Avoid tasks that require alertness, motor skills until response to drug is established.
- Report involuntary eye, facial, limb movement (extrapyramidal reaction).
- Avoid alcohol.

metOLazone

meh-toe-la-zone
(Zaroxolyn )

Do not confuse metOLazone with metaxalone, methotrexate, metoclopramide, or metoprolol, or Zaroxolyn with Zarontin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Thiazide diuretic. **CLINICAL:** Diuretic, antihypertensive.

USES

Treatment of mild to moderate hypertension, edema due to HF, nephrotic syndrome, or impaired renal function.

PRECAUTIONS

Contraindications: Hypersensitivity to metolazone. Anuria, hepatic coma/precoma. **Cautions:** History of hypersensitivity to sulfonamides, thiazide diuretics. Severe renal disease, severe hepatic impairment, gout, prediabetes or diabetes, elevated serum cholesterol, triglycerides.

ACTION

Blocks reabsorption of sodium, potassium, chloride at distal convoluted tubule, increasing excretion of sodium, potassium, water. **Therapeutic Effect:** Reduces B/P, promotes diuresis.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (diuretic)	1 hr	—	24 hrs

Incompletely absorbed from GI tract. Protein binding: 95%. Primarily excreted unchanged in urine. Not removed by hemodialysis. **Half-life:** 20 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Small amount distributed in breast milk. Breastfeeding not recommended. **Children:** No age-related precautions noted. **Elderly:** May be more sensitive to hypotensive or electrolyte effects. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Bile acid sequestrants (e.g., cholestyramine) may decrease absorption. May increase the hypokalemic effect of topiramate.

HERBAL: Licorice may increase the hypokalemic effect. **Herbals with hypotensive properties** (e.g., garlic, ginger, ginkgo biloba) or **hypertensive properties** (e.g., yohimbe) may alter effects.

FOOD: None known. **LAB VALUES:** May increase serum glucose, cholesterol, LDL, bilirubin, calcium, creatinine, uric acid, triglycerides. May decrease urinary calcium, serum magnesium, potassium, sodium.

AVAILABILITY (Rx)

Tablets: 2.5 mg, 5 mg, 10 mg.

ADMINISTRATION/HANDLING**PO**

- May give with food, milk if GI upset occurs, preferably with breakfast (may prevent nocturia).

INDICATIONS/ROUTES/DOSAGE**Edema**

PO: ADULTS: 2.5–10 mg/day. May increase to 20 mg/day.

Hypertension

PO: ADULTS, ELDERLY: Initially, 2.5–5 mg/day. Adjust dose to achieve maximum therapeutic effect.

Dosage in Renal Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Use caution.

Dosage in Hepatic Impairment

No dose adjustment. Contraindicated with hepatic coma or precoma.

SIDE EFFECTS

Expected: Increased urinary frequency/volume. **Frequent (10%–9%):** Dizziness, light-headedness, headache. **Occasional (6%–4%):** Muscle cramps/spasm, drowsiness, fatigue, lethargy. **Rare (less than 2%):** Asthenia, palpitations, depression, nausea, vomiting, abdominal bloating, constipation, diarrhea, urticaria.

ADVERSE EFFECTS/TOXIC REACTIONS

Vigorous diuresis may lead to profound water loss and electrolyte depletion, resulting in hypokalemia, hyponatremia, dehydration. Acute hypotensive episodes may occur. Hyperglycemia may occur during prolonged therapy. Pancreatitis, paresthesia, blood dyscrasias, pulmonary edema, allergic pneumonitis, dermatologic reactions occur rarely. Overdose can lead to lethargy, coma without changes in electrolytes, hydration.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Check vital signs, esp. B/P for hypotension, before administration. Assess

baseline serum electrolytes, particularly check for hypokalemia. Assess skin turgor, mucous membranes for hydration status. Assess for peripheral edema. Assess muscle strength, mental status. Note skin temperature, moisture. Obtain baseline weight. Monitor I&O.

INTERVENTION/EVALUATION

Continue to monitor B/P, vital signs, serum electrolytes, I&O, weight. Note extent of diuresis. Monitor for electrolyte disturbances (hypokalemia may result in weakness, tremors, muscle cramps, nausea, vomiting, altered mental status, tachycardia; hyponatremia may result in confusion, thirst, cold/clammy skin).

PATIENT/FAMILY TEACHING

- Expect increased urinary frequency/volume.
- Slowly go from lying to standing to reduce hypotensive effect.
- Avoid tasks requiring motor skills, mental alertness until response to drug is established.
- Eat foods high in potassium, such as whole grains (cereals), legumes, meat, bananas, apricots, orange juice, potatoes (white, sweet), raisins.

metoprolol

TOP 100 HIGH ALERT

me-toe-pro-lol

(Kaspargo, Lopressor, Toprol XL)

BLACK BOX ALERT Abrupt withdrawal can produce acute tachycardia, hypertension, ischemia. Drug should be gradually tapered over 1–2 wks.

Do not confuse metoprolol with atenolol, labetalol, nadolol, or stanozolol, or Toprol XL with TEGretol, TEGretol XR, or Topamax.

FIXED-COMBINATION(S)

Dutoprol: metoprolol/hydroCHLORothiazide (a diuretic): 25 mg/12.5 mg, 50 mg/12.5 mg, 100 mg/12.5 mg.

Lopressor HCT: metoprolol/hydrochlorothiazide (a diuretic): 50 mg/25 mg, 100 mg/25 mg, 100 mg/50 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Beta₁-adrenergic blocker. **CLINICAL:** Antianginal, antihypertensive, MI adjunct.

USES

Immediate-Release: Treatment of hemodynamically stable acute myocardial infarction (AMI) to reduce CV mortality. Long-term treatment of angina pectoris. Management of hypertension. **Extended-Release:** Long-term treatment of angina pectoris. Management of hypertension. Treatment of stable symptomatic HF of ischemic, hypertensive, or cardiomyopathic origin to reduce rate of hospitalization in pts receiving ACE inhibitors, diuretics, and/or digoxin. **Injection:** Treatment of hemodynamically stable acute myocardial infarction (AMI) to reduce CV mortality. **OFF-LABEL:** Treatment of ventricular arrhythmias, migraine prophylaxis, essential tremor, aggressive behavior, prevent reinfarction post-MI, prevent/treat atrial fibrillation/atrial flutter, hypertrophic cardiomyopathy, thyrotoxicosis.

PRECAUTIONS

Contraindications: Hypersensitivity to metoprolol. Second- or third-degree heart block. **Immediate-Release: MI:** Severe sinus bradycardia (HR less than 45 beats/min), systolic B/P less than 100 mm Hg, moderate to severe HF, significant first-degree heart block. **Immediate-Release: HTN/Angina:** Sinus bradycardia, cardiogenic shock, overt HF, sick sinus syndrome (except with pacemaker), severe peripheral arterial disease. **Extended-Release:** Severe bradycardia, cardiogenic shock, decompensated HF, sick sinus syndrome (except with functioning pacemaker). **Cautions:** Arterial obstruction, bronchospastic disease, hepatic impairment, peripheral vascular disease, hyperthyroidism, diabetes mellitus, myasthenia gravis, psychiatric disease, history of severe anaphylaxis to allergens. **Extended-Release:** Compensated HF.

ACTION

Selectively blocks beta₁-adrenergic receptors. **Therapeutic Effect:** Slows heart rate, decreases cardiac output, reduces B/P. Decreases myocardial ischemia severity.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	10–15 min	1–2 hrs	N/A
PO (extended-release)	N/A	6–12 hrs	N/A
IV	Immediate	20 min	N/A

Well absorbed from GI tract. Protein binding: 12%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 3–7 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. Avoid use during first trimester. May produce bradycardia, apnea, hypoglycemia, hypothermia during delivery, low-birth-weight infants. **Children:** Safety and efficacy not established. **Elderly:** Age-related peripheral vascular disease may increase susceptibility to decreased peripheral circulation.

INTERACTIONS

DRUG: Alpha₂ agonists (e.g., clonidine) may increase AV-blocking effect. **Strong CYP3A4 inducers** (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. **Dronedaraone, fingolimod, rivastigmine** may increase bradycardic effect. May increase vasoconstriction of **ergot derivatives** (e.g., ergotamine). **HERBAL:** Herbals with hypertensive properties (e.g., licorice, yohimbe) or hypotensive properties (e.g., garlic, ginger, ginkgo biloba) may alter effects. **FOOD:** None known. **LAB VALUES:** May increase serum anti-nuclear antibody titer (ANA), serum BUN, lipoprotein, LDH, alkaline phosphatase,

bilirubin, creatinine, potassium, uric acid, ALT, AST, triglycerides.

AVAILABILITY (Rx)

Injection Solution: 5 mg/5 mL. **Tablets, Immediate-Release:** 25 mg, 37.5 mg, 50 mg, 75 mg, 100 mg.

Capsules, Extended-Release Sprinkle: 25 mg, 50 mg, 100 mg, 200 mg. **Tablets, Extended-Release:** 25 mg, 50 mg, 100 mg, 200 mg.

ADMINISTRATION/HANDLING

Rate of administration • May give undiluted. • Administer IV injection over 1 min. • May give by IV piggyback (in 50 mL D₅W or 0.9% NaCl) over 30–60 min. • Monitor ECG, B/P during administration.

Storage • Store at room temperature.

PO

• Tablets may be crushed; do not crush extended-release tablets. • Extended-release tablets may be divided in half. • Give at same time each day. • May be given with or immediately after meals (enhances absorption). • Sprinkle capsules may be given whole or contents may be mixed (1 teaspoonful) on soft food and used within 60 min.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), lidocaine, nitroglycerin.

IV COMPATIBILITIES

Amiodarone, dilTIAzem, furosemide, heparin, morphine.

INDICATIONS/ROUTES/DOSAGE**Hypertension**

PO: (Immediate-Release): ADULTS, ELDERLY: Initially, 50 mg twice daily. Increase at wkly (or longer) intervals. **Usual Range:** 100–200 mg/day in 2 divided doses. **Maximum:** 450 mg/day. **CHILDREN:** Initially, 0.5–1 mg/kg/dose. **Maximum Initial Dose:** 25 mg.

Maximum Daily Dose: 6 mg/kg/day or 200 mg/day, whichever is less.

PO: (*Extended-Release*): ADULTS, ELDERLY: Initially, 25–100 mg/day as single dose. May increase at least at wkly intervals until optimum B/P attained. **Usual Range:** 50–200 mg once daily. **Maximum:** 400 mg/day. **CHILDREN 6 YRS OR OLDER:** Initially, 1 mg/kg once daily. **Maximum Initial Dose:** 50 mg. May increase to 2 mg/kg/day or 200 mg/day, whichever is less.

Angina Pectoris

PO: (*Immediate-Release*): ADULTS: Initially, 50 mg twice daily. Increase at wkly (or longer) intervals. Usual range: 50–200 mg twice daily. **Maximum:** 400 mg/day.

PO: (*Extended-Release*): ADULTS: Initially, 100 mg/day as single dose. May increase by at least at wkly intervals until optimum clinical response achieved. **Maximum:** 400 mg/day.

HF

PO: (*Extended-Release*): ADULTS: Initially, 12.5–25 mg/day. May titrate gradually by doubling dose q2wks or longer up to target dose of 200 mg/day.

Early Treatment of MI

IV: ADULTS: 5 mg q5min for up to 3 doses, followed by 12.5–50 mg q6–12h in acute setting (begin oral 15–30 min after last IV dose). Transition to metoprolol tartrate twice daily or metoprolol succinate once daily. May increase up to a maximum of 200 mg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Metoprolol is generally well tolerated, with transient and mild side effects.

Frequent: Diminished sexual function, drowsiness, insomnia, unusual fatigue/weakness. **Occasional:** Anxiety, diarrhea, constipation, nausea, vomiting, nasal congestion, abdominal discomfort, dizziness, difficulty breathing, cold

hands/feet. **Rare:** Altered taste, dry eyes, nightmares, paresthesia, allergic reaction (rash, pruritus).

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose may produce profound bradycardia, hypotension, bronchospasm. Abrupt withdrawal may result in diaphoresis, palpitations, headache, tremulousness, exacerbation of angina, MI, ventricular arrhythmias. May precipitate HF, MI in pts with heart disease, thyroid storm in those with thyrotoxicosis, peripheral ischemia in those with existing peripheral vascular disease. Hypoglycemia may occur in pts with previously controlled diabetes (may mask signs of hypoglycemia). **Antidote:** Glucagon (see Appendix J for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline renal function, LFT. Assess B/P, apical pulse immediately before drug administration (if pulse is 60/min or less or systolic B/P is less than 90 mm Hg, withhold medication, contact physician).

Antianginal: Record onset, type (sharp, dull, squeezing), radiation, location, intensity, duration of anginal pain, precipitating factors (exertion, emotional stress).

INTERVENTION/EVALUATION

Measure B/P near end of dosing interval (determines whether B/P is controlled throughout day). Monitor B/P for hypotension, respiration for shortness of breath. Assess pulse for quality, rate, rhythm. Assess for evidence of HF: dyspnea (esp. on exertion, lying down), night cough, peripheral edema, distended neck veins. Monitor I&O (increased weight, decreased urinary output may indicate HF). Therapeutic response to hypertension noted in 1–2 wks.

PATIENT/FAMILY TEACHING

- Do not abruptly discontinue medication.
- Compliance with therapy regimen is essential to control hypertension,

arrhythmias. • If dose is missed, take next scheduled dose (do not double dose). • Go from lying to standing slowly. • Report excessive fatigue, dizziness. • Avoid tasks that require alertness, motor skills until response to drug is established. • Do not use nasal decongestants, OTC cold preparations (stimulants) without physician approval. • Monitor B/P, pulse before taking medication. • Restrict salt, alcohol intake.

metroNIDAZOLE

me-troe-nye-da-zole
(Flagyl, MetroCream, MetroGel, MetroGel-Vaginal, NidaGel , Noritate, Vandazole)

Do not confuse metroNIDAZOLE with meropenem, metFORMIN, methotrexate, or miconazole.

FIXED-COMBINATION(S)

Helidac: metronidazole/bismuth/tetracycline (an anti-infective): 250 mg/262 mg/500 mg. **Pylera:** metroNIDAZOLE/bismuth/tetracycline (an anti-infective): 125 mg/140 mg/125 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Nitroimidazole derivative. **CLINICAL:** Antibacterial, antiprotozoal, amebicide.

USES

Systemic: Treatment of anaerobic infections (skin/skin structure, CNS, lower respiratory tract, bone/joints, intra-abdominal, gynecologic, endocarditis, septicemia). Treatment of *H. pylori* (part of multidrug regimen); surgical prophylaxis (colorectal), trichomoniasis, amebiasis. Topical treatment of acne rosacea or inflammatory lesions. **Vaginal gel:** Treatment of bacterial vaginosis. **OFF-LABEL:** Crohn's disease, urethritis. Antibiotic-associated pseudomembranous colitis (AAPC) caused by *C. difficile*.

PRECAUTIONS

Contraindications: Hypersensitivity to metronidazole. Pregnancy (first trimester with trichomoniasis), use of disulfiram within 2 wks, use of alcohol during therapy or within 3 days of discontinuing metroNIDAZOLE. **Cautions:** Blood dyscrasias, severe hepatic dysfunction, end-stage renal disease, seizure disorder, HF, other sodium-retaining states, elderly.

ACTION

Diffuses into organism, interacting with DNA causing a loss of helical DNA structure and strand breakage, inhibiting protein synthesis. **Therapeutic Effect:** Produces bactericidal, antiprotozoal, amebicidal, trichomonocidal effects. Produces anti-inflammatory, immunosuppressive effects when applied topically.

PHARMACOKINETICS

Well absorbed from GI tract; minimally absorbed after topical application. Protein binding: less than 20%. Widely distributed; crosses blood-brain barrier. Metabolized in liver. Excreted in urine (80%), feces (15%). Removed by hemodialysis. **Half-life:** 8 hrs (increased in cirrhosis, neonates). Active metabolite prolonged in renal failure.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. Contraindicated during first trimester in those with trichomoniasis. Topical use during pregnancy, lactation discouraged. **Children:** Safety and efficacy of topical administration not established in pts younger than 21 yrs. **Elderly:** Age-related hepatic impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Alcohol** may cause disulfiram-type reaction (e.g., abdominal cramps, nausea, vomiting, headache, psychotic reactions). **Disulfiram** may increase risk of toxicity. May increase effects of

oral anticoagulants (e.g., warfarin). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum LDH, ALT, AST.

AVAILABILITY (Rx)

Capsules: 375 mg. **Injection, Infusion:** 500 mg/100 mL. **Tablets: (Flagyl):** 250 mg, 500 mg. **Topical Cream: (MetroCream):** 0.75% (**Noritate**): 1%. **Topical Gel: (Metro-Gel):** 0.75%, 1%. **Vaginal Gel: (MetroGel-Vaginal, Vandazole):** 0.75%.

ADMINISTRATION/HANDLING

Rate of administration • Infuse IV over 30–60 min. Do not give by IV bolus. **Storage** • Store at room temperature (ready-to-use infusion bags).

PO

• Give without regard to food. Give with food to decrease GI irritation.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec).

IV COMPATIBILITIES

Dexmedetomidine (Precedex), dilTIA-Zem (Cardizem), DOPamine (Intropin), heparin, HYDROMorphone (Dilaudid), LORazepam (Ativan), magnesium sulfate, midazolam (Versed), morphine.

INDICATIONS/ROUTES/DOSAGE

Amebiasis

PO: ADULTS, ELDERLY: (Immediate-Release): 500–750 mg q8h for 7–10 days. **CHILDREN:** 35–50 mg/kg/day in divided doses q8h for 7–10 days.

Anaerobic Infections

PO, IV: ADULTS, ELDERLY: 500 mg q6–8h. **Maximum:** 4 g/day. **PO: CHILDREN, INFANTS:** 30–50 mg/kg/day in divided doses q8h. **Maximum:** 2,250 mg/day.

IV: CHILDREN, INFANTS: 22.5–40 mg/kg/day in 3 divided doses. **Maximum:** 1,500 mg/day.

Intra-abdominal Infections

IV: ADULTS, ELDERLY: 500 mg q6h. **Maximum:** 4 g/day. **CHILDREN:** 30–40 mg/kg/day in 3 divided doses. **Maximum dose:** 500 mg/dose.

Pseudomembranous Colitis

PO: ADULTS, ELDERLY: 250–500 mg 3–4 times/day. **CHILDREN:** 30 mg/kg/day in divided doses q6h for 7–10 days. **Maximum:** 2 g/day.

Bacterial Vaginosis

Intravaginal: ADULTS: 0.75% apply 1–2 times/day for 5 days. 1.3% apply once as a single dose. **PO:** 500 mg twice daily for 7 days.

◀ALERT▶ Centers for Disease Control and Prevention (CDC) does not recommend the use of topical agents during pregnancy.

Rosacea

Topical: ADULTS, ELDERLY: (1%): Apply to affected area once daily. **(0.75%):** Apply to affected area twice daily.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: Use caution. No dose adjustment. **Severe impairment:** Reduce dose by 50% for immediate-release; not recommended for extended-release.

SIDE EFFECTS

Frequent: Systemic: Anorexia, nausea, dry mouth, metallic taste. **Vaginal:** Symptomatic cervicitis/vaginitis, abdominal cramps, uterine pain. **Occasional: Systemic:** Diarrhea, constipation, vomiting, dizziness, erythematous rash, urticaria, reddish-brown urine. **Topical:** Transient erythema, mild dryness, burning, irritation, stinging, tearing when applied too close to eyes. **Vaginal:** Vaginal,

perineal, vulvar itching; vulvar swelling.

Rare: Mild, transient leukopenia; thrombophlebitis with IV therapy.

ADVERSE EFFECTS/TOXIC REACTIONS

Oral therapy may result in furry tongue, glossitis, cystitis, dysuria, pancreatitis. Peripheral neuropathy (manifested as numbness, tingling of hands/feet) usually is reversible if treatment is stopped immediately upon appearance of neurologic symptoms. Seizures occur occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, LFT. Question for history of hypersensitivity to metronidazole, other nitroimidazole derivatives (and parabens with topical). Obtain specimens for diagnostic tests, cultures before giving first dose (therapy may begin before results are known).

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Monitor I&O, assess for urinary problems. Be alert to neurologic symptoms (dizziness, paresthesia of extremities). Assess for rash, urticaria. Monitor for onset of superinfection (ulceration/change of oral mucosa, furry tongue, vaginal discharge, genital/anal pruritus).

PATIENT/FAMILY TEACHING

- Urine may be red-brown or dark.
- Avoid alcohol, alcohol-containing preparations (cough syrups, elixirs) for at least 48 hrs after last dose.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- If taking metronidazole for trichomoniasis, refrain from sexual intercourse until full treatment is completed.
- For amebiasis, frequent stool specimen checks will be necessary.
- **Topical:** Avoid contact with eyes.
- May apply cosmetics after application.
- Metronidazole acts on erythema, papules, pustules but has no effect on rhinophyma (hypertrophy of nose), telan-

giectasia, ocular problems (conjunctivitis, keratitis, blepharitis).

- Other recommendations for rosacea include avoidance of hot/spicy foods, alcohol, extremes of hot/cold temperatures, excessive sunlight.

micafungin

mye-ka-fun-jin
(Mycamine)

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Echinocandin antifungal. **CLINICAL:** Antifungal.

USES

Treatment of esophageal candidiasis, candidemia, candida peritonitis, abscesses, acute disseminated candidiasis, prophylaxis of *Candida* infection in pts undergoing hematopoietic stem cell transplant. **OFF-LABEL:** Treatment of infections due to *Aspergillus* spp.

PRECAUTIONS

Contraindications: Hypersensitivity to micafungin. **Cautions:** Hepatic/renal impairment, concomitant hepatotoxic medications.

ACTION

Inhibits synthesis of glucan (vital component of fungal cell formation), damaging fungal cell membrane. **Therapeutic Effect:** Decreased glucan content leads to cellular lysis.

PHARMACOKINETICS

Slowly metabolized in liver. Protein binding: greater than 99%. Primarily excreted in feces. Not removed by hemodialysis. **Half-life:** 11–21 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May reduce sperm count. May be embryotoxic. Unknown if distributed in breast milk. **Children:** Safety and efficacy not

established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease therapeutic effect of *Saccharomyces boulardii*. May increase concentration/effect of **sirolimus**. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum creatinine, alkaline phosphatase, LDH, ALT, AST.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 50 mg, 100 mg.

ADMINISTRATION/HANDLING

Reconstitution • Add 5 mL 0.9% NaCl (without bacteriostatic agent) to each 50-mg vial (10 mL to 100-mg vial) to yield micafungin 10 mg/mL. • Gently swirl to dissolve; do not shake. • Further dilute in 0.9% NaCl or D₅W to final concentration of 0.5–1.5 mg/mL. • Alternatively, D₅W may be used for reconstitution and dilution. • Flush existing IV line with 0.9% NaCl or D₅W before infusion.

Rate of administration • Infuse over 60 min.

Storage • Reconstituted solution is stable for 24 hrs at room temperature. • Discard if precipitate is present.

IV INCOMPATIBILITIES

Amiodarone, nifedipine.

IV COMPATIBILITIES

Bumetanide (Bumex), calcium gluconate, heparin.

INDICATIONS/ROUTES/DOSAGE

Esophageal Candidiasis

IV: ADULTS, ELDERLY: 150 mg/day for 10–30 days. **CHILDREN 4 MOS OR OLDER WEIGHING MORE THAN 30 KG:** 2.5 mg/kg/day. **Maximum:** 150 mg daily. **30 KG OR LESS:** 3 mg/kg/day.

Candida Prophylaxis in Stem Cell Pts

IV: ADULTS, ELDERLY: 50 mg/day. **CHILDREN 4 MOS OR OLDER:** 1 mg/kg/day. **Maximum:** 50 mg/day.

Candidemia, Disseminated Candidiasis, Peritonitis, Abscesses

IV: ADULTS, ELDERLY: 100 mg/day for 15 days. **CHILDREN 4 MOS OR OLDER:** 2 mg/kg/day. **Maximum:** 100 mg daily.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (3%–2%): Nausea, headache, diarrhea, vomiting, fever. **Rare (1%):** Dizziness, drowsiness, pruritus, abdominal pain, dyspepsia.

ADVERSE EFFECTS/TOXIC REACTIONS

Hypersensitivity reaction characterized by rash, pruritus, facial edema occurs rarely. Anaphylaxis, hemoglobinuria, hemolytic anemia have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Determine baseline renal function, LFT and periodically thereafter.

INTERVENTION/EVALUATION

Monitor BUN, serum creatinine, CrCl, LFT. Monitor for hepatotoxicity.

PATIENT/FAMILY TEACHING

- Report liver problems such as bruising, confusion; dark amber or orange-colored urine; right upper abdominal pain; yellowing of the skin or eyes.
- Report decreased urine output; dark, amber urine; swelling of the hands or feet.
- Do not take OTC medications that are toxic to the liver (e.g., acetaminophen).

midazolam**HIGH
ALERT**mye-**da**-zoe-lam
(Nayzilam)

BLACK BOX ALERT ■ May cause severe respiratory depression, respiratory arrest, apnea. Initial doses in elderly should be conservative. Do not administer by rapid IV injection in neonates (may cause severe hypotension/seizures). Use with opioids may cause profound sedation, respiratory depression, coma, or death.

Do not confuse midazolam with, ALPRAZolam or LORazepam.

◆ **CLASSIFICATION**

PHARMACOTHERAPEUTIC: Benzodiazepine (Schedule IV). **CLINICAL:** Sedative, anxiolytic.

USES

Sedation, anxiolytic, amnesia before procedure or induction of anesthesia, conscious sedation before diagnostic/radiographic procedure, continuous IV sedation of intubated or mechanically ventilated pts. **Nasal:** Acute treatment of seizure clusters. **OFF-LABEL:** Anxiety, status epilepticus, conscious sedation (intranasal route).

PRECAUTIONS

Contraindications: Hypersensitivity to midazolam. Acute narrow-angle glaucoma, concurrent use of protease inhibitors (e.g., atazanavir, darunavir).

Cautions: Renal/hepatic/pulmonary impairment, impaired gag reflex, HE, treated open-angle glaucoma, obese pts, concurrent CNS depressants, alcohol dependency, elderly pts, debilitated pts.

ACTION

Enhances action of gamma-aminobutyric acid (GABA), one of the major inhibitory neurotransmitters in the brain. **Therapeutic Effect:** Produces anxiolytic, hypnotic, anticonvulsant, muscle relaxant, amnestic effects.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	10–20 min	N/A	N/A
IV	1–5 min	5–7 min	20–30 min
IM	5–15 min	30–60 min	2–6 hrs

Well absorbed after IM administration. Protein binding: 97%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 1–5 hrs.

 **LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: Crosses placenta. Unknown if drug is distributed in breast milk. **Children:** Neonates more likely to have respiratory depression. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Alcohol, other CNS depressants (e.g., LORazepam, morphine, zolpidem) may increase CNS effects, respiratory depression, hypotensive effect. **Strong CYP3A4 inhibitors** (e.g., clarithromycin, ketoconazole, ritonavir) may increase concentration/effect. **Strong CYP3A4 inducers** (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. **HERBAL:** Herbs with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **St. John's wort** may decrease concentration. **FOOD:** Grapefruit products increase oral absorption, systemic availability. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 1 mg/mL, 5 mg/mL. **Nasal Spray:** 5 mg/0.1 mL. **Syrup:** 2 mg/mL.

ADMINISTRATION/HANDLING**Rate of administration**

- May give undiluted or as infusion.
- Resuscitative equipment, O₂ must be readily available before IV administration.
- Administer by slow IV injection over at least 2–5 min at concentration of

1–5 mg/mL. • Reduce IV rate in those older than 60 yrs, debilitated pts with chronic disease states, pulmonary impairment. • Too-rapid IV rate, excessive doses, or single large dose increases risk of respiratory depression/arrest.

Storage • Store vials at room temperature.

IM

• Give deep IM into large muscle mass.
Maximum concentration: 1 mg/mL.

PO

• Do not mix with grapefruit juice.

IV INCOMPATIBILITIES

Albumin, amphotericin B complex (Abelcet, AmBisome, Amphotec), ampicillin (Polycillin), ampicillin and sulbactam (Unasyn), bumetanide (Bumex), co-trimoxazole (Bactrim), dexamethasone (Decadron), fosphenytoin (Cerebyx), furosemide (Lasix), hydrocortisone (Solu-Cortef), methotrexate, nafcillin (Nafcil), sodium bicarbonate.

IV COMPATIBILITIES

Amiodarone (Cordarone), atropine, calcium gluconate, dexmedetomidine (Precedex), dilTIAZem (Cardizem), diphenhydrAMINE (Benadryl), DOBUTamine (Dobutrex), DOPamine (Intropin), etomidate (Amidate), fentaNYL (Sublimaze), glycopyrrolate (Robinul), heparin, HYDROmorphone (Dilaudid), hydrOXYzine (Vistaril), insulin, LORazepam (Ativan), milrinone (Primacor), morphine, nitroglycerin, norepinephrine (Levophed), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Continuous Sedation During Mechanical Ventilation

IV: ADULTS, ELDERLY: Initially, 0.01–0.05 mg/kg (1–5 mg in 70-kg adult). May repeat at 5- to 15-min intervals until adequate sedation achieved or continuous infusion rate of 0.02–0.1 mg/kg/hr and titrated to desired effect. **CHILDREN:** Initially, 0.05–0.2 mg/kg followed by continuous infusion of 0.06–0.12 mg/kg/hr (1–2 mcg/kg/min) titrated to desired

effect. Usual range: 0.4–9.4 mcg/kg/min.

Seizure Clusters

Nasal: ADULTS, CHILDREN 12 YRS AND OLDER: Initially, one spray (5-mg dose) into one nostril. One additional spray (5-mg dose) into the opposite nostril may be administered after 10 min. **Maximum dose:** 10 mg (2 sprays) per episode. **Maximum frequency:** 1 episode q3days; 5 episodes/mos.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (10%–4%): Decreased respiratory rate, tenderness at IM or IV injection site, pain during injection, oxygen desaturation, hiccups. **Occasional (3%–2%):** Hypotension, paradoxical CNS reaction. **Rare (less than 2%):** Nausea, vomiting, headache, coughing.

ADVERSE EFFECTS/TOXIC REACTIONS

Inadequate or excessive dosage, improper administration may result in cerebral hypoxia, agitation, involuntary movements, hyperactivity, combativeness. Too-rapid IV rate, excessive doses, or single large dose increases risk of respiratory depression/arrest. Respiratory depression/apnea may produce hypoxia, cardiac arrest.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Resuscitative equipment, oxygen must be available. Obtain vital signs before administration. Assess level of consciousness.

INTERVENTION/EVALUATION

Monitor respiratory rate, oxygen saturation continuously during parenteral administration for underventilation, apnea. Monitor vital signs, level of sedation q3–5min during recovery period. Assess level of consciousness for effectiveness.

midodrine

mye-doe-dreen

(Amatine , Apo-Midodrine )

BLACK BOX ALERT ■ Can cause marked rise in supine blood pressure; use in pts for whom orthostatic hypotension significantly impairs daily life.

Do not confuse Amatine with amantadine or protamine, or midodrine with Midrin.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Alpha₁ agonist. **CLINICAL:** Vasopressor.

USES

Treatment of symptomatic orthostatic hypotension. **OFF-LABEL:** Vasovagal syncope, prevention of dialysis-induced hypotension.

PRECAUTIONS

Contraindications: Hypersensitivity to midodrine. Acute renal failure, persistent supine hypertension, pheochromocytoma, severe cardiac disease, thyrotoxicosis, urinary retention. **Cautions:** Renal/hepatic impairment, history of visual problems, diabetes, immobility, pts who are unable to stand. **Concurrent administration with digoxin, beta blockers (e.g., metoprolol), vasoconstrictors (e.g., norepinephrine).**

ACTION

Forms active metabolite desglymidodrine, an alpha₁ agonist, increasing arteriolar and venous tone. **Therapeutic Effect:** Increases standing, sitting, and supine systolic B/P in pts with orthostatic hypotension.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	—	2–3 hrs

Rapid absorption from GI tract following PO administration. Protein binding: Low. Undergoes enzymatic hydrolysis in

systemic circulation. Excreted in urine.

Half-life: 0.5 hr.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Ergot derivatives (e.g., ergotamine), linezolid, MAOIs (e.g., phenelzine, selegiline) may increase hypertensive effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 2.5 mg, 5 mg, 10 mg.

ADMINISTRATION/HANDLING

- Give without regard to food.
- Last dose of day should be given 3–4 hrs before bedtime.

INDICATIONS/ROUTES/DOSAGE

Orthostatic Hypotension

PO: ADULTS, ELDERLY: 2.5–10 mg 3 times/day (q3–4hrs). Give during the day when pt is upright, such as upon arising, midday, and late afternoon. Do not give less than 4h before bedtime. **Maximum:** 40 mg/day.

Dosage in Renal Impairment

2.5 mg 3 times/day; increase gradually, as tolerated. **Hemodialysis:** Dose after HD unless used to prevent HD-induced hypotension.

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (20%–7%): Paresthesia, piloerection, pruritus, dysuria, supine hypertension. **Occasional (6%–1%):** Pain, rash, chills, headache, facial flushing, confusion, dry mouth, anxiety.

ADVERSE EFFECTS/TOXIC REACTIONS

May cause marked increase of supine systolic BP (supine hypertension).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess sensitivity to midodrine, other medications (esp. digoxin, sodium-retaining vasoconstrictors). Assess medical history, esp. for renal impairment, severe hypertension, cardiac disease.

INTERVENTION/EVALUATION

Monitor B/P, renal, hepatic, cardiac function.

PATIENT/FAMILY TEACHING

- Do not take last dose of the day after evening meal or less than 4 hrs before bedtime.
- Do not give if pt will be supine.
- Use caution with OTC medications that may affect B/P (e.g., cough and cold, diet medications).

midostaurin

mye-doe-staw-rim
(Rydapt)

Do not confuse midostaurin with midodrine.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: FLT inhibitor. Tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of adult pts with newly diagnosed acute myeloid leukemia (AML) who are FLT3 mutation–positive, as detected by an FDA-approved test (in combination with standard cytarabine and daunorubicin induction and cytarabine consolidation chemotherapy). Treatment of adult pts with aggressive systemic mastocytosis (ASM), systemic mastocytosis with associated hematologic

neoplasm (SM-AHN), or mast cell leukemia (MCL).

PRECAUTIONS

Contraindications: Hypersensitivity to midostaurin. **Cautions:** Baseline anemia, leukopenia, neutropenia, thrombocytopenia; concomitant use of strong CYP3A inhibitors, strong CYP3A inducers; pts at risk for hemorrhage (e.g., history of GI bleeding, coagulation disorders, recent trauma; concomitant use of anticoagulants, NSAIDs, antiplatelet medication).

ACTION

Inhibits multiple receptors including FLT3 receptor signaling, and cell proliferation. **Therapeutic Effect:** Induces apoptosis in ITD and ITD mutant expressing leukemic cells.

PHARMACOKINETICS

Widely distributed. Metabolized in liver. Protein binding: 99.8%. Peak plasma concentration: 1–3 hrs. Steady state reached in 28 days. Excreted in feces (95%), urine (5%). **Half-life:** 21 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm. Females of reproductive potential and males with female partners of reproductive potential should use effective contraception during treatment and for at least 4 mos after discontinuation. Unknown if distributed in breast milk. Breastfeeding not recommended. May impair fertility in both females and males. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Moderate CYP3A4 inhibitors (e.g., ciprofloxacin, fluconazole, verapamil), strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole, ritonavir) may increase concentration/effect. Strong CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease

concentration/effect. **QT-prolonging agents (e.g., amiodarone, haloperidol, moxifloxacin, sotalol)** may enhance QT-prolonging effect. May decrease therapeutic effect of BCG. **HERBAL:** St. John's wort may decrease concentration/effect. **FOOD:** **Grapefruit products** may increase concentration/effect. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST, bilirubin, creatinine, GGT, glucose, lipase, sodium, uric acid. May decrease Hgb, Hct, lymphocytes, leukocytes, neutrophils, platelets, RBCs; serum albumin, magnesium, phosphate, potassium. May increase or decrease serum calcium or sodium. May prolong aPTT.

AVAILABILITY (Rx)

 **Capsules:** 25 mg.

M

ADMINISTRATION/HANDLING

PO

- Give with food.
- Administer whole; do not cut, crush, open capsules.

INDICATIONS/ROUTES/DOSAGE

Acute Myeloid Leukemia (FLT positive)

PO: ADULTS, ELDERLY: 50 mg twice daily (at 12-hr intervals) on days 8–21 of each induction in combination with cytarabine and daunorubicin, and on days 8–21 of each cycle of consolidation with high-dose in combination with cytarabine.

Systemic Mastocytosis, Mast Cell Leukemia

PO: ADULTS, ELDERLY: 100 mg twice daily. Continue until disease progression or unacceptable toxicity.

DOSE MODIFICATION FOR SYSTEMIC MASTOCYTOSIS

Neutropenia

Treatment-induced ANC less than 1,000 cells/mm³ in pts without MCL; treatment-induced ANC less than 500 cells/mm³ in pts with baseline ANC 500–1,500 cells/mm³: Withhold treatment until ANC greater than or equal to 1,000 cells/mm³, then resume at 50-mg twice daily. May increase to 100 mg twice

daily if 50 mg dose is tolerated. If treatment-induced neutropenia persists for more than 21 days, permanently discontinue.

Thrombocytopenia

Platelet count less than 50,000 cells/mm³ (treatment-induced) in pts without MCL; platelet count less than 25,000 cells/mm³ (treatment-induced) in pts with baseline platelet count 25,000–75,000 cells/mm³: Withhold treatment until platelet count greater than or equal to 50,000 cells/mm³, then resume at 50 mg twice daily. May increase to 100 mg twice daily if 50-mg dose is tolerated. If treatment-induced thrombocytopenia persists for more than 21 days, permanently discontinue.

Anemia

Hgb less than 8 g/dL (treatment-induced) in pts without MCL; life-threatening anemia with baseline Hgb 8–10 g/dL (treatment-induced): Withhold treatment until Hgb greater than or equal to 8 g/dL, then resume at 50 mg twice daily. May increase to 100 mg twice daily if 50-mg dose is tolerated. If treatment-induced anemia persists for more than 21 days, permanently discontinue.

Nausea, Vomiting

CTCAE Grade 3 or 4 nausea, vomiting despite antiemetic therapy: Withhold treatment for 3 days (6 doses), then resume at 50 mg twice daily. May increase to 100 mg twice daily if 50-mg dose is tolerated.

Nonhematologic Toxicities

Any other grade toxicities: Withhold treatment until resolved to CTCAE Grade 2 or less, then resume at 50 mg twice daily. May increase to 100 mg twice daily if 50-mg dose is tolerated.

Dosage in Renal/Hepatic Impairment

Not specified; use caution.

SIDE EFFECTS

AML: Frequent (83%–24%): Nausea, mucositis, stomatitis, laryngeal pain, vomiting,

headache, petechiae, musculoskeletal pain. **Occasional (20%–7%):** Hyperglycemia, hemorrhoids, arthralgia, hyperhidrosis, insomnia, hypertension, dry skin, increased weight. **Rare (4%–3%):** Tremor, eyelid edema. **Systemic mastocytosis: Frequent (82%–23%):** Nausea, vomiting, diarrhea, edema, peripheral edema, fatigue, asthenia, musculoskeletal pain, back pain, extremity pain, abdominal pain, constipation, pyrexia, headache, dyspnea, bronchospasm. **Occasional (19%–6%):** Arthralgia, cough, rash, dizziness, insomnia, hypotension, dyspepsia. **Rare (5%–4%):** Vertigo, chills, mental status change.

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia, leukopenia, lymphopenia, neutropenia, thrombocytopenia are expected responses to therapy. Hypersensitivity reactions including anaphylaxis, angioedema, dyspnea, itching, flushing may occur. Infections including bronchitis, bronchopulmonary aspergillosis, colitis, cellulitis, device-related infection, erysipelas, fungal pneumonia, gastroenteritis, hepatic candidiasis, herpes zoster, nasopharyngitis, oral herpes, pneumonia, sepsis, sinusitis, splenic fungal infection, upper respiratory tract infection, urinary tract infection have occurred. Renal failure, acute kidney injury may occur. Other adverse effects including angina pectoris, cardiac failure, contusion, duodenal ulcer hemorrhage, epistaxis, gastritis, febrile neutropenia, GI bleeding, hematoma, interstitial lung disease, myocardial infarction, myocardial ischemia, pericardial effusion, pneumonitis, pulmonary congestion, pulmonary edema, thrombosis were reported. May prolong QT interval.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain ANC, CBC, BMP, LFT; serum magnesium; vital signs. Ensure electrolytes are corrected prior to initiation. In females of reproductive potential, obtain pregnancy test within 7 days of initiation.

Screen for active infection. To reduce risk of nausea/vomiting, administer antiemetic before treatment. Obtain ECG in pts taking QT interval–prolonging medications. Receive full medication history and screen for interactions. Question history as listed in Precautions. Question plans of breastfeeding. Confirm compliance of effective contraception. Offer emotional support.

INTERVENTION/EVALUATION

Monitor ANC, CBC for anemia, leukopenia, neutropenia, lymphopenia, thrombocytopenia. Monitor BMP for renal insufficiency, electrolyte imbalance (esp. in pts with diarrhea, vomiting, malnutrition); LFT for transaminitis, hepatotoxicity. Diligently screen for infections, sepsis; provide appropriate antimicrobial therapy if indicated. Obtain ABG, radiologic test if interstitial lung disease or pneumonitis suspected. Monitor for toxicities at least wkly for 4 wks, then every other wk for 8 wks, then monthly thereafter. If treatment-related toxicities occur, consider referral to specialist. Monitor for hemorrhage, melena, hematuria; hypersensitivity reactions; myocardial infarction, pulmonary disease, thrombosis. Monitor I&O.

PATIENT/FAMILY TEACHING

- Blood levels will be routinely monitored.
- Treatment may depress your immune system and reduce your ability to fight infection. Report symptoms of infection such as body aches, burning with urination, chills, cough, fatigue, fever. Avoid those with active infection.
- Report symptoms of kidney failure (decreased urination, amber-colored urine, flank pain, fatigue, swelling of the hands or feet); liver problems (bruising, confusion; amber, dark, orange-colored urine; right upper abdominal pain, yellowing of the skin or eyes); lung problems (severe cough, difficulty breathing, lung pain, shortness of breath).
- Avoid pregnancy. Females and males of child-bearing potential should use effective

contraception during treatment and for at least 4 mos after last dose. Do not breastfeed. • Treatment may impair fertility. • Avoid grapefruit products, Seville oranges, starfruit, herbal supplements. • Do not take newly prescribed medications unless approved by the prescriber who originally started treatment. • Heart attacks have occurred; immediately report chest pain, sweating, fainting, palpitations, jaw pain, pain that radiates to the left arm. • Antinausea medication will be given before treatment to reduce the risk of nausea or vomiting. • Report bleeding of any kind, esp. nosebleeds, blood in stool or urine. • Allergic reactions such as anaphylaxis, difficulty breathing, itching, flushing, rash may occur.

in pts receiving linezolid or IV methylene blue. **Cautions:** Pts with depression, pts at increased risk of suicide, other psychiatric disorders; elevated blood pressure or heart rate, seizure disorder, pts with substantial alcohol use or chronic hepatic disease, pts with history of dysuria (e.g., prostatic hypertrophy, prostatitis), controlled narrow-angle glaucoma, renal impairment, cardiovascular disease, elderly.

ACTION

Appears to inhibit serotonin and norepinephrine reuptake at CNS neuronal presynaptic membranes. **Therapeutic Effect:** Reduces chronic pain, fatigue, depression, sleep disorders associated with fibromyalgia syndrome; improves physical function.

PHARMACOKINETICS

Well absorbed following PO administration. Protein binding: 13%. Excreted unchanged in urine. Steady-state levels reached in 36–48 hrs. **Half-life:** 6–8 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Increased risk of fetal complications, including need for respiratory support, if given during third trimester. Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Severe renal impairment requires dosage adjustment.

INTERACTIONS

DRUG: Alcohol, **clomipramine**, **metoclopramide** may increase adverse effects. May increase adverse effects of **digoxin**. **Linezolid**, **MAOIs** (e.g. **phenelzine**, **selegiline**) may increase serotonergic effect. **EPINEPHRINE**, **norepinephrine** may produce paroxysmal hypertension, arrhythmias. May inhibit antihypertensive effect of **clonidine**. **HERBAL:** **Glucosamine**, **herbals with anticoagulant/antiplatelet activity** (e.g., **garlic**, **ginger**, **ginkgo biloba**) may increase adverse effects. **FOOD:** None known. **LAB VALUES:** May decrease serum sodium.

milnacipran

mil-nay-sip-ran
(Savella)

BLACK BOX ALERT ■ Increased risk of suicidal ideation and behavior in children, adolescents, and young adults 18–24 yrs with major depressive disorder, other psychiatric disorders. Not approved for use in children.

Do not confuse Savella with cevimeline or sevelamer.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin, norepinephrine reuptake inhibitor. **CLINICAL:** Fibromyalgia agent.

USES

Management of fibromyalgia.

PRECAUTIONS

Contraindications: Hypersensitivity to milnacipran. Concomitant use of MAOIs to treat psychiatric disorders (concurrently or within 5 days of discontinuing milnacipran or within 2 wks of discontinuing MAOI), initiation of milnacipran

AVAILABILITY (Rx)

 **Tablets, Film-Coated:** 12.5 mg, 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

- Give without regard to food.
- Do not break, crush, dissolve, or divide film-coated tablets.

INDICATIONS/ROUTES/DOSAGE**Fibromyalgia**

PO: ADULTS, ELDERLY: Day 1: 12.5 mg once. **Days 2–3:** 25 mg/day (12.5 mg twice daily). **Days 4–7:** 50 mg/day (25 mg twice daily). **After Day 7:** 100 mg/day (50 mg twice daily thereafter). Dose may be increased to 200 mg/day (100 mg twice daily).

Dosage in Renal Impairment

Mild impairment: No dose adjustment.

Moderate impairment: Use caution.

Severe impairment: Reduce maintenance dose by 50% to 50 mg/day (25 mg twice daily). Based on pt response, dose may be increased to 100 mg/day (50 mg twice daily). Not recommended in end-stage renal disease.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Use caution.

SIDE EFFECTS

Frequent (37%–18%): Nausea, headache.

Occasional (16%–5%): Constipation, insomnia, hot flashes, dizziness, hyperhidrosis, palpitations, vomiting, URI. **Rare**

(less than 5%): Dry mouth, increased B/P, anxiety, skin flushing, rash, blurred vision, abdominal pain, chest pain, chills, pruritus, paresthesia, tachycardia.

ADVERSE EFFECTS/TOXIC REACTIONS

Abrupt discontinuation may present with withdrawal symptoms (dysphoria, irritability, agitation, dizziness, paresthesia, anxiety, confusion, headache, lethargy, emotional lability, tinnitus, seizures). Serotonin

syndrome symptoms may include mental status changes (agitation, hallucinations), hyperreflexia, incoordination. May increase risk of bleeding events (e.g., ecchymoses, hematomas, epistaxis).

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain baseline pain intensity scale, location(s) of pain, tenderness. Obtain baseline B/P, heart rate. Question for history of changes in day-to-day pain intensity.

INTERVENTION/EVALUATION

Control nausea with antiemetics. Treat complaint of headache, migraine with appropriate analgesics. Monitor for increase in B/P, pulse. Question for changes in visual acuity. Assess for clinical improvement and record onset of pain control, decreased fatigue, lessening of depressive symptoms, improvement in sleep pattern. Monitor for suicidal ideation.

PATIENT/FAMILY TEACHING

- Avoid tasks that require alertness, motor skills until response to drug is established.
- Do not abruptly discontinue medication.
- Increase fluids, bulk to prevent constipation.
- Report unusual changes in behavior, suicidal ideation; hot flushing that becomes intolerant, excessive sweating.
- Caution about risk of bleeding associated with concomitant use of NSAIDs, aspirin.

milrinone**HIGH ALERT**

mil-ri-none

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Cardiac inotropic agent. **CLINICAL:** Vasodilator.

USES

Short-term management of decompensated HF. **OFF-LABEL:** Inotropic therapy

for pts unresponsive to other therapy, outpatient inotropic therapy for heart transplant candidates, palliation of symptoms in end-stage HF.

PRECAUTIONS

Contraindications: Hypersensitivity to milrinone. **Cautions:** Severe obstructive aortic or pulmonic valvular disease, history of ventricular arrhythmias, atrial fibrillation/flutter, renal impairment. Not recommended in pts with acute MI.

ACTION

Inhibits phosphodiesterase, which increases cyclic adenosine monophosphate (cAMP), potentiating delivery of calcium to myocardial contractile systems. **Therapeutic Effect:** Relaxes vascular muscle, causing vasodilation. Increases cardiac output, decreases pulmonary capillary wedge pressure, vascular resistance.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	5–15 min	N/A	N/A

Protein binding: 70%. Metabolized in liver. Primarily excreted in urine. **Half-life:** 1.7–2.7 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution (Primacor): 1 mg/mL, 10-mL vial. **Injection Solution, Premix (Primacor):** 200 mcg/mL (100 mL, 200 mL).

ADMINISTRATION/HANDLING

Reconstitution • For IV infusion, dilute 20-mg (20-mL) vial with 80 mL 0.9% NaCl or D₅W to provide concentration of 0.2 mg/mL (200 mcg/mL).

Rate of administration • For IV injection (loading dose), administer undiluted slowly over 10 min. • Monitor for arrhythmias, hypotension during IV therapy; reduce or temporarily discontinue infusion until condition stabilizes. Infuse via infusion pump.

Storage • Diluted solutions stable for 72 hrs at room temperature.

IV INCOMPATIBILITIES

Furosemide (Lasix), imipenem-cilastatin (Primaxin), procainamide (Pronestyl).

IV COMPATIBILITIES

Calcium gluconate, dexamethasone (Decadron), dexmedetomidine (Precedex), digoxin (Lanoxin), dilTIAZEM (Cardizem), DOBUTamine (Dobutrex), DOPamine (Intropin), heparin, HYDROMORPHONE (Dilaudid), lidocaine, magnesium, midazolam (Versed), morphine, nitroglycerin, potassium, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Management of HF

IV: ADULTS: Initially, 50 mcg/kg over 10 min. Continue with maintenance infusion rate of 0.125–0.75 mcg/kg/min based on hemodynamic and clinical response.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
50 mL/min	0.43 mcg/kg/min
40 mL/min	0.38 mcg/kg/min
30 mL/min	0.33 mcg/kg/min
20 mL/min	0.28 mcg/kg/min
10 mL/min	0.23 mcg/kg/min
5 mL/min	0.2 mcg/kg/min

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (3%–1%): Headache, hypotension. **Rare (less than 1%):** Angina, chest pain.

ADVERSE EFFECTS/TOXIC REACTIONS

Supraventricular/ventricular arrhythmias (12%), nonsustained ventricular tachycardia (2%), sustained ventricular tachycardia (1%) may occur. Ventricular fibrillation (0.2%) has been documented.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain baseline lab studies, esp. BN peptide. Offer emotional support (difficulty breathing may produce anxiety). Assess B/P, apical pulse rate before treatment begins and during IV therapy. Assess lung sounds; observe for edema.

INTERVENTION/EVALUATION

Monitor B/P, heart rate, cardiac output, ECG, serum potassium, renal function, signs/symptoms of HF.

minocycline

mye-noe-sye-kleen
(CoreMino, Monolira, Ximino,
Minocin, Solodyn)

Do not confuse Dynacin with Dyazide, DynaCirc, or Dynapen, or Minocin with Indocin, Mithracin, or niacin.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Tetracycline. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to *Rickettsiae*, *M. pneumoniae*, *C. trachomatis*, *C. psittaci*, *H. ducreyi*, *Yersinia pestis*, *Francisella tularensis*, *Vibrio*

cholerae, *Brucella* spp.; gram-negative organisms, including acute intestinal amebiasis, gram-negative respiratory and skin/skin structure infections. **Solodyn:** Treatment of inflammatory lesions of moderate to severe nonnodular acne. **OFF-LABEL:** Treatment of nocardiosis, community-acquired MRSA infection, rheumatoid arthritis (RA), prosthetic joint infection.

PRECAUTIONS

Contraindications: Hypersensitivity to minocycline, other tetracyclines. **Cautions:** Children younger than 8 yrs, renal impairment, hepatic impairment, sun/ultraviolet exposure (severe photosensitivity reaction). Avoid use in pregnancy.

ACTION

Inhibits bacterial protein synthesis by binding to ribosomes. **Therapeutic Effect:** Bacteriostatic.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 70%–75%. Partially excreted in feces; minimal excretion in urine. Not removed by hemodialysis. **Half-life:** 11–23 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; distributed in breast milk. May inhibit fetal skeletal growth. **Children:** May cause permanent discoloration of teeth, enamel hypoplasia. Not recommended in pts younger than 8 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Bile acid sequestrants (e.g., cholestyramine) may decrease absorption. Aluminum-, calcium-, magnesium-containing antacids may decrease absorption, effect. May decrease the effects of estrogen-containing oral contraceptives. **HERBAL:** St. John's wort may decrease concentration/effect. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, amylase, bilirubin, ALT, AST, BUN.

AVAILABILITY (Rx)

Capsules: 50 mg, 75 mg, 100 mg. **Tablets:** 50 mg, 75 mg, 100 mg.

 **Capsules, Extended-Release:** 90 mg, 135 mg. **Tablets, Extended-Release:** 45 mg, 55 mg, 65 mg, 80 mg, 90 mg, 105 mg, 115 mg, 135 mg.

ADMINISTRATION/HANDLING**PO**

- Take without regard to food.
- Give with adequate fluid (reduces risk of esophageal irritation and ulceration).
- Give pellet-filled capsules, extended-release tablets whole; do not cut, crush, dissolve, or divide.

INDICATIONS/ROUTES/DOSAGE**Usual Dosage**

PO: ADULTS, ELDERLY: Initially, 100–200 mg once, then 100 mg q12h or 50 mg 4 times/day. **CHILDREN OLDER THAN 8 YRS:** Initially, 4 mg/kg once, then 2 mg/kg q12h. **Maximum:** 100 mg/dose, 200 mg/day.

Acne

PO: (CoreMino, Solodyn): CHILDREN 12 YRS AND OLDER, WEIGHING 126–136 KG: 135 mg once daily; **111–125 KG:** 115 mg once daily; **97–110 KG:** 105 mg once daily; **85–96 KG:** 90 mg once daily; **72–84 KG:** 80 mg once daily; **60–71 KG:** 65 mg once daily; **50–59 KG:** 55 mg once daily; **45–49 KG:** 45 mg once daily. **(Ximino):** 1 mg/kg (round to nearest size) once daily. **(Minolira) 12–136 KG:** 135 mg once daily. **90–125 KG:** 105 mg once daily. **60–89 KG:** 67.5 mg once daily. **45–59 KG:** 52.5 mg once daily. **(Capsule or Immediate-Release Tablet): ADULTS, ELDERLY:** 50–100 mg/twice daily.

Dosage in Renal/Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent: Dizziness, light-headedness, diarrhea, nausea, vomiting, abdominal cramps, possibly severe photosensitivity, drowsiness, vertigo. **Occasional:** Altered pigmentation of skin, mucous membranes, rectal/genital pruritus, stomatitis.

ADVERSE EFFECTS/TOXIC REACTIONS

Superinfection (esp. fungal), anaphylaxis, increased ICP may occur. Bulging fontanelles occur rarely in infants.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Question for history of allergies, esp. tetracyclines, sulfite.

INTERVENTION/EVALUATION

Assess ability to ambulate (may cause vertigo, dizziness). Monitor daily pattern of bowel activity, stool consistency. Monitor renal function, LFT with long-term therapy. Assess skin for rash. Observe for signs of increased intracranial pressure (altered LOC, widened pulse pressure). Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

- Continue antibiotic for full length of treatment.
- Space doses evenly.
- Drink full glass of water with capsules or tablets.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Report diarrhea, rash, other new symptoms.
- Protect skin from sun exposure.
- Advise female pts to use additional form of birth control (may decrease effectiveness of oral contraceptives).

mirabegron

mir-a-beg-ron
(Myrbetriq)

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Beta₃-adrenergic agonist. **CLINICAL:** Smooth muscle relaxant.

USES

Treatment of overactive bladder with symptoms of urinary incontinence, urgency, frequency as monotherapy or in combination with solifenacin.

PRECAUTIONS

Contraindications: Hypersensitivity to mirabegron. **Cautions:** Bladder outlet obstruction, pts taking antimuscarinic medications (increases urinary retention), mild to moderate hepatic/renal impairment, history of QT-interval prolongation, medications known to prolong QT interval. Not recommended for use in pts with severe uncontrolled hypertension (SBP equal to or greater than 180 mm Hg and/or DBP equal to or greater than 110 mm Hg).

ACTION

Relaxes detrusor smooth muscle of bladder through β_3 stimulation during storage phase of urinary bladder fill-void cycle. **Therapeutic Effect:** Increases bladder capacity, reduces symptoms of urinary urgency, increased voiding frequency, urge incontinence, nocturia.

PHARMACOKINETICS

Readily absorbed following PO administration; widely distributed. Protein binding: 71%. Eliminated in urine (55%), feces (35%). **Half-life:** 50 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration/effects of **desipramine, digoxin, thioridazine, flecainide, propafenone**. May decrease concentration/effect of **tamoxifen**. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase GGT, LDH; temporarily increase ALT, AST.

AVAILABILITY (Rx)

 **Tablets, Extended-Release:** 25 mg, 50 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.
- Administer with water; instruct pt to swallow whole.
- Do not break, crush, dissolve, or divide film-coated tablets.

INDICATIONS/ROUTES/DOSAGE

Overactive Bladder

PO: ADULTS, ELDERLY: (Monotherapy): Initially, 25 mg once daily. Efficacy seen within 8 wks for 25-mg dose. May increase to 50 mg once daily. **(Combination with solifenacin):** Initially, 25 mg once daily with solifenacin 5 mg once daily. May increase mirabegron to 50 mg once daily after 4–8 wks.

Dosage in Renal Impairment

Mild to moderate impairment: No dosage adjustment. **Severe impairment:** Do not exceed 25 mg once daily.

Dosage in Hepatic Impairment

Mild impairment: No dosage adjustment. **Moderate impairment:** Do not exceed 25 mg once daily. **Severe impairment:** Not recommended.

SIDE EFFECTS

Occasional (9%–4%): Hypertension, headache, nasopharyngitis. **Rare (2%–1%):** Constipation, arthralgia, diarrhea, tachycardia, fatigue.

ADVERSE EFFECTS/TOXIC REACTIONS

Worsening of preexisting hypertension reported infrequently. Urinary tract infection occurred in 6% of pts, influenza in 3%, and upper respiratory infection in 1.5%.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check B/P; assess for hypertension. Monitor ECG. Receive full medication history, and screen for possible drug interactions. Monitor I&O (particularly in pts with history of urinary retention).

INTERVENTION/EVALUATION

Monitor ALT, AST, LDH, GGT periodically. Palpate bladder for urinary retention. Measure B/P near end of dosing interval (determines whether B/P is controlled throughout day). Periodic B/P determinations are recommended, especially in hypertensive pts. For pts taking digoxin, monitor digoxin serum level for therapeutic effect (very narrow line between therapeutic and toxic level). Assess pulse for quality, irregular rate, bradycardia. Question for evidence of headache.

PATIENT/FAMILY TEACHING

- Report urinary retention.
- Do not use nasal decongestants, over-the-counter cold preparations without doctor approval. Restrict salt, alcohol intake.
- Take mirabegron with water; swallow tablet whole; do not chew, crush, dissolve, or divide tablet.
- May take with or without food.

mirtazapine

mir-taz-a-peen

(Remeron, Remeron Soltab)

BLACK BOX ALERT Increased risk of suicidal thinking and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse Remeron with Premarin, Rozerem, or Zemuron.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Alpha-2 antagonist. **CLINICAL:** Antidepressant.

USES

Treatment of major depressive disorder (MDD).

PRECAUTIONS

Contraindications: Hypersensitivity to mirtazapine. Use of MAOIs to treat psychiatric disorders (concurrently or within 14 days of discontinuing either MAOI or mirtazapine), initiation of mirtazapine in pts receiving linezolid or IV methylene blue.

Cautions: Renal/hepatic impairment, elderly pts, seizure disorder, suicidal ideation or behavior, alcoholism, concurrent medications that lower seizure threshold, cardiovascular disease, pts at risk for QT prolongation, medications known to prolong QT interval.

ACTION

Acts as antagonist at presynaptic alpha₂-adrenergic receptors, increasing norepinephrine, serotonin neurotransmission. Has low anticholinergic activity. **Therapeutic Effect:** Relieves depression.

PHARMACOKINETICS

Rapidly, completely absorbed after PO administration; absorption not affected by food. Protein binding: 85%. Metabolized in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 20–40 hrs (longer in males [37 hrs] than females [26 hrs]).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Alcohol, CNS depressant medications (e.g., lorazepam, morphine, zolpidem) may increase impairment of cognition, motor skills. **Serotonergic drugs** (e.g., venlafaxine) may increase risk of serotonin syndrome. **Strong CYP3A4 inducers** (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effects. **Strong CYP3A4 inhibitors** (e.g., clarithromycin, ketoconazole, ritonavir) may increase concentration/

effects. **MAOIs** (e.g., phenelzine, selegiline) may increase risk of neuroleptic malignant syndrome, hypertensive crisis, severe seizures. **HERBAL: Herbals with sedative properties** (e.g., chamomile, kava kava, valerian) may increase CNS depression. **St. John's wort** may decrease concentration/effects, may increase risk of serotonin syndrome. **FOOD:** None known. **LAB VALUES:** May increase serum cholesterol, triglycerides, ALT.

AVAILABILITY (Rx)

Tablets: 7.5 mg, 15 mg, 30 mg, 45 mg.
Tablets, Orally Disintegrating: 15 mg, 30 mg, 45 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.
- May crush/break scored tablets.

Orally Disintegrating Tablets

- Give without regard to food.
- Do not split tablet.
- Place on tongue; dissolves without water.

INDICATIONS/ROUTES/DOSAGE

Depression

Note: When discontinuing, gradually taper dose to minimize withdrawal symptoms and to allow detection of re-emerging symptoms. **PO: ADULTS:** Initially, 15 mg at bedtime. May increase by 15 mg/day q1–2wks. **Maximum:** 45 mg/day. **ELDERLY:** Initially, 7.5 mg at bedtime. May increase by 7.5–15 mg/day q1–2wks. **Maximum:** 45 mg/day.

Dosage in Renal/Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (54%–12%): Drowsiness, dry mouth, increased appetite, constipation, weight gain. **Occasional (89%–4%):** Asthenia, dizziness, flu-like symptoms, abnormal dreams. **Rare:** Abdominal discomfort, vasodilation, paresthesia, acne, dry skin, thirst, arthralgia.

ADVERSE EFFECTS/TOXIC REACTIONS

Higher incidence of seizures than with tricyclic antidepressants (esp. in pts with no history of seizures). Overdose may produce cardiovascular effects (severe orthostatic hypotension, dizziness, tachycardia, palpitations, arrhythmias). Abrupt discontinuation from prolonged therapy may produce headache, malaise, nausea, vomiting, vivid dreams. Agranulocytosis occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess mental status, appearance, behavior, speech pattern, level of interest, mood. Obtain baseline weight. For pts on long-term therapy, renal function, LFT, CBC should be performed periodically.

INTERVENTION/EVALUATION

Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Children, adolescents are at increased risk for suicidal thoughts/behavior and worsening of depression, esp. during first few mos of therapy. Assess appearance, behavior, speech pattern, level of interest, mood. Monitor for hypotension, arrhythmias.

PATIENT/FAMILY TEACHING

- Take as single bedtime dose.
- Avoid alcohol, depressant/sedating medications.
- Avoid tasks requiring alertness, motor skills until response to drug established.
- Report worsening depression, suicidal ideation, unusual changes in behavior.

miSOPROStol

mis-oh-pros-tol
(Cytotec)

BLACK BOX ALERT Use during pregnancy can cause abortion, premature birth, birth defects.

Not recommended in women of childbearing potential unless pt is capable of complying with effective contraception.

Do not confuse Cytotec with Cytozan, or miSOPROStol with metoprolol or miFEPRISone.

FIXED-COMBINATION(S)

Arthrotec: miSOPROStol/diclofenac (an NSAID): 200 mcg/50 mg, 200 mcg/75 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Prostaglandin. **CLINICAL:** Antisecretory, gastric protectant.

USES

Prevention of NSAID-induced gastric ulcers and in pts at high risk for developing gastric ulcer/gastric ulcer complications. Medical termination of intrauterine pregnancy through 70 days' gestation (in conjunction with miFEPRISone). **OFF-LABEL:** Cervical ripening, labor induction, treatment/prevention of postpartum hemorrhage, treatment of incomplete or missed abortion.

PRECAUTIONS

Contraindications: Hypersensitivity to misoprostol, other prostaglandins; pregnancy. **Cautions:** Renal impairment, cardiovascular disease, elderly.

ACTION

Replaces protective prostaglandins consumed with prostaglandin-inhibiting therapies (e.g., NSAIDs). Induces uterine contractions. **Therapeutic Effect:** Reduces acid secretion from gastric parietal cells, stimulates bicarbonate production from gastric/duodenal mucosa.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30 min	1–1.5 hrs	3–6 hrs

Rapidly absorbed from GI tract. Protein binding: 80%–90%. Primarily excreted

in urine. Unknown if removed by hemodialysis. **Half-life:** 20–40 min.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Produces uterine contractions, uterine bleeding, expulsion of products of conception (abortifacient property). **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Antacids may increase concentration. May increase adverse effects of oxytocin. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 100 mcg, 200 mcg.

ADMINISTRATION/HANDLING

PO

- Give with or after meals (minimizes diarrhea).

INDICATIONS/ROUTES/DOSAGE

Prevention of NSAID-Induced Gastric Ulcer

PO: ADULTS, ELDERLY: 200 mcg 4 times/day with food (last dose at bedtime). Continue for duration of NSAID therapy. May reduce dosage to 100 mcg 4 times/day.

Termination of Intrauterine Pregnancy

See manufacturer guidelines for miFEPRISone.

Early Pregnancy Loss

Intravaginal: 800 mcg once; may repeat 3 or more hrs after first dose and within 7 days of no response to initial dose.

Incomplete Abortion, Postpartum Hemorrhage

PO: 600 mcg as a single dose.

Labor Induction or Cervical Ripening

Intravaginal: 25 mcg q3–6 hrs. Some pts may require 50 mcg q6hrs. **Maximum:** 50 mcg/dose.

Postpartum Hemorrhage (Prevention)

PO: ADULTS: 600 mcg as a single dose given immediately after delivery.

Postpartum Hemorrhage (Treatment)

PO/Rectal: ADULTS: 600–1,000 mcg as a single dose.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (40%–20%): Abdominal pain, diarrhea. **Occasional (3%–2%):** Nausea, flatulence, dyspepsia, headache. **Rare (1%):** Vomiting, constipation.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdosage may produce sedation, tremor, seizures, dyspnea, palpitations, hypotension, bradycardia.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Question for possibility of pregnancy before initiating therapy.

PATIENT/FAMILY TEACHING

- Avoid magnesium-containing antacids (minimizes potential for diarrhea).
- Women of childbearing potential must not be pregnant before or during medication therapy (may result in hospitalization, surgery, infertility, fetal death).
- Incidence of diarrhea may be lessened by taking immediately following meals.

mitoMYcin**HIGH ALERT**

mye-toe-mye-sin
(Mutamycin)

■ **BLACK BOX ALERT** ■ Potent vesicant. Marked myelosuppression. Infiltration produces ulceration, necrosis, cellulitis, tissue sloughing. Hemolytic-uremic syndrome reported. Must be admin-

istered by certified chemotherapy personnel.

Do not confuse mitoMYcin with mithramycin or mitoXANTRONE.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Antibiotic. **CLINICAL:** Antineoplastic.

USES

Treatment of disseminated adenocarcinoma of stomach, pancreas (in combination with other chemotherapy agents and as palliative treatment when other modalities have failed). **OFF-LABEL:** Treatment of bladder cancer, anal carcinoma; cervical, esophageal, gastric, non-small-cell lung cancer.

PRECAUTIONS

Contraindications: Hypersensitivity to mitomycin. Coagulation disorders, other increased bleeding tendencies, thrombocytopenia. **Cautions:** Myelosuppression, renal (serum creatinine greater than 1.7 mg/dL)/hepatic impairment, pregnancy, prior radiation treatment.

ACTION

Alkylating agent, produces DNA cross-linking. **Therapeutic Effect:** Inhibits DNA, RNA synthesis.

PHARMACOKINETICS

Widely distributed. Does not cross blood-brain barrier. Metabolized in liver. Excreted in urine. **Half-life:** 50 min.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. Breastfeeding not recommended. Safety in pregnancy not established. **Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Bone marrow depressants (e.g., cladribine) may increase

myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** **Echinacea** may decrease the therapeutic effect. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, creatinine.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 5 mg, 20 mg, 40 mg.

ADMINISTRATION/HANDLING

⚠️ ALERT ▶ May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration. Give via IV push, IV infusion. Extremely irritating to vein. Injection may produce pain with induration, thrombophlebitis, paresthesia.

Reconstitution • Reconstitute with Sterile Water for Injection to provide solution containing 0.5–1 mg/mL. • Do not shake vial to dissolve. • Allow vial to stand at room temperature until complete dissolution occurs. • For IV infusion, further dilute with 50–100 mL D₅W or 0.9% NaCl (concentration 20–40 mcg/mL).

Rate of administration • Give slow IV push or by IV infusion over 15–30 min. • Extravasation may produce cellulitis, ulceration, tissue sloughing. Terminate administration immediately, inject ordered antidote. Apply ice intermittently for up to 72 hrs; keep area elevated.

Storage • Use only clear, blue-gray solutions. • Concentration of 0.5 mg/mL (reconstituted vial or syringe) is stable for 7 days at room temperature or 2 wks if refrigerated. Further diluted solution with D₅W is stable for 3 hrs, 12 hrs if diluted with 0.9% NaCl at room temperature.

IV INCOMPATIBILITIES

Aztreonam (Azactam), bleomycin (Blenoxane), cefepime (Maxipime), filgrastim (Ne-

upogen), heparin, piperacillin/tazobactam (Zosyn), sargramostim (Leukine), vinorelbine (Navelbine).

IV COMPATIBILITIES

Cisplatin (Platinol AQ), cyclophosphamide (Cytoxan), DOXOrubicin (Adriamycin), 5-fluorouracil, granisetron (Kytril), leucovorin, methotrexate, ondansetron (Zofran), vinBLAStine (Velban), vinCRIS-tine (Oncovin).

INDICATIONS/ROUTES/DOSAGE

Stomach, Pancreatic Cancer

IV: ADULTS, ELDERLY, CHILDREN: 20 mg/m² as single dose. Repeat q6–8wks.

Bladder Cancer (Non–Muscle Invasive)

Intravesicular Instillation: ADULTS, ELDERLY: Low risk of recurrence: 40 mg as single dose postoperatively (retain in bladder for 1–2 hrs). High risk of recurrence: 20 mg/wk for 6 wks, then 20 mg qmo for 3 yrs (retain in bladder for 1–2 hrs).

Dose Modification for Toxicity

Leukocytes 2,000 to less than 3,000 cells/mm ³	Hold therapy until leukocytes 4,000 or more cells/mm ³ ; reduce dose to 70% or more in subsequent cycles
Leukocytes less than 2,000 cells/mm ³	Hold therapy until leukocytes 4,000 or more cells/mm ³ ; reduce dose to 50% in subsequent cycles
Platelets 25,000 to less than 75,000 cells/mm ³	Hold therapy until platelets 100,000 or more cells/mm ³ ; reduce dose to 70% in subsequent cycles
Platelets less than 25,000 cells/mm ³	Hold therapy until platelets 100,000 or more cells/mm ³ ; reduce dose to 50% in subsequent cycles

Dosage in Renal Impairment

CrCl less than 10 mL/min: Give 75% of normal dose.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (greater than 10%): Fever, anorexia, nausea, vomiting. **Occasional (10%–2%):** Stomatitis, paresthesia, purple colored bands on nails, rash, alopecia, unusual fatigue. **Rare (less than 1%):** Thrombophlebitis, cellulitis with extravasation.

ADVERSE EFFECTS/TOXIC REACTIONS

Marked myelosuppression results in hematologic toxicity manifested as leukopenia, thrombocytopenia, and, to a lesser extent, anemia (generally occurs within 2–4 wks after initial therapy). Renal toxicity may be evidenced by increased serum BUN, creatinine levels. Pulmonary toxicity manifested as dyspnea, cough, hemoptysis, pneumonia. Long-term therapy may produce hemolytic uremic syndrome, characterized by hemolytic anemia, thrombocytopenia, renal failure, hypertension.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain CBC with differential, PT, bleeding time, before and periodically during therapy. Antiemetics before and during therapy may alleviate nausea/vomiting. Offer emotional support.

INTERVENTION/EVALUATION

Monitor hematologic status, renal function studies. Assess IV site for phlebitis, extravasation. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness). Assess for renal toxicity (foul odor from urine, elevated serum BUN, creatinine).

PATIENT/FAMILY TEACHING

- Maintain strict oral hygiene.
- Immediately report stinging, burning, pain at injection site.
- Do not have immunizations without physician's approval (drug lowers resistance to infection).
- Avoid contact with those who have recently received live virus vaccine.
- Hair loss is reversible, but new hair growth may have different color, texture.
- Report nausea/vomiting, fever, sore throat, bruising, bleeding, shortness of breath, painful urination.

modafinilTOP
100

moe-daf-i-nil
(Alertec , Provigil)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Alpha₁-agonist, CNS stimulant (Schedule IV).

CLINICAL: Wakefulness-promoting agent, antinarcotic.

USES

Treatment of excessive daytime sleepiness associated with narcolepsy, shift work sleep disorder, adjunct therapy for obstructive sleep apnea/hypopnea syndrome. **OFF-LABEL:** Treatment of ADHD, multiple sclerosis–related fatigue.

PRECAUTIONS

Contraindications: Hypersensitivity to modafinil, armodafinil. **Cautions:** History of clinically significant mitral valve prolapse, left ventricular hypertrophy, renal/hepatic impairment, angina, cardiac disease, myocardial ischemia, recent MI, preexisting psychosis or bipolar disorder, Tourette's syndrome.

ACTION

Exact mechanism unknown. Increases dopamine in brain. Increases alpha activity, decreasing delta, theta, brain wave activity. **Therapeutic Effect:** Reduces number of sleep episodes, total daytime sleep. Increases mental alertness.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 60%. Widely distributed. Metabolized in liver. Excreted by kidneys. Unknown if removed by hemodialysis. **Half-life:** 15 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if excreted in breast milk. Use caution if given to pregnant women. **Children:** Safety and efficacy not established in pts younger than 16 yrs. **Elderly:** Age-related renal/hepatic impairment may require decreased dosage.

INTERACTIONS

DRUG: May decrease concentration/effect of cycloSPORINE, oral contraceptives. Alcohol may decrease therapeutic effect. **Strong CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin)** may decrease concentration/effect. **HERBAL:** St. John's wort may decrease concentration/effect. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets (Provigil): 100 mg, 200 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Narcolepsy, Obstructive Sleep Apnea/Hypopnea Syndrome

PO: ADULTS: 200 mg/day in the morning.
ELDERLY: 100 mg/day in the morning.

Shift Work Sleep Disorder

PO: ADULTS: 200 mg about 1 hr before start of work shift.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. Reduce dose 50% with severe impairment.

SIDE EFFECTS

Generally well tolerated. **Occasional (5%):** Headache, nausea, dizziness, insomnia, palpitations, diarrhea.

ADVERSE EFFECTS/TOXIC REACTIONS

Agitation, excitation, increased B/P, insomnia may occur. Psychiatric disturbances (anxiety, hallucinations, suicidal ideation), serious allergic reactions (angioedema, Stevens-Johnson syndrome) have been noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline evidence of narcolepsy or other sleep disorders, including pattern, environmental situations, length of sleep episodes. Question for sudden loss of muscle tone (cataplexy) precipitated by strong emotional responses before sleep episode. Assess frequency/severity of sleep episodes before drug therapy.

INTERVENTION/EVALUATION

Monitor sleep pattern, evidence of restlessness during sleep, length of insomnia episodes at night. Assess for dizziness, anxiety; initiate fall precautions.

PATIENT/FAMILY TEACHING

- Avoid alcohol.
- Sugarless gum, sips of water may relieve dry mouth.
- Do not increase dose without physician approval.
- Use alternative contraceptives during therapy and 1 mo after discontinuing modafinil (reduces effectiveness of oral contraceptives).

mometasone

TOP
100

moe-met-a-sone
(Asmanex, Asmanex HFA, Elocon, Nasonex, Apo-Mometasone )

FIXED-COMBINATION(S)

Dulera: mometasone/formoterol (beta-adrenergic agonist): 100 mcg/5 mcg, 200 mcg/5 mcg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Adrenocorticosteroid. **CLINICAL:** Anti-inflammatory.

USES

Nasal: Treatment of nasal symptoms of seasonal/perennial allergic rhinitis in adults, children 2 yrs and older. Relief of nasal symptoms of seasonal allergic rhinitis in adults, children 2 yrs and older. Treatment of nasal polyps in adults. **Inhalation:** Maintenance treatment of asthma as prophylactic therapy in adults and children 4 yrs and older. **Topical:** Relief of inflammatory, pruritic manifestations of steroid-responsive dermatoses.

PRECAUTIONS

Contraindications: Hypersensitivity to mometasone, milk proteins. **Asmanex:** Primary treatment of status asthmaticus or acute bronchospasm. **Cautions:** Thyroid/hepatic/renal impairment, elderly, diabetes, cardiovascular disease, glaucoma, cataracts, myasthenia gravis, pts at risk for osteoporosis, seizures, GI disease (e.g., ulcer, colitis); following MI. Untreated systemic fungal, viral, bacterial infections.

ACTION

Inhibits formation, release, and activity of mediators of inflammation (e.g., histamine, kinins). Reverses the dilation and increased nasal permeability of inflammation. **Therapeutic Effect:** Improves symptoms of asthma, rhinitis.

PHARMACOKINETICS

Undetectable in plasma. Protein binding: 98%–99%. Swallowed portion undergoes extensive metabolism. Excreted in bile (74%), urine (8%). **Half-life:** 5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Prolonged treatment/high doses may decrease short-term growth rate,

cortisol secretion. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase hyponatremic effect of **desmopressin**. May increase antineoplastic effect of **aldesleukin**. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Cream: (Elocon): 0.1%. **Lotion: (Elocon):** 0.1%. **Nasal Spray: (Nasonex):** 50 mcg/spray. **Ointment: (Elocon):** 0.1%. **Powder for Oral Inhaler: (Asmanex):** 110 mcg (delivers 100 mcg/actuation), 220 mcg (delivers 200 mcg/actuation). **(Asmanex HFA):** 100 mcg/actuation, 200 mcg/actuation.

ADMINISTRATION/HANDLING

Inhalation

- Do not shake or prime.
- Hold twist-haler straight up with pink portion (base) on bottom, remove cap.
- Exhale fully.
- Firmly close lips around mouthpiece and inhale a fast, deep breath.
- Hold breath for 10 sec.

Intranasal

- Instruct pt to clear nasal passages as much as possible before use.
- Tilt head slightly forward.
- Insert spray tip into nostril, pointing toward nasal passages, away from nasal septum.
- Spray into one nostril while pt holds other nostril closed, concurrently inspires through nose to permit medication as high into nasal passages as possible.

Topical

- Apply thin layer of cream, lotion, ointment to cover affected area. Rub in gently.
- Do not cover area with occlusive dressing.

INDICATIONS/ROUTES/DOSAGE

Allergic Rhinitis

Nasal Spray: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 2 sprays (100 mcg) in each nostril once daily. Total daily dose: 200 mcg. When used to prevent

nasal rhinitis, begin 2–4 wks before start of pollen season. **CHILDREN 2–11 YRS:** 1 spray (50 mcg) in each nostril once daily. Total daily dose: 100 mcg.

Asthma

Inhalation: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER (Previous therapy with bronchodilators): (**Asmanex**): Initially, inhale 220 mcg (1 puff) once daily. **Maximum:** 440 mcg/day as single or 2 divided doses. (Previous therapy with inhaled corticosteroids): (**Asmanex HFA**): Initially, 200 mcg twice daily. **Maximum:** 400 mcg twice daily. (Previous therapy with oral corticosteroids): (**Asmanex**): 440 mcg (2 puffs) twice daily. (**Asmanex HFA**): 400 mcg twice daily. Reduce prednisONE no faster than 2.5 mg/day beginning after at least 1 wk of mometasone. **CHILDREN 4–11 YRS:** (**Asmanex**): 110 mcg once daily in evening.

Skin Disease

Topical: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Apply cream, lotion, or ointment sparingly to affected area once daily.

Nasal Polyp

Nasal Spray: ADULTS, ELDERLY: 2 sprays (100 mcg) in each nostril once or twice daily. Total daily dose: 400 mcg.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional: Inhalation: Headache, allergic rhinitis, upper respiratory infection, muscle pain, fatigue. **Nasal:** Nasal irritation, stinging. **Topical:** Burning. **Rare: Inhalation:** Abdominal pain, dyspepsia, nausea. **Nasal:** Nasal/pharyngeal candidiasis. **Topical:** Pruritus.

ADVERSE EFFECTS/TOXIC REACTIONS

Acute hypersensitivity reaction (urticaria, angioedema, severe bronchospasm) occurs rarely. Transfer from systemic to local steroid therapy may unmask previously suppressed bronchial asthma condition.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to any corticosteroids.

INTERVENTION/EVALUATION

Teach proper use of nasal spray, oral inhaler. Instruct pt to clear nasal passages before use. Report if no improvement in symptoms or if sneezing, nasal irritation occur. Assess lung sounds for wheezing, rales.

PATIENT/FAMILY TEACHING

- Do not change dose schedule or stop taking drug; must taper off gradually under medical supervision. **Nasal:** Report if symptoms do not improve; report if sneezing, nasal irritation occur.
- Clear nasal passages prior to use. **Inhalation:** Inhale rapidly, deeply; rinse mouth after inhalation.
- Not indicated for acute asthma attacks. **Topical:** Do not cover affected area with bandage, dressing.

montelukast

mon-tee-loo-kast
(Singular)

Do not confuse Singular with SINEquan.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Leukotriene receptor inhibitor. **CLINICAL:** Antiasthmatic.

USES

Prophylaxis, chronic treatment of asthma. Prevention of exercise-induced bronchoconstriction. Relief of symptoms of seasonal allergic rhinitis (hay fever), perennial allergic rhinitis. **OFF-LABEL:** Urticaria.

PRECAUTIONS

Contraindications: Hypersensitivity to montelukast. **Cautions:** Systemic corticosteroid

treatment reduction during montelukast therapy. Concomitant use of CYP3A4 inducers. Not for use in acute asthma attacks.

ACTION

Binds to cysteinyl leukotriene receptors, inhibiting effects of leukotrienes on bronchial smooth muscle. **Therapeutic Effect:** Decreases bronchoconstriction, vascular permeability, mucosal edema, mucus production.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	N/A	N/A	24 hrs
PO (chewable)	N/A	N/A	24 hrs

Rapidly absorbed from GI tract. Protein binding: 99%. Extensively metabolized in liver. Excreted almost exclusively in feces. **Half-life:** 2.7–5.5 hrs (slightly longer in elderly).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Use during pregnancy only if necessary. **Children/Elderly:** No age-related precautions noted in pts older than 6 yrs or the elderly.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, eosinophils.

AVAILABILITY (Rx)

Oral Granules: 4 mg per packet. **Tablets:** 10 mg. **Tablets, Chewable:** 4 mg, 5 mg.

ADMINISTRATION/HANDLING

PO

- May take without regard to food. When treating asthma, administer in evening.
- When treating allergic rhinitis, may individualize administration times.
- Granules may be given directly in mouth or mixed with carrots, rice, applesauce, ice cream, baby formula, or

breast milk (do not add to any other liquid or food). • Give within 15 min of opening packet.

INDICATIONS/ROUTES/DOSAGE

Bronchial Asthma

PO: ADULTS, ELDERLY, CHILDREN 15 YRS AND OLDER: One 10-mg tablet daily, taken in the evening. **CHILDREN 6–14 YRS:** One 5-mg chewable tablet daily, taken in the evening. **CHILDREN 2–5 YRS:** One 4-mg chewable tablet or oral granules daily, taken in the evening. **CHILDREN 6–23 MOS:** 4 mg (oral granules) once daily in the evening.

Seasonal Allergic Rhinitis

PO: ADULTS, ELDERLY, CHILDREN 15 YRS AND OLDER: One 10-mg tablet, taken in the evening. **CHILDREN 6–14 YRS:** One 5-mg chewable tablet, taken in the evening. **CHILDREN 2–5 YRS:** One 4-mg chewable tablet, or oral granules taken in the evening.

Perennial Allergic Rhinitis

PO: ADULTS, ELDERLY, CHILDREN 15 YRS AND OLDER: One 10-mg tablet, taken in the evening. **CHILDREN 6–14 YRS:** One 5-mg chewable tablet, taken in the evening. **CHILDREN 2–5 YRS:** One 4-mg chewable tablet or oral granules, taken in the evening. **CHILDREN 6–23 MOS:** 4 mg oral granules, taken in the evening.

Exercise-Induced Bronchoconstriction Prevention

PO: ADULTS, ELDERLY, CHILDREN 15 YRS AND OLDER: 10 mg 2 or more hrs before exercise. No additional doses within 24 hrs. **CHILDREN 6–14 YRS:** 5 mg (chew tab) 2 or more hrs prior to exercise. No additional doses within 24 hrs.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

ADULTS, CHILDREN 15 YRS AND OLDER: **Frequent (18%):** Headache. **Occasional (4%):** Influenza. **Rare (3%–2%):**

Abdominal pain, cough, dyspepsia, dizziness, fatigue, dental pain.

CHILDREN 6–14 YRS: **Rare (less than 2%):** Diarrhea, laryngitis, pharyngitis, nausea, otitis media, sinusitis, viral infection.

ADVERSE EFFECTS/TOXIC REACTIONS

Suicidal ideation and behavior, depression have been noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Chewable tablet contains phenylalanine (component of aspartame); parents of phenylketonuric pts should be informed. Assess lung sounds for wheezing. Assess for allergy symptoms. Question history of depression, suicidal ideation.

INTERVENTION/EVALUATION

Monitor rate, depth, rhythm, type of respirations; quality/rate of pulse. Assess lung sounds for wheezing. Monitor for change in mood, behavior.

PATIENT/FAMILY TEACHING

- Increase fluid intake (decreases lung secretion viscosity).
- Take as prescribed, even during symptom-free periods as well as during exacerbations of asthma.
- Do not alter/stop other asthma medications.
- Drug is not for treatment of acute asthma attacks.
- Report increased use or frequency of short-acting bronchodilators, changes in behavior, suicidal ideation.

morphine

TOP
100 HIGH
ALERT

mor-feen

(Arymo ER, Duramorph, Infumorph, Kadian, M-Eslon , Mitigo, MS Contin, MS-IR )

BLACK BOX ALERT Risk of severe adverse effects when epidural route of administration is used. Ingestion of alcohol with morphine ER may increase risk of overdose. Risk of opioid addiction, abuse, and misuse. Serious, life-threatening, or fatal respiratory depression may occur. Prolonged use during pregnancy may result in neonatal opioid withdrawal syndrome. Accidental ingestion of even one dose may result in a fatal overdose. Concomitant use with benzodiazepines, other CNS depressants may result in profound sedation, respiratory depression, coma, or death.

Do not confuse morphine with HYDROMORPHONE, or morphine sulfate with magnesium sulfate, MS Contin with OxyCONTIN. MSO₄ and MS are error-prone abbreviations.

FIXED-COMBINATION(S)

Embeda: morphine/naloxone (an opioid antagonist): 20 mg/0.8 mg, 30 mg/1.2 mg, 50 mg/2 mg, 60 mg/2.4 mg, 80 mg/3.2 mg, 100 mg/4 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Opioid agonist (Schedule II). **CLINICAL:** Opioid analgesic.

USES

Relief of moderate to severe, acute, or chronic pain; analgesia during labor, pain due to MI, dyspnea from pulmonary edema not resulting from chemical respiratory irritant. **Infumorph:** Use in devices for managing intractable chronic pain. **Extended-Release:** Use only when repeated doses for extended periods of time are required around the clock.

PRECAUTIONS

Contraindications: Hypersensitivity to morphine. Acute or severe asthma, GI obstruction, known or suspected paralytic ileus, concurrent use of MAOIs or use of MAOIs within 14 days, severe respiratory depression. **Extreme Caution:** COPD,

cor pulmonale, hypoxia, hypercapnia, preexisting respiratory depression, head injury, increased ICP, severe hypotension.

Cautions: Biliary tract disease, pancreatitis, Addison's disease, cardiovascular disease, morbid obesity, adrenal insufficiency, elderly, hypothyroidism, urethral stricture, prostatic hyperplasia, debilitated pts, pts with CNS depression, toxic psychosis, seizure disorders, alcoholism.

ACTION

Binds with opioid receptors within CNS, inhibiting ascending pain pathways. **Therapeutic Effect:** Alters pain perception, emotional response to pain.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Oral solution	30 min	1 hr	3–5 hrs
Tablets	30 min	1 hr	3–5 hrs
Tablets (extended-release)	N/A	3–4 hrs	8–12 hrs
IV	Rapid	0.3 hr	3–5 hrs
IM	5–30 min	0.5–1 hr	3–5 hrs
Epidural	15–60 min	1 hr	12–20 hrs
SQ	10–30 min	1.1–5 hrs	3–5 hrs
Rectal	20–60 min	0.5–1 hr	3–7 hrs

Variably absorbed from GI tract. Readily absorbed after IM, SQ administration. Protein binding: 20%–35%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 2–4 hrs (increased in hepatic disease).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. May prolong labor if administered in latent phase of first stage of labor or before cervical dilation of 4–5 cm has occurred. Respiratory depression may occur in neonate if mother received opiates during labor. Regular use of opiates during pregnancy may produce withdrawal symptoms in neonate (irritability, excessive crying,

tremors, hyperactive reflexes, fever, vomiting, diarrhea, yawning, sneezing, seizures). **Children:** Paradoxical excitement may occur; those younger than 2 yrs are more susceptible to respiratory depressant effects. **Elderly:** Paradoxical excitement may occur. Age-related renal impairment may increase risk of urinary retention.

INTERACTIONS

DRUG: Alcohol, other CNS depressants (e.g., LORazepam, gabapentin, zolpidem) may increase CNS effects, respiratory depression, hypotension. **MAOIs** (e.g., phenelzine, selegiline) may produce serotonin syndrome. (Reduce dosage to one-fourth of usual morphine dose.) **HERBAL:** Herbals with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum amylase, lipase.

AVAILABILITY (Rx)

Injection Solution: 2 mg/mL, 4 mg/mL, 5 mg/mL, 10 mg/mL. **Injection Solution (Epidural, Intrathecal, IV Infusion): (Duramorph):** 0.5 mg/mL, 1 mg/mL. **Injection Solution, Epidural or Intrathecal: (Infirmorph):** 10 mg/mL, 25 mg/mL. **Injection Solution (Mitigo):** 10 mg/mL, 25 mg/mL. **Injection Solution, Patient-Controlled Analgesia (PCA) Pump:** 1 mg/mL. **Solution, Oral:** 10 mg/5 mL, 20 mg/5 mL, 20 mg/mL. **Suppository:** 5 mg, 10 mg, 20 mg, 30 mg. **Tablets:** 15 mg, 30 mg.

 **Capsules, Extended-Release:** 45 mg, 75 mg, 90 mg, 120 mg. **Capsules, Sustained-Release:** 10 mg, 20 mg, 30 mg, 50 mg, 60 mg, 80 mg, 100 mg. **Tablets, Extended-Release:** 15 mg, 30 mg, 60 mg, 100 mg, 200 mg. **Tablets, Extended-Release (Abuse Deterrent):** 15 mg, 30 mg, 60 mg.

ADMINISTRATION/HANDLING

Reconstitution • May give undiluted. • For IV injection, may dilute in Sterile Water for Injection or 0.9% NaCl to

final concentration of 1–2 mg/mL.

- For continuous IV infusion, dilute to concentration of 0.1–1 mg/mL in D₅W and give through controlled infusion device.

Rate of administration • Always administer very slowly. Rapid IV increases risk of severe adverse reactions (apnea, chest wall rigidity, peripheral circulatory collapse, cardiac arrest, anaphylactoid effects).

Storage • Store at room temperature.

IM, SQ

- Administer slowly, rotating injection sites.
- Pts with circulatory impairment experience higher risk of overdosage due to delayed absorption of repeated administration.

PO

- May give without regard to food.
- Mix liquid form with fruit juice to improve taste.
- Do not break, crush, dissolve, or divide extended-release capsule, tablets.
- **Avinza, Kadian:** May mix with applesauce immediately prior to administration.

Rectal

- If suppository is too soft, chill for 30 min in refrigerator or run cold water over foil wrapper.
- Moisten suppository with cold water before inserting well into rectum.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), doxorubicin (Doxil), phenytoin (Dilantin).

IV COMPATIBILITIES

Amiodarone (Cordarone), atropine, bumetanide (Bumex), bupivacaine (Marcaine, Sensorcaine), dexmedetomidine (Precedex), dilTIAZem (Cardizem), diphenhydrAMINE (Benadryl), DOBUTamine (Dobutrex), DOPamine (Intropin), glycopyrrolate (Robinul), heparin, hydroXYzine (Vistaril), lidocaine, LORazepam (Ativan), magnesium, midazolam (Versed), milrinone (Primacor), nitroglycerin, potassium, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

◀ **ALERT** ▶ Dosage should be titrated to desired effect.

Analgesia

PO: (*Immediate-Release*): ADULTS, ELDERLY: 10–30 mg q4h as needed. **CHILDREN 6 MOS AND OLDER WEIGHING 50 KG OR MORE:** 15–20 mg q3–4h as needed. **CHILDREN 6 MOS AND OLDER WEIGHING LESS THAN 50 KG:** 0.2–0.5 mg/kg q3–4h as needed. **CHILDREN YOUNGER THAN 6 MOS: (*Oral Solution*):** 0.08–0.1 mg/kg q3–4h as needed.

◀ **ALERT** ▶ For the Avinza dosage below, be aware that this drug is to be administered once daily only.

◀ **ALERT** ▶ For the Kadian dosage information below, be aware that this drug is to be administered q12h or once daily.

◀ **ALERT** ▶ Be aware that pediatric dosages of extended-release preparations of Kadian and AVINza have not been established.

◀ **ALERT** ▶ For the MS Contin dosage information below, be aware that the daily dosage is divided and given q8h or q12h.

PO: (*Extended-Release [Avinza]*): ADULTS, ELDERLY: Dosage requirement should be established using prompt-release formulations and is based on total daily dose. AVINza is given once daily only.

PO: (*Extended-Release [Kadian]*): ADULTS, ELDERLY: Dosage requirement should be established using prompt-release formulations and is based on total daily dose. Dose is given once daily or divided and given q12h.

PO: (*Extended-Release [MS Contin]*): ADULTS, ELDERLY: Dosage requirement should be established using prompt-release formulations and is based on total daily dose. Daily dose is divided and given q8h or q12h.

IV: ADULTS, ELDERLY: 2.5–5 mg q3–4h as needed. **Note:** Repeated doses (e.g., 1–2 mg) may be given more frequently (e.g., every hr) if needed. **CHILDREN WEIGHING 50 KG**

OR MORE: Initially, 2–5 mg q2–4h as needed. **CHILDREN WEIGHING LESS THAN 50 KG:** Initially, 0.05 mg/kg. Range: 0.1–0.2 mg/kg q2–4h as needed. **NEONATES:** Initially, 0.05–0.1 mg/kg/dose q4–6h as needed.

IV continuous infusion: ADULTS, ELDERLY: 0.8–10 mg/hr. Range: 20–50 mg/hr. **CHILDREN WEIGHING 50 KG OR MORE:** 1.5 mg/hr. **CHILDREN WEIGHING LESS THAN 50 KG:** Initially, 0.01 mg/kg/hr. Range: 0.01–0.04 mg/kg/hr (10–40 mcg/kg/hr). **NEONATES:** Initially, 0.01 mg/kg/hr (10 mcg/kg/hr). **Maximum:** 0.015–0.02 mg/kg/hr.

Patient-Controlled Analgesia (PCA)

IV: ADULTS, ELDERLY: Usual concentration: 1 mg/mL. **Demand dose:** 1 mg (range: 0.5–2.5 mg). **Lockout interval:** 5–10 min.

Dosage in Renal Impairment

Creatinine

Clearance	Dose
10–50 mL/min, CRRT	75% of normal dose
Less than 10 mL/min, HD, PD	50% of normal dose

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

◀ ALERT ▶ Ambulatory pts, pts not in severe pain may experience nausea, vomiting more frequently than pts in supine position or who have severe pain. **Frequent:** Sedation, decreased B/P (including orthostatic hypotension), diaphoresis, facial flushing, constipation, dizziness, drowsiness, nausea, vomiting. **Occasional:** Allergic reaction (rash, pruritus), dyspnea, confusion, palpitations, tremors, urinary retention, abdominal cramps, vision changes, dry mouth, headache, decreased appetite, pain/burning at injection site. **Rare:** Paralytic ileus.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose results in respiratory depression, skeletal muscle flaccidity, cold/clammy skin, cyanosis, extreme drowsiness progressing to seizures, stupor, coma. Tolerance to analgesic effect, physical dependence may occur with repeated use. Prolonged duration of action, cumulative effect may occur in those with hepatic/renal impairment. **Antidote:** Naloxone (see Appendix J for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pt should be in recumbent position before drug is given by parenteral route. Assess onset, type, location, duration of pain. Obtain vital signs before giving medication. If respirations are 12/min or less (20/min or less in children), withhold medication, contact physician. Effect of medication is reduced if full pain recurs before next dose.

INTERVENTION/EVALUATION

Monitor vital signs 5–10 min after IV administration, 15–30 min after SQ, IM. Be alert for decreased respirations, B/P. Check for adequate voiding. Monitor daily pattern of bowel activity, stool consistency; avoid constipation. Initiate deep breathing, coughing exercises, particularly in those with pulmonary impairment. Assess for clinical improvement; record onset of pain relief. Consult physician if pain relief is not adequate.

PATIENT/FAMILY TEACHING

- Discomfort may occur with injection.
- Change positions slowly to avoid orthostatic hypotension.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Avoid alcohol, CNS depressants.
- Tolerance, dependence may occur with prolonged use of high doses.
- Report ineffective pain control, constipation, urinary retention.

moxifloxacin

mox-i-**flox**-a-sin

(Avelox, Moxeza, Vigamox)

BLACK BOX ALERT ■ May increase risk of tendonitis, tendon rupture (increased with concurrent corticosteroids, organ transplant recipients, those older than 60 yrs). May aggravate myasthenia gravis (avoid use).

Do not confuse Avelox with Avonex.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Fluoroquinolone. **CLINICAL:** Antibacterial, antibiotic.

USES

Treatment of susceptible infections due to *S. pneumoniae*, *S. pyogenes*, *S. aureus*, *H. influenzae*, *M. catarrhalis*, *K. pneumoniae*, *M. pneumoniae*, *C. pneumoniae* including acute bacterial exacerbation of chronic bronchitis, acute bacterial sinusitis, intra-abdominal infection, community-acquired pneumonia, uncomplicated skin/skin structure infections. **Ophthalmic:** Topical treatment of bacterial conjunctivitis due to susceptible strains of bacteria.

PRECAUTIONS

Contraindications: Hypersensitivity to moxifloxacin, other quinolones. **Cautions:** Renal/hepatic impairment, bradycardia, acute myocardial ischemia, myasthenia gravis, diabetes, rheumatoid arthritis, seizures, pts with prolonged QT interval, medications known to prolong QT interval, hypokalemia, hypomagnesemia, elderly, pts with suspected CNS disorder, pts at risk for tendon rupture, tendonitis (e.g., renal failure, concomitant use of corticosteroids; solid organ transplant recipient, elderly).

ACTION

Inhibits two enzymes, topoisomerase II and IV, in susceptible microorganisms.

Therapeutic Effect: Interferes with bacterial DNA replication. Prevents/delays emergence of resistant organisms. Bactericidal.

PHARMACOKINETICS

Well absorbed from GI tract after PO administration. Protein binding: 50%. Widely distributed throughout body with tissue concentration often exceeding plasma concentration. Metabolized in liver. Excreted in urine (20%), feces (25%) unchanged. **Half-life:** **PO:** 12 hrs; **IV:** 15 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May be distributed in breast milk. May produce teratogenic effects. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Antacids, iron preparations, sucralfate may decrease absorption. **NSAIDs** (e.g., ibuprofen, ketorolac, naproxen) may increase risks of CNS stimulation/seizures. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Infusion: 400 mg (250 mL). **Ophthalmic Solution:** (Moxeza, Vigamox): 0.5%. **Tablets:** 400 mg.

ADMINISTRATION/HANDLING

Reconstitution • Available in ready-to-use containers.

Rate of administration • Give by IV infusion only. • Avoid rapid or bolus IV infusion. • Infuse over 60 min.

Storage • Store at room temperature. • Do not refrigerate.

PO

• Give without regard to food. • Oral moxifloxacin should be administered 4

hrs before or 8 hrs after antacids, multivitamins, iron preparations, sucralfate, didanosine chewable/buffered tablets, pediatric powder for oral solution.

Ophthalmic

- Place gloved finger on lower eyelid and pull out until a pocket is formed between eye and lower lid.
- Place prescribed number of drops into pocket.
- Instruct pt to close eye gently (so medication will not be squeezed out of the sac) and to apply digital pressure to lacrimal sac at inner canthus for 1 min to minimize systemic absorption.

IV INCOMPATIBILITIES

Do not add or infuse other drugs simultaneously through the same IV line. Flush line before and after use if same IV line is used with other medications.

INDICATIONS/ROUTES/DOSAGE

Usual Dose

PO, IV: ADULTS, ELDERLY: 400 mg q24h. Duration dependent on severity of infection.

Acute Bacterial Sinusitis

PO, IV: ADULTS, ELDERLY: 400 mg q24h for 10 days.

Acute Bacterial Exacerbation of Chronic Bronchitis

PO, IV: ADULTS, ELDERLY: 400 mg q24h for 5 days.

Community-Acquired Pneumonia

PO, IV: ADULTS, ELDERLY: 400 mg q24h for 7–14 days.

Intra-abdominal Infection

PO, IV: ADULTS, ELDERLY: 400 mg q24h for 5–14 days.

Skin/Skin Structure Infection

PO, IV: ADULTS, ELDERLY: 400 mg once daily for 7–21 days.

Topical Treatment of Bacterial Conjunctivitis Due to Susceptible Strains of Bacteria

Ophthalmic: ADULTS, ELDERLY, CHILDREN 1 YR AND OLDER: (*Vigamox*): 1

drop 3 times/day for 7 days. (*Moxeza*): 1 drop 2 times/day for 7 days.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Use caution.

SIDE EFFECTS

Frequent (8%–6%): Nausea, diarrhea. **Occasional: PO, IV (3%–2%):** Dizziness, headache, abdominal pain, vomiting. **Ophthalmic (6%–1%):** Conjunctival irritation, reduced visual acuity, dry eye, keratitis, eye pain, ocular itching, swelling of tissue around cornea, eye discharge, fever, cough, pharyngitis, rash, rhinitis. **Rare (1%):** Altered taste, dyspepsia, photosensitivity.

ADVERSE EFFECTS/TOXIC REACTIONS

Pseudomembranous colitis (severe abdominal cramps/pain, severe watery diarrhea, fever) may occur. Superinfection (anal/genital pruritus, moderate to severe diarrhea, stomatitis) may occur. May increase risk of tendonitis, tendon rupture, peripheral neuropathy.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain serum BUN, creatinine; CrCl, GFR in pts with renal impairment; LFT in pts with hepatic impairment. Obtain bacterial culture and sensitivity prior to administration. Question pt's usual stool characteristics (color, frequency, consistency). Question medical history as listed in Precautions, esp. cardiac conduction disorders, CNS disorders, hypersensitivity reaction.

INTERVENTION/EVALUATION

Monitor for CNS reactions (agitation, anxiety, convulsions, depression, hallucinations, increased ICP, insomnia, nightmares, suicidal ideation and behavior),

peripheral neuropathy; hypersensitivity reactions (throat and facial edema, dyspnea, urticaria, itching, hemodynamic instability); muscle weakness, voice dystonia in pts with myasthenia gravis; pain, swelling, bruising, popping of tendons. Be alert for superinfections. Obtain ECG if cardiac arrhythmia suspected or palpitations occur. Observe daily pattern of bowel activity, stool consistency (increased severity may indicate antibiotic-associated colitis). If frequent diarrhea occurs, obtain *C. difficile* toxin screen and initiate isolation precautions until test result confirmed. Antibacterial drugs that are not directed against *C. difficile* infection may need to be discontinued. Monitor I&O.

PATIENT/FAMILY TEACHING

• It is essential to complete drug therapy despite symptom improvement. Early discontinuation may result in antibacterial resistance or increase risk of recurrent infection. • Report any episodes of diarrhea, esp. during the first few mos after final dose. Frequent diarrhea, fever, abdominal pain, blood-streaked stool may indicate infectious diarrhea, which may be contagious to others. • Severe allergic reactions, such as hives, palpitations, rash, shortness of breath, swelling of tongue, may occur. • Tendon inflammation/swelling, tendon rupture may occur; report bruising, pain, swelling in tendon areas or snapping, popping of tendons. • Immediately report nervous system problems such as anxiety, confusion, dizziness, nervousness, nightmares, thoughts of suicide, seizures, tremors, trouble sleeping. • Treatment may cause heart problems such as low heart rate, palpitations; permanent nerve damage such as burning, numbness, tingling, weakness. • Do not take aluminum- or magnesium-containing antacids, multivitamins, zinc or iron products at least 2 hrs before or 6 hrs after dose. • Drink plenty of fluids.

mycophenolate

mye-koe-**fen**-o-late
(CellCept, Myfortic)

BLACK BOX ALERT ■ Increased risk of congenital malformation, spontaneous abortion. Increased risk for development of lymphoma, skin malignancy. Increased susceptibility to infections. Administer under supervision of physician experienced in immunosuppressive therapy.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Immunologic agent. **CLINICAL:** Immunosuppressant.

USES

Should be used concurrently with other immunosuppressants **CellCept:** Prophylaxis of organ rejection in pts receiving allogeneic hepatic/renal/cardiac transplant. **Myfortic:** Renal transplants. **OFF-LABEL:** Treatment of hepatic transplant rejection in pts unable to tolerate tacrolimus or cycloSPORINE due to toxicity, mild heart transplant rejection, moderate to severe psoriasis, proliferative lupus nephritis, myasthenia gravis, graft-vs-host disease. Treatment of autoimmune hepatitis (refractory).

PRECAUTIONS

Contraindications: Hypersensitivity to mycophenolate, mycophenolic acid or polysorbate 80 (IV formulation). **Cautions:** Active severe GI disease, renal impairment, neutropenia, women of childbearing potential (use caution when handling).

ACTION

Suppresses immunologically mediated inflammatory response by inhibiting inosine monophosphate dehydrogenase, an enzyme that deprives lymphocytes of nucleotides necessary for DNA, RNA synthesis, thus inhibiting proliferation of T and B lymphocytes. **Therapeutic Effect:** Prevents transplant rejection.

PHARMACOKINETICS

Rapidly, extensively absorbed after PO administration (food decreases drug plasma concentration but does not affect absorption). Protein binding: 97%. Completely hydrolyzed to active metabolite mycophenolic acid. Primarily excreted in urine. Not removed by hemodialysis.

Half-life: 17.9 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Breastfeeding not recommended. Increased risk of miscarriage, birth defects. Effective contraception should be used during treatment and for 6 wks after discontinuation. **Children:** Safety and efficacy not established in children younger than 3 months. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May increase concentration/effect of **acyclovir**, **ganciclovir**. **Antacids (aluminum- and magnesium-containing)**, **cholestyramine** may decrease absorption. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **Rifampin** may decrease concentration/effect. May decrease therapeutic effect of **oral contraceptives**. **HERBAL:** **Echinacea** may decrease therapeutic effect. **FOOD:** All foods may decrease concentration. **LAB VALUES:** May increase serum cholesterol, alkaline phosphatase, creatinine, ALT, AST. May alter serum glucose, lipids, calcium, potassium, phosphate, uric acid.

AVAILABILITY (Rx)

Capsules: (*CellCept*): 250 mg. **Injection, Powder for Reconstitution:** (*CellCept*): 500 mg. **Oral Suspension:** (*CellCept*): 200 mg/mL. **Tablets:** (*CellCept*): 500 mg.

Tablets, Delayed-Release: (*Myfortic*): 180 mg, 360 mg.

ADMINISTRATION/HANDLING

Reconstitution • Reconstitute each 500-mg vial with 14 mL D₅W. Gently agitate. • For 1-g dose, further dilute with 140 mL D₅W; for 1.5-g dose, further dilute with 210 mL D₅W, providing a concentration of 6 mg/mL.

Rate of administration • Infuse over at least 2 hrs. • Begin infusion within 4 hrs of reconstitution.

Storage • Store at room temperature.

PO

• Give on empty stomach (1 hr before or 2 hrs after food). • Do not break, crush, or open capsules or break, crush, dissolve, or divide delayed-release tablets. Avoid inhalation of powder in capsules, direct contact of powder on skin/mucous membranes. If contact occurs, wash thoroughly, with soap, water. Rinse eyes profusely with plain water. • May store reconstituted suspension in refrigerator or at room temperature. • Suspension is stable for 60 days after reconstitution. • Suspension can be administered orally or via an NG tube (minimum size 8 French).

IV INCOMPATIBILITIES

Mycophenolate is compatible only with D₅W. Do not infuse concurrently with other drugs or IV solutions.

INDICATIONS/ROUTES/DOSAGE

Prevention of Renal Transplant Rejection

PO, IV: (*CellCept*): **ADULTS, ELDERLY:** 1 g twice daily. **PO: CHILDREN 3 MONTHS AND OLDER:** (*CellCept Suspension*): 600 mg/m²/dose twice daily. (*Tablets, Capsules*): **BSA greater than or equal to 1.5 m²:** 1,000 mg twice daily. **BSA 1.25–1.5 m²:** 750 mg twice daily. **Maximum:** 1 g twice daily. **PO:** (*Myfortic*): **ADULTS, ELDERLY:** 720 mg twice daily. **CHILDREN 5–16 YRS:** 400 mg/m² twice daily. **BSA greater than 1.58 m²:** 720 mg twice daily. **BSA 1.19–1.58 m²:** 540 mg twice daily. **Maximum:** 720 mg twice daily.

Prevention of Heart Transplant Rejection

PO, IV: (Cellcept): ADULTS, ELDERLY: 1.5 g twice daily in combination with cyclosporine and initially with corticosteroids; or, 1 g twice daily in combination with other immunosuppressants (e.g., tacrolimus, everolimus, or sirolimus).

Prevention of Hepatic Transplant Rejection

PO, IV: (Cellcept): ADULTS, ELDERLY: 1.5 g twice daily in combination with cyclosporine and initially with corticosteroids; or, 1 g twice daily in combination with other immunosuppressants (e.g., tacrolimus, everolimus, or sirolimus).

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (37%–20%): UTI, hypertension, peripheral edema, diarrhea, constipation, fever, headache, nausea. **Occasional (18%–10%):** Dyspepsia, dyspnea, cough, hematuria, asthenia, vomiting, edema, tremors, oral candidiasis, acne; abdominal, chest, back pain. **Rare (9%–6%):** Insomnia, respiratory tract infection, rash, dizziness.

ADVERSE EFFECTS/TOXIC REACTIONS

Significant anemia, leukopenia, thrombocytopenia, neutropenia, leukocytosis may occur, particularly in pts undergoing renal transplant rejection. Sepsis, infection occur occasionally. GI tract hemorrhage occurs rarely. There is an increased risk of developing neoplasms.

Immunosuppression results in increased susceptibility to infection.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Women of childbearing potential should have a negative serum or urine pregnancy test within 1 wk before initiation. Assess medical history, esp. renal function, existence of active digestive system disease, drug history, esp. other immunosuppressants.

INTERVENTION/EVALUATION

CBC should be performed wkly during first mo of therapy, twice monthly during second and third mos of treatment, then monthly throughout the first yr. If rapid fall in WBC occurs, dosage should be reduced or discontinued. Assess particularly for delayed bone marrow suppression. Report any major change in assessment of pt.

PATIENT/FAMILY TEACHING

- Effective contraception should be used before, during, and for 6 wks after discontinuing therapy, even if pt has a history of infertility, other than hysterectomy.
- Two forms of contraception must be used concurrently unless abstinence is absolute.
- Report unusual bleeding/bruising, sore throat, mouth sores, abdominal pain, fever.
- Laboratory follow-up while taking medication is important part of therapy.
- Malignancies may occur.

nafcillin

naf-sil-in

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Penicillin. **CLINICAL:** Antibiotic.

USES

Treatment of respiratory tract, skin/skin structure infections, osteomyelitis, endocarditis, meningitis; perioperatively, esp. in cardiovascular, orthopedic procedures. Predominant treatment of infections caused by susceptible strains of staphylococci.

PRECAUTIONS

Contraindications: Hypersensitivity to nafcillin, other penicillins. **Cautions:** History of allergies, particularly cephalosporins; severe renal/hepatic impairment, asthma, pts with HE.

ACTION

Binds to bacterial membranes. **Therapeutic Effect:** Inhibits cell wall synthesis. Bactericidal.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; appears in cord blood, amniotic fluid. Distributed in breast milk. May lead to rash, diarrhea, candidiasis in neonate, infant. **Children:** Immature renal function in neonate may delay renal excretion. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: High doses (2 g q4h) may decrease effects of **warfarin**. May decrease effects of **BCG (intravesical)**, **axitinib**, **bosutinib**, **cobimetinib**, **elbasvir**, **grazoprevir**, **neratinib**, **olaparib**, **ranolazine**, **sonidegib**. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May cause false-positive Coombs' test.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 1 g, 2 g. **Infusion, Premix:** 1 g/50 mL, 2g/100 mL.

ADMINISTRATION/HANDLING

◀ ALERT ▶ Space doses evenly around the clock.

Reconstitution • Reconstitute each vial with 10 mL Sterile Water for Injection or 0.9% NaCl. • For intermittent IV infusion (piggyback), further dilute with 50–100 mL 0.9% NaCl or D₅W.

Rate of administration • Infuse over 30–60 min. • Because of potential for hypersensitivity/anaphylaxis, start initial dose at few drops per min, increase slowly to ordered rate; stay with pt first 10–15 min, then check q10min. • Limit IV therapy to less than 48 hrs, if possible. Stop infusion if pt complains of pain at IV site.

Storage • Refrigerate diluted solution for up to 7 days or store at room temperature for up to 24 hrs. • Discard if precipitate forms.

IM

• Reconstitute each 500 mg with 1.7 mL Sterile Water for Injection or 0.9% NaCl to provide concentration of 250 mg/mL. • Inject IM into large muscle mass.

IV INCOMPATIBILITIES

Aztreonam (Azactam), dilTIAZem (Cardizem), droperidol (Inapsine), fentanyl, gentamicin, insulin, labetalol (Normodyne, Trandate), methylPREDNISolone (Solu-Medrol), midazolam (Versed), nalbuphine (Nubain), vancomycin (Vancocin), verapamil (Isoptin).

IV COMPATIBILITIES

Acyclovir, famotidine (Pepcid), flucanazole (Diflucan), heparin, HYDROMORPHONE (Dilaudid), lidocaine, lipids, magnesium, morphine, potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE**Usual Dosage**

IV: ADULTS, ELDERLY: 0.5–2 g q4–6h. **CHILDREN: Mild to Moderate Infections:** 100–150 mg/kg/day in divided doses q6h. **Maximum:** 4 g/day. **Severe Infections:** 150–200 mg/kg/day in divided doses q4–6h. **Maximum:** 12 g/day. **NEONATES:** 25 mg/kg/dose in divided doses q6–12h. Dose based on body weight and postnatal age.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Mild hypersensitivity reaction (fever, rash, pruritus), GI effects (nausea, vomiting, diarrhea). **Occasional:** Hypokalemia with high IV dosages, phlebitis, thrombophlebitis (common in elderly).

Rare: Extravasation with IV administration.

ADVERSE EFFECTS/TOXIC REACTIONS

Potentially fatal antibiotic-associated colitis, superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance in GI tract. Hematologic effects (esp. involving platelets, WBCs), severe hypersensitivity reactions, anaphylaxis occur rarely.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Question for history of allergies, esp. penicillins, cephalosporins.

INTERVENTION/EVALUATION

Hold medication, promptly report rash (possible hypersensitivity), diarrhea (fever, abdominal pain, mucus/blood in stool may indicate antibiotic-associated colitis). Evaluate IV site frequently for phlebitis (heat, pain, red streaking over vein), infiltration (potential extravasation). Monitor periodic CBC, urinalysis, BMP, LFT. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

- Continue antibiotic for full length of treatment.
- Doses should be evenly spaced.
- Discomfort may occur with IM injection.
- Report IV discomfort immediately.
- Report diarrhea, rash, other new symptoms.

nalbuphine**HIGH ALERT**

nal-bue-feen
(Nubain )

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Opioid partial agonist. **CLINICAL:** Opioid analgesic.

USES

Relief of moderate to severe pain. **OFF-LABEL:** Opioid-induced pruritus.

PRECAUTIONS

Contraindications: Hypersensitivity to nalbuphine. Severe respiratory depression, acute or severe bronchial asthma, GI obstruction including paralytic ileus. **Cautions:** Hepatic/renal impairment, respiratory depression, recent MI, recent biliary tract impairment, pancreatitis, hypovolemia, head trauma, increased intracranial pressure (ICP), pregnancy, pts suspected of being opioid dependent, obesity, thyroid dysfunction, prostatic hyperplasia, urinary stricture, adrenal insufficiency, cardiovascular disease, elderly pts, debilitated pts.

ACTION

Agonist of kappa opioid receptors and partial antagonist of mu opioid receptors within CNS, inhibiting ascending pain pathways. **Therapeutic Effect:** Alters pain perception, emotional response to pain.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	2–3 min	2–3 min	3–4 hrs
IM	Less than 15 min	30 min	3–6 hrs
SQ	Less than 15 min	N/A	3–6 hrs

Well absorbed after IM, SQ administration. Metabolized in liver. Primarily eliminated in feces by biliary secretion.

Half-life: 3.5–5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. Breastfeeding not recommended. May cause fetal, neonatal adverse effects during labor/delivery (e.g., fetal bradycardia). **Children:** Paradoxical excitement may occur. Pts younger than 2 yrs more susceptible to respiratory depression. **Elderly:** More susceptible to respiratory depression. Age-related renal impairment may increase risk of urinary retention.

INTERACTIONS

DRUG: Alcohol, other CNS depressants (e.g., LORazepam, morphine, zolpidem) may increase CNS depression. **HERBAL:** Herbals with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum amylase, lipase.

AVAILABILITY (Rx)

Injection Solution: 10 mg/mL, 20 mg/mL.

ADMINISTRATION/HANDLING

Reconstitution • May give undiluted. **Rate of administration** • For IV push, administer each 10 mg over 3–5 min. **Storage** • Store parenteral form at room temperature.

IM/SQ

• Rotate injection sites. • Administer undiluted.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), ketorolac (Toradol), nafcillin (Nafcil), piperacillin and tazobactam (Zosyn).

IV COMPATIBILITIES

Dexmedetomidine (Precedex), diphenhydrAMINE (Benadryl), droperidol (Inapsine), glycopyrrolate (Robinul), hydrOXYzine (Vistaril), lidocaine, midazolam (Versed), prochlorperazine (Compazine), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE**Analgesia**

IV, IM, SQ: ADULTS, ELDERLY: 10 mg q3–6h as needed. Do not exceed maximum single dose of 20 mg or daily dose of 160 mg. **CHILDREN 1 YR AND OLDER:** 0.1–0.2 mg/kg q3–4h as needed. **Maximum:** 20 mg/dose, 160 mg/day.

Dosage in Renal/Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (36%): Sedation. **Occasional (9%–3%):** Diaphoresis, cold/clammy skin, nausea, vomiting, dizziness, vertigo, dry mouth, headache. **Rare (less than 1%):** Restlessness, emotional lability, paresthesia, flushing, paradoxical reaction.

ADVERSE EFFECTS/TOXIC REACTIONS

Abrupt withdrawal after prolonged use may produce symptoms of narcotic withdrawal (abdominal cramping, rhinorrhea, lacrimation, anxiety, fever, piloerection [goose bumps]). Overdose results in severe respiratory depression, skeletal muscle flaccidity, cyanosis, extreme drowsiness progressing to seizures, stupor, coma. Tolerance to analgesic effect, physical dependence may occur with chronic use.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question medical history as listed in Precautions. Obtain vital signs before giving medication. If respirations are 12/min or less (20/min or less in children), withhold medication, contact physician. Assess onset, type, location, duration of pain. Effect of medication is reduced if full pain recurs before next dose.

INTERVENTION/EVALUATION

Monitor for change in respirations, B/P, rate/quality of pulse. Monitor daily pattern of bowel activity, stool consistency. Initiate deep breathing, coughing exercises, particularly in pts with pulmonary impairment. Assess for clinical improvement, record onset of relief of pain. Consult physician if pain relief is not adequate.

PATIENT/FAMILY TEACHING

- Avoid alcohol.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- May cause dry mouth.
- May be habit forming.

naldemedine

nal-**dem**-e-deen
(Symproic)

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Opioid receptor antagonist (peripheral acting) (**Schedule II**). **CLINICAL:** GI agent.

USES

Treatment of opioid-induced constipation (OIC) in adult pts with chronic non-cancer pain, including pts with chronic pain related to prior cancer or its treatment, who do not require frequent (e.g., weekly) opioid dosage escalation.

PRECAUTIONS

Contraindications: Hypersensitivity to naldemedine. Known or suspected mechanical GI obstruction. Pts at risk of recurrent GI obstruction. **Cautions:** Severe hepatic impairment, pts with advanced illness associated with impaired structural integrity of the GI wall or conditions that may impair integrity of GI wall (e.g., Crohn's disease, diverticulitis, GI tract malignancies, intestinal adhesions, Ogilvie's syndrome, peptic ulcers, peritoneal malignancies). Concomitant use of strong CYP3A inducers, other opioid antagonists. Pts with disruption to the blood-brain barrier (may precipitate symptoms of opioid withdrawal).

ACTION

Blocks opioid binding at the peripheral mu, delta, and kappa opioid receptors in GI tract. Inhibits the delay in GI transit times. **Therapeutic Effect:** Decreases constipating effects of opioids.

PHARMACOKINETICS

Widely distributed. Metabolized in liver. Protein binding: 93%–94%. Peak plasma concentration: 45 mins (with food: 2.5 hrs). Excreted in urine (57%), feces (35%). Not removed by dialysis. **Half-life:** 11 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cross the placenta and cause fetal opiate withdrawal due to immature blood-brain barrier. Due to risk of opiate withdrawal in nursing infants, breastfeeding not recommended during treatment and for at least 3 days after discontinuation. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: P-gp/ABCB1 inhibitors (e.g., amiodarone), diTIAZem, proton pump inhibitors (e.g., omeprazole, pantoprazole), strong CYP3A inhibitors (e.g., clarithromycin, ketoconazole, ritonavir) may increase concentration/

effect; **Strong CYP3A inducers** (e.g., **carbamazepine, phenytoin, rifampin**) may decrease concentration/effect. **Methylnaltrexone, opioid antagonists** may increase adverse/toxic effects. **HERBAL:** **St. John's wort** may decrease concentration/effect. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Tablets: 0.2 mg.

ADMINISTRATION/HANDLING

PO

- Give with or without food.

INDICATIONS/ROUTES/DOSAGE

Opioid-Induced Constipation

PO: ADULTS, ELDERLY: 0.2 mg once daily. (Discontinue if opioid pain medication is discontinued.)

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Not recommended.

SIDE EFFECTS

Frequent (21%–12%): Abdominal pain. **Occasional (9%–3%):** Diarrhea, nausea, flatulence, vomiting, headache, hyperhidrosis.

ADVERSE EFFECTS/TOXIC REACTIONS

Severe abdominal pain, diarrhea requiring hospitalization have occurred. GI perforation was reported in pts with baseline GI disease (Crohn's disease, diverticulitis, GI tract malignancies, peptic ulcers, Ogilvie's syndrome, peritoneal malignancies). Symptoms of opiate withdrawal including abdominal pain, anxiety, chills, diarrhea, feeling cold, flushing, hyperhidrosis, increased lacrimation, irritability, nausea were reported, esp. in pts taking methadone or with disruptions to the blood-brain barrier. May increase risk of adverse effects in pts with renal impairment.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Discontinue all maintenance laxative therapy prior to initiation. Laxatives may be restarted if therapy has been ineffective for 3 days. Changes to analgesic dosage prior to initiation is not required. Question characteristics of constipation, frequency of bowel movements. Assess bowel sounds. Question history of GI obstruction, GI perforation, or baseline GI disease. Receive full medication history, including herbal products, and screen for interactions. Assess hydration status.

INTERVENTION/EVALUATION

Pts may be less responsive to therapy if taking opioids for less than 4 wks. Monitor for opioid withdrawal symptoms, esp. in pts taking methadone or with disruptions to blood-brain barrier. Monitor for severe, persistent, or worsening of abdominal pain; may indicate GI tract obstruction or perforation. Encourage fluid intake. Monitor daily pattern of bowel activity, stool consistency. Discontinue treatment if opioid pain medication is also discontinued. If dose is increased to 25 mg/day in pts with renal impairment, monitor for adverse effects.

PATIENT/FAMILY TEACHING

- Take with or without food.
- Do not take laxatives unless approved by prescriber.
- Notify prescriber if opioid pain medication is discontinued.
- Immediately report severe, persistent abdominal pain; may indicate tear or blockage in GI tract.
- Do not ingest grapefruit products or take herbal supplements.
- Opioid withdrawal may occur in a fetus of pregnant females due to undeveloped fetal blood-brain barrier.
- Do not breastfeed during treatment and for at least 3 days after last dose.
- Do not take newly prescribed medication unless approved by prescriber who originally started treatment.

naloxegol

nal-ox-ee-gol
(Movantik)

Do not confuse naloxegol with naloxone.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Mu-opioid receptor antagonist (Peripherally acting). **CLINICAL:** GI agent.

USES

Treatment of opioid-induced constipation (OIC) in adult pts with chronic non-cancer pain, including pts with chronic pain related to prior cancer or its treatment who do not require frequent (e.g., weekly) opioid dosage escalation.

PRECAUTIONS

Contraindications: Hypersensitivity to naloxegol. Known or suspected mechanical GI obstruction, pts at risk for recurrent GI obstruction. Concomitant use of strong CYP3A inhibitors. **Cautions:** Moderate to severe renal impairment, end-stage renal disease, severe hepatic impairment; pts with risk or reduction of structural wall integrity of GI tract (e.g., Crohn's disease, diverticulitis, GI tract malignancies, peptic ulcers, Ogilvie's syndrome, peritoneal metastases). Pts with disruptions to the blood-brain barrier. Concomitant use of moderate CYP3A inhibitors, P-glycoprotein (P-gp) inhibitors. Avoid concomitant use of strong CYP3A inducers, other opioid antagonists.

ACTION

Blocks opioid binding at peripheral mu-opioid receptors in GI tract. **Therapeutic Effect:** Decreases constipating effects of opioids.

PHARMACOKINETICS

Rapidly absorbed. Widely distributed. Metabolized in liver. Protein binding: 4.2%. Peak plasma concentration: less

than 2 hrs. Excreted in feces (68%), urine (16%). **Half-life:** 6–11 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Known to cross the placenta. Use during pregnancy may induce fetal opiate withdrawal due to immature blood-brain barrier. Unknown if excreted in breast milk. Breastfeeding not recommended due to risk of opiate withdrawal in nursing infants. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: P-gp/ABCB1 inhibitors (e.g., amiodarone, cycloSPORINE), diltiazem, PPIs (e.g., pantoprazole), moderate CYP3A inhibitors (e.g., erythromycin, ciprofloxacin, dilTIA-Zem, dronedarone, fluconazole, verapamil), strong CYP3A inhibitors (e.g., clarithromycin, ketoconazole, ritonavir) may increase concentration/effect; may increase risk of opiate withdrawal. **Strong CYP3A inducers** (e.g., carBA-Mazepine, phenytoin, rifAMPin) may decrease concentration/effect. **Methylnaltrexone, opioid antagonists** may increase adverse/toxic effects. **HERBAL:** St John's wort may decrease concentration/effect. **FOOD:** Grapefruit products may increase concentration/effect. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Tablets: 12.5 mg, 25 mg.

ADMINISTRATION/HANDLING

PO

- Give on empty stomach at least 1 hr prior to first meal or 2 hrs after first meal.
- Swallow whole; do not chew.

For pts unable to swallow tablet whole, tablets may be crushed and mixed with 120 mL water for oral administration or mixed with 60 mL for NG tube administration. After administration of crushed tablet, refill container with 120 mL (oral) or 60 mL (NG tube) of water, stir well, and give remaining contents. • Do not give with grapefruit products.

INDICATIONS/ROUTES/DOSAGE

Note: Discontinue all maintenance laxative therapy prior to use. May reintroduce laxatives if suboptimal response to naloxegol after 3 days.

Opioid-Induced Constipation

PO: ADULTS, ELDERLY: 25 mg once daily in AM. May reduce dose to 12.5 mg once daily if 25-mg dose is not tolerated.

Dose Modification

Concomitant use of moderate CYP3A inhibitors: 12.5 mg daily in AM. **Strong CYP3A inhibitors:** Contraindicated.

Dosage in Renal Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment: CrCl less than 60 mL/min: ESRD:** Reduce dose to 12.5 mg once daily in AM. If tolerated, may increase to 25 mg once daily in AM.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Not recommended; avoid use.

SIDE EFFECTS

Frequent (21%–12%): Abdominal pain. **Occasional (9%–3%):** Diarrhea, nausea, flatulence, vomiting, headache, hyperhidrosis.

ADVERSE EFFECTS/TOXIC REACTIONS

Severe abdominal pain, diarrhea requiring hospitalization have occurred. GI perforation was reported in pts with baseline GI disease (Crohn's disease, diverticulitis, GI tract malignancies, peptic ulcers, Ogilvie's syndrome, peritoneal malignancies). Symptoms of opiate withdrawal, including abdominal pain, anxiety, chills, diarrhea, hyperhidrosis, irritability, yawning, were reported, esp. in pts taking methadone or with disruptions to the blood-brain barrier. May increase risk of adverse effects in pts with renal impairment who have increased dose to 25 mg/day.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Discontinue all maintenance laxative therapy prior to initiation. Laxatives may be restarted if therapy has been ineffective for 3 days. Changes to analgesic dosage prior to initiation are not required. Question characteristics of constipation, frequency of bowel movements. Assess bowel sounds. Question history of GI obstruction, perforation, baseline GI disease. Receive full medication history including herbal products and screen for interactions. Assess hydration status.

INTERVENTION/EVALUATION

Pts may be less responsive to therapy if taking opioids for less than 4 wks. Monitor for opioid withdrawal symptoms, esp. in pts taking methadone or with disruptions to blood-brain barrier. Monitor for severe, persistent, worsening of abdominal pain; may indicate GI tract obstruction, perforation. Encourage fluid intake. Monitor daily pattern of bowel activity, stool consistency. Discontinue treatment if opioid pain medication is also discontinued. If dose is increased to 25 mg/day in pts with renal impairment, monitor for increased adverse effects.

PATIENT/FAMILY TEACHING

- Take on an empty stomach in the AM at least 1 hr before or 2 hrs after morning meal.
- Do not take laxatives unless approved by prescriber.
- Tablets may be taken whole or crushed and mixed in water.
- Notify prescriber if opioid pain medication is discontinued.
- Immediately report severe, persistent abdominal pain; may indicate tear or blockage in GI tract.
- Do not ingest grapefruit products or take herbal supplements.
- Opioid withdrawal may occur in a fetus of pregnant females due to undeveloped fetal blood-brain barrier.
- Do not breastfeed.

naloxone

nal-ox-own

(Evzio, Narcan, Narcan Nasal Spray)

Do not confuse naloxone with Lanoxin or naltrexone.

FIXED-COMBINATION(S)

Embeda: naloxone/morphine (an opioid agonist): 0.8 mg/20 mg, 1.2 mg/30 mg, 2 mg/50 mg, 2.4 mg/60 mg, 3.2 mg/80 mg, 4 mg/100 mg. **Suboxone (sublingual film):** naloxone/buprenorphine (an analgesic): 0.5 mg/2 mg, 1 mg/4 mg, 2 mg/8 mg, 3 mg/12 mg. **Zubsolv:** naloxone/buprenorphine: 0.36 mg/1.4 mg, 1.4 mg/5.7 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Opioid antagonist. **CLINICAL:** Antidote.

N

USES

Narcan: Complete or partial reversal of opioid depression including respiratory depression. Diagnosis of suspected opioid tolerance or acute opioid overdose.

Evzio, Narcan Nasal Spray: Emergency treatment of known or suspected opioid overdose. **OFF-LABEL:** Opioid-induced pruritus.

PRECAUTIONS

Contraindications: Hypersensitivity to naloxone. **Cautions:** Cardiac/pulmonary disease. Medications with potential for adverse cardiovascular effects (e.g., hypotension, arrhythmias).

ACTION

Displaces opioids at opioid-occupied receptor sites in CNS. **Therapeutic Effect:** Reverses opioid-induced sleep/sedation, increases respiratory rate, raises B/P to normal range.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	1–2 min	N/A	20–60 min
IM	2–5 min	N/A	20–60 min
SQ	2–5 min	N/A	20–60 min

Well absorbed after IM, SQ administration. Metabolized in liver. Primarily excreted in urine. **Half-life:** 60–100 min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Methylnaltrexone may increase adverse/toxic effects. May increase adverse/toxic effects of naldemedine, naloxegol.

HERBAL: None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Autoinjector (Evzio): 2 mg/0.4 mL. **Injection Solution:** 0.4 mg/mL, 1 mg/mL. **Narcan Nasal Spray:** 4 mg/0.1 mL.

ADMINISTRATION/HANDLING

Reconstitution • For IV push, may give undiluted (0.4 mg/mL or diluted with 9 mL 0.9% NaCl to concentration of 0.04 mg/mL). • For continuous IV infusion, dilute each 2 mg of naloxone with 500 mL of D₅W or 0.9% NaCl, producing solution containing 0.004 mg/mL (4 mcg/mL).

Rate of administration • May give IV push over 30 sec.

Storage • Store parenteral form at room temperature. • Use mixture within 24 hrs; discard unused solution. • Protect from light. • Stable in D₅W or 0.9% NaCl at 4 mcg/mL for 24 hrs.

IM

• Give deep IM in large muscle mass.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec).

IV COMPATIBILITIES

Heparin, ondansetron (Zofran), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Note: If no response seen after a total of 10 mg, consider other causes of respiratory depression.

Opioid Overdose

IV, IM, SQ: ADULTS, ELDERLY: 0.4–2 mg q2–3min as needed. After reversal, additional doses may be required at later intervals (e.g., 20–60 min) depending on type/duration of opioid. **CHILDREN 5 YRS AND OLDER, WEIGHING 20 KG OR MORE:** 2 mg/dose; if no response, may repeat q2–3min. May need to repeat doses q20–60min. **CHILDREN YOUNGER THAN 5 YRS, WEIGHING LESS THAN 20 KG:** 0.1 mg/kg (**Maximum:** 2 mg); if no response, repeat q2–3min. May need to repeat doses q20–60min. (**Narcan Nasal Spray:** **ADULTS, ELDERLY, CHILDREN:** Single spray (4 mg) into one nostril. May give q2–3min until emergency medical assistance arrives. (**Evzio:** **IM: ADULTS, ELDERLY, CHILDREN:** 2 mg (contents of 1 auto-injector) as a single dose; may repeat q2–3min until emergency medical assistance becomes available.

Reversal of Respiratory Depression with Therapeutic Opioid Dosing

IV, IM, SQ: ADULTS, ELDERLY: Initially, 0.02–0.2 mg. Titrate to avoid profound withdrawal, seizures, arrhythmias, or severe pain. **CHILDREN:** 0.001–0.015 mg/kg. Titrate to desired effect. If administered IM or SQ, dose is to be given in divided doses.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

None known; little or no pharmacologic effect in absence of narcotics.

ADVERSE EFFECTS/TOXIC REACTIONS

Too-rapid reversal of narcotic-induced respiratory depression may result in agitation, nausea, vomiting, tremors,

increased B/P, tachycardia, seizures. Excessive dosage in postoperative pts may produce significant reversal of analgesia, agitation, tremors. Hypotension or hypertension, ventricular tachycardia/fibrillation, pulmonary edema may occur in pts with cardiovascular disease.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Maintain patent airway. Obtain weight of children to calculate drug dosage.

INTERVENTION/EVALUATION

Monitor vital signs, esp. rate, depth, rhythm of respiration, during and frequently following administration. Carefully observe pt after satisfactory response (duration of opiate may exceed duration of naloxone, resulting in recurrence of respiratory depression). Assess for increased pain with reversal of opiate.

naproxen

na-prox-en

(Aleve, EC-Naprosyn, Naprelan, Naprosyn)

■ BLACK BOX ALERT ■ Increased risk of serious cardiovascular thrombotic events, including myocardial infarction, CVA. Increased risk of severe GI reactions, including ulceration, bleeding, perforation of stomach, intestines.

Do not confuse Aleve with Allese, or Anaprox with Anaspaz or Avapro.

FIXED-COMBINATION(S)

Prevacid NapraPac: naproxen/lan-soprazole (proton pump inhibitor): 375 mg/15 mg, 500 mg/15 mg.

Treximet: naproxen/SUMatriptan (an antimigraine): 60 mg/10 mg; 500 mg/85 mg. **Vimovo:** naproxen/esome-prazole (proton pump inhibitor): 375 mg/20 mg, 500 mg/20 mg.

◆ CLASSIFICATION**PHARMACOTHERAPEUTIC:** NSAID.**CLINICAL:** Analgesic, nonopioid.**USES**

Treatment of acute or long-term mild to moderate pain, primary dysmenorrhea, rheumatoid arthritis (RA), juvenile rheumatoid arthritis (JRA), osteoarthritis, ankylosing spondylitis, acute gouty arthritis, bursitis, tendonitis, fever. **OFF-LABEL:** Migraine prophylaxis.

PRECAUTIONS

Contraindications: History of asthma, urticaria; hypersensitivity to naproxen, other NSAIDs. Perioperative pain in setting of CABG surgery. **Cautions:** GI disease (bleeding, ulcers), fluid retention, renal/hepatic impairment, asthma, HF, concurrent use of anticoagulants, smoking, use of alcohol, elderly pts, debilitated pts.

ACTION

Reversibly inhibits COX-1 and COX-2 enzymes, resulting in decreased formation of prostaglandin precursors. **Therapeutic Effect:** Reduces inflammatory response, fever, intensity of pain.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (analgesic)	1 hr	2–4 hrs	7 hrs or less
PO (anti-inflammatory)	2 wks	2–4 wks	12 hrs

Completely absorbed from GI tract. Protein binding: 99%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 13 hrs.

🕒 LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. Avoid use during third trimester (may adversely affect fetal cardiovascular system: premature closing of ductus arteriosus). **Children:** Safety and efficacy not established in pts younger than 2 yrs. Children older than 2 yrs at increased risk for skin rash. **Elderly:** Age-related

renal impairment may increase risk of hepatic/renal toxicity; reduced dosage recommended. More likely to have serious adverse effects with GI bleeding/ulceration.

INTERACTIONS

DRUG: May increase effect of **apixaban**, **dabigatran**, **edoxaban**, **rivaroxaban**. **Bile acid sequestrants** (e.g., **cholestyramine**) may decrease absorption. May increase nephrotoxic effect of **aliskiren**, **cyclosporine**. **HERBAL:** **Glucosamine**, **herbals with anticoagulant/antiplatelet properties** (e.g., **garlic**, **ginger**, **ginseng**, **ginkgo biloba**) may increase concentration/effect. **FOOD:** None known. **LAB VALUES:** May prolong bleeding time. May increase serum BUN, creatinine, ALT, AST, alkaline phosphatase. May decrease Hgb, Hct, leukocytes, platelets, uric acid.

AVAILABILITY (Rx)

Capsule: 220 mg. **Oral Suspension:** 125 mg/5 mL naproxen. **Tablets:** 220 mg, 250 mg, 275 mg, 375 mg, 500 mg, 550 mg.

📄 Tablets, Delayed-Release: 375 mg, 500 mg. **Extended-Release:** 375 mg, 500 mg, 750 mg.

ADMINISTRATION/HANDLING**PO**

• Give controlled-release form whole. Do not break, crush, dissolve, or divide. • Best taken with food or milk (decreases GI irritation). • Shake suspension well.

INDICATIONS/ROUTES/DOSAGE

Note: Dosage expressed as naproxen base (200 mg naproxen base equivalent to 220 mg naproxen sodium).

Rheumatoid Arthritis (RA), Osteoarthritis, Ankylosing Spondylitis

PO: ADULTS, ELDERLY: (Immediate-Release): 500–1,000 mg/day in 2 divided doses. May increase to 1,500 mg/day for limited time (less than 6 mos). **(Extended-Release):** Initially, 750–1,000 mg once daily. May increase temporarily to 1,500 mg once daily.

Acute Gouty Arthritis

PO: ADULTS, ELDERLY: 500 mg twice daily (start within 24–48h of flare-up). Discontinue 2–3 days after clinical signs resolve. (Usual duration: 5–7 days.)

Mild to Moderate Pain, Dysmenorrhea, Bursitis, Tendonitis

PO: ADULTS, ELDERLY: (*Immediate-Release*): Initially, 500 mg, then 500 mg q12h or 250 mg q6–8h as needed. **Maximum:** 1,250 mg on day 1, then 1,000 mg once daily. (*Extended-Release*): Initially, 1,000 mg once daily. May temporarily increase to 1,500 mg once daily, then reduce to 1,000 mg once daily.

Juvenile Idiopathic Arthritis (JIA)

PO: (*Oral Suspension Recommended*): **CHILDREN OLDER THAN 2 YRS:** 10–15 mg/kg/day in 2 divided doses. **Maximum:** 1,000 mg/day.

OTC Uses (Pain, Fever)

PO: ADULTS 65 YRS AND YOUNGER, CHILDREN 12 YRS AND OLDER: Initially, 400 mg once, then 200 mg q8–12h. **Maximum:** 400 mg in any 8- to 12-hr period or 600 mg/day. **ELDERLY:** Use with caution (consider a lower dose).

Dosage in Renal Impairment

Not recommended with CrCl less than 30 mL/min.

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (9%–4%): Nausea, constipation, abdominal cramps/pain, heartburn, dizziness, headache, drowsiness. **Occasional (3%–1%):** Stomatitis, diarrhea, indigestion. **Rare (less than 1%):** Vomiting, confusion.

ADVERSE EFFECTS/TOXIC REACTIONS

Rare reactions with long-term use include peptic ulcer, GI bleeding, gastritis, severe hepatic reactions (cholestasis, jaundice),

nephrotoxicity (dysuria, hematuria, proteinuria, nephrotic syndrome), and severe hypersensitivity reaction (fever, chills, bronchospasm).

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Assess onset, type, location, duration of pain/inflammation. Inspect appearance of affected joints for immobility, deformities, skin condition. Question history of GI bleeding, gastric or duodenal ulcers, hypertension.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Periodically monitor renal function test during chronic use. Monitor daily pattern of bowel activity, stool consistency. Evaluate for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility, reduced joint tenderness, improved grip strength.

PATIENT/FAMILY TEACHING

- Avoid tasks that require alertness, motor skills until response to drug is established.
- Take with food, milk.
- Avoid aspirin, alcohol during therapy (increases risk of GI bleeding).
- Report headache, rash, visual disturbances, weight gain, black or tarry stools, bleeding, persistent headache.

naratriptan

nar-a-trip-tan
(Amerge)

Do not confuse naratriptan with eletriptan or almotriptan, or Amerge with Altace or Amaryl.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin receptor agonist. **CLINICAL:** Antimigraine.

USES

Treatment of acute migraine headache with or without aura in adults.

PRECAUTIONS

Contraindications: Hypersensitivity to naratriptan. Basilar/hemiplegic migraine, cerebrovascular disease, peripheral vascular disease, coronary artery disease, ischemic heart disease (including angina pectoris, history of MI, silent ischemia, Prinzmetal's angina), severe hepatic impairment (Child-Pugh Grade C), severe renal impairment (CrCl less than 15 mL/min), uncontrolled hypertension, use within 24 hrs of ergotamine-containing preparations or another serotonin receptor agonist, 5-HT agonist (e.g., SUMatriptan), MAOI use within 14 days. **Cautions:** Mild to moderate renal/hepatic impairment, pt profile suggesting cardiovascular risks, elderly.

ACTION

Binds selectively to serotonin receptors, producing vasoconstrictive effect on cranial blood vessels. **Therapeutic Effect:** Relieves migraine headache.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: 28%–31%. Metabolized in liver. Eliminated primarily in urine. **Half-life:** 6 hrs (increased in hepatic/renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Not recommended in the elderly.

INTERACTIONS

DRUG: Ergotamine-containing medications may produce vasospastic reaction. **SSRIs** (e.g., escitalopram, paroxetine, sertraline), **SNRIs** (e.g., duloxetine, venlafaxine) may produce serotonin syndrome. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

 **Tablets:** 1 mg, 2.5 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Do not break, crush, dissolve, or divide tablets. Swallow whole with water.

INDICATIONS/ROUTES/DOSAGE

Acute Migraine Attack

PO: ADULTS: 1–2.5 mg. If headache improves but then returns, dose may be repeated after 4 hrs. **Maximum:** 5 mg/24 hrs.

Dosage in Renal/Hepatic Impairment

Hepatic Failure	Creatinine Clearance	Dosage
Mild to moderate	15–39 mL/min	Initial, 1 mg; Max: 2.5 mg/24 hrs
Severe	Less than 15 mL/min	Contraindicated

SIDE EFFECTS

Occasional (5%): Nausea. **Rare (2%):** Paresthesia, dizziness, fatigue, drowsiness, feeling of pressure in throat, neck, jaw.

ADVERSE EFFECTS/TOXIC REACTIONS

Corneal opacities, other ocular defects may occur. Cardiac events (ischemia, coronary artery vasospasm, MI), non-cardiac vasospasm-related reactions (hemorrhage, cerebrovascular accident [CVA]) occur rarely, particularly in pts with hypertension, diabetes, strong family history of coronary artery disease, obese pts, smokers, males older than 40 yrs, postmenopausal women.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question medical history as listed in Precautions. Question pt regarding possible precipitating symptoms, onset, location, duration of migraine.

INTERVENTION/EVALUATION

Assess for relief of migraine headache; potential for photophobia, phonophobia (sound sensitivity), nausea, vomiting.

PATIENT/FAMILY TEACHING

- Do not chew, crush, dissolve, or divide tablet; swallow whole with water.
- May repeat dose after 4 hrs (maximum of 5 mg/24 hrs).
- May cause dizziness, fatigue, drowsiness.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Report any chest pain, palpitations, tightness in throat, rash, hallucinations, anxiety, panic.

necitumumab

ne-si-toom-oo-mab
(Portrazza)

BLACK BOX ALERT ■ Cardiopulmonary arrest and/or sudden death reported in 3% of pts (when treated in combination with gemcitabine and cisplatin). Closely monitor serum electrolytes, esp. serum calcium, magnesium, potassium, and aggressively replace as appropriate. Hypomagnesemia occurred in 83% of pts and was severe in 20%. Monitor pts for hypomagnesemia, hypocalcemia, hypokalemia prior to each dose, during treatment, and up to 8 wks after discontinuation. Withhold treatment for CTCAE Grade 3 or 4 electrolyte abnormality.

Do not confuse necitumumab with adalimumab, belimumab, daratumumab, ipilimumab, nivolumab, ofatumumab, or panitumumab.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Epidermal growth factor receptor (EGFR) inhibitor. Monoclonal antibody.
CLINICAL: Antineoplastic.

USES

First-line treatment (in combination with gemcitabine and CISplatin) of metastatic squamous non–small-cell lung cancer (NSCLC).

PRECAUTIONS

Contraindications: Severe hypersensitivity to necitumumab. **Cautions:** COPD, chronic arrhythmias, coronary artery disease, HF, recent MI (within 6 mos), pts at risk for electrolyte imbalance (e.g., adrenal insufficiency, alcoholism, renal failure, thyroid disorders, malnutrition, chronic diarrhea; concomitant use of medication known to cause electrolyte abnormalities); history of venous or arterial thrombosis (e.g., CVA, DVT, MI, pulmonary embolism). Not indicated for treatment of non-squamous non–small-cell lung cancer.

ACTION

Binds to ligand-binding site of EGFR and prevents activation, expression, signaling of EGFR. **Therapeutic Effect:** Inhibits tumor cell growth and metastasis.

PHARMACOKINETICS

Widely distributed. Metabolism not specified. Elimination not specified. **Half-life:** 14 days.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm. Female pts of reproductive potential should use effective contraception during treatment and for at least 3 mos after discontinuation. Unknown if distributed in breast milk. Breastfeeding not recommended during treatment and up to 3 mos after discontinuation. **Children:** Safety and efficacy not established. **Elderly:** May have increased risk of venous thromboembolism (including pulmonary embolism).

INTERACTIONS

DRUG: None known. **HERBAL:** None known. **FOOD:** None known. **LAB VALUES:** May decrease serum calcium, magnesium, potassium.

AVAILABILITY (Rx)

Injection Solution: 800 mg/50 mL (16 mg/mL).

ADMINISTRATION/HANDLING

Preparation • Visually inspect for particulate matter or discoloration. • Solution should appear clear to slightly opalescent, colorless to slightly yellow in color. Discard if solution is cloudy or particulate matter is observed. • Dilute in 250 mL 0.9% NaCl bag. • Do not use solutions containing dextrose. • Gently invert to mix. Do not shake or agitate.

Infusion guidelines • For pts with prior Grade 1 or 2 infusion reaction, premedicate with diphenhydramine (or equivalent) before each subsequent infusion. • For pts with recurrent Grade 1 or 2 infusion reaction (despite administration of diphenhydramine), premedicate with dexamethasone (or equivalent), acetaminophen, diphenhydramine (or equivalent) before each subsequent infusion. • Once infusion is complete, flush IV line with 0.9% NaCl only.

Rate of administration • Infuse over 60 mins using infusion pump via dedicated line.

Storage • Refrigerate unused vials in original carton until time of use. • Protect from light. • May refrigerate diluted solution up to 24 hours or at room temperature up to 4 hrs.

IV INCOMPATIBILITIES

Do not mix with dextrose-containing solutions. Do not infuse with other medications or electrolytes.

INDICATIONS/ROUTES/DOSAGE

Non–Small-Cell Lung Cancer

IV: ADULTS, ELDERLY: 800 mg on days 1 and 8 of each 3-wk cycle (in combination with gemcitabine and cisplatin). Continue until disease progression or unacceptable toxicity.

Dose Modification

Based on Common Terminology Criteria for Adverse Events (CTCAE).

Infusion Reactions

Any Grade 1 reaction: Decrease rate by 50%. **Grade 2 reaction:** Interrupt infusion until resolved to Grade 1 or 0, then resume with rate reduced by 50% for all subsequent infusions. **Grade 3 reaction:** Permanently discontinue.

Dermatological Toxicity

Grade 3 rash or acneiform rash: Withhold treatment until resolved to Grade 2 or better, then reduce dose to 400 mg for at least 1 treatment cycle. If tolerated, may increase dose to 600 mg and 800 mg for subsequent cycles.

Permanent discontinuation: Grade 3 rash or acneiform rash that does not resolve to Grade 2 or better within 6 wks; worsening of skin reaction or intolerance at 400 mg dose; Grade 3 skin induration or fibrosis; Grade 4 dermatological toxicity.

Electrolyte Imbalance

Withhold treatment for any Grade 3 or 4 electrolyte abnormalities. Resume once abnormalities resolve to Grade 2 or better.

Venous/Arterial Thrombosis

Any occurrence: Permanently discontinue.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Not specified; use caution.

SIDE EFFECTS

Frequent (44%–29%): Rash, vomiting. **Occasional (16%–5%):** Diarrhea, dermatitis acneiform, decreased weight, stomatitis, headache, acne, pruritus, dry skin, paronychia, conjunctivitis, blurry vision, dry eye, reduced visual acuity, blepharitis, eye pain, increased lacrimation, ocular hyperemia, visual impairment, eye pruritus, skin fissures. **Rare (3%–1%):** Dysphagia, muscle spasm, oropharyngeal pain.

ADVERSE EFFECTS/TOXIC REACTIONS

All cases were reported in combination with gemcitabine and CISplatin. Pts with severe hypomagnesemia, hypokalemia, hypocalcemia are at an increased risk for cardiac arrhythmias or sudden death. Cardiopulmonary arrest and/or sudden death occurred in 3% of pts. Most cases of cardiopulmonary arrest occurred within 30 days of the last dose and involved co-morbidities including COPD, coronary artery disease, hypomagnesemia, hypertension. Hypomagnesemia reported in 83% of pts with median onset of approx. 6 wks. Severe hypomagnesemia (Grade 3 or 4) reported in 20% of pts. Infusion reaction (any grade) reported in 1.5% of pts. Life-threatening venous and arterial thromboembolic events including pulmonary embolism (5% of pts), DVT (2% of pts), CVA (2% of pts), MI (1% of pts); thrombosis of mesenteric veins, pulmonary artery/vein, axillary vein, vena cava, subclavian vein; thrombophlebitis may occur. Hemoptysis reported in 10% of pts. Ocular toxicities including conjunctivitis, conjunctival hemorrhage, eye infections were reported. Severe skin toxicities occurred in 8% of pts. Immunogenicity (auto-necitumumab antibodies) occurred in 4% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline BMP, serum magnesium, ionized calcium; vital signs prior to each dose. Obtain pregnancy test in female pts of reproductive potential. Receive full medication history and screen for drugs known to cause electrolyte imbalance. Assess nutritional status. Question history of CVA, DVT, pulmonary embolism, cardiac disease, recent MI; conditions known to cause electrolyte imbalance; prior hypersensitivity reaction to any drug in treatment regimen; prior infusion reaction. Offer emotional support. Conduct full dermatological exam.

INTERVENTION/EVALUATION

Diligently monitor serum electrolytes, esp. serum magnesium, potassium, calcium, ionized calcium, during therapy and up to 8 wks after discontinuation. Monitor for symptoms of hypocalcemia, hypokalemia, hypomagnesemia. Obtain ECG, vital signs if arrhythmia, chest pain, palpitations, syncope occurs. Aggressively replace electrolytes as appropriate. Pts with sudden chest pain, dyspnea, hypoxia, tachycardia should be evaluated for pulmonary embolism. Monitor for symptoms of DVT (leg or arm pain/swelling), CVA (aphasia, altered LOC, hemiplegia, vision loss, headache, homonymous hemianopsia [vision loss on the same side of both eyes]), MI (chest pain, dyspnea, syncope, diaphoresis, left arm pain, jaw pain). Monitor for hemoptysis. Assess skin for rash, hypersensitivity reaction; eyes for infection, subconjunctival hemorrhage.

PATIENT/FAMILY TEACHING

- Therapy may cause low levels of potassium, magnesium, calcium in the blood and may be life threatening. Replace electrolytes exactly as instructed.
- Report symptoms of electrolyte imbalance such as fainting, fatigue, muscle cramps, palpitations, paralysis, numbness or tingling, seizures, weakness.
- Avoid pregnancy; treatment may cause birth defects. Female pts of childbearing potential should use effective contraception during treatment and for at least 3 mos after last dose. Do not breastfeed during therapy and for at least 3 mos after last dose.
- Treatment may cause blood clots in the arms, legs, lungs, brain, heart, or abdomen. Immediately report symptoms of stroke (difficulty speaking, confusion, paralysis, vision loss), heart attack (chest pain, shortness of breath, fainting, dizziness, profuse sweating, left arm or jaw pain), lung embolism (difficulty breathing, fast heart rate, chest pain), or blood clots in the arms or legs (pain/swelling).
- Report skin rashes, allergic reactions,

coughing up blood; eye problems such as infection, vision impairment, collection of blood in the whites of the eyes. • Avoid sunlight, tanning beds. Wear protective clothing, high SPF sunscreen, and lip balm when outdoors.

neratinib

ne-ra-ti-nib
(Nerlynx)

Do not confuse neratinib with afatinib, axitinib, bosutinib, cabozantinib, dasatinib, gefitinib, imatinib, ponatinib, tofacitinib.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Epidermal growth factor receptor (EGFR) inhibitor. Tyrosine kinase inhibitor.

CLINICAL: Antineoplastic.

USES

Extended adjuvant treatment of adult pts with early stage HER2-overexpressed/amplified breast cancer, to follow adjuvant trastuzumab-based therapy.

PRECAUTIONS

Contraindications: Hypersensitivity to neratinib. **Cautions:** Dehydration, electrolyte imbalance, hepatic impairment, irritable bowel syndrome with diarrhea. Avoid concomitant use of strong or moderate CYP3A inhibitors, CYP3A inducers; proton pump inhibitors, H₂ receptor antagonists, antacids.

ACTION

Irreversibly binds to epidermal growth factor receptor (EGFR), human epidermal growth factor receptor 2 (HER2), HER4, reducing autophosphorylation and signaling of EGFR and HER2. **Therapeutic Effect:** Exhibits antitumor activity in EGFR and/or HER2 expressing cancer cell lines.

PHARMACOKINETICS

Widely distributed. Metabolized in liver. Protein binding: 99%. Peak plasma concentration: 2–8 hrs. Excreted in feces (97%), urine (1%). **Half-life:** 7–17 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm/malformations. Unknown if distributed in breast milk. Breastfeeding not recommended during treatment and for at least 1 month after last dose. Females of reproductive potential should use effective contraception during treatment and for at least 1 mo after discontinuation. **Males:** Males with female partners of reproductive potential should use effective contraception during treatment and up to 3 mos after discontinuation. **Children:** Safety and efficacy not established. **Elderly:** May have increased risk of adverse reactions/toxic effects. Use caution.

INTERACTIONS

DRUG: Aluminum-, magnesium-, calcium-containing antacids, H₂ receptor antagonists (e.g., famotidine), proton pump inhibitors (e.g., omeprazole, pantoprazole) may decrease concentration/effect. **Strong CYP3A4 inhibitors** (e.g., clarithromycin, ketoconazole, ritonavir), **moderate CYP3A inhibitors** (e.g., erythromycin, ciprofloxacin, diltiazem, dronedarone, fluconazole, verapamil) may increase concentration/effect. **CYP3A4 inducers** (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. May increase concentration of **pazopanib, topotecan**. **HERBAL:** None significant. **FOOD:** Grapefruit products may increase concentration/effect. **LAB VALUES:** May increase serum ALT, AST, bilirubin.

AVAILABILITY (Rx)

Tablets: 40 mg.

ADMINISTRATION/HANDLING

PO

• Give with food. • Administer whole; do not break, cut, crush, or divide

tablets. • If a dose is missed or vomiting occurs after administration, do not give extra dose. Administer next dose at regularly scheduled time. • Take 3 hours after aluminum-, magnesium-, or calcium-containing antacids are given.

INDICATIONS/ROUTES/DOSAGE

Note: Recommend antidiarrheal prophylaxis during first 2 cycles (56 days) of therapy.

Breast Cancer

PO; ADULTS, ELDERLY: 240 mg (6 tablets) once daily for 1 yr.

Loperamide (Antidiarrheal) Prophylaxis

Wks 1–2 (days 1–14): 4 mg three times/day. **Wks 3–8 (days 15–56):** 4 mg twice daily. **Wks 9–52 (days 57–365):** 4 mg as needed (do not exceed 16 mg/day).

Dose Reduction Schedule (Neratinib)

First dose reduction: 200 mg daily.

Second dose reduction: 160 mg daily.

Third dose reduction: 120 mg daily.

Dose Modification

Any CTCAE Grade 3 toxicity: Withhold treatment until improved to Grade 1 or 0 (or baseline), then resume at the next reduced dose level. **Any CTCAE Grade 4 toxicity:** Permanently discontinue.

Diarrhea

CTCAE Grade 1 diarrhea (increase of greater than 4 stools/day over baseline); CTCAE Grade 2 diarrhea (increase of 4–6 stools/day over baseline) lasting more than 5 days, CTCAE Grade 3 diarrhea (increase of greater than 7 stools/day over baseline, incontinence, hospitalization, self-limiting ADLs lasting more than 2 days): Adjust antidiarrheal therapy, diet. Maintain fluid intake (approx. 2 L/day). Once improved to Grade 1 or 0, start loperamide 4 mg with each administration. **Any CTCAE grade diarrhea with complications (fever, hypotension, renal failure, or Grade 3 or 4 neutropenia):** Withhold treatment and

adjust antidiarrheal therapy, diet. Maintain fluid intake (approx. 2 L/day). If diarrhea improves to Grade 1 or 0 within 7 days, resume treatment at same dose level. If diarrhea improves to Grade 1 or 0 for more than 7 days, resume treatment at the next reduced dose level. Once improved to Grade 1 or 0, start loperamide 4 mg with each administration. **CTCAE Grade 4 diarrhea (life-threatening event, emergent intervention indicated); recurrent Grade 2 diarrhea (or higher) at 120 mg dose:** Permanently discontinue.

Hepatotoxicity

CTCAE Grade 3 serum ALT elevation (greater than 5–20 times upper limit normal [ULN]) or CTCAE Grade 3 serum bilirubin elevation (greater than 3–10 times ULN): Withhold treatment until improved to Grade 1 or 0 and investigate cause. If serum ALT elevation improves to Grade 1 or 0 within 3 wks, resume treatment at reduced dose level. **CTCAE Grade 4 serum ALT elevation (greater than 20 times ULN) or CTCAE Grade 4 serum bilirubin elevation (greater than 10 times ULN):** Permanently discontinue and investigate cause.

Dosage in Renal Impairment

Not specified; use caution.

Dosage in Hepatic Impairment

Mild to moderate impairment (Child-Pugh A or B): No dose adjustment. **Severe impairment (Child-Pugh C):** Reduce starting dose to 80 mg.

SIDE EFFECTS

Frequent (95%–26%): Diarrhea, nausea, abdominal pain, vomiting. **Occasional (18%–4%):** Rash (erythematous, follicular, generalized, pruritic, pustular, maculopapular, papular, dermatitis, dermatitis acneiform, toxic skin eruption), stomatitis, mouth ulceration, oral mucosal blistering, mucosal inflammation, oropharyngeal pain, oral pain, glossodynia, glossitis, cheilitis, decreased appetite, muscle spasm, dyspepsia, nail disorder (paronychia,

onychoclasis, nail discoloration, nail toxicity, abnormal nail growth, nail dystrophy), dry skin, abdominal distention, decreased weight, dehydration. **Rare (3%):** Dry mouth.

ADVERSE EFFECTS/TOXIC REACTIONS

Diarrhea reported in 95% of pts. CTCAE Grade 3 diarrhea reported in 40% of pts. CTCAE Grade 4 diarrhea reported in less than 1% of pts. Median time of onset of diarrhea was days to wks. Severe diarrhea, dehydration, hypotension, renal failure may occur. Hepatotoxicity reported in 5%–10% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain LFT, vital signs. Obtain BMP and screen for electrolyte imbalance. Confirm HER2-positive status. Obtain pregnancy test prior to initiation. Question current breastfeeding status. Stress the importance of antidiarrheal therapy. Question history of IBS with chronic diarrhea, hepatic impairment. Assess hydration status. Question usual bowel movement patterns, stool characteristics. Receive full medication history and screen for interactions. Offer emotional support.

INTERVENTION/EVALUATION

Monitor LFT monthly for the first 3 mos, then q3mos thereafter. Monitor for hepatotoxicity (abdominal pain, ascites, confusion, dark-colored urine, jaundice). Obtain BMP (note electrolytes) if severe diarrhea occurs. Ensure compliance of antidiarrheal therapy. Additional antidiarrheal medication may be needed to manage diarrhea despite treatment with loperamide. Monitor daily pattern of bowel activity, stool consistency. If treatment-related toxicities occur, consider referral to specialist. Monitor I&O. Assess skin, nails, oral mucosa for toxic reactions.

PATIENT/FAMILY TEACHING

- Treatment may cause severe diarrhea, which may lead to life-threatening dehy-

dration or hospitalization. Take antidiarrheal medication exactly as prescribed (goal is 1–2 bowel movements/day). Report worsening of diarrhea or dehydration. • Drink plenty of fluids (at least 2 L/day if severe diarrhea occurs). • Report liver problems such as bruising; confusion; amber, dark, orange-colored urine; right upper abdominal pain; yellowing of the skin or eyes. • Treatment may cause fetal harm; avoid pregnancy. • Females of childbearing potential should use effective contraception during treatment and for at least 1 mo after last dose. Males with female partners of childbearing potential should use effective contraception during treatment and up to 3 mos after last dose. • Do not breast-feed. • Avoid grapefruit products, Seville oranges, starfruit, herbal supplements. • Acid-reducing medications may interfere with absorption; avoid use. Do not take aluminum-, magnesium-, calcium-containing antacids 3 hrs before or 3 hrs after dose. • Do not take newly prescribed medications unless approved by the prescriber who originally started treatment.

niCARDipine

nye-kar-di-peen
(Cardene IV)

Do not confuse Cardene SR with Cardizem SR or codeine, or niCARDipine with NIFEdipine or niMODipine.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Calcium channel blocker. Dihydropyridine.
CLINICAL: Antianginal, antihypertensive.

USES

PO: Immediate-Release: Treatment of chronic stable (effort-associated) angina, hypertension. **Sustained-Release:** Treatment

of hypertension. **Parenteral:** Short-term treatment of hypertension when oral therapy not feasible or desirable. **OFF-LABEL:** Blood pressure control in acute ischemic stroke and intracranial hemorrhage.

PRECAUTIONS

Contraindications: Hypersensitivity to niCARDipine. Advanced aortic stenosis.

Cautions: Cardiac/renal/hepatic dysfunction, HF, hypertrophic cardiomyopathy with outflow tract obstruction, aortic stenosis, coronary artery disease, portal hypertension.

ACTION

Inhibits calcium ion movement across cell membranes of cardiac, vascular smooth muscle. **Therapeutic Effect:** Relaxes coronary vascular smooth muscle. Causes coronary vasodilation, increasing myocardial oxygen delivery in angina.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	0.5–2 hrs	—	8 hrs
IV	10 min	—	8 hrs or less

Rapidly, completely absorbed from GI tract. Protein binding: 95%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2–4 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May increase concentration/effects of cycloSPORINE, fosphenytoin, phenytoin. Azole antifungals (e.g., ketoconazole, itraconazole) may increase adverse effects. **Strong CYP3A4 inhibitors** (e.g., clarithromycin, ketoconazole, ritonavir) may increase

concentration/effect. **Strong CYP3A4 inducers** (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. **HERBAL:** Herbals with hypertensive properties (e.g., licorice, yohimbe) or hypotensive properties (e.g., garlic, ginger, ginkgo biloba) may alter effects. **St. John's wort** may decrease concentration/effect. **FOOD:** Grapefruit products may alter absorption. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: 20 mg, 30 mg. **Infusion, Ready to Use:** 20 mg/200 mL, 40 mg/200 mL. **Injection Solution:** 2.5 mg/mL (10-mL vial).

ADMINISTRATION/HANDLING

Reconstitution • Dilute 25-mg vial with 240 mL D₅W, 0.45% NaCl, or 0.9% NaCl to provide concentration of 0.1 mg/mL.

Rate of administration • Give by slow IV infusion. • Change IV site q12h if administered peripherally.

Storage • Store at room temperature. • Diluted IV solution is stable for 24 hrs at room temperature.

PO

• Give without regard to food. • Do not break, crush, or open capsules. Give whole.

IV INCOMPATIBILITIES

Ampicillin (Principen), ampicillin/sulbactam (Unasyn), cefepime (Maxipime), ceftAZidime (Fortaz), furosemide (Lasix), heparin, sodium bicarbonate.

IV COMPATIBILITIES

Diltiazem (Cardizem), DOBUTamine (Dobutrex), DOPamine (Intropin), EPI-NEPhrine, HYDROmorphone (Dilaudid), labetalol (Trandate), LORazepam (Ativan), midazolam (Versed), milrinone (Primacor), morphine, nitroglycerin, norepinephrine (Levophed), potassium chloride.

INDICATIONS/ROUTES/DOSAGE**Chronic Stable Angina**

PO: ADULTS, ELDERLY: Initially, 20 mg 3 times/day. Range: 20–40 mg 3 times/day (allow at least 3 days between dosage increases).

Hypertension

PO: ADULTS, ELDERLY: Initially, 20 mg 3 times/day. Range: 20–40 mg 3 times/day (allow at least 3 days between dosage increases).

Acute Hypertension

IV: ADULTS, ELDERLY (GRADUAL B/P DECREASE): Initially, 5 mg/hr. May increase by 2.5 mg/hr q5–15min. **Maximum:** 15 mg/hr. After B/P goal is achieved, adjust dose to maintain desired BP.

Dosage in Renal Impairment

ADULTS, ELDERLY: PO: Initially, give 20 mg q8h (30 mg twice daily [sustained-release capsules]), then titrate. **IV:** No dose adjustment.

Dosage in Hepatic Impairment

ADULTS, ELDERLY: PO: Initially, give 20 mg twice daily, then titrate. **IV:** No dose adjustment.

SIDE EFFECTS

Frequent (10%–7%): Headache, facial flushing, peripheral edema, light-headedness, dizziness. **Occasional (6%–3%):** Asthenia, palpitations, angina, tachycardia. **Rare (less than 2%):** Nausea, abdominal cramps, dyspepsia, dry mouth, rash.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose produces confusion, slurred speech, drowsiness, marked hypotension, bradycardia.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Concurrent therapy with sublingual nitroglycerin may be used for relief of anginal pain. Record onset, type (sharp, dull, squeezing), radiation, location, intensity,

duration of anginal pain, precipitating factors (exertion, emotional stress).

INTERVENTION/EVALUATION

Monitor B/P, heart rate during and following IV infusion. Assess for peripheral edema. Assess skin for facial flushing, dermatitis, rash. Question for asthenia, headache. Monitor LFT results. Assess ECG, pulse for tachycardia.

PATIENT/FAMILY TEACHING

- May take without regard to food.
- Sustained-release capsule taken whole; do not break, chew, crush, or open.
- Avoid alcohol, grapefruit products; limit caffeine.
- Report if anginal pain not relieved or if palpitations, shortness of breath, swelling, dizziness, constipation, nausea, hypotension occurs.
- Avoid tasks requiring motor skills, alertness until response to drug is established.

nicotine**nik-o-teen**

(Good Sense Nicotine, Habitrol , NicoDerm , NicoDerm CQ, Nicorette, Nicotrol, Nicotrol NS, Thrive)

Do not confuse NicoDerm with Nitroderm.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Cholinergic-receptor agonist. **CLINICAL:** Smoking deterrent.

USES

Treatment to aid smoking cessation for relief of nicotine withdrawal symptoms (including nicotine craving). **OFF-LABEL: Transdermal:** Management of ulcerative colitis.

PRECAUTIONS

Contraindications: Hypersensitivity to nicotine. **Cautions:** Smoking post-MI period, severe or worsening angina,

active temporomandibular joint disease (gum), pregnancy, hyperthyroidism, pheochromocytoma, insulin-dependent diabetes, severe renal impairment, eczematous dermatitis, oropharyngeal inflammation, esophagitis, peptic ulcer (delays healing in peptic ulcer disease), coronary artery disease, recent MI, serious cardiac arrhythmias, vasospastic disease, angina, hypertension, hepatic impairment, use of oral inhaler/nasal spray with bronchospastic disease.

ACTION

Binds to nicotinic-cholinergic receptors at the autonomic ganglia, in the adrenal medulla, at neuromuscular junction, and in the brain, producing stimulating effect in the cortex and a rewards effect in the limbic system. **Therapeutic Effect:** Provides source of nicotine during nicotine withdrawal, reduces withdrawal symptoms.

PHARMACOKINETICS

Absorbed slowly after transdermal administration. Protein binding: 5%. Metabolized in liver. Excreted primarily in urine. **Half-life:** 4 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. Use of cigarettes, nicotine gum associated with decrease in fetal breathing movements. **Children:** Not recommended in this pt population. **Elderly:** Age-related decrease in cardiac function may require dosage adjustment.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (OTC)

Chewing Gum: 2 mg, 4 mg. **Inhalation (Nicotrol Inhaler):** 10-mg cartridge. **Lozenges:** 2 mg, 4 mg. **Nasal Spray (Nicotrol NS):** 0.5 mg/spray. **Transdermal Patch:** 7 mg/24 hrs, 14 mg/24 hrs, 21 mg/24 hrs.

ADMINISTRATION/HANDLING

Gum

- Do not swallow.
- Chew 1 piece when urge to smoke present.
- Chew slowly and intermittently for 30 min.
- Chew until distinctive nicotine taste (peppery) or slight tingling in mouth perceived, then stop; when tingling almost gone (about 1 min), repeat chewing procedure (this allows constant slow buccal absorption).
- Too-rapid chewing may cause excessive release of nicotine, resulting in adverse effects similar to oversmoking (e.g., nausea, throat irritation).

Inhaler

- Insert cartridge into mouthpiece.
- Puff on nicotine cartridge mouthpiece for 20 min.

Lozenge

- Do not chew or swallow.
- Allow to dissolve slowly (20–30 min).

Transdermal

- Apply promptly upon removal from protective pouch (prevents evaporation, loss of nicotine).
- Use only intact pouch. Do not cut patch.
- Apply only once daily to hairless, clean, dry skin on upper body, outer arm.
- Replace daily; rotate sites; do not use same site within 7 days; do not use same patch longer than 24 hrs.
- Normal exposure to water (e.g., bathing, swimming) should not affect patch.
- Wash hands with water alone after applying patch (soap may increase nicotine absorption).
- Discard used patch by folding patch in half (sticky side together), placing in pouch of new patch, and throwing away in such a way as to prevent child or pet accessibility.
- Patch may contain conducting metal; remove prior to MRI.

INDICATIONS/ROUTES/DOSAGE

Smoking Cessation Aid to Relieve Nicotine Withdrawal Symptoms

PO: (Chewing Gum): ADULTS, ELDERLY: 2 mg. Use 4 mg in pts who smoke first cigarette within 30 min of waking. Chew 1

piece of gum when urge to smoke, up to 24/day. Use following schedule: wks 1–6: q1–2h (at least 9 pieces/day); wks 7–9: q2–4h; wks 10–12: q4–8h.

PO: (Lozenge):

◀ALERT▶ For pts who smoke the first cigarette within 30 min of waking, administer the 4-mg lozenge; otherwise, administer the 2-mg lozenge.

ADULTS, ELDERLY: One 4-mg or 2-mg lozenge q1–2h for the first 6 wks (use at least 9 lozenges/day first 6 wks); 1 lozenge q2–4h for wks 7–9; and 1 lozenge q4–8h for wks 10–12. **Maximum:** 1 lozenge at a time, 5 lozenges/6 hrs, 20 lozenges/day.

Transdermal:

◀ALERT▶ Apply 1 new patch q24h.

ADULTS, ELDERLY WHO SMOKE 10 CIGARETTES OR MORE PER DAY: Follow the guidelines below. **Step 1:** 21 mg/day for 6 wks. **Step 2:** 14 mg/day for 2 wks. **Step 3:** 7 mg/day for 2 wks. **ADULTS, ELDERLY WHO SMOKE LESS THAN 10 CIGARETTES PER DAY:** Follow the guidelines below. **Step 1:** 14 mg/day for 6 wks. **Step 2:** 7 mg/day for 2 wks.

Nasal: ADULTS, ELDERLY: Each dose (2 sprays, 1 spray in each nostril) = 1 mg nicotine. Initially, 1–2 doses/hr. **Maximum:** 5 doses/hr (10 sprays), 40 doses/day (80 sprays). For best results, take at least 8 doses/day (16 sprays).

Inhaler: (Nicotrol): ADULTS, ELDERLY: Initially, 6–16 cartridges per day. Puff on nicotine cartridge mouthpiece for about 20 min as needed. **Maximum:** 16 cartridges/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: All forms: Hiccups, nausea. **Gum:** Mouth/throat soreness. **Transdermal:** Erythema, pruritus, burning at application site. **Occasional: All forms:** Eructation, GI upset, dry mouth, insomnia, diaphoresis, irritability. **Gum:** Hoarseness. **Inhaler:** Mouth/throat irritation, cough. **Rare: All forms:** Dizziness, myalgia, arthralgia.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose produces palpitations, tachyarrhythmias, seizures, depression, confusion, diaphoresis, hypotension, rapid/weak pulse, dyspnea. Lethal dose for adults is 40–60 mg. Death results from respiratory paralysis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Screen, evaluate those with coronary heart disease (history of MI, angina pectoris), serious cardiac arrhythmias, Buerger's disease, Prinzmetal's variant angina.

INTERVENTION/EVALUATION

Monitor smoking habits, B/P, pulse, sleep pattern, skin for erythema, pruritus, burning at application site if transdermal system used.

PATIENT/FAMILY TEACHING

- Follow guidelines for proper application of transdermal system.
- Chew gum slowly to avoid jaw ache, maximize benefit.
- Report persistent rash, pruritus that occurs with patch.
- Do not smoke while wearing patch.

NIFEdipine

nye-fed-i-peen

(Adalat CC, Adalat XL , Procardia, Procardia XL)

Do not confuse NIFEdipine with niCARDipine or niMODipine, or Procardia XL with Cartia XT.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Calcium channel blocker, dihydropyridine. **CLINICAL:** Antianginal, antihypertensive.

USES

Immediate-/Extended-Release: Treatment of angina due to coronary artery

spasm (Prinzmetal's variant angina), chronic stable angina (effort-associated angina). **Extended-Release:** Treatment of hypertension. **OFF-LABEL:** Treatment of Raynaud's phenomenon, pulmonary hypertension, preterm labor, prevention/treatment of high-altitude pulmonary edema.

PRECAUTIONS

Contraindications: Hypersensitivity to NIFEdipine. ST elevation myocardial infarction (STEMI). **Cautions:** Renal/hepatic impairment, obstructive coronary disease, HF, severe aortic stenosis, edema, severe left ventricular dysfunction, hypertrophic cardiomyopathy, before major surgery, bradycardia, concurrent use with beta blockers or digoxin, CYP3A4 inhibitors/inducers.

ACTION

Inhibits calcium ion movement across cell membranes of vascular smooth muscle and myocardium during depolarization. **Therapeutic Effect:** Relaxes coronary vascular smooth muscle and coronary vasodilation, increases myocardial oxygen delivery (angina), reduces peripheral vascular resistance, reduces arterial B/P.

PHARMACOKINETICS

Rapidly, completely absorbed from GI tract. Protein binding: 92%–98%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis.

Half-life: 2–5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Insignificant amount distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment. Use lower initial doses and titrate to response.

INTERACTIONS

DRUG: Strong CYP3A4 inducers (e.g., rifAMPin, PHENobarbital, phenytoin, carBAMazepine) may decrease concentration/effects. CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole) may increase concentration. **Beta blockers**

(e.g., carvedilol, metoprolol) may have additive effect. May increase digoxin concentration, risk of toxicity. **Hypokalemia-producing agents** (e.g., furosemide, other diuretics) may increase risk of arrhythmias. **HERBAL:** Herbals with hypertensive properties (e.g., licorice, yohimbe) or hypotensive properties (e.g., garlic, ginger, ginkgo biloba) may alter effects. **St. John's wort** may decrease concentration/effect. **FOOD:** Grapefruit products may increase risk for flushing, headache, tachycardia, hypotension. **LAB VALUES:** May cause positive ANA, direct Coombs' test.

AVAILABILITY (Rx)

Capsules: 10 mg, 20 mg.

 **Tablets, Extended-Release:** 30 mg, 60 mg, 90 mg.

ADMINISTRATION/HANDLING

PO

- Do not break, crush, dissolve, or divide extended-release tablets.
- Give without regard to food (Adalat CC, Nifediac CC should be taken on an empty stomach).
- Grapefruit products may alter absorption; avoid use.

Sublingual

- Capsules must be punctured, chewed, and/or squeezed to express liquid into mouth.

INDICATIONS/ROUTES/DOSAGE

Prinzmetal's Variant Angina, Chronic Stable (Effort-Associated) Angina

PO: (*Extended-Release*): **ADULTS, ELDERLY:** Initially, 30–60 mg/day. May increase at 7- to 14-day intervals. **Maximum:** 120 mg/day.

Hypertension

PO: (*Extended-Release*): **ADULTS, ELDERLY:** Initially, 30–60 mg/day. May increase at 7- to 14-day intervals. **Maximum:** 90–120 mg/day. **CHILDREN 1–17 YRS:** Initially, 0.2–0.5 mg/kg/day. **Maximum:** 3 mg/kg/day or 120 mg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (30%–11%): Peripheral edema, headache, flushed skin, dizziness.

Occasional (12%–6%): Nausea, shakiness, muscle cramps/pain, drowsiness, palpitations, nasal congestion, cough, dyspnea, wheezing. **Rare**

(5%–3%): Hypotension, rash, pruritus, urticaria, constipation, abdominal discomfort, flatulence, sexual dysfunction.

ADVERSE EFFECTS/TOXIC REACTIONS

May precipitate HE, MI in pts with cardiac disease, peripheral ischemia. Overdose produces nausea, drowsiness, confusion, slurred speech. **Antidote:** Glucagon (see Appendix J for dosage).

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Concurrent therapy with sublingual nitroglycerin may be used for relief of anginal pain. Record onset, type (sharp, dull, squeezing), radiation, location, intensity, duration of anginal pain; precipitating factors (exertion, emotional stress). Check B/P for hypotension immediately before giving medication.

INTERVENTION/EVALUATION

Assist with ambulation if light-headedness, dizziness occurs. Assess for peripheral edema. Assess skin for flushing. Monitor LFT. Observe for signs/symptoms of HE.

PATIENT/FAMILY TEACHING

- Go from lying to standing slowly.
- Report palpitations, shortness of breath, pronounced dizziness, nausea, exacerbations of angina.
- Avoid alcohol; concomitant grapefruit product use.

niMODipine

nye-**mode**-i-peen

(Nimotop , Nymalize)

BLACK BOX ALERT Severe cardiovascular events, including fatalities, have resulted when capsule contents have been withdrawn by syringe and administered by IV injection rather than orally or via nasogastric tube.

Do not confuse niMODipine with niCARDipine or NIFEdipine.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Calcium channel blocker, dihydropyridine.

CLINICAL: Cerebral vasospasm agent.

USES

Improvement of neurologic deficits due to cerebral vasospasm following subarachnoid hemorrhage from ruptured intracranial aneurysms.

PRECAUTIONS

Contraindications: Hypersensitivity to niMODipine. Concurrent use with strong CYP3A4 inhibitors (e.g., clarithromycin, voriconazole). **Cautions:** Pts with cirrhosis, baseline hypotension, bradycardia.

 LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment. May experience greater hypotensive response, constipation.

ACTION

Inhibits movement of calcium ions across vascular smooth muscle cell membranes. Exerts greatest effect on cerebral arteries.

Therapeutic Effect: Produces favorable effect on severity of neurologic deficits due to cerebral vasospasm. May prevent cerebral vasospasm.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 95%. Metabolized in liver. Excreted in bile (80%), urine (20%). Not removed by hemodialysis. **Half-life:** 1–2 hrs.

INTERACTIONS

DRUG: Beta blockers (e.g., carvedilol, metoprolol) may have additive effect, increase depression of cardiac SA/AV conduction. **CYP3A4 inhibitors** (e.g., clarithromycin, ketoconazole, ritonavir) increase concentration/effect. **CYP3A4 inducers** (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect.

HERBAL: Herbals with hypertensive properties (e.g., licorice, yohimbe) or hypotensive properties (e.g., garlic, ginger, ginkgo biloba) may alter effects. **St. John's wort** may decrease concentration/effect. **FOOD:** Grapefruit products may increase concentration, risk of toxicity.

LAB VALUES: None significant.

AVAILABILITY (Rx)

Solution, Oral: (Nymalize): 60 mg/20 mL.

Capsules: 30 mg.

ADMINISTRATION/HANDLING

PO

- Administer 1 hr before or 2 hrs after meals.
- If pt unable to swallow, place hole in both ends of capsule with 18-gauge needle to extract contents into syringe. Empty into NG tube; flush tube with 30 mL water.

INDICATIONS/ROUTES/DOSAGE

Subarachnoid Hemorrhage

PO: ADULTS, ELDERLY: 60 mg q4h for 21 days. Begin within 96 hrs of subarachnoid hemorrhage.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

PO: ADULTS, ELDERLY: Reduce dose to 30 mg q4h in pts with cirrhosis.

SIDE EFFECTS

Occasional (6%–2%): Hypotension, peripheral edema, diarrhea, headache. **Rare (less than 2%):** Allergic reaction (rash, urticaria), tachycardia, flushing of skin.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose produces nausea, weakness, dizziness, drowsiness, confusion, slurred speech.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess level of consciousness, neurologic response, initially and throughout therapy. Monitor baseline LFT. Assess B/P, apical pulse immediately before drug administration (if pulse is 60/min or less or systolic B/P is less than 90 mm Hg, withhold medication, contact physician).

INTERVENTION/EVALUATION

Monitor CNS response, heart rate, B/P for evidence of hypotension, bradycardia. Monitor transcranial Doppler results for evidence of vasospasm.

PATIENT/FAMILY TEACHING

- Do not chew, crush, dissolve, or divide capsules.
- Report palpitations, shortness of breath, swelling, constipation, nausea, dizziness. Immediately report headache, blurry vision, confusion (may indicate vasospasm).

niraparib

nye-rap-a-rib
(Zejula)

Do not confuse niraparib with olaparib, neratinib, or rucaparib.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Poly(ADP-ribose) polymerase (PARP) inhibitor.

CLINICAL: Antineoplastic.

USES

Maintenance treatment of adult pts with recurrent epithelial ovarian, fallopian tube, or primary peritoneal cancer who are in a complete or partial response to platinum-based chemotherapy.

PRECAUTIONS

Contraindications: Hypersensitivity to niraparib. **Cautions:** Baseline anemia, leukopenia, neutropenia, thrombocytopenia; history of hypertension, cardiac disease; pts at risk for hemorrhage (e.g., history of GI bleeding, coagulation disorders, recent trauma; concomitant use of anticoagulants, antiplatelet medication, NSAIDs).

ACTION

Inhibits poly(ADP-ribose) polymerase (PARP) enzymatic activity, resulting in DNA damage, apoptosis, and cellular death. **Therapeutic Effect:** Induces cytotoxicity in tumor cell lines with and without BRCA deficiencies.

PHARMACOKINETICS

Well absorbed. Widely distributed. Metabolized by carboxylesterase to inactive metabolite. Protein binding: 83%. Peak plasma concentration: 3 hrs. Excreted in urine (48%), feces (39%). **Half-Life:** 36 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm/malformations. Unknown if distributed in breast milk. Breastfeeding not recommended during treatment and up to 1 mo after discontinuation. Females of reproductive potential should use effective contraception during treatment and for at least 6 mos after discontinuation. May impair fertility in males. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease therapeutic effect of BCG (intravesical). **HERBAL:** None

significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST, creatinine, GGT. May decrease ANC, Hgb, Hct, leukocytes, neutrophils, RBCs; serum potassium.

AVAILABILITY (Rx)

Capsules: 100 mg.

ADMINISTRATION/HANDLING

PO

- Give with or without food.
- Administer whole; do not break, cut, crush, or open capsules.
- If a dose is missed or vomiting occurs after administration, do not give extra dose. Administer next dose at regularly scheduled time.
- Administration at bedtime may decrease occurrence of nausea.

INDICATIONS/ROUTES/DOSAGE

Recurrent Epithelial Ovarian, Fallopian Tube, Peritoneal Cancer

PO: ADULTS, ELDERLY: 300 mg once daily, initiated no later than 8 wks after most recent platinum-containing regimen. Continue until disease progression or unacceptable toxicity.

Dose Reduction Schedule

First dose reduction: 200 mg daily.
Second dose reduction: 100 mg daily.

Dose Modification

Note: If acute myeloid leukemia or myelodysplastic syndrome is confirmed, permanently discontinue.

Anemia, Neutropenia

ANC less than 1,000 cells/mm³, Hgb level less than 8 g/dL: Withhold treatment for maximum of 28 days until ANC improves to greater than or equal to 1,500 cells/mm³ or Hgb level improves to 9 g/dL or greater, then resume at reduced dose level. If ANC or Hgb level does not improve to an acceptable level within 28 days or if dose is already reduced to 100 mg/day, permanently discontinue.

Hematologic Toxicity Requiring Transfusion

Platelet count less than or equal to 10,000 cells/mm³: Consider transfusion, then resume at reduced dose level.

Nonhematologic Toxicity

Any nonhematologic CTCAE Grade 3 or 4 toxicity when prophylactic treatment is not possible or toxicity persists despite treatment: Withhold treatment for maximum of 28 days until resolved, then resume at next lower dose level.

Any nonhematologic CTCAE Grade 3 or 4 toxicity lasting more than 28 days with 100 mg/day regimen: Permanently discontinue.

Thrombocytopenia

Platelet count less than 100,000 cells/mm³: **First occurrence:** Withhold treatment for maximum of 28 days until improved to greater than or equal to 100,000 cells/mm³, then resume at same or reduced dose level. If platelet count is less than 75,000 cells/mm³, resume at reduced dose level. **Second occurrence:** Withhold treatment for maximum of 28 days until improved to greater than or equal to 100,000 cells/mm³, then resume at reduced dose level. If platelet count does not improve to an acceptable level within 28 days or if dose is already reduced to 100 mg/day, permanently discontinue.

Dosage in Renal Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment, ESRD:** Not specified; use caution.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment:** Not specified; use caution.

SIDE EFFECTS

Frequent (74%–20%): Nausea, fatigue, asthenia, constipation, vomiting, abdominal pain/distention, insomnia, headache, decreased appetite, rash, mucositis, stomatitis, hypertension,

dyspnea. **Occasional (19%–10%):** Myalgia, back pain, dizziness, dyspepsia, cough, arthralgia, anxiety, dysgeusia, dry mouth, palpitations, tachycardia, peripheral edema, decreased weight, depression.

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia, neutropenia, leukopenia, thrombocytopenia are expected responses to therapy, but more severe reactions including bone marrow failure may result in life-threatening event. Fatal cases of acute myeloid leukemia, myelodysplastic syndrome reported in 1% of pts. Hypertension, hypertensive crisis reported in 9% of pts. Infections including bronchitis, conjunctivitis, nasopharyngitis (23% of pts), urinary tract infection (13% of pts) may occur. Epistaxis may occur, esp. in pts with treatment-induced thrombocytopenia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain ANC, CBC, BMP, LFT; vital signs. Obtain pregnancy test in females of reproductive potential. Question plans of breastfeeding. Confirm compliance of effective contraception. Question history of cardiac disease, hypertension. Assess hydration status. Screen for active infection. Offer emotional support.

INTERVENTION/EVALUATION

Monitor ANC, CBC for anemia, leukopenia, neutropenia, thrombocytopenia wkly for first 4 wks, then monthly for 11 mos, then periodically thereafter. In pts with platelet count less than 10,000 cells/mm³, consider withholding anticoagulant, antiplatelet drugs or proceed with transfusion (if applicable). Monitor for acute myeloid leukemia, myelodysplastic syndrome (bleeding or bruising easily, fatigue, frequent infections, pyrexia, hematuria, melena, weakness, weight loss, cytopenias, increased requirements for blood transfusion). Diligently screen for infections. Monitor vital signs for arrhythmia, hypertension,

tachycardia. Offer antiemetic if nausea, vomiting occurs. Assess skin for rash, toxic reactions. Encourage nutritional intake.

PATIENT/FAMILY TEACHING

- Treatment may depress your immune system and reduce your ability to fight infection. Report symptoms of infection such as body aches, burning with urination, chills, cough, fatigue, fever. Avoid those with active infection.
- Treatment may cause severe bone marrow depression or new-onset myeloid leukemia; report bruising, fatigue, fever, frequent infections, shortness of breath, weight loss, bleeding easily, blood in urine or stool.
- Avoid pregnancy. Females and males of childbearing potential should use effective contraception during treatment and for at least 6 mos after last dose.
- Do not breastfeed during treatment and for at least 1 mo after final dose.
- Treatment may impair fertility in males.
- Dose administration at bedtime may decrease occurrence of nausea.

nitrofurantoin

nye-troe-fue-ran-toyn
(Furadantin, Macrobid, Macro-dantin)

Do not confuse Macrobid with MicroK or Nitro-Bid, or nitrofurantoin with Neurontin or nitroglycerin.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Anti-bacterial. **CLINICAL:** Antibiotic, UTI prophylaxis.

USES

Prevention/treatment of UTI caused by susceptible gram-negative, gram-positive organisms, including *E. coli*, *S. aureus*, *Enterococcus*, *Klebsiella*, *Enterobacter*.

PRECAUTIONS

Contraindications: Hypersensitivity to nitrofurantoin. Anuria, oliguria, renal

impairment (CrCl less than 60 mL/min), infants younger than 1 mo due to risk of hemolytic anemia. Pregnancy at term, during labor, or delivery, or when onset of labor is imminent. Pts with history of cholestatic jaundice or hepatic impairment with previous nitrofurantoin therapy. **Cautions:** Renal impairment, diabetes, electrolyte imbalance, anemia, vitamin B deficiency, debilitated pts (greater risk of peripheral neuropathy), G6PD deficiency (greater risk of hemolytic anemia), elderly pts, prolonged therapy (may cause pulmonary toxicity).

ACTION

Inhibits bacterial enzyme systems, interfering with protein synthesis, anaerobic energy metabolism, DNA, RNA, and cell wall synthesis. **Therapeutic Effect:** Bactericidal at therapeutic doses.

PHARMACOKINETICS

Microcrystalline form rapidly, completely absorbed; macrocrystalline form more slowly absorbed. Food increases absorption. Protein binding: 60%. Primarily concentrated in urine, kidneys. Metabolized in most body tissues. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 20–60 min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. Contraindicated at term and during lactation when infant suspected of having G6PD deficiency. **Children:** No age-related precautions noted in pts older than 1 mo. **Elderly:** Avoid use. More likely to develop acute pneumonitis, peripheral neuropathy. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Antacids containing magnesium trisilicate may decrease absorption. **Probenecid** may increase concentration, risk of toxicity. May decrease effect of **norfloxacin**. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May

increase serum ALT, AST, phosphorus. May decrease Hgb.

AVAILABILITY (Rx)

Capsules: (*Macrocrystalline [Macrobid]*): 100 mg. **Capsules:** (*Macrocrystalline [Macrocrystalline]*): 25 mg, 50 mg, 100 mg. **Oral Suspension:** (*Microcrystalline [Furadantin]*): 25 mg/5 mL.

ADMINISTRATION/HANDLING

PO

- Give with food, milk to enhance absorption, reduce GI upset.
- May mix suspension with water, milk, fruit juice; shake well.

INDICATIONS/ROUTES/DOSAGE

UTI

PO: (*Furadantin, Macrocrystalline*): **ADULTS, ELDERLY:** 50–100 mg q6h; treat males for 7 days or females for 5 days. **Maximum:** 400 mg/day. **CHILDREN, ADOLESCENTS:** 5–7 mg/kg/day in divided doses q6h for 7 days or at least 3 days after obtaining sterile urine. **Maximum:** 400 mg/day (100 mg/dose). **PO:** (*Macrobid*): **ADULTS, ELDERLY, ADOLESCENTS:** 100 mg twice daily; treat males for 7 days or females for 5 days.

Long-Term Prevention of UTI

PO: ADULTS, ELDERLY: 50–100 mg at bedtime. **CHILDREN OLDER THAN 1 MONTH:** 1–2 mg/kg/day in 2 divided doses. **Maximum:** 100 mg/day.

Dosage in Renal Impairment

Contraindicated in pts with CrCl less than 60 mL/min.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Anorexia, nausea, vomiting, dark urine. **Occasional:** Abdominal pain, diarrhea, rash, pruritus, urticaria, hypertension, headache, dizziness, drowsiness.

Rare: Photosensitivity, transient alopecia, asthmatic exacerbation in those with history of asthma.

ADVERSE EFFECTS/TOXIC REACTIONS

Superinfection, hepatotoxicity, peripheral neuropathy (may be irreversible), Stevens-Johnson syndrome, permanent pulmonary impairment, anaphylaxis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of asthma. Evaluate baseline renal function, LFT. Question medical history as listed in Precautions, and screen for contraindications.

INTERVENTION/EVALUATION

Monitor CBC, BMP, LFT; I&O. Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash, urticaria. Be alert for numbness/tingling, esp. of lower extremities (may signal onset of peripheral neuropathy). Observe for signs of hepatotoxicity (fever, rash, arthralgia, hepatomegaly). Monitor respiratory status, esp. in pts with asthma.

PATIENT/ FAMILY TEACHING

- Urine may become dark yellow/brown.
- Take with food, milk for best results, to reduce GI upset.
- Complete full course of therapy.
- Avoid sun, ultraviolet light; use sunscreen, wear protective clothing.
- Report cough, fever, chest pain, difficulty breathing, numbness/tingling of fingers, toes.
- Rare occurrence of alopecia is transient.

nitroglycerin

nye-troe-**glis**-er-in

(GoNitro, Minitran, Nitro-Bid, Nitro-Dur, Nitrolingual, NitroMist, Nitrostat, Rectiv, Trinipatch )

Do not confuse Nitro-Bid with Macrobid or Nicobid, Nitro-Dur with Nicoderm, nitroglycerin with nitrofurantoin or nitroprusside, or Nitrostat with Nilstat or Nystatin.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Nitrate.

CLINICAL: Antianginal, antihypertensive, coronary vasodilator.

USES

Treatment/prevention of angina pectoris. Extended-release, topical forms used for prophylaxis, long-term angina management. IV form used in treatment of HF, acute MI, perioperative hypertension, induction of intraoperative hypotension. **Rectiv:** Treatment of moderate to severe pain associated with chronic anal fissure. **OFF-LABEL:** Short-term management of pulmonary hypertension, esophageal spastic disorders, uterine relaxation, treatment of sympathomimetic vasopressor extravasation.

PRECAUTIONS

Contraindications: Hypersensitivity to nitroglycerin. Allergy to adhesives (transdermal); concurrent use of sildenafil, tadalafil, vardenafil (PDE5 inhibitors). Concurrent use with riociguat. **IV:** Restrictive cardiomyopathy, pericardial tamponade, constrictive pericarditis, increased ICP, uncorrected hypovolemia. **Sublingual, Rectal:** Increased intracranial pressure, severe anemia. **Sublingual:** Acute circulatory failure or shock, early MI. **Cautions:** Blood volume depletion, severe hypotension (systolic B/P less than 90 mm Hg), bradycardia (less than 50 beats/min), inferior wall MI and suspected right ventricular involvement.

ACTION

Dilates coronary arteries, improves collateral blood flow to ischemic areas within myocardium. IV form produces peripheral vasodilation. **Therapeutic Effect:** Decreases myocardial oxygen demand by decreasing preload (LVDP). Improves collateral flow to ischemic areas. **Rectal:** Decreases sphincter tone and intra-anal pressure.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Sublingual	1–3 min	4–8 min	30–60 min
Translingual spray	2 min	4–10 min	30–60 min
Buccal tablet	2–5 min	4–10 min	2 hrs
PO (extended-release)	20–45 min	45–120 min	4–8 hrs
Topical	15–60 min	30–120 min	2–12 hrs
Transdermal patch	40–60 min	60–180 min	18–24 hrs
IV	1–2 min	Immediate	3–5 min

Well absorbed after PO, sublingual, topical administration. Metabolized in liver, by enzymes in bloodstream. Protein binding: 60%. Excreted in urine. Not removed by hemodialysis. **Half-life:** 1–4 min.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** More susceptible to hypotensive effects. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Alcohol, other antihypertensives (e.g., amlodipine, lisinopril, valsartan), vasodilators may increase risk of orthostatic hypotension. Concurrent use of sildenafil, tadalafil, vardenafil (PDE5 inhibitors) produces significant hypotension. **Ergot derivatives (e.g., ergotamine)** may decrease effect of vasodilation. May increase hypotensive effect of riociguat. **HERBAL:** Herbals with hypertensive properties (e.g., licorice, yohimbe) or hypotensive properties (e.g., garlic, ginger, ginkgo biloba) may alter effects. **FOOD:** None known. **LAB VALUES:** May increase serum methemoglobin, urine catecholamine concentrations.

AVAILABILITY (Rx)

Infusion, Premix: 25 mg/250 mL, 50 mg/250 mL, 100 mg/250 mL. **Injection Solution:** 5 mg/mL. **Ointment (Nitro-Bid):** 2%. **Ointment, Rectal (Rectiv):** 0.4%. **Translingual Spray:** 0.4 mg/spray. **Transdermal Patch:** 0.1 mg/hr, 0.2 mg/hr, 0.4 mg/hr, 0.6 mg/hr.

 **Capsules, Extended-Release:** 2.5 mg, 6.5 mg, 9 mg.  **Tablets, Sublingual:** 0.3 mg, 0.4 mg, 0.6 mg.

ADMINISTRATION/HANDLING

⚠️ ALERT Cardioverter/defibrillator must not be discharged through paddle electrode overlying nitroglycerin (transdermal, ointment) application. May cause burns to pt or damage to paddle via arcing.

Reconstitution • Available in ready-to-use injectable containers. • Dilute vials in D₅W or 0.9% NaCl. **Maximum concentration:** 400 mcg/mL. • Use glass bottles.

Rate of administration • Use micro-drop or infusion pump.

Storage • Store at room temperature. • Reconstituted solutions stable for 48 hrs at room temperature or 7 days if refrigerated.

PO

• Do not break, crush, or open extended-release capsules. • Do not shake oral aerosol canister before lingual spraying.

Sublingual

• Instruct pt to not swallow. • Dissolve under tongue. • Administer while seated. • Slight burning sensation under tongue may be lessened by placing tablet in buccal pouch. • Keep sublingual tablets in original container.

Topical

• Spread thin layer on clean, dry, hairless skin of upper arm or body (not below knee or elbow), using applicator

or dose-measuring papers. Do not use fingers; do not rub/massage into skin.

Transdermal

• Apply patch on clean, dry, hairless skin of upper arm or body (not below knee or elbow). • May keep patch on when bathing/showering. • Do not cut/trim to adjust dose.

IV INCOMPATIBILITIES

Alteplase (Activase), phenytoin (Dilantin).

IV COMPATIBILITIES

Amiodarone (Cordarone), dexmedetomidine (Precedex), diltiazem (Cardizem), DOBUTamine (Dobutrex), DOPamine (Intropin), EPINEPHrine, famotidine (Pepcid), fentaNYL (Sublimaze), furosemide (Lasix), heparin, HYDROMorphone (Dilaudid), insulin, labetalol (Trandate), lidocaine, lipids, LORazepam (Ativan), midazolam (Versed), milrinone (Primacor), morphine, niCARDipine (Cardene), nitroprusside (Nipride), norepinephrine (Levophed), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE**Angina, CAD**

Translingual spray: ADULTS, ELDERLY: 1 spray (0.4 mg) q5min up to 3 doses in response to chest pain. If chest pain fails to improve or worsens in 3-5min after 1 dose, call 911.

Sublingual: ADULTS, ELDERLY: One tablet (0.3-0.4 mg) under tongue. If chest pain fails to improve or worsens in 3-5 min, call 911. After the call, may take additional tablet. A third tablet may be taken 5 min after second dose (maximum of 3 tablets).

PO: (Extended-Release): ADULTS, ELDERLY: 2.5-6.5 mg 3-4 times/day. **Maximum:** 26 mg 4 times/day.

Topical: ADULTS, ELDERLY: Initially, 1/2 inch upon waking and 1/2 inch 6 hrs later. May double dose to 1 inch and double again to 2 inches. **Maximum:** 2 doses/day including nitrate-free interval of 10-12 hrs.

Transdermal patch: ADULTS, ELDERLY: Initially, 0.2-0.4 mg/hr. **Maintenance:** 0.4-0.8 mg/hr. Consider patch on for

12–14 hrs, patch off for 10–12 hrs (prevents tolerance).

HF, Acute MI

IV; ADULTS, ELDERLY: Initially, 5 mcg/min via infusion pump. Increase in 5-mcg/min increments at 3- to 5-min intervals until B/P response is noted or until dosage reaches 20 mcg/min, then increase by 10–20 mcg/min q3–5min. Dosage may be further titrated according to clinical, therapeutic response up to 400 mcg/min.

Anal Fissure

Rectal; ADULTS, ELDERLY: One inch (1.5 mg) q12h for up to 3 wks.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Headache (possibly severe; occurs mostly in early therapy, diminishes rapidly in intensity, usually disappears during continued treatment), transient flushing of face/neck, dizziness (esp. if pt is standing immobile or is in a warm environment), weakness, orthostatic hypotension. **Sublingual:** Burning, tingling sensation at oral point of dissolution. **Ointment:** Erythema, pruritus. **Occasional:** GI upset. **Transdermal:** Contact dermatitis.

ADVERSE EFFECTS/TOXIC REACTIONS

Discontinue drug if blurred vision, dry mouth occurs. Severe orthostatic hypotension may occur, manifested by syncope, pulselessness, cold/clammy skin, diaphoresis. Tolerance may occur with repeated, prolonged therapy; minor tolerance may occur with intermittent use of sublingual tablets. High doses tend to produce severe headache.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Record onset, type (sharp, dull, squeezing), radiation, location, intensity,

duration of anginal pain; precipitating factors (exertion, emotional stress). Assess B/P, apical pulse before administration and periodically following dose. Pt must have continuous ECG monitoring for IV administration. Rule out right-sided MI, if applicable (may precipitate life-threatening hypotension). Receive full medication history, and screen for interactions, esp. use of PDE5 inhibitors. Question medical history and screen for contraindications.

INTERVENTION/EVALUATION

Monitor B/P, heart rate. Assess for facial, neck flushing. Cardioverter/defibrillator must not be discharged through paddle electrode overlying nitroglycerin (transdermal, ointment) system (may cause burns to pt or damage to paddle via electrical arcing). Consider NS boluses for hypotension.

PATIENT/FAMILY TEACHING

- Go from lying to standing slowly.
- Take oral form on empty stomach (however, if headache occurs during therapy, take medication with meals).
- Use spray only when lying down.
- Dissolve sublingual tablet under tongue; do not swallow.
- Take at first sign of angina.
- May take additional dose q5min if needed up to a total of 3 doses.
- If not relieved within 5 min, contact physician or immediately go to emergency room.
- Do not change brands.
- Keep container away from heat, moisture.
- Do not inhale lingual aerosol but spray onto or under tongue (avoid swallowing after spray is administered).
- Expel from mouth any remaining lingual, sublingual, intrabuccal tablet after pain is completely relieved.
- Place transmucosal tablets under upper lip or buccal pouch (between cheek and gum); do not chew/swallow tablet.
- Avoid alcohol (intensifies hypotensive effect). If alcohol is ingested soon after taking nitroglycerin, possible acute hypotensive episode (marked drop in B/P, vertigo,

diaphoresis, pallor) may occur. • Do not use within 48 hrs of sildenafil, tadalafil, vardenafil (PDE5 inhibitors); may cause acute hypotensive episode.

nivolumab

nye-vol-ue-mab
(Opdivo)

Do not confuse nivolumab with denosumab, adalimumab, or palivizumab.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Anti-PD-1 monoclonal antibody. Immune checkpoint inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of BRAF V600 wild-type unresectable or metastatic melanoma, as a single agent; BRAF V600 mutation-positive unresectable melanoma, as a single agent; unresectable or metastatic melanoma, in combination with ipilimumab. Adjuvant treatment of melanoma with involvement of lymph nodes or metastatic disease following complete resection. Treatment of metastatic non-small-cell lung cancer (NSCLC) with progression on or after platinum-based chemotherapy. Treatment of metastatic small-cell lung cancer (SCLC) in pts with progression following platinum-based chemotherapy and at least one other line of therapy. Treatment of advanced renal cell cancer (RCC) in pts receiving prior antiangiogenic therapy. First-line treatment of advanced previously untreated RCC (in combination with ipilimumab). Treatment of classical Hodgkin lymphoma (cHL) that relapsed or progressed following autologous hematopoietic stem cell transplant (HSCT) and post-brentuximab, or 3 or more lines of systemic therapy that includes autologous HSCT. Treatment of recurrent or metastatic squamous cell carcinoma of the head

and neck. Treatment of locally advanced or metastatic urothelial carcinoma with disease progression during or following platinum-containing chemotherapy; or within 12 mos of neoadjuvant or adjuvant treatment with platinum-containing chemotherapy. Treatment (as a single agent or in combination with ipilimumab) of microsatellite instability-high (MSI-H) or mismatch repair deficient (dMMR) metastatic colorectal cancer in adults and children 12 yrs of age and older that has progressed following treatment with fluoropyrimidine, oxaliplatin and irinotecan. Treatment of hepatocellular carcinoma in pts previously treated with sorafenib.

PRECAUTIONS

Contraindications: Hypersensitivity to nivolumab. **Cautions:** Thyroid/pituitary disease, hepatic/renal impairment, interstitial lung disease, electrolyte imbalance.

ACTION

Binds PD-1 ligands to PD-1 receptor found on T cells, blocking its interaction with the ligands (PD-L1 and PD-L2). Releases PD-1 pathway-mediated inhibition of immune response (including anti-tumor immune response). **Therapeutic Effect:** Inhibits T-cell proliferation and cytokine production. Inhibits tumor cell growth and metastasis.

PHARMACOKINETICS

Information on metabolism and elimination is not available. Steady-state concentration reached in 12 wks. **Half-life:** 26.7 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm. Unknown if distributed in breast milk. Females of reproductive potential should use effective contraception during treatment and up to 5 mos after discontinuation. **Children:** Safety and efficacy not established. **Elderly:** May have increased risk of endocrine/hepatic/pulmonary/optic/renal injury due to age-related diseases.

INTERACTIONS

DRUG: May enhance adverse/toxic effects of **belimumab**. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** **Single Therapy:** May increase serum alkaline phosphatase, ALT, AST, potassium. May decrease serum sodium. **Combo Therapy:** May increase serum alkaline phosphatase, ALT, AST, amylase, creatinine, lipase. May decrease RBC, Hct, Hgb, lymphocytes, neutrophils, platelets; serum calcium, sodium, magnesium. May increase or decrease serum calcium, potassium.

AVAILABILITY (Rx)

Injection Solution: 40 mg/4 mL, 100 mg/10 mL, 240 mg/24 mL vials.

ADMINISTRATION/HANDLING

Preparation • Visually inspect solution for particulate matter or discoloration. Solution should appear opalescent, colorless to pale yellow. Discard if solution is cloudy or contains particulate matter other than a few translucent to white proteinaceous particles. • Do not shake vial. • Withdraw required dose volume and dilute in 0.9% NaCl or 5% Dextrose injection. Final concentration will equal 1–10 mg/mL based on volume of diluent. • Mix by gentle inversion. • Do not shake. • Discard partially used or empty vials.

Rate of administration • Infuse over 60 min using sterile, nonpyrogenic, low protein-binding, 0.2- to 1.2-micron in-line filter. • Flush IV line upon completion.

Storage • Refrigerate diluted solution up to 24 hrs or store at room temperature for no more than 4 hrs (includes time of preparation and infusion). • Do not freeze.

IV INCOMPATIBILITIES

Do not infuse with other medications.

INDICATIONS/ROUTES/DOSAGE**Melanoma**

IV: ADULTS, ELDERLY: (Single Agent): 240 mg q2wks or 480 mg q4wks until

disease progression or unacceptable toxicity. (**In combination with ipilimumab**): 1 mg/kg, followed by ipilimumab on the same day, q3wks for 4 doses. Subsequent single-agent therapy dose is 240 mg q2wks or 480 mg q4wks until disease progression or unacceptable toxicity.

Metastatic Non–Small-Cell Lung Cancer (NSCLC)

IV: ADULTS, ELDERLY: 240 mg q2wks until disease progression or unacceptable toxicity.

Advanced Renal Cell Carcinoma (Previously Treated), Urothelial Carcinoma, Hepatocellular Carcinoma, Melanoma (Adjuvant Treatment)

IV: ADULTS, ELDERLY: 240 mg q2wks or 480 mg q4wks until disease progression or unacceptable toxicity.

cHL (Recurrent or Metastatic)

IV: ADULTS, ELDERLY: 240 mg once q2wks or 480 mg once q4wks until disease progression or unacceptable toxicity.

Colorectal Cancer, Metastatic (Single Agent)

IV: ADULTS, ELDERLY: 240 mg q2wks or 480 mg once q4wks until disease progression or unacceptable toxicity.

Colorectal Cancer (Metastatic) Combination Therapy

IV: ADULTS, ELDERLY: (In combination with ipilimumab): 3 mg/kg, in combination with ipilimumab, q3wks for 4 doses. Subsequent single-agent therapy dose is 240 mg q2wks or 480 mg once q4wks until disease progression or unacceptable toxicity.

Metastatic Small-Cell Lung Cancer (SCLC)

IV: ADULTS, ELDERLY: (Single agent): 3 mg/kg once q2wks until disease progression or unacceptable toxicity. (**In combination with ipilimumab**): 1 mg/kg once q3wks for 4 combination doses, then 3 mg/kg once q2wks as single agent until disease progression or unacceptable toxicity.

RCC (Previously Untreated) Combination Therapy

IV: ADULTS, ELDERLY: (In combination with ipilimumab): 3 mg/kg, in combination with ipilimumab, q3wks for 4 doses. Subsequent single-agent therapy dose is 240 mg q2wks or 480 mg q4wks until disease progression or unacceptable toxicity.

Head and Neck Carcinoma

IV: ADULTS, ELDERLY: 240 mg once q2wks or 480 mg once q4wks until disease progression or unacceptable toxicity.

Dose Modification

Based on Common Terminology Criteria for Adverse Events (CTCAE).

Withhold Treatment for Any of the Following Adverse Events

Grade 2 or 3 diarrhea or colitis; single-agent therapy-associated colitis; Grade 2 pneumonitis; serum AST or ALT greater than 3–5 times upper limit of normal (ULN) or serum bilirubin 1.5–3 times ULN; Grade 2 or 3 hypophysitis; Grade 2 adrenal insufficiency; serum creatinine greater than 1.5–6 times ULN; Grade 3 rash; first occurrence of any other Grade 3 adverse reaction. When nivolumab is administered in combination with ipilimumab and nivolumab is withheld, then ipilimumab should also be withheld.

Restarting Therapy

Resume when adverse reactions return to Grade 0 or 1.

Permanently Discontinue for Any of the Following Adverse Events

Combo-agent therapy (ipilimumab)–associated colitis; Grade 3 or 4 pneumonitis; serum AST or ALT greater than 5 times ULN or serum bilirubin 3 times ULN; pts with liver metastasis who begin treatment with baseline Grade 2 serum ALT or AST elevation who experience serum ALT or AST elevation greater than or equal to 50% from baseline that persists for at least 1 wk; Grade 4 hypophysitis; Grade 3 or 4 adrenal insufficiency; serum creatinine greater than 6 times ULN; Grade 4 rash; recurrence of any

other Grade 3 adverse reaction; any life-threatening or Grade 4 adverse reaction; requirement for prednisONE 10 mg/day or greater (or equivalent) for more than 12 wks; persistent Grade 2 or 3 adverse reaction lasting longer than 12 wks.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Not specified; use caution.

SIDE EFFECTS

Note: Percentage of side effects may vary depending on the use of single or combination therapy. **Frequent (50%–24%):** Fatigue, dyspnea, musculoskeletal pain, decreased appetite, cough, nausea, headache, constipation. **Occasional (19%–10%):** Vomiting, asthenia, diarrhea, edema, pyrexia, cough, dehydration, rash, abdominal pain, chest pain, arthralgia, decreased weight, blurred vision, pruritus, peripheral edema, generalized pain.

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia, lymphopenia, neutropenia, thrombocytopenia is an expected response to therapy. May cause severe immune-mediated events including interstitial lung disease or pneumonitis (3%–10% of pts), colitis (21%–57% of pts), hepatitis (15%–28% of pts), hypophysitis (13% of pts), renal failure or nephritis (1%–2% of pts), hyperthyroidism (1% of pts), hypothyroidism (3%–19% of pts), rash (up to 37% of pts). Other adverse events including autoimmune nephropathy, demyelination, diabetic ketoacidosis, duodenitis, erythema multiforme, exfoliative dermatitis, facial and abducens nerve paresis, gastritis, iridocyclitis, motor dysfunction, pancreatitis, psoriasis, sarcoidosis, uveitis, vasculitis, ventricular arrhythmia, vitiligo reported in less than 2% of pts. Severe infusion-related reactions reported in less than 1%

of pts. Occurrence of events is dependent on use of single or combination therapy. Upper respiratory tract infections including nasopharyngitis, pharyngitis, rhinitis reported in 11% of pts. Immunogenicity (auto-nivolumab antibodies) occurred in 8.5% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, BMP, ionized calcium, LFT, TSH; vital signs; urine pregnancy. Record weight in kg. Screen for history of arrhythmias, pituitary/pulmonary/thyroid disease, autoimmune disorders, diabetes, hepatic/renal impairment; allergy to predniSONE. Along with routine assessment, conduct full dermatologic exam, ophthalmologic exam/visual acuity. Receive full medication history and screen for interactions.

INTERVENTION/EVALUATION

Monitor CBC, LFT, serum electrolytes; thyroid panel if applicable. Diligently monitor for immune-mediated adverse events as listed in Adverse Effects/Toxic Reactions. Notify physician if any CTCAE toxicities occur (see Appendix M) and initiate proper treatment. Obtain chest X-ray if interstitial lung disease, pneumonitis suspected. Screen for tumor lysis syndrome in pts with high tumor burden. Monitor I&O, daily weight. If predniSONE therapy is initiated for immune-mediated events, monitor capillary blood glucose and screen for corticosteroid side effects.

PATIENT/FAMILY TEACHING

- Blood levels will be routinely monitored.
- Avoid pregnancy; treatment may cause birth defects or miscarriage. Do not breastfeed. Females of childbearing potential should use effective contraception during treatment and for at least 5 mos after discontinuation.
- Serious adverse reactions may affect lungs, GI tract, kidneys, or hormonal glands; anti-inflammatory medication may need to be started.
- Immediately contact physician if serious or life-threatening inflam-

matory reactions occur in the following body systems: colon (severe abdominal pain or diarrhea); kidney (decreased or dark-colored urine, flank pain); lung (chest pain, cough, shortness of breath); liver (bruising easily, dark-colored urine, clay-colored/tarry stools, yellowing of skin or eyes); pituitary (persistent or unusual headache, dizziness, extreme weakness, fainting, vision changes); thyroid (trouble sleeping, high blood pressure, fast heart rate [overactive thyroid]), (fatigue, goiter, weight gain [underactive thyroid]).

norepinephrine

HIGH ALERT

nor-ep-i-nef-rin
(Levophed)

BLACK BOX ALERT Extravasation may produce severe tissue necrosis, sloughing. Using fine hypodermic needle, liberally infiltrate area with 10–15 mL saline solution containing 5–10 mg phentolamine.

Do not confuse Levophed with Levaquin or levoFLOXacin, or norepinephrine with EPINEPHrine.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Alpha, beta agonist. **CLINICAL:** Vasopressor.

USES

Severe hypotension, treatment of shock persisting after adequate fluid volume replacement.

PRECAUTIONS

Contraindications: Hypersensitivity to norepinephrine. Hypotension related to hypovolemia (except in emergency to maintain coronary/cerebral perfusion until volume replaced), mesenteric/peripheral vascular thrombosis (unless it is lifesaving procedure). **Cautions:** Concurrent use of MAOIs.

ACTION

Stimulates beta₁-adrenergic receptors, alpha-adrenergic receptors, increasing contractility, heart rate and producing vasoconstriction. **Therapeutic Effect:** Increases systemic B/P, coronary blood flow.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	Rapid	1–2 min	N/A

Localized in sympathetic tissue. Metabolized in liver. Primarily excreted in urine.

 **LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: Readily crosses placenta. May produce fetal anoxia due to uterine contraction, constriction of uterine blood vessels. **Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: MAOIs (e.g., phenelzine, selegiline), antidepressants (tricyclic) may prolong hypertension. **SNRIs** (e.g., duloxetine), **tramadol** may increase tachycardic effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 1 mg/mL

ADMINISTRATION/HANDLING

Reconstitution • Add 4 mL (4 mg) to 250 mL D₅W (16 mcg/mL). **Maximum concentration:** 32 mL (32 mg) to 250 mL (128 mcg/mL).

Rate of administration • Closely monitor IV infusion flow rate (use infusion pump). • Monitor B/P q2min during IV infusion until desired therapeutic response is achieved, then q5min during remaining IV infusion. • Never leave pt unattended. • Maintain B/P at 90–100 mm Hg in previously normotensive pts, and 30–40 mm Hg below preexisting B/P in previously hypertensive pts. • Reduce

IV infusion gradually. Avoid abrupt withdrawal. • If using peripherally inserted catheter, it is imperative to check the IV site frequently for free flow and infused vein for blanching, hardness to vein, coldness, pallor to extremity. • If extravasation occurs, area should be infiltrated with 10–15 mL sterile saline containing 5–10 mg phentolamine (does not alter pressor effects of norepinephrine).

Storage • Do not use if solution is brown or contains precipitate. • Store at room temperature. Diluted solution stable for 24 hrs at room temperature.

 **IV INCOMPATIBILITIES**

Pantoprazole (Protonix), regular insulin.

 **IV COMPATIBILITIES**

Amiodarone (Cordarone), calcium gluconate, dexmedetomidine (Precedex), dilTIAzem (Cardizem), DOBUTamine (Dobutrex), DOPamine (Intropin), EPI-NEPhrine, esmolol (Brevibloc), fentaNYL (Sublimaze), furosemide (Lasix), haloperidol (Haldol), heparin, HYDRomorphone (Dilaudid), labetalol (Trandate), lipids, LORazepam (Ativan), magnesium, midazolam (Versed), milrinone (Primacor), morphine, niCARDipine (Cardene), nitroglycerin, potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

 **ALERT** If possible, blood, fluid volume depletion should be corrected before drug is administered.

Acute Hypotension Unresponsive to Fluid Volume Replacement

IV infusion: ADULTS, ELDERLY: Initially, administer at 8–12 mcg/min. Adjust rate of flow to desired response. Average maintenance range: 2–4 mcg/min (varies greatly based on clinical situation). **CHILDREN:** Initially, 0.05–0.1 mcg/kg/min; titrate to desired effect. **Maximum:** 2 mcg/kg/min.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

N

SIDE EFFECTS

Norepinephrine produces less pronounced, less frequent side effects than EPINEPHRINE. **Occasional (5%–3%):** Anxiety, bradycardia, palpitations. **Rare (2%–1%):** Nausea, anginal pain, shortness of breath, fever.

ADVERSE EFFECTS/TOXIC REACTIONS

Extravasation may produce tissue necrosis, sloughing. Overdose manifested as severe hypertension with violent headache (may be first clinical sign of overdose), arrhythmias, photophobia, retrosternal or pharyngeal pain, pallor, diaphoresis, vomiting. Prolonged therapy may result in plasma volume depletion. Hypotension may recur if plasma volume is not maintained.

NURSING CONSIDERATIONS

N

BASELINE ASSESSMENT

Assess ECG, B/P continuously (be alert to precipitous B/P drop). Be alert to pt complaint of headache.

INTERVENTION/EVALUATION

Monitor IV flow rate diligently. Assess for extravasation characterized by blanching of skin over vein, coolness (results from local vasoconstriction); color, temperature of IV site extremity (pallor, cyanosis, mottling). Assess nailbed capillary refill. Monitor I&O; measure output hourly, report urine output less than 30 mL/hr. Once B/P parameter has been reached, IV infusion should not be restarted unless systolic B/P falls below 90 mm Hg.

nortriptyline

nor-trip-ti-leen

(Aventyl , Norventyl , Pamelor)

BLACK BOX ALERT ■ Increased risk of suicidal thinking and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse Aventyl with Bently, or nortriptyline with amitriptyline, desipramine, or Norpramin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Tricyclic compound. **CLINICAL:** Antidepressant.

USES

Treatment of symptoms of unipolar major depression. **OFF-LABEL:** Adjunctive therapy for smoking cessation, myofascial pain, postherpetic pain, orofacial pain, chronic pain, irritable bowel syndrome.

PRECAUTIONS

Contraindications: Hypersensitivity to nortriptyline. Use during acute recovery period after MI. Use of MAOI intended to treat psychiatric disorders (concurrently or within 14 days of discontinuing either nortriptyline or MAOI). Initiation of nortriptyline in pt receiving linezolid or methylene blue. **Cautions:** Prostatic hyperplasia, history of urinary retention/obstruction, narrow-angle glaucoma, diabetes, history of seizures, hyperthyroidism, cardiac/hepatic/renal disease, psychosis, increased intraocular pressure, pts at high risk for suicide, elderly pts.

ACTION

Blocks reuptake of neurotransmitters (norepinephrine, serotonin) at neuronal presynaptic membranes, increasing their availability at postsynaptic receptor sites. **Therapeutic Effect:** Relieves depression, anxiety disorders, nocturnal enuresis.

PHARMACOKINETICS

Rapidly absorbed. Widely distributed. Extensively bound to plasma proteins. Metabolized in liver. Excreted primarily in urine. **Half-life: Adults:** 14–51 hrs. **Elderly:** 23–79 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta, excreted in breast milk. **Children:** Safety

and efficacy not established in children younger than 6 yrs. **Elderly:** Use caution.

INTERACTIONS

DRUG: Acclidinium, ipratropium, tiotropium, umeclidinium may increase anticholinergic effect. **CNS depressants** (e.g., alcohol, morphine, oxycodone, zolpidem) may increase CNS depression. May increase arrhythmogenic effect of dronedarone. May increase adverse effects of escitalopram. **Cimetidine** may increase concentration, risk of toxicity. **MAOIs** (e.g., phenelzine, selegiline) may increase risk of neuroleptic malignant syndrome, seizures, hyperpyrexia, hypertensive crisis. **HERBAL:** St. Johns wort may decrease concentration/effect. **Herbals with sedative properties** (e.g., chamomile, kava kava, valerian) may increase CNS depression. **FOOD:** Grape juice, carbonated beverages may decrease effectiveness. **Grapefruit products** may increase risk of side effects. **LAB VALUES:** May alter serum glucose, ECG readings. **Therapeutic peak serum level:** 6–10 mcg/mL; **therapeutic trough serum level:** 0.5–2 mcg/mL. **Toxic peak serum level:** greater than 12 mcg/mL; **toxic trough serum level:** greater than 2 mcg/mL.

AVAILABILITY (Rx)

Capsules: 10 mg, 25 mg, 50 mg, 75 mg.

Oral Solution: 10 mg/5 mL.

ADMINISTRATION/HANDLING

PO

- Give with food, milk if GI distress occurs.
- Dilute oral solution in water, milk, or fruit juice. Give immediately. (Do not mix with grape juice/carbonated beverages.)

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ At least 14 days must elapse between use of MAOIs and nortriptyline. When discontinuing, gradually taper dose to minimize withdrawal symptoms.

Depression

PO: ADULTS: Initially, 25 mg once daily. May increase to usual dose of 25 mg 3–4 times/day up to 150 mg/day. Total daily dose may be given as a single dose. Adjust dose based on response and tolerability.

ELDERLY: Initially, 30–50 mg at bedtime. May increase by 25 mg every 3–7 days.

Maximum: 150 mg/day.

Enuresis

PO: CHILDREN 6 YRS AND OLDER: Initially, 10–20 mg/day. May titrate up to maximum daily dose of 40 mg/day.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent: Drowsiness, fatigue, dry mouth, blurred vision, constipation, delayed micturition, orthostatic hypotension, diaphoresis, impaired concentration, increased appetite, urinary retention. **Occasional:** GI disturbances (nausea, GI distress, metallic taste), photosensitivity. **Rare:** Paradoxical reactions (agitation, restlessness, nightmares, insomnia), extrapyramidal symptoms (particularly fine hand tremor).

ADVERSE EFFECTS/TOXIC REACTIONS

High dosage may produce cardiovascular effects (severe orthostatic hypotension, dizziness, tachycardia, palpitations, arrhythmias), altered temperature regulation (hyperpyrexia, hypothermia). Abrupt discontinuation from prolonged therapy may produce headache, malaise, nausea, vomiting, vivid dreams.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for suicidal ideation/tendencies, behavior, thought content, appearance. Obtain baseline glucose, cholesterol levels. For pts on long-term therapy,

hepatic/renal function tests, blood counts should be performed periodically.

INTERVENTION/EVALUATION

Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess appearance, behavior, speech pattern, level of interest, mood. Monitor daily pattern of bowel activity, stool consistency. Avoid constipation with increased fluids, bulky foods. Monitor B/P, pulse for hypotension, arrhythmias, weight. Assess for urinary retention. Therapeutic peak serum level: 6–10 mcg/mL; trough serum level: 0.5–2 mcg/mL. Toxic peak serum level: greater than 12 mcg/mL; toxic trough: greater than 2 mcg/mL.

PATIENT/FAMILY TEACHING

- Slowly go from lying to standing to avoid hypotensive effect; tolerance to postural hypotension, sedative, anticholinergic effects usually develops during early therapy.
- Avoid alcohol.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Therapeutic effect may be noted in 2 wks or longer.
- Photosensitivity to sun may occur; use sunscreen, protective clothing.
- Dry mouth may be relieved by sugarless gum, sips of water.
- Report visual disturbances, worsening depression, suicidal ideation, unusual changes in behavior (esp. at initiation of therapy or with changes in dosage).
- Do not abruptly discontinue medication.

obinutuzumab

oh-bi-nue-too-z-ue-mab
(Gazyva)

■ BLACK BOX ALERT ■ Hepatitis B virus reactivation, resulting in hepatic failure, fulminant hepatitis, and death have occurred. Screen all pts for hepatitis B virus infection before initiating treatment. Progressive multifocal leukoencephalopathy (PML) including fatal PML reported.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Anti-CD20 monoclonal antibody. **CLINICAL:** Antineoplastic.

USES

Treatment of previously untreated chronic lymphocytic leukemia (CLL), in combination with chlorambucil. Treatment of follicular lymphoma (in combination with bendamustine) in pts who relapsed after, or are refractory to, a ritUXimab-containing regimen. Treatment of previously untreated stage II bulky, stage III, or stage IV follicular lymphoma in combination with chemotherapy and followed by obinutuzumab monotherapy.

PRECAUTIONS

Contraindications: Hypersensitivity to obinutuzumab. **Cautions:** Pts showing evidence of prior HBV infection, preexisting cardiac/pulmonary impairment; hematologic abnormalities (e.g., leukopenia, thrombocytopenia); electrolyte imbalance; avoid with active infection.

ACTION

Targets CD20 antigen expressed on surface of B lymphocytes. Mediates B-cell lysis by activating complement-dependent cytotoxicity, antibody-dependent cellular cytotoxicity. **Therapeutic Effect:** Inhibits tumor cell growth and proliferation in chronic lymphocytic leukemia.

PHARMACOKINETICS

Metabolism and elimination not specified. **Half-life:** 28 days.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Monoclonal antibodies are known to cross placenta. Effective contraception, discontinuation of breastfeeding recommended during therapy and for at least 18 mos after discontinuation. **Children:** Safety and efficacy not established. **Elderly:** May have increased risk of adverse reactions.

INTERACTIONS

DRUG: May increase hypotensive effect of **ACE inhibitors** (e.g., enalapril, lisinopril), **angiotensin receptor blockers** (e.g., losartan), **beta blockers** (e.g., metoprolol). May decrease the therapeutic effect of **BCG (intravesical)**, **vaccines (live)**. May increase adverse effects of **belimumab**, **natalizumab**, **vaccines (live)**. **HERBAL:** Echinacea may diminish the therapeutic effect. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST, bilirubin, creatinine, uric acid. May decrease albumin, Hgb, Hct, lymphocytes, neutrophils, platelets; serum potassium, sodium.

AVAILABILITY (Rx)

Injection Solution: 1,000 mg/40 mL (25 mg/mL) single-use vial.

ADMINISTRATION/HANDLING

◀ ALERT ▶ Administer via dedicated line. Do not administer IV push or bolus. Withhold hypertensive medications at least 12 hrs before and 1 hr after administration. Do not mix with dextrose-containing fluids.

Reconstitution • Visually inspect for particulate matter or discoloration. • For 100-mg dose: withdraw 40 mL solution from vial and dilute only 4 mL (100 mg) in 100 mL 0.9% NaCl for immediate

administration. Dilute remaining 36 mL (900 mg) into 250 mL 0.9% NaCl at same time and refrigerate for up to 24 hrs for cycle 1: day 2. For remaining infusions (day 8 and day 15 of cycle 1 and day 1 of cycles 2–6), dilute 40 mL (1,000 mg) solution in 250 mL NaCl infusion bag. • Gently mix by inversion. • Do not shake.

Rate of administration • Day 1 of cycle 1 (100 mg): Infuse over 4 hrs (25 mg/hr). • Do not increase infusion rate. • **Day 2 of cycle 1 (900 mg):** Infuse at 50 mg/hr. • May increase by 50 mg/hr every 30 min to maximum rate of 400 mg/hr. • Increase rate based on tolerability.

Storage • Solution should appear clear, colorless to slightly brown. • May refrigerate diluted solution up to 24 hrs.

INDICATIONS/ROUTES/DOSAGE

Chronic Lymphocytic Leukemia (CLL)

◀ALERT▶ Premedicate with glucocorticoid, acetaminophen, and antihistamine to decrease severity of infusion reaction. Consider premedication with antihyperuricemics (allopurinol) 12–24 hrs for pts with high tumor burden or high circulating absolute lymphocyte count greater than $25 \times 10^9/L$. Recommend antimicrobial prophylaxis throughout treatment for pts with neutropenia.

IV: ADULTS/ELDERLY: Six treatment cycles of 28-day cycle. **Day 1 of cycle 1:** 100 mg. **Day 2 of cycle 1:** 900 mg. **Day 8 and Day 15 of cycle 1:** 1000 mg. **Cycles 2–6:** 1000 mg on day 1 of each subsequent 28-day cycle for 5 doses. Discontinue treatment if any severe to life-threatening infusion reactions occur.

Follicular Lymphoma (Relapsed/Refractory)

IV: ADULTS, ELDERLY: Six treatment cycles of 28 days (in combination with bendamustine). **Cycle 1:** 1,000 mg on days 1, 8, 15. **Cycles 2–6:** 1,000 mg on day 1 of each subsequent 28-day cycle for 5 doses. If achieves stable disease, complete or partial response, continue

obinutuzumab (as monotherapy) 1,000 mg q2mos for 2 yrs.

Follicular Lymphoma (previously untreated)

IV: ADULTS, ELDERLY: Cycle 1 (either in combination with bendamustine or with CHOP or CVP chemotherapy): 1,000 mg wkly on days 1, 8, and 15. **Cycles 2–6 (in combination with bendamustine):** 1,000 mg on day 1 q28days for 5 doses. **Cycles 2–8 (in combination with CHOP):** 1,000 mg on day 1 q21days for 5 doses (with CHOP), then 1,000 mg on day 1 q21 days for 2 doses (as monotherapy). **Cycles 2–8 (in combination with CVP):** 1,000 mg on day 1 q21days for 7 doses. **Then as monotherapy:** 1,000 mg q2mos for up to 2 yrs beginning approximately 2 mos after last induction phase.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (69%): Infusion reactions (pruritus, flushing, urticaria). **Occasional (10%):** Pyrexia, cough.

ADVERSE EFFECTS/TOXIC REACTIONS

Thrombocytopenia, neutropenia, leukopenia, lymphopenia (47%–80% of pts) are expected responses to therapy, but more severe reactions including bone marrow failure, febrile neutropenia, opportunistic infection may result in life-threatening events. Hepatitis B virus reactivation may occur. Infusion reactions including hypotension, tachycardia, dyspnea, bronchospasm, wheezing, laryngeal edema, nausea, vomiting, flushing, pyrexia may occur during infusion. Tumor lysis syndrome may present as acute renal failure, hypocalcemia, hyperuricemia, hyperphosphatemia within 12–24 hrs of infusion. Immunogenicity (autoantibodies) occurred in 13% of pts. Progressive multifocal leukoencephalopathy (PML) occurred rarely and may include weakness, paralysis, vision loss, aphasia, cognition impairment.

underlined – top prescribed drug

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, BMP, ionized calcium, phosphate, uric acid; vital signs. Screen for history of anemia, asthma, arrhythmias, COPD, diabetes, GI bleeding, hypertension, hepatitis B virus infection, hepatic/renal impairment, peripheral edema. Receive full medication history, esp. hypertension, anticoagulant medications. Perform baseline visual acuity. Offer emotional support.

INTERVENTION/EVALUATION

Monitor CBC, serum electrolytes, LFT, vital signs. Monitor all pts for cardiovascular alterations, respiratory distress. If respiratory reactions occur, consider administration of oxygen, EPINEPHrine, albuterol treatments. Locate rapid-sequence intubation kit if respiratory compromise occurs. Monitor strict I&O, hydration status. If PML suspected, consult neurologist for proper management. Obtain ECG for palpitations, severe hypokalemia, hyponatremia.

PATIENT/FAMILY TEACHING

- Avoid pregnancy.
- Report any yellowing of skin or eyes, abdominal pain, bruising, black/tarry stools, amber or bloody urine.
- Fever, cough, burning with urination, body aches, chills may indicate acute infection.
- Avoid use of live virus vaccines.
- Avoid alcohol.
- Immediately report difficult breathing, severe coughing, chest tightness, wheezing.
- Paralysis, vision changes, impaired speech, altered mental status may indicate life-threatening neurologic event.

ocrelizumab

ok-re-liz-ue-mab
(Ocrevus)

Do not confuse ocrelizumab with certolizumab, daclizumab, efalizumab, mepolizumab, natalizumab, or omalizumab.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Anti-CD20 monoclonal antibody. **CLINICAL:** Multiple sclerosis agent.

USES

Treatment of adult pts with relapsing or primary progressive forms of multiple sclerosis (MS).

PRECAUTIONS

Contraindications: Life-threatening infusion reaction to ocrelizumab. Active hepatitis B virus (HBV) infection confirmed by positive results for hepatitis B surface antigen (HBsAg) and anti-HBV tests.

Cautions: History of chronic opportunistic infections (esp. bacterial, invasive fungal, mycobacterial, protozoal, viral, tuberculosis); active infection, conditions predisposing to infection (e.g., diabetes, immunocompromised pts, renal failure, open wounds); intolerance to corticosteroids; history of depression, malignancies, breast cancer. Avoid administration of live or live attenuated vaccines during treatment and after discontinuation until B-cells are no longer depleted.

ACTION

Monoclonal antibody that is directed against B cells, which express the cell surface antigen CD20 (thought to influence the course of MS through antigen presentation, autoantibody production, cytokine regulation, and formation of ectopic lymphoid aggregates in meninges). Binds to the cell surface to deplete CD20-expressing B cells. **Therapeutic Effect:** Reduces progression of MS.

PHARMACOKINETICS

Onset of action: serum CD-19+ B-cell count reduced within 14 days. Duration of action: 72 wks (Range: 27–175 wks). Antibodies are primarily cleared by catabolism. **Half-life:** 26 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause transient peripheral B-cell depletion and lymphocytopenia in neonates when used during pregnancy. Immunoglobulins are known to cross the placenta. Females of reproductive potential must use effective contraception during treatment and up to 6 mos after discontinuation. Unknown if distributed in breast milk; however, immunoglobulin G (IgG) is present in breast milk. Breastfeeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effect of **BCG, vaccines (live)**. May increase adverse effects/toxicity of **belimumab, natalizumab, tacrolimus**. **HERBAL:** **Echinacea** may diminish therapeutic effect. **FOOD:** None known. **LAB VALUES:** May decrease immunoglobulin A (IgA), immunoglobulin M (IgM), immunoglobulin G (IgG), neutrophils.

AVAILABILITY (Rx)

Injection Solution: 300 mg/10 mL (30 mg/mL).

ADMINISTRATION/HANDLING

Preparation • Visually inspect for particulate matter or discoloration. Solution should appear clear to slightly opalescent, colorless to pale brown in color. • Do not use if solution is cloudy, discolored, or if visible particles are observed. • Withdraw proper dose from vial (10 mL for 300-mg dose; 20 mL for 600-mg dose) and dilute into 0.9% NaCl bag to a final concentration of approx. 1.2 mg/mL (300-mg dose in 250 mL 0.9% NaCl; 600-mg dose in 500 mL 0.9% NaCl). • Mix by gentle inversion. • Do not shake or agitate.

Rate of administration • **First and Second Infusion:** Start at 30 mL/hr via dedicated line using 0.2- or 0.22-micron

in-line filter. If tolerated, increase rate by 30 mL/hr q30min to a maximum rate of 180 mL/hr for a duration of 2.5 hrs or longer. • **Subsequent Infusions:** Start at 40 mL/hr via dedicated line using 0.2- or 0.22-micron in-line filter. If tolerated, increase rate by 40 mL/hr q30min to a maximum rate of 200 mL/hr for a duration of 3.5 hrs or longer. • **Mild Infusion Reactions:** Decrease rate by 50% and continue reduced rate for at least 30 min. If tolerated, may increase infusion rate as described above. • **Severe Infusion Reactions:** Interrupt infusion until symptoms resolve, then resume infusion at 50% of the initial infusion rate. • **Life-threatening Infusion Reaction:** Immediately stop infusion and permanently discontinue; do not restart.

Storage • May refrigerate diluted solution up to 24 hrs or store at room temperature for up to 8 hrs (includes infusion time). • If diluted solution is refrigerated, allow to warm to room temperature before administration. • Discard solution if not administered within required time frame.

IV INCOMPATIBILITIES

Do not dilute with other IV solutions. Do not mix or infuse with other medications.

INDICATIONS/ROUTES/DOSAGE

⚠️ALERT⚠️ Must be administered under the direct supervision of health care professionals with access to emergency medical supplies and who are trained to manage severe infusion reactions. If a dose is missed, administer as soon as possible; do not wait until the next regularly scheduled dose. Reset administration schedule so that the next subsequent infusion is 6 mos after the most recent dose. Subsequent doses must be separated by at least 5 mos.

Premedication

• To reduce severity and frequency of infusion reaction, premedicate with methylprednisolone 100 mg (or

equivalent) approx. 30 min prior to infusion and an antihistamine (e.g., diphenhydramine) approx. 30–60 min prior to infusion. • Consider an antipyretic (e.g., acetaminophen) based on previous infusion reactions.

Multiple Sclerosis

IV: ADULTS, ELDERLY: 300 mg once at wk 0 and wk 2, then 600 mg q6mos (beginning 6 mos after the first 300-mg dose). Observe pt for at least 1 hr after completion of infusion.

Dosage in Renal/Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment:** Not specified; use caution.

SIDE EFFECTS

Occasional (8%–5%): Back pain, cough, diarrhea, peripheral edema, extremity pain.

ADVERSE EFFECTS/TOXIC REACTIONS

Infusion-related reactions including bronchospasm, dizziness, dyspnea, erythema, fatigue, flushing, headache, hypotension, nausea, oropharyngeal pain, pharyngeal/laryngeal edema, pruritus, pyrexia, rash, tachycardia, throat irritation, urticaria was reported in 34%–40% of pts. Serious infusion reactions requiring hospitalization occurred in less than 1% of pts. Infections including upper respiratory tract infections (40%–49% of pts), lower respiratory tract infections (10% of pts), skin infections (16% of pts), herpes infection (6% of pts) may occur. Progressive multifocal leukoencephalopathy (PML), an opportunistic viral infection of the brain caused by the JC virus, has occurred in pts treated with other anti-CD20 antibodies; may result in progressive permanent disability and death. Symptoms of PML include altered mental status, aphasia, paralysis, vision loss, weakness. HBV reactivation was reported in pts treated with other anti-CD20 antibodies; may result in fulminant hepatitis, hepatic failure, death. May

increase risk of malignancies including breast cancer. Immunogenicity (auto anti-ocrelizumab antibodies) reported in 1% of pts. Depression reported in 8% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline symptoms of MS (e.g., bladder/bowel dysfunction, cognitive impairment, depression, dysphagia, fatigue, gait disorder, numbness/tingling, pain, seizures, spasticity, tremors, weakness). Obtain vital signs. Question history of hypersensitivity reactions, infusion-related reactions. Ensure that proper resuscitative equipment, medical supplies are readily available (e.g., albuterol, antipyretics, antihistamines, epinephrine, isotonic IV fluids, bag-valve mask, oxygen, rapid sequence intubation kit). Screen all pts for active HBV. Pts who test negative for HBsAg and positive for anti-HBcAb+ should be referred to a hepatic specialist. If applicable, immunizations should be up-to-date according to guidelines at least 6 wks prior to initiation. Question history of chronic infections, herpes infection, depression, malignancies, breast cancer. Screen for active infection. Verify use of effective contraception in females of reproductive potential.

INTERVENTION/EVALUATION

Monitor vital signs. Diligently monitor for infusion-related reactions during infusion and for at least 1 hr after completion (esp. during initial infusions). If severe or life-threatening reactions occur, immediately stop infusion and provide appropriate medical support. Due to risk of respiratory compromise, pts with bronchospasm, dyspnea, hypoxia should be given immediate supplemental oxygen, hypersensitivity medications, hemodynamic support. If laryngeal or pharyngeal edema occurs, airway protection or possible intubation may be required. Mild to moderate infusion reactions may require interruption of infusion, decrease of infusion rate, symptom management. Closely monitor for

HBV reactivation, symptoms of PML, new malignancies including breast cancer, infections. Conduct neurologic assessment. Assess for symptom improvement of MS.

PATIENT/FAMILY TEACHING

- Life-threatening infusion reactions, allergic reactions may occur during infusion and up to 24 hrs after completion of infusion. Immediately report difficulty breathing, chest pain, chest tightness, chills, dizziness, fast heart rate, fever, flushing, headache, hives, itching, low blood pressure, nausea, throat pain or swelling, rash.
- If applicable, vaccinations should be up-to-date at least 6 wks before starting treatment. Do not receive live vaccines.
- Treatment may depress your immune system and reduce your ability to fight infection. Report symptoms of infection such as body aches, burning with urination, chills, cough, fatigue, fever. Avoid those with active infection.
- Avoid pregnancy. Females of childbearing potential should use effective contraception during treatment and for at least 6 mos after last dose. Do not breastfeed.
- Due to pretreatment with a corticosteroid, pts with diabetes may experience a transient rise in blood sugar levels.
- PML, an opportunistic viral infection of the brain, may cause progressive, permanent disabilities and death. Report symptoms of PML such as confusion, memory loss, paralysis, trouble speaking, vision loss, seizures, weakness.
- Treatment may cause reactivation of HBV, depression, new cancers including breast cancer.
- Notify physician if symptoms of MS do not improve.

octreotide

ock-tree-oh-tide

(SandoSTATIN, SandoSTATIN LAR Depot)

Do not confuse SandoSTATIN with SandIMMUNE, SandoSTATIN LAR, sargramostim, or simvastatin.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Somatostatin analogue. **CLINICAL:** Secretory inhibitory, growth hormone suppressant; antidiarrheal.

USES

Control of diarrhea and flushing in pts with metastatic carcinoid tumors, treatment of watery diarrhea associated with vasoactive intestinal peptic-secreting tumors (VIPomas), acromegaly (to reduce blood levels of growth hormone and insulin-like growth factor). **OFF-LABEL:** Control of bleeding esophageal varices, treatment of AIDS-associated secretory diarrhea, diarrhea, diarrhea associated with graft-vs-host disease, chemotherapy-induced diarrhea, insulinomas, small-bowel fistulas, Zollinger-Ellison syndrome, Cushing's syndrome, hypothalamic obesity, malignant bowel obstruction, postgastrectomy dumping syndrome, islet cell tumors, sulfonyleurea-induced hypoglycemia.

PRECAUTIONS

Contraindications: Hypersensitivity to octreotide. **Cautions:** Diabetic pts with gastroparesis, renal failure, hepatic impairment, HF, concomitant medications altering heart rate or rhythm. Concurrent use of medications that prolong QT interval, elderly pts.

ACTION

Suppresses secretion of serotonin, gastrin, VIP, insulin, glucagon, secretin, pancreatic polypeptide. **Therapeutic Effect:** Prolongs intestinal transit time. Decreases growth hormone in acromegaly.

PHARMACOKINETICS

Route	Onset	Peak	Duration
SQ	N/A	N/A	Up to 12 hrs

Rapidly, completely absorbed from injection site. Protein binding: 65%. Metabolized in liver. Excreted in urine. Removed by hemodialysis. **Half-life:** 1.7–1.9 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effectiveness of cycloSPORINE. **Glucagon, growth hormone, insulin, oral antidiabetics (e.g., gliPIZIDE, metFORMIN)** may alter glucose concentrations.

HERBAL: Herbs with hypoglycemic properties (e.g., fenugreek) may increase hypoglycemic effect. **FOOD:** None known. **LAB VALUES:** May decrease serum thyroxine (T_4). May increase serum alkaline phosphatase, ALT, AST, GGT.

AVAILABILITY (Rx)

Injection Solution: (SandoSTATIN): 50 mcg/mL, 100 mcg/mL, 200 mcg/mL, 500 mcg/mL, 1,000 mcg/mL. **Injection Suspension: (SandoSTATIN LAR):** 10-mg, 20-mg, 30-mg vials.

ADMINISTRATION/HANDLING

ALERT SandoSTATIN may be given IV, IM, SQ. SandoSTATIN LAR Depot may be given only IM. Refrigerate.

IM

- Give immediately after mixing.
- Administer deep IM in large muscle mass at 4-wk intervals.
- Avoid deltoid injections.

SQ

- Do not use if discolored or particulates form.
- Avoid multiple injections at same site within short periods.

- Dilute in 50–100 mL 0.9% NaCl or D₅W and infuse over 15–30 min. In emergency, may give IV push over 3 min. Following dilution, stable for 96 hrs at room temperature when diluted with 0.9% NaCl (24 hrs with D₅W). Infuse over 15–30 min.

INDICATIONS/ROUTES/DOSAGE

Note: Schedule injections between meals (to decrease GI effects).

Carcinoid Tumor

IV, SQ: (Sandostatin): ADULTS, ELDERLY: Initial 2 wks, 100–600 mcg/day in 2–4 divided doses. Range: 50–750 mcg.

IM: (Sandostatin Lar): ADULTS, ELDERLY: Must be stabilized on SQ octreotide for at least 2 wks. 20 mg q4wks for 2 mos, then modify based on response.

Vasoactive Intestinal Peptic-Secreting Tumor (VIPoma)

IV, SQ: (Sandostatin): ADULTS, ELDERLY: Initial 2 wks, 200–300 mcg/day in 2–4 divided doses. Titrate dose based on response/tolerance. Range: 150–750 mcg.

IM: (Sandostatin Lar): ADULTS, ELDERLY: Must be stabilized on SQ octreotide for at least 2 wks; 20 mg q4wks for 2 mos, then modify based on response.

Acromegaly

IV, SQ: (Sandostatin): ADULTS, ELDERLY: Initially, 50 mcg 3 times/day. Increase as needed. Range: 300–1,500 mcg/day. Usual effective dose: 100 mcg 3 times/day.

IM: (Sandostatin Lar): ADULTS, ELDERLY: Must be stabilized on SQ octreotide for at least 2 wks. 20 mg q4wks for 3 mos, then modify based on response. **Maximum:** 40 mg q4wks.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (10%–6%; 58%–30% in Acromegaly Pts): Diarrhea, nausea, abdominal discomfort, headache, injection site pain.

Occasional (5%–1%): Vomiting, flatulence, constipation, alopecia, facial flushing, pruritus, dizziness, fatigue, arrhythmias, ecchymosis, blurred vision. **Rare (less than 1%):** Depression, diminished libido, vertigo, palpitations, dyspnea.

ADVERSE EFFECTS/TOXIC REACTIONS

Increased risk of cholelithiasis. Prolonged high-dose therapy may produce hypothyroidism. GI bleeding, hepatitis, seizures occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baseline B/P, weight, thyroid function, serum glucose, electrolytes.

INTERVENTION/EVALUATION

Monitor serum glucose, electrolytes, thyroid function. In acromegaly, monitor growth hormone levels. Weigh every 2–3 days, report over 5-lb gain per wk. Monitor B/P, pulse, respirations periodically during treatment. Be alert for decreased urinary output, peripheral edema. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

- Therapy should provide significant improvement of severe, watery diarrhea.

ofatumumab

oh-fa-tue-mue-mab
(Arzerra)

BLACK BOX ALERT ■ Hepatitis B virus (HBV) reactivation may occur, resulting in hepatitis, hepatic failure, death. Progressive multifocal leukoencephalopathy (PML) resulting in death may occur.

Do not confuse ofatumumab with omalizumab.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Anti-CD20 monoclonal antibody. **CLINICAL:** Antineoplastic.

USES

Treatment of chronic lymphocytic leukemia (CLL) in pts previously untreated, relapsed, or who require extended

therapy. Treatment of CLL refractory to fludarabine and alemtuzumab.

PRECAUTIONS

Contraindications: Hypersensitivity to ofatumumab. **Cautions:** Carriers of hepatitis B virus.

ACTION

Binds to CD20 molecule, the antigen on surface of B-cell lymphocytes; inhibits early-stage B-lymphocyte activation. **Therapeutic Effect:** Controls tumor growth, triggers cell death.

PHARMACOKINETICS

Eliminated through both a target-independent route and a B-cell-mediated route. Due to depletion of B cells, clearance is decreased substantially after subsequent infusions compared with first infusion. **Half-life:** 12–16 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Bone marrow depressants (e.g., cladribine) may increase myelosuppression. Live virus vaccines may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** Echinacea may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May decrease neutrophils, platelets.

AVAILABILITY (Rx)

Injection Solution: 100 mg/5 mL, 1000 mg/50 mL.

ADMINISTRATION/HANDLING

◀ALERT▶ Do not give by IV push or bolus. Use in-line filter supplied with product.

Reconstitution • 300-mg dose: Withdraw and discard 15 mL from 1,000 mL 0.9% NaCl bag. • Withdraw 5 mL from each of 3 single-use 100-mg vials and add to bag. • Gently invert. • **1,000-mg dose:** Withdraw and discard 50 mL from 1,000 mL NaCl bag. Withdraw 50 mL from 1 single-use 1,000-mg vial and add to bag. • Gently invert to mix. • **2,000-mg dose:** Withdraw and discard 100 mL from 1,000 mL NaCl bag. Withdraw 50 mL from 2 single-use 1,000-mg vials and add to bag. • Gently invert to mix.

Rate of administration • Dose 1: Initiate infusion at rate of 3.6 mg/hr (12 mL/hr). • **Dose 2:** Initiate infusion at rate of 24 mg/hr (12 mL/hr). • **Dose 3–12:** Initiate infusion at rate of 50 mg/hr (25 mL/hr). • If no infusion toxicity, rate of infusion may be increased every 30 min, using following table:

Interval After Start of Infusion (min)	Doses		
	Dose 1 (mL/hr)	Dose 2 (mL/hr)	Dose 3–12 (mL/hr)
0–30	12	12	25
31–60	25	25	50
61–90	50	50	100
91–120	100	100	200
Over 120	200	200	400

Storage • Refrigerate vials. • After dilution, solution should be used within first 12 hrs; discard preparation after 24 hrs. • Discard if discoloration is present, but solution may contain visible, translucent-to-white particulates (will be removed by in-line filter).

IV COMPATIBILITIES

Prepare all doses with 0.9% NaCl. Do not mix with dextrose solutions or any other medications.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Premedicate 30 min to 2 hrs before each infusion with acetaminophen, an antihistamine, and a corticosteroid as prophylaxis for infusion reaction. Flush IV line with 0.9% NaCl before and after each dose. Interrupt infusion if

infusion reaction of any severity occurs (do not resume for Grade 4 reaction).

Chronic Lymphocytic Leukemia (Untreated)

IV infusion: ADULTS, ELDERLY: Cycle 1: 300 mg, then 1,000 mg on day 8. Subsequent cycles: 1,000 mg on day 1 q28days. Continue for at least 3 cycles or a maximum of 12 cycles (in combination with chlorambucil).

Chronic Lymphocytic Leukemia (Refractory)

IV infusion: ADULTS, ELDERLY: Recommended dosage is 12 doses given on the following schedule: 300 mg initial dose (dose 1), followed 1 wk later by 2,000 mg wkly for 7 doses (doses 2–8), followed 4 wks later by 2,000 mg every 4 wks for 4 doses (doses 9–12).

Chronic Lymphocytic Leukemia (Relapsed)

IV infusion: ADULTS, ELDERLY: 300 mg once on day 1, then 1,000 mg on day 8, then 1,000 mg on day 1 of subsequent 28-day cycles for a maximum of 6 cycles (in combination with fludarabine and cyclophosphamide).

Extended Treatment of CLL

IV infusion: ADULTS, ELDERLY: 300 mg once on day 1, then 1,000 mg on day 8, then 1,000 mg 7 wks later and q8wks thereafter up to a maximum of 2 yrs.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (20%–14%): Fever, cough, diarrhea, fatigue, rash. **Occasional (13%–5%):** Nausea, bronchitis, peripheral edema, nasopharyngitis, urticaria, insomnia, headache, sinusitis, muscle spasm, hypertension.

ADVERSE EFFECTS/TOXIC REACTIONS

Most common serious adverse reactions were bacterial, viral, fungal infections (including pneumonia and sepsis), septic

shock, neutropenia, thrombocytopenia. Infusion reactions occur more frequently with first 2 infusions. Severe infusion reactions manifested as angioedema, bronchospasm, dyspnea, fever, chills, back pain, hypotension. Progressive multifocal leukoencephalopathy may occur. Small bowel obstruction has been noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Screen pts at high risk of hepatitis B virus. Assess baseline CBC prior to therapy. Offer emotional support.

INTERVENTION/EVALUATION

Monitor renal function, electrolytes. Monitor CBC for evidence of myelosuppression during therapy, and increase frequency of monitoring in pts who develop Grade 3 or 4 cytopenia. Monitor for blood dyscrasias (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness). Closely monitor for infusion reactions.

PATIENT/FAMILY TEACHING

- Do not have immunizations without physician's approval (lowers body's resistance).
- Avoid contact with those who have recently received live virus vaccine.
- Avoid crowds, those with infection.
- Promptly report fever, sore throat, signs of infection.
- Report symptoms of infusion reactions (e.g., fever, chills, breathing problems, rash); bleeding, bruising, petechiae, worsening weakness or fatigue; new neurologic symptoms (e.g., confusion, loss of balance, vision problems); symptoms of hepatitis (e.g., fatigue, yellow discoloration of skin/eyes); worsening abdominal pain, nausea.

OLANzapine

oh-lan-za-peen

(Apo-OLANzapine , ZypREXA, ZypREXA Relprevv, ZypREXA Zydys)

BLACK BOX ALERT

Elderly pts with dementia-related psychosis are at increased risk for mortality due to cerebrovascular events. Sedation (including coma), delirium reported following use of ZypREXA Relprevv.

Do not confuse OLANzapine with olsalazine or QUETiapine, or ZypREXA with CeleXA or ZyrTEC.

FIXED-COMBINATION(S)

Symbyax: OLANzapine/FLUoxetine (an antidepressant): 6 mg/25 mg, 6 mg/50 mg, 12 mg/25 mg, 12 mg/50 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Second-generation (atypical) antipsychotic.
CLINICAL: Antipsychotic.

USES

PO: Management of manifestations of schizophrenia. Treatment of acute mania associated with bipolar I disorder as monotherapy or in combination with lithium or valproate. In combination with FLUoxetine: treatment of depressive episodes associated with bipolar I disorder and treatment of treatment-resistant bipolar depression. Maintenance treatment of bipolar I disorder. **IM: ZypREXA Intramuscular:** Controls acute agitation in schizophrenia and bipolar mania. **Relprevv:** Long-acting antipsychotic for IM injection for treatment of schizophrenia. **OFF-LABEL:** Prevention of chemotherapy-induced nausea/vomiting. Acute treatment of delirium. Treatment of anorexia nervosa, Tourette's syndrome, tic disorder.

PRECAUTIONS

Contraindications: Hypersensitivity to OLANzapine. **Cautions:** Disorders in which CNS depression is prominent; cardiac disease, hemodynamic instability, prior MI, ischemic heart disease; hyperlipidemia, pts at risk for aspiration pneumonia, decreased GI motility, urinary

retention, BPH, narrow-angle glaucoma, diabetes, elderly, pts at risk for suicide, Parkinson's disease, severe renal/hepatic impairment, predisposition to seizures.

ACTION

Antagonizes alpha₁-adrenergic, DOPA-mine, histamine, muscarinic, serotonin receptors. Produces anticholinergic, histaminic, CNS depressant effects. **Therapeutic Effect:** Diminishes psychotic symptoms through combined antagonism of dopamine and serotonin receptors.

PHARMACOKINETICS

Well absorbed after PO administration. Rapid absorption following IM administration. Protein binding: 93%. Widely distributed. Excreted in urine (57%), feces (30%). Not removed by dialysis.

Half-life: 21–54 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Use caution. Consider lower starting doses.

INTERACTIONS

DRUG: Alcohol, CNS depressants (e.g., LORazepam, morphine, zolpidem) may increase CNS depressant effects. **Anticholinergics** (e.g., acridinium, ipratropium, tiotropium, umeclidinium) may increase anticholinergic effect. **QT-prolonging agents** (e.g., amiodarone, haloperidol, moxifloxacin, sotalol) may cause QT interval prolongation. **HERBAL:** Herbals with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum GGT, cholesterol, prolactin, ALT, AST.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: (ZyPREXA): 10 mg. **Suspension for IM Injection:** (Relprevv): 210 mg, 300 mg, 405 mg. **Tablets:** (ZyPREXA): 2.5 mg, 5 mg, 7.5 mg, 10 mg, 15 mg, 20 mg. **Tablets,**

Orally Disintegrating: (ZyPREXA Zydys): 5 mg, 10 mg, 15 mg, 20 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

Orally Disintegrating

- Remove by peeling back foil (do not push through foil).
- Place in mouth immediately.
- Tablet dissolves rapidly with saliva and may be swallowed with or without liquid.

IM (ZyPREXA Intramuscular)

- Reconstitute 10-mg vial with 2.1 mL Sterile Water for Injection to provide concentration of 5 mg/mL.
- Use within 1 hr following reconstitution.
- Discard unused portion.

IM (Relprevv)

- Dilute to final concentration of 150 mg/mL.
- Shake vigorously to mix.
- Store at room temperature for up to 24 hrs.

INDICATIONS/ROUTES/DOSAGE

Schizophrenia

Note: Discontinue gradually to avoid withdrawal symptoms and reduce relapse. **PO: ADULTS, ELDERLY:** Initially, 5–10 mg once daily. May increase to 10 mg/day within 5–7 days. If further adjustments are indicated, may increase by 5 mg/day at 7-day intervals. **Maintenance:** 10–20 mg/day. **Maximum:** 20 mg/day. **CHILDREN 13 YRS AND OLDER:** Initially, 2.5–5 mg/day. Titrate in 2.5- or 5-mg increments at wkl intervals. Target dose: 10 mg. **Maximum:** 20 mg/day.

IM: (Long-Acting [Relprevv]): ADULTS, ESTABLISHED ON 10 MG/DAY ORALLY: 210 mg q2wks for 4 doses or 405 mg q4wks for 2 doses. **Maintenance:** 150 mg q2wks or 300 mg q4wks. **ESTABLISHED ON 15 MG/DAY ORALLY:** 300 mg q2wks for 4 doses. **Maintenance:** 210 mg q2wks or 405 mg q4wks. **ESTABLISHED ON 20 MG/DAY ORALLY:** 300 mg q2wks.

Depression Associated with Bipolar Disorder (with FLUoxetine)

PO: ADULTS, ELDERLY: Initially, 5 mg in evening. May increase dose in 5 mg increments at intervals of q1–7 days based on response and tolerability up to 15 mg/day (adjunctive therapy) or up to 20 mg/day (monotherapy).

CHILDREN 10–17 yrs: Initially, 2.5 mg once daily in evening. Adjust dose as tolerated.

Treatment-Resistant Depression (with FLUoxetine)

PO: ADULTS, ELDERLY: Initially, 5 mg in evening. May gradually increase dose based on response and tolerability up to 20 mg/day. Range: 5–20 mg/day.

Bipolar Mania

PO: ADULTS, ELDERLY: (Monotherapy): Initially, 10–15 mg/day. May increase by 5 mg/day at intervals of at least 24 hrs. Range: 5–20 mg/day. **Maximum:** 20 mg/day. **(In Combination with Lithium or Valproate):** Initially, 10 mg/day. Range: 5–20 mg/day. **CHILDREN 13 YRS OF AGE AND OLDER:** Initially, 2.5–5 mg/day. Adjust dose by 2.5–5 mg daily to target dose of 10 mg/day. Range: 2.5–20 mg/day.

Dosage for Elderly, Debilitated Pts, Pts Predisposed to Hypotensive Reactions

Initial dosage: 5 mg/day.

Control of Agitation

IM: ADULTS, ELDERLY: (Short-Acting): Initially, 5–10 mg. Additional doses (up to 10 mg) may be considered. However, allow at least 2 hrs (after initial dose) or 4 hrs (after second dose) to evaluate response. **Maximum:** 30 mg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (26%–10%): Drowsiness, agitation, insomnia, headache, nervousness, hostility, dizziness, rhinitis. **Occasional (9%–5%):** Anxiety, constipation, nonaggressive atypical behavior, dry mouth, weight gain, orthostatic hypotension, fever, arthralgia, restlessness, cough,

pharyngitis, visual changes (dim vision). **Rare:** Tachycardia; back, chest, abdominal, or extremity pain; tremor.

ADVERSE EFFECTS/TOXIC REACTIONS

Rare reactions include seizures, neuroleptic malignant syndrome, a potentially fatal syndrome characterized by hyperpyrexia, muscle rigidity, irregular pulse or B/P, tachycardia, diaphoresis, cardiac arrhythmias. Extrapyrarnidal symptoms (EPS), dysphagia may occur. Overdose (300 mg) produces drowsiness, slurred speech.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline LFT, serum glucose, weight, lipid profile before initiating treatment. Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content.

INTERVENTION/EVALUATION

Monitor B/P, serum glucose, lipids, LFT. Assess for tremors, changes in gait, abnormal muscular movements, behavior. Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess for therapeutic response (interest in surroundings, improvement in self-care, increased ability to concentrate, relaxed facial expression). Assist with ambulation if dizziness occurs. Assess sleep pattern. Notify physician if extrapyramidal symptoms (EPS) occur.

PATIENT/FAMILY TEACHING

- Avoid dehydration, particularly during exercise, exposure to extreme heat, concurrent use of medication causing dry mouth, other drying effects.
- Sugarless gum, sips of water may relieve dry mouth.
- Report suspected pregnancy.
- Take medication as prescribed; do not stop taking or increase dosage.
- Slowly go from lying to standing.
- Avoid alcohol.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Monitor diet, exercise program to prevent weight gain.

olaparib

oh-lap-a-rib
(Lynparza)

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: PARP inhibitor. **CLINICAL:** Antineoplastic.

USES

Capsules/Tablets: Treatment of deleterious or suspected deleterious germline BRCA-mutated advanced ovarian cancer in pts who have been treated with three or more prior lines of chemotherapy.

Tablets only: Maintenance treatment of adults with recurrent epithelial ovarian, fallopian tube or primary peritoneal cancer who are in complete or partial response to platinum-based chemotherapy. Treatment of germline BRCA-mutated, HER2-negative metastatic breast cancer in pts who have been treated with chemotherapy.

PRECAUTIONS

Contraindications: Hypersensitivity to olaparib. **Cautions:** Baseline anemia, neutropenia, lymphopenia, thrombocytopenia. History of pulmonary disease. Avoid concomitant use of strong or moderate CYP3A inhibitors, strong or moderate CYP3A inducers.

ACTION

Inhibits poly (ADP-ribose) polymerase (PARP) enzymes, involved in normal cellular hemostasis (e.g., DNA transcription, cell cycle regulation, and DNA repair). Disrupts cellular homeostasis, resulting in cell death. **Therapeutic Effect:** Inhibits tumor cell growth and metastasis.

PHARMACOKINETICS

Rapidly absorbed. Metabolized in liver. Protein binding: 82%. Peak plasma concentration: 1–3 hrs. Steady-state concentration: 3–4 days. Excreted in urine (44%), feces (42%). **Half-life:** 11.9 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm. Females of reproductive potential should use effective contraception during treatment and for at least 6 mos after discontinuation. Unknown if distributed in breast milk. Must either discontinue drug or discontinue breastfeeding. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A inhibitors (e.g., clarithromycin, ketoconazole, ritonavir), moderate CYP3A inhibitors (e.g., atazanavir, ciprofloxacin) may increase concentration/effect. Strong CYP3A inducers (e.g., carbamazepine), moderate CYP3A inducers (e.g., nafcillin) may decrease concentration/effect. **HERBAL:** Bitter orange may increase concentration/effect. **FOOD:** Grapefruit products, Seville oranges may increase concentration/effect. High-fat food may delay absorption. **LAB VALUES:** May increase mean corpuscular volume, serum creatinine. May decrease Hct, Hgb, lymphocytes, neutrophils, RBC.

AVAILABILITY (Rx)

Capsules: 50 mg. **Tablets:** 100 mg, 150 mg.

ADMINISTRATION/HANDLING

PO

Capsules: • Give without regard to food. • Administer capsules whole; do not break, cut, crush, or open. **Tablets:** May give with or without food. Administer tablet whole; do not break, cut, crush, or divide.

INDICATIONS/ROUTES/DOSAGE

Note: Do not substitute tablets with capsules on a mg to mg basis.

Ovarian Cancer

PO: ADULTS, ELDERLY: (**Capsule**): 400 mg twice daily. Continue until disease

progression or unacceptable toxicity. If a dose is missed, give next dose at its scheduled time. (**Tablet**): 300 mg (2×150 mg) twice daily (100-mg tablets available for dose reduction). **Maintenance:** (**Tablets only**): 300 mg (2×150 mg) twice daily (100-mg tablets available for dose reduction). Pts with complete response at 2 yrs should discontinue treatment. Pts with evidence of disease at 2 yrs may continue treatment beyond 2 yrs.

Breast Cancer (metastatic, HER2-negative, BRCA-mutated)

PO: ADULTS, ELDERLY: (**Tablet**): 300 mg (2×150 mg) twice daily. Continue until disease progression or unacceptable toxicity.

Dose Modification

Dose Reduction for Adverse Reactions

PO: ADULTS, ELDERLY: Interrupt treatment until resolved. Then, decrease to 200 mg twice daily. If further dose reduction is indicated, decrease to 100 mg twice daily.

Concomitant Use of Strong CYP3A Inhibitors

PO: ADULTS, ELDERLY: 150 mg twice daily.

Concomitant Use of Moderate CYP3A Inhibitors

PO: ADULTS, ELDERLY: 200 mg twice daily.

Dosage in Renal Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment:** Not specified; use caution.

Dosage in Hepatic Impairment

Not specified; use caution.

SIDE EFFECTS

Frequent (66%–21%): Fatigue, asthenia, nausea, vomiting, abdominal pain, diarrhea, dyspepsia, decreased appetite, headache, back pain, rash, myalgia, arthralgia, musculoskeletal pain, dysgeusia, cough.

ADVERSE EFFECTS/TOXIC REACTIONS

Myelodysplastic syndrome/acute myeloid leukemia reported in 2% of pts. Pneumonitis, including fatal cases, occurred in less than 1% of pts. Respiratory tract infections including nasopharyngitis, pharyngitis, upper respiratory tract infection occurred in 43% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC. Do not initiate therapy until pts have recovered from hematologic toxicities caused by previous chemotherapy. Question history of pulmonary disease. Receive full medication history and screen for interactions. Offer emotional support.

INTERVENTION/EVALUATION

Monitor CBC monthly. For prolonged hematologic toxicities, interrupt treatment and monitor CBC w/ky until recovery. If hematologic levels have not recovered to CTCAE Grade 1 or 0 after 4 wks of treatment interruption, consider hematology consultation for further investigations such as bone marrow analysis and blood sample for cytogenetics. Monitor for myelodysplastic syndrome/acute myeloid leukemia, pneumonitis.

PATIENT/FAMILY TEACHING

- Report bleeding or bruising easily, bloody urine or stool, frequent infections, fatigue, shortness of breath, weakness, weight loss; may indicate acute bone marrow suppression or acute leukemia.
- Report new or worsening respiratory symptoms such as cough, difficulty breathing, fever, wheezing; may indicate severe lung inflammation.
- Do not ingest grapefruit product, Seville oranges.
- Do not take herbal products.
- Avoid pregnancy; treatment may cause birth defects or miscarriage. Do not breastfeed. Females of childbearing potential should use effective contraception during treatment and for at least 6 mos after stopping therapy.

olaratumab

oh-lar-at-ue-mab
(Lartruvo)

Do not confuse olaratumab with elotuzumab, obinutuzumab.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Platelet-derived growth factor receptor (PDGFR) alpha blocker. Monoclonal antibody. **CLINICAL:** Antineoplastic.

USES

Treatment of adult pts with soft tissue sarcoma (STS), in combination with doxorubicin, with a histologic subtype for which an anthracycline-containing regimen is appropriate and which is not amendable to curative treatment with radiotherapy or surgery.

PRECAUTIONS

Contraindications: Hypersensitivity to olaratumab. **Cautions:** Electrolyte imbalance, pts at risk for hyperglycemia (e.g., diabetes, recent surgery, chronic use of corticosteroids).

ACTION

A human IgG-1 antibody that binds to PDGFR-alpha. Blocks receptor activation and disrupts PDGF receptor signaling. PDGFR alpha receptor plays a role in cell differentiation, growth, and angiogenesis. **Therapeutic Effect:** Exhibits antitumor activity.

PHARMACOKINETICS

Widely distributed. Metabolism not specified. Excretion not specified. **Half-life:** 11 days (range: 6–24 days).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm/malformations. Females of reproductive potential must use effective contraception during treatment and up to 3 mos after

discontinuation. Unknown if distributed in breast milk. Breastfeeding not recommended during treatment and for at least 3 mos after discontinuation. **Children:** Safety and efficacy not established. **Elderly:** Not specified; use caution.

INTERACTIONS

DRUG: May decrease therapeutic effect of BCG (intravesical). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, glucose. May decrease lymphocytes, neutrophils, platelets; serum phosphate, potassium, magnesium. May prolong aPTT.

AVAILABILITY (Rx)

Injection Solution: 190 mg/19 mL, 500 mg/50 mL.

ADMINISTRATION/HANDLING

Preparation • Visually inspect for particulate matter or discoloration. Solution should appear clear to slightly opalescent, colorless to slightly yellow in color. • Do not use if solution is cloudy, discolored, or if visible particles are observed. • Withdraw required dose from vial and dilute into 250 mL 0.9% NaCl bag. • Mix by gently inversion. • Do not shake or agitate. • Discard used portions from vial.

Infusion guidelines • Do not give IV push or bolus. • Do not mix or infuse with other medications, electrolytes. • Flush IV line with 0.9% NaCl after completion of infusion.

Rate of administration • Infuse over 60 min via dedicated IV line.

Storage • May refrigerate diluted solution up to 24 hrs or store at room temperature for up to 4 hrs (includes infusion time). • Do not freeze. • If diluted solution is refrigerated, allow to warm to room temperature before administration. • Discard solution if

not administered within required time frame.

IV INCOMPATIBILITIES

Do not dilute in dextrose-containing solutions.

INDICATIONS/ROUTES/DOSAGE

Note: Premedicate with diphenhydramine 25–50 mg IV and dexamethasone 10–20 mg IV on day 1 of cycle 1.

Soft Tissue Sarcoma

IV: ADULTS, ELDERLY: 15 mg/kg on days 1 and 8 of each 21-day cycle. Administer with doxorubicin for the first 8 cycles (see manufacturer guidelines). After 8 cycles are completed, continue olaratumab as a single agent. Continue until disease progression or unacceptable toxicity.

Dose Modification

Infusion Reaction

CTCAE Grade 1 or 2 infusion reaction: Interrupt infusion until symptoms resolve, then resume infusion at 50% of the initial infusion rate. **CTCAE Grade 3 or 4 infusion reaction:** Immediately stop infusion; do not restart.

Neutropenia

Neutropenic fever/infection; CTCAE Grade 4 neutropenia lasting greater than 1 wk: Withhold treatment until ANC 1000 cells/mm³ or greater, then reduce dose to 12 mg/kg. Do not increase dose for subsequent infusions.

Dosage in Renal/Hepatic Impairment

Not specified; use caution.

SIDE EFFECTS

Frequent (73%–22%): Nausea, fatigue, asthenia, musculoskeletal pain, arthralgia, back pain, bone pain, flank pain, groin pain, musculoskeletal chest pain, myalgia, muscle spasm, neck pain, extremity pain, mucositis, alopecia, vomiting, diarrhea, decreased appetite, abdominal pain, neuropathy.

Occasional (20%–11%): Headache, anxiety, dry eyes.

ADVERSE EFFECTS/TOXIC REACTIONS

Neutropenia, lymphopenia, thrombocytopenia are expected responses to therapy. Life-threatening infusion-related reactions including anaphylaxis, bronchospasm, cardiac arrest, chills, dyspnea, hypotension, pyrexia occurred in 14% of pts. CTCAE Grade 3 or 4 infusion-related reactions occurred in 2% of pts. Immunogenicity (auto anti-olaratumab antibodies) reported in 3.5% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain ANC, CBC, BMP. Obtain pregnancy test in females of reproductive potential. Question history of hypersensitivity reactions, infusion-related reactions; diabetes. Ensure that proper resuscitative equipment, medications are readily available (e.g., albuterol, antipyretics, antihistamines, epinephrine; isotonic IV fluids; bag-valve mask, oxygen, rapid sequence intubation kit). Assess nutritional/hydration status. Offer emotional support.

INTERVENTION/EVALUATION

Monitor ANC, CBC for neutropenia, lymphopenia, thrombocytopenia; BMP for electrolyte imbalance; vital signs. Diligently monitor for infusion-related reactions. If severe or life-threatening reactions occur, immediately stop infusion and provide appropriate medical support. Due to risk of respiratory compromise, pts with bronchospasm, dyspnea, hypoxia should be given immediate supplemental oxygen, hypersensitivity medications, hemodynamic support. Mild to moderate infusion reactions may require interruption of infusion, decrease of infusion rate, symptom management. Offer antiemetic if nausea, vomiting occurs. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

- Life-threatening infusion reactions, allergic reactions, cardiac arrest may

occur during infusion. Immediately report difficulty breathing, chest pain, chest tightness, chills, dizziness, fast heart rate, fever, flushing, headache, hives, itching, low blood pressure, nausea, throat pain or swelling, rash. • Treatment may depress your immune system and reduce your ability to fight infection. Report symptoms of infection such as body aches, burning with urination, chills, cough, fatigue, fever. Avoid those with active infection. • Females of child-bearing potential should use effective contraception during treatment and for at least 3 mos after last dose. Do not breastfeed. • Generalized pain is an expected side effect. • Treatment may cause severe diarrhea. Drink plenty of fluids. • Hair loss is an expected side effect of therapy.

olmesartan

TOP
100

ol-me-sar-tan

(Benicar, Olmetec )

BLACK BOX ALERT May cause fetal injury, mortality. Discontinue as soon as possible once pregnancy is detected.

Do not confuse Benicar with Mevacor.

FIXED-COMBINATION(S)

Azor: olmesartan/amLODIPine (calcium channel blocker): 20 mg/5 mg, 40 mg/5 mg, 20 mg/10 mg, 40 mg/10 mg. **Benicar HCT:** olmesartan/hydroCHLOROthiazide (a diuretic): 20 mg/12.5 mg, 40 mg/12.5 mg, 40 mg/25 mg. **Tribenzor:** olmesartan/hydroCHLOROthiazide/amLODIPine: 20 mg/12.5 mg/5 mg, 40 mg/12.5 mg/5 mg, 40 mg/25 mg/5 mg, 40 mg/12.5 mg/10 mg, 40 mg/25 mg/10 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin II receptor antagonist. **CLINICAL:** Antihypertensive.

USES

Treatment of hypertension alone or in combination with other antihypertensives.

PRECAUTIONS

Contraindications: Hypersensitivity to olmesartan. Concomitant use with aliskiren in pts with diabetes. **Cautions:** Renal impairment, unstented unilateral or bilateral renal arterial stenosis, significant aortic/mitral stenosis. Concurrent potassium supplements; pts who are volume depleted.

ACTION

Blocks vasoconstrictor, aldosterone-secreting effects of angiotensin II by inhibiting binding of angiotensin II to AT₁ receptors in vascular smooth muscle. **Therapeutic Effect:** Causes vasodilation, decreases peripheral resistance, decreases B/P.

PHARMACOKINETICS

Moderately absorbed after PO administration. Hydrolyzed in GI tract to olmesartan. Protein binding: 99%. Excreted in urine (35%–50%), remainder in feces. Not removed by hemodialysis. **Half-life:** 13 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established in children younger than 6 yrs of age. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: NSAIDs (e.g., ibuprofen, naproxen) may decrease antihypertensive effect. Aliskiren may increase hypokalemic effect. May increase adverse effects of ACE inhibitors (e.g., benazepril, lisinopril). **HERBAL:** Herbals with hypertensive properties (e.g., licorice, yohimbe) or hypotensive properties (e.g., garlic, ginger, ginkgo biloba) may alter effects. **FOOD:** None known. **LAB VALUES:** May slightly decrease Hgb, Hct. May increase serum BUN, creatinine, bilirubin, ALT, AST.

AVAILABILITY (Rx)

Tablets: 5 mg, 20 mg, 40 mg.

ADMINISTRATION/HANDLING**PO**

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE**Hypertension**

PO: ADULTS, ELDERLY: Initially, 20 mg/day. May increase to 40 mg/day after 2 wks. Lower initial dose may be necessary in pts receiving volume-depleting medications (e.g., diuretics). **CHILDREN 6–16 YRS, WEIGHING 20 TO LESS THAN 35 KG:** Initially, 10 mg once daily. Range: 10–20 mg once daily. **WEIGHING 35 KG OR MORE:** Initially, 20 mg once daily. Range: 20–40 mg once daily. Use with caution.

Dosage in Renal/Hepatic Impairment

Use caution.

SIDE EFFECTS

Occasional (3%): Dizziness. **Rare (less than 2%):** Headache, diarrhea, upper respiratory tract infection.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdosage may manifest as hypotension, tachycardia. Bradycardia occurs less often. Rare cases of rhabdomyolysis have been reported.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain B/P, apical pulse immediately before each dose in addition to regular monitoring (be alert to fluctuations). If excessive reduction in B/P occurs, place pt in supine position, feet slightly elevated. Question for possibility of pregnancy. Assess medication history (esp. diuretics).

INTERVENTION/EVALUATION

Maintain hydration. Assess for evidence of upper respiratory infection. Assist with ambulation if dizziness occurs. Monitor serum potassium level. Assess B/P for hypertension, hypotension.

PATIENT/FAMILY TEACHING

- Maintain adequate hydration.
- Avoid pregnancy.
- Avoid tasks that require alertness, motor skills until response to drug is established (possible dizziness effect).
- Report any signs of infection (sore throat, fever).
- Therapy requires lifelong control, diet, exercise.

olodaterol

oh-loe-da-ter-ol
(Striverdi Respimat)

BLACK BOX ALERT Long-acting beta₂-adrenergic agonists (LABA) increase risk of asthma-related deaths. Not indicated for treatment of asthma.

Do not confuse olodaterol with albuterol, indacaterol, formoterol, or salmeterol.

FIXED-COMBINATION(S)

Stiolto Respimat: olodaterol/tiotropium (bronchodilator): 2.5 mcg/2.5 mcg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Sympathomimetic (beta₂-adrenergic agonist). **CLINICAL:** Bronchodilator.

USES

Long-term, once-daily maintenance bronchodilator treatment of airflow obstruction in pts with chronic obstructive pulmonary disease (COPD), including chronic bronchitis and emphysema. Not indicated in asthma, acute deterioration of COPD.

PRECAUTIONS

Contraindications: Hypersensitivity to olodaterol. Asthma without use of long-term asthma control medication, history of hypersensitivity to sympathomimetics. **Cautions:** Diabetes, ketoacidosis, cardiovascular disorders (e.g., coronary insufficiency, arrhythmias, hypertension, hypertrophic obstructive

cardiomyopathy), seizure disorder, hyperthyroidism; history of severe bronchospasm, long QT syndrome, electrolyte imbalance.

ACTION

Stimulates beta₂-adrenergic receptors in lungs, resulting in relaxation of bronchial smooth muscle. **Therapeutic Effect:** Relieves bronchospasm, reduces airway resistance, improves bronchodilation.

PHARMACOKINETICS

Rapidly absorbed following inhalation. Extensively distributed in tissue. Metabolized in liver. Protein binding: 60%. Peak plasma concentration: 10–20 min. Excreted in urine. **Half-life:** 45 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Excretion into breast milk is probable. Breastfeeding not recommended. May interfere with uterine contractility. **Children:** Safety and efficacy not established. **Elderly:** No age-related precaution noted.

INTERACTIONS

DRUG: Beta blockers (e.g., metoprolol) may decrease therapeutic effect, cause bronchospasms. Beta₂-adrenergic agonists (e.g., salmeterol) may potentiate sympathomimetic effects. **Linezolid** may increase hypertensive effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum glucose. May decrease serum potassium.

AVAILABILITY (Rx)

Inhalation Spray (2.5 mcg/actuation): 28 metered actuations/cartridge with inhaler, 60 metered actuations/cartridge with inhaler.

ADMINISTRATION/HANDLING

Inhalation

- While taking slow, deep breath through the mouth, press and release button and continue slow inhalation as

long as possible. (See manufacturer guidelines for priming instructions and further information.)

INDICATIONS/ROUTES/DOSAGE

COPD

Inhalation: ADULTS, ELDERLY: Two inhalations (2.5 mcg per inhalation for total of 5 mcg) once daily, at same time each day. **Maximum:** 5 mcg within 24-hr period.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Use caution.

SIDE EFFECTS

Occasional (11%–4%): Nasopharyngitis, upper respiratory tract infection, bronchitis, cough, back pain. **Rare (3%–2%):** Dizziness, insomnia, dry mouth, arthralgia, urinary retention.

ADVERSE EFFECTS/TOXIC REACTIONS

Life-threatening asthma-related events, bronchospasm, or worsening of COPD-related symptoms have been reported. Serious cardiovascular events including arrhythmias, angina pectoris, cardiac arrest, hypertension, tachycardia; flattening of T wave, prolongation of QTc interval, ST segment depression have occurred. All beta-adrenergic agonists carry risk of hypoglycemia or significant hypokalemia. Pts with severe COPD or hypokalemia have additional increased risk of adverse effects related to hypoxia and concomitant medications.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain ABG, capillary glucose, O₂ saturation, serum potassium level, vital signs; ECG, pulmonary function test if applicable. Assess respiratory rate, depth, rhythm. Assess lung sounds for wheezing,

rates. Receive full medication history and screen for drug interactions. Question history of asthma, cardiovascular disease, diabetes, long QT syndrome, seizure disorder. Teach proper inhaler priming and administration techniques.

INTERVENTION/EVALUATION

Routinely monitor capillary glucose, O₂ saturation, serum potassium level, vital signs. Auscultate lung sounds. Obtain ECG for palpitation, tachycardia; symptomatic hypokalemia. Recommend discontinuation of short-acting beta₂-agonists (use only for symptomatic relief of acute respiratory symptoms). Monitor for hypoglycemia.

PATIENT/FAMILY TEACHING

- Refill prescription when dose indicator on left of inhaler reaches red area of scale.
- Follow manufacturer guidelines for proper use of inhaler.
- Drink plenty of fluids (decreases lung secretion viscosity).
- Rinse mouth with water after inhalation to decrease mouth/throat irritation.
- Avoid excessive use of caffeine derivatives (chocolate, coffee, tea, cola).
- Report fever, productive cough, body aches, difficulty breathing; may indicate lung infection or worsening of COPD.

omacetaxine

oh-ma-se-tax-een
(Synribo)

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Protein synthesis inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of adult pts with chronic or accelerated phase chronic myeloid leukemia (CML) with resistance and/or intolerance to two or more tyrosine kinase inhibitors.

PRECAUTIONS

Contraindications: Hypersensitivity to omacetaxine. **Cautions:** Glucose intolerance, poorly controlled diabetes, elderly, recent GI bleeding. Avoid all use of anticoagulants, aspirin, NSAIDs; all pts with baseline platelets less than 50,000 cells/mm³.

ACTION

Inhibits protein synthesis of Bcr-Abl tyrosine kinase, a translocation-created enzyme, created by the Philadelphia chromosome abnormality noted in chronic myeloid leukemia (CML). **Therapeutic Effect:** Inhibits tumor proliferation and growth during accelerated and chronic stages of CML.

PHARMACOKINETICS

Rapidly absorbed following SQ administration. **Maximum concentration:** 30 min. Protein binding: Less than 50%. Hydrolyzed via plasma esterases. **Half-life:** 6 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Not recommended in nursing mothers. Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Increased risk for toxicity (e.g., hematologic).

INTERACTIONS

DRUG: NSAIDs (e.g., ibuprofen, ketorolac, naproxen), anticoagulants (e.g., heparin, warfarin), aspirin, antiplatelets (e.g., clopidogrel) may increase risk for bleeding. **HERBAL:** Echinacea may decrease levels/effects. **FOOD:** None known. **LAB VALUES:** May decrease platelets, Hgb, Hct, leukocytes, lymphocytes. May increase serum ALT.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 3.5-mg vial.

ADMINISTRATION/HANDLING

⚠️ ALERT Must be administered by health care workers trained in proper

chemotherapy handling and disposal procedures.

SQ

Reconstitution • Reconstitute with 1 mL 0.9% NaCl. • Gently swirl until powder is completely dissolved. • Inspect vial for particulate matter or discoloration. • Reconstituted vial will provide a concentration of 3.5 mg/mL. • Avoid contact with skin.

Storage • Solution should appear clear. • May store solution at room temperature for up to 12 hrs or may refrigerate up to 24 hrs. • Discard unused solution.

INDICATIONS/ROUTES/DOSAGE

Note: If dose is missed, skip dose and resume next regularly scheduled dose.

Chronic or Accelerated Myeloid Leukemia

SQ: ADULTS, ELDERLY: Induction dose: 1.25 mg/m² twice daily for 14 consecutive days every 28 days, over 28-day cycle. Continue induction dose until hematologic response achieved. **Maintenance dose:** 1.25 mg/m² twice daily for 7 consecutive days every 28 days of a 28-day cycle. Continue until no longer achieving clinical treatment benefit.

Dosage Modification

Hematologic toxicity: If neutrophils less than 500 cells/mm³ or platelets less than 50,000 cells/mm³, interrupt therapy. Restart when neutrophil count greater than or equal to 1000 cells/mm³ or platelet count greater than or equal to 50,000 cells/mm³ and reduce number of dosing days by 2. **Nonhematologic toxicity:** Interrupt therapy until toxicity/adverse effects resolved. Continue indefinitely until pt no longer benefits from therapy.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Chronic Phase

Frequent (45%–25%): Diarrhea, nausea, fatigue, pyrexia, asthenia. **Occasional**

(20%–11%): Headache, arthralgia, cough, epistaxis, alopecia, constipation, abdominal pain, peripheral edema, vomiting, back pain, insomnia, rash.

Accelerated Phase

Occasional (19%–7%): Diarrhea, nausea, fatigue, pyrexia, asthenia, vomiting, cough, abdominal pain, chills, anorexia, headache. **Rare (7% or less):** Dyspnea, epistaxis.

ADVERSE EFFECTS/TOXIC REACTIONS

Thrombocytopenia, neutropenia, leukopenia, lymphopenia, or myelosuppression is an expected response to therapy, but more severe reactions including bone marrow failure, febrile neutropenia may result in life-threatening events. Pts with neutropenia are at increased risk for infection. Thrombocytopenia may increase risk for intracranial hemorrhage, GI bleeding. Hyperglycemic events including hyperglycemic hyperosmolar nonketotic syndrome (HHNK) may occur. Pts with uncontrolled diabetes are at increased risk for hyperglycemic emergency.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline serum chemistries, CBC, PT/INR if on anticoagulants. Question for possibility of pregnancy, current breastfeeding status. Obtain negative urine pregnancy before initiating treatment. Obtain full medication history including herbal products, anticoagulants. Question for history of diabetes, GI bleeding. Offer emotional support.

INTERVENTION/EVALUATION

Monitor CBC w/ky, then q2wks during maintenance phase. Obtain frequent blood glucose levels, especially in diabetic pts. Do not initiate therapy until negative urine pregnancy confirmed. Monitor LFT if hepatic impairment suspected. If drug exposure occurs, immediately wash affected area with soap and

water. Consider isolation protocol if pt develops neutropenia.

PATIENT/FAMILY TEACHING

- Report if pregnant or planning to become pregnant.
- Use barrier methods during sexual activity.
- Strictly avoid pregnancy.
- May cause male infertility.
- Immediately report yellowing of skin or eyes, abdominal pain, bruising, black/tarry stools, dark urine, dehydration, GI bleeding, nausea, vomiting, rash.
- Report fever, cough, night sweats, flu-like symptoms, skin changes.
- Shortness of breath, pale skin, weakness may indicate bleeding or severe myelosuppression.
- Avoid tasks that require alertness, motor skills until response to drug is established.

omadacycline

oh-mad-a-sye-kleen
(Nuzyra)

Do not confuse omadacycline with doxycycline, minocycline, tigecycline, or tetracycline, or Nuzyra with Ampyra or Lucemyra.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Tetracycline. **CLINICAL:** Antibiotic.

USES

Treatment of adults with community-acquired bacterial pneumonia (CABP) caused by susceptible organisms: *Streptococcus pneumoniae*, *Staphylococcus aureus* (methicillin-susceptible isolates), *Haemophilus influenzae*, *Haemophilus parainfluenzae*, *Klebsiella pneumoniae*, *Legionella pneumophila*, *Mycoplasma pneumoniae*, and *Chlamydophila pneumoniae*. Treatment of adults with acute bacterial skin and skin structure infections (ABSSSI) caused by susceptible

organisms: *Staphylococcus aureus* (methicillin-susceptible and -resistant isolates), *Staphylococcus lugdunensis*, *Streptococcus anginosus* group (including *S. anginosus*, *S. intermedius*, *S. constellatus*), *Enterococcus faecalis*, *Enterobacter cloacae*, and *Klebsiella pneumoniae*.

PRECAUTIONS

Contraindications: Hypersensitivity to omadacycline, other tetracyclines. **Cautions:** History or predisposition to candidiasis infection; recent *Clostridium difficile* infection or antibiotic-associated colitis; history of pancreatitis. Avoid use during pregnancy or during tooth development in children.

ACTION

Inhibits bacterial protein synthesis by binding to 30S ribosomal subunit. **Therapeutic Effect:** Bacteriostatic.

PHARMACOKINETICS

Widely distributed. Not systemically metabolized. Protein binding: 20%. Excreted in feces (76%–84%), urine (14%). **Half-life:** 13.5–16.8 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm. Female pts of reproductive potential should use effective contraception during treatment. Fetal tooth discoloration, enamel hypoplasia, inhibited bone growth may occur in neonates when given in second or third trimester. Unknown if distributed in breast milk or crosses the placenta; however, other tetracyclines are secreted in breast milk and are known to cross the placenta. Breastfeeding not recommended during treatment and up to 4 days after discontinuation. **Children:** Safety and efficacy not established in pts 8 yrs and younger. **Elderly:** May have increased risk of treatment-related mortality imbalance when administered for community-acquired bacterial pneumonia.

INTERACTIONS

DRUG: Antacids containing aluminum, calcium, magnesium; bismuth subsalicylate, iron preparations, multivitamins, bile acid sequestrants (e.g., cholestyramine), sucralfate may decrease absorption/concentration. **HERBAL:** None significant. **FOOD:** Food, dairy products decrease absorption/concentration. **LAB VALUES:** May increase serum ALT, AST. May decrease Hgb.

AVAILABILITY (Rx)

Tablets: 150 mg. **Injection, Powder for Reconstitution:** 100 mg.

ADMINISTRATION/HANDLING

PO

- Give with water after pt has fasted for at least 4 hrs. No food or drink (except water) may be consumed for at least 2 hrs after administration.
- Do not give multivitamins, antacid, or dairy products for at least 4 hrs.

IV

Reconstitution • Calculate the number of vials required for dose (2 vials for 200-mg dose, 1 vial for 100-mg dose). • Reconstitute each 100 mg vial with 5 mL Sterile Water for injection, 0.9% NaCl, or 5% Dextrose injection. • Gently swirl vial until completely dissolved. Do not shake or agitate. • Allow vial to stand until foam disperses. • Visually inspect for particulate matter or discoloration. Solution should appear yellow to dark orange in color. Do not use if solution is discolored. • Dilute in 100-mL infusion bag containing 0.9% NaCl or 5% Dextrose Injection for a final concentration of 1 mg/mL or 2 mg/mL.

Infusion guidelines • Infuse via dedicated IV line or a Y-site. • Flush infusion line with 0.9% NaCl or 5% Dextrose Injection before and after administration if infusion line is used for sequential infusions of several drugs.

Rate of administration • Infuse 200-mg dose over 60 min or 100-mg dose over 30 min.

Storage • Store unused vials at room temperature. • May refrigerate diluted solution for up to 7 days or store at room temperature for no more than 12 hrs.

IV INCOMPATIBILITIES

Do not mix with infusion solutions containing multivalent cations (e.g., calcium, magnesium).

INDICATIONS/ROUTES/DOSAGE

Community-Acquired Bacterial Pneumonia

Note: An initial IV loading dose is recommended.

IV/PO: ADULTS, ELDERLY: 200 mg IV on day 1 or 100 mg twice on day 1 (as loading dose). **Maintenance:** 100 mg IV once daily or 300 mg PO once daily for 7–14 days.

Acute Bacterial Skin/Skin Structure Infections

IV: ADULTS, ELDERLY: 200 mg on day 1 or 100 mg twice on day 1 (as loading dose). **Maintenance:** 100 mg once daily for 7–14 days.

PO: ADULTS, ELDERLY: 450 mg once daily on day 1 and 2 (as loading dose). **Maintenance:** 300 mg once daily for 7–14 days.

Dosage in Renal Impairment

Mild to severe impairment: No dose adjustment.

Dosage in Hepatic Impairment

Mild to severe impairment: No dose adjustment.

SIDE EFFECTS

Frequent (21%): Nausea. **Occasional (11%–5%):** Vomiting, infusion reactions (extravasation, pain, erythema, inflammation, swelling, irritation, peripheral swelling and induration). **Rare (3%–less than 2%):** Headache, diarrhea, vertigo, tachycardia, abdominal pain, dyspepsia, fatigue, oral pharyngeal pain, pruritus, erythema, hyperhidrosis, urticaria.

ADVERSE EFFECTS/TOXIC REACTIONS

Serious hypersensitivity reactions, including anaphylaxis, may occur. Tooth discoloration and enamel hypoplasia may occur when given during tooth development (second or third trimester, infancy, childhood up to 8 yrs of age). May inhibit bone growth when given in second or third trimester, infancy, and childhood up to 8 yrs of age. *Clostridium difficile*-associated diarrhea, with severity ranging from mild diarrhea to fatal colitis, was reported. *C. difficile* infection may occur more than 2 mos after discontinuation. May increase risk of development of drug-resistant bacteria or superinfection when used in the absence of a proven or strongly suspected bacterial infection. Other adverse reactions such as acidosis, atrial fibrillation, azotemia, hyperphosphatemia, mycotic infections, pancreatitis, pancreatic necrosis, pleural effusion, oral candidiasis, transaminitis, elevated BUN have occurred with other tetracyclines and may occur with omadacycline.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question history of hypersensitivity to tetracycline, sulfites; predisposition to candidiasis infection; pancreatitis. Question pt's usual stool characteristics (color, frequency, consistency). Confirm compliance of effective contraception. Receive full medication history and screen for interactions.

INTERVENTION/EVALUATION

Monitor for hypersensitivity reactions, anaphylaxis (dyspnea, hypotension, rash, angioedema, tachycardia). Monitor daily pattern of bowel activity, stool consistency (increased severity may indicate antibiotic-associated colitis). If frequent diarrhea occurs, obtain *C. difficile* toxin test and initiate isolation precautions until test result is confirmed; manage proper fluid intake, electrolyte

levels, protein intake. Due to prolonging effect of prothrombin activity, dosage of anticoagulants may need to adjusted and monitored.

PATIENT/FAMILY TEACHING

- It is essential to complete drug therapy despite improvement of symptoms. Early discontinuation may result in antibacterial resistance or increase the risk of recurrent infection.
- Frequent diarrhea, fever, abdominal pain, blood-streaked stool may indicate infectious diarrhea and may be contagious to others.
- Severe allergic reactions such as dizziness, hives, palpitations, rash, shortness of breath, tongue-swelling may occur.
- Nausea is a common side effect.
- Persistent, severe abdominal pain that radiates to the back (with or without vomiting) may indicate acute inflammation of the pancreas.
- Take on an empty stomach. Fasting is recommended for 4 hrs before and 2 hrs after taking tablet.
- Do not take antacids, multivitamins, dairy products for at least 4 hrs after taking tablet.
- Avoid pregnancy; may cause fetal harm. Female pts of reproductive potential should use effective contraception during treatment. Do not breastfeed.

omalizumab

TOP
100

oh-ma-liz-ue-mab
(Xolair)

BLACK BOX ALERT Anaphylaxis (severe bronchospasm, hypotension, angioedema, syncope, urticaria) has occurred after first dose and in some cases after 1 yr of regular treatment.

Do not confuse omalizumab with ofatumumab.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Antiasthmatic.

USES

Treatment of moderate to severe persistent asthma in adults and children 6 yrs of age and older reactive to perennial allergens and with symptoms inadequately controlled with inhaled corticosteroids. Chronic idiopathic urticaria in adults and children 12 yrs and older.

PRECAUTIONS

Contraindications: Hypersensitivity to omalizumab. Do not use to treat acute bronchospasm, status asthmaticus. **Cautions:** Pts at risk for parasitic infections.

ACTION

Selectively binds to human immunoglobulin E (IgE). Inhibits binding of IgE on surface of mast cells, basophils. **Therapeutic Effect:** Prevents/reduces number of asthmatic attacks and corticosteroid use.

PHARMACOKINETICS

Absorbed slowly after SQ administration, with peak concentration in 7–8 days. Excreted primarily via hepatic degradation. **Half-life:** 26 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Because IgE is present in breast milk, omalizumab is expected to be present in breast milk. Use only if clearly needed. **Children:** Safety and efficacy not established in pts younger than 6 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May enhance the adverse/toxic effects of **belimumab**, **loxapine**. **HERBAL:** **Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase serum IgE levels.

AVAILABILITY (Rx)

Injection, Prefilled Syringe: 75 mg/0.5 mL, 150 mg/mL. **Injection, Powder for Reconstitution:** 150 mg/1.2 mL after reconstitution.

ADMINISTRATION/HANDLING

SQ

Reconstitution • Use only Sterile Water for Injection to prepare for SQ administration. • Medication takes 15–20 min to dissolve. • Draw 1.4 mL Sterile Water for Injection into 3-mL syringe with 1-inch, 18-gauge needle; inject contents into powdered vial. • Swirl vial for approximately 1 min (do not shake) and again swirl vial for 5–10 sec every 5 min until no gel-like particles appear in the solution. • Do not use if contents do not dissolve completely within 40 min. • Invert vial for 15 sec (allows solution to drain toward the stopper). • Using new 3-mL syringe with 1-inch 18-gauge needle, obtain required 1.2-mL dose, replace 18-gauge needle with 25-gauge needle for SQ administration.

Rate of administration • SQ administration may take 5–10 sec to administer due to its viscosity.

Storage • Use only clear or slightly opalescent solution; solution is slightly viscous. • Refrigerate. • Reconstituted solution is stable for 8 hrs if refrigerated or within 4 hrs of reconstitution when stored at room temperature.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Give only under direct medical supervision. Should be administered in health care setting by health professionals. Dosage and frequency of administration are based upon total IgE levels and body weight (see table). IgE levels should be measured prior to initiating treatment and not during treatment. Pts should be observed a minimum of 2 hrs following each omalizumab treatment.

Asthma

SQ: ADULTS, ELDERLY, CHILDREN 6 YRS AND OLDER: 75–375 mg every 2 or 4 wks; dose and dosing frequency are individualized based on body weight and pretreatment IgE level (as shown

in table). (Consult specific product labeling.)

Dosing not dependent on IgE level or body weight.

Chronic Idiopathic Urticaria

SQ: ADULTS, CHILDREN 12 YRS AND OLDER: 150 mg or 300 mg q4wks.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

4-Wk Dosing Table

Pretreatment Serum IgE Levels (units/mL)	Weight 30–60 kg	Weight 61–70 kg	Weight 71–90 kg	Weight 91–150 kg
30–100	150 mg	150 mg	150 mg	300 mg
101–200	300 mg	300 mg	300 mg	See next table
201–300	300 mg	See next table	See next table	See next table

2-Wk Dosing Table

Pretreatment Serum IgE Levels (units/mL)	Weight 30–60 kg	Weight 61–70 kg	Weight 71–90 kg	Weight 91–150 kg
101–200	See preceding table	See preceding table	See preceding table	225 mg
201–300	See preceding table	225 mg	225 mg	300 mg
301–400	225 mg	225 mg	300 mg	Do not dose
401–500	300 mg	300 mg	375 mg	Do not dose
501–600	300 mg	375 mg	Do not dose	Do not dose
601–700	375 mg	Do not dose	Do not dose	Do not dose

SIDE EFFECTS

Frequent (45%–11%): Injection site ecchymosis, redness, warmth, stinging, urticaria, viral infection, sinusitis, headache, pharyngitis. **Occasional (8%–3%):** Arthralgia, leg pain, fatigue, dizziness. **Rare (2%):** Arm pain, earache, dermatitis, pruritus.

ADVERSE EFFECTS/TOXIC REACTIONS

Anaphylaxis, occurring within 2 hrs of first dose or subsequent doses, occurs in 0.1% of pts. Malignant neoplasms occur in 0.5% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline serum total IgE level before initiation of treatment (dosage is based on pretreatment levels). Drug is not for treatment of acute exacerbations of asthma, acute bronchospasm, status asthmaticus.

INTERVENTION/EVALUATION

Monitor rate, depth, rhythm, type of respirations, quality/rate of pulse. Assess lung sounds for rhonchi, wheezing, rales. Observe lips, fingernails for cyanosis.

PATIENT/FAMILY TEACHING

- Increase fluid intake (decreases viscosity of pulmonary secretions).
- Do not alter/stop other asthma medications.
- Report allergic reactions (e.g., breathing difficulty, swelling of throat/tongue).

ombitasvir/ paritaprevir/ ritonavir/dasabuvir

om-bit-as-vir/par-i-ta-pre-vir/rit-oh-na-vir/da-sa-bue-vir
(Viekira Pak, Holkira PAK , Viekira XR)

Test all pts for hepatitis B virus (HBV) infection prior to initiation. HBV reactivation was reported in HBV/HCV co-infected pts who were undergoing or had completed treatment with hepatitis C virus (HCV) direct-acting antivirals and were not receiving HBV antiviral therapy. HBV reactivation may cause fulminant hepatitis, hepatic failure, and death. Monitor HCV/HBV co-infected pts for hepatitis flare or HBV reactivation during HCV infection and as clinically indicated.

Do not confuse ombitasvir with daclatasvir, or paritaprevir with boceprevir or simeprevir, or ritonavir with Retrovir, lopinavir, darunavir, or saquinavir, or dasabuvir with sofosbuvir.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: NS5A inhibitor, protease inhibitor, CYP3A inhibitor, nonnucleoside inhibitor.
CLINICAL: Antihepatocellular.

USES

Treatment of adults with chronic hepatitis C virus (HCV) infection genotype 1a without cirrhosis or with compensated cirrhosis (in combination with ribavirin), and genotype 1b without cirrhosis or with compensated cirrhosis.

PRECAUTIONS

Contraindications: Hypersensitivity to any component. Moderate to severe hepatic impairment; decompensated hepatic cirrhosis; contraindication or known hypersensitivity to ribavirin; concomitant use of strong CYP3A inducers, strong CYP2C8 inducers or strong CYP2C8 inhibitors; drugs highly dependent on CYP3A for clearance and for which elevated plasma concentrations are associated with serious and/or life-threatening events. Concurrent use of alfuzosin, carbamazepine, colchicine, dronedarone, efavirenz, ergotamine, dihydroergotamine, ethinyl

estradiol-containing drugs including combined oral contraceptives, gemfibrozil, lovastatin, lurasidone, midazolam (oral), phenytoin, PHENobarbital, pimezide, ranolazine, rifampin, sildenafil (when used for pulmonary arterial hypertension), simvastatin, St. John's wort, triazolam. **Cautions:** History of anemia, hepatitis B virus infection, HIV infection.

ACTION

Ombitasvir inhibits HCV NS5A needed for essential RNA replication and virion assembly. Paritaprevir inhibits HCV protease needed for cleavage of HCV-encoded polyproteins and viral replication. Ritonavir inhibits CYP3A clearance; increases plasma concentrations of paritaprevir. Dasabuvir inhibits HCV RNA-dependent RNA polymerase needed for replication of viral genome. **Therapeutic Effect:** Inhibits viral replication of hepatitis C virus.

PHARMACOKINETICS

Readily absorbed. Paritaprevir, ritonavir, dasabuvir metabolized in liver. Ombitasvir metabolized by amide hydrolysis. Protein binding: ombitasvir: greater than 99%, paritaprevir: 97%–99%, ritonavir: 99%, dasabuvir: 99%. Peak plasma concentration: 4–5 hrs. Steady-state concentration: 12 days. Elimination: ombitasvir: feces (92%), urine (2%); paritaprevir: feces (88%), urine (9%); ritonavir: feces (86%), urine (11%); dasabuvir: feces (94%), urine (2%). **Half-life:** Ombitasvir: 21–25 hrs; paritaprevir: 5.5 hrs; ritonavir: 4 hrs; dasabuvir: 5.5–6 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm. When administered with ribavirin, therapy is contraindicated in pregnant women and in men whose female partners are pregnant. Unknown if distributed in breast milk. Concomitant use of ethinyl estradiol-containing drugs is contraindicated. Alternative contraception methods including progestin-only drugs, barrier methods, abstinence are recommended. **Children:** Safety and efficacy not

established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration/effects of **antiarrhythmics** (e.g., amiodarone), **antifungals** (e.g., itraconazole), **calcium channel blockers** (e.g., amlodipine, nifedipine), **corticosteroids** (e.g., fluticasone), **immunosuppressants** (e.g., cyclosporine), **digoxin**, **HIV antiretrovirals** (e.g., paritaprevir, rilpivirine), **phosphodiesterase-5 inhibitors** (e.g., sildenafil), **sedative/hypnotics** (e.g., temazepam), **statins** (e.g., atorvastatin, simvastatin), **sirolimus**, **tacrolimus**. **Anticonvulsants** (e.g., carbamazepine, phenytoin), **dexamethasone**, **efavirenz**, **omeprazole**, **rifampin** may decrease concentration/effect. **HERBAL:** **St. John's wort** may decrease concentration/effect. **Kava kava** may increase risk of hepatotoxicity. **Red yeast** may increase risk of myopathy, rhabdomyolysis. **Meals** increase absorption. **FOOD:** **Grapefruit products**, **Seville oranges** may increase concentration/effect. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, INR. May decrease Hct, Hgb.

AVAILABILITY (Rx)

Fixed-Dose Combination Tablets (co-packaged with dasabuvir tablets): (*Viekira Pak*): Ombitasvir 12.5 mg/paritaprevir 75 mg/ritonavir 50 mg; dasabuvir 250 mg. (*Viekira XR*): Ombitasvir 8.33 mg/paritaprevir 50 mg/ritonavir 33.3 mg/dasabuvir 200 mg.

ADMINISTRATION/HANDLING

PO

- Give with food. Do not cut, crush, break, or divide XR tablets.

INDICATIONS/ROUTES/DOSAGE

Hepatitis C Virus Infection

PO: ADULTS, ELDERLY: (*Viekira Pak*): 2 tablets of ombitasvir, paritaprevir, ritonavir once daily, plus 1 tablet of dasabuvir

twice daily with or without ribavirin. (*Viekira XR*): 3 tablets once daily.

Treatment Regimen and Duration

Genotype 1a, without cirrhosis (in combination with ribavirin); genotype 1b without cirrhosis or compensated cirrhosis: Fixed-combination regimen with ribavirin for 12 wks. **Recommended dose of ribavirin based on weight in kg: LESS THAN 75 KG:** 1,000 mg/day in 2 divided doses. **75 KG OR GREATER:** 1,200 mg/day in 2 divided doses. For ribavirin dose modifications, refer to prescribing information.

Dose Modification

Liver Transplant Recipients

PO: ADULTS, ELDERLY: 2 tablets of ombitasvir, paritaprevir, ritonavir once daily, plus 1 tablet of dasabuvir twice daily with ribavirin for 24 wks, irrespective of HCV genotype 1 subtype in pts with normal hepatic function and mild fibrosis.

HCV/HIV-1 Coinfection

Follow dose recommendations as listed in Treatment Regimen and Duration. Consider suppressive antiretroviral drug therapy during treatment.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate impairment:** Treatment not recommended. **Severe impairment:** Treatment contraindicated.

SIDE EFFECTS

Frequent (34%–22%): Fatigue, nausea. **Occasional (18%–14%):** Pruritus, rash, erythema, eczema, allergic dermatitis, skin exfoliation, urticaria, photosensitivity reaction, skin ulcer, insomnia, asthenia.

ADVERSE EFFECTS/TOXIC REACTIONS

HBV reactivation was reported in pts coinfected with HBV/HVC; may result in fulminant hepatitis, hepatic failure, death.

Serum ALT greater than 5 times upper limit of normal (ULN) reported in 1% of pts (usually occurred during the first 4 wks of treatment). Elevations of serum ALT were significantly higher in female pts using ethinyl estradiol-containing drugs such as contraceptive patches, combined oral contraceptives, vaginal rings. May increase risk of drug resistance in HCV/HIV-1 coinfecting pts using HIV-1 protease inhibitors. Hypersensitivity reaction including angioedema may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, LFT, HCV-RNA level, urine pregnancy. Confirm HCV genotype. Test all pts for hepatitis B virus (HBV) infection prior to initiation. Receive full medication history and screen for contraindications/interactions. Ethinyl estradiol-containing contraceptive drugs should be discontinued prior to initiation. Question history as listed in Precautions. To reduce risk of HIV-1 protease inhibitor drug resistance, consider suppressive antiretroviral drug therapy upon initiation.

INTERVENTION/EVALUATION

Monitor LFT periodically during the first 4 wks of treatment, then as clinically indicated thereafter. Discontinue treatment for serum ALT persistently greater than 10 times ULN; serum ALT elevation associated with increase in serum alkaline phosphatase, bilirubin, or INR; hepatic injury. Periodically monitor CBC for anemia, HCV-RNA level for treatment effectiveness. Reinforce birth control compliance. Monitor for abdominal pain, bruising, jaundice, nausea, vomiting; may indicate hepatic injury. Ethinyl estradiol-containing contraceptives may be restarted approx. 2 wks after discontinuation.

PATIENT/FAMILY TEACHING

- Treatment must be used in combination with ribavirin.
- Take with meals.
- Inform pt of contraindications/adverse effects of therapy.
- Do not take newly prescribed medication

unless approved by doctor who originally started treatment. Do not take herbal products.

- Pregnancy should be avoided when combination regimen is given with ribavirin. Female pts of child-bearing potential must use reliable forms of birth control such as progestin-containing contraception, barrier methods, abstinence. Immediately report suspected pregnancy. Do not breast-feed.
- Report abdominal pain, bruising easily, dark-colored urine, fatigue, yellowing of the skin or eyes.
- Avoid alcohol.
- Report skin changes such as rash, peeling, ulcers; allergic reactions such as difficulty breathing, itching, hives, tongue swelling.

omega-3 acid-ethyl esters TOP 100

oh-may-ga 3 as-id eth-il es-ters
(Lovaza, Vascepa)
Do not confuse Lovaza with LORazepam.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Omega-3 fatty acid. **CLINICAL:** Antilipemic agent.

USES

Adjunct to diet to reduce very high (500 mg/dL or higher) serum triglyceride levels in adult pts. Dietary supplement for pts with early risk of CAD. **OFF-LABEL:** Treatment of IgA nephropathy.

PRECAUTIONS

Contraindications: Hypersensitivity to omega-3 fatty acids. **Cautions:** Known sensitivity, allergy to fish.

ACTION

Reduces hepatic production of triglyceride-rich very low density lipoproteins (VLDL). **Therapeutic Effect:** Reduces serum triglyceride levels.

PHARMACOKINETICS

Well absorbed following PO administration. Incorporated into phospholipids.

Half-life: N/A.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established in pts younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase antiplatelet effect of **agents with antiplatelet properties** (e.g., NSAIDs, aspirin). May increase anticoagulant effect of **anti-coagulants** (e.g., warfarin). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, LDL.

AVAILABILITY (Rx)

Capsules: 500 mg, 1,000 mg.

ADMINISTRATION/HANDLING**PO**

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Before initiating therapy, pt should be on standard cholesterol-lowering diet for minimum of 3–6 mos. Continue diet throughout therapy.

Usual Dosage

PO: ADULTS, ELDERLY: (Lovaza): 4 g (4 capsules) once daily or 2 g (2 capsules) twice daily. **(Vascepa):** 2 g (2 [1 gram] capsules or 4 [0.5 g] capsules) twice daily with meals. 4 g/day, given as a single daily dose or twice daily.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (5%–3%): Eructation, altered taste, dyspepsia. **Rare (2%–1%):** Rash, back pain.

ADVERSE EFFECTS/TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Assess baseline serum triglyceride level, LFT. Obtain diet history, esp. fat consumption.

INTERVENTION/EVALUATION

Monitor serum triglyceride levels for therapeutic response. Monitor serum ALT, LDL periodically during therapy. Discontinue therapy if no response after 2 mos of treatment.

PATIENT/FAMILY TEACHING

- Continue to adhere to lipid-lowering diet (important part of treatment).
- Periodic lab tests are essential part of therapy to determine drug effectiveness.

omeprazoleTOP
100

oh-mep-ra-zole

(Losec , PriLOSEC, PriLOSEC OTC)

Do not confuse omeprazole with ARIPiprazole, pantoprazole, or esomeprazole, or PriLOSEC with Plendil, Prevacid, Prinivil, or PROzac.

FIXED-COMBINATION(S)

Yosprala: omeprazole/aspirin (a platelet aggregation inhibitor): 40 mg/81 mg, 40 mg/325 mg. **Zegerid:** omeprazole/sodium bicarbonate (an antacid): 20 mg/1,100 mg, 40 mg/1,100 mg. **Zegerid Powder:** 20 mg/1,680 mg, 40 mg/1,680 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzimidazole. **CLINICAL:** Proton pump inhibitor.

USES

Short-term treatment (4–8 wks) of erosive esophagitis (diagnosed by endoscopy), symptomatic gastroesophageal reflux disease (GERD) poorly responsive to other treatment. *H. pylori*-associated duodenal ulcer (with amoxicillin and clarithromycin). Long-term treatment of pathologic hypersecretory conditions, treatment of active duodenal ulcer or active benign gastric ulcer. Maintenance healing of erosive esophagitis. **OTC, short-term:** Treatment of frequent, uncomplicated heartburn occurring 2 or more days/wk. **OFF-LABEL:** Prevention/treatment of NSAID-induced ulcers, stress ulcer prophylaxis in critically ill pts.

PRECAUTIONS

Contraindications: Hypersensitivity to omeprazole, other proton pump inhibitors. Concomitant use with products containing rilpivirine. **Cautions:** May increase risk of fractures, gastrointestinal infections. Hepatic impairment, pts of Asian descent.

ACTION

Inhibits hydrogen-potassium adenosine triphosphatase (H^+/K^+ ATP pump), an enzyme on the surface of gastric parietal cells. **Therapeutic Effect:** Increases gastric pH, reduces gastric acid production.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	2 hrs	72 hrs

Rapidly absorbed from GI tract. Protein binding: 95%. Primarily distributed into gastric parietal cells. Metabolized in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 0.5–1 hr (increased in hepatic impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Use caution (bioavailability may be increased).

INTERACTIONS

DRUG: May decrease concentration/effects of **acalabrutinib, atazanavir, bosutinib, cefuroxime, clopidogrel, dasatinib, neratinib**. May increase concentration/effects of **escitalopram, voriconazole, oral anticoagulants (e.g., warfarin), phenytoin**. **HERBAL:** **St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST.

AVAILABILITY (Rx)

Oral Suspension: 2.5 mg/packet, 10 mg/packet.

 **Capsules, Delayed-Release: (PriLOSEC):** 10 mg, 20 mg, 40 mg.  **Tablets, Delayed-Release: (PriLOSEC OTC):** 20 mg.

ADMINISTRATION/HANDLING

PO

- Give before meals (breakfast preferred).
- Give whole. Do not break, crush, dissolve, or divide delayed-release forms.
- May open capsule, mix with applesauce, and give immediately.

PO (Suspension)

- Following reconstitution, allow to thicken (2–3 min).
- Administer within 30 min.

INDICATIONS/ROUTES/DOSAGE

Active Duodenal Ulcer

PO: ADULTS, ELDERLY: 20–40 mg once daily for 4 wks.

Symptomatic GERD

PO: ADULTS, ELDERLY, CHILDREN WEIGHING 20 KG OR MORE: 10 mg once daily. May increase to 20 mg once daily after 4–8 wks if necessary. Discontinue once asymptomatic for 8 wks. **10–19 KG:** 10 mg/day for up to 4 wks. **5–9 KG:** 5 mg/day for up to 4 wks.

Erosive Esophagitis

PO: ADULTS, ELDERLY, CHILDREN WEIGHING 20 KG OR MORE: **Treatment:** 20–40 mg once daily. Once symptoms are controlled, continue for at least 8 wks. **CHILDREN**

1–16 YRS WEIGHING 10–19 KG: 10 mg/day. **WEIGHING 5–9 KG:** 5 mg/day. **CHILDREN 1–11 MOS WEIGHING 10 KG OR MORE:** 10 mg/day. **WEIGHING 5–9 KG:** 5 mg/day. **WEIGHING 3–4 KG:** 2.5 mg/day. **Maintenance:** **ADULTS, ELDERLY, CHILDREN WEIGHING 20 KG OR MORE:** 20 mg/day for up to 12 mos (including treatment period). **ASIAN PTS, CHILDREN WEIGHING 10–19 KG:** 10 mg/day. **WEIGHING 5–9 KG:** 5 mg/day.

Pathologic Hypersecretory Conditions

Note: Doses more than 80 mg in divided doses. **PO: ADULTS, ELDERLY:** Initially, 40 mg twice daily. May titrate up to 180 mg/day.

H. Pylori Duodenal Ulcer

PO: ADULTS, ELDERLY: 20 mg or 40 mg twice daily as part of an appropriate combination regimen with antibiotics (dose depends on the selected regimen).

Gastric Ulcer

PO: ADULTS, ELDERLY: 20–40 mg once daily for 8 wks.

OTC Use (Frequent Heartburn)

PO: ADULTS, ELDERLY: 20 mg/day for 14 days. May repeat after 4 mos if needed.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (7%): Headache. **Occasional (3%–2%):** Diarrhea, abdominal pain, nausea. **Rare (2%):** Dizziness, asthenia, vomiting, constipation, upper respiratory tract infection, back pain, rash, cough.

ADVERSE EFFECTS/TOXIC REACTIONS

Pancreatitis, hepatotoxicity, interstitial nephritis occur rarely. May increase risk of *C. difficile* infection.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Evaluate for therapeutic response (relief of GI symptoms). Question if GI discomfort, nausea, diarrhea occurs.

PATIENT/FAMILY TEACHING

- Report headache, onset of black, tarry stools, diarrhea, abdominal pain.
- Avoid alcohol.
- Swallow capsules whole; do not chew, crush, dissolve, or divide.
- Take before eating.

ondansetron

on-dan-se-tron
(Zofran, Zuplenz)

Do not confuse ondansetron with dolasetron, granisetron, or palonosetron, or Zofran with Zantac or Zosyn.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective 5-HT₃ receptor antagonist. **CLINICAL:** Antinausea, antiemetic.

USES

Prevention/treatment of nausea/vomiting due to cancer chemotherapy (including high-dose CISplatin). Prevention and treatment of postop nausea, vomiting. Prevention of radiation-induced nausea, vomiting. **OFF-LABEL:** Breakthrough treatment of nausea and vomiting associated with chemotherapy, hyperemesis gravidarum.

PRECAUTIONS

Contraindications: Hypersensitivity to ondansetron, other HT₃ antagonists. Concomitant use of apomorphine. **Cautions:** Mild to moderate hepatic impairment, pts at risk for QT prolongation or ventricular arrhythmia (congenital long QT prolongation, medications prolonging QT interval, hypokalemia, hypomagnesemia).

ACTION

Blocks serotonin, both peripherally on vagal nerve terminals and centrally in chemoreceptor trigger zone. **Therapeutic Effect:** Prevents nausea/vomiting.

PHARMACOKINETICS

Readily absorbed from GI tract. Protein binding: 70%–76%. Metabolized in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 3–6 hrs (increased in hepatic impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established in children younger than 1 mo. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Apomorphine may cause profound hypotension, altered LOC. **QT interval-prolonging medications** (e.g., amiodarone, azithromycin, ciprofloxacin, haloperidol) may increase risk of QT interval prolongation, torsades de pointes. **HERBAL:** St. John's wort may decrease concentration. **FOOD:** None known. **LAB VALUES:** May transiently increase serum bilirubin, ALT, AST.

AVAILABILITY (Rx)

Injection Solution: (Zofran): 2 mg/mL. **Oral Soluble Film:** (Zuplenz): 4 mg, 8 mg. **Oral Solution:** (Zofran): 4 mg/5 mL. **Tablets:** (Zofran): 4 mg, 8 mg, 24 mg. **Tablets, Orally Disintegrating:** 4 mg, 8 mg.

ADMINISTRATION/HANDLING

Reconstitution • May give undiluted. • For IV infusion, dilute with 50 mL D₅W or 0.9% NaCl before administration. **Rate of administration** • Give IV push over 2–5 min. • Give IV infusion over 15–30 min. **Storage** • Store at room temperature. • Stable for 48 hrs at room temperature following dilution.

IM

• Inject undiluted into large muscle mass.

PO

• Give without regard to food.

Orally Disintegrating Tablets

• Do not remove from blister pack until needed. • Peel backing off; do not push through. • Place tablet on tongue; allow to dissolve. • Swallow with saliva.

Oral Soluble Film

• Keep film in pouch until ready to use. • Remove film strip from pouch and place on top of tongue; allow to dissolve. • Swallow after film dissolves. Do not chew or swallow film whole. • If using more than one, each should be allowed to dissolve before administering the next one.

IV INCOMPATIBILITIES

Acyclovir (Zovirax), allopurinol (Aloprim), amphotericin B (Fungizone), amphotericin B complex (Abelcet, AmBisome, Amphotec), ampicillin (Polycillin), ampicillin and sulbactam (Unasyn), cefepime (Maxipime), 5-fluorouracil, LORazepam (Ativan), meropenem (Merrem IV), methyl-PREDNISolone (SOLU-Medrol).

IV COMPATIBILITIES

CARBOPlatin (Paraplatin), CISPlatin (Platinol), cyclophosphamide (Cytoxan), cytarabine (Cytosar), dacarbazine (DTIC-Dome), DAUNOrubicin (Cerubidine), dexmedetomidine (Precedex), dexamethasone (Decadron), diphenhydramine (Benadryl), DOCEtaxel (Taxotere), DOPamine (Intropin), etoposide (VePesid), gemcitabine (Gemzar), heparin, HYDROMORPHONE (Dilaudid), ifosfamide (Ifex), magnesium, mannitol, mesna (Mesnex), methotrexate, metoclopramide (Reglan), mitoMYcin (Mutamycin), mitoXANTRONE (Novantrone), morphine, PACLitaxel (Taxol), potassium chloride, teniposide (Vumon), topotecan (Hycamtin), vinBLASTine (Velban), vinCRISTine (Oncovin), vinorelbine (Navelbine).

INDICATIONS/ROUTES/DOSAGE

Chemotherapy-Induced Nausea/Vomiting

IV: ADULTS, ELDERLY, CHILDREN 6 MOS AND OLDER: 0.15 mg/kg (**Maximum:** 16 mg/

dose) 3 times/day beginning 30 min before chemotherapy, followed by subsequent doses 4 and 8 hrs after the first dose.

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: (highly emetogenic) 16 mg 30 min before start of chemotherapy, (moderately emetogenic) 8 mg repeat dose 8 hrs after initial dose, then q12h, beginning 30 min before chemotherapy and continuing for 1–2 days after completion of chemotherapy. **CHILDREN 4–11 YRS:** 4 mg 30 min before chemotherapy, repeat 4 and 8 hrs after initial dose then q8h for 1–2 days after chemotherapy completed.

Prevention of Postop Nausea/Vomiting

IV, IM: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 4 mg as a single dose. **CHILDREN 1 MO–12 YRS WEIGHING MORE THAN 40 KG:** 4 mg as a single dose. **CHILDREN 1 MO–12 YRS WEIGHING 40 KG OR LESS:** 0.1 mg/kg as a single dose.

PO: ADULTS, ELDERLY: 16 mg 1 hr before induction of anesthesia.

Prevention of Radiation-Induced Nausea/Vomiting

PO: ADULTS, ELDERLY: (Total body irradiation): 8 mg 1–2 hrs before each fraction of radiotherapy administered each day. (Single high-dose radiotherapy to abdomen): 8 mg 1–2 hrs before irradiation, then 8 mg q8h after first dose for 1–2 days after completion of radiotherapy. (Daily fractionated radiotherapy to abdomen): 8 mg 1–2 hrs before irradiation, then 8 mg 8 hrs after first dose for each day of radiotherapy.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** **Maximum daily dose:** 8 mg.

SIDE EFFECTS

Frequent (13%–5%): Anxiety, dizziness, drowsiness, headache, fatigue, constipation, diarrhea, hypoxia, urinary retention. **Occasional (4%–2%):** Abdominal

pain, xerostomia, fever, feeling of cold, redness/pain at injection site, paresthesia, asthenia (loss of strength, energy).

Rare (1%): Hypersensitivity reaction (rash, pruritus), blurred vision.

ADVERSE EFFECTS/TOXIC REACTIONS

Hypertension, acute renal failure, GI bleeding, respiratory depression, coma, extrapyramidal effects occur rarely. QT interval prolongation, torsades de pointes may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess degree of nausea, vomiting. Assess for dehydration if excessive vomiting occurs (poor skin turgor, dry mucous membranes, longitudinal furrows in tongue). Provide emotional support.

INTERVENTION/EVALUATION

Monitor ECG in pts with electrolyte abnormalities (e.g., hypokalemia, hypomagnesemia), HF, bradyarrhythmias, concurrent use of other medications that may cause QT prolongation, pts receiving high doses or frequent doses. Provide supportive measures. Assess mental status. Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool consistency. Record time of evacuation.

PATIENT/FAMILY TEACHING

- Relief from nausea/vomiting generally occurs shortly after drug administration.
- Avoid alcohol, barbiturates.
- Report persistent vomiting.
- Avoid tasks that require alertness, motor skills until response to drug is established (may cause drowsiness, dizziness).

oritavancin

or-it-a-van-sin
(Orbactiv)

Do not confuse oritavancin with dalbavancin or telavancin.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Lipoglycopeptide (antibacterial). **CLINICAL:** Antibiotic.

USES

Treatment of adult pts with acute bacterial skin and skin structure infections (ABSSSI) caused by susceptible strains of gram-positive microorganisms including *Staphylococcus aureus* (including methicillin-susceptible and methicillin-resistant strains), *Streptococcus agalactiae*, *Streptococcus dysgalactiae*, *Streptococcus pyogenes*, *Streptococcus anginosus* group (including *S. anginosus*, *S. intermedius*, *S. constellatus*), and *E. faecalis* (vancomycin-susceptible strains only).

PRECAUTIONS

Contraindications: Hypersensitivity to oritavancin. Concomitant use of IV unfractionated heparin sodium for 120 hrs (5 days) after oritavancin administration. **Cautions:** Severe hepatic impairment, history of hypersensitivity reaction to glycopeptides (e.g., vancomycin), recent *C. difficile* infection or antibiotic-associated colitis.

ACTION

Inhibits cell wall synthesis by binding to bacterial cell membrane, disrupting membrane integrity. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Widely distributed. Not metabolized. Protein binding: 85%. Excreted unchanged in feces, urine. Not removed by hemodialysis. **Half-life:** 10.2 days.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease therapeutic effect of **anticoagulants** (e.g., **heparin**, **warfarin**). Use of **heparin** within 48 hrs of dose contraindicated. May increase risk of bleeding with **warfarin**. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May prolong aPTT (falsely elevates aPTT for up to 120 hrs after oritavancin administration), PT/INR. May increase ALT, AST, bilirubin, uric acid. May decrease glucose.

AVAILABILITY (Rx)

Sterile Powder for Injection: 400 mg/vial.

ADMINISTRATION/HANDLING

◀ ALERT ▶ No preservatives or bacteriostatic agent is present in product. Aseptic technique must be used when preparing solution. Must be reconstituted with Sterile Water for Injection and subsequently diluted with 5% Dextrose in Water only.

Reconstitution • Obtain three 400-mg vials to equal required 1,200-mg dose. • Add 40 mL of Sterile Water for Injection to each vial for final concentration of 10 mg/mL per vial. • To avoid foaming, gently swirl until contents completely dissolve. • Visually inspect each vial for particulate matter or discoloration.

Dilution • Using D₅W, withdraw 120 mL from 1,000-mL bag and discard. • Withdraw 40 mL from each vial and mix into D₅W to provide a final concentration of 1.2 mg/mL.

Rate of administration • Administer over 3 hrs.

Storage • Reconstituted solution should appear clear, colorless to pale yellow. • Infuse diluted solution within 6 hrs when stored at room temperature or 12 hrs when refrigerated. • Combined storage time and 3-hr infusion time should not exceed 6 hrs if at room temperature or 12 hrs if refrigerated.

IV INCOMPATIBILITIES

Dilute using 5% Dextrose in Water only. Dilution with normal saline may cause precipitate formation. Infuse via dedicated line only. Do not piggyback through maintenance IV line.

INDICATIONS/ROUTES/DOSAGE

Acute Bacterial Skin and Skin Structure Infection

IV; ADULTS, ELDERLY: 1,200 mg as single dose.

Dosage in Renal/Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Use caution.

SIDE EFFECTS

Occasional (10%–5%): Nausea, headache, vomiting. **Rare (4%–3%):** Diarrhea, dizziness, tachycardia.

ADVERSE EFFECTS/TOXIC REACTIONS

Serious hypersensitivity reactions including anaphylaxis, angioedema, bronchospasm, severe skin reactions, wheezing have been reported with glycopeptide antibacterial agents. *C. difficile*-associated diarrhea with severity ranging from mild diarrhea to fatal colitis has occurred. Treatment in the absence of proven or strongly suspected bacterial infection may increase risk of drug-resistant bacteria. Infusion site reactions, phlebitis, irritation, abscess, rash, pruritus have occurred. Increased incidence of osteomyelitis has been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC (WBC), BMP, LFT, wound culture and sensitivity, vital signs. Question history of recent *C. difficile* infection, hepatic/renal impairment, hypersensitivity reaction. Assess skin wound characteristics, hydration status. Question pt's usual stool characteristics (color, frequency, consistency).

INTERVENTION/EVALUATION

Assess skin infection/wound for improvement. Monitor daily pattern of bowel activity, stool consistency; increasing severity of diarrhea may indicate antibiotic-associated colitis. If frequent diarrhea occurs, obtain *C. difficile* toxin screen and initiate isolation precautions until result confirmed. Encourage PO intake. Monitor I&O. If osteomyelitis suspected, other antimicrobial agents may be required. Screen for hypersensitivity reaction.

PATIENT/FAMILY TEACHING

- Treatment will consist of a single infusion only.
- Report episodes of diarrhea, esp. the following weeks after treatment completion. Frequent diarrhea, fever, abdominal pain, blood-streaked stool may indicate *C. difficile* infection, which may be contagious to others.
- Report abdominal pain, black/tarry stools, bruising, yellowing of skin or eyes; dark urine, decreased urine output; or allergic reactions including difficulty breathing, itching, hives, tongue swelling, wheezing.
- Do not breastfeed.
- Drink plenty of fluids.
- Report symptoms of bone pain; may indicate bone infection.

oseltamivir

TOP
100

oh-sel-tam-i-veer
(Tamiflu)

Do not confuse Tamiflu with Thera-flu.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Neuraminidase inhibitor. **CLINICAL:** Antiviral.

USES

Symptomatic treatment of uncomplicated acute illness caused by influenza A or B virus in adults and children 2 wks of age and older who are symptomatic no longer than 2 days. Prevention of influenza in adults, children.

PRECAUTIONS

Contraindications: Hypersensitivity to oseltamivir. **Cautions:** Renal impairment.

ACTION

Selective inhibitor of influenza virus neuraminidase, an enzyme essential for viral replication. Acts against influenza A and B viruses. **Therapeutic Effect:** Suppresses spread of infection within respiratory system, reduces duration of clinical symptoms.

PHARMACOKINETICS

Readily absorbed after PO administration. Protein binding: 3%. Metabolized in liver. Primarily excreted in urine. **Half-life:** 6–10 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established in pts younger than 2 wks. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Live attenuated influenza virus vaccine intranasal may interfere with effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: 30 mg, 45 mg, 75 mg. **Powder for Oral Suspension:** 6 mg/mL.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.
- May open capsules and mix with sweetened liquid.
- Oral suspension stable for 10 days (room temperature) or 17 days (refrigerated) following reconstitution.

INDICATIONS/ROUTES/DOSAGE

Treatment of Influenza

Note: Hospitalized pts may require longer treatment course. Initiate within 48 hrs of onset of symptoms. Consider duration longer than 5 days in pts with severe or complicated influenza.

PO: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: 75 mg twice daily for 5 days. **CHILDREN 1–12 YRS, WEIGHING MORE THAN 40 KG:** 75 mg twice daily for 5 days. **WEIGHING 24–40 KG:** 60 mg twice daily for 5 days. **WEIGHING 16–23 KG:** 45 mg twice daily for 5 days. **WEIGHING 15 KG OR LESS:** 30 mg twice daily for 5 days. **NEONATES, INFANTS AGES 2 WKS TO YOUNGER THAN 1 YR:** 3 mg/kg twice daily for 5 days.

Prevention of Influenza

Note: Initiate within 48 hrs of contact with an infected individual. Duration: 7–10 days (longer during community outbreaks). **PO: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER:** 75 mg once daily. **CHILDREN 1–12 YRS, WEIGHING MORE THAN 40 KG:** 75 mg once daily. **WEIGHING 24–40 KG:** 60 mg once daily. **WEIGHING 15–23 KG:** 45 mg once daily. **WEIGHING LESS THAN 15 KG:** 30 mg once daily. **INFANTS 9–11 MOS:** 3.5 mg/kg/dose. **INFANTS 3–8 MOS:** 3 mg/kg/dose.

Dosage in Renal Impairment

CrCl 31–60 mL/min: Treatment: 30 mg twice daily. Prevention: 30 mg once daily. **CrCl 11–30 mL/min:** Treatment: 30 mg once daily. Prevention: 30 mg every other day. **End-stage renal disease:** Not recommended.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (10%–7%): Nausea, vomiting, diarrhea. **Rare (2%–1%):** Abdominal pain, bronchitis, dizziness, headache, cough, insomnia, fatigue, vertigo.

ADVERSE EFFECTS/TOXIC REACTIONS

Colitis, pneumonia, tympanic membrane disorder, fever occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline laboratory tests as indicated. Confirm presence of influenza A or B virus.

INTERVENTION/EVALUATION

Monitor serum glucose, renal function in pts with influenza symptoms, diabetes.

PATIENT/FAMILY TEACHING

- Begin as soon as possible from first appearance of flu symptoms (recommended within 2 days from symptom onset).
- Avoid contact with those who are at high risk for influenza.
- Not a substitute for flu shot.

osimertinib

oh-sim-er-ti-nib
(Tagrisso)

Do not confuse osimertinib with afatinib, dasatinib, erlotinib, ibrutinib, imatinib, olaparib, or ospemifene, or Tagrisso with Targretin or Tasigna.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Epidermal growth factor receptor (EGFR) inhibitor. Tyrosine kinase inhibitor.

CLINICAL: Antineoplastic.

USES

Treatment of pts with metastatic epidermal growth factor receptor (EGFR) T790M mutation-positive non-small-cell lung cancer (NSCLC), as detected by FDA-approved test, who have progressed on or after EGFR therapy. First-line treatment of metastatic NSCLC in pts with EGFR exon 19 deletions or exon 21 L858R mutations.

PRECAUTIONS

Contraindications: Hypersensitivity to osimertinib. **Cautions:** Baseline anemia, lymphopenia, neutropenia, thrombocytopenia; COPD, heart disease (bradycardia, cardiomyopathy, heart block, HF, recent MI), pts at risk for QTc interval prolongation or ventricular arrhythmia (congenital long QT syndrome, history for QT prolongation, medications that prolong QT

interval, hypokalemia, hypomagnesemia); history of CVA, pulmonary embolism. Concomitant use of CYP3A inducers.

ACTION

Exhibits antitumor activity by irreversibly binding to mutant forms of EGFR. **Therapeutic Effect:** Inhibits tumor cell growth and metastasis.

PHARMACOKINETICS

Widely distributed. Metabolized in liver. Protein binding: Likely high. Peak plasma concentration: 3–24 hrs (median: 6 hrs). Steady state reached in 15 days. Excreted in feces (68%), urine (14%). **Half-life:** 48 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm. Females of reproductive potential should use effective contraception during treatment and for at least 6 wks after discontinuation. Males with female partners of reproductive potential must use effective barrier methods during treatment and at least 4 mos after discontinuation. Unknown if distributed in breast milk. Breastfeeding not recommended during treatment and for up to 2 wks after discontinuation. May impair fertility in both females and males. **Children:** Safety and efficacy not established. **Elderly:** May have increased risk of CTCAE Grade 3 or 4 adverse events. May require more frequent dose modifications.

INTERACTIONS

DRUG: QTc interval-prolonging medications (e.g., amiodarone, FLU-oxetine, haloperidol, sotalol) may increase risk of QTc prolongation. **Strong CYP3A inducers** (e.g., carBA-Mazepine, phenytoin, rifAMPin) may decrease concentration/effect. **Strong CYP3A inhibitors** (e.g., clarithromycin, ketoconazole, ritonavir) may increase concentration/risk of adverse effects. May decrease the therapeutic effect of BCG (intravesical), vaccines (live). May increase adverse/toxic effects

of **belimumab**, **natalizumab**, **vaccines (live)**. **HERBAL**: **St. John's wort** may decrease concentration/effect. **Echinacea** may diminish therapeutic effect. **FOOD**: None known. **LAB VALUES**: May decrease serum sodium, magnesium; Hgb, Hct, lymphocytes, neutrophils, platelets, RBCs. May decrease diagnostic effect of *Coccidioides immitis* skin test.

AVAILABILITY (Rx)

Tablets: 40 mg, 80 mg.

ADMINISTRATION/HANDLING

PO

- Tablets are hazardous; use cytotoxic precautions during handling and disposal. Recommend single gloving when handling intact tablets; double gloving, protective gown when handling liquid preparations.
- Do not divide, crush, cut, or ultrasonicate tablets.
- Give without regard to food.
- If a dose is missed, skip missed dose and administer the next dose on schedule.
- **Pts with dysphagia**: Disperse tablet in 60 mL of water (noncarbonated) only.
- Stir until dissipated into small pieces (does not completely dissolve).
- Deliver orally or via gastric tube.
- Rinse container with 120–240 mL of water and administer any remaining drug residue. After oral administration of residue, instruct pt to thoroughly rinse mouth with water and swallow.

INDICATIONS/ROUTES/DOSAGE

Non–Small-Cell Lung Cancer

PO: **ADULTS, ELDERLY**: 80 mg once daily. Continue until disease progression or unacceptable toxicity.

Dose Modification

Based on Common Terminology Criteria for Adverse Events (CTCAE).

Cardiac Toxicity

QTc interval greater than 500 msec on at least two separate ECGs: Withhold treatment until QTc interval is less than 481 msec or recovers to baseline. Once resolved, resume at 40 mg once daily.

QTc interval prolongation with symptoms of life-threatening arrhythmia: Permanently discontinue. **Asymptomatic, absolute decrease in left ventricular ejection fraction (LVEF) of 10% from baseline and below 50%**: Withhold treatment for up to 4 wks. Resume treatment if improved to baseline. If not improved to baseline, permanently discontinue.

Pulmonary Toxicity

Interstitial lung disease/pneumonitis: Permanently discontinue.

Other Toxicities

Any Grade 3 or higher reaction: Withhold treatment for up to 3 wks. Resume treatment at 80 mg once daily or 40 mg once daily if improved to Grade 2 or lower within 3 wks. If not improved within 3 wks, permanently discontinue. **Concomitant use of strong CYP3A4 inducers**: Start dose at 160 mg once daily. May decrease dose to 80 mg once daily if strong CYP3A4 inducer has been discontinued for at least 3 wks.

Dosage in Renal/Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment**: Not specified; use caution.

SIDE EFFECTS

Frequent (42%–17%): Diarrhea, rash (generalized, erythematous, macular, maculopapular, papular, pustular), erythema, folliculitis, acne, dermatitis, acneiform dermatitis, dry skin, eczema, skin fissures, xerosis, nail disorders (inflammation, tenderness, discoloration, dystrophy, infection, ridging, onychoclasis, onycholysis, onychomadesis, paronychia), dry eye, blurry vision, keratitis, cataract, eye irritation, blepharitis, eye pain, increased lacrimation, vitreous floaters, nausea. **Occasional (16%–10%)**: Decreased appetite, constipation, pruritus, cough, fatigue, back pain, stomatitis, headache.

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia, leukopenia, neutropenia, thrombocytopenia are expected responses to therapy. Interstitial lung disease/pneumonitis reported in 3% of pts. May cause QTc interval prolongation (up to 3% of pts); cardiac toxicities including cardiomyopathy (1% of pts), decreased LVEF (2% of pts); other adverse effects including CVA, intracranial hemorrhage; pneumonia (4% of pts); venous thromboembolism including pulmonary embolism, jugular venous thrombosis, DVT (7% of pts).

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain CBC, BMP, serum magnesium; vital signs; ECG. Confirm presence of T790M mutation in tumor specimen prior to initiation. Obtain pregnancy test in females of reproductive potential. Receive full medication history and screen for interactions. Question history of CVA, DVT, pulmonary embolism, pulmonary disease, cardiac disease. Obtain baseline echocardiogram to assess LVEF. Obtain visual acuity. Screen for active infection. Offer emotional support.

INTERVENTION/EVALUATION

Monitor CBC for cytopenias; BMP, serum magnesium for electrolyte abnormalities. Pts with cough, dyspnea, fever, worsening of respiratory status should be investigated for interstitial lung disease/pneumonitis. Pts with sudden chest pain, dyspnea, hypoxia, tachycardia should be evaluated for pulmonary embolism. Monitor for symptoms of DVT (leg or arm pain/swelling); CVA, intracranial hemorrhage (aphasia, altered LOC, facial droop, headache, hemiplegia, seizures). Assess LVEF by echocardiogram q3mos during therapy or more frequently in pts suspected of HF, congestive HF. Assess for eye pain, visual changes. Monitor for skin rash/toxicities, hypersensitivity reaction. Diligently monitor for infection. Monitor daily stool pattern, consistency.

PATIENT/FAMILY TEACHING

- Blood levels, echocardiograms will be routinely monitored.
- Treatment may cause life-threatening adverse effects. Report symptoms of abnormal heartbeats (dizziness, fainting, light-headedness, palpitations), heart failure (shortness of breath, fast or slow heart rate, exercise intolerance, swelling of the ankles or legs), severe lung inflammation (difficulty breathing, cough with fever, lung pain).
- Avoid pregnancy; treatment may cause birth defects. Female pts of childbearing potential should use effective contraception during treatment and for at least 6 wks after last dose. Male pts with female partners of childbearing potential should use condoms, abstinence during treatment and for at least 4 mos after last dose. Do not breastfeed during therapy and for at least 2 wks after last dose.
- Treatment may cause blood clots in the arms, legs, lungs, or brain. Immediately report symptoms of stroke (difficulty speaking, confusion, paralysis, vision loss), lung embolism (difficulty breathing, fast heart rate, chest pain), blood clots in the arms or legs (pain/swelling).
- Do not take any newly prescribed medications unless approved by doctor who originally started treatment.
- Avoid crowds, people with active infection.
- Do not take herbal supplements.

oxaliplatin**HIGH ALERT**

ox-al-i-pla-tin
(Eloxatin) 

BLACK BOX ALERT

Anaphylactic-like reaction may occur within minutes of administration; may be controlled with EPINEPHrine, corticosteroids, antihistamines.

Do not confuse oxaliplatin with Aloxi, CARBOplatin, or CISplatin.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Platinum-containing complex. Alkylating agent. **CLINICAL:** Antineoplastic.

USES

Treatment of stage III colon cancer after complete resection of primary tumor (in combination with infusional 5-fluorouracil and leucovorin); treatment of advanced colon cancer (in combination with infusional 5-fluorouracil and leucovorin). **OFF-LABEL:** Treatment of ovarian cancer, pancreatic cancer, hepatobiliary cancer, testicular cancer, esophageal cancer, gastric cancer, non-Hodgkin's lymphoma, chronic lymphocytic leukemia.

PRECAUTIONS

Contraindications: History of allergy to oxaliplatin, other platinum compounds.

Cautions: Previous therapy with other antineoplastic agents; radiation, renal impairment, pregnancy, immunosuppression, presence or history of peripheral neuropathy, elderly pts.

ACTION

Inhibits DNA replication and transcription by cross-linking with DNA strands. Cell cycle–phase nonspecific. **Therapeutic Effect:** Causes cellular death (apoptosis).

PHARMACOKINETICS

Rapidly distributed. Protein binding: 90%. Undergoes rapid, extensive nonenzymatic biotransformation. Excreted in urine. **Half-life:** 391 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. May cause fetal harm. Breastfeeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** Increased incidence of diarrhea, dehydration, hypokalemia, fatigue.

INTERACTIONS

DRUG: Bone marrow depressants (e.g., cladribine) may increase myelosuppression, GI effects. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** Echinacea may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase serum creatinine, bilirubin, ALT, AST, INR. May prolong prothrombin time.

AVAILABILITY (Rx)

Injection Solution: 5 mg/mL (10-mL, 20-mL vials).

ADMINISTRATION/HANDLING

◀ ALERT ▶ Wear protective gloves during handling of oxaliplatin. If solution comes in contact with skin, wash skin immediately with soap, water. Do not use aluminum needles or administration sets that may come in contact with drug; may cause degradation of platinum compounds.

◀ ALERT ▶ Pt should avoid ice, drinking cold beverages, touching cold objects during infusion and for 5 days thereafter (can exacerbate acute neuropathy).

Reconstitution • Dilute with 250–500 mL D₅W (never dilute with sodium chloride solution or other chloride-containing solutions) to final concentration of 0.2–0.6 mg/mL.

Rate of administration • Infuse over 2–6 hrs.

Storage • Do not freeze. • Protect from light. • Store vials at room temperature. • After dilution, solution is stable for 6 hrs at room temperature, 24 hrs if refrigerated.

IV INCOMPATIBILITIES

Do not infuse oxaliplatin with alkaline medications.

0

IV COMPATIBILITIES

Dexamethasone, diphenhydrAMINE (Benadryl), granisetron (Kytril), ondansetron (Zofran), palonosetron (Aloxi).

INDICATIONS/ROUTES/DOSAGE

Refer to individual protocols.

◀ALERT▶ Pretreat pt with antiemetics. Repeat courses should not be given more frequently than every 2 wks.

Colon Cancer, Advanced

IV: ADULTS: 85 mg/m² q2wks until disease progression or unacceptable toxicity (in combination with fluorouracil/leucovorin).

Colon Cancer, Stage III (adjuvant therapy)

IV: ADULTS: 85 mg/m² q2wks for total of 6 months (in combination with fluorouracil/leucovorin).

Dosage in Renal Impairment

CrCl less than 30 mL/min: Reduce dose to 65 mg/m².

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (76%–20%): Peripheral/sensory neuropathy (usually occurs in hands, feet, perioral area, throat but may present as: jaw spasm, abnormal tongue sensation, eye pain, chest pressure, difficulty walking, swallowing, writing), nausea, fatigue, diarrhea, vomiting, constipation, abdominal pain, fever, anorexia. **Occasional (14%–10%):** Stomatitis, earache, insomnia, cough, difficulty breathing, backache, edema. **Rare (7%–3%):** Dyspepsia, dizziness, rhinitis, flushing, alopecia.

ADVERSE EFFECTS/TOXIC REACTIONS

Peripheral/sensory neuropathy can occur without any prior event by drinking or holding a glass of cold liquid during IV infusion. Pulmonary fibrosis (characterized as nonproductive cough, dyspnea, crackles, radiologic pulmonary infiltrates) may warrant drug

discontinuation. Hypersensitivity reaction (rash, urticaria, pruritus) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline renal function, WBC, platelet count. Question medical history as listed in Precautions. Offer emotional support.

INTERVENTION/EVALUATION

Monitor for decrease in WBC, platelets (myelosuppression is minimal). Monitor daily pattern of bowel activity, stool consistency. Monitor for diarrhea, GI bleeding (bright red, black tarry stool), signs of neuropathy. Pt should avoid ice or drinking, holding glass of cold liquid during IV infusion and for 5 days following completion of infusion; may precipitate/exacerbate neuropathy (occurs within hrs or 1–2 days of dosing, lasts up to 14 days). Maintain strict I&O. Assess oral mucosa for stomatitis.

PATIENT/FAMILY TEACHING

- Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site, persistent diarrhea, difficulty breathing.
- Do not have immunizations without physician's approval (drug lowers resistance).
- Avoid contact with those who have recently taken oral polio vaccine.
- Avoid cold drinks, ice, cold objects (may produce neuropathy).

Oxcarbazepine

ox-kar-baz-e-pee
(Oxtellar XR, Trileptal)

Do not confuse Oxcarbazepine with carbamazepine, or Trileptal with TriLipix.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Carbamate derivative, anticonvulsant.

CLINICAL: Anticonvulsant.

USES

Immediate-Release: Monotherapy, adjunctive therapy in treatment of partial seizures in adults. Monotherapy in children 4 yrs and older, adjunctive therapy in children 2 yrs and older. **Extended-Release:** Treatment of partial seizures in adults and children 6 yrs and older. **OFF-LABEL:** Treatment of neuropathic pain, bipolar disorder.

PRECAUTIONS

Contraindications: Hypersensitivity to OXcarbazepine. **Cautions:** Renal impairment, sensitivity to carbamazepine, pts at increased risk for suicide.

ACTION

Blocks sodium channels, stabilizing hyperexcited neural membranes, inhibiting repetitive neuronal firing, diminishing synaptic impulses. **Therapeutic Effect:** Prevents seizures.

PHARMACOKINETICS

Completely absorbed from GI tract. Metabolized in liver. Protein binding: 40%. Primarily excreted in urine. **Half-life:** 2 hrs; metabolite, 6–10 hrs.

 **LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Children:** Safety and efficacy not established in children younger than 2 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Alcohol, CNS depressants (e.g., lorazepam, morphine, zolpidem) may have additive sedative effect. May decrease effectiveness of oral contraceptives, dolutegravir, doravirine, elvitegravir, rilpivirine, simeprevir, sofosbuvir, tenofovir alafenamide. May increase serotonergic effect of selegiline. May increase concentration, risk of toxicity of phenobarbital, phenytoin. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May

increase serum alkaline phosphatase, ALT, AST. May decrease serum sodium.

AVAILABILITY (Rx)

Oral Suspension: 300 mg/5 mL. **Tablets:** 150 mg, 300 mg, 600 mg.

 **Tablets, Extended-Release:** 150 mg, 300 mg, 600 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food. Do not break, crush, dissolve, or divide extended-release tablets. Swallow whole.

INDICATIONS/ROUTES/DOSAGE

Adjunctive Treatment of Seizures

PO: ADULTS, ELDERLY: (Immediate-Release): Initially, 600 mg/day in 2 divided doses. May increase by up to 600 mg/day at wkly intervals. **Maximum:** 2,400 mg/day. **Usual maintenance dose:** 600 mg twice daily. **CHILDREN 4–16 YRS:** Initially, 8–10 mg/kg in 2 divided doses. **Maximum:** 600 mg/day. Increase dose slowly over 2 wks. **Maintenance (based on weight): CHILDREN WEIGHING MORE THAN 39 KG:** 1,800 mg/day in 2 divided doses; **CHILDREN WEIGHING 29.1–39 KG:** 1,200 mg/day in 2 divided doses; **CHILDREN WEIGHING 20–29 KG:** 900 mg/day in 2 divided doses. **CHILDREN 2–3 YRS:** Initially, 8–10 mg/kg/day in 2 divided doses. **Maximum:** 600 mg/day in 2 divided doses. Increase dose slowly over 2 wks up to a **maximum** of 60 mg/kg/day in 2 divided doses. **(Extended-Release): ADULTS:** Initially, 600 mg once daily. May increase by 600 mg/day at wkly intervals. Range: 1,200–2,400 mg/day. **ELDERLY:** Initially, 300–450 mg/day. May increase by 300–450 mg/day at wkly intervals to desired clinical response. Range: Up to 2,400 mg/day.

Conversion to Monotherapy

PO: ADULTS, ELDERLY: (Immediate-Release): 600 mg/day in 2 divided doses (while decreasing concomitant anticonvulsant over 3–6 wks). May increase by

✦ Canadian trade name

 Non-Crushable Drug

 High Alert drug

600 mg/day at wkly intervals up to 2,400 mg/day. **CHILDREN 4–16 YRS:** Initially, 8–10 mg/kg/day in 2 divided doses with simultaneous initial reduction of dose of concomitant antiepileptic over 3–6 wks. May increase by maximum of 10 mg/kg/day at wkly intervals (see below for recommended daily dose by weight).

Initiation of Monotherapy

PO: ADULTS, ELDERLY: (Immediate-Release): 600 mg/day in 2 divided doses. May increase by 300 mg/day every 3 days up to 1,200 mg/day. **CHILDREN 4–16 YRS:** Initially, 8–10 mg/kg/day in 2 divided doses. Increase at 3-day intervals by 5 mg/kg/day to achieve maintenance dose by weight as follows:

Weight	Dosage
70+ kg	1,500–2,100 mg/day
60–69 kg	1,200–2,100 mg/day
50–59 kg	1,200–1,800 mg/day
41–49 kg	1,200–1,500 mg/day
35–40 kg	900–1,500 mg/day
25–34 kg	900–1,200 mg/day
20–24 kg	600–900 mg/day

Dosage in Renal Impairment

Mild to moderate impairment: No dose adjustment. **CrCl less than 30 mL/min:** Give 50% of normal starting dose, then titrate slowly to desired dose.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Use caution with immediate-release; not recommended with extended-release.

SIDE EFFECTS

Frequent (22%–13%): Dizziness, nausea, headache. **Occasional (7%–5%):** Vomiting, diarrhea, ataxia (muscular incoordination), nervousness, dyspepsia, constipation. **Rare (4%):** Tremor, rash, back pain, epistaxis, sinusitis, diplopia.

ADVERSE EFFECTS/TOXIC REACTIONS

Clinically significant hyponatremia may occur, manifested as leg cramping, hypotension, cold/clammy skin, increased

pulse rate, headache, nausea, vomiting, diarrhea. Suicidal ideation occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (type, onset, intensity, frequency, duration, LOC), drug history (esp. other anticonvulsants). Provide safety precautions; quiet, dark environment.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness, ataxia occur. Assess for visual abnormalities, headache. Monitor serum sodium. Assess for signs of hyponatremia (nausea, malaise, headache, lethargy, confusion). Assess for clinical improvement (decrease in intensity, frequency of seizures). Monitor for worsening depression, suicidal ideation.

PATIENT/FAMILY TEACHING

- Do not abruptly stop taking medication (may increase seizure activity).
- Report if rash, nausea, headache, dizziness occurs.
- May need periodic blood tests.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Avoid alcohol.
- May decrease effectiveness of oral contraceptives.

oxybutynin

ox-i-bue-ti-nin
(Ditropan XL, Gelnique, Oxytrol for Women)

Do not confuse oxybutynin with OxyContin.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticholinergic. **CLINICAL:** Urinary antispasmodic.

USES

Relief of symptoms (urgency, incontinence, frequency, nocturia, urge incontinence) associated with uninhibited

underlined – top prescribed drug

neurogenic bladder, reflex neurogenic bladder. **Extended-Release (additional):** Treatment of symptoms associated with detrusor overactivity due to neurologic disorder (e.g., spina bifida).

PRECAUTIONS

Contraindications: Hypersensitivity to oxybutynin. Pts with or at risk for uncontrolled narrow-angle glaucoma, urinary retention, gastric retention, or conditions with severely decreased GI motility. **Cautions:** Renal/hepatic impairment, pts with bladder outflow obstruction, treated narrow-angle glaucoma, hyperthyroidism, coronary artery disease, HE, hypertension, arrhythmias, prostatic hyperplasia, myasthenia gravis, reduced GI motility, GI obstructive disorder, gastroesophageal reflux.

ACTION

Direct antispasmodic effect on smooth muscle; inhibits action of acetylcholine on smooth muscle. **Therapeutic Effect:** Increases bladder capacity, delays desire to void. Decreases urgency and frequency.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	0.5–1 hr	3–6 hrs	6–10 hrs

Rapidly, well absorbed from GI tract. Metabolized in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 1–2.3 hrs; metabolite, 7–8 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** No age-related precautions noted in those older than 5 yrs. **Elderly:** May be more sensitive to anticholinergic effects (e.g., dry mouth, urinary retention).

INTERACTIONS

DRUG: Medications with anticholinergic action (e.g., acclidinium, ipratropium, tiotropium, umeclidinium)

may increase anticholinergic effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Syrup: 5 mg/5 mL. **Tablets:** 5 mg. **Topical Gel (10%):** (*Gelnique*): 100 mg/unit dose sachet. **Transdermal:** (*Oxytrol for Women*): 3.9 mg/24 hrs.

 **Tablets, Extended-Release:** 5 mg, 10 mg, 15 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.
- Extended-release tablet must be swallowed whole; do not break, crush, dissolve, or divide.

Transdermal

- Apply patch to dry, intact skin on abdomen, hip, buttock.
- Use new application site for each new patch; avoid reapplication to same site within 7 days.
- Normal exposure to water (e.g., bathing, swimming) should not affect patch.

Topical Gel

- **Gelnique:** Apply contents of 1 sachet once daily to dry, intact skin on abdomen, upper arms/shoulders, or thighs.
- Do not bathe/shower until 1 hr after gel is applied.

INDICATIONS/ROUTES/DOSAGE

Neurogenic Bladder

PO: (Immediate-Release): ADULTS: 5 mg 2–3 times/day. May increase to 5 mg 4 times/day. **ELDERLY:** 2.5–5 mg 2–3 times/day. **CHILDREN OLDER THAN 5 YRS:** 5 mg twice daily. May increase to 5 mg 3 times/day.

PO: (Extended-Release): ADULTS, ELDERLY: 5–10 mg/day. May increase by 5-mg increments at wkly intervals. **Maximum:** 30 mg/day. **CHILDREN 6 YRS AND OLDER:** Initially, 5–10 mg once daily. May increase in 5 mg increments at wkly intervals. **Maximum:** 20 mg/day.

Transdermal: ADULTS: 3.9 mg applied twice wkly. Apply every 3–4 days.

Topical gel: ADULTS, ELDERLY: (10%) 100 mg once daily.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Constipation, dry mouth, drowsiness, decreased perspiration. **Occasional:** Decreased lacrimation/salivation, impotence, urinary hesitancy/retention, suppressed lactation, blurred vision, mydriasis, nausea/vomiting, insomnia.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose produces CNS excitation (nervousness, restlessness, hallucinations, irritability), hypotension/hypertension, confusion, tachycardia, facial flushing, respiratory depression.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess degree of dysuria, urgency, frequency, incontinence. Question medical history as listed in Precautions.

INTERVENTION/EVALUATION

Monitor for symptomatic relief. Monitor I&O; palpate bladder for urine retention. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

- Avoid alcohol.
- May cause dry mouth (sugarless candy/gum may reduce effect).
- Avoid tasks that require alertness, motor skills until response to drug is established (may cause drowsiness).
- Avoid strenuous activity in warm environment.

oxyCODONE

TOP 100 HIGH ALERT

ox-ee-koe-done

(Oxaydo, Oxy CONTIN, OxyIR , Roxicodone, Supeudol , Xtampza ER)

BLACK BOX ALERT **OxyContin (controlled-release):** Not intended as an “as needed” analgesic or for immediate postop pain control. Extended-release should not be crushed, broken, or chewed (otherwise leads to rapid release and absorption of potentially fatal dose). Be alert to signs of abuse, misuse, and diversion. May cause potentially life-threatening respiratory depression. Prolonged use during pregnancy can cause neonatal withdrawal syndrome. Use of CYP3A4 inhibitors may increase effects/ cause fatal respiratory depression.

Do not confuse oxyCODONE with HYDROcodone, oxybutynin, or oxyMORphone, OxyCONTIN with MS Contin or oxybutynin, or Roxicodone with Roxanol.

FIXED-COMBINATION(S)

Combunox: oxyCODONE/ibuprofen (an NSAID): 5 mg/400 mg. **Endocet:** oxyCODONE/acetaminophen (a nonnarcotic analgesic): 5 mg/325 mg, 7.5 mg/325 mg, 7.5 mg/500 mg, 10 mg/325 mg, 10 mg/650 mg. **Magnacet:** oxyCODONE/acetaminophen (a nonnarcotic analgesic): 2.5 mg/400 mg, 7.5 mg/400 mg, 10 mg/400 mg. **Percocet:** oxyCODONE/acetaminophen: 2.5 mg/325 mg, 5 mg/325 mg, 5 mg/500 mg, 7.5 mg/325 mg, 7.5 mg/500 mg, 10 mg/325 mg, 10 mg/650 mg. **Percocet, Roxicet, Tylox:** oxyCODONE/acetaminophen (a nonnarcotic analgesic): 5 mg/500 mg. **Percodan:** oxyCODONE/aspirin (a nonnarcotic analgesic): 2.25 mg/325 mg, 4.5 mg/325 mg. **Targiniq ER:** oxyCODONE/naloxone (opioid antagonist): 10 mg/5 mg, 20 mg/10 mg, 40 mg/20 mg. **Troxyca ER:** oxyCODONE/naltrexone (an opioid antagonist): 10 mg/1.2 mg, 20 mg/2.4 mg, 30 mg/3.6 mg, 40 mg/4.8 mg, 60 mg/7.2 mg, 9.6 mg/80 mg. **Xartemis XR:** oxyCODONE/acetaminophen (nonnarcotic analgesic): 7.5 mg/325 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Opioid agonist (Schedule II). **CLINICAL:** Analgesic.

USES

Immediate-Release: Relief of acute or chronic, moderate to severe pain (usually in combination with nonopioid analgesics). **Extended-Release:** Around-the-clock management of moderate to severe pain when continuous analgesic is needed.

PRECAUTIONS

Contraindications: Hypersensitivity to oxyCODONE. Acute or severe bronchial asthma, hypercarbia, paralytic ileus (known or suspected), GI obstruction, significant respiratory depression. **Extreme Caution:** CNS depression, anoxia, hypercapnia, respiratory depression, seizures, acute alcoholism, shock, untreated myxedema, respiratory dysfunction. **Cautions:** Elevated ICP, hepatic/renal impairment, coma, debilitated pts, head injury, biliary tract disease, toxic psychosis, acute abdominal conditions, hypothyroidism, prostatic hypertrophy, Addison's disease, urethral stricture, COPD, history of substance abuse, elderly pts.

ACTION

Binds with opioid receptors within CNS, causing inhibition of ascending pain pathway. **Therapeutic Effect:** Alters perception of and emotional response to pain.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (immediate-release)	10–15 min	0.5–1 hr	3–6 hrs
PO (controlled-release)	10–15 min	0.5–1 hr	Up to 12 hrs

Moderately absorbed from GI tract. Protein binding: 38%–45%. Widely distributed. Metabolized in liver. Excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 2–3 hrs (5 hrs controlled-release).

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. Respiratory depression may occur in neonate if mother received opiates during labor. Regular use of opiates during pregnancy may produce withdrawal symptoms in neonate (irritability, excessive crying, tremors, hyperactive reflexes, fever, vomiting, diarrhea, yawning, sneezing, seizures). **Children:** Paradoxical excitement may occur. Pts younger than 2 yrs are more susceptible to respiratory depressant effects. **Elderly:** Age-related renal impairment may increase risk of urinary retention. May be more susceptible to respiratory depressant effects.

INTERACTIONS

DRUG: Alcohol, other CNS depressants (e.g., LORazepam, gabapentin, zolpidem) may increase CNS effects, respiratory depression, hypotension. **Strong CYP3A4 inhibitors (clarithromycin, ketoconazole, ritonavir)** may increase concentration, toxicity. **Strong CYP3A4 inducers (carbamazepine, phenytoin, rifampin)** may decrease concentration/effects. **MAOIs** may produce serotonin syndrome, a severe, sometimes fatal reaction. **HERBAL:** Herbals with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **St. John's wort** may decrease concentration/effect. **FOOD:** Grapefruit products may increase potential for respiratory depression. **LAB VALUES:** May increase serum amylase, lipase.

AVAILABILITY (Rx)

◀ **ALERT** ▶ New formulation of controlled-release is intended to prevent medication from being cut, broken, chewed, crushed, or dissolved to reduce risk of overdose due to tampering, snorting, or injection.

Capsules: 5 mg. **Oral Concentrate:** 20 mg/mL. **Oral Solution:** 5 mg/5 mL. **Tablets:** 5 mg, 10 mg, 15 mg, 20 mg, 30 mg. **Tablets,**

Abuse Deterrent: (Oxaydo): 5 mg, 7.5 mg.

Capsules, Extended-Release: (Xtampza): 9 mg, 13.5 mg, 18 mg, 27 mg, 36 mg. **Tablets, Controlled-Release 12-Hour Abuse Deterrent: (OxyCONTIN):** 10 mg, 15 mg, 20 mg, 30 mg, 40 mg, 60 mg, 80 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • **Controlled-release:** Swallow whole; do not break, crush, dissolve, or divide.

INDICATIONS/ROUTES/DOSAGE

Note: All doses should be titrated to desired effect. Do not abruptly discontinue in physically dependent pts. **Discontinuation: (Immediate-Release):** Reduce dose by 25%-50% q2-4 days while monitoring for withdrawal; **(Extended-Release):** Gradually titrate downward.

Analgesia

PO: (Immediate-Release): ADULTS, ELDERLY: Initially, 5–15 mg q4–6h as needed. Range: 5–20 mg/dose. **CHILDREN (GREATER THAN 6 MOS) 50 KG OR GREATER:** Initially, 5–10 mg q4–6h. **Maximum:** 20 mg/dose. **LESS THAN 50 KG:** 0.1–0.2 mg/kg/dose q4–6h. **Maximum dose range:** 5–10 mg.

Opioid Naive

PO: (Controlled-Release): ADULTS, ELDERLY: (Tablets): Initially, 10 mg q12h. **(Capsules):** Initially, 9 mg q12h.

◀ALERT▶ To convert from other opioids or nonopioid analgesics to oxyCODONE controlled-release, refer to OxyCONTIN package insert. Dosages are reduced in pts with severe hepatic disease.

Dosage in Renal/Hepatic Impairment

Use caution. Titrate carefully.

SIDE EFFECTS

◀ALERT▶ Effects are dependent on dosage amount. Ambulatory pts, pts not in severe pain may experience dizziness, nausea, vomiting, hypotension more frequently than those in supine position or having severe

pain. **Frequent:** Drowsiness, dizziness, hypotension (including orthostatic hypotension), anorexia. **Occasional:** Confusion, diaphoresis, facial flushing, urinary retention, constipation, dry mouth, nausea, vomiting, headache. **Rare:** Allergic reaction, depression, paradoxical CNS hyperactivity, nervousness in children, paradoxical excitement, restlessness in elderly, debilitated pts.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose results in respiratory depression, skeletal muscle flaccidity, cold/clammy skin, cyanosis, extreme drowsiness progressing to seizures, stupor, coma. Hepatotoxicity may occur with overdose of acetaminophen component of fixed-combination product. Tolerance to analgesic effect, physical dependence may occur with repeated use. **Antidote:** Naloxone (see Appendix J for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain. Effect of medication is reduced if full pain recurs before next dose. Obtain vital signs before giving medication. If respirations are 12/min or less (20/min or less in children), withhold medication, contact physician.

INTERVENTION/EVALUATION

Palpate bladder for urinary retention. Monitor daily pattern of bowel activity, stool consistency. Initiate deep breathing, coughing exercises, esp. in pts with pulmonary impairment. Monitor pain relief, respiratory rate, mental status, B/P, LOC.

PATIENT/FAMILY TEACHING

• May cause dry mouth, drowsiness. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • May be habit forming. • Do not chew, crush, dissolve, or divide controlled-release tablets. • Report severe constipation, absence of pain relief.

oxytocin

**HIGH
ALERT**

 ox-ee-toe-sin
(Pitocin)

■ BLACK BOX ALERT ■ Not to be given for elective labor induction, but can be used when there is a clear medical indication for induction.

Do not confuse Pitocin with Pitressin.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Uterine smooth muscle stimulant. **CLINICAL:** Oxytocic agent.

USES

Antepartum: Induction of labor in pts with medical indication (e.g., at or near term), to stimulate reinforcement of labor, as adjunct in managing incomplete or inevitable abortion. **Postpartum:** To produce uterine contractions during third stage of labor and to control postpartum bleeding/hemorrhage.

PRECAUTIONS

Contraindications: Hypersensitivity to oxytocin. Adequate uterine activity that fails to progress, cephalopelvic disproportion, fetal distress without imminent delivery, grand multiparity, hyperactive or hypertonic uterus, obstetric emergencies that favor surgical intervention, prematurity, unengaged fetal head, unfavorable fetal position/presentation, when vaginal delivery is contraindicated (e.g., active genital herpes infection, invasive cervical cancer, placenta previa, cord presentation). **Cautions:** Induction of labor should be for medical, not elective, reasons. Generally not recommended in fetal distress, hydramnios, partial placental previa, predisposition to uterine rupture.

ACTION

Activates receptors that trigger increase in intracellular calcium levels in uterine

myofibrils; increases prostaglandin production. **Therapeutic Effect:** Stimulates uterine contractions.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	Immediate	N/A	1 hr
IM	3–5 min	N/A	2–3 hrs

Rapidly absorbed through nasal mucous membranes. Protein binding: 30%. Distributed in extracellular fluid. Metabolized in liver, kidney. Primarily excreted in urine. **Half-life:** 1–6 min.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Used as indicated, not expected to present risk of fetal abnormalities. Small amounts in breast milk. Breastfeeding not recommended. **Children/Elderly:** Not used in these pt populations.

INTERACTIONS

DRUG: Dinoprostone, misoprostol may increase adverse effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection: (Pitocin): 10 units/mL. **Injection Solution:** 30 units/500 mL.

ADMINISTRATION/HANDLING

Reconstitution • Dilute 10–40 units (1–4 mL) in 1,000 mL of 0.9% NaCl, lactated Ringer's, or D₅W to provide concentration of 10–40 milliunits/mL solution.

Rate of administration • Give by IV infusion (use infusion device to carefully control rate of flow as ordered by physician).

Storage • Store at room temperature.

⚡ IV INCOMPATIBILITIES

No known incompatibilities via Y-site administration.

IV COMPATIBILITIES

Heparin, insulin (regular), multivitamins, potassium chloride, zidovudine.

INDICATIONS/ROUTES/DOSAGE

Induction or Stimulation of Labor

IV: ADULTS: 0.5–1 milliunit/min. May gradually increase in increments of 1–2 milliunits/min q30–60 minutes until desired contraction pattern is established. Rates greater than 9–10 milliunits/min are rarely required.

Abortion

IV: ADULTS: (Midterm elective abortion): 10–20 milliunits/min. **Maximum:** 30 units/12-hr dose. **(Incomplete, inevitable, or elective abortion):** 10 units as IV infusion after suction or a sharp curettage.

Control of Postpartum Bleeding

IV infusion: ADULTS: 5–10 units may be given initially and can be followed by a maintenance infusion of 10–40 units in 1,000 mL IV fluid at rate sufficient to sustain uterine contractions and control uterine atony.

IM: ADULTS: 10 units (total dose) after delivery.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional: Tachycardia, premature ventricular contractions, hypotension, nausea, vomiting. **Rare:** Nasal:

Lacrimation/tearing, nasal irritation, rhinorrhea, unexpected uterine bleeding/contractions.

ADVERSE EFFECTS/TOXIC REACTIONS

Hypertonicity may occur with tearing of uterus, increased bleeding, abruptio placentae (i.e., placental abruption), cervical/vaginal lacerations. **Fetal:** Bradycardia, CNS/brain damage, trauma due to rapid propulsion, low Apgar score at 5 min, retinal hemorrhage occur rarely. Prolonged IV infusion of oxytocin with excessive fluid volume has caused severe water intoxication with seizures, coma, death.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baselines for vital signs, B/P, fetal heart rate. Determine frequency, duration, strength of contractions.

INTERVENTION/EVALUATION

Monitor B/P, pulse, respirations, fetal heart rate, intrauterine pressure, contractions (duration, strength, frequency) q15min. Notify physician of contractions that last longer than 1 min, occur more frequently than every 2 min, or stop. Maintain careful I&O; be alert to potential water intoxication. Check for blood loss.

PATIENT/FAMILY TEACHING

- Keep pt, family informed of labor progress.

PACLitaxel

**HIGH
ALERT**

pak-li-tax-el

(Abraxane, Apo-Paclitaxel )

■ BLACK BOX ALERT ■ Myelosuppression is a major dose-limiting toxicity. Must be administered by certified chemotherapy personnel. Severe hypersensitivity reactions reported.

Do not confuse PACLitaxel with DOCEtaxel, PARoxetine, or Paxil.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Taxane derivative, antimetabolic agent. **CLINICAL:** Antineoplastic.

USES

Conventional: Treatment of node-positive breast cancer, metastatic breast cancer after failure of combination therapy or relapse within 6 mos of adjuvant therapy; subsequent therapy for advanced ovarian cancer or as first-line therapy (in combination with CISplatin). Treatment of AIDS-related Kaposi's sarcoma; non-small-cell lung cancer (NSCLC) as first-line therapy (in combination with CISplatin). **Abraxane:** Treatment of breast cancer after failure of combination chemotherapy or relapse within 6 mos of adjuvant chemotherapy. First-line treatment of metastatic adenocarcinoma of pancreas. Treatment of locally advanced or metastatic NSCLC. **OFF-LABEL:** Bladder, cervical, small-cell lung, head and neck cancers. Treatment of adenocarcinoma. **Abraxane:** Recurrent/persistent ovarian, fallopian tube, primary peritoneal cancers.

PRECAUTIONS

Contraindications: Hypersensitivity to PACLitaxel. Hypersensitivity to drugs developed with Cremophor EL (polyoxyethylated castor oil). Treatment of solid tumors with baseline neutrophil count less than 1,500 cells/mm³; treatment of Kaposi's sarcoma with baseline neutrophil count less than 1,000 cells/mm³.

Cautions: Hepatic impairment, severe neutropenia, peripheral neuropathy.

ACTION

Increases action of tubulin dimers; stabilizes existing microtubules; inhibits their disassembly; interferes with late G₂ mitotic phase. **Therapeutic Effect:** Inhibits cellular mitosis, replication.

PHARMACOKINETICS

Does not readily cross blood-brain barrier. Protein binding: 89%–98%. Metabolized in liver. Excreted in bile/feces (71%), urine (14%). Not removed by hemodialysis. **Half-life:** 3-hr infusion: 13.1–20.2 hrs; 24-hr infusion: 15.7–52.7 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. Avoid use in pregnancy. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Strong CYP3A4 inhibitors** (e.g., clarithromycin, ketoconazole, ritonavir) may increase concentration/effect. **Strong CYP3A4 inducers** (e.g., carbamazepine, phenytoin, rifampin) may decrease effect. **Bone marrow depressants** (e.g., cladribine) may increase myelosuppression. **Strong CYP2C8 inhibitors** (e.g., gemfibrozil) may increase concentration/effect. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** **Herbals with hypotensive properties** (e.g., garlic, ginger, ginkgo biloba) may increase effect. **Echinacea** may decrease therapeutic effect. **St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** May elevate serum alkaline phosphatase, bilirubin, ALT, AST, triglycerides.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Abraxane): 100-mg vial. **Injection Solu-**

tion: 6 mg/mL (5-mL, 16.7-mL, 25-mL, 50-mL vials).

ADMINISTRATION/HANDLING

◀ALERT▶ Wear gloves during handling; if contact with skin occurs, wash hands thoroughly with soap, water. If contact with mucous membranes occurs, flush with water.

PACLitaxel

Reconstitution • Dilute with 250–1,000 mL 0.9% NaCl, D₅W to final concentration of 0.3–1.2 mg/mL.

Rate of administration • Administer at rate per protocol (range: 1–96 hrs) through in-line filter not greater than 0.22 microns. • Monitor vital signs during infusion, esp. during first hour. • Discontinue administration if severe hypersensitivity reaction occurs.

Storage • Store unopened vials at room temperature. • Reconstituted solution is stable at room temperature for 72 hrs. • Store diluted solutions in bottles or plastic bags. Administer through polyethylene-lined administration sets (avoid plasticized PVC equipment or devices).

Abraxane (PACLitaxel—Protein Bound)

Reconstitution • Reconstitute each vial with 20 mL 0.9% NaCl to provide concentration of 5 mg/mL. • Slowly inject onto inside wall of vial; gently swirl over 2 min to avoid foaming. • Inject appropriate amount into empty PVC-type bag.

Rate of administration • Infuse over 30 min. Do not use in-line filter.

Storage • Store unopened vials at room temperature. • Once reconstituted, use immediately but may refrigerate for up to 8 hrs.

IV INCOMPATIBILITIES

◀ALERT▶ Data for Abraxane not known; avoid mixing with other medication.

Amphotericin B complex (Abelcet, AmBisome, Amphotec), DOXOrubicin liposomal (Doxil), hydroXYzine (Vistaril), methylPREDNISolone (SOLU-Medrol), mitoXANTRONE (Novantrone).

IV COMPATIBILITIES

CARBOplatin (Paraplatin), CISplatin (Platinol AQ), cyclophosphamide (Cytoxan), cytarabine (Cytosar), dacarbazine (DTIC-Dome), dexamethasone (Decadron), diphenhydrAMINE (Benadryl), DOXOrubicin (Adriamycin), etoposide (VePesid), gemcitabine (Gemzar), granisetron (Kytril), HYDROmorphone (Dilaudid), lipids, magnesium sulfate, mannitol, methotrexate, morphine, ondansetron (Zofran), potassium chloride, vinBLASTine (Velban), vinCRIStine (Oncovin).

INDICATIONS/ROUTES/DOSAGE

Note: Premedication with dexamethasone, diphenhydrAMINE, and cimetidine, famotidine, or ranITidine recommended. Refer to individual protocols.

PACLitaxel (Conventional)

Ovarian Cancer

IV: ADULTS, ELDERLY: (Previously treated): 135–175 mg/m²/dose over 3 hrs q3wks. **(Previously untreated):** 175 mg/m² over 3 hrs q3wks (in combination with CISplatin) or 135 mg/m² over 24 hrs q3wks (in combination with CISplatin).

Breast Cancer (Adjuvant)

IV: ADULTS, ELDERLY: 175 mg/m² over 3 hrs for 4 cycles (give sequentially following anthracycline-containing regimen).

Breast Cancer (Metastatic/Relapsed)

IV: ADULTS, ELDERLY: 175 mg/m² over 3 hrs q3wks.

Non–Small-Cell Lung Cancer

IV: ADULTS, ELDERLY: 135 mg/m² over 24 hrs (in combination with CISplatin).

Kaposi's Sarcoma (AIDS-Related)

IV: ADULTS, ELDERLY: 135 mg/m²/dose over 3 hrs q3wks or 100 mg/m²/dose over 3 hrs q2wks.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Transaminase

Level	Bilirubin	Dose
24-HR INFUSION		
Less than 2 times ULN	1.5 mg/dL or less	135 mg/m ²
2 to less than 10 times ULN	1.5 mg/dL or less	100 mg/m ²
Less than 10 times ULN	1.6–7.5 mg/dL or less	50 mg/m ²
3-HR INFUSION		
Less than 10 times ULN	1.25 mg/dL or less	175 mg/m ²
Less than 10 times ULN	1.26–2 times ULN	135 mg/m ²
Less than 10 times ULN	2.01–5 times ULN	90 mg/m ²
10 times ULN or greater	Greater than 5 times ULN	Avoid use

ULN: upper limit of normal

Dose Modification

Courses of PACLitaxel should be withheld until neutrophil count is 1,500 cells/mm³ or more and platelet count is 100,000 cells/mm³ or more.

Abraxane (Protein Bound)

Breast Cancer (Metastatic)

IV infusion: ADULTS, ELDERLY: 260 mg/m² q3wks.

Dose Modification

Severe neutropenia (ANC less than 500 cells/mm³ for 1 wk or longer); severe sensory neuropathy: Reduce dose to 220 mg/m² for subsequent courses. **Recurrence of severe neutropenia, severe neuropathy:** Reduce dose to 180 mg/m² q3wks for subsequent courses. **CTCAE Grade 3 sensory neuropathy:** Hold until resolved to Grade 2 or 1, then reduce dose for subsequent courses. **Dosage of Abraxane for serum bilirubin greater than 1.5 mg/dL:** Dose unknown.

NSCLC (Locally Advanced or Metastatic)

IV: ADULTS, ELDERLY: 100 mg/m² on days 1, 8, 15 of each 21-day cycle (in combination with CARBOplatin).

Adenocarcinoma of Pancreas

(Metastatic) (in combination with gemcitabine)

IV: ADULTS, ELDERLY: 125 mg/m² on days 1, 8, 15 of each 28-day cycle (in combination with gemcitabine).

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

	Mild Impairment (AST Less Than 10 Times Upper Limit of Normal [ULN], Bilirubin 1.25 Times ULN or Less)		Severe Impairment (AST Less Than 10 Times ULN, Bilirubin 2.01–5 Times ULN)	
	Mild Impairment (AST Less Than 10 Times Upper Limit of Normal [ULN], Bilirubin 1.25 Times ULN or Less)	Moderate Impairment (AST Less Than 10 Times ULN, Bilirubin 1.26–2 Times ULN)	(AST Less Than 10 Times ULN, Bilirubin 2.01–5 Times ULN)	(AST More Than 10 Times ULN or Bilirubin > 5 Times ULN)
Breast cancer	No adjustment	Reduce dose to 200 mg/m ²	Reduce dose to 130 mg/m ² (may increase to 200 mg/m ² in subsequent cycles)	Not recommended
NSCLC	No adjustment	Reduce dose to 75 mg/m ²	Reduce dose to 50 mg/m ² (may increase to 75 mg/m ² in subsequent cycles)	Not recommended
Pancreatic	No adjustment	Not recommended	Not recommended	Not recommended

SIDE EFFECTS

Expected (90%–70%): Diarrhea, alopecia, nausea, vomiting. **Frequent (48%–46%):** Myalgia, arthralgia, peripheral neuropathy. **Occasional (20%–13%):** Mucositis, hypotension during infusion, pain/redness at injection site. **Rare (3%):** Bradycardia.

ADVERSE EFFECTS/TOXIC REACTIONS

Neutropenic nadir occurs at median of 11 days. Anemia, leukopenia occur commonly; thrombocytopenia occurs occasionally. Severe hypersensitivity reaction (dyspnea, severe hypotension, angioedema, generalized urticaria) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC (note neutrophil count), BMP, LFT prior to each course. Receive full medication history and screen for interactions. Offer emotional support.

INTERVENTION/EVALUATION

Monitor CBC, LFT, vital signs. Monitor for hematologic toxicity (fever, sore throat, signs of local infections, unusual bleeding/bruising), symptoms of anemia (excessive fatigue, weakness). Monitor daily pattern of bowel activity, stool consistency; report diarrhea. Avoid IM injections, rectal temperatures, other traumas that may induce bleeding. Hold pressure to injection sites for full 5 min.

PATIENT/FAMILY TEACHING

- Hair loss is reversible, but new hair may have different color, texture.
- Do not have immunizations without physician's approval (drug lowers resistance).
- Avoid crowds, persons with known infections.
- Report signs of infection at once (fever, flu-like symptoms).
- Report persistent nausea/vomiting.
- Be alert for signs of peripheral neuropathy.
- Avoid pregnancy.
- Avoid tasks that may require alertness, motor skills until response to drug is established.

palbociclib

pal-boe-sye-klib
(Ibrance)

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Cyclin-dependent kinase inhibitor. **CLINICAL:** Antineoplastic.

USES

Used in combination with an aromatase inhibitor (e.g., letrozole) for treatment of postmenopausal women and adult men with estrogen receptor–positive, human epidermal growth factor receptor 2 (*HER2*)–negative advanced breast cancer as initial endocrine-based therapy for metastatic disease or in combination with fulvestrant in women with disease progression following endocrine therapy.

PRECAUTIONS

Contraindications: Hypersensitivity to palbociclib. **Cautions:** Baseline anemia, lymphopenia, neutropenia, thrombocytopenia. History of pulmonary embolism. Avoid concomitant use of strong or moderate CYP3A inhibitors, strong or moderate CYP3A inducers.

ACTION

Reduces proliferation of breast cancer cell lines by preventing cellular progression from G1 into S phase of cell cycle. Combination with an aromatase inhibitor provides increased inhibition. **Therapeutic Effect:** Inhibits tumor cell growth and metastasis.

PHARMACOKINETICS

Readily absorbed. Widely distributed. Metabolized in liver. Protein binding: 85%. Peak plasma concentration: 6–12 hrs. Steady state reached in 8 days. Excreted in feces (74%), urine (18%). **Half-life:** 29 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Treatment is indicated for postmenopausal women.

However, treatment may cause fetal harm when administered during pregnancy. Females of reproductive potential should use effective contraception during treatment and up to 2 wks after discontinuation. Unknown if distributed in breast milk. Must either discontinue drug or discontinue breastfeeding. **Children:** Safety and efficacy not established. Not indicated for this pt population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A inhibitors (e.g., clarithromycin, ketoconazole, ritonavir), moderate CYP3A inhibitors (e.g., atazanavir, ciprofloxacin) may increase concentration/effect; avoid use. Strong CYP3A inducers (e.g., carbamazepine, rifampin), moderate CYP3A inducers (e.g., nafcillin) may decrease concentration/effect; avoid use. May decrease the therapeutic effect of vaccines (live). May increase adverse/toxic effects of natalizumab, vaccines (live). **HERBAL:** St. John's wort may decrease concentration/effect. Echinacea may decrease therapeutic effect. **FOOD:** Grapefruit products may increase concentration/effect. **LAB VALUES:** May decrease Hgb, lymphocytes, neutrophils, platelets, WBC.

AVAILABILITY (Rx)

Capsules: 75 mg, 100 mg, 125 mg.

ADMINISTRATION/HANDLING

PO

- Give with food.
- Administer whole; do not break, crush, cut, or open capsule.
- If vomiting occurs after dosing, do not readminister dose; give dose at next scheduled time.

INDICATIONS/ROUTES/DOSAGE

Breast Cancer (initial endocrine-based therapy)

PO: ADULTS, ELDERLY: 125 mg once daily for 21 days, followed by a 7-day rest period to complete a 28-day cycle. Use in combination with an aromatase inhibitor (e.g., letrozole) once daily throughout

28-day cycle. Continue until disease progression or unacceptable toxicity.

Breast Cancer (Disease Progression)

PO: ADULTS, ELDERLY: 125 mg once daily for 21 days, then 7 days off. Repeat q28 days (in combination with fulvestrant [and an LHRH agonist if pre- or perimenopausal]). Continue until disease progression or unacceptable toxicity.

Dose Reduction for Adverse Events

Dose Level	Dose
Recommended starting dose	125 mg/day
First dose reduction	100 mg/day
Second dose reduction	75 mg/day
Unable to tolerate 75 mg/day	Permanently discontinue

Dose Modification

Based on Common Terminology Criteria for Adverse Events (CTCAE).

Hematologic Toxicities

Grade 1 or 2: No dose adjustment. **Grade 3 (except lymphopenia unless associated with clinical events [e.g., opportunistic infection]):** No dose adjustment. Withhold treatment until recovery to less than Grade 2. **Grade 3, ANC 500–1000 cells/mm³ plus fever that is greater than or equal to 38.5°C and/or active infection:** Interrupt treatment (and initiation of the next cycle) until recovery to Grade 2 or less. Resume at reduced dose upon starting.

Nonhematologic Toxicities

Grade 1 or 2: No dose adjustment. **Grade 3 or greater (if persistent despite optimal medical management):** Interrupt treatment until resolved to Grade 1 or less; Grade 2 or less if the event is not considered a serious medical risk. Resume at reduced dose upon starting.

Concomitant Use of Strong CYP3A Inhibitors

PO: ADULTS, ELDERLY: 75 mg once daily if unable to use alternative drug with minimal CYP3A inhibition. If CYP3A inhibitor is discontinued, increase palbociclib dose (after 3–5 half-lives of CYP3A inhibitor have elapsed) to the dose used prior to initiating strong CYP3A inhibitor.

Dosage in Renal Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Not studied; use caution.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment:** Not studied; use caution.

SIDE EFFECTS

Frequent (41%–21%): Fatigue, nausea, alopecia, diarrhea. **Occasional (16%–13%):** Decreased appetite, vomiting, asthenia.

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia, leukopenia, neutropenia, thrombocytopenia are expected responses to therapy. CTCAE Grade 3 neutropenia reported in 57% of pts. The median onset of neutropenia was 15 days. Pulmonary embolism (5% of pts); upper respiratory tract infections including influenza, laryngitis, nasopharyngitis, pharyngitis, rhinitis, sinusitis (31% of pts); peripheral neuropathy (31% of pts); cheilitis, glossitis, glossodynia, mouth ulceration, stomatitis (25% of pts); epistaxis (11% of pts) were reported.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain baseline ANC, CBC. Confirm estrogen receptor–positive, *HER2*-negative status. Verify pregnancy status before start of each cycle. Screen for history of pulmonary embolism. Receive full medication history and screen for interactions. Assess hydration status. Screen for active infection. Offer emotional support.

INTERVENTION/EVALUATION

Monitor ANC, CBC at start of each cycle and on day 14 on the first two cycles. If any Grade 3 or 4 hematologic toxicity occurs, repeat CBC 7 days after interruption of therapy and at start of next cycle. If neutropenia occurs specifically, recommend treatment interruption, dose reduction, or

delay in starting treatment for next cycle. Monitor for neurotoxicity (peripheral neuropathy), epistaxis. If chest pain, dyspnea, tachycardia occurs, provide supplemental O₂ and obtain radiologic testing to rule out pulmonary embolism.

PATIENT/FAMILY TEACHING

- Blood levels will be monitored regularly.
- Treatment may cause fetal harm. Women of childbearing potential should use effective contraception during treatment and up to 2 wks following discontinuation. Immediately report suspected pregnancy. Do not breastfeed.
- Immediately report chest pain, difficult breathing, fast heart rate, rapid breathing; may indicate life-threatening blood clot in the lungs.
- Report symptoms of bone marrow suppression or infection such as bruising easily, chills, cough, dizziness, fainting, fever, shortness of breath, weakness.
- Swallow capsules whole; do not chew, crush, cut, or open capsules.
- Take each dose with food.
- Treatment may increase risk of infection, nosebleeds.
- Drink plenty of fluids.
- Do not ingest grapefruit products or herbal supplements.
- Avoid crowds, those with active infection.

paliperidoneTOP
100

pal-ee-per-i-done

(Invega, Invega Sustenna, Invega Trinza)

BLACK BOX ALERT Elderly pts with dementia-related psychosis are at increased risk for mortality due to cerebrovascular events.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzisoxazole derivative. **CLINICAL:** Second-generation (atypical) antipsychotic.

USES

PO: Treatment of schizophrenia. **PO, IM:** Treatment of schizoaffective

disorder. **OFF-LABEL:** Treatment of irritability associated with autistic disorder.

PRECAUTIONS

Contraindications: Sensitivity to paliperidone, risperiDOne. **Cautions:** History of cardiac arrhythmias, mild renal impairment (not recommended in moderate to severe impairment), diabetes, HF, active seizures or predisposition to seizures, history of seizures, cardiovascular disease, congenital long QT syndrome, concomitant use with other medications that prolong QT interval, pts at risk for aspiration pneumonia. May increase risk of stroke in pts with dementia-related psychosis. CNS depression, concomitant use of antihypertensives, hypovolemia or dehydration, high risk for suicide. Pts with breast cancer, other prolactin-dependent tumors; children, adolescents.

ACTION

Exact mechanism unknown. May be a result of mixed central DOPamine and serotonin antagonism. **Therapeutic Effect:** Suppresses behavioral response in psychosis.

PHARMACOKINETICS

Absorbed from GI tract. Metabolized in liver. Primarily excreted in urine. **Half-life:** 23 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Potential for orthostatic hypotension. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May decrease effects of DOPamine agonists, levodopa. Alcohol, CNS depressants (e.g., LORazepam, morphine, zolpidem) may increase CNS depression. **Strong CYP3A4 inducers (e.g., carBAMazepine, phenytoin, rifAMPin)** may decrease concentration/effect. **Itraconazole** may increase QT interval—prolonging effect. **HERBAL:** St. John's wort may decrease

concentration/effect. **Herbals with sedative properties (e.g., chamomile, kava kava, valerian)** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum creatine phosphatase, uric acid, triglycerides, ALT, AST, prolactin. May decrease serum potassium, sodium, protein, glucose.

AVAILABILITY (Rx)

Injection Suspension: (Invega Sustenna): 39 mg/0.25 mL, 78 mg/0.5 mL, 117 mg/0.75 mL, 156 mg/mL, 234 mg/1.5 mL. **(Invega Trinza):** 273 mg, 410 mg, 546 mg, 819 mg.

 **Tablets, Extended-Release:** 1.5 mg, 3 mg, 6 mg, 9 mg.

ADMINISTRATION/HANDLING

PO

- May give without regard to food.
- Do not break, crush, dissolve, or divide extended-release tablets.

IM

- Administer both initial injections (first injection on day 1 and the second injection 1 wk later) into deltoid muscle (helps attain therapeutic concentration rapidly).
- Maintenance doses may be given in gluteal or deltoid muscle.

INDICATIONS/ROUTES/DOSAGE

Schizophrenia

PO: ADULTS, ELDERLY: Initially, 6 mg once daily in the morning. May increase dose in increments of 3 mg/day at intervals of more than 5 days. Range: 3–12 mg/day. **ADOLESCENTS 51 KG OR MORE:** Initially, 3 mg once daily. Range: 3–12 mg/day. **50 KG OR LESS:** Initially, 3 mg once daily. Range: 3–6 mg/day.

IM: (Invega Sustenna): ADULTS, ELDERLY: Initially, 234 mg on day 1 followed by 156 mg 1 wk later (second dose may be given 4 days before or after the wkly time point). **Maintenance:** Following the 1-wk initiation regimen, begin 117 mg monthly. Range: 39–234 mg (based on response and tol-

erability). Monthly maintenance dose may be given 7 days before or after the monthly time point. (**Invega Trinza**): 273 mg to 819 mg q3mos (based on last dose of Invega Sustenna). Three-month IM used only after monthly IM dose established for at least 4 mos. The last 2 mos of monthly IM should be the same dosage strength before starting 3-mo injections.

Schizoaffective Disorder

PO: ADULTS, ELDERLY: 6 mg once daily in the morning. May increase in increments of 3 mg/day at intervals of more than 4 days. Range: 3–12 mg/day. **IM: ADULTS, ELDERLY:** Initially, 234 mg, then 156 mg 1 wk later. **Maintenance range:** 39–234 mg monthly (based on response and tolerability). May be given 7 days before or after the monthly time point.

Dosage in Renal Impairment

Creatinine

Clearance	Oral Dosage	IM Dosage
50–79 mL/min	Initially, 3 mg/d Maximum: 6 mg/d	Initially, 156 mg, then 117 mg 1 wk later, then 78 mg monthly
10–49 mL/min	Initially, 1.5 mg/d Maximum: 3 mg/d	Not recommended
Less than 10 mL/min	Not recommended	Not recommended

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (14%–4%): Tachycardia, headache, drowsiness, akathisia, anxiety, dizziness, dyspepsia, nausea.

ADVERSE EFFECTS/TOXIC REACTIONS

Neuroleptic malignant syndrome (NMS), hyperpyrexia, muscle rigidity, change in mental status, unstable pulse or B/P, tachycardia, diaphoresis, cardiac arrhythmias, rhabdomyolysis, acute renal

failure, tardive dyskinesia (protrusion of tongue, puffing of cheeks, chewing/puckering of mouth) may occur rarely. May prolong QT interval.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline renal function tests. Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content. Screen for comorbidities as listed in Precautions.

INTERVENTION/EVALUATION

Monitor B/P, heart rate, weight, renal function tests, ECG. Monitor for fine tongue movement (may be first sign of tardive dyskinesia). Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess for therapeutic response (greater interest in surroundings, improved self-care, increased ability to concentrate, relaxed facial expression). Monitor for potential neuroleptic malignant syndrome (fever, muscle rigidity, unstable B/P or pulse, altered mental status).

PATIENT/FAMILY TEACHING

- Avoid tasks that may require alertness, motor skills until response to drug is established.
- Use caution when changing position from lying or sitting to standing.
- Report trembling in fingers, altered gait, unusual muscle/skeletal movements, palpitations, severe dizziness, fainting, swelling/pain in breasts, visual changes, rash, difficulty in breathing.

palonosetron

pal-oh-noe-se-tron
(Aloxi)

Do not confuse Aloxi with Eloxatin or oxaliplatin, or palonosetron with dolasetron, granisetron, or ondansetron.

FIXED-COMBINATION(S)

Akynzeo: palonosetron/netupitant (a substance P/neurokinin receptor antagonist): 0.5 mg/300 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective 5-HT₃ receptor antagonist. **CLINICAL:** Antiemetic.

USES

Prevention of acute and delayed nausea/vomiting associated with initial/repeated courses of moderately or highly emetogenic chemotherapy. Prevention of postop nausea/vomiting for up to 24 hrs following surgery.

PRECAUTIONS

Contraindications: Hypersensitivity to palonosetron. **Cautions:** History of cardiovascular disease; congenital long QT syndrome, risk factors for QT prolongation (hypokalemia, hypomagnesemia), medications that prolong QT interval or reduce potassium/magnesium levels, pts at risk for ventricular arrhythmias.

ACTION

Antagonizes 5-HT₃ receptors, blocking serotonin on both peripheral and vagal nerve terminals in chemoreceptor trigger zone. **Therapeutic Effect:** Decreases episodes of nausea/vomiting associated with chemotherapy or postoperative recovery.

PHARMACOKINETICS

Protein binding: 52%. Metabolized in liver. Excreted in urine. **Half-life:** 40 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: FentaNYL, lithium, MAOIs (e.g., phenelzine, selegiline), SNRIs (e.g., DULoxetine, venlafaxine), SS-

RIIs (e.g., citalopram, FLUoxetine, sertraline), tricyclic antidepressants (e.g., amitriptyline, doxepin) may increase risk of serotonin syndrome. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May transiently increase serum bilirubin, ALT, AST.

AVAILABILITY (Rx)

Injection Solution: 0.25 mg/5 mL.

ADMINISTRATION/HANDLING

Reconstitution • Give undiluted as IV push.

Rate of administration • Give IV push over 30 sec. Children: Infuse over 15 min. • Flush infusion line with 0.9% NaCl before and following administration.

Storage • Store at room temperature. Solution should appear colorless, clear. Discard if cloudy precipitate forms.

⊞ IV COMPATIBILITIES

Famotidine (Pepcid), LORazepam (Ativan), midazolam (Versed), potassium chloride.

INDICATIONS/ROUTES/DOSAGE**Chemotherapy-Induced Nausea/Vomiting**

IV: ADULTS, ELDERLY: 0.25 mg as single dose 30 min before starting chemotherapy. **CHILDREN 1 MO TO YOUNGER THAN 17 YRS:** 20 mcg/kg as single dose 30 min before starting chemotherapy. **Maximum:** 1.5 mg.

Postop Nausea/Vomiting

IV: ADULTS, ELDERLY: 0.075 mg over 10 sec immediately before induction of anesthesia.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (9%–5%): Headache, constipation. **Rare (less than 1%):** Diarrhea, dizziness, fatigue, abdominal pain, insomnia.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose may produce combination of CNS stimulation, depressant effects. May prolong QT interval. 5-HT₃ receptor antagonists are known to potentiate serotonin syndrome, esp. in pts taking serotonergic medications.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain BMP, serum magnesium in pts at risk for hypokalemia, hypomagnesemia, QT interval prolongation. Assess for signs of dehydration due to excessive vomiting (poor skin turgor, dry mucous membranes). Question history of cardiac disease, long QT syndrome, cardiac arrhythmias. Screen for concomitant home medications that prolong QT interval, increase risk of serotonin syndrome. Provide emotional support.

INTERVENTION/EVALUATION

Monitor for occurrence of nausea/vomiting. Assess for dehydration if excessive vomiting occurs (poor skin turgor, dry mucous membranes, longitudinal furrows in tongue). Monitor BMP, serum magnesium; ECG in pts suspected of arrhythmia, QT interval prolongation. Assess for symptoms of serotonin syndrome (e.g., altered mental status, tachycardia, labile B/P, diaphoresis, hyperthermia, tremor, hyperreflexia, diarrhea, seizures). Monitor for hypersensitivity reaction.

PATIENT/FAMILY TEACHING

- Relief from nausea/vomiting generally occurs shortly after drug administration.
- Report symptoms of serotonin overproduction such as confusion, excessive talking, fever, hallucinations, headache, hyperactivity, insomnia, racing thoughts, seizure activity, sexual dysfunction, tremors.
- Report persistent vomiting.
- Report palpitations, light-headedness, fainting; allergic reactions of any kind.

pamidronate

pam-id-roe-nate
(Aredia )

Do not confuse Aredia with Adriamycin, or pamidronate with alendronate, ibandronate, or risedronate.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Bisphosphonate. **CLINICAL:** Hypocalcemic.

USES

Treatment of moderate to severe hypercalcemia associated with malignancy (with/without bone metastases). Treatment of moderate to severe Paget's disease. Treatment of osteolytic bone lesions of multiple myeloma or bone metastases of breast cancer. **OFF-LABEL:** Inhibits bone resorption in osteogenesis imperfecta, treatment of bone metastases of thyroid cancer, prevention of bone loss associated with androgen deprivation treatment in prostate cancer.

PRECAUTIONS

Contraindications: Hypersensitivity to pamidronate, other bisphosphonates (e.g., risedronate, alendronate). **Cautions:** Renal impairment, concurrent use with other nephrotoxic medications, history of thyroid surgery. Preexisting anemia, leukopenia, thrombocytopenia.

ACTION

Inhibits bone resorption, decreases mineralization by disrupting activity of osteoclasts. **Therapeutic Effect:** Lowers serum calcium concentration.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	24–48 hrs	3–7 days	N/A

After IV administration, rapidly absorbed by bone. Slowly excreted unchanged in urine. Unknown if removed by hemodialysis. **Half-life:** 21–35 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if crosses placenta. Recommend discontinuation of drug as early as possible before a planned pregnancy. Unknown if fetal harm can occur. Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** May become overhydrated. Careful monitoring of fluid and electrolytes indicated; recommend dilution in smaller volume.

INTERACTIONS

DRUG: NSAIDs (e.g., ibuprofen, ketorolac, naproxen) may increase adverse/toxic effects (e.g., increased risk of ulcer). **Proton pump inhibitors** (e.g., omeprazole, pantoprazole) may decrease effect. **Aminoglycosides** (e.g., gentamicin) may increase risk of hypokalemia. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 30 mg, 90 mg. **Injection Solution:** 3 mg/mL, 6 mg/mL, 9 mg/mL.

ADMINISTRATION/HANDLING

Reconstitution • Reconstitute each vial with 10 mL Sterile Water for Injection to provide concentration of 3 mg/mL or 9 mg/mL. • Allow drug to dissolve before withdrawing. • Further dilute with 250–1,000 mL sterile 0.45% or 0.9% NaCl or D₅W (1,000 mL for hypercalcemia of malignancy, 500 mL for Paget's disease, multiple myeloma, 250 mL for breast cancer). **Rate of administration** • Adequate hydration is essential in conjunction with pamidronate therapy (avoid overhydration in pts with potential for HF). • Administer as IV infusion over 2–24 hrs for treatment of hypercalcemia; over 2 hrs for breast cancer; over 4 hrs for Paget's disease or multiple myeloma.

Storage • Store parenteral form at room temperature. • Reconstituted vial

is stable for 24 hrs if refrigerated; IV solution is stable for 24 hrs after dilution.

IV INCOMPATIBILITIES

Calcium-containing IV fluids.

INDICATIONS/ROUTES/DOSAGE

Hypercalcemia of Malignancy

IV infusion: ADULTS, ELDERLY: Moderate hypercalcemia (corrected serum calcium level 12–13.5 mg/dL): 60–90 mg as a single dose over 2–24 hrs. **Severe hypercalcemia (corrected serum calcium level greater than 13.5 mg/dL):** 90 mg as a single dose over 2–24 hrs.

Paget's Disease

IV infusion: ADULTS, ELDERLY: 30 mg/day over 4 hrs for 3 consecutive days. May retreat if clinically indicated.

Osteolytic Bone Lesion (Multiple Myeloma)

IV infusion: ADULTS, ELDERLY: 90 mg over 4 hrs once monthly.

Osteolytic Bone Metastases (Breast Cancer)

IV infusion: ADULTS, ELDERLY: 90 mg over 2 hrs q3–4wks.

Dosage in Renal Impairment

Not recommended.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (27%–18%): Temperature elevation (at least 1°C) 24–48 hrs after administration; erythema, swelling, induration, pain at catheter site in pts receiving 90 mg; anorexia, nausea, fatigue. **Occasional (10%–1%):** Constipation, rhinitis.

ADVERSE EFFECTS/TOXIC REACTIONS

Hypophosphatemia, hypokalemia, hypomagnesemia, hypocalcemia occur more frequently with higher dosages. Anemia, hypertension, tachycardia, atrial

fibrillation, drowsiness occur more frequently with 90-mg doses. GI hemorrhage occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, serum calcium, ionized calcium, magnesium, phosphate; renal function test level prior to therapy. Determine hydration status.

INTERVENTION/EVALUATION

Monitor serum calcium, ionized calcium, potassium, magnesium, creatinine, CBC. Provide adequate hydration; assess overhydration. Monitor I&O carefully; assess lungs for crackles, dependent body parts for edema. Monitor B/P, temperature, pulse. Assess catheter site for redness, swelling, pain. Monitor food intake, daily pattern of bowel activity, stool consistency. Be alert for potential GI hemorrhage with 90-mg dosage.

PATIENT/FAMILY TEACHING

- Report symptoms of low blood calcium levels, including confusion, muscle twitching/cramps, numbness, seizures, tingling, jaw pain.
- Immediately report GI bleeding.

panitumumab

pan-i-toom-ue-mab
(Vectibix)

BLACK BOX ALERT 90% of pts experience dermatologic toxicities (dermatitis acneiform, pruritus, erythema, rash, skin exfoliation, skin fissures, abscess). Severe infusion reactions (anaphylaxis, bronchospasm, fever, chills, hypotension), fatal reactions have occurred.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Epidermal growth factor receptor (EGFR) inhibitor, monoclonal antibody.

CLINICAL: Antineoplastic.

USES

Treatment of wild-type RAS metastatic colorectal cancer either as first-line therapy in combination with FOLFOX or as monotherapy following disease progression after prior treatment with fluoropyrimidine-, oxaliplatin-, or irinotecan-based regimens.

PRECAUTIONS

Contraindications: Hypersensitivity to panitumumab. **Cautions:** Interstitial pneumonitis, pulmonary fibrosis, pulmonary infiltrates, renal impairment, baseline electrolyte imbalance. Not indicated in pts with RAS-mutant metastatic colorectal cancer or for whom RAS mutation status is unknown.

ACTION

Binds specifically to epidermal growth factor receptor (EGFR) and competitively inhibits binding of epidermal growth factor. Blocks activation of intracellular tyrosine kinase. **Therapeutic Effect:** Inhibits tumor cell growth, survival, and proliferation.

PHARMACOKINETICS

Clearance varies by body weight, gender, tumor burden. **Half-life:** 3–10 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. May impair fertility. May decrease fetal body weight, increase risk of skeletal fetal abnormalities. Use effective contraception during and for at least 6 mos after treatment. Breastfeeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum magnesium, calcium.

AVAILABILITY (Rx)

Injection Solution: 20 mg/mL vial (5-mL, 20-mL vials).

ADMINISTRATION/HANDLING

◀ALERT▶ Do not give by IV push or bolus. Use low protein-binding 0.2- or 0.22-micron in-line filter. Flush IV line before and after chemotherapy administration with 0.9% NaCl.

Reconstitution • Dilute in 100–150 mL 0.9% NaCl to provide concentration of 10 mg/mL or less. • Do not shake solution. Invert gently to mix. • Discard any unused portion.

Rate of administration • Give as IV infusion over 60 min. • Infuse doses greater than 1,000 mg over 90 min.

Storage • Refrigerate vials. • After dilution, solution may be stored for up to 6 hrs at room temperature, up to 24 hrs if refrigerated. • Discard if discolored, but solution may contain visible, translucent-to-white particulates (will be removed by in-line filter).

IV INCOMPATIBILITIES

Do not mix with dextrose solutions or any other medications.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Stop infusion immediately in pts experiencing severe infusion reactions.

Metastatic Colorectal Cancer

IV infusion: ADULTS, ELDERLY: 6 mg/kg once q14 days as a single agent or in combination with FOLFOX (fluorouracil, leucovorin and oxaliplatin). Continue until disease progression or unacceptable toxicity.

Dose Modification**Infusion Reactions**

Mild to moderate reactions: Reduce infusion rate by 50% for remainder of infusion. **Severe reactions:** Discontinue infusion. Depending on severity, consider permanent discontinuation.

Skin Toxicity

For all CTCAE Grade 3 skin toxicities, withhold treatment for 1–2 doses until

improved to better than Grade 3. Then, reduce dose as follows: **First occurrence of CTCAE Grade 3:** Resume at same dose. **Second occurrence of CTCAE Grade 3:** Reduce dose to 80% of initial dose. **Third occurrence of CTCAE Grade 3:** Reduce dose to 60% of initial dose. **Fourth occurrence of CTCAE Grade 3:** Permanently discontinue.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Common (65%–57%): Erythema, acneiform dermatitis, pruritus. **Frequent (26%–20%):** Fatigue, abdominal pain, skin exfoliation, paronychia (soft tissue infection around nailbed), nausea, rash, diarrhea, constipation, skin fissures. **Occasional (19%–10%):** Vomiting, acne, cough, peripheral edema, dry skin. **Rare (7%–2%):** Stomatitis, mucosal inflammation, eyelash growth, conjunctivitis, increased lacrimation.

ADVERSE EFFECTS/TOXIC REACTIONS

Pulmonary fibrosis, severe dermatologic toxicity (complicated by infectious sequelae) occur rarely. Severe infusion reactions manifested as bronchospasm, fever, chills, hypotension occur rarely. Hypomagnesemia occurs in 39% of pts. Life-threatening and/or fatal bullous fasciitis, abscess, sepsis were reported. Severe dehydration and diarrhea may increase risk of acute renal failure. Exposure to sunlight may exacerbate skin toxicities. May cause ocular toxicities including keratitis, ulcerative keratitis, corneal ulceration.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Assess serum magnesium, calcium prior to therapy, periodically during therapy, and for 8 wks after completion of therapy. Assess *KRAS* mutational status in colorectal tumors and confirm the absence of a *RAS* mutation.

INTERVENTION/EVALUATION

Assess for skin, ocular, mucosal, pulmonary toxicity; report effects. Median time to development of skin/ocular toxicity is 14–15 days; resolution after last dosing is 84 days. Monitor serum electrolytes for hypomagnesemia, hypocalcemia. Offer antiemetic if nausea/vomiting occurs. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

- Do not have immunizations without physician's approval (drug lowers resistance).
- Avoid contact with those who have recently received a live virus vaccine.
- Avoid crowds, those with infection.
- There is a potential risk for development of fetal abnormalities if pregnancy occurs; take measures to prevent pregnancy.
- Report skin reactions, including rash, sloughing, blisters, erosions.
- Report difficulty breathing, fever with cough, lung pain; may indicate life-threatening lung inflammation.
- Limit sun, UV exposure. Wear protective sunscreen, hats, and clothing while outdoors.

panobinostat

pan-oh-bin-oh-stat
(Farydak)

BLACK BOX ALERT Severe cases of diarrhea reported in 25% of pts. If diarrhea occurs, interrupt treatment, initiate antidiarrheal therapy, and then reduce or discontinue treatment. Severe and/or fatal cases of cardiac arrhythmias, cardiac ischemic events, ECG changes may occur. Electrolyte abnormalities may increase risk of arrhythmias. Obtain ECG, serum electrolytes at baseline and monitor during treatment.

Do not confuse panobinostat with febuxostat or pentostatin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Histone deacetylase (HDAC) inhibitor. **CLINICAL:** Antineoplastic.

USES

Used in combination with bortezomib and dexamethasone for treatment of pts with multiple myeloma who have received at least 2 prior regimens, including bortezomib and an immunomodulatory agent.

PRECAUTIONS

Contraindications: Hypersensitivity to panobinostat. **Cautions:** Congenital long QT syndrome, concurrent medications that prolong QT interval, electrolyte abnormalities (hypokalemia, hypomagnesemia), renal impairment. Not recommended in pts with recent MI or unstable angina, severe hepatic impairment. Concurrent use of strong CYP3A inhibitors and/or CYP3A inducers, CYP2D6 substrates not recommended. Preexisting myelosuppression. Avoid use in pts with active infection.

ACTION

Inhibits enzymatic activity of histone deacetylase. Increases acetylation of histone proteins, resulting in cell cycle arrest and/or cellular death (apoptosis). **Therapeutic Effect:** Inhibits tumor growth and metastasis. Promotes tumor cell death.

PHARMACOKINETICS

Widely distributed. Extensively metabolized. Protein binding: 90%. Peak plasma concentration: 2 hrs. Excreted in feces (44%–77%), urine (29%–51%). **Half-life:** 37 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm/malformations. Females of reproductive potential should use effective contraception during treatment and up to 1 mo after discontinuation. Unknown if distributed in breast milk. **Males:** Males should use condoms during sexual activity during treatment and up to 3 mos after discontinuation. **Children:** Safety and efficacy not established. **Elderly:** May have increased risk of adverse effects (e.g., cardiac/GI/hematologic toxicities).

INTERACTIONS

DRUG: Strong CYP3A inhibitors (e.g., clarithromycin, ketoconazole, ritonavir) may increase concentration/effect. Strong CYP3A inducers (e.g., carbamazepine, rifampin) may decrease concentration/effect. May increase concentration/effects of CYP2D6 substrates (e.g., metoprolol, venlafaxine). Amiodarone, azithromycin, ceritinib, haloperidol, moxifloxacin may increase risk of QT interval prolongation. May decrease the therapeutic effect; increase adverse effects of vaccines (live). **HERBAL:** St. John's wort may decrease concentration/effect. **FOOD:** High-fat meals may delay absorption. Grapefruit products, star fruit may increase concentration/effect. **LAB VALUES:** May decrease Hct, Hgb, leukocytes, lymphocytes, neutrophils, platelets; serum albumin, calcium, potassium, sodium. May increase serum bilirubin, creatinine, magnesium. May increase or decrease phosphate.

AVAILABILITY (Rx)

Capsules: 10 mg, 15 mg, 20 mg.

ADMINISTRATION/HANDLING**PO**

- May give without regard to food; avoid grapefruit products (dexamethasone should be given with food to decrease GI upset).
- Administer capsule whole; do not break, cut, crush, or open.
- If vomiting occurs after dosing, do not readminister dose; give dose at next scheduled time.

INDICATIONS/ROUTES/DOSAGE**Multiple Myeloma**

PO: ADULTS, ELDERLY: 20 mg once every other day for 3 doses/wk during wk 1 and 2 of each 21-day cycle for up to 8 cycles, in combination with bortezomib and dexamethasone. Consider continuing treatment for additional 8 cycles based on tolerability. **Total duration:** Up to 16 cycles (48 wks). **Recommended dose of bortezomib:** 1.3 mg/m² as injection/day per dosing schedule. **Recommended**

dose of dexamethasone: 20 mg orally/day on a full stomach per dosing schedule.

Dosing Schedule for Cycles 1–8 of 21-Day Cycle

Wk 1: Panobinostat: days 1, 3, 5. Bortezomib: days 1, 4. Dexamethasone: days 1, 2, 4, 5. **Wk 2:** Panobinostat: days 8, 10, 12. Bortezomib: days 8, 11. Dexamethasone: days 8, 9, 11, 12. **Wk 3:** Rest period (all 3 drugs).

Dosing Schedule for Cycles 9–16 of 21-Day Cycle

Wk 1: Panobinostat: days 1, 3, 5. Bortezomib: day 1 only. Dexamethasone: days 1, 2. **Wk 2:** Panobinostat: days 8, 10, 12. Bortezomib: day 8 only. Dexamethasone: days 8, 9. **Wk 3:** Rest period (all 3 drugs).

Dose Reduction for Adverse Events

If reduction required, reduce panobinostat in increments of 5 mg. If the reduced dose is less than 10 mg 3 times/wk, discontinue treatment. Keep same schedule (21-day cycle) when dose reduced.

Dose Modification for Clinical Toxicities

Based on Common Terminology Criteria for Adverse Events (CTCAE).

Thrombocytopenia

Grade 3: No dose adjustment. (**Bortezomib**): No dose adjustment. **Grade 3 with bleeding/Grade 4:** Interrupt treatment until platelet count 50,000 cells/mm³ or greater, then resume at reduced dose. (**Bortezomib**): Interrupt bortezomib until platelet count 75,000 cells/mm³ or greater. If only 1 dose was held prior to resolution of platelet count, resume bortezomib at same dose. If more than 2 doses were held consecutively, resume bortezomib at reduced dose.

Neutropenia

Grade 3: No dose adjustment. (**Bortezomib**): No dose adjustment. **Two or more occurrences of Grade 3:** Interrupt treatment until ANC 1,000 cells/mm³ or greater, then resume at same dose. (**Bortezomib**): No dose adjustment. **Grade**

3 with febrile neutropenia/Grade

4: Interrupt treatment until febrile neutropenia resolves and ANC is 1,000 cells/mm³ or greater, then resume at reduced dose.

(Bortezomib): Interrupt bortezomib until febrile neutropenia resolves and ANC is 1,000 cells/mm³ or greater. If only 1 dose was held prior resolution of platelet count, resume bortezomib at same dose. If more than 2 doses were held consecutively, resume bortezomib at reduced dose.

Anemia

Grade 3: Interrupt panobinostat until Hgb greater than or equal to 10 g/dL, then resume at reduced dose. **(Bortezomib):** Not specified.

Diarrhea

Grade 2: Interrupt treatment until resolved, then resume at same dose.

(Bortezomib): Consider interruption of bortezomib until resolved, then resume at same dose. **Grade 3 or hospitalization/administration of IV fluids:** Interrupt until resolved, then resume at reduced dose. **(Bortezomib):** Interrupt until resolved, then resume bortezomib at reduced dose. **Grade 4:** Permanently discontinue panobinostat and bortezomib.

Nausea/Vomiting

Grade 3 or 4: Interrupt until resolved, then resume at reduced dose. **(Bortezomib):** Not specified.

Other Toxicities (Other CTCAE Grades)

Any Grade 2 recurrence, any other

Grade 3 or 4: Interrupt until resolved to Grade 1 or 0, then resume at reduced dose.

(Bortezomib): Not specified. **Any other Grade 3 or 4 recurrence:** Consider further dose reduction once resolved to Grade 1 or 0.

Concomitant Use of Strong CYP3A Inhibitors

PO: ADULTS, ELDERLY: 10 mg per dosing schedule.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

PO: ADULTS, ELDERLY: Mild impairment: 15 mg per dosing schedule. **Moderate impairment:** 10 mg per dosing schedule. **Severe impairment:** Treatment not recommended.

SIDE EFFECTS

Frequent (60%–2%): Fatigue, asthenia, lethargy, diarrhea, nausea, peripheral edema, decreased appetite, vomiting, pyrexia. **Occasional (12%):** Decreased weight.

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia, leukopenia, neutropenia, thrombocytopenia are expected responses to therapy. Diarrhea occurred in 68% of pts. Severe cases of diarrhea occurred in 25% of pts. Cardiac toxicities such as cardiac ischemic events, ST-segment depression, T-wave abnormalities were reported. Cardiac arrhythmias including atrial fibrillation, atrial flutter, bradycardia, SVT, atrial/ventricular/sinus tachycardia occurred in 12% of pts. Severe thrombocytopenia may increase risk of fatal hemorrhage. Infectious processes such as bacterial infections, invasive fungal infections, pneumonia, sepsis, viral infections were reported. Severe and/or fatal infections occurred in 31% of pts.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain CBC, BMP, LFT; serum magnesium, phosphate; ECG, vital signs. Correct electrolyte imbalances prior to each cycle. Verify platelet count is at least 100,000 cells/mm³, ANC is 1,500 cells/mm³, QTc interval is less than 450 msec on ECG prior to each cycle. Verify pregnancy status. Assess hydration status, usual stool characteristics. Question history if acute MI, unstable angina, arrhythmia. Screen for active infection.

INTERVENTION/EVALUATION

Monitor CBC, BMP; serum magnesium, phosphate wkly; LFT as indicated; vital signs. Monitor ECG periodically. If QTc

interval increases to greater than 480 msec on ECG, interrupt treatment and correct any electrolyte abnormalities. If QT prolongation does not resolve, permanently discontinue treatment. Initiate medical management for nausea, vomiting, diarrhea prior to any interruption or dose reduction. Consider blood transfusion in pts with severe anemia, thrombocytopenia. Diligently monitor daily pattern bowel activity, stool consistency. Start antidiarrheal therapy at first sign of loose stool/diarrhea. Obtain 2D cardiac echocardiogram, ECG if cardiac decompensation is suspected. Monitor for infection.

PATIENT/FAMILY TEACHING

- Blood levels will be monitored regularly.
- Treatment may cause fetal harm. Women of childbearing potential should use effective contraception during treatment and up to 1 mo after final dose. Immediately report suspected pregnancy. Do not breastfeed.
- Therapy may reduce fertility in both female and male pts.
- Male pts must use condoms during sexual activity.
- Report liver problems such as upper abdominal pain, bruising, dark or amber-colored urine, nausea, vomiting, or yellowing of the skin or eyes; heart problems such as chest tightness, dizziness, fainting, palpitations, shortness of breath; kidney problems such as dark-colored urine, decreased urine output, extremity swelling, flank pain; skin changes such as rash, redness.
- Report mouth ulceration, jaw pain.
- Swallow capsules whole; do not chew, crush, cut, or open capsules.
- Treatment may increase risk of bleeding, nosebleeds.
- Drink plenty of fluids.
- Report the first signs of abdominal cramping, loose stool, diarrhea.

pantoprazole

TOP
100

pan-toe-pra-zole

(Pantoloc , Protonix, Tecta )

Do not confuse pantoprazole with Aripiprazole.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzimidazole. **CLINICAL:** Proton pump inhibitor.

USES

PO: Treatment, maintenance of healing of erosive esophagitis associated with gastroesophageal reflux disease (GERD) and reduction of relapse rate of heartburn symptoms in GERD. Treatment of hypersecretory conditions including Zollinger-Ellison syndrome. **IV:** Short-term treatment of erosive esophagitis associated with GERD, treatment of hypersecretory conditions. **OFF-LABEL:** Peptic ulcer disease, active ulcer bleeding (injection), adjunct in treatment of *H. pylori*, stress ulcer prophylaxis in critically ill pts.

PRECAUTIONS

Contraindications: Hypersensitivity to pantoprazole, other proton pump inhibitors (e.g., omeprazole). **Cautions:** May increase risk of fractures, GI infections.

ACTION

Irreversibly binds to, inhibits hydrogen-potassium adenosine triphosphate, an enzyme on surface of gastric parietal cells. Inhibits hydrogen ion transport into gastric lumen. **Therapeutic Effect:** Increases gastric pH, reduces gastric acid production.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	N/A	N/A	24 hrs

Well absorbed from GI tract. Protein binding: 98% (primarily albumin). Primarily distributed into gastric parietal cells. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 1 hr.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed

in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease concentration/effect of **acalabrutinib**, **cefuroxime**, **erlotinib**, **neratinib**, **pazopanib**. **Strong CYP2C19 inducers (e.g., FLUoxetine)**, **strong CYP3A4 inducers (e.g., carBAMazepine, phenytoin, rifAMPin)** may decrease concentration/effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum creatinine, cholesterol, uric acid, glucose, lipoprotein, ALT.

AVAILABILITY (Rx)

Granules for Suspension: 40 mg/packet.
Injection, Powder for Reconstitution (Protonix): 40 mg.

 **Tablets, Delayed-Release (Protonix):** 20 mg, 40 mg.

ADMINISTRATION/HANDLING

Reconstitution • Mix 40-mg vial with 10 mL 0.9% NaCl injection. • May be further diluted with 100 mL D₅W, 0.9% NaCl.

Rate of administration • Infuse 10 mL solution over at least 2 min. • Infuse 100 mL solution over at least 15 min. • Flush IV line after administration.

Storage • Store undiluted vials at room temperature. • Once diluted with 10 mL 0.9% NaCl, stable for 96 hrs at room temperature; when further diluted with 100 mL, stable for 96 hrs at room temperature.

PO

• May be given without regard to food. Best given before breakfast. • Do not break, crush, dissolve, or divide tablets; give whole. • Administer oral suspension only in apple juice or applesauce. Best taken 30 min before a meal.

IV INCOMPATIBILITIES

DOBUtamine.

IV COMPATIBILITIES

DOPamine, EPINEPHrine, furosemide (Lasix), insulin (regular), potassium chloride, vasopressin.

INDICATIONS/ROUTES/DOSAGE

Erosive Esophagitis (Treatment)

PO: ADULTS, ELDERLY: 40 mg/day for up to 8 wks. If not healed after 8 wks, may continue an additional 8 wks. **CHILDREN 5 YRS AND OLDER (WEIGHING 40 KG OR MORE):** 40 mg/day for up to 8 wks. **(WEIGHING 15–39 KG):** 20 mg/day for up to 8 wks.
IV: ADULTS, ELDERLY: 40 mg/day for 7–10 days.

Maintenance of Healing of Erosive Esophagitis

PO: ADULTS, ELDERLY: 40 mg once daily.

Hypersecretory Conditions

PO: ADULTS, ELDERLY: Initially, 80 mg twice daily. May titrate upward early in therapy. **Maximum:** 240 mg/day (as either 80 mg three times daily or 120 mg twice daily).

IV: ADULTS, ELDERLY: 80 mg twice daily. May increase to 80 mg q8h.

Prevention of Rebleeding in Peptic Ulcer Bleed (Unlabeled)

IV: ADULTS, ELDERLY: 80 mg followed by 8 mg/hr infusion for 72 hrs or 80 mg then 40 mg q12h for 72 hrs.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Rare (less than 2%): Diarrhea, headache, dizziness, pruritus, rash.

ADVERSE EFFECTS/TOXIC REACTIONS

Hyperglycemia occurs rarely. May increase risk of *C. difficile*-associated diarrhea.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question history of GI disease, ulcers, GERD.

INTERVENTION/EVALUATION

Evaluate for therapeutic response (relief of GI symptoms). Question if GI discomfort, nausea occur. Monitor for abdominal pain, diarrhea (with or without fever).

PATIENT/FAMILY TEACHING

- Report abdominal pain, diarrhea (with or without fever) that does not resolve; may indicate colon infection.
- Avoid alcohol.
- Swallow tablets whole; do not chew, crush, dissolve, or divide.
- Best if given before breakfast. May give without regard to food.

PARoxetine

par-ox-e-teen

(Brisdelle, Paxil, Paxil CR, Pexeva)

■ **BLACK BOX ALERT** ■ Increased risk of suicidal thinking and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse PARoxetine with piroxicam, FLUoxetine or pyridoxine, or Paxil with Doxil, Plavix, PROzac, or Taxol.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective serotonin reuptake inhibitor (SSRI).

CLINICAL: Antidepressant, antiobsessive-compulsive, antianxiety.

USES

Treatment of major depressive disorder (MDD). Treatment of panic disorder, obsessive-compulsive disorder (OCD). Treatment of social anxiety disorder (SAD), generalized anxiety disorder (GAD), premenstrual dysphoric disorder (PMDD), post-traumatic stress disorder (PTSD). **Brisdelle:** Treatment of moderate to severe vasomotor symptoms associated with menopause. **OFF-LABEL:** Social anxiety disorder in children, self-

injurious behavior, treatment of depression and OCD in children.

PRECAUTIONS

Contraindications: Hypersensitivity to PARoxetine. Concurrent use of MAOIs with or within 14 days of MAOIs intended to treat psychiatric disorders, initiation in pts treated with linezolid or methylene blue; concomitant use with thioridazine, pimozide. **Brisdelle:** Pregnancy. **Cautions:** History of seizures, renal/hepatic impairment, pts with suicidal tendencies, elderly pts, narrow-angle glaucoma; avoid use in first trimester of pregnancy, alcohol use.

ACTION

Selectively blocks uptake of neurotransmitter serotonin at CNS neuronal presynaptic membranes, increasing its availability at postsynaptic receptor sites. **Therapeutic Effect:** Relieves depression, reduces obsessive-compulsive behavior, decreases anxiety.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 95%. Widely distributed. Metabolized in liver. Excreted in urine. Not removed by hemodialysis. **Half-life:** 24 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May impair reproductive function. Not distributed in breast milk. May increase risk of congenital malformations. **Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment. Use caution.

INTERACTIONS

DRUG: Alcohol may increase adverse effects. Lithium, MAOIs (e.g., phenelzine, selegiline) may increase the serotonergic effect. May increase antiplatelet effect of NSAIDs (e.g., ibuprofen, ketorolac, naproxen). May decrease concentration/effect of tamoxifen. May increase adverse effects of tricyclic antidepressants (e.g., amitriptyline). **HERBAL:** Glucosamine, herbals with anticoagulant/antiplatelet properties

(e.g., garlic, ginger, ginkgo biloba) may increase effect. **FOOD:** None known.

LAB VALUES: May decrease Hgb, Hct, WBC count.

AVAILABILITY (Rx)

Capsules: (*Brisdelle*): 7.5 mg. **Oral Suspension:** (*Paxil*): 10 mg/5 mL. **Tablets:** (*Paxil, Pexeva*): 10 mg, 20 mg, 30 mg, 40 mg.

 **Tablets, Controlled-Release:** (*Paxil CR*): 12.5 mg, 25 mg, 37.5 mg.

ADMINISTRATION/HANDLING

PO

- May give without regard to food.
- Give with food, milk if GI distress occurs.
- Scored tablet may be crushed.
- Do not crush, break, dissolve, or divide controlled-release tablets.

INDICATIONS/ROUTES/DOSAGE

Depression

PO: (*Immediate-Release*): **ADULTS:** Initially, 10–20 mg/day. May increase by 10–20 mg/day at intervals of more than 1 wk. **Maximum:** 50 mg/day.

PO: (*Controlled-Release*): **ADULTS:** Initially, 25 mg/day. May increase by 12.5 mg/day at intervals of more than 1 wk. **Maximum:** 62.5 mg/day.

Generalized Anxiety Disorder (GAD)

PO: (*Immediate-Release*): **ADULTS:** Initially, 10 mg/day. May increase by 10 mg/day at intervals of more than 1 wk. Range: 20–50 mg/day.

Obsessive-Compulsive Disorder (OCD)

PO: (*Immediate-Release*): **ADULTS:** Initially, 20 mg/day. May increase by 10 mg/day at intervals of more than 1 wk. Recommended dose: 40–60 mg/day.

Panic Disorder

PO: (*Immediate-Release*): **ADULTS:** Initially, 10 mg/day. May increase by 10 mg/day at intervals of more than 1 wk. Usual dose: 20–40 mg/day. **Maximum:** 60 mg/day.

PO: (*Controlled-Release*): **ADULTS, ELDERLY:** Initially, 12.5 mg once daily. May

increase by 12.5 mg/day at wkly intervals. **Maximum:** 75 mg/day.

Social Anxiety Disorder (SAD)

PO: (*Immediate-Release*): **ADULTS:** Initially, 10 mg/day. May increase by 10 mg/day at intervals of more than 1 wk. **Maximum:** 60 mg/day.

PO: (*Controlled-Release*): **ADULTS, ELDERLY:** Initially, 12.5 mg once daily. May increase by 12.5 mg/day at wkly intervals. **Maximum:** 37.5 mg/day.

Post-traumatic Stress Disorder (PTSD)

PO: (*Immediate-Release*): **ADULTS:** Initially, 20 mg/day. May increase by 10–20 mg/day at intervals of more than 1 wk. **Maximum:** 60 mg/day.

Premenstrual Dysphoric Disorder (PMDD)

PO: (*Controlled-Release*): **ADULTS:** Initially, 12.5 mg/day. May increase by 12.5 mg at wkly intervals. **Maximum:** 50 mg/day.

Vasomotor Symptoms

PO: **ADULTS:** (*Brisdelle*): 7.5 mg once daily at bedtime.

Usual Elderly Dosage

PO: Initially, 10 mg/day. May increase by 10 mg/day at intervals of more than 1 wk. **Maximum:** 40 mg/day.

PO: (*Controlled-Release*): Initially, 12.5 mg/day. May increase by 12.5 mg/day at intervals of more than 1 wk. **Maximum:** 50 mg/day (37.5 mg for SAD).

Dosage Renal/Hepatic Impairment

CrCl less than 30 mL/min, severe hepatic impairment: (*Immediate-Release*): Initially, 10 mg/day. May increase by 10 mg/dose at wkly intervals. **Maximum:** 40 mg/day. (*Extended-Release*): Initially, 12.5 mg/day. May increase by 12.5 mg/day at wkly intervals. **Maximum:** 50 mg/day. (*Brisdelle*): No dosage adjustment.

SIDE EFFECTS

Frequent (26%–8%): Nausea, drowsiness, headache, dry mouth, asthenia, constipation, dizziness, insomnia, diarrhea, diaphoresis, tremor. **Occasional (6%–3%):** Decreased appetite, respiratory disturbance

(e.g., increased cough), anxiety, flatulence, paresthesia, yawning, decreased libido, sexual dysfunction, abdominal discomfort.

Rare: Palpitations, vomiting, blurred vision, altered taste, confusion.

ADVERSE EFFECTS/TOXIC REACTIONS

Hyponatremia, seizures have been reported. Serotonin syndrome (agitation, confusion, diaphoresis, hallucinations, hyperreflexia) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline LFT. Assess appearance, behavior, speech pattern, level of interest, mood.

INTERVENTION/EVALUATION

For pts on long-term therapy, CBC, LFT, renal function test should be performed periodically. Assess mental status for depression, suicidal ideation (esp. at beginning of therapy or change in dosage), anxiety, social functioning, panic attacks. Assess appearance, behavior, speech pattern, level of interest, mood.

PATIENT/FAMILY TEACHING

- Avoid alcohol, St. John's wort.
- Therapeutic effect may be noted within 1–4 wks.
- Do not abruptly discontinue medication.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- May impair reproductive function.
- Report suspected pregnancy.
- Report worsening depression, suicidal ideation, unusual changes in behavior.

PAZOPanib

paz-oh-pa-nib
(Votrient)

BLACK BOX ALERT Severe, fatal hepatotoxicity has been observed.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Vascular endothelial growth factor (VEGF) inhibitor. Tyrosine kinase inhibitor.

CLINICAL: Antineoplastic.

USES

Treatment of advanced renal cell carcinoma (RCC), advanced soft-tissue sarcoma (STS) (in pts previously treated with chemotherapy). **OFF-LABEL:** Advanced thyroid cancer.

PRECAUTIONS

Contraindications: Hypersensitivity to PAZOPanib. **Cautions:** Avoid use of strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole) or CYP3A inducers (carbamazepine, rifampin) and grapefruit products. Cautious use in pts with increased risk or history of arterial thrombotic events (e.g., angina, MI, ischemic stroke), QT prolongation, hypokalemia, hypomagnesemia, hypertension, severe hepatic impairment, history of hemoptysis, cerebral hemorrhage or significant GI hemorrhage. Concomitant use of medications that may prolong QT interval not recommended.

ACTION

Inhibits cell surface vascular endothelial growth factor (VEGF) receptors. **Therapeutic Effect:** Inhibits angiogenesis, blocks tumor growth.

PHARMACOKINETICS

Peak concentration occurs 2–4 hrs following oral administration. Metabolized in liver. Protein binding: greater than 99%. Excreted in feces (60%), urine (23%). **Half-life:** 31 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Histamine H₂ antagonists (e.g., famotidine, ranitidine), proton pump inhibitors (e.g., omeprazole, pantoprazole) may decrease concentration/effect. QT interval-prolonging medications (e.g., amiodarone, citalopram, haloperidol, ondansetron) may prolong QT interval. CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole, ritonavir) may increase concentration. CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration. May decrease the therapeutic effect; increase adverse effects of vaccines (live). **HERBAL:** St. John's wort decreases concentration. **FOOD:** Food may increase concentration. **Grapefruit products** may increase concentration, potential for torsades de pointes, myelotoxicity. **LAB VALUES:** May decrease serum phosphorus, sodium, magnesium, glucose, WBC count. May increase serum ALT, AST.

AVAILABILITY (Rx)

 **Tablets:** 200 mg.

ADMINISTRATION/HANDLING

PO

- Give at least 1 hr before or 2 hrs after ingestion of food.
- Give tablets whole; do not break, crush, dissolve, or divide.

INDICATIONS/ROUTES/DOSAGE

Renal Cell Carcinoma, Soft-Tissue Sarcoma

PO: ADULTS, ELDERLY: 800 mg once daily. If concomitant CYP3A4 inhibitor cannot be discontinued, reduce initial dose to 400 mg/day.

Dose Adjustment for Toxicity

Prior to dose reduction, temporarily discontinue therapy if 24-hr urine protein 3 g or more (or for other toxicities). Initial dose reduction: Renal cell carcinoma: 400 mg/day. Soft tissue sarcoma: 600 mg/day. Further dose adjustment: 200 mg/day.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment.

Moderate impairment: Reduce dose to 200 mg/day. **Severe impairment:** Not recommended.

SIDE EFFECTS

Frequent (52%–19%): Diarrhea, hypertension, hair color changes, nausea, fatigue, anorexia, vomiting. **Occasional (14%–10%):** Asthenia, abdominal pain, headache. **Rare (less than 10%):** Alopecia, chest pain, altered taste, dyspepsia, proteinuria, rash, decreased weight.

ADVERSE EFFECTS/TOXIC REACTIONS

Hepatotoxicity, manifested as increase in serum bilirubin, ALT, AST, has been observed and may be fatal. Hemorrhagic events (hematuria, epistaxis, hemoptysis, GI bleeding or perforation, intracranial hemorrhage) have been noted and may be fatal. Hypertension (B/P greater than 150/100 mm Hg) is common (47% of pts), usually occurring early in the first 18 wks of treatment. Hypothyroidism has been reported occasionally. Arterial thrombotic events (MI, CVA), QT prolongation, torsades de pointes have been seen rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline ECG, CBC, serum chemistries, LFT. Assess medical history, esp. hepatic impairment. Question history of hepatic impairment, arterial or venous thromboembolism, GI bleeding. Receive full medication history and screen for interactions.

INTERVENTION/EVALUATION

Monitor B/P, LFT periodically for elevations. Monitor CBC, serum chemistries for changes from baseline. Observe for hepatotoxicity (jaundice, dark-colored urine, unusual fatigue, right upper quadrant

abdominal pain). Observe ECG for QT-interval prolongation. Monitor for evidence of bleeding, hemorrhage. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

- Avoid crowds, those with known infection.
- Avoid contact with anyone who recently received live virus vaccine; do not receive vaccinations.
- Swallow tablets whole; do not chew, crush, dissolve, or divide.
- No food should be taken at least 1 hr before and 2 hrs after dose is taken.
- Avoid grapefruit products.
- Report diarrhea, abdominal pain, yellowing of skin or sclera, discolored urine, fatigue.
- Report bleeding of any kind, esp. bloody stools, nosebleeds, coughing up blood.
- Treatment may increase risk of heart attack, stroke, blood clots, or heart arrhythmias.

pegfilgrastim

TOP
100

peg-fil-gras-tim
(Neulasta, Neulasta Onpro, Fulphila, Udenyca)

Do not confuse Neulasta with Lunesta, Neumega, or Neupogen.

♦ CLASSIFICATION

PHARMACOTHERAPEUTIC: Colony-stimulating factor. **CLINICAL:** Hematopoietic agent.

USES

Decreases incidence of infection (as manifested by febrile neutropenia) in cancer pts receiving myelosuppressive chemotherapy associated with febrile neutropenia. To increase survival in pts acutely exposed to myelosuppressive doses of radiation.

PRECAUTIONS

Contraindications: Hypersensitivity to pegfilgrastim, filgrastim. **Cautions:** Any malignancy with myeloid characteristics, sickle cell disease. The 6-mg fixed dose not to be used in infants, children, or

adolescents weighing less than 45 kg. Do not administer within 14 days before and 24 hrs after cytotoxic chemotherapy.

ACTION

Stimulates production, maturation, and activation of neutrophils within bone marrow. **Therapeutic Effect:** Increases phagocytic ability, antibody-dependent destruction; decreases incidence of infection.

PHARMACOKINETICS

Readily absorbed after SQ administration. **Half-life:** 15–80 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established in children younger than 12 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Pegloticase may decrease effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum LDH, alkaline phosphatase, uric acid.

AVAILABILITY (Rx)

Injection Solution: (Neulasta): 6 mg/0.6 mL syringe. **Prefilled Syringe Kit:** (Neulasta Onpro): 6 mg/0.6 mL; dose delivers over 45 min. time period about 27 hrs after application. **Prefilled Syringe:** (Fulphila, Udenyca): 6 mg/0.6 mL.

ADMINISTRATION/HANDLING

SQ

Storage • Store in refrigerator. Warm to room temperature prior to administering injection. • Administer to outer upper arms, abdomen (except within 2 inches of navel), front middle thigh or upper outer buttocks. Discard if left at room temperature for more than 48 hrs. • Protect from light. • Avoid freezing; but if accidentally frozen, may allow to thaw in refrigerator before administration. Discard if freezing takes

place a second time. • Discard if discolored or precipitate forms.

On Body Injector (OnPro)

A health care provider must fill the injector prior to applying to pt's skin. Apply to intact, nonirritated skin on back of arms or abdomen. Delivers pegfilgrastim over 45 min. time period about 27 hrs after application. May apply on same day as chemotherapy. Keep injector at least 4 inches away from electrical equipment.

INDICATIONS/ROUTES/DOSAGE

Neutropenia (Chemotherapy-Induced)

SQ: ADULTS, ELDERLY, CHILDREN 12–17 YRS, WEIGHING MORE THAN 45 KG: Give as single 6-mg injection once per chemotherapy cycle beginning at least 24 hrs after completion of chemotherapy.

◀ALERT▶ Do not administer between 14 days before and 24 hrs after cytotoxic chemotherapy. Do not use in infants, children, adolescents weighing less than 45 kg.

Radiation Injury Syndrome

Note: Prefilled syringe not designed to give doses less than 6 mg. Not recommended; use caution to avoid dosing errors.

SQ: ADULTS, ELDERLY, CHILDREN WEIGHING 45 KG OR MORE: 6 mg once wkly for 2 doses. **31–44 KG:** 4 mg once wkly for 2 doses. **21–30 KG:** 2.5 mg once wkly for 2 doses. **10–20 KG:** 1.5 mg once wkly for 2 doses. **LESS THAN 10 KG:** 0.1 mg/kg once wkly for 2 doses.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (72%–15%): Bone pain, nausea, fatigue, alopecia, diarrhea, vomiting, constipation, anorexia, abdominal pain, arthralgia, generalized weakness, peripheral edema, dizziness, stomatitis, mucositis, neutropenic fever.

ADVERSE EFFECTS/TOXIC REACTIONS

Allergic reactions (anaphylaxis, rash, urticaria) occur rarely. Cytopenia resulting

from antibody response to growth factors occurs rarely. Splenomegaly occurs rarely. Severe sickle cell crisis reported in pts with sickle cell disease. Glomerulonephritis, capillary leak syndrome, tumor growth stimulatory effect on malignant cells, acute respiratory distress syndrome may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC prior to initiation and routinely thereafter. Question history of sickle cell disease, glomerulonephritis, splenic disease, hypersensitivity reaction to acrylic adhesive on body (injector uses acrylic adhesive).

INTERVENTION/EVALUATION

Monitor for allergic reactions. Assess for peripheral edema. Assess mucous membranes for evidence of stomatitis, mucositis. Assess muscle strength. Monitor daily pattern of bowel activity, stool consistency. Adult respiratory distress syndrome (ARDS) may occur in septic pts.

PATIENT/FAMILY TEACHING

- Inform pt of possible side effects, signs/symptoms of allergic reaction.
- Counsel pt on importance of compliance with pegfilgrastim treatment, including regular monitoring of blood counts.
- Report unusual fever or chills, severe bone pain, chest pain or palpitations.

pegloticase

peg-loe-ti-kase
(Krystexxa)

■ BLACK BOX ALERT ■ Severe infusion reactions, anaphylaxis (bronchospasm, stridor, urticaria, hypotension, dyspnea, flushing, circumoral swelling) have occurred, especially within 2 hrs of first infusion. Premedicate pt with corticosteroids, antihistamines. Should be administered in health care setting by health care providers prepared to manage infusion reactions. Life-threatening hemolytic reaction and methemoglobinemia reported in pts with G6PD deficiency.

Do not confuse pegloticase with Activase, cholinesterase, or pegaspargase.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Uric acid enzyme. **CLINICAL:** Antigout agent.

USES

Treatment of chronic gout in adult pts refractory to conventional therapy. Not recommended for treatment of asymptomatic hyperuricemia.

PRECAUTIONS

Contraindications: Hypersensitivity to pegloticase. Glucose-6-phosphate dehydrogenase (G6PD) deficiency due to hemodialysis, methemoglobinemia.

Cautions: History of HF, elderly, debilitated.

ACTION

Decreases uric acid production by catalyzing oxidation of uric acid to allantoin, lowering serum uric acid. **Therapeutic Effect:** Lowers serum uric acid concentration.

PHARMACOKINETICS

Catalyzes oxidation of uric acid to allantoin, an inert and water-soluble purine metabolite. Readily eliminated, primarily by renal excretion. **Half-life:** 14.5 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effect of **pegfilgrastim**. **Allopurinol**, **febuxostat**, **probenecid** may increase adverse effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** Decreases serum uric acid (expected).

AVAILABILITY (Rx)

Injection Solution: 2-mL (8 mg/mL) single-use vials.

ADMINISTRATION/HANDLING

Reconstitution • Withdraw 1 mL from single-use vial and inject into 250 mL 0.9% NaCl or 0.45% NaCl. • Invert infusion bag a number of times to ensure thorough mixing; do not shake.

Rate of administration • Infuse slowly over no less than 120 min.

Storage • Store in refrigerator. • Solution should appear clear; discard if particulate is present. • Allow diluted solution to reach room temperature prior to infusion. • Following dilution, solution remains stable for 4 hrs if refrigerated or at room temperature.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Give by IV infusion; do not give as IV push or IV bolus. Pt to be pretreated with corticosteroids, antihistamines to reduce risk of infusion reaction, anaphylaxis.

Gout

Note: Discontinue oral agents prior to initiating pegloticase and do not initiate during course of therapy.

IV infusion: ADULTS, ELDERLY: 8 mg every 2 wks.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (12%–9%): Nausea, ecchymosis at IV site, nasopharyngitis. **Rare (6%–5%):** Constipation, vomiting.

ADVERSE EFFECTS/TOXIC REACTIONS

Exacerbation of HF has been noted. Infusion-related reaction (urticaria, dyspnea, chest discomfort, chest pain, erythema, pruritus) occurs in 26% of pts; anaphylaxis occurs in 7% of pts. Increase in gout flares is frequently noted upon initiation

of antihyperuricemic therapy due to changing serum uric acid levels.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

If gout flare occurs during treatment, prophylaxis with an NSAID or colchicine is recommended. Pts at higher risk for G6PD deficiency (e.g., pts of African or Mediterranean ancestry) should be screened for G6PD deficiency before starting therapy. Obtain serum uric acid levels prior to each infusion. If levels reach greater than 6 mg/dL, particularly when 2 consecutive levels greater than 6 mg/dL are observed, treatment should be discontinued.

INTERVENTION/EVALUATION

Monitor closely for infusion reaction during therapy and for 2 hrs post-treatment. If infusion reaction occurs during administration, infusion may be slowed, or stopped and restarted at slower rate. If severe infusion reaction occurs, discontinue infusion and institute treatment as needed. Assess for therapeutic response (reduced joint tenderness, swelling, redness, limitation of motion).

PATIENT/FAMILY TEACHING

- Educate pts on the most common signs and symptoms of infusion reaction (rash, redness of skin, difficulty breathing, flushing, chest discomfort, chest pain).
- Advise pts to seek medical care immediately if they experience any symptoms of allergic reaction during or at any time after infusion.

pembrolizumab

pem-broe-liz-ue-mab
(Keytruda)

Do not confuse pembrolizumab with palivizumab.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Anti PD-1 monoclonal antibody. **CLINICAL:** Antineoplastic.

USES

Treatment of unresectable or metastatic melanoma. Treatment of metastatic head and neck squamous cell carcinoma (HNSCC) (recurrent or metastatic) with disease progression on or after platinum-containing chemotherapy. Treatment of metastatic non-small-cell lung cancer (NSCLC) in pts with PD-L1-expressing tumors as a single agent for first-line tx, with disease progression on or after platinum-containing chemotherapy; or in combination with pemetrexed and carboplatin, as first-line tx of metastatic non-squamous NSCLC or as first-line single-agent treatment of metastatic NSCLC in pts with tumors with PD-L1 expression and with no EGFR or ALK genomic tumor aberrations. Treatment of refractory classical Hodgkin lymphoma (cHL) or relapse after 3 or more lines of therapy. Treatment of locally advanced or metastatic urothelial carcinoma not eligible for cisplatin-containing chemotherapy or who have disease progression during or following platinum-containing chemotherapy; or with 12 mos of neoadjuvant or adjuvant tx with platinum-containing chemotherapy. Treatment of unresectable or metastatic microsatellite instability high (MSI-H) or mismatch repair deficient solid tumors or colorectal cancer. Treatment of gastric cancer (advanced or metastatic) or gastroesophageal junction adenocarcinoma in pts with tumors with PD-L1 expression and with disease progression on or after 2 or more lines of therapy. Treatment of recurrent or metastatic cervical cancer in pts with tumors with PD-L1 expression and with disease progression on or after chemotherapy. Treatment of primary mediastinal large B-cell lymphoma (PMBCL) in adult and pediatric pts with refractory disease or relapsed after 2 or more lines of therapy. Treatment of hepatocellular carcinoma in pts previously treated with sorafenib. Adjuvant treatment of melanoma with lymph node involvement following complete resection. Treatment of recurrent locally advanced or metastatic Merkel cell carcinoma. Treatment of advanced renal cell carcinoma (in

combination with axitinib). Treatment of metastatic small-cell lung cancer (SCLC) in pts with disease progression on or after platinum-based chemotherapy and at least one other prior line of therapy. Treatment of HNSCC. Treatment of metastatic squamous cell carcinoma of esophagus. Treatment of advanced endometrial carcinoma (in combination with lenvatinib) that is not MSI-H or dMMR, having disease progression following prior systemic therapy, and who are not candidates for curative surgery or radiation.

PRECAUTIONS

Contraindications: Hypersensitivity to pembrolizumab. **Cautions:** Thyroid disease, hepatic/renal impairment, interstitial lung disease, electrolyte imbalance, hypertriglyceridemia.

ACTION

Binds PD-1 ligands to PD-1 receptor found on T cells, blocking its interaction with the ligands (PD-L1 and PD-L2). Releases PD-1 pathway-mediated inhibition of immune response (including antitumor immune response). **Therapeutic Effect:** Inhibits T-cell proliferation and cytokine production. Induces antitumor responses.

PHARMACOKINETICS

Metabolism not specified. Elimination not specified. Steady-state concentration: 18 wks. **Half-life:** 26 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm. Unknown if distributed in breast milk. Females of reproductive potential must use effective contraception during treatment and up to 4 mos after discontinuation. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None known. **HERBAL:** None significant. **FOOD:** None known. **LAB**

VALUES: May increase serum AST, glucose, triglycerides. May decrease albumin, serum calcium, sodium.

AVAILABILITY (Rx)

Injection Solution: 100 mg/4 mL.

ADMINISTRATION/HANDLING

ALERT Use 0.2–0.5-micron in-line filter.

Reconstitution • Withdraw required dose and mix into 0.9% NaCl infusion bag (diluent volume depends on dose required). • Final concentration of diluent bag should equal 1–10 mg/mL. • Allow refrigerated solution to warm to room temperature before infusing.

Rate of administration • Infuse via dedicated line over 30 min using a 0.2–0.5-micron filter.

Storage • Diluted solution up to 24 hrs, or at room temperature up to 4 hrs. Store time should not exceed total combined time of reconstitution, dilution, storage, and infusion.

INDICATIONS/ROUTES/DOSAGE

cHL, MSI-H Cancer

IV: ADULTS, ELDERLY: 200 mg q3wks until disease progression or unacceptable toxicity. **CHILDREN:** 2 mg/kg (up to 200 mg) q3wks until disease progression or unacceptable toxicity.

Cervical Cancer, Gastric Cancer, HNSCC, NSCLC (Single-Agent Therapy), Primary Mediastinal Large B-Cell Lymphoma, Melanoma, Urothelial Cancer, Hepatocellular Carcinoma, Head and Neck Squamous Cell, Melanoma (Adjuvant Treatment), Merkel Cell Carcinoma, Renal Cell Carcinoma, SCLC, Squamous Cell Carcinoma of Esophagus, Endometrial Carcinoma

IV: ADULTS, ELDERLY: 200 mg q3wks. Continue until disease progression or unacceptable toxicity, or in pts without disease progression.

NSCLC (Combination Therapy)

IV: ADULTS, ELDERLY: 200 mg q3wks (in combination with pemetrexed and carboplatin) for 4 cycles, then 200 mg q3wks (with or without optional indefinite pemetrexed maintenance therapy). Continue until disease progression or unacceptable toxicity, or in pts without disease progression for up to 24 months.

Dose Modification

Based on Common Terminology Criteria for Adverse Events (CTCAE).

Withhold treatment for any of the following adverse events: ALT or AST greater than 3–5 times upper limit of normal (ULN) or bilirubin 1.5–3 times ULN, Grade 2 or 3 colitis, Grade 3 hyperthyroidism, Grade 2 nephritis, Grade 2 pneumonitis, symptomatic hypophysitis; any Grade 3 treatment-related adverse reaction. **Permanently discontinue for any of the following adverse events:** ALT or AST greater than 5 times ULN or bilirubin 3 times ULN (or pts with liver metastasis who begin treatment with Grade 2 ALT, AST, if ALT or AST increases greater than or equal to 50% from baseline and lasts for at least 1 wk), Grade 3 or 4 infusion-related reaction, Grade 3 or 4 nephritis, Grade 3 or 4 pneumonitis; inability to reduce corticosteroid dose to 10 mg/day or less (or predniSONE equivalent) after last dose; persistent Grade 2 or 3 adverse reaction that does not recover to Grade 0–1 within 12 wks after last dose; any severe or Grade 3 treatment-related adverse reaction that reoccurs.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment.
Moderate to severe impairment: Not studied, use caution.

SIDE EFFECTS

Frequent (47%–20%): Fatigue, nausea, cough, pruritus, rash, decreased appetite, constipation, diarrhea, arthralgia.

Occasional (18%–11%): Dyspnea, extremity pain, peripheral edema, vomiting, headache, chills, insomnia, myalgia, abdominal pain, back pain, pyrexia, vitiligo, dizziness, upper respiratory tract infection.

ADVERSE EFFECTS/TOXIC REACTIONS

May cause severe immune-mediated events such as pneumonitis (2.9% of pts), colitis (1% of pts), hepatitis (0.5% of pts), hypophysitis (0.5% of pts), renal failure or nephritis (0.7% of pts), hyperthyroidism (1.2% of pts), hypothyroidism (8.3% of pts). Other reported events include adrenal insufficiency, arthritis, cellulitis, exfoliative dermatitis, hemolytic anemia, myositis, myasthenic syndrome, pancreatitis, partial seizures, pneumonia, optic neuritis, rhabdomyolysis, sepsis. Immunogenicity (anti-pembrolizumab antibody formation) may occur.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain baseline CBC, BMP, ionized calcium, LFT, TSH, free T₄, vital signs, urine pregnancy. Obtain weight in kg. Screen for history of adrenal/pituitary/pulmonary/thyroid disease, autoimmune disorders, hepatic/renal impairment, allergy to predniSONE. Question plans for breastfeeding. Along with routine assessment, conduct full dermatologic exam, visual acuity.

INTERVENTION/EVALUATION

Monitor CBC, LFT, serum electrolytes; thyroid panel if applicable. Monitor for immune-mediated adverse events. Notify physician if any CTCAE toxicities occur (see Appendix M) and initiate proper treatment. Obtain chest X-ray if pneumonitis suspected. Screen for tumor lysis syndrome in pts with high tumor burden. Offer antiemetics if nausea, vomiting occurs. Monitor I&O, daily weight. If predniSONE therapy initiated, monitor capillary blood glucose and screen for corticosteroid side effects.

PATIENT/FAMILY TEACHING

- Blood levels will be routinely monitored.
- Avoid pregnancy; treatment may cause birth defects or miscarriage. Do not breastfeed.
- Serious adverse reactions may affect lungs, GI tract, kidneys, or hormonal glands, and predniSONE therapy may need to be started.
- Immediately contact physician if serious or life-threatening inflammatory reactions occur in the following body systems: lung (chest pain, cough, shortness of breath); colon (severe abdominal pain or diarrhea); liver (bruising, clay-colored/tarry stools, yellowing of skin or eyes); pituitary (persistent or unusual headache, dizziness, extreme weakness, fainting, vision changes); kidney (decreased or dark-colored urine, flank pain); thyroid (insomnia, hypertension, tachycardia [overactive thyroid]), (fatigue, goiter, weight gain [underactive thyroid]).

PEMEtrexedTOP
100 HIGH
ALERT

pem-e-trex-ed
(Alimta)

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Folate analog metabolic inhibitor. Antimetabolite. **CLINICAL:** Antineoplastic.
Do not confuse PEMEtrexed with methotrexate or PRALAtrexate.

USES

Treatment of unresectable malignant pleural mesothelioma in combination with CISplatin. Initial treatment of locally advanced or metastatic nonsquamous non-small-cell lung cancer (NSCLC) in combination with CISplatin. Single-agent maintenance treatment of NSCLC in pts whose disease has not progressed following 4 cycles of platinum-based first-line chemotherapy. **OFF-LABEL:** Treatment of bladder, cervical, ovarian, thymic malignancies; malignant pleural mesothelioma.

PRECAUTIONS

Contraindications: Severe hypersensitivity to PEMEtrexed. **Cautions:** Hepatic/renal impairment, concurrent use of nephrotoxic medications, preexisting myelosuppression. Not indicated for squamous cell NSCLC.

ACTION

Inhibits biosynthesis of purine and thymidine nucleotides. Inhibits protein synthesis. **Therapeutic Effect:** Disrupts folate-dependent enzymes essential for cell replication.

PHARMACOKINETICS

Protein binding: 81%. Not metabolized. Excreted in urine. **Half-life:** 3.5 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm. Females of reproductive potential must use effective contraception during treatment and for at least 6 mos after discontinuation. Unknown if distributed in breast milk. Breastfeeding not recommended during treatment and for at least 7 days after discontinuation. Males must use effective contraception during treatment and for at least 3 mos after discontinuation. **Children:** Safety and efficacy not established in pts younger than 18 yrs. **Elderly:** Higher incidence of fatigue, leukopenia, neutropenia, thrombocytopenia in pts 65 yrs and older.

INTERACTIONS

DRUG: Ibuprofen may increase concentration/adverse effects. **Bone marrow depressants (e.g., cladribine)** may increase risk of myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** Echinacea may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, creatinine.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 100 mg; 500 mg.

ADMINISTRATION/HANDLING

IV Infusion

Reconstitution • Dilute 500-mg vial with 20 mL (4.2 mL to 100-mg vial) 0.9% NaCl to provide concentration of 25 mg/mL. • Gently swirl each vial until powder is completely dissolved. • Solution appears clear and ranges in color from colorless to yellow or green-yellow. • Further dilute reconstituted solution with 100 mL 0.9% NaCl.

Rate of administration • Infuse over 10 min.

Storage • Store at room temperature. • Diluted solution is stable for up to 24 hrs at room temperature or if refrigerated.

IV INCOMPATIBILITIES

Use only 0.9% NaCl to reconstitute; flush line prior to and following infusion. Do not add any other medications to IV line.

INDICATIONS/ROUTES/DOSAGE

⚠️ALERT ▶ Pretreatment with dexamethasone (or equivalent) will reduce risk, severity of cutaneous reaction; treatment with folic acid and vitamin B₁₂ beginning 1 wk before treatment and continuing for 21 days after last PEMEtrexed dose will reduce risk of side effects. Do not begin new treatment cycles unless ANC 1,500 cells/mm³ or greater, platelets 100,000 cells/mm³ or greater, and CrCl 45 mL/min or greater.

Malignant Pleural Mesothelioma

IV: ADULTS, ELDERLY: 500 mg/m² on day 1 of each 21-day cycle in combination with CISplatin. Continue until disease progression or unacceptable toxicity.

Non-small-Cell Lung Cancer (NSCLC)

IV: ADULTS, ELDERLY: Initial treatment 500 mg/m² on day 1 of each 21-day cycle (in combination with CISplatin) for up to 6 cycles or until disease progression or unacceptable toxicity. **Maintenance or second-line treatment:** 500 mg/m² on day 1 of each 21-day cycle (as single

agent). Continue until disease progression or unacceptable toxicity.

Dose Modification for Hematologic Toxicity

Nadir ANC less than 500 cells/mm³ and platelets 50,000 cells/mm³ or more: Reduce dose to 75% of previous dose. **Nadir platelets less than 50,000 cells/mm³ without bleeding:** Reduce dose to 75% of previous dose. **Nadir platelets less than 50,000 cells/mm³ with bleeding:** Reduce dose to 50% of previous dose. **Nonhematologic toxicity Grade 3 or greater (excluding neurotoxicity):** Reduce dose to 75% of previous dose (excluding mucositis). **Grade 3 or 4 mucositis:** Reduce dose to 50% of previous dose.

Dosage in Renal Impairment

Not recommended with CrCl less than 45 mL/min.

Dosage in Hepatic Impairment

Grade 3 (5.1–20 times ULN) or Grade 4 (greater than 20 times ULN): 75% of previous dose.

SIDE EFFECTS

Frequent (12%–10%): Fatigue, nausea, vomiting, rash, desquamation. **Occasional (8%–4%):** Stomatitis, pharyngitis, diarrhea, anorexia, hypertension, chest pain. **Rare (less than 3%):** Constipation, depression, dysphagia.

ADVERSE EFFECTS/TOXIC REACTIONS

Myelosuppression, characterized as CTCAE Grade 1–4 neutropenia, thrombocytopenia, anemia, was reported. Severe, sometimes fatal renal toxicity may occur. Serious cutaneous events including bullous, blistering, and exfoliative skin toxicities, Stevens-Johnson syndrome, epidermal necrolysis may occur. Fatal cases of interstitial pneumonitis were reported. Radiation recall may occur in pts who have received radiation wks to yrs previously.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, BMP, LFT; pregnancy test in females of reproductive potential. Question current breastfeeding status. Verify use of contraception in female pts of reproductive potential. Question history of hepatic/renal impairment. Receive full medication history and screen for interactions (esp. use of NSAIDs). Assess hydration status. Offer emotional support.

INTERVENTION/EVALUATION

Monitor CBC as clinically indicated; BMP, LFT periodically. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness), renal toxicity. Assess skin for rash, lesions, dermatological toxicities. Obtain CXR if interstitial lung disease, pneumonitis suspected. Ensure adequate hydration.

PATIENT/FAMILY TEACHING

- Treatment may depress your immune system response and reduce your ability to fight infection. Report symptoms of infection such as body aches, chills, cough, fatigue, fever. Avoid those with active infection.
- Use effective contraception during treatment and for at least 6 mos after last dose. Do not breastfeed during treatment and for at least 7 days after last dose. Males must use barrier methods (e.g., condoms) with sexual activity during treatment and for at least 3 mos after last dose.
- Report unusual bruising or bleeding of any kind.
- Treatment may cause severe lung inflammation; report cough, difficulty breathing, fever.
- Report skin toxicities such as blistering, bubbling, sloughing of the skin; liver problems (bruising, confusion, amber- or orange-colored urine, abdominal pain, yellowing of the skin or eyes); kidney problems (decreased urine output, dark-colored urine, flank pain).
- Pts with history of renal impairment should avoid NSAIDs (e.g., ibuprofen).

penicillin G potassium

pen-i-sil-in G po-tas-ee-um
(Crystapen , Pfizerpen-G)

Do not confuse penicillin with penicillAMINE.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Penicillin. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections including sepsis, meningitis, endocarditis, pneumonia. Active against gram-positive organisms (except *S. aureus*), some gram-negative organisms (e.g., *N. gonorrhoeae*), and some anaerobes and spirochetes.

PRECAUTIONS

Contraindications: Hypersensitivity to any penicillin. **Cautions:** Renal/hepatic impairment, seizure disorder, hypersensitivity to cephalosporins, pts with asthma.

ACTION

Inhibits bacterial cell wall synthesis by binding to one or more of the penicillin-binding proteins of bacteria. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Protein binding: 60%. Widely distributed (poor CNS penetration). Metabolized in liver. Primarily excreted in urine. **Half-life:** 0.5–1 hr (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; distributed in breast milk. **Children:** May delay renal excretion in neonates, young infants. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Probenecid increases concentration. **HERBAL:** None significant. **FOOD:** None significant. **LAB VALUES:** May cause positive Coombs' test. May increase serum ALT, AST, alkaline phosphatase, LDH. May decrease WBC count.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 5 million units.

ADMINISTRATION/HANDLING

Reconstitution • After reconstitution, further dilute with 50–100 mL D₅W or 0.9% NaCl for final concentration of 100,000–500,000 units/mL (50,000 units/mL for infants, neonates).

Rate of administration • Infuse over 15–30 min.

Storage • Reconstituted solution is stable for 7 days if refrigerated.

IV INCOMPATIBILITIES

DOPamine (Intropin), sodium bicarbonate.

IV COMPATIBILITIES

Amiodarone (Cordarone), calcium gluconate, dilTIAZem (Cardizem), heparin, magnesium sulfate, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

IV, IM; ADULTS, ELDERLY: 12–24 million units/day in divided doses q4–6h. **CHILDREN:** **Mild to moderate infection:** 100,000–150,000 units/kg/day in divided doses q6h. **Maximum:** 8 million units/day. **Severe infections:** 200,000–300,000 units/kg/day in divided doses q4–6h. **Maximum:** 24 million units/day. **NEONATES:** 25,000–50,000 units/kg/dose q8–12h.

Dosage in Renal Impairment

Dosage interval is modified based on creatinine clearance.

Creatinine

Clearance	Dosage
Greater than 50 mL/min	No dose adjustment
10–50 mL/min	75% normal dose
Less than 10 mL/min	20%–50% normal dose
Hemodialysis	50%–100% normal dose q8–12h
Continuous renal replacement therapy	
Continuous venovenous hemofiltration	Loading dose 4 million units, then 2 million units q4–6h
Continuous venovenous hemodialysis	Loading dose 4 million units, then 2–3 million units q4–6h
Continuous venovenous hemodiafiltration	Loading dose 4 million units, then 2–4 million units q4–6h

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional: Lethargy, fever, dizziness, rash, electrolyte imbalance, diarrhea, thrombophlebitis. **Rare:** Seizures, interstitial nephritis.

ADVERSE EFFECTS/TOXIC REACTIONS

Hypersensitivity reactions ranging from rash, fever, chills to anaphylaxis occur occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly penicillins, cephalosporins.

INTERVENTION/EVALUATION

Promptly report rash (hypersensitivity), diarrhea (with fever, abdominal pain, mucus, or blood in stool, may indicate antibiotic-associated colitis). Monitor I&O, urinalysis electrolytes, renal function tests for nephrotoxicity.

penicillin V potassium

pen-i-sil-in V po-tas-ee-um
(Apo-Pen-VK , Novo-Pen-VK ,
NuPen VK )

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Penicillin. **CLINICAL:** Antibiotic.

USES

Treatment of infections of respiratory tract, skin/skin structure, otitis media, necrotizing ulcerative gingivitis; prophylaxis for rheumatic fever, dental procedures. **OFF-LABEL:** Prosthetic joint infection.

PRECAUTIONS

Contraindications: Hypersensitivity to any penicillin. **Cautions:** Severe renal impairment, history of allergies (particularly cephalosporins), history of seizures, asthma.

ACTION

Inhibits cell wall synthesis by binding to bacterial cell membranes. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Moderately absorbed from GI tract. Protein binding: 80%. Widely distributed. Metabolized in liver. Primarily excreted in urine. **Half-life:** 1 hr (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; appears in cord blood, amniotic fluid. Distributed in breast milk in low concentrations. May lead to allergic sensitization, diarrhea, candidiasis, skin rash in infant. **Children:** Use caution in neonates and young infants (may delay renal elimination). **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May increase concentration/effect of **methotrexate**. **Probenecid** may increase concentration, risk of toxicity. **Tetracycline** may decrease concentration/effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May cause positive Coombs' test. May increase serum ALT, AST, alkaline phosphatase, LDH. May decrease WBC count.

AVAILABILITY (Rx)

Powder for Oral Solution: 125 mg/5 mL, 250 mg/5 mL. **Tablets:** 250 mg, 500 mg.

ADMINISTRATION/HANDLING

PO

- Give on empty stomach 1 hr before or 2 hrs after meals (increases absorption).
- After reconstitution, oral solution is stable for 14 days if refrigerated.
- Space doses evenly around the clock.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 125–500 mg q6–8h. **CHILDREN YOUNGER THAN 12 YRS:** 25–75 mg/kg/day in divided doses q6–8h. **Maximum:** 2,000 mg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Mild hypersensitivity reaction (chills, fever, rash), nausea, vomiting, diarrhea. **Rare:** Bleeding, allergic reaction.

ADVERSE EFFECTS/TOXIC REACTIONS

Severe hypersensitivity reactions, including anaphylaxis, may occur. Nephrotoxicity, antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from high dosages, prolonged therapy.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly penicillins, cephalosporins.

INTERVENTION/EVALUATION

Hold medication, promptly report rash (hypersensitivity), diarrhea (with fever, abdominal pain, mucus or blood in stool may indicate antibiotic-associated colitis). Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal change (ulceration, pain, erythema). Review Hgb levels; check for bleeding (overt/occult bleeding, ecchymosis, swelling of tissue). Monitor I&O, urinalysis, renal function tests for nephrotoxicity.

PATIENT/FAMILY TEACHING

- Continue antibiotic for full length of treatment.
- Space doses evenly.
- Report immediately if rash, diarrhea, bleeding, bruising, other new symptoms occur.

perampanel

per-am-pa-nel
(Fycompa)

BLACK BOX ALERT Risk for serious neuropsychiatric events, including irritability, aggression, anger, anxiety, paranoia, euphoric mood, agitation, mental status changes. Some of these events reported as serious and life-threatening. Violent thoughts or threatening behavior were also observed. Immediately report any changes in mood or behavior that are not typical for the patient. Health care professionals should closely monitor patients during titration period when higher doses are used.

CLASSIFICATION

PHARMACOTHERAPEUTIC: AMPA glutamate receptive antagonist. **CLINICAL:** Anticonvulsant.

USES

Treatment of partial-onset seizures with or without secondary generalized seizures as

adjunct or monotherapy in pts 4 yrs of age and older. Adjunctive therapy for the treatment of primary generalized tonic-clonic seizures in pts 12 yrs and older.

PRECAUTIONS

Contraindications: Hypersensitivity to perampanel. **Cautions:** Elderly (increased falls, dizziness, gait disturbances), severe renal/hepatic impairment, dialysis, concurrent use of CNS depressants, pts at risk for suicidal behavior.

ACTION

Noncompetitive antagonist of AMPA glutamate receptors, a primary excitatory neurotransmitter on postsynaptic neurons. **Therapeutic Effect:** Reduces frequency of seizure activity.

PHARMACOKINETICS

Rapidly, completely absorbed. Peak concentration: 0.5–2.5 hrs. Protein binding: 95%–96%. Steady state reached in 2–3 wks. Metabolized via oxidation/glucuronidation. Excreted in feces (48%), urine (22%). **Half-life:** 105 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Use caution when breastfeeding. **Children:** Safety and efficacy not established in pts younger than 12 yrs. **Elderly:** Due to increased risk of adverse reactions in the elderly, dosing titration should proceed very slowly.

INTERACTIONS

DRUG: CYP450 inducers (e.g., carbamazepine, oxcarbazepine, phenytoin) may decrease concentration/effects. May decrease effectiveness of hormonal contraceptives containing levonorgestrel. Alcohol, other CNS depressants (e.g., lorazepam, morphine, zolpidem) may increase CNS depression. **HERBAL:** St. John's wort may decrease concentration/effect. **Herbals with sedative properties** (e.g., chamomile, kava kava,

underlined – top prescribed drug

valerian) may increase CNS depression. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

 **Suspension, Oral:** 0.5 mg/mL. **Tablets, Film-Coated:** 2 mg, 4 mg, 6 mg, 8 mg, 10 mg, 12 mg.

ADMINISTRATION/HANDLING

PO

- Give at bedtime.
- Give tablet whole; do not break, crush, dissolve, or divide tablet.
- Measure oral suspension using provided adapter and dosing syringe.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Initial starting dose should be increased when enzyme-inducing anticonvulsants are given concurrently. Individual dosing based on clinical response, tolerability. Do not use in severe hepatic/renal impairment, pts on hemodialysis.

Partial-Onset Seizures in Absence of an Enzyme-Inducing Anticonvulsant

PO: ADULTS, ELDERLY, CHILDREN 4 YRS AND OLDER: Initially, 2 mg once daily at bedtime. May titrate in 2-mg increments at wkly intervals (in elderly, no more frequently than every 2 wks). **Recommended maintenance dose:** 8–12 mg/day at bedtime.

Generalized Tonic-Clonic Seizures in Absence of an Enzyme-Inducing Anticonvulsant

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Initially, 2 mg once daily at bedtime. May titrate in 2-mg increments at wkly intervals (in elderly, no more frequently than every 2 wks). **Recommended maintenance dose:** 8–12 mg/day at bedtime.

Partial-Onset Seizures, Generalized Tonic-Clonic Seizures (Concurrently Taking an Enzyme-Inducing Anticonvulsant)

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER (4 YRS AND OLDER FOR PARTIAL-ONSET SEIZURES): Initially, 4 mg once daily at bedtime. May titrate in 2-mg

increments at wkly intervals (in elderly, no more frequently than q2wks). **Recommended maintenance dose:** 8–12 mg/day at bedtime.

Dosage in Renal Impairment

CrCl less than 30 mL/min: Not recommended.

Dosage in Hepatic Impairment

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 2 mg once daily with wkly increase of 2 mg daily q2wks until target dose is achieved. **Mild impairment: Maximum:** 6 mg. **Moderate impairment: Maximum:** 4 mg. **Severe impairment:** Not recommended.

SIDE EFFECTS

Frequent (32%–11%): Dizziness, sleepiness, headache. **Occasional (8%–3%):** Fatigue, irritability, nausea, balance disorder, weight gain, gait disturbance, vertigo, blurred vision, vomiting, arthralgia, anxiety. **Rare (2%–1%):** Constipation, back pain, extremity pain, asthenia, oropharyngeal pain, aggression.

ADVERSE EFFECTS/TOXIC REACTIONS

Irritability, aggression, anger, anxiety, affect lability, agitation occurred rarely (2% of pts). Increased risk for seizures when anticonvulsants are withdrawn abruptly.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (intensity, frequency, duration, LOC). Initiate seizure precautions. Obtain medication history (esp. use of other anticonvulsant therapy; dosage based on concurrent seizure medication). Observe clinically. Assist with ambulation until response to drug is established (32% of pts experience dizziness).

INTERVENTION/EVALUATION

Assess mental status, cognitive abilities, behavioral changes. Monitor for clinical response, tolerability to medication, dosing level during treatment and for at least 1 mo

after last therapy dose. Report persistent, severe, or worsening psychiatric symptoms or behaviors. Assess for clinical improvement (decrease in intensity, frequency of seizures).

PATIENT/FAMILY TEACHING

- Avoid alcohol (greater risk for adverse effects).
- The combination of alcohol and perampanel may significantly worsen mood, increase anger.
- Counsel pts, families, and caregivers of need to monitor for emergence of anger, aggression, hostility, unusual changes in mental status.
- Avoid tasks that require alertness, motor skills until response to drug is established (greater risk for dizziness, sleepiness).

pertuzumab

per-tue-zue-mab
(Perjeta)

BLACK BOX ALERT Can result in embryo-fetal death, birth defects. Pts must be made aware of danger to fetus, need for effective contraception. May result in cardiac failure. Assess left ventricular ejection fraction.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: *HER2* receptor antagonist. Monoclonal antibody. **CLINICAL:** Antineoplastic.

USES

Treatment of *HER2*-positive metastatic breast cancer in pts who have not received prior anti-*HER2* therapy or chemotherapy for metastatic disease in combination with trastuzumab and DOCEtaxel. Neoadjuvant treatment of pts with *HER2*-positive, locally advanced inflammatory, or early-stage breast cancer in combination with trastuzumab and DOCEtaxel. Adjuvant treatment of *HER2*-positive early breast cancer at high risk of recurrence (in combination with trastuzumab and chemotherapy).

PRECAUTIONS

Contraindications: Hypersensitivity to pertuzumab. **Cautions:** Conditions that may impair left ventricular function (e.g., uncontrolled hypertension, recent MI, severe cardiac arrhythmia), history of infusion-related reaction. Prior anthracycline therapy or irradiation. Conditions predisposing to infection (e.g., diabetes, immunocompromised pts, renal failure, open wounds), pts at risk for tumor lysis syndrome (high tumor burden).

ACTION

Targets human epidermal growth factor 2 (*HER2*), blocking ligand-initiated intercellular signaling, which can result in cell growth arrest and cell death. **Therapeutic Effect:** Inhibits cell growth and metastasis.

PHARMACOKINETICS

Peak plasma concentration reached after first maintenance dose. **Half-life:** 18 days.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause embryo-fetal harm. Females of reproductive potential must use effective contraception during treatment and for at least 7 mos after discontinuation. Unknown if distributed in breast milk. However, human immunoglobulin G (IgG) is present in breast milk and is known to cross the placenta. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase levels of **belimumab**. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease Hgb, Hct, leukocytes, neutrophils.

AVAILABILITY (Rx)

Injection Solution: 420 mg/14 mL (30 mg/mL) vial.

ADMINISTRATION/HANDLING

Reconstitution • Visually inspect vial for particulate matter or discoloration. Do not use if solution is cloudy, discolored, or if visible particles are observed. • Withdraw dose from vial and dilute into 250 mL 0.9% NaCl only (do not use D₅W). • Mix by gentle inversion. • Do not shake.

Rate of administration • Initial dose to be infused over 60 min. • Subsequent doses may be infused over 30–60 min.

Storage • Refrigerate unused vials. Store vials in outside cartons (protects from light). • May refrigerate diluted solution for up to 24 hrs. • Do not freeze.

IV INCOMPATIBILITIES

Do not mix with any other medications.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Give as an IV infusion only. Do not give by IV push or bolus.

Breast Cancer (Metastatic)

IV infusion: ADULTS/ELDERLY: Initially, 840 mg given over 60 min, followed by maintenance dose of 420 mg given over 30–60 min q3wks until disease progression or unacceptable toxicity (in combination with trastuzumab and DOCEtaxel).

Breast Cancer (Adjuvant)

IV infusion: ADULTS, ELDERLY: 840 mg over 60 min, followed by maintenance dose of 420 mg over 30–60 min q3wks for a total of 1 yr (up to 18 cycles) or until disease progression or unacceptable toxicity (as part of combination regimen containing trastuzumab and standard anthracycline- and/or taxane-based therapy). Pertuzumab and trastuzumab should begin on day 1 of the first taxane-containing cycle.

Breast Cancer (Neoadjuvant)

IV infusion: ADULTS, ELDERLY: 840 mg once, followed by 420 mg q3wks for 3–6

cycles. May be administered as one of the following regimens: 4 preoperative cycles of pertuzumab, trastuzumab, DOCEtaxel, then 3 postoperative cycles of 5-fluorouracil, epiRUBicin, and cyclophosphamide (FEC) **or** 3 or 4 preoperative cycles of FEC alone, then 3 or 4 preoperative cycles of pertuzumab, trastuzumab, DOCEtaxel **or** 6 preoperative cycles of pertuzumab, trastuzumab, DOCEtaxel, and CARBOplatin **or** 4 preoperative cycles of dose-dense DOXOrubicin and cyclophosphamide alone, then 4 preoperative cycles of pertuzumab, trastuzumab, and PAClitaxel. **Note:** Continue trastuzumab postoperatively to complete 1 yr of treatment.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (67%–21%): Diarrhea, alopecia, nausea, fatigue, rash, peripheral neuropathy, anorexia, asthenia, mucosal inflammation, vomiting, peripheral edema, myalgia, nail disorder, headache. **Occasional (19%–12%):** Stomatitis, pyrexia, dysgeusia, arthralgia, constipation, increased lacrimation, pruritus, insomnia, dizziness. **Rare (10%–7%):** Nasopharyngitis, dry skin, paronychia.

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia, leukopenia, neutropenia are expected responses to therapy, but more severe reactions including febrile neutropenia may be life-threatening. Upper respiratory tract infection occurs in 17% of pts. Pleural effusion occurred in 5% of pts. Tumor lysis syndrome may present as acute renal failure, hypocalcemia, hyperuricemia, hyperphosphatemia. Immunogenicity (auto-pertuzumab antibodies) reported in 3% of pts. Decreases in LVEF occurred in 4% of pts. Prior treatment with anthracyclines, chest radiotherapy may further increase risk of decreased LVEF.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC. Assess left ventricular ejection fraction (LVEF) before initiating therapy. Negative pregnancy test must be confirmed before initiating treatment. Obtain *HER2* testing by an FDA-approved laboratory. Screen for active infection. Offer emotional support.

INTERVENTION/EVALUATION

Monitor ANC, CBC periodically. Assess LVEF at regular intervals. Monitor for symptoms of left ventricular dysfunction (arrhythmia, cough, dyspnea, peripheral edema). Monitor for infusion reactions, hypersensitivity reactions, anaphylaxis. If a significant infusion reaction occurs, slow or interrupt infusion and administer appropriate medical treatment. Observe pt closely for 60 min after the first infusion and for 30 min after subsequent infusions. Offer antiemetics if nausea occurs. Monitor for symptoms of tumor lysis syndrome (acute renal failure, hypocalcemia, hyperuricemia, hyperphosphatemia).

PATIENT/FAMILY TEACHING

- Treatment may depress your immune system response and reduce your ability to fight infection. Report symptoms of infection such as body aches, chills, cough, fatigue, fever. Avoid those with active infection.
- Report symptoms of bone marrow depression such as bruising, fatigue, fever, shortness of breath, weight loss; bleeding easily, bloody urine or stool.
- New-onset left heart dysfunction may occur; report shortness of breath, cough, swelling of ankles or feet, palpitations.
- Therapy may cause life-threatening tumor lysis syndrome (a condition caused by the rapid breakdown of cancer cells), which can cause kidney failure. Report decreased urination, amber-colored urine; confusion, difficulty breathing, fatigue, fever, muscle or joint pain,

palpitations, seizures, vomiting.

- Avoid pregnancy.
- Use effective contraception, including condoms, during treatment and for at least 7 mos after last dose.
- Do not breast-feed.
- Alopecia is reversible, but new hair growth may have different color, texture.

PHENobarbital

fee-noe-bar-bi-tal

Do not confuse PHENobarbital with pentobarbital, Phenergan, or phenytoin.

FIXED-COMBINATION(S)

Donnatal: PHENobarbital/atropine (an anticholinergic)/hyoscyamine (an anticholinergic)/scopolamine (an anticholinergic): 16.2 mg/0.0194 mg/0.1037 mg/0.0065 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Barbiturate (Schedule IV). **CLINICAL:** Anticonvulsant.

USES

Management of generalized tonic-clonic (grand mal) seizures, partial seizures, control of acute seizure episodes (status epilepticus). **OFF-LABEL:** Treatment of alcohol withdrawal, sedative/hypnotic withdrawal.

PRECAUTIONS

Contraindications: Hypersensitivity to PHENobarbital, other barbiturates, porphyria, dyspnea or airway obstruction, use in nephritic pts (large doses), severe hepatic impairment. Pts with history of sedative/hypnotic addiction. Intra-arterial or SQ administration. **Cautions:** Renal/hepatic impairment, acute/chronic pain, depression, suicidal tendencies, history of drug abuse, elderly pts, debilitated pts,

children, hemodynamically unstable pts, hypoadrenalism, respiratory disease.

ACTION

Depresses sensory cortex, decreases motor activity, alters cerebellar function. **Therapeutic Effect:** Induces drowsiness, sedation, anticonvulsant activity.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	20–60 min	N/A	6–10 hrs
IV	5 min	30 min	4–10 hrs

Well absorbed after PO, parenteral administration. Protein binding: 20%–45%. Rapidly and widely distributed. Metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 53–140 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. Produces respiratory depression in neonates during labor. May cause postpartum hemorrhage, hemorrhagic disease in newborn. Withdrawal symptoms may appear in neonates born to women receiving barbiturates during last trimester of pregnancy. Lowers serum bilirubin in neonates. **Children:** May cause paradoxical excitement. **Elderly:** May exhibit excitement, confusion, mental depression. Use caution.

INTERACTIONS

DRUG: Alcohol, other CNS depressants (e.g., LORazepam, morphine) may increase CNS depression. May decrease effects of warfarin, oral contraceptives. Valproic acid may increase concentration, risk of toxicity. Strong CYP2C19 inducers (e.g., carbamazepine, rifampin) may decrease concentration/effect. Strong CYP2C19 inhibitors (e.g., FLUoxetine, fluvoxamine) may increase concentration/

effect. May decrease concentration/effect of dolutegravir, tenofovir, voriconazole. **HERBAL:** Herbals with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May decrease serum bilirubin. **Therapeutic serum level:** 10–40 mcg/mL; **toxic serum level:** greater than 40 mcg/mL.

AVAILABILITY (Rx)

Elixir: 20 mg/5 mL. **Oral Solution:** 20 mg/5 mL. **Injection Solution:** 65 mg/mL, 130 mg/mL. **Tablets:** 15 mg, 30 mg, 60 mg, 100 mg.

ADMINISTRATION/HANDLING

Reconstitution • May give undiluted or may dilute with NaCl.

Rate of administration • Adequately hydrate pt before and immediately after drug therapy (decreases risk of adverse renal effects). • Do not inject IV faster than 30 mg/min for children and 60 mg/min for adults. Too-rapid IV may produce severe hypotension, marked respiratory depression. • Inadvertent intra-arterial injection may result in arterial spasm with severe pain, tissue necrosis. Extravasation in SQ tissue may produce redness, tenderness, tissue necrosis.

Storage • Store vials at room temperature.

IM

• Do not inject more than 5 mL in any one IM injection site (produces tissue irritation). • Inject deep IM into large muscle mass.

PO

• Give without regard to food. • Tablets may be crushed. • Elixir may be mixed with water, milk, fruit juice.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec).

IV COMPATIBILITIES

Calcium gluconate, enalapril (Vasotec), fosphenytoin (Cerebyx), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Status Epilepticus

IV: ADULTS, ELDERLY, CHILDREN: 15 mg/kg as a single dose. **CHILDREN:** 15–20 mg/kg (**Maximum:** 1,000 mg) over 10 min; may repeat after 15 min (**Maximum:** 40 mg/kg).

Seizure Control (Maintenance)

Note: Maintenance dose usually starts 12 hrs after loading dose.

PO, IV: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 2 mg/kg/day in divided doses. **CHILDREN 5–12 YRS:** 4–6 mg/kg/day in divided doses. **CHILDREN 1–5 YRS:** 6–8 mg/kg/day in divided doses. **CHILDREN YOUNGER THAN 1 YR:** 5–6 mg/kg/day in 1–2 divided doses. **NEONATES:** 3–4 mg/kg/day given once daily.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (3%–1%): Drowsiness. **Rare (less than 1%):** Confusion, paradoxical CNS reactions (hyperactivity, anxiety in children; excitement, restlessness in elderly, generally noted during first 2 wks of therapy, particularly in presence of uncontrolled pain).

ADVERSE EFFECTS/TOXIC REACTIONS

Abrupt withdrawal after prolonged therapy may produce increased dreaming, nightmares, insomnia, tremor, diaphoresis, vomiting, hallucinations, delirium, seizures, status epilepticus. Skin eruptions appear as hypersensitivity reaction. Blood dyscrasias, hepatic disease, hypocalcemia occur rarely. Overdose produces cold/clammy skin, hypothermia, severe CNS depression, cyanosis, tachycardia, Cheyne-Stokes respirations. Toxicity may result in severe renal impairment.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, pulse, respirations immediately before administration. **Hypnotic:** Raise bed rails, provide environment conducive to sleep (back rub, quiet environment, low lighting). **Seizures:** Review history of seizure disorder (length, presence of auras, LOC). Observe for recurrence of seizure activity. Initiate seizure precautions.

INTERVENTION/EVALUATION

Monitor CNS status, seizure activity, hepatic/renal function, respiratory rate, heart rate, B/P. Monitor for therapeutic serum level. Neurologic assessments may be inaccurate until drug has properly cleared the body. **Therapeutic serum level:** 10–40 mcg/mL; **toxic serum level:** greater than 40 mcg/mL.

PATIENT/FAMILY TEACHING

- Avoid alcohol, limit caffeine.
- May be habit-forming.
- Do not discontinue abruptly.
- May cause dizziness/drowsiness; avoid tasks that require alertness, motor skills until response to drug is established.

phenylephrine

HIGH ALERT

fen-il-ef-rin

(AK-Dilate, Mydrin, Neo-Synephrine, Sudafed PE)

BLACK BOX ALERT Intravenous use should be administered by adequately trained individuals familiar with its use.

Do not confuse Mydrin with Midrin, or Sudafed PE with Sudafed.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Alpha-adrenergic agonist. **CLINICAL:** Nasal decongestant, mydriatic, vasopressor.

USES

Nasal decongestant: Topical application to nasal mucosa reduces nasal

secretion, promoting drainage of sinus secretions. **Parenteral:** Vascular failure in shock, supraventricular tachycardia, hypotension.

PRECAUTIONS

Contraindications: Hypersensitivity to phenylephrine. **Injection:** Severe hypertension, ventricular tachycardia. **Oral:** Use within 14 days of MAOI therapy. **Cautions: Injection:** Elderly, hyperthyroidism, bradycardia, partial heart block, cardiac disease, HF, cardiogenic shock, hypertension. **Oral:** Asthma, bowel obstruction, cardiac disease, ischemic heart disease, hypertension, increased intraocular pressure, elderly, prostatic hyperplasia.

ACTION

Acts on alpha-adrenergic receptors of vascular smooth muscle. Causes vasoconstriction of arterioles of nasal mucosa/conjunctiva; produces systemic arterial vasoconstriction. **Therapeutic Effect:** Decreases mucosal blood flow, relieves congestion. Increases B/P. Reduces heart rate due to decrease in cardiac output.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	Immediate	N/A	15–20 min
IM	10–15 min	N/A	0.5–2 hrs
SQ	10–15 min	N/A	1 hr

Minimal absorption after intranasal, ophthalmic administration. Metabolized in liver, GI tract. Primarily excreted in urine. **Half-life:** 2.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Children:** May exhibit increased absorption, toxicity with nasal preparation. No age-related precautions noted with systemic use. **Elderly:** More likely to experience adverse effects.

INTERACTIONS

DRUG: Linezolid, MAOIs (e.g., phenelzine, selegiline) may increase vasopressor effects. Tricyclic antidepressants (e.g., amitriptyline, doxepin) may increase vasopressor effect. Ergot derivatives (e.g., ergotamine) may increase hypertensive effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (OTC)

Injection, Solution: 10 mg/mL. **Solution, Nasal Drops (Neo-Synephrine):** 0.125%, 0.25%. **Solution, Nasal Spray (Neo-Synephrine):** 0.25%, 0.5%. **Solution, Oral:** 2.5 mg/5 mL. **Tablets (Sudafed PE):** 10 mg.

ADMINISTRATION/HANDLING

Reconstitution • For IV push, dilute with NS to a concentration of 0.1–1 mg/mL. • For IV infusion, dilute 10–100 mg with 500 mL 0.9% NaCl or D₅W.

Rate of administration • For IV push, give over 20–30 sec. • For IV infusion, titrate dose to maintain systolic B/P greater than 90 mm Hg.

Storage • Store vials at room temperature.

Nasal

• Instruct pt to blow nose prior to administering medication. • With head tilted back, apply drops in 1 nostril. Wait 5 min before applying drops in other nostril. • Sprays should be administered into each nostril with head erect. • Pt should sniff briskly while squeezing container, then wait 3–5 min before blowing nose gently. • Rinse tip of spray bottle.

IV INCOMPATIBILITIES

Furosemide (Lasix).

IV COMPATIBILITIES

Amiodarone (Cordarone), dexmedetomidine (Precedex), DOBUTamine (Do-

butrex), lidocaine, potassium chloride, propofol (Diprivan), vasopressin.

INDICATIONS/ROUTES/DOSAGE

Nasal Decongestant

ALERT Do not use for more than 3 days.

Intranasal: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 2–3 drops or 2–3 sprays of 0.25%–0.5% solution into each nostril q4h as needed. **CHILDREN 6–11 YRS:** 2–3 drops or 2–3 sprays of 0.25% solution into each nostril q4h as needed. **CHILDREN 2–5 YRS:** 1 drop of 0.125% solution (dilute 0.5% solution with 0.9% NaCl to achieve 0.125%) in each nostril. Repeat q2–4h as needed.

PO: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: 10 mg q4h as needed for up to 7 days. **Maximum:** 60 mg/day. **CHILDREN 6–11 YRS:** 5 mg q4h as needed for up to 7 days. **Maximum:** 30 mg/day. **CHILDREN 4–5 YRS:** 2.5 mg q4h as needed for up to 7 days. **Maximum:** 15 mg/day.

Hypotension, Shock

IV infusion: ADULTS, ELDERLY: 0.5–6 mcg/kg/min. Titrate to desired response. **CHILDREN:** Initially, 0.1–0.5 mcg/kg/min. Titrate to desired effect.

SIDE EFFECTS

Frequent: Nasal: Rebound nasal congestion due to overuse, esp. when used longer than 3 days. **Occasional:** Mild CNS stimulation (restlessness, nervousness, tremors, headache, insomnia, particularly in those hypersensitive to sympathomimetics, such as elderly pts). **Nasal:** Stinging, burning, drying of nasal mucosa.

ADVERSE EFFECTS/TOXIC REACTIONS

Large doses may produce tachycardia, palpitations (particularly in pts with cardiac disease), dizziness, nausea, vomiting. Overdose in pts older than 60 yrs may result in hallucinations, CNS

depression, seizures. Prolonged nasal use may produce chronic swelling of nasal mucosa, rhinitis. If phenylephrine 10% ophthalmic is instilled into denuded/damaged corneal epithelium, corneal clouding may result.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline symptomology, vital signs. Question history of hypertension, cardiac disease, asthma, recent use of MAOI therapy.

INTERVENTION/EVALUATION

Monitor B/P, heart rate. For severe hypotension or shock states, monitor central venous pressure noninvasive hemodynamic monitoring systems.

PATIENT/FAMILY TEACHING

- Discontinue drug if adverse reactions occur.
- Do not use for nasal decongestion for longer than 3 days (rebound congestion).
- Discontinue drug if insomnia, dizziness, weakness, tremor, palpitations occur.
- **Nasal:** Stinging/burning of nasal mucosa may occur.
- **Ophthalmic:** Blurring of vision with eye instillation generally subsides with continued therapy.
- Discontinue medication if redness/swelling of eyelids, itching occurs.

phenytoin

fen-i-toyn

(Dilantin, Novo-Phenytoin , Phenytek)

BLACK BOX ALERT Do not exceed IV rate of 50 mg/min in adults and 1–3 mg/kg/min in pediatric pts.

Do not confuse Dilantin with Dilaudid or diTIAZem, or phenytoin with phenelzine or fosphenytoin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Hydantoin. **CLINICAL:** Anticonvulsant.

USES

Management of generalized tonic-clonic seizures (grand mal), complex partial seizures, status epilepticus. Prevention of seizures following head trauma/neurosurgery. **OFF-LABEL:** Prevention of early post-traumatic seizures following traumatic brain injury.

PRECAUTIONS

Contraindications: Hypersensitivity to phenytoin, other hydantoin. Concurrent use of delavirdine. History of acute phenytoin therapy-induced hepatotoxicity. **IV (additional):** Second- and third-degree AV block, sinoatrial block, sinus bradycardia, Adams-Stokes syndrome. **Cautions:** Porphyria, diabetes, renal/hepatic impairment, pts at increased risk of suicidal behavior/thoughts, elderly/debilitated pts, low serum albumin, cardiac disease, hypothyroidism, pts of Asian descent.

ACTION

Stabilizes neuronal membranes in motor cortex. Decreases influx of sodium during generation of nerve impulses. **Therapeutic Effect:** Decreases seizure activity.

PHARMACOKINETICS

Slowly, variably absorbed after PO administration. Protein binding: 90%–95%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 7–42 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in small amount in breast milk. Fetal hydantoin syndrome (craniofacial abnormalities, nail/digital hypoplasia, prenatal growth deficiency) has been reported. Increased frequency of seizures in pregnant women due to altered absorption of metabolism of phenytoin. May increase risk of hemorrhage in neonate, maternal bleeding during delivery. **Children:** More susceptible to gingival hyperplasia, coarsening of facial

features; excess body hair. **Elderly:** No age-related precautions noted but lower dosages recommended.

INTERACTIONS

DRUG: Alcohol, other CNS depressants (e.g., LORazepam, morphine, zolpidem) may increase CNS depression. Amiodarone, cimetidine, disulfiram, FLUoxetine, isoniazid, sulfonamides may increase concentration/effects, risk of toxicity. May decrease effects of glucocorticoids (e.g., dexamethasone, prednisONE), oral contraceptives. Lidocaine, propranolol may increase cardiac depressant effects. Valproic acid may decrease metabolism, increase concentration. May decrease concentration/effect of apixaban, axitinib, dabigatran, dronedarone, itraconazole, ivabradine, niMODipine, rivaroxaban. **HERBAL:** Herbals with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, GGT, alkaline phosphatase. **Therapeutic serum level:** 10–20 mcg/mL; **toxic serum level:** greater than 20 mcg/mL.

AVAILABILITY (Rx)

Capsules, Extended-Release: 30 mg, 100 mg, 200 mg, 300 mg. **Injection Solution:** 50 mg/mL. **Suspension, Oral:** 125 mg/5 mL. **Tablets, Chewable:** 50 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ Give by IV push or IV piggyback. IV push can be painful (chemical irritation of vein due to alkalinity of solution). To minimize effect of irritation, flush IV with sterile saline after dose is administered.

Reconstitution • May give undiluted or may dilute with 0.9% NaCl to a concentration of 5 mg/mL or more.

Rate of administration • Administer at rate not exceeding 50 mg/min in adults, 20 mg/min in elderly, pts with preexisting cardiovascular conditions. In neonates, administer at rate not exceeding 1–3 mg/kg/min. • Infuse diluted solutions using an in-line filter. • Severe hypotension, cardiovascular collapse occur if rate of IV injection exceeds 50 mg/min for adults. • IV toxicity characterized by CNS depression, cardiovascular collapse.

Storage • Precipitate may form if parenteral form is refrigerated (will dissolve at room temperature). • Slight yellow discoloration of parenteral form does not affect potency, but do not use if solution is cloudy or precipitate forms. Discard if not used within 4 hrs of preparation.

PO

• Give with food if GI distress occurs. • Tablets may be chewed. • Shake oral suspension well before using. • Separate administration of phenytoin with antacids or tube feeding by 2 hrs.

IV INCOMPATIBILITIES

DilTIAZem (Cardizem), DOBUTamine (Dobutrex), enalapril (Vasotec), heparin, HYDROmorphone (Dilaudid), insulin, lidocaine, morphine, nitroglycerin, norepinephrine (Levophed), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Status Epilepticus

IV: ADULTS, ELDERLY, ADOLESCENTS: **Loading dose:** 20 mg/kg at maximum rate of 25–50 mg/min. May repeat in 10 min after loading dose with dose of 5–10 mg/kg. **INFANTS, CHILDREN:** **Loading dose:** 20 mg/kg at maximum rate of 1 mg/kg/min. May give additional dose of 5–10 mg/kg after loading dose.

Seizure Control (Maintenance)

Note: Loading dose not used in pts with history of renal/hepatic disease.

PO: ADULTS, ELDERLY: Loading Dose: 1 g divided into 3 doses given at 2-hr intervals. **Maintenance** (begins 24 hrs after loading dose): Initially 100 mg 3 times/day; adjust at no less than 7–10-day intervals. Usual dose: 100 mg 3–4 times/day up to 200 mg 3 times/day (may consider 300 mg once daily in pts established on 100 mg 3 times/day). **CHILDREN:** Initially, 5 mg/kg/day in 2–3 divided doses. Adjust dose at 7- to 10-day intervals. **Maintenance:** 4–8 mg/kg/day. **Maximum:** 300 mg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Drowsiness, lethargy, confusion, slurred speech, irritability, gingival hyperplasia, hypersensitivity reaction (fever, rash, lymphadenopathy), constipation, dizziness, nausea. **Occasional:** Headache, hirsutism, coarsening of facial features, insomnia, muscle twitching.

ADVERSE EFFECTS/TOXIC REACTIONS

Abrupt withdrawal may precipitate status epilepticus. Blood dyscrasias, osteomalacia (due to interference of vitamin D metabolism) may occur. Toxic phenytoin blood concentration (25 mcg/mL or more) may produce ataxia, nystagmus, diplopia. As level increases, extreme lethargy to comatose state occurs. May increase risk of suicidal thoughts and behavior. Severe cutaneous reactions including toxic epidermal necrolysis, Stevens-Johnson syndrome may occur. Life-threatening drug reaction with eosinophilia and systemic symptoms (DRESS) (multi-organ hypersensitivity) may present as lymphadenopathy, fever, facial swelling, hepatitis, nephritis, myocarditis, myositis. Hepatotoxicity, acute hepatic failure were reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Anticonvulsant: Review history of seizure disorder (intensity, frequency, duration, LOC). Initiate seizure precautions. LFT, CBC should be performed before beginning therapy and periodically during therapy. Repeat CBC 2 wks following initiation of therapy and 2 wks following administration of maintenance dose.

INTERVENTION/EVALUATION

Observe frequently for recurrence of seizure activity. Monitor ECG for cardiac arrhythmia. Assess for clinical improvement (decrease in intensity/frequency of seizures). Monitor for signs/symptoms of depression, suicidal tendencies, unusual behavior. Monitor CBC with differential, renal function, LFT, B/P (with IV use). Assist with ambulation if drowsiness, lethargy occurs. Monitor for suicidal ideation or behaviors. Monitor for therapeutic serum level (10–20 mcg/mL). **Therapeutic serum level:** 10–20 mcg/mL; **toxic serum level:** greater than 20 mcg/mL. **Free unbound levels:** **Therapeutic:** 1–2 mcg/mL; **toxic:** more than 2 mcg/mL.

PATIENT/FAMILY TEACHING

- Pain may occur with IV injection.
- To prevent gingival hyperplasia (bleeding, tenderness, swelling of gums), maintain good oral hygiene, gum massage, regular dental visits.
- Serum levels should be performed every mo for 1 yr after maintenance dose is established and q3mos thereafter.
- Report sore throat, fever, glandular swelling, skin reaction (hematologic toxicity).
- Drowsiness usually diminishes with continued therapy.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Do not abruptly withdraw medication after long-term use

(may precipitate seizures). • Strict maintenance of drug therapy is essential for seizure control, arrhythmias. • Avoid alcohol. • Report changes in behavior, thoughts of suicide.

phosphates potassium sodium

fos-fates

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Electrolyte supplement. **CLINICAL:** Mineral.

USES

Prevention and treatment of hypophosphatemia.

PRECAUTIONS

Contraindications: **K-phosphate:** Hyperkalemia, hyperphosphatemia, hypocalcemia. **Na-phosphate:** Hypocalcemia, hypernatremia, hyperphosphatemia. **Cautions:** Renal impairment, concomitant use of potassium-sparing drugs, acid-base alteration, digitalized pts, cardiac disease, metabolic alkalosis.

ACTION

Active in bone deposition, calcium metabolism, utilization of B complex vitamins. Act as buffers in maintaining acid-base balance. Exert osmotic effect in small intestine. **Therapeutic Effect:** Correct hypophosphatemia, acidify urine, prevent calcium deposits in urinary tract, promote peristalsis in GI tract.

PHARMACOKINETICS

Poorly absorbed after PO administration. PO form excreted in feces; IV form excreted in urine.

**LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: Use caution in pregnant women with other medical conditions (e.g., preeclampsia). **Children:** Increased risk of dehydration in pts younger than 12 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: ACE inhibitors (e.g., enalapril, lisinopril), eplerenone, iron salts, magnesium salts, potassium-containing medications, potassium-sparing diuretics (e.g., spironolactone), salt substitutes containing potassium phosphate may increase serum potassium. Antacids, sucralfate may decrease absorption. Calcium-containing medications may increase risk of calcium deposition in soft tissues, decrease phosphate absorption. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution (Potassium Phosphate): 3 mmol phosphate and 4.4 mEq potassium per mL. **Injection Solution (Sodium Phosphate):** 3 mmol phosphate and 4 mEq sodium per mL.

ADMINISTRATION/HANDLING

Reconstitution • Must be diluted. Soluble in all commonly used IV solutions.

Rate of administration • Infuse over minimum of 4 hrs (usually over 6 hrs).

Maximum rate: 0.06 mmol/kg/hr.

Storage • Store at room temperature.

IV INCOMPATIBILITIES

Amiodarone, DOBUTamine (Dobutrex), pantoprazole (Protonix).

IV COMPATIBILITIES

Diltiazem (Cardizem), enalapril (Vasotec), famotidine (Pepcid), metoclopramide (Reglan), nicardipine (Cardene).

INDICATIONS/ROUTES/DOSAGE

Note: (**K-Phosphate**): For each mmol of phosphate, 1.5 mEq of K will be given. (**Na-Phosphate**): For each mmol of phosphate, 1.3 mEq of Na will be given.

Hypophosphatemia

(**Potassium/Sodium Phosphate**):

Phosphate level 2.3–3 mg/dL: 0.16–0.32 mmol/kg over 4–6 hr. **Phosphate level 1.6–2.2 mg/dL:** 0.32–0.64 mmol/kg over 4–6 hr. **Phosphate level less than 1.5 mg/dL:** 0.64–1 mmol/kg over 8–12 hr.

Phosphate level 1.6–2.2 mg/dL: 0.32–0.64 mmol/kg over 4–6 hr. **Phosphate level less than 1.5 mg/dL:** 0.64–1 mmol/kg over 8–12 hr.

SIDE EFFECTS

Frequent: Mild laxative effect (in first few days of therapy). **Occasional:** Diarrhea, nausea, abdominal pain, vomiting. **Rare:** Headache, dizziness, confusion, heaviness of lower extremities, fatigue, muscle cramps, paresthesia, peripheral edema, arrhythmias, weight gain, thirst.

ADVERSE EFFECTS/TOXIC REACTIONS

Hyperphosphatemia may produce extraskelatal calcification.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain BMP, serum phosphate, ionized calcium. Question history of renal impairment, cardiac disease. Receive full medication history and screen for interactions. Assess hydration status.

INTERVENTION/EVALUATION

Routinely monitor serum calcium, phosphorus, potassium, sodium, ALT, AST, alkaline phosphatase, bilirubin.

PATIENT/FAMILY TEACHING

- Report diarrhea, nausea, vomiting.

piperacillin/ tazobactam

pye-per-a-sil-in/tay-zoe-bak-tam
(Zosyn)

Do not confuse Zosyn with Zofran or Zyxos.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Penicillin. **CLINICAL:** Antibiotic.

USES

Treatment of moderate to severe bacterial infections, including community-acquired/nosocomial pneumonia, intra-abdominal, pelvic, skin, and skin structure infections. Tazobactam expands piperacillin activity to include beta-lactamase-producing strains of *S. aureus*, *H. influenzae*, *Bacteroides*, *PsAg*, *Acinetobacter*, *Klebsiella pneumoniae*, *E. coli*. **OFF-LABEL:** Surgical prophylaxis, complicated intra-abdominal infections.

PRECAUTIONS

Contraindications: Hypersensitivity to piperacillin/tazobactam, any penicillin. **Cautions:** History of allergies (esp. cephalosporins, beta-lactamase inhibitors), renal impairment, preexisting seizure disorder.

ACTION

Piperacillin: Inhibits bacterial cell wall synthesis by binding to PCN-binding proteins, which inhibit the final step of peptidoglycan synthesis. **Therapeutic Effect:** Bactericidal. **Tazobactam:** Inactivates bacterial beta-lactamase. **Therapeutic Effect:** Protects piperacillin from enzymatic degradation, extends its spectrum of activity, prevents bacterial overgrowth.

PHARMACOKINETICS

Protein binding: 16%–30%. Widely distributed. Primarily excreted

unchanged in urine. Removed by hemodialysis. **Half-life:** 0.7–1.2 hrs (increased in hepatic cirrhosis, renal impairment).

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; appears in cord blood, amniotic fluid. Distributed in breast milk in low concentrations. May lead to allergic sensitization, diarrhea, candidiasis, skin rash in infant. **Children:** Dosage not established for pts younger than 12 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May decrease concentration/effects of **aminoglycosides** (e.g., **gentamicin**, **tobramycin**). May increase concentration, toxicity of **methotrexate**. **Probenecid** may increase concentration, risk of toxicity. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum sodium, alkaline phosphatase, bilirubin, LDH, ALT, AST, BUN, creatinine, PT, PTT. May decrease serum potassium. May cause positive Coombs' test.

AVAILABILITY (Rx)

◀ **ALERT** ▶ Piperacillin/tazobactam is a combination product in an 8:1 ratio of piperacillin to tazobactam. **Injection Powder:** 2.25 g, 3.375 g, 4.5 g. **Premix Ready to Use:** 2.25 g (50 mL), 3.375 g (50 mL), 4.5 g (100 mL).

ADMINISTRATION/HANDLING

Reconstitution • Reconstitute each 1 g with 5 mL D₅W or 0.9% NaCl. Shake vigorously to dissolve. • Further dilute with at least 50 mL D₅W or 0.9% NaCl. **Rate of administration** • Infuse over 30 min. Expanded infusion over 3–4 hrs.

Storage • Reconstituted vial is stable for 24 hrs at room temperature or 48 hrs if refrigerated. • After further dilution, stable for 24 hrs at room temperature or 7 days if refrigerated.

IV INCOMPATIBILITIES

Amphotericin B (Fungizone), amphotericin B complex (Abelcet, AmBisome, Amphotec), famotidine (Pepcid), haloperidol (Haldol), hydroxyzine (Vistaril), vancomycin (Vancocin).

IV COMPATIBILITIES

Bumetanide (Bumex), calcium gluconate, dexmedetomidine (Precedex), diphenhydramine (Benadryl), DOPamine (Intropin), enalapril (Vasotec), furosemide (Lasix), granisetron (Kytril), heparin, hydrocortisone (Solu-CORTEF), HYDROMORPHONE (Dilaudid), LORAZEPAM (Ativan), magnesium sulfate, methyl-PREDNISOLONE (SOLU-Medrol), metoclopramide (Reglan), morphine, ondansetron (Zofran), potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Note: Extended Infusion: ADULTS, ELDERLY: 3.375–4.5 g over 4 hrs q8h.

Usual Dosage

IV: ADULTS, ELDERLY: 4.5 g q6–8h or 3.375 g q6h. **Maximum:** 18 g daily. **ADOLESCENTS, CHILDREN, INFANTS:** 240–300 mg piperacillin/kg/day divided in 3–4 doses. **Maximum:** 16 g/day. **NEONATES:** 80–100 mg piperacillin component/kg/dose q6–8h.

Creatinine Clearance Dosage

20–40 mL/min	2.25 g q6h (3.375 g q6h for nosocomial pneumonia)
Less than 20 mL/min	2.25 g q8h (2.25 g q6h for nosocomial pneumonia) Extended Infusion 3.375 g q12h

Dosage for Hemodialysis

IV: ADULTS, ELDERLY: 2.25 g q12 with additional dose of 0.75 g after each dialysis session.

Dosage for CRRT

CVVH	2.25–3.375 g q6–8h
CVVHD	2.25–3.375 g q6h
CVVHDF	3.375 g q6h

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Diarrhea, headache, constipation, nausea, insomnia, rash. **Occasional:** Vomiting, dyspepsia, pruritus, fever, agitation, candidiasis, dizziness, abdominal pain, edema, anxiety, dyspnea, rhinitis.

ADVERSE EFFECTS/TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance in GI tract. Overdose, more often with renal impairment, may produce seizures, neurologic reactions. Severe hypersensitivity reactions, including anaphylaxis, occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. to penicillins, cephalosporins. Obtain baseline CBC with differential, BMP, LFT; urinalysis; PT, aPTT (if on anticoagulants or history of coagulopathy).

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency; mild GI effects may be tolerable, but increasing

severity may indicate onset of antibiotic-associated colitis. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Monitor I&O, urinalysis. Monitor serum electrolytes, esp. potassium, renal function tests.

plecanatide

ple-kan-a-tide
(Trulance)

BLACK BOX ALERT Contraindicated in pts younger than 6 yrs due to risk of life-threatening dehydration and death. Safety and efficacy not established in pts younger than 18 yrs; avoid use.

Do not confuse plecanatide with exenatide, lixisenatide, pramlintide or Trulance with Truvada.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Guanylate cyclase-C agonist. **CLINICAL:** GI agent.

USES

Treatment of adults with chronic idiopathic constipation or irritable bowel syndrome with constipation.

PRECAUTIONS

Contraindications: Hypersensitivity to plecanatide. Pts younger than 6 yrs of age, mechanical GI obstruction (known or suspected). **Cautions:** Dehydration. Avoid use in pts younger than 18 yrs of age.

ACTION

Binds and agonizes guanylate cyclase-C on luminal surface of intestinal epithelium, increasing cyclic guanosine monophosphate (cGMP), resulting in chloride and bicarbonate secretion into the intestinal lumen. **Therapeutic Effect:** Increases intestinal fluid and accelerates GI transit time.

PHARMACOKINETICS

Minimal absorption systemically; mainly confined to GI tract. Metabolized within GI tract to active metabolite. Undergoes proteolytic degradation within intestinal lumen to smaller peptides and amino acids. **Half-life:** Not specified.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Contraindicated in pts younger than 6 yrs. Safety and efficacy not established in pts aged 6 to less than 18 yrs. Severe, possibly fatal, dehydration may occur in pediatric pts younger than 18 yrs due to increased intestinal fluid secretion; avoid use. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None known. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST.

AVAILABILITY (Rx)

Tablets: 3 mg.

ADMINISTRATION/HANDLING

PO

- Give with or without food.
- If a dose is missed, skip the dose and give at next regularly scheduled time; do not double dose.
- Give tablet whole; do not break, cut, or divide.
- For pts with dysphagia, tablet may be crushed and mixed in applesauce, or dispersed in 30 mL of water and given orally or via NG tube. After administration of dispersed tablet, refill container with additional 30 mL of water and give remaining contents. Flush NG tube with additional 10 mL of water.

INDICATIONS/ROUTES/DOSAGE

Chronic Idiopathic Constipation, Irritable Bowel Syndrome

PO: ADULTS, ELDERLY: 3 mg once daily.

Dosage in Renal/Hepatic Impairment

Not specified; use caution.

SIDE EFFECTS

Occasional (5%): Diarrhea. **Rare (less than 2%):** Abdominal pain/tenderness, flatulence.

**ADVERSE EFFECTS/
TOXIC REACTIONS**

Severe diarrhea reported in less than 1% of pts; usually occurred within the first 3 days.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question characteristics of constipation, frequency of bowel movements. Assess bowel sounds. Assess hydration status.

INTERVENTION/EVALUATION

Encourage fluid intake. Monitor daily pattern of bowel activity, stool consistency. Monitor for abdominal pain, dehydration.

PATIENT/FAMILY TEACHING

- Report severe diarrhea.
- Drink plenty of fluids.
- Do not take laxatives unless approved by prescriber.
- Tablets may be taken whole, dispersed in water, or crushed and mixed in applesauce.
- Securely store tablets away from children; life-threatening dehydration may occur if accidentally ingested by children younger than 6 yrs.

polyethylene glycol

**polyethylene glycol–
electrolyte solution**

pol-ee-eth-il-een-glye-kol
(CoLyte, GoLYTELY, Klean-Prep ,
MiraLax, NuLytely, Peglyte ,

TriLyte)
Do not confuse MiraLax with Mirapex.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Osmotic.
CLINICAL: Bowel evacuant, laxative.

USES

Polyethylene glycol-electrolyte solution: Bowel cleansing before GI examination, colon surgery. **Polyethylene glycol:** Treatment of occasional constipation.

PRECAUTIONS

Contraindications: Hypersensitivity to polyethylene glycol. Bowel perforation, gastric retention, GI obstruction, megacolon, toxic colitis, toxic ileus. **Cautions:** **Propylene glycol:** Renal impairment. **Propylene glycol–electrolyte solution:** Ulcerative colitis, dehydration, medications altering electrolytes, hyponatremia, cardiac arrhythmias, impaired gag reflex, history of seizures, elderly.

ACTION

Induces catharsis by osmotic effect. **Therapeutic Effect:** Alleviates constipation, cleanses bowel without depleting electrolytes.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (bowel cleansing)	1–2 hrs	N/A	N/A
PO (constipation)	2–4 days	N/A	N/A

 **LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Powder for Oral Solution: Propylene glycol: (Miralax): 17 g/dose. **Propylene glycol–electrolyte solution: (CoLyte, GoLYTELY):** See individual product for specific ingredients.

ADMINISTRATION/HANDLING

PO

Polyethylene glycol–electrolyte solution: • Refrigerate reconstituted solutions; use within 48 hrs. • May use tap water to prepare solution. Shake vigorously for several min to ensure complete dissolution of powder. • Fasting should occur for more than 3 hrs prior to ingestion of solution (always avoid solid food less than 2 hrs prior to administration). • Only clear liquids permitted after administration. • May give via NG tube. • Rapid drinking preferred. Chilled solution is more palatable.

Polyethylene glycol: • Add to 4- to 8-oz beverage.

INDICATIONS/ROUTES/DOSAGE

Bowel Evacuant

PO: ADULTS, ELDERLY: Before GI examination: 240 mL (8 oz) q10min until 4 L consumed or rectal effluent clear. NG tube: 20–30 mL/min until 4 L given.

Constipation

PO: (Miralax): ADULTS: 17 g or 1 heaping tbsp/day. **CHILDREN 6 MOS AND OLDER:** 0.2–0.8 g/kg/day. **Maximum:** 17 g/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (50%): Some degree of abdominal fullness, nausea, bloating. **Occasional (10%–1%):** Abdominal cramping, vomiting, anal irritation. **Rare (less than 1%):** Urticaria, rhinorrhea, dermatitis.

ADVERSE EFFECTS/TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Do not give oral medication within 1 hr of start of therapy (may not adequately be absorbed before GI cleansing).

INTERVENTION/EVALUATION

Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool consistency. Assess for abdominal disturbances. Monitor serum electrolytes.

PATIENT/FAMILY TEACHING

- May take 2–4 days to produce a bowel movement.
- Report unusual cramps, bloating, diarrhea.

pomalidomide

poe-ma-lid-oh-mide
(Pomalyst)

■ BLACK BOX ALERT ■ May cause life-threatening birth defects. Pregnancy contraindicated. Exclude pregnancy before initiating treatment. Females of reproductive potential must use two reliable forms of contraception or continuously abstain during treatment and for 4 wks after treatment. Deep vein thrombosis and pulmonary embolism may occur. Consider venous thromboembolism (VTE) prophylaxis during treatment.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Thalidomide analogue. **CLINICAL:** Antineoplastic.

USES

Treatment of multiple myeloma in pts who have received at least two prior therapies including lenalidomide and bortezomib and who have demonstrated disease progression on or within 60 days of completion of the last therapy.

PRECAUTIONS

◀**ALERT**▶ Do not donate blood products during therapy and for 1 month after therapy discontinuation; male pts must not donate sperm.

Contraindications: Hypersensitivity to pomalidomide. **Pregnancy:** **Cautions:** Anemia, HF, hepatic/renal impairment, smoking, breastfeeding, or prior history of CVA, MI, DVT, PE.

ACTION

Inhibits tumor cell proliferation and induces apoptosis (cell death) of hematopoietic cells. Enhances T-cell- and natural killer (NK) cell-mediated immunity. Inhibits proinflammatory cytokines. **Therapeutic Effect:** Inhibits tumor cell growth and metastasis.

PHARMACOKINETICS

Readily absorbed following PO administration. Metabolized in liver. Protein binding: 12%–44%. Peak plasma concentration: 2–3 hrs. Excreted in urine (73%), feces (15%). **Half-life:** 8–10 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Pregnancy/breastfeeding contraindicated. May cause fetal harm. Unknown if distributed in breast milk. Do not breastfeed. Must verify negative pregnancy status before initiation. Must use two reliable

forms of birth control (intrauterine device [IUD], tubal ligation) plus barrier methods. Avoid pregnancy for at least 4 wks after discontinuation. **Males:** Must use condoms during treatment and up to 1 mo after treatment, despite prior history of vasectomy. Do not donate sperm. **Children:** Safety and efficacy not established. **Elderly:** May have increased risk of serious adverse effects, renal failure, electrolyte imbalance.

INTERACTIONS

DRUG: May decrease the therapeutic effect; increase adverse effects of **vaccines (live)**. **CNS depressants (e.g., alcohol, morphine, zolpidem)** may increase CNS depression. **HERBAL:** **Herbals with sedative properties (e.g., chamomile, kava kava, valerian)** may increase CNS depression. **Echinacea** may decrease therapeutic effect. **FOOD:** None significant. **LAB VALUES:** May decrease Hgb, Hct, neutrophils, platelets, leukocytes, lymphocytes, serum calcium, potassium, sodium. May increase serum calcium, creatinine, glucose.

AVAILABILITY (Rx)

Capsules: 1 mg, 2 mg, 3 mg, 4 mg.

ADMINISTRATION/HANDLING

PO

- Do not break, crush, or open capsule.
- Give on empty stomach; must administer at least 2 hrs before or 2 hrs after meal.

INDICATIONS/ROUTES/DOSAGE

Note: Absolute neutrophil count (ANC) should be 500 cells/mm³ or greater and platelets 50,000 cells/mm³ or greater prior to starting new cycles of therapy.

Multiple Myeloma

PO: ADULTS/ELDERLY: 4 mg once daily on days 1–21 of 28-day cycle (in combination with dexamethasone). Continue until disease progression or unacceptable toxicity.

Dose Modification

Neutropenia

ANC less than 500 cells/mm³ or febrile neutropenia: Interrupt treatment until ANC is greater than 500 cells/mm³, then reduce dose to 3 mg once daily. **Any subsequent drop of ANC less than 500 cells/mm³ after prior reduction:** Interrupt treatment until ANC is greater than 500 cells/mm³, then reduce dose at 1 mg less than previous dose. Discontinue if 1-mg dose is intolerable.

Thrombocytopenia

Platelet count less than 25,000 cells/mm³: Interrupt treatment until platelet count greater than 50,000 cells/mm³, then reduce dose to 3 mg once daily. **Any subsequent platelet drop to less than 25,000 cells/mm³:** Interrupt treatment until platelet count greater than 50,000 cells/mm³, then reduce dose at 1 mg less than previous dose. Discontinue if 1-mg dose is intolerable.

Dosage in Renal Impairment

Avoid use in pts with serum creatinine more than 3 mg/dL or CrCl less than 45 mL/min.

Dosage in Hepatic Impairment

Avoid use with bilirubin more than 2 mg/dL and ALT, AST more than 3 times upper limit of normal (ULN).

SIDE EFFECTS

Frequent (55%–22%): Fatigue, constipation, nausea, diarrhea, dyspnea, back pain, peripheral edema, musculoskeletal chest pain, anorexia, rash. **Occasional (20%–7%):** Dizziness, pyrexia, muscle spasms, arthralgia, pruritus, vomiting, cough, weight loss, headache, bone pain, muscular weakness, anxiety, musculoskeletal pain, peripheral neuropathy, chills, dry skin, tremor, insomnia. **Rare (6%–1%):** Hyperhidrosis, extremity pain, back pain, night sweats, constipation.

ADVERSE EFFECTS/TOXIC REACTIONS

Myelosuppression (neutropenia, leukopenia, thrombocytopenia) is an

expected outcome of therapy; may increase risk of infection such as pneumonia, upper respiratory tract infection, UTI. Neurologic events such as acute confusion, dizziness reported. Peripheral neuropathy occurred in 18% of pts. Venous thromboembolism including DVT, PE occurred in 3% of pts. Epistaxis occurred in 15% of pts. Increased risk of secondary malignancies reported. Acute renal failure reported in 16% of pts. Additional adverse events may include interstitial lung disease (ILD), neutropenic sepsis, *Pneumocystis jiroveci* pneumonia, respiratory syncytial virus infection, urinary retention, vertigo.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain vital signs, CBC with differential, serum chemistries, esp. magnesium, phosphate, ionized calcium, PT/INR, urinalysis. Confirm negative pregnancy status 10–14 days before and 24 hrs before starting treatment. Receive full medication history. Obtain baseline neurologic exam. Question history of diabetes mellitus, electrolyte imbalance, hepatic/renal impairment, pulmonary disease, thromboembolism, smoking.

INTERVENTION/EVALUATION

Monitor CBC, serum chemistries, PT/INR. Offer antiemetics for nausea, vomiting. Monitor pregnancy status every mo during treatment and for at least 4 mos after discontinuation. Obtain ECG for palpitations, chest pain, hypokalemia, hyperkalemia, hypocalcemia, bradycardia, ventricular arrhythmias. Immediately report dyspnea, chest pain, hypoxia, unilateral peripheral edema/pain (may indicate thromboembolic event). Consider sequential compression device (SCD) for immobilized pts. Perform routine neurologic assessments to screen for confusion, delirium. Monitor urine output, frequency.

PATIENT/FAMILY TEACHING

• May cause birth defects or miscarriage. Do not breastfeed. Consult with gynecologist for appropriate birth control methods. Female pts must use contraception during treatment and for at least 1 mo after treatment. Immediately report suspected pregnancy. Male pts must use condoms with spermicide during sexual activity, despite history of vasectomy. • Do not donate blood. • Swallow capsules whole; do not break, crush, or open. • Go from lying to standing slowly (prevents postural hypotension, dizziness). Avoid tasks that require alertness, motor skills until response to drug is established. • Do not smoke. • Do not eat 2 hrs before or 2 hrs after dose. • Avoid alcohol. • Report difficulty breathing, chest pain, extremity pain or swelling, dizziness, confusion.

ponatinib

poe-na-ti-nib
(Iclusig)

BLACK BOX ALERT ■ Arterial occlusions have occurred, including CVA, fatal MI, large arterial vessel stenosis of the brain, severe peripheral vascular disease requiring revascularization. Events may occur in pts with or without cardiovascular risks, including pts younger than 50 yrs of age. Venous thromboembolism, serious HF, or left ventricular dysfunction were reported. Hepatotoxicity, including fatal hepatic failure, may occur.

Do not confuse ponatinib with afatinib, alectinib, dasatinib, bosutinib, gefitinib, imatinib, lapatinib, lenvatinib, neratinib, or tofacitinib.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: BCR-ABL tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of pts with chronic, accelerated, or blast phase chronic myeloid leukemia (CML) or Philadelphia chromosome (Ph+) acute lymphoblastic leukemia (ALL) for whom no other kinase inhibitor therapy is indicated. Treatment of adults with T315I-positive CML (chronic, accelerated, or blast phase) or T315I-positive ALL (Ph+ ALL). Not indicated for treatment of newly diagnosed chronic phase CML.

PRECAUTIONS

Contraindications: Hypersensitivity to ponatinib. **Cautions:** Baseline hematologic cytopenias; conditions predisposing to infection (e.g., diabetes, immunocompromised pts, open wounds), history of arterial/venous thrombosis (e.g., CVA, DVT, MI, PE), cardiac disease, cardiac conduction disorders, HF, hypertension; diabetes, electrolyte imbalance, glaucoma, hepatic impairment, hyperlipidemia, GI perforation, neuropathy (peripheral or cranial), ocular disorders, pancreatitis or alcohol abuse, history of ischemia, vascular stenosis; pts with high tumor burden; pts at risk for hemorrhage (e.g., history of intracranial/GI bleeding, coagulation disorders, recent trauma; concomitant use of anticoagulants, antiplatelets, NSAIDs).

ACTION

Inhibits viability of cells expressing native or mutant BCR-ABL tyrosine kinase, including T315I mutation, created by the Philadelphia chromosome abnormality. **Therapeutic Effect:** Inhibits tumor cell growth and metastasis.

PHARMACOKINETICS

Widely distributed. Metabolized in liver. Protein binding: greater than 99%. Peak plasma concentration: 6 hrs or less. Excreted in feces (87%), urine (5%). **Half-life:** 24 hrs (Range: 12–66 hrs).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm/malformations. Unknown if distributed in breast milk. Breastfeeding not recommended during treatment and for at least 6 days after discontinuation. Females of reproductive potential and males with female partners of reproductive potential should use effective contraception during treatment and for at least 3 wks after discontinuation. May impair fertility in females. **Children:** Safety and efficacy not established. **Elderly:** May have increased risk of adverse reactions/toxic effects. Use caution.

INTERACTIONS

DRUG: Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole, ritonavir) may increase concentration/effect. Strong CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. May decrease therapeutic effect of BCG (intravesical). **HERBAL:** St. John's wort may decrease concentration/effect. **FOOD:** Grapefruit products may increase concentration/effect. **LAB VALUES:** May increase serum alkaline phosphatase, amylase, ALT, AST, bilirubin, creatinine, lipase, triglycerides, uric acid. May decrease Hgb, Hct, leukocytes, lymphocytes, neutrophils, platelets; serum albumin, bicarbonate, phosphate. May increase or decrease serum calcium, glucose, potassium, sodium.

AVAILABILITY (Rx)

Tablets: 15 mg, 45 mg.

ADMINISTRATION/HANDLING

PO

- Give with or without food.
- Administer tablets whole; do not break, cut, crush, or divide.

INDICATIONS/ROUTES/DOSAGE

CML, Ph+ ALL

PO: ADULTS, ELDERLY: 45 mg once daily. Consider dose reduction in pts

with chronic or accelerated phase CML who have achieved a major cytogenetic response. If an adequate response has been not achieved within 90 days, consider discontinuation.

Dose Modification

Hepatotoxicity

CTCAE Grade 2 or greater serum ALT/AST elevation (greater than 3 times upper limit normal [ULN]): Withhold treatment until improved to Grade 1 or 0, then resume dose based on occurrence. **Occurrence at 45-mg dose:** Resume treatment at 30-mg dose. **Occurrence at 30-mg dose:** Resume treatment at 15-mg dose. **Occurrence at 15-mg dose:** Permanently discontinue. **Serum ALT/AST elevation greater than or equal to 3 times ULN with concurrent serum bilirubin elevation greater than 2 times ULN and serum alkaline phosphatase less than 2 times ULN:** Permanently discontinue.

Neutropenia/Thrombocytopenia

ANC less than 1000 cells/mm³; platelets less than 50,000 cells/mm³: Withhold treatment until ANC greater than or equal to 1500 cells/mm³; or platelets greater than or equal to 75,000 cells/mm³, then resume dose based on occurrence. **First occurrence:** Resume treatment at 45-mg dose. **Second occurrence:** Resume treatment at 30-mg dose. **Third occurrence:** Resume treatment at 15-mg dose.

Pancreatitis/Elevated Lipase

Asymptomatic CTCAE Grade 1 or 2 serum lipase elevation: Consider withholding treatment or reducing dose. **Asymptomatic CTCAE Grade 3 or 4 serum lipase elevation (greater than 2 times ULN); asymptomatic radiologic pancreatitis (Grade 2 pancreatitis):** Withhold treatment until improved to Grade 1 or 0, then resume dose based on occurrence. **Occurrence at 45-mg dose:** Resume treatment at 30-mg dose. **Occurrence at 30-mg dose:** Resume treatment at 15-mg dose. **Occurrence at**

15-mg dose: Permanently discontinue.
Grade 4 pancreatitis: Permanently discontinue.

Concomitant Use of Strong Cyp3a4

Inhibitors

Reduce initial dose to 30 mg.

Dosage in Renal Impairment

Not specified; use caution.

Dosage in Hepatic Impairment

Mild, moderate, severe impairment (Child-Pugh A, B, or C): Reduce initial dose to 30 mg.

SIDE EFFECTS

Note: Percentages of side effects of chronic phase, accelerated phase, blast phase CML; Ph+ ALL may vary.

Frequent (69%–18%): Hypertension, abdominal pain, fatigue, asthenia, headache, dry skin, constipation, arthralgia, nausea, pyrexia, burning sensation, hyperesthesia, hypoesthesia, neuralgia, paresthesia, dysgeusia, muscular weakness, gait disturbance, areflexia, hypotonia, restless legs syndrome, myalgia, extremity pain, back pain, diarrhea, vomiting. **Occasional (17%–2%):** Dyspnea, dizziness, peripheral edema, cough, bone pain, musculoskeletal pain, mucositis, aphthous stomatitis, lip blister, mouth ulceration, mucosal eruption, oral pain, oropharyngeal pain, stomatitis, tongue ulceration, muscle spasm, conjunctival irritation, corneal abrasion/erosion, dry eye, hyperemia, eye pain, pruritus, decreased appetite, insomnia, decreased weight, generalized pain, erythema, alopecia, chills, blurry vision, tachycardia.

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia, leukopenia, lymphopenia, neutropenia, thrombocytopenia are expected responses to therapy, but more severe reactions including bone marrow failure, febrile neutropenia may be life-threatening. Fatal arterial occlusions including CVA, MI, stenosis of large arterial vessel of the brain, severe peripheral vascular disease

requiring revascularization reported in 35% of pts; may occur within 2 wks of initiation (even at reduced doses of 15 mg/day). Coronary artery occlusion, MI occurred in 21% of pts. Venous thromboembolism (DVT, PE, superficial thrombophlebitis) occurred in 5–9% of pts. Life-threatening events including cardiac bradyarrhythmias (requiring pacemaker implantation), complete heart block, sick sinus syndrome, atrial fibrillation with bradycardic pauses, atrial fibrillation, SVT, ventricular tachycardia; emergent hypertension (68% of pts), GI/intracranial hemorrhage (28% of pts), hepatotoxicity (54% of pts), pancreatitis (6%), HF, left ventricular dysfunction (6% of pts); infections including cellulitis, nasopharyngitis, pneumonia, sepsis, upper respiratory tract infection, UTI; ocular toxicities including blindness, conjunctival hemorrhage, cataracts, periorbital edema, ocular hyperemia, iritis, iridocyclitis, ulcerative keratitis; peripheral edema (31% of pts), pleural effusion (2% of pts), pericardial effusion (1% of pts); peripheral neuropathy, polyneuropathy, nerve compression (20% of pts) may occur. Tumor lysis syndrome may present as acute renal failure, hypocalcemia, hyperuricemia, hyperphosphatemia. Reversible posterior leukoencephalopathy may include aphasia, cognition impairment, paralysis, vision loss, weakness. Pts with newly diagnosed CML have an increased risk of severe toxicities. Improper wound healing, GI perforation may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, BMP, LFT, serum ionized calcium, phosphate, uric acid; vital signs; weight. Obtain pregnancy test in females of reproductive potential. Question plans of breastfeeding. Receive full medication history including herbal products and screen for interactions. Question history as listed in Precautions. Screen for active infection. Conduct ophthalmologic, neurologic exam. Due to increased risk of tumor lysis

syndrome, assess adequate hydration prior to initiation. Consider correcting electrolyte abnormalities prior to initiation. Obtain dietary consult. Screen for risk of bleeding; active infection. Assess skin for rash, lesions. Offer emotional support.

INTERVENTION/EVALUATION

Obtain ANC, CBC for myelosuppression q2wks for 3 mos, then monthly thereafter. Monitor serum lipase monthly; BMP, LFT, serum ionized calcium, phosphate, uric acid as indicated. Monitor ECG for cardiac arrhythmias. Due to extremely high risk for arterial occlusions, be vigilant when screening for CVA (aphasia, confusion, paresthesia, hemiparesis, seizures), MI (chest pain, diaphoresis, left arm/jaw pain, increased serum troponin, ST segment elevation), vascular compromise. Be alert for serious infection, opportunistic infection, sepsis. Monitor for GI perforation, hepatotoxicity, ocular disease, pancreatitis; symptoms of thromboembolism (arm/leg pain, swelling; chest pain, dyspnea, hypoxia, tachycardia), reversible posterior leukoencephalopathy, tumor lysis syndrome; other toxicities as listed in Adverse Reactions/Toxic Effects. Monitor daily pattern of bowel activity, stool consistency. Ensure adequate hydration, nutrition. Monitor weight, I&O.

PATIENT/FAMILY TEACHING

- Treatment may cause life-threatening arterial blood clots; report symptoms of heart attack (chest pain, difficulty breathing, jaw pain, nausea, pain that radiates to the left arm, sweating), stroke (blindness, confusion, one-sided weakness, loss of consciousness, trouble speaking, seizures).
- Report symptoms of DVT (swelling, pain, hot feeling in the arms or legs), lung embolism (difficulty breathing, chest pain, rapid heart rate); liver problems (abdominal pain, bruising, clay-colored stool, amber or dark-colored urine, yellowing of the skin or eyes); HF (difficulty breathing, extremity swelling, sudden loss of breath, palpitations); inflammation of the pancreas (abdominal

bruising; persistent, severe abdominal pain that radiates to the back [with or without vomiting]); eye problems (blindness, blurred vision, eye inflammation or bleeding, severe eye or head pain); heart arrhythmias (chest pain, dizziness, fainting, palpitations, slow or rapid heart rate, irregular heart rate); intestinal perforation (severe abdominal pain, fever, nausea).

- Treatment may depress your immune system response and reduce your ability to fight infection. Report symptoms of infection such as body aches, chills, cough, fatigue, fever. Avoid those with active infection.
- Treatment may cause severe bone marrow depression; report bruising, fatigue, fever, shortness of breath, weight loss, bleeding easily, bloody urine or stool.
- Avoid pregnancy; may cause birth defects or miscarriage. Females and males of childbearing potential should use effective contraception during treatment and for at least 3 wks after final dose.
- Do not breastfeed during treatment and for at least 6 days after final dose.
- Report planned surgical/dental procedures.
- Immediately report bleeding of any kind.
- Do not ingest grapefruit products, herbal supplements.
- Do not take newly prescribed medications unless approved by the prescriber who originally started treatment.

posaconazole

poe-sa-kon-a-zole
(Noxafil, Posanol )

Do not confuse Noxafil with minoxidil.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Azole derivative. **CLINICAL:** Antifungal.

USES

Prophylaxis of invasive *Aspergillus* and *Candida* infections in pts 13 yrs and older (IV for pts 18 yrs and older) who

are at high risk for developing these infections due to severely immunocompromised conditions. Treatment of oropharyngeal candidiasis. **OFF-LABEL:** Salvage therapy of refractory invasive fungal infections, mucormycosis, pulmonary infections.

PRECAUTIONS

Contraindications: Hypersensitivity to posaconazole, other azole antifungals. Coadministration with pimozide, quinidine (may cause QT prolongation, torsades de pointes), HMG-CoA reductase inhibitors metabolized by CYP3A4 (e.g., atorvastatin, lovastatin, simvastatin), sirolimus, ergot alkaloids. **Cautions:** Renal/hepatic impairment, hypokalemia, hypomagnesemia, pts at increased risk of arrhythmias. Concomitant administration of medications that prolong QT interval, pts with long QT syndrome.

ACTION

Inhibits synthesis of ergosterol, a vital component of fungal cell wall formation.

Therapeutic Effect: Damages fungal cell wall membrane, altering its function.

PHARMACOKINETICS

Moderately absorbed following PO administration. Absorption increased if drug is taken with food. Widely distributed. Protein binding: 98%. Not significantly metabolized. Primarily excreted in feces. **Half-life:** 20–66 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Breastfeeding not recommended. **Children:** Safety and efficacy not established in pts younger than 13 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration/ effect of atorvastatin, cycloSPORINE, ergot alkaloids, phenytoin, rifabutin, simvastatin, sirolimus, tacrolimus, vinBLASTine, vinCRISTine. May

decrease therapeutic effect of *Saccharomyces boulardii*. **HERBAL:** None significant. **FOOD:** Concentration higher when given with food or nutritional supplements. Grapefruit products may decrease concentration/effects. **LAB VALUES:** May decrease WBC, RBC, Hgb, Hct, platelets, serum calcium, potassium, magnesium. May increase serum glucose, bilirubin, ALT, AST, alkaline phosphatase.

AVAILABILITY (Rx)

Injection Solution: 300 mg/16.7 mL (18 mg/mL). **Oral Suspension:** 40 mg/mL.

 **Tablets, Delayed-Release:** 100 mg.

ADMINISTRATION/HANDLING

Reconstitution • Transfer 300 mg (16.7 mL) posaconazole into 150 mL D₅W or 0.9% NaCl bag.

Rate of administration • Infuse over 90 min via central venous line. Must be infused through in-line filter (0.22 microns) or PVD filter.

Storage • Refrigerate vials. Once diluted, use immediately. May refrigerate solution up to 24 hrs if not used immediately.

PO

- Administer with or within 20 min of full meal, liquid nutritional supplement, or acidic carbonated beverage (e.g., ginger ale) (enhances absorption).
- Store oral suspension at room temperature.
- Shake suspension well before use.
- **Tablets:** Swallow whole; do not crush, cut, dissolve, or divide. Administer with food.

INDICATIONS/ROUTES/DOSAGE

Note: The delayed-release tablets and oral suspension are not to be used interchangeably.

Prophylaxis of Invasive *Aspergillus* and *Candida*

PO: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: (**Oral Suspension**): 200

mg (5 mL) 3 times/day, given with full meal or liquid nutritional supplement.

(Delayed-Release): 300 mg twice daily on first day, then 300 mg once daily.

IV: 300 mg twice daily on first day, then 300 mg once daily thereafter.

Oropharyngeal Candidiasis

PO: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: 100 mg twice daily for 1 day, then 100 mg once daily for 13 days.

Oropharyngeal Candidiasis Refractory to Fluconazole

PO: ADULTS, ELDERLY: (Suspension): 400 mg twice daily for 3 days, then 400 mg once daily for up to 28 days. **HIV-INFECTED PTS: (Suspension):** 400 mg twice daily on day 1, then 400 mg once daily for 7–14 days (28 days in azole refractory pts).

Dosage in Renal Impairment

PO: No dose adjustment. **IV:** Avoid use in pts with CrCl less than 50 mL/min.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Common (42%–24%): Diarrhea, nausea, vomiting, headache, abdominal pain, cough. **Frequent (20%–15%):** Constipation, rigors, rash, hypertension, fatigue, insomnia, mucositis, musculoskeletal pain, edema of lower extremities, herpes simplex, anorexia. **Occasional (14%–8%):** Hypotension, epistaxis, tachycardia, pharyngitis, dizziness, pruritus, arthralgia, dyspepsia, back pain, generalized edema, weakness.

ADVERSE EFFECTS/TOXIC REACTIONS

Bacteremia occurs in 18% of pts; upper respiratory tract infection occurs in 7%. Allergic/hypersensitivity reactions, QT prolongation, hemolytic uremic syndrome, thrombotic thrombocytopenic purpura, pulmonary embolus have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain BMP, LFT, ECG. Receive full medication history and screen for interactions (esp. drugs known to prolong QT interval).

INTERVENTION/EVALUATION

Monitor LFT periodically. Monitor daily pattern of bowel activity, stool consistency. Obtain order for antiemetic if excessive vomiting occurs. Monitor B/P for hypertension, hypotension. Assess for lower extremity edema.

PATIENT/FAMILY TEACHING

- Take each dose with full meal or liquid nutritional supplement.
- Report severe diarrhea, vomiting, chest pain, yellowing of skin/eyes.
- Maintain strict oral hygiene.

potassium acetate

HIGH ALERT

potassium bicarbonate/citrate

(Effer-K, Klor-Con EF)

potassium chloride

(Kaon-Cl, Klor-Con, Klor-Con M10, Klor-Con M20, Micro-K)

Do not confuse Micro-K with Macrobid or Micronase.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Electrolyte. **CLINICAL:** Potassium repletisher.

USES

Potassium acetate, potassium bicarbonate/citrate: Treatment, preven-

tion of hypokalemia when necessary to avoid chloride or acid/base imbalance (requires bicarbonate). **Potassium chloride:** Treatment, prevention of hypokalemia.

PRECAUTIONS

Contraindications: **Acetate:** Severe renal impairment, adrenal insufficiency, hyperkalemia. **Chloride:** Renal failure, hyperkalemia, conditions in which potassium retention is present. Solid oral dosage form in pts in whom there is structural, pathologic cause for delay in passage through GI tract. **Cautions:** Cardiac disease, acid-base disorders, potassium-altering disorders, digitalized pts, concomitant therapy that increases serum potassium (e.g., ACE inhibitors), renal impairment. Do not administer IV undiluted.

ACTION

Necessary for multiple cellular metabolic processes. Primary action is intracellular. **Therapeutic Effect:** Required for nerve impulse conduction, contraction of cardiac, skeletal, smooth muscle; maintains normal renal function, acid-base balance.

PHARMACOKINETICS

Well absorbed from GI tract. Enters cells by active transport from extracellular fluid. Primarily excreted in urine.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** No age-related precautions noted. **Elderly:** May be at increased risk for hyperkalemia. Age-related ability to excrete potassium is reduced.

INTERACTIONS

DRUG: ACE inhibitors (e.g., enalapril, lisinopril), eplerenone, potassium-containing medications, potassium-sparing diuretics (e.g., spironolactone, triamterene), salt substitutes may increase serum potassium concentration. **HERBAL:** None sig-

nificant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Potassium Acetate

Injection Solution: 2 mEq/mL.

Potassium Bicarbonate And

Potassium Citrate

Tablets for Solution: (Effer-K): 10 mEq, 20 mEq, 25 mEq. **(Klor-Con EF):** 25 mEq.

Potassium Chloride

Injection Solution: 2 mEq/mL. **Oral Solution:** 20 mEq/15 mL, 40 mEq/15 mL. **Powder for Oral Solution:** 20 mEq/packet, 25 mEq/packet.

Capsules, Extended-Release: (Micro-K): 8 mEq, 10 mEq. **Tablets, Extended-Release:** 8 mEq, 10 mEq, 15 mEq, 20 mEq.

ADMINISTRATION/HANDLING

Reconstitution • For IV infusion only, must dilute before administration, mix well, infuse slowly. • Avoid adding potassium to hanging IV.

Rate of administration • Routinely, give at concentration of no more than 40 mEq/L, no faster than 10 mEq/hr for peripheral infusion, 20–40 mEq/hr for central infusion.

Storage • Store at room temperature. Use admixtures within 24 hrs.

PO

• Take with or after meals, with full glass of water (decreases GI upset). • Liquids, powder, effervescent tablets: Mix, dissolve with juice, water before administering. • Do not break, crush, dissolve, or divide tablets; give whole.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), phenytoin (Dilantin).

IV COMPATIBILITIES

Amiodarone (Cordarone), atropine, aztreonam (Azactam), calcium gluconate, cefepime (Maxipime), ciprofloxacin

(Cipro), clindamycin (Cleocin), dexamethasone (Decadron), dexmedetomidine (Precedex), digoxin (Lanoxin), diltiazem (Cardizem), diphenhydramine (Benadryl), DOBUTAMINE (Dobutrex), DOPAMINE (Intropin), enalapril (Vasotec), famotidine (Pepcid), fluconazole (Diflucan), furosemide (Lasix), granisetron (Kytril), heparin, hydrocortisone (Solu-CORTEF), insulin, lidocaine, LORAZEPAM (Ativan), magnesium sulfate, methylPREDNISOLONE (SOLU-Medrol), metoclopramide (Reglan), midazolam (Versed), milrinone (Primacor), morphine, norepinephrine (Levophed), ondansetron (Zofran), oxytocin (Pitocin), piperacillin and tazobactam (Zosyn), procainamide (Pronestyl), propofol (Diprivan), propranolol (Inderal).

INDICATIONS/ROUTES/DOSAGE

Treatment of Hypokalemia

Potassium Acetate

IV: ADULTS, ELDERLY: 5–10 mEq/dose (**Maximum:** 40 mEq/dose) to infuse over 2–3 hrs. **Usual Range:** 40–100 mEq/day.

Dose/Rate Guidelines

	Greater than 2.5–	2.5 mEq/L
Serum potassium	3.5 mEq/L	or less
Maximum infusion rate	10 mEq/hr	40 mEq/hr
Maximum 24-hr dose	200 mEq	400 mEq

Potassium Chloride

PO: ADULTS, ELDERLY: Mild to moderate: Initially, 10–20 mEq given 2–4 times/day. **Severe:** Initially, 40 mEq given 3–4 times/day. (May also give 20 mEq q2–3h in conjunction with careful monitoring.) **CHILDREN:** Initially, 1–2 mEq/kg, then as needed based on lab values.

IV: ADULTS, ELDERLY: 10 mEq/hr (or less); repeat as needed based on lab values. **CHILDREN:** 0.5–1 mEq/kg/dose (**Maximum:** 40 mEq); repeat as needed based on lab values.

Dosage in Renal/Hepatic Impairment

No dose adjustment. Use caution with potassium acetate (may increase serum aluminum and/or potassium).

SIDE EFFECTS

Occasional: Nausea, vomiting, diarrhea, flatulence, abdominal discomfort with distention, phlebitis with IV administration (particularly when potassium concentration of greater than 40 mEq/L is infused). **Rare:** Rash.

ADVERSE EFFECTS/TOXIC REACTIONS

Hyperkalemia (more common in elderly, pts with renal impairment) manifested as paresthesia, motor weakness, cold skin, hypotension, confusion, irritability, paralysis, cardiac arrhythmias. Too-rapid infusion may cause cardiac arrhythmia, ventricular fibrillation, cardiac arrest.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for hypokalemia (weakness, fatigue, polyuria, polydipsia). PO should be given with food or after meals with full glass of water, fruit juice (minimizes GI irritation).

INTERVENTION/EVALUATION

Monitor serum potassium, calcium, phosphate. If GI disturbance is noted, dilute preparation further or give with meals. Be alert to decreased urinary output (may be indication of renal insufficiency). Check IV site closely during infusion for evidence of phlebitis (heat, pain, red streaking of skin over vein, hardening of vein), extravasation (swelling, pain). Be alert to evidence of hyperkalemia (skin pallor/coldness, paresthesia, feeling of heaviness of lower extremities).

PATIENT/FAMILY TEACHING

- Foods rich in potassium include beef, veal, ham, chicken, turkey, fish, milk, bananas, dates, prunes, raisins, avocados, watermelon, cantaloupe, apricots, molasses, beans, yams, broccoli, brus-

sels sprouts, lentils, potatoes, spinach. • Report numbness, feeling of heaviness of lower extremities, weakness, unusual fatigue.

PRALAtrexate

pral-a-trex-ate
(Folotyn)

Do not confuse Folotyn with Focalin, or PRALAtrexate with methotrexate or PEMEtrexed.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimetabolite. **CLINICAL:** Antineoplastic.

USES

Treatment of relapsed or refractory peripheral T-cell lymphoma (PTCL). **OFF-LABEL:** Treatment of relapsed/refractory cutaneous T-cell lymphoma.

PRECAUTIONS

Contraindications: Hypersensitivity to PRALAtrexate. **Cautions:** Moderate to severe renal impairment, hepatic impairment. Avoid use in end-stage renal disease.

ACTION

Folate analogue metabolic inhibitor that competes with enzymes necessary for tumor cell reproduction. Inhibits DNA, RNA, protein synthesis. **Therapeutic Effect:** Inhibits tumor growth.

PHARMACOKINETICS

Protein binding: 67%. Partially excreted in urine. **Half-life:** 12–18 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if drug is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: NSAIDs (e.g., ibuprofen, ketorolac, naproxen), probenecid, salicylates (e.g., aspirin), trimethoprim/sulfamethoxazole may delay clearance, increase concentration. May decrease the therapeutic effect; increase adverse effects of vaccines (live). **HERBAL:** Echinacea may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May decrease RBC, WBC, Hgb, Hct, platelet count, serum potassium. May increase serum ALT, AST.

AVAILABILITY (Rx)

Injection Solution: 20 mg/mL.

ADMINISTRATION/HANDLING

◀ALERT▶ May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration. Wear gloves when preparing solution. If powder or solution comes in contact with skin, wash immediately, thoroughly with soap, water.

Reconstitution • Withdraw calculated dose into syringe for immediate use. • Intended for single use only. • Do not dilute.

Rate of administration • Administer as IV push over 3–5 min into IV infusion of 0.9% NaCl.

Storage • Refrigerate vials until use, protect from light. Stable at room temperature for 72 hrs. • Discard vial if solution is discolored (solution should appear clear to yellow) or particulate matter is present.

IV INCOMPATIBILITIES

Do not mix with any other medication.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Prior to any dose, mucositis should be no higher than CTCAE Grade 1, platelets 100,000 cells/mm³ or greater for first dose and 50,000 cells/mm³ or greater for subsequent doses, and absolute neutro-

phil count (ANC) 1,000 cells/mm³ or greater. Pt should begin taking oral folic acid (1 mg) daily starting 10 days prior to first IV PRALatrexate dose and continue for 30 days after last dose. Pt should also receive vitamin B₁₂ (1 mg) IM injection no more than 10 wks prior to first IV PRALatrexate dose and every 8–10 wks thereafter.

Refractory/Relapsed Peripheral T-Cell Lymphoma

IV: ADULTS, ELDERLY: 30 mg/m² administered once wky for 6 wks in 7-wk cycles. Dose may be decreased to 20 mg/m² to manage adverse reactions. Continue until disease progression or unacceptable toxicity.

Dosage in Renal Impairment

Monitor for toxicities. Avoid use in end-stage renal disease.

Dosage in Hepatic Impairment

CTCAE Grade 3: Withhold dose; decrease to 20 mg/m² when Grade 2 or less.

CTCAE Grade 4: Discontinue.

SIDE EFFECTS

Common (70%–36%): Mucositis, nausea, fatigue. **Frequent (34%–10%):** Constipation/diarrhea, pyrexia, edema, cough, epistaxis, vomiting, dyspnea, anorexia, rash, throat/abdominal/back pain, night sweats, asthenia, tachycardia, upper respiratory infection.

ADVERSE EFFECTS/TOXIC REACTIONS

Hematologic toxicity, resulting from blood dyscrasias, may manifest as thrombocytopenia (41% of pts), anemia (34% of pts), neutropenia (24% of pts), leukopenia (11% of pts). High potential for development of mucositis (70% of pts). Mucositis is less severe when folic acid, vitamin B₁₂ therapy is ongoing. Sepsis, pyrexia, febrile neutropenia, dehydration have occurred. Overdosage requires general supportive care. Prompt administration of leucovorin should be considered in case of overdose, based on mechanism of action of PRALatrexate.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Evaluate baseline CBC with differential, renal function, LFT, serum potassium level. Question for possibility of pregnancy before initiating therapy. Assess baseline vital signs, temperature. Antiemetics before and during therapy may alleviate nausea/vomiting. Initiate folic acid, vitamin B₁₂ administration prior to and throughout therapy.

INTERVENTION/EVALUATION

Prior to any dose: mucositis should be Grade 1 or less. Platelet count 100,000 cells/mm³ or greater for first dose (50,000 cells/mm³ or greater for all subsequent doses). Absolute neutrophil count (ANC) 1,000 cells/mm³ or greater. Assess for signs of mucositis (oropharyngeal ulcers, oral/throat pain, local infection). Monitor for signs of hematologic toxicity, sepsis (fever, signs of local infection, altered CBC results). Monitor hepatic/renal function. Monitor for hypokalemia (muscle cramps, weakness, ECG changes).

PATIENT/FAMILY TEACHING

- Explain importance of folic acid, vitamin B₁₂ therapy to reduce adverse effects.
- Maintain strict oral hygiene.
- Do not have immunizations without physician's approval (drug lowers body's resistance).
- Avoid crowds, those with infection.
- Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site.
- Use nonhormonal contraception.
- Report persistent nausea/vomiting.

pramipexole

pram-i-pex-ole
(Apo-Pramipexole , Mirapex, Mirapex ER)

Do not confuse Mirapex with Mifeprex or MiraLax.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: DOPamine receptor agonist. **CLINICAL:** Antiparkinson agent.

USES

Mirapex: Treatment of Parkinson's disease, moderate to severe primary restless legs syndrome. **Mirapex ER:** Treatment of Parkinson's disease. **OFF-LABEL: Immediate-Release:** Depression (due to bipolar disorder), fibromyalgia.

PRECAUTIONS

Contraindications: Hypersensitivity to pramipexole. **Cautions:** History of orthostatic hypotension, pts at risk for hypotension, syncope, hallucinations, renal impairment (extended-release not recommended with CrCl less than 30 mL/min), concomitant use of CNS depressants, preexisting dyskinesia, elderly pts.

ACTION

Stimulates DOPamine receptors in striatum and substantia nigra. **Therapeutic Effect:** Relieves signs/symptoms of Parkinson's disease. Improves motor function.

PHARMACOKINETICS

Rapidly, extensively absorbed after PO administration. Protein binding: 15%. Widely distributed. Steady-state concentrations achieved within 2 days. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 8 hrs (12 hrs in pts older than 65 yrs).

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Increased risk of hallucinations.

INTERACTIONS

DRUG: Antipsychotic agents (e.g., haloperidol) may decrease therapeutic effect. **Levodopa-containing products** may increase the hypotensive effect. **HERBAL:** Herbals with hypotensive properties (e.g., garlic, ginger, ginkgo biloba) may increase hypotensive effect. **FOOD:** All foods delay peak drug plasma levels by 1 hr (extent of absorption not affected). **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 0.125 mg, 0.25 mg, 0.5 mg, 0.75 mg, 1 mg, 1.5 mg.

Tablets, Extended-Release: (Mirapex ER): 0.375 mg, 0.75 mg, 1.5 mg, 2.25 mg, 3 mg, 3.75 mg, 4.5 mg.

ADMINISTRATION/HANDLING

PO

Mirapex: • Give without regard to food. **Mirapex ER:** • Give once daily, without regard to food. • Give whole; do not break, crush, dissolve, or divide tablets.

INDICATIONS/ROUTES/DOSAGE

Parkinson's Disease

Note: When discontinuing, reduce dose by 0.75 mg/day until daily dose is 0.75 mg once daily, then reduce by 0.375 mg/day thereafter.

PO: (Immediate-Release): ADULTS, ELDERLY: Initially, 0.125 mg 3 times/day. Increase no more frequently than every 5–7 days. **Maintenance:** 0.5–1.5 mg 3 times/day. **(Extended-Release):** Initially, 0.375 mg once daily. May increase to 0.75 mg, then by 0.75-mg increments no more frequently than 5–7 days. **Maximum:** 4.5 mg once daily. **Note:** May switch overnight from immediate-release to extended-release at same daily dose.

Restless Legs Syndrome

Note: When discontinuing, gradually reduce dose q4–7 days.

PO: ADULTS, ELDERLY: (Immediate-Release): Initially, 0.125 mg once daily 2–3 hrs before bedtime. May increase to

0.25 mg after 4–7 days, then to 0.5 mg after 4–7 days (interval is 14 days in pts with renal impairment). **Maximum:** 0.75 mg/day.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance.

Parkinson's Disease

Immediate-Release

Creatinine Clearance	Initial Dosage	Maximum Dosage
30–50 mL/min	0.125 mg twice daily	0.75 mg 3 times/day
15–29 mL/min	0.125 mg once daily	1.5 mg once daily

Extended-Release

CrCl 30–50 mL/min: Initially, 0.375 mg every other day. May increase by 0.375 mg/day in 7 days or longer. **Maximum:** 2.25 mg once daily. **CrCl less than 30 mL/min:** Not recommended.

Restless Legs Syndrome

No dose adjustment.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Early Parkinson's disease (28%–10%): Nausea, asthenia, dizziness, drowsiness, insomnia, constipation. **Advanced Parkinson's disease (53%–17%):** Orthostatic hypotension, extrapyramidal reactions, insomnia, dizziness, hallucinations. **Occasional:** Early Parkinson's disease (5%–2%): Edema, malaise, confusion, amnesia, akathisia, anorexia, dysphagia, peripheral edema, vision changes, impotence. **Advanced Parkinson's disease (10%–7%):** Asthenia, drowsiness, confusion, constipation, abnormal gait, dry mouth. **Rare:** **Advanced Parkinson's disease (6%–2%):** General edema, malaise, angina, amnesia, tremor, urinary frequency/incontinence, dyspnea, rhinitis, vision changes. **Restless legs**

syndrome: **Frequent (16%):** Headache, nausea. **Occasional (13%–9%):** Insomnia, fatigue. **Rare (6%–3%):** Drowsiness, constipation, diarrhea, dry mouth.

ADVERSE EFFECTS/TOXIC REACTIONS

Vascular disease, atrial fibrillation, arrhythmias, pulmonary embolism, impulsive/compulsive behavior (pathological gambling, hypersexuality, binge eating) have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Parkinson's disease: Assess for tremor, muscle weakness and rigidity, ataxia. **Restless legs syndrome:** Assess frequency of symptoms, sleep pattern.

INTERVENTION/EVALUATION

Assess for clinical improvement. Assist with ambulation if dizziness occurs. Assess for constipation; encourage fiber, fluids, exercise.

PATIENT/FAMILY TEACHING

- Inform pt that hallucinations may occur, esp. in the elderly.
- Go from lying to standing slowly.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- If nausea occurs, take medication with food.
- Avoid abrupt withdrawal.
- Avoid alcohol.
- Report new or increased impulsive/compulsive behaviors (e.g., gambling, sexual urges, compulsive eating or buying).

prasugrel

TOP
100

pra-soo-grel
(Effient)

BLACK BOX ALERT Serious, sometimes fatal, hemorrhage may occur.

Do not confuse Effient with Effexor, or prasugrel with praziquantel.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Thienopyridine derivative inhibitor. **CLINICAL:** Antiplatelet agent.

USES

Reduction of thrombotic cardiovascular events (MI, CVA, stent thrombosis) in pts with acute coronary syndrome (unstable angina, non-ST-segment elevation MI, ST-segment MI) who are to be managed with percutaneous coronary intervention (PCI). **OFF-LABEL:** Initial treatment of unstable angina, STEMI in pts undergoing PCI with allergy or major GI intolerance to aspirin.

PRECAUTIONS

Contraindications: Hypersensitivity to prasugrel. Active bleeding, prior transient ischemic attack (TIA), CVA. **Cautions:** Pts who undergo coronary artery bypass graft (CABG) after receiving prasugrel, pts at risk for bleeding (age 75 yrs or older, body weight less than 60 kg, recent trauma/surgery, recent GI bleeding or active peptic ulcer disease, severe hepatic impairment).

ACTION

Inhibits binding of the enzyme adenosine phosphate (ADP) to its platelet receptor, which prevents activation of the GPIIb/IIIa receptor complex. **Therapeutic Effect:** Inhibits platelet aggregation.

PHARMACOKINETICS

Rapidly absorbed, with peak concentration occurring 30 min following administration. Metabolized in liver. Protein binding: 98%. Excreted in urine (68%), feces (27%). **Half-life:** 7 hrs.

🕒 LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** May have increased risk for intracranial hemorrhage; caution advised in pts 75 yrs and older.

INTERACTIONS

DRUG: Aspirin, NSAIDs (e.g., ibuprofen, ketorolac, naproxen), warfarin may increase risk of bleeding. Apixaban, dabigatran, edoxaban, rivaroxaban may increase anticoagulant effect. **HERBAL:** Herbals with anticoagulant/antiplatelet properties (e.g., garlic, ginger, ginseng, ginkgo biloba) may increase concentration/effect. **FOOD:** None known. **LAB VALUES:** May decrease Hgb, Hct, WBC, platelet count. May increase bleeding time, serum cholesterol, ALT, AST.

AVAILABILITY (Rx)

Tablets: 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Do not crush tablet.

INDICATIONS/ROUTES/DOSAGE

Acute Coronary Syndrome

⚠️ ALERT Consider 5 mg once daily for pts weighing less than 60 kg. Not recommended in pts 75 yrs and older.

PO: ADULTS, ELDERLY: Initially, 60-mg loading dose, then 10 mg once daily (in combination with aspirin) for at least 12 mos.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (8%–4%): Hypertension, minor bleeding, headache, back pain, dyspnea, nausea, dizziness. **Rare (less than 4%):** Cough, hypotension, fatigue, non-cardiac chest pain, bradycardia, rash, pyrexia, peripheral edema, extremity pain, diarrhea.

ADVERSE EFFECTS/TOXIC REACTIONS

Major bleeding (intracranial hemorrhage, epistaxis, GI bleeding, hemoptysis, SQ hematoma, postprocedural hemorrhage, retroperitoneal hemor-

rhage, retinal hemorrhage) has been reported. Severe thrombocytopenia, anemia, abnormal hepatic function, anaphylactic reaction, angioedema, atrial fibrillation occur rarely. Overdosage may require platelet transfusion to restore clotting ability.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline vital signs, CBC, ECG, LFT. Question history of intracranial hemorrhage, GI bleeding, ulcers, recent surgery or trauma.

INTERVENTION/EVALUATION

Monitor vital signs for changes in B/P, pulse. Assess for signs of unusual bleeding or hemorrhage, pain. Monitor platelet count, LFT, ECG for changes from baseline.

PATIENT/FAMILY TEACHING

- It may take longer to stop minor bleeding during drug therapy. Report unusual bleeding/bruising, blood noted in stool or urine, chest/back pain, extremity pain, symptoms of stroke.
- Monitor for dyspnea.
- Report fever, weakness, extreme skin paleness, purple skin patches, yellowing of skin or eyes, changes in mental status.
- Do not discontinue drug therapy without physician approval.
- Inform physicians, dentists before undergoing any invasive procedure or surgery.

pravastatin

TOP
100

pra-va-sta-tin
(Pravachol)

Do not confuse pravastatin with atorvastatin, lovastatin, nystatin, pitavastatin, or simvastatin, or Pravachol with Prevacid, Prilivil, or propranolol.

FIXED-COMBINATION(S)

Pravigard: pravastatin/aspirin (anti-coagulant): 20 mg/81 mg, 40 mg/81 mg, 80 mg/81 mg, 20 mg/325 mg, 40 mg/325 mg, 80 mg/325 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Hydroxymethylglutaryl CoA (HMG-CoA) reductase inhibitor. **CLINICAL:** Anti-hyperlipidemic.

USES

Adjunct to diet in the treatment of primary hyperlipidemias and mixed dyslipidemias to reduce total cholesterol, LDL cholesterol, apolipoprotein B, triglycerides; increase HDL cholesterol. Reduces risk of MI, revascularization, and mortality in hypercholesterolemia without clinically evident CHD. Reduces mortality risk in pts with CHD. Reduces elevated triglycerides in hypertriglyceridemia. Treatment of heterozygous familial hypercholesterolemia in pediatric pts 8–18 yrs.

PRECAUTIONS

Contraindications: Hypersensitivity to pravastatin. Active hepatic disease or unexplained, persistent elevations of LFT results. Pregnancy, breastfeeding.

Cautions: History of hepatic disease, substantial alcohol consumption. Withholding/discontinuing pravastatin may be necessary when pt is at risk for renal failure secondary to rhabdomyolysis, elderly.

ACTION

Interferes with cholesterol biosynthesis by preventing conversion of HMG-CoA reductase to mevalonate, a precursor to cholesterol. **Therapeutic Effect:** Lowers LDL, VLDL cholesterol, plasma triglycerides; increases HDL.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 50%. Metabolized in liver. Primarily excreted in feces via biliary

system. Not removed by hemodialysis. **Half-life:** 2–3 hrs. (Half-life including all metabolites: 77 hrs.)

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in pregnancy (suppression of cholesterol biosynthesis may cause fetal toxicity) and lactation. Small amount is distributed in breast milk, but there is risk of serious adverse reactions in breastfeeding infants. Breastfeeding not recommended. **Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CycloSPORINE, clarithromycin, colchicine, erythromycin, gemfibrozil, niacin increase risk of myopathy, rhabdomyolysis. **Bile acid sequestrants** (e.g., cholestyramine) may decrease absorption. **HERBAL:** None significant. **FOOD:** Red yeast rice contains 2.4 mg lovastatin per 600 mg rice (may increase adverse effects). **LAB VALUES:** May increase serum creatine kinase (CK), transaminase.

AVAILABILITY (Rx)

Tablets: 10 mg, 20 mg, 40 mg, 80 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Prior to initiating therapy, pt should be on standard cholesterol-lowering diet for 3–6 mos. Low-cholesterol diet should be continued throughout pravastatin therapy.

Hyperlipidemia, Prevention of Coronary/ Cardiovascular Events

PO: ADULTS, ELDERLY: Initially, 40 mg/day. Titrate to desired response. Range: 10–80 mg/day.

Heterozygous Familial Hypercholesterolemia

PO: CHILDREN 14–18 YRS: 40 mg/day.
CHILDREN 8–13 YRS: 20 mg/day.

Dosage with Clarithromycin

Maximum: 40 mg/day.

Dosage with CycloSPORINE

ADULTS, ELDERLY: Initially, 10 mg/day.
Maximum: 20 mg/day.

Dosage in Renal Impairment

For adults, give 10 mg/day initially. Titrate to desired response.

Dosage in Hepatic Impairment

See contraindications.

SIDE EFFECTS

Pravastatin is generally well tolerated. Side effects are usually mild and transient. **Occasional (7%–4%):** Nausea, vomiting, diarrhea, constipation, abdominal pain, headache, rhinitis, rash, pruritus. **Rare (3%–2%):** Heartburn, myalgia, dizziness, cough, fatigue, flu-like symptoms, depression, photosensitivity.

ADVERSE EFFECTS/TOXIC REACTIONS

Potential for malignancy, cataracts. Hypersensitivity, myopathy occur rarely. Rhabdomyolysis has been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain dietary history, esp. fat consumption. Question for possibility of pregnancy before initiating therapy. Assess baseline serum lab results (cholesterol, triglycerides, LFT).

INTERVENTION/EVALUATION

Monitor serum cholesterol, triglyceride lab results for therapeutic response. Monitor LFT, CPK. Monitor daily pattern of bowel activity, stool consistency. Assess for headache, dizziness (provide assistance as needed). Assess for rash, pruritus. Be alert for malaise, muscle cramping/weakness; if accompanied by fever, may require discontinuation of medication.

PATIENT/FAMILY TEACHING

- Follow special diet (important part of treatment).
- Periodic lab tests are essential part of therapy.
- Report promptly any muscle pain/weakness, esp. if accompanied by fever, malaise.
- Avoid tasks that require alertness, motor skills until response to drug is established (potential for dizziness).
- Use nonhormonal contraception.
- Avoid direct exposure to sunlight.

prednisoLONE

pred-niss-oh-lone
(Millipred, Omnipred, Orapred ODT, Pred Forte, Pred Mild, Veripred)

Do not confuse PediaPred with Pediazole, prednisoLONE with predniSONE or primidone, or Prelone with PROzac.

FIXED-COMBINATION(S)

Blephamide: prednisoLONE/sulfacetamide (an anti-infective): 0.2%/10%.

Vasocidin: prednisoLONE/sulfacetamide: 0.25%/10%.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Adrenal corticosteroid. **CLINICAL:** Anti-inflammatory, immunosuppressant.

USES

Systemic: Endocrine, rheumatic, hematologic disorders; collagen, respiratory, neoplastic, GI diseases; allergic states; acute or chronic solid organ rejection.

Ophthalmic: Treatment of conjunctivitis, corneal injury (from chemical/thermal burns, foreign body).

PRECAUTIONS

Contraindications: Hypersensitivity to prednisoLONE. Acute superficial herpes simplex keratitis, systemic fungal infec-

tions, varicella, live or attenuated virus vaccines. **Cautions:** Hyperthyroidism, cirrhosis, ocular herpes simplex, respiratory tuberculosis, untreated systemic infections, renal/hepatic impairment, diabetes, cataracts, glaucoma, seizure disorder, peptic ulcer disease, osteoporosis, myasthenia gravis, hypertension, HF, ulcerative colitis, thromboembolic disorders, elderly pts.

ACTION

Inhibits accumulation of inflammatory cells at inflammation sites, phagocytosis, lysosomal enzyme release/synthesis, release of mediators of inflammation. **Therapeutic Effect:** Prevents/suppresses cell-mediated immune reactions. Decreases/prevents tissue response to inflammatory process.

PHARMACOKINETICS

Protein binding: 65%–91%. Metabolized in liver. Excreted in urine. **Half-life:** 3.6 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. Fetal cleft palate often occurs with chronic, first-trimester use. Breastfeeding not recommended. **Children:** Prolonged treatment or high dosages may decrease short-term growth rate, cortisol secretion. **Elderly:** May be more susceptible to developing hypertension or osteoporosis.

INTERACTIONS

DRUG: CYP3A4 inducers (e.g., carBA-Mazepine, phenytoin, rifAMPin) may decrease effects. **Live virus vaccines** increase vaccine side effects, potentiate virus replication, decrease pt's antibody response to vaccine. May increase effect of **warfarin**. May decrease therapeutic effect of **aldesleukin**. May increase hyponatremic effect of **desmopressin**. **HERBAL:** **Echinacea** may decrease level/effects. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, lipids,

sodium, uric acid. May decrease serum calcium, WBC, hypothalamic pituitary adrenal (HPA) axis function, potassium.

AVAILABILITY (Rx)

Solution, Ophthalmic: 1%. **Solution, Oral:** 15 mg/5 mL, 5 mg/5 mL, 10 mg/5 mL, 20 mg/5 mL. **Suspension, Ophthalmic:** 1%, 0.12%. **Syrup:** 15 mg/5 mL. **Tablets:** 5 mg.

 **Tablets, Orally Disintegrating:** 10 mg, 15 mg, 30 mg.

ADMINISTRATION/HANDLING

PO

- Give with food or fluids to decrease GI side effects.

Orally Disintegrating Tablets

- Do not break, crush, or divide tablets.
- Remove from blister just prior to giving; place on tongue.
- Pt may swallow whole or allow to dissolve in mouth with/without water.

Ophthalmic

- For ophthalmic solution, shake well before using.
- Instill drops into conjunctival sac, as prescribed.
- Avoid touching applicator tip to conjunctiva to avoid contamination.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

PO: ADULTS, ELDERLY: 5–60 mg/day in divided doses. **CHILDREN:** 0.1–2 mg/kg/day in 3–4 divided doses.

Treatment of Conjunctivitis, Corneal Injury

Ophthalmic: ADULTS, ELDERLY, CHILDREN: 1–2 drops every hr during day and q2h during night. After response, decrease dosage to 1 drop q4h, then 1 drop 3–4 times/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Insomnia, heartburn, nervousness, abdominal distention, diaphoresis,

acne, mood swings, increased appetite, facial flushing, delayed wound healing, increased susceptibility to infection, diarrhea, constipation. **Occasional:** Headache, edema, change in skin color, frequent urination. **Rare:** Tachycardia, allergic reaction (rash, urticaria), psychological changes, hallucinations, depression. **Ophthalmic:** Stinging/burning, posterior subcapsular cataracts.

ADVERSE EFFECTS/TOXIC REACTIONS

Long-term therapy: Hypocalcemia, hypokalemia, muscle wasting (esp. arms, legs), osteoporosis, spontaneous fractures, amenorrhea, cataracts, glaucoma, peptic ulcer, HF, immunosuppression. **Abrupt withdrawal following long-term therapy:** Anorexia, nausea, fever, headache, severe/sudden joint pain, rebound inflammation, fatigue, weakness, lethargy, dizziness, orthostatic hypotension. Sudden discontinuance may be fatal.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question medical history as listed in Precautions. Obtain baselines for height, weight, B/P, serum glucose, electrolytes. Check results of initial tests (tuberculosis [TB] skin test, X-rays, ECG).

INTERVENTION/EVALUATION

Monitor B/P, weight, serum electrolytes, glucose, results of bone mineral density test, height, weight in children. Be alert to infection (sore throat, fever, vague symptoms); assess oral cavity daily for signs of *Candida* infection. Monitor for symptoms of adrenal insufficiency, immunosuppression.

PATIENT/FAMILY TEACHING

- Report fever, sore throat, muscle aches, sudden weight gain, swelling, loss of appetite, fatigue.
- Avoid alcohol, limit caffeine.
- Maintain fastidious oral hygiene.
- Do not abruptly discontinue without physician's approval.
- Avoid

exposure to chickenpox, measles.

- Long-term use may significantly increase risk of serious infections.

predniSONE

pred-ni-sone

(Apo-PredniSONE , PredniSONE Intensol, Rayos, Winpred )

Do not confuse predniSONE with methylPREDNISolone, prazosin, prednisoLONE, PriLOSEC, primidone, or promethazine.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Adrenal corticosteroid. **CLINICAL:** Anti-inflammatory, immunosuppressant.

USES

Substitution therapy in deficiency states: Acute or chronic adrenal insufficiency, congenital adrenal hyperplasia, adrenal insufficiency secondary to pituitary insufficiency. **Nonendocrine disorders:** Arthritis, rheumatic carditis; allergic, collagen, intestinal tract, multiple sclerosis exacerbations; liver, ocular, renal, skin diseases; bronchial asthma, cerebral edema, malignancies. **OFF-LABEL:** Prevention of postherpetic neuralgia, relief of acute pain in pts with herpes zoster, autoimmune hepatitis.

PRECAUTIONS

Contraindications: Hypersensitivity to predniSONE. Acute superficial herpes simplex keratitis, systemic fungal infections, varicella, administration of live or attenuated virus vaccines. **Cautions:** Hyperthyroidism, cirrhosis, ocular herpes simplex, respiratory tuberculosis, untreated systemic infections, renal/hepatic impairment, following acute MI, cataracts, glaucoma, seizures, peptic ulcer disease, osteoporosis, myasthenia gravis, hypertension, HF, ulcerative colitis, thromboembolic disorders, elderly, pts

at risk for hyperglycemia (e.g., diabetes, recent surgery).

ACTION

Inhibits accumulation of inflammatory cells at inflammation sites, phagocytosis, lysosomal enzyme release/synthesis, release of mediators of inflammation. **Therapeutic Effect:** Prevents/suppresses cell-mediated immune reactions. Decreases/prevents tissue response to inflammatory process.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 70%–90%. Widely distributed. Metabolized in liver, converted to prednisoLONE. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2.5–3.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. Fetal cleft palate often occurs with chronic, first trimester use. Breastfeeding not recommended. **Children:** Prolonged treatment or high dosages may decrease short-term growth rate, cortisol secretion. **Elderly:** May be more susceptible to developing hypertension or osteoporosis.

INTERACTIONS

DRUG: CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease effects. **Live virus vaccines** may increase vaccine side effects, potentiate virus replication, decrease pt's antibody response to vaccine. May increase effect of **warfarin**. May decrease therapeutic effect of **aldesleukin**. May increase hyponatremic effect of **desmopressin**. **HERBAL:** **Echinacea** may decrease therapeutic effect. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, lipids, sodium, uric acid. May decrease serum calcium, potassium, WBC, hypothalamic pituitary adrenal (HPA) axis function.

AVAILABILITY (Rx)

Solution, Oral: 1 mg/mL. **Solution, Oral Concentrate:** (*Prednisone Intensol*): 5 mg/mL. **Tablets:** 1 mg, 2.5 mg, 5 mg, 10 mg, 20 mg, 50 mg.

 **Tablet, Delayed-Release:** (*Rayos*): 1 mg, 2 mg, 5 mg.

ADMINISTRATION/HANDLING**PO**

- Give with food or fluids to decrease GI side effects.
- Give single doses before 9 AM, multiple doses at evenly spaced intervals.
- Give delayed-release tablet whole; do not break, crush, dissolve, or divide.

INDICATIONS/ROUTES/DOSAGE

Note: Dose dependent upon condition treated, pt response rather than by rigid adherence to age, weight, or body surface area.

Usual Dosage

PO: ADULTS, ELDERLY: 10–60 mg/day in divided doses. **Range:** 2.5–100 mg/day. **CHILDREN:** 0.05–2 mg/kg/day in 1–4 divided doses.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Insomnia, heartburn, nervousness, abdominal distention, diaphoresis, acne, mood swings, increased appetite, facial flushing, delayed wound healing, increased susceptibility to infection, diarrhea, constipation. **Occasional:** Headache, edema, change in skin color, frequent urination. **Rare:** Tachycardia, allergic reaction (rash, urticaria), psychological changes, hallucinations, depression.

ADVERSE EFFECTS/TOXIC REACTIONS

Long-term therapy: Muscle wasting (esp. in arms, legs), osteoporosis, spontaneous fractures, amenorrhea, cataracts, glaucoma, peptic ulcer, HF. **Abrupt with-**

drawal following long-term therapy: Anorexia, nausea, fever, headache, rebound inflammation, fatigue, weakness, lethargy, dizziness, orthostatic hypotension. Sudden discontinuance may be fatal.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Question medical history as listed in Precautions. Obtain baselines for height, weight, B/P, serum glucose, electrolytes. Check results of initial tests (tuberculosis [TB] skin test, X-rays, ECG).

INTERVENTION/EVALUATION

Monitor B/P, serum electrolytes, glucose, results of bone mineral density test, height, weight in children. Be alert to infection (sore throat, fever, vague symptoms); assess oral cavity daily for signs of *Candida* infection. Monitor for symptoms of adrenal insufficiency, immunosuppression.

PATIENT/FAMILY TEACHING

- Report fever, sore throat, muscle aches, sudden weight gain, swelling, loss of appetite, or fatigue.
- Avoid alcohol, minimize use of caffeine.
- Report symptoms of elevated blood sugar levels (blurred vision, headache, increased thirst, frequent urination).
- Maintain strict oral hygiene.
- Do not abruptly discontinue without physician's approval.
- Avoid exposure to chickenpox, measles.
- Long-term use may significantly increase risk of serious infections.

pregabalinTOP
100

pre-gab-a-lin
(Lyrica, Lyrica CR)

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: GABA analogue. **CLINICAL:** Anticonvulsant, antineuralgic, analgesic (Schedule V).

USES

Lyrica: Adjunctive therapy in treatment of partial-onset seizures. Management of neuropathic pain associated with diabetic peripheral neuropathy or spinal cord injury. Management of postherpetic neuralgia. Management of fibromyalgia. **Lyrica CR:** Management of neuropathic pain associated with diabetic peripheral neuropathy, postherpetic neuralgia.

PRECAUTIONS

Contraindications: Hypersensitivity to pregabalin. **Cautions:** HF, renal impairment, cardiovascular disease, diabetes, history of angioedema, pts at risk for suicide. Concurrent use of thiazolidine antidiabetics (e.g., Actos).

ACTION

Binds to calcium channel sites in CNS tissue, inhibiting excitatory neurotransmitter release. Exerts antinociceptive, anticonvulsant activity. **Therapeutic Effect:** Decreases symptoms of painful peripheral neuropathy; decreases frequency of partial seizures.

PHARMACOKINETICS

Well absorbed following PO administration. Excreted in urine unchanged. **Half-life:** 6 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Increased risk of fetal skeletal abnormalities. Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Alcohol, CNS depressants (e.g., LORazepam, morphine, zolpidem) may increase sedative effect. **HERBAL:** Herbals with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase CPK. May cause mild PR interval prolongation. May decrease platelet count.

AVAILABILITY (Rx)

Solution, Oral: 20 mg/mL.

 **Capsules: (Lyrica):** 25 mg, 50 mg, 75 mg, 100 mg, 150 mg, 200 mg, 225 mg, 300 mg.

 **Tablet, Extended-Release: (Lyrica CR):** 82.5 mg, 165 mg, 330 mg.

ADMINISTRATION/HANDLING

- Give without regard to food.
- Administer whole; do not break, crush, or open capsule.
- **Lyrica CR:** Give once daily in evening.
- Discontinue pregabalin gradually over at least 1 wk.
- Administer whole; do not break, cut, crush, or divide. Tablet cannot be chewed.

INDICATIONS/ROUTES/DOSAGE

Partial-Onset Seizures

PO: ADULTS, ELDERLY: Initially, 75 mg twice daily or 50 mg 3 times/day. May increase dose based on tolerability/effect. **Maximum:** 600 mg/day. **ADOLESCENTS, CHILDREN, INFANTS WEIGHING 30 KG OR MORE:** Initially, 2.5 mg/kg/day in 2 or 3 divided doses. May increase w/ky based on clinical response and tolerability. **Maximum:** 10 mg/kg/day (not to exceed 600 mg/day). **LESS THAN 30 KG:** Initially, 3.5 mg/kg/day in 2 or 3 divided doses. May increase w/ky based on clinical response and tolerability. **Maximum:** 14 mg/kg/day.

Neuropathic Pain (Diabetes-Associated)

PO: ADULTS, ELDERLY: Initially, 25–75 mg/day once daily or in 2–3 divided doses. May increase within 1 wk based on response and tolerability. **Maximum:** 300–450 mg/day.

PO: (Lyrica CR): ADULTS, ELDERLY: Initially, 165 mg once daily. May increase to 330 mg/day within 1 wk. **Maximum:** 330 mg/day.

Postherpetic Neuralgia, Neuropathic Pain Associated with Spinal Cord Injury

PO: ADULTS, ELDERLY: Initially, 75 mg twice daily or 50 mg 3 times/day. May increase to 300 mg/day within 1 wk. May further increase to 600 mg/day after 2–4 wks. **Maximum:** 600 mg/day.

PO: (Lyrica CR): ADULTS, ELDERLY: Initially, 165 mg once daily. May increase

to 330 mg/day within 1 wk. May further increase to 660 mg once daily after 2–4 wks. **Maximum:** 660 mg/day.

Fibromyalgia

PO: ADULTS, ELDERLY: Initially, 75 mg twice daily. May increase to 150 mg twice daily within 1 wk. **Maximum:** 225 mg twice daily.

Dosage in Renal Impairment

Creatinine

Clearance	Daily Dosage
30–60 mL/min	75–300 mg in 2–3 divided doses
15–29 mL/min	25–150 mg in 1 or 2 doses
Less than 15 mL/min	25–75 mg once daily

Dosage for Hemodialysis

◀ALERT▶ Take supplemental dose immediately following dialysis.

Daily Dosage	Supplemental Dosage
25 mg	Single dose of 25 mg or 50 mg
25–50 mg	Single dose of 50 mg or 75 mg
75 mg	Single dose of 100 mg or 150 mg

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (32%–12%): Dizziness, drowsiness, ataxia, peripheral edema. **Occasional (12%–5%):** Weight gain, blurred vision, diplopia, difficulty with concentration, attention, cognition; tremor, dry mouth, headache, constipation, asthenia. **Rare (4%–2%):** Abnormal gait, confusion, incoordination, twitching, flatulence, vomiting, edema, myopathy.

ADVERSE EFFECTS/TOXIC REACTIONS

Abrupt withdrawal increases risk of seizure frequency in pts with seizure disorders; withdraw gradually over a minimum of 1 wk. May increase risk of suicidal thoughts and behavior.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Seizure: Review history of seizure disorder (type, onset, intensity, frequency, duration, LOC). **Pain:** Assess onset, type, location, and duration of pain.

INTERVENTION/EVALUATION

Provide safety measures as needed. Assess for seizure activity. Assess for clinical improvement; record onset of relief of pain. Assess for peripheral edema. Question for changes in visual acuity. Monitor weight.

PATIENT/FAMILY TEACHING

- Do not abruptly stop taking drug; seizure frequency may be increased.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Avoid alcohol.
- Carry identification card, bracelet to note seizure disorder, anticonvulsant therapy.

primidone

prim-i-done
(Apo-Primidone , Mysoline)

Do not confuse primidone with predniSONE or pyridoxine.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Barbiturate. **CLINICAL:** Anticonvulsant.

USES

Management of psychomotor, generalized tonic-clonic (grand mal), and focal seizures. **OFF-LABEL:** Treatment of essential tremor (familial tremor).

PRECAUTIONS

Contraindications: Hypersensitivity to primidone, PHENobarbital; porphyria.

Cautions: Renal/hepatic impairment, pulmonary insufficiency, elderly pts, debilitated pts, children, hypoadrenalism, pts at risk for suicidal thoughts/behavior, depression, history of drug abuse.

ACTION

Decreases neuron excitability. Raises seizure threshold. **Therapeutic Effect:** Reduces seizure activity.

PHARMACOKINETICS

Rapidly, usually completely absorbed following PO administration. Protein binding: 99%. Metabolized in liver to PHENobarbital. Minimal excretion in urine. **Half-life:** 3–6 hrs. (PHENobarbital: 2–5 days.)

 **LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Children/Elderly:** May produce paradoxical excitement, restlessness.

INTERACTIONS

DRUG: Alcohol, other CNS depressants (e.g., LORazepam, morphine, zolpidem) may increase effects. Valproic acid increases concentration, risk of toxicity. **Strong CYP2C19 inducers** (e.g., carbAMazepine, rifAMPin) may decrease concentration/effect. **Strong CYP2C19 inhibitors** (e.g., FLUoxetine, fluvoxAMINE) may increase concentration/effect. May decrease effect of dolutegravir, oral contraceptives, tenofovir, voriconazole, warfarin. **HERBAL:** Herbals with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May decrease serum bilirubin. **Therapeutic serum level:** 4–12 mcg/mL; **toxic serum level:** greater than 12 mcg/mL.

AVAILABILITY (Rx)

Tablets: 50 mg, 250 mg.

ADMINISTRATION/HANDLING

PO

- Give with food to minimize GI effects.

INDICATIONS/ROUTES/DOSAGE

Seizure Control

PO: ADULTS, ELDERLY, CHILDREN 8 YRS AND OLDER: Initially, 100–125 mg/day at bedtime for days 1–3. **Days**

4–6: 100–125 mg twice daily. **Days 7–9:** 100–125 mg 3 times/day. **Usual dose:** 750–1,500 mg/day in 3–4 divided doses. **Maximum:** 2 g/day. **CHILDREN YOUNGER THAN 8 YRS:** Initially, 50 mg/day at bedtime for days 1–3. **Days 4–6:** 50 mg twice daily. **Days 7–9:** 100 mg twice daily. **Usual dose:** 10–25 mg/kg/day (375–750 mg) in 3–4 divided doses. **NEONATES:** 12–20 mg/kg/day in divided doses 2–4 times/day.

Dosage in Renal Impairment

Creatine Clearance	Interval
50 mL/min or greater	q12h
10–49 mL/min	q12–24h
Less than 10 mL/min	q24h
Hemodialysis (HD)	Administer dose post-HD

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Ataxia, dizziness. **Occasional:** Anorexia, drowsiness, altered mental status, nausea, vomiting, paradoxical excitement. **Rare:** Rash.

ADVERSE EFFECTS/TOXIC REACTIONS

Abrupt withdrawal after prolonged therapy may produce effects ranging from markedly increased dreaming, nightmares, insomnia, tremor, diaphoresis, vomiting to hallucinations, delirium, seizures, status epilepticus. Skin eruptions may appear as hypersensitivity reaction. Blood dyscrasias, hepatic disease, hypocalcemia occur rarely. Overdose produces cold/clammy skin, hypothermia, severe CNS depression, followed by high fever, coma. May increase risk of suicidal thoughts and behavior.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (intensity, frequency, duration, LOC). Observe frequently for recurrence of seizure activity. Initiate seizure precautions.

INTERVENTION/EVALUATION

Monitor for changes in behavior, depression, suicidal ideation. Monitor CBC, neurologic status (frequency, duration, severity of seizures). Monitor for **therapeutic serum level:** 4–12 mcg/mL; **toxic serum level:** more than 12 mcg/mL.

PATIENT/FAMILY TEACHING

- Do not abruptly discontinue medication after long-term use (may precipitate seizures).
- Strict maintenance of drug therapy is essential for seizure control.
- Avoid tasks that require alertness, motor skills until response to drug is established; drowsiness usually disappears during continued therapy.
- Slowly go from lying to standing.
- Avoid alcohol.
- Report depression, thoughts of suicide, unusual changes in behavior.

prochlorperazine

proe-klor-per-a-zen
(Compro)

BLACK BOX ALERT ■ Increased risk for death in elderly with dementia-related psychosis.

Do not confuse prochlorperazine with chlorproMAZINE.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Phenothiazine. **CLINICAL:** Antiemetic, first-generation (typical) antipsychotic.

USES

Management of severe nausea/vomiting.

OFF-LABEL: Behavioral syndromes in dementia, psychosis/agitation related to Alzheimer's dementia.

PRECAUTIONS

Contraindications: Hypersensitivity to prochlorperazine. Coma or presence of large amounts of CNS depressants (e.g., alcohol, opioids). Use in children younger than 2 yrs or weighing less than

9 kg. Postoperative nausea/vomiting following pediatric surgery. **Cautions:** History of seizures, Parkinson's disease, elderly, pts at risk for pneumonia, severe renal/hepatic impairment, decreased GI motility, urinary retention, visual problems, narrow-angle glaucoma, paralytic ileus, myasthenia gravis, cerebrovascular/cardiovascular disease.

ACTION

Acts centrally to inhibit/block DOPamine receptors in brain, including the chemoreceptor trigger zone. **Therapeutic Effect:** Relieves nausea/vomiting.

PHARMACOKINETICS

Route	Onset*	Peak	Duration
PO	30–40 min	N/A	3–4 hrs
IM	10–20 min	N/A	4–6 hrs
Rectal	60 min	N/A	12 hrs

*As an antiemetic.

Variably absorbed after PO administration. Widely distributed. Metabolized in liver, GI mucosa. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** PO: 3–5 hrs, IV: 7 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Children:** Safety and efficacy not established in pts weighing less than 9 kg or younger than 2 yrs. **Elderly:** More susceptible to orthostatic hypotension, anticholinergic effects (e.g., dry mouth), sedation, extrapyramidal symptoms (EPS); lower dosage recommended.

INTERACTIONS

DRUG: Alcohol, other CNS depressants (e.g., LORazepam, morphine, zolpidem) may increase CNS, respiratory depression, hypotensive effects. **Lithium** may decrease absorption, produce adverse neurologic effects. May increase concentration/effect of **dofetilide**. May increase arrhythmogenic

effect of **dronedarone**. **Acridinium, ipratropium, tiotropium, umeclidinium** may increase anticholinergic effect. **HERBAL:** **Kava kava** may increase adverse effects. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 5 mg/mL. **Suppositories:** (**Compro**): 25 mg. **Tablets:** 5 mg, 10 mg.

ADMINISTRATION/HANDLING

Rate of administration • May give by IV push slowly. Maximum rate: 5 mg/min. **Storage** • Store at room temperature. • Protect from light. • Clear or slightly yellow solutions may be used.

IM

• Inject deep IM into outer quadrant of buttocks.

PO

• Should be administered with food or water.

Rectal

• Moisten suppository with cold water before inserting well into rectum.

IV INCOMPATIBILITIES

Furosemide (**Lasix**), hydrocortisone, HYDROMORPHONE (**Dilaudid**), midazolam (**Versed**).

IV COMPATIBILITIES

Calcium gluconate, dexmedetomidine (**Precedex**), diphenhydramine (**Benadryl**), fentanyl, heparin, metoclopramide (**Reglan**), morphine, potassium chloride, promethazine (**Phenergan**), propofol (**Diprivan**).

INDICATIONS/ROUTES/DOSAGE

Nausea/Vomiting

PO: **ADULTS, ELDERLY:** 5–10 mg 3–4 times/day. **Maximum:** 40 mg/day. **CHIL-**

DREN WEIGHING MORE THAN 39 KG: 5–10 mg q6–8h. **Maximum:** 40 mg/day. **19–39 KG:** 2.5 mg q8h or 5 mg q12h. **Maximum:** 15 mg/day. **14–18 KG:** 2.5 mg q8–12h. **Maximum:** 10 mg/day. **9–13 KG:** 2.5 mg q12–24h. **Maximum:** 7.5 mg/day.

IV: **ADULTS, ELDERLY:** 2.5–10 mg. May repeat q3–4h. **Maximum:** 10 mg/dose or 40 mg/day.

IM: **ADULTS, ELDERLY:** 5–10 mg q3–4h. **CHILDREN:** 0.1–0.15 mg/kg/dose q8–12h. **Maximum single dose:** 10 mg.

Rectal: **ADULTS, ELDERLY:** 25 mg twice daily.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Drowsiness, hypotension, dizziness, fainting (commonly occurring after first dose, occasionally after subsequent doses, rarely with oral form).

Occasional: Dry mouth, blurred vision, lethargy, constipation, diarrhea, myalgia, nasal congestion, peripheral edema, urinary retention.

ADVERSE EFFECTS/TOXIC REACTIONS

Extrapyramidal symptoms (EPS) appear dose related and are divided into three categories: akathisia (e.g., inability to sit still, tapping of feet), parkinsonian symptoms (mask-like face, tremors, shuffling gait, hypersalivation), acute dystonias (torticollis [neck muscle spasm], opisthotonos [rigidity of back muscles], oculogyric crisis [rolling back of eyes]). Dystonic reaction may produce diaphoresis, pallor. Tardive dyskinesia (tongue protrusion, puffing of cheeks, puckering of mouth) occurs rarely and may be irreversible. Abrupt withdrawal after long-term therapy may precipitate nausea, vomiting, gastritis, dizziness, tremors. Blood dyscrasias, particularly agranulocytosis, mild leukopenia, may occur. May lower seizure threshold.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Avoid skin contact with solution (contact dermatitis). **Antiemetic:** Assess for dehydration (poor skin turgor, dry mucous membranes, longitudinal furrows in tongue). **Antipsychotic:** Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content.

INTERVENTION/EVALUATION

Monitor B/P for hypotension. Assess for EPS. Monitor CBC for blood dyscrasias. Monitor for fine tongue movement (may be early sign of tardive dyskinesia). Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess for therapeutic response (interest in surroundings, improvement in self-care, increased ability to concentrate, relaxed facial expression or relief of nausea, vomiting).

PATIENT/FAMILY TEACHING

• Limit caffeine. • Avoid alcohol. • Avoid tasks requiring alertness, motor skills until response to drug is established (may cause drowsiness, impairment).

propafenone

proe-paf-e-nown

(Apo-Propafenone , Rythmol SR)

BLACK BOX ALERT Mortality or nonfatal cardiac arrest rate (7.7% of pts) in asymptomatic non-life-threatening ventricular arrhythmia pts with recent MI (more than 6 days but less than 2 yrs prior) reported.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Class 1c antiarrhythmic. **CLINICAL:** Antiarrhythmic.

USES

Immediate-Release: Treatment of life-threatening ventricular arrhythmias (e.g., sustained ventricular tachycardias). To prolong time to recurrence of paroxysmal atrial fibrillation/flutter (PAF) or paroxysmal supraventricular tachycardia (PSVT) in pts with disabling symptoms and without structural heart disease.

Extended-Release: Prolong the time to recurrence of atrial fibrillation/flutter or paroxysmal supraventricular tachycardia in pts with disabling symptoms without structural heart disease. **OFF-LABEL:** Treatment following cardioversion of recent-onset atrial fibrillation; supraventricular tachycardia in pts with Wolff-Parkinson-White syndrome.

PRECAUTIONS

Contraindications: Hypersensitivity to propafenone. Sinus bradycardia, bronchospastic disorders or severe obstructive pulmonary disease, cardiogenic shock, uncorrected electrolyte imbalance, sinoatrial, AV, intraventricular impulse generation or conduction disorders (e.g., sick sinus syndrome, AV block) without pacemaker, uncompensated HF, marked hypotension. **Cautions:** Renal/hepatic impairment, myasthenia gravis, concurrent use of other medications that prolong QT interval, hypokalemia, hypomagnesemia.

ACTION

Blocks fast inward sodium current. Slows the rate of increase of the action potential (prolongs conduction velocity, refractory period). **Therapeutic Effect:** Suppresses arrhythmias.

PHARMACOKINETICS

Nearly completely absorbed following PO administration. Protein binding: 85%–97%. Metabolized in liver. Primarily excreted in feces. **Half-life:** 2–10 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta, distributed in breast milk.

Children: Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Amiodarone may affect cardiac conduction, repolarization. May increase effects of warfarin. **CYP3A4 inhibitors** (e.g., ketoconazole, erythromycin) may increase concentration/toxicity. **Strong CYP2D6 inhibitors** (e.g., bupropion, fluoxetine) may increase concentration/effect. **HERBAL:** St. John's wort may decrease concentration/effect. **FOOD:** Grapefruit products may increase concentration. **LAB VALUES:** May cause ECG changes (e.g., QRS widening, PR interval prolongation), positive ANA titer.

AVAILABILITY (Rx)

Tablets: 150 mg, 225 mg, 300 mg.

 **Capsules, Extended-Release:** 225 mg, 325 mg, 425 mg.

ADMINISTRATION/HANDLING

PO

- May take without regard to food.
- Give whole; do not break, crush, divide, or open capsules.

INDICATIONS/ROUTES/DOSAGE

Ventricular Arrhythmias, PAT, PSVT

PO: (Immediate-Release): ADULTS, ELDERLY: Initially, 150 mg q8h. May increase at 3- to 4-day intervals to 225 mg q8h, then to 300 mg q8h. **Maximum:** 900 mg/day.

Atrial Fibrillation (Prevention of Recurrence)

PO: (Immediate-Release): ADULTS, ELDERLY: Initially, 150 mg q8h. May increase at 3- to 4-day intervals to 225 mg q8h, then to 300 mg q8h. **Maximum:** 900 mg/day. **(Extended-Release): ADULTS, ELDERLY:** Initially, 225 mg q12h. May increase at 5-day intervals to 325 mg q12h. **Maximum:** 425 mg q12h.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (13%–7%): Dizziness, nausea, vomiting, altered taste, constipation. **Occasional (6%–3%):** Headache, dyspnea, blurred vision, dyspepsia. **Rare (less than 2%):** Rash, weakness, dry mouth, diarrhea, edema, hot flashes.

ADVERSE EFFECTS/TOXIC REACTIONS

May produce, worsen arrhythmias, HF. Overdose may produce hypotension, drowsiness, bradycardia, atrioventricular conduction disturbances.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Correct electrolyte imbalance before administering medication. Obtain baseline ECG. Screen for cardiac contraindications.

INTERVENTION/EVALUATION

Assess pulse for quality, rhythm, rate. Monitor ECG for cardiac performance or changes, particularly widening of QRS, prolongation of PR interval. Question for visual disturbances, headache, GI upset. Monitor fluid, serum electrolyte levels. Monitor daily pattern of bowel activity, stool consistency. Assess for dizziness, unsteadiness. Monitor LFT. Monitor for therapeutic serum level (0.06–1 mcg/mL).

PATIENT/FAMILY TEACHING

- Compliance with therapy regimen is essential to control arrhythmias.
- Altered taste sensation may occur.
- Report headache, blurred vision.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Report chest pain, difficulty breathing, palpitations.

propofol**HIGH
ALERT****proe-poe-fol**

(Diprivan, Fresenius Propoven)

Do not confuse Diprivan with Diflucan or Ditropan, or propofol with fospropofol.**◆ CLASSIFICATION****PHARMACOTHERAPEUTIC:** Rapid-acting general anesthetic. **CLINICAL:** Sedative-hypnotic.**USES**Induction/maintenance of anesthesia. Continuous sedation in intubated and respiratory controlled adult pts in ICU. **OFF-LABEL:** Postop antiemetic, refractory status epilepticus.**PRECAUTIONS****Contraindications:** Hypersensitivity to propofol, eggs, egg products, soybean or soy products. **Cautions:** Hemodynamically unstable pts, hypovolemia, severe cardiac/respiratory disease, elevated ICP, impaired cerebral circulation, preexisting pancreatitis, hyperlipidemia, history of epilepsy, seizure disorder, elderly pts, debilitated pts, pts allergic to peanuts.**ACTION**Causes CNS depression through agonist action of GABA receptors. **Therapeutic Effect:** Produces hypnosis rapidly.**PHARMACOKINETICS**

Route	Onset	Peak	Duration
IV	40 sec	N/A	3–10 min

Rapidly, extensively distributed. Protein binding: 97%–99%. Metabolized in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. Rapid awakening can occur 10–15 min after discontinuation. **Half-life:** 3–12 hrs.**LIFESPAN CONSIDERATIONS****Pregnancy/Lactation:** Unknown if drug crosses placenta. Distributed in breast milk. Not recommended for obstetrics, breastfeeding mothers. **Children:** Safety and efficacy not established. FDA-approved for use in pts 2 mos and older. **Elderly:** No age-related precautions noted; lower dosages recommended.**INTERACTIONS****DRUG:** Alcohol, CNS depressants (e.g., LORazepam, morphine, zolpidem) may increase CNS, respiratory depression, hypotensive effects. **Antihypertensive medications (e.g., amlODIPine, lisinopril, valsartan)** may increase hypotensive effects. **HERBAL:** Herbs with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. Herbs with hypotensive properties (e.g., garlic, ginger, ginkgo biloba) may increase effect. **FOOD:** None known. **LAB VALUES:** May increase serum triglycerides.**AVAILABILITY (Rx)****Injection Emulsion:** 10 mg/mL.**ADMINISTRATION/HANDLING****◀ALERT▶** Do not give through same IV line with blood or plasma.**Reconstitution** • May give undiluted, or dilute only with D₅W. • Do not dilute to concentration less than 2 mg/mL (4 mL D₅W to 1 mL propofol yields 2 mg/mL).**Rate of administration** • Too-rapid IV administration may produce marked severe hypotension, respiratory depression, irregular muscular movements. • Observe for signs of extravasation (pain, discolored skin patches, white or blue color to peripheral IV site area, delayed onset of drug action).**Storage** • Store at room temperature. • Discard unused portions. • Do not use if emulsion separates. • Shake well before using.

IV INCOMPATIBILITIES

Amikacin (Amikin), amphotericin B complex (Abelcet, AmBisome, Amphotec), bretylium (Bretylol), calcium chloride, ciprofloxacin (Cipro), diazepam (Valium), digoxin (Lanoxin), DOXOrubicin (Adriamycin), gentamicin (Garamycin), methylPREDNISolone (SOLU-Medrol), minocycline (Minocin), phenytoin (Dilantin), tobramycin (Nebcin), verapamil (Isoptin).

IV COMPATIBILITIES

Acyclovir (Zovirax), bumetanide (Bumex), calcium gluconate, ceftAZidime (Fortaz), dexmedetomidine (Precedex), DOBUTamine (Dobutrex), DOPamine (Intropin), enalapril (Vasotec), fentaNYL, heparin, insulin, labetalol (Normodyne, Trandate), lidocaine, LORazepam (Ativan), magnesium, milrinone (Primacor), nitroglycerin, norepinephrine (Levophed), potassium chloride, vancomycin (Vancocin).

INDICATIONS/ROUTES/DOSAGE

Anesthesia

IV infusion: ADULTS, ELDERLY: Induction, 2–2.5 mg/kg (approximately 40 mg q10sec until onset of anesthesia). **Maintenance:** Initially, 100–200 mcg/kg/min or 6–12 mg/kg/hr for 10–15 min. Usual maintenance infusion: 50–100 mcg/kg/min or 3–6 mg/kg/hr. **CHILDREN 3–16 YRS:** Induction, 2.5–3.5 mg/kg over 20–30 sec, then infusion of 125–300 mcg/kg/min or 7.5–18 mg/kg/hr.

Sedation in ICU

IV infusion: ADULTS, ELDERLY: Initially, 5 mcg/kg/min (0.3 mg/kg/hr); increase by increments of 5–10 mcg/kg/min (0.3–0.6 mg/kg/hr) q5–10 min until desired sedation level achieved. **Usual maintenance:** 5–50 mcg/kg/min (0.3–3 mg/kg/hr). Reduce dose after adequate sedation established, and adjust to response. Daily interruption with retitration (sedation vacation) recommended to minimize prolonged sedative effects.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Involuntary muscle movements, apnea (common during induction; often lasts longer than 60 sec), hypotension, nausea, vomiting, IV site burning/stinging. **Occasional:** Twitching, thrashing, headache, dizziness, bradycardia, hypertension, fever, abdominal cramps, paresthesia, coldness, cough, hiccups, facial flushing, green-tinted urine. **Rare:** Rash, dry mouth, agitation, confusion, myalgia, thrombophlebitis.

ADVERSE EFFECTS/TOXIC REACTIONS

Continuous infusion or repeated intermittent infusions of propofol may result in extreme drowsiness, respiratory depression, circulatory depression, delirium. Too-rapid IV administration may produce severe hypotension, respiratory depression, involuntary muscle movements. Pt may experience acute allergic reaction, characterized by abdominal pain, anxiety, restlessness, dyspnea, erythema, hypotension, pruritus, rhinitis, urticaria. May cause propofol infusion syndrome, a collection of metabolic disorders and organ system failures including metabolic acidosis, hyperkalemia, rhabdomyolysis, hepatomegaly; cardiac, renal failure.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Resuscitative equipment, suction, O₂ must be available. Obtain vital signs before administration.

INTERVENTION/EVALUATION

Observe pt for signs of wakefulness, agitation. Monitor respiratory rate, B/P, heart rate, O₂ saturation, ABGs, depth of sedation, serum lipid, triglycerides (if used longer than 24 hrs). May change urine color to green. If continuous high-dose infusions do not properly induce sedation, consider additional sedatives (e.g., opioids, hypnotics, benzodiazepines) to achieve desired response.

propranolol**HIGH
ALERT**

proe-pran-oh-lol

(Hemangeol, Inderal LA, Inderal XL, InnoPran XL)

BLACK BOX ALERT Severe angina exacerbation, MI, ventricular arrhythmias may occur in angina pts after abrupt discontinuation; must taper gradually over 1–2 wks.

Do not confuse Inderal LA with Adderall, Imdur, Isordil, or Toradol, or propranolol with Pravachol.

FIXED-COMBINATION(S)

Inderide: propranolol/hydroCHLORothiazide (a diuretic): 40 mg/25 mg, 80 mg/25 mg. **Inderide LA:** propranolol/hydroCHLORothiazide (a diuretic): 80 mg/50 mg, 120 mg/50 mg, 160 mg/50 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Non-selective beta-adrenergic blocker.

CLINICAL: Antihypertensive, antianginal, antiarrhythmic, antimigraine.

USES

Treatment of angina pectoris, supraventricular arrhythmias, essential tremors, hypertension, ventricular tachycardia, symptomatic treatment of obstructive hypertrophic cardiomyopathy, treatment of proliferating infantile hemangioma requiring systemic therapy, migraine headache prophylaxis, pheochromocytoma, prevention of MI. **Hemangeol:** Treatment of proliferating infantile hemangioma needing systemic therapy. **OFF-LABEL:** Treatment adjunct for anxiety, tremor due to Parkinson's disease, alcohol withdrawal, aggressive behavior, schizophrenia, antipsychotic-induced akathisia, variceal hemorrhage, acute panic.

PRECAUTIONS

Contraindications: Hypersensitivity to propranolol. Bronchial asthma, severe sinus bradycardia, cardiogenic shock, sick sinus syndrome, heart block greater than first-degree (unless pt has functional pacemaker), uncompensated HF. **Hemangeol (Additional):** Premature infants with corrected age younger than 5 wks, infants weighing less than 2.5 kg; history of bronchospasm, bradycardia (less than 80 beats/min), B/P less than 50/30 mm Hg, pheochromocytoma. **Cautions:** Diabetes, renal/hepatic impairment, Raynaud's disease, hyperthyroidism, myasthenia gravis, psychiatric disease, bronchospastic disease, elderly pts, history of severe anaphylaxis to allergens.

ACTION

Blocks beta₁-, beta₂-adrenergic receptors. **Therapeutic Effect:** Slows heart rate; decreases B/P, myocardial contractility, myocardial oxygen demand.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1–2 hrs	N/A	6 hrs

Well absorbed from GI tract. Protein binding: 93%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis.

Half-life: 4–6 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. Avoid use during first trimester. May produce low-birth-weight infants, bradycardia, apnea, hypoglycemia, hypothermia during delivery. **Children:** No age-related precautions noted. **Elderly:** Age-related peripheral vascular disease may increase susceptibility to decreased peripheral circulation.

INTERACTIONS

DRUG: Alpha₂ agonists (e.g., cloNIDine) may increase AV-blocking effect.

Strong CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. **Dronedaron, fingolimod, rivastigmine** may increase bradycardic effect. May increase vasoconstriction of **ergot derivatives (e.g., ergotamine)**. **HERBAL:** Herbals with **hypertensive properties (e.g., licorice, yohimbe)** or **hypotensive properties (e.g., garlic, ginger, ginkgo biloba)** may alter effects. **FOOD:** None known. **LAB VALUES:** May increase serum antinuclear antibody (ANA) titer, serum BUN, LDH, lipoprotein, alkaline phosphatase, potassium, uric acid, ALT, AST, triglycerides.

AVAILABILITY (Rx)

Injection Solution: 1 mg/mL. **Oral Solution:** 20 mg/5 mL, 40 mg/5 mL. **Oral Solution: (Hemangeol):** 4.28 mg/mL. **Tablets:** 10 mg, 20 mg, 40 mg, 60 mg, 80 mg.

 **Capsules, Sustained-Release:** 60 mg, 80 mg, 120 mg, 160 mg.

ADMINISTRATION/HANDLING

Reconstitution • Give undiluted for IV push. • For IV infusion, may dilute each 1 mg in 10 mL D₅W.

Rate of administration • Do not exceed 1 mg/min injection rate. • For IV infusion, give over 30 min.

Storage • Store at room temperature. • Once diluted, stable for 24 hrs at room temperature.

PO

• May crush scored tablets. • Do not break, crush, or open extended- or sustained-release capsules. • Give immediate-release tablets on empty stomach. • Give extended-release, sustained-release without regard to food.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec).

IV COMPATIBILITIES

Alteplase (Activase), heparin, milrinone (Primacor), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: (Immediate-Release or Extended-Release): Initially, 80 mg/day. May increase at greater than or equal to 1-wk intervals prn based on patient response. Usual dosage range: 80–160 mg/day.

Angina

PO: ADULTS, ELDERLY: (Immediate-Release): Initially, 80 mg/day. Increase dose as tolerated to desired effect. Range: 80–320 mg/day in 2–4 divided doses.

PO: (Extended-Release [Inderal LA]): Initially, 80 mg/day. Increase dose as tolerated to desired effect. Range: 80–320 mg/day.

Arrhythmia

IV: ADULTS, ELDERLY: 1–3 mg. Repeat q2–5min up to total of 5 mg. **CHILDREN:** 0.01–0.15 mg/kg. May repeat q6–8h. **Maximum:** Infants, 1 mg/dose; children, 3 mg/dose.

PO: ADULTS, ELDERLY: (Immediate-Release): 10–40 mg 3–4 times/day. **CHILDREN:** Initially, 0.5–1 mg/kg/day in divided doses q6–8h. May increase q3days. Usual dosage: 2–4 mg/kg/day. **Maximum:** 16 mg/kg/day or 60 mg/day.

Adjunct to Alpha-Blocking Agents to Treat Pheochromocytoma

PO: ADULTS, ELDERLY: Initially, 10 mg q6h or 20 mg 3 times daily. Begin 3–4 days after initiation of an alpha-1 blocker and adjust to goal heart rate up to 120 mg/day in divided doses.

Migraine Headache

PO: ADULTS, ELDERLY: (*Immediate-Release or Extended-Release*): Initially, 40–80 mg/day. May increase gradually based on response and tolerability. Usual effective range: 40–160 mg/day. **CHILDREN 7 YRS AND OLDER:** (*Immediate-Release*): Initially, 10 mg daily. May increase at wkly intervals in 10 mg increments. Usual dose range: 10–20 mg 3 times/day.

Reduction of Cardiovascular Mortality, Reinfarction in Pts with Previous MI

PO: ADULTS, ELDERLY: (*Immediate-Release*): Initially, 60–120 mg/day in 2–3 divided doses. May increase dose based on heart rate and BP up to 240 mg/day.

Essential Tremor

PO: ADULTS, ELDERLY: (*Immediate-Release or Extended-Release*): Initially, 60–80 mg/day. May increase based on response and tolerability. Usual dosage range: 60–320 mg/day.

Infantile Hemangioma

Note: Separate doses by at least 9 hrs during or after feeding.

PO: INFANTS 5 WKS TO 5 MOS: Initially, 0.15 mL/kg (0.6 mg/kg) twice daily. After 1 wk, increase to 0.3 mL/kg (1.1 mg/kg) twice daily. After 2 wks, increase to maintenance dose of 0.4 mL/kg (1.7 mg/kg) twice daily. Maintain dose for 6 months. Readjust dose as weight increases.

Dosage in Renal/Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent: Diminished sexual function, drowsiness, difficulty sleeping, unusual fatigue/weakness. **Occasional:** Bradycardia, depression, sensation of coldness in extremities, diarrhea, constipation, anxiety, nasal congestion, nausea, vomiting. **Rare:** Altered taste, dry eyes, pruritus, paresthesia.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose may produce profound bradycardia, hypotension. Abrupt withdrawal may result in diaphoresis, palpitations, headache, tremulousness. May precipitate HF, MI in pts with cardiac disease, thyroid storm in pts with thyrotoxicosis, peripheral ischemia in pts with existing peripheral vascular disease. Hypoglycemia may occur in pts with previously controlled diabetes. **Antidote:** Glucagon (see Appendix J for dosage).

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Assess baseline renal function, LFT. Assess B/P, apical pulse immediately before administering drug (if pulse is 60/min or less or systolic B/P is less than 90 mm Hg, withhold medication, contact physician). **Angina:** Record onset, quality, radiation, location, intensity, duration of anginal pain, precipitating factors (exertion, emotional stress).

INTERVENTION/EVALUATION

Assess pulse for quality, regularity, bradycardia. Monitor ECG for cardiac arrhythmias. Assess fingers for color, numbness (Raynaud's). Assess for evidence of HF (dyspnea [particularly on exertion or lying down], night cough, peripheral edema, distended neck veins). Monitor I&O (increase in weight, decrease in urinary output may indicate HF). Assess for rash, fatigue, behavioral changes. Therapeutic response time ranges from a few days to several wks. Measure B/P near end of dosing interval (determines if B/P is controlled throughout day).

PATIENT/FAMILY TEACHING

- Do not abruptly discontinue medication.
- Compliance with therapy regimen is essential to control hypertension, arrhythmia, anginal pain.
- To avoid hypotensive effect, slowly go from lying to standing.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Report excessively

slow pulse rate (less than 50 beats/min), peripheral numbness, dizziness. • Do not use nasal decongestants, OTC cold preparations (stimulants) without physician approval. • Restrict salt, alcohol intake.

propylthiouracil

proe-pil-thye-oh-ure-a-sil
(Propyl-Thyracil )

BLACK BOX ALERT ■ May cause severe hepatic injury, acute hepatic failure, death.

Do not confuse propylthiouracil with Purinethol.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Thiourea derivative. **CLINICAL:** Antithyroid agent.

USES

Palliative treatment of hyperthyroidism in pts with Graves' disease or toxic multinodular goiter or intolerant of methimazole. Amelioration of hyperthyroid symptoms in preparation for thyroidectomy or radioactive iodine therapy. **OFF-LABEL:** Management of thyrotoxic crises, Graves' disease, thyroid storm.

PRECAUTIONS

Contraindications: Hypersensitivity to propylthiouracil. **Cautions:** In combination with other agranulocytosis-inducing drugs.

ACTION

Blocks conversion of thyroxine to triiodothyronine in peripheral tissues. **Therapeutic Effect:** Inhibits synthesis of thyroid hormone.

PHARMACOKINETICS

Readily absorbed from GI tract. Protein binding: 80%. Metabolized in liver. Excreted in urine. **Half-life:** 1.5–5 hrs.

INTERACTIONS

DRUG: May increase concentration of **digoxin**. May decrease effect of **oral anticoagulants** (e.g., **warfarin**). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase LDH, serum alkaline phosphatase, bilirubin, ALT, AST, prothrombin time.

AVAILABILITY (Rx)

Tablets: 50 mg.

ADMINISTRATION/HANDLING

PO

- Give with food.

INDICATIONS/ROUTES/DOSAGE

Hyperthyroidism

PO: ADULTS, ELDERLY: Initially, 300–400 mg/day (**ELDERLY:** 150–300 mg/day) in divided doses q8h. **Maintenance:** 100–150 mg/day in divided doses q8–12h.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Urticaria, rash, pruritus, nausea, skin pigmentation, hair loss, headache, paresthesia. **Occasional:** Drowsiness, lymphadenopathy, vertigo. **Rare:** Drug fever, lupus-like syndrome.

ADVERSE EFFECTS/TOXIC REACTIONS

Agranulocytosis (may occur as long as 4 mos after therapy), pancytopenia, fatal hepatitis have occurred.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline weight, pulse. Obtain baseline T₃, T₄, TSH level, LFT.

INTERVENTION/EVALUATION

Monitor pulse, weight daily. Check for skin eruptions, pruritus, swollen lymph glands. Be alert for signs, symptoms of hepatic injury, hepatitis (nausea, vom-

iting, drowsiness, jaundice). Monitor hematology results for bone marrow suppression; observe for signs of infection, bleeding.

PATIENT/FAMILY TEACHING

- Space doses evenly around the clock.
- Take resting pulse daily.
- Report pulse rate less than 60 beats/min.
- Seafood, iodine products may be restricted.
- Report fever, sore throat, yellowing of skin/eyes, unusual bleeding/bruising immediately.
- Report sudden or continuous weight gain, cold intolerance, depression.

pyrazinamide

peer-a-zin-a-mide
(Tebrazid )

FIXED-COMBINATION(S)

Rifater: pyrazinamide/isoniazid/rifAMPin (an antitubercular): 300 mg/50 mg/120 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic pyrazine analogue. **CLINICAL:** Antitubercular.

USES

Adjunctive treatment of tuberculosis in conjunction with other antitubercular agents.

PRECAUTIONS

Contraindications: Hypersensitivity to pyrazinamide. Acute gout, severe hepatic dysfunction. **Cautions:** Diabetes, porphyria, renal impairment, history of gout, history of alcoholism, concurrent medication associated with hepatotoxicity.

ACTION

Exact mechanism unknown. May disrupt *Mycobacterium tuberculosis* membrane transport. **Therapeutic Effect:** Bacteriostatic or bactericidal, depending on

drug concentration at infection site, susceptibility of infecting bacteria.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 5%–10%. Widely distributed. Metabolized in liver. Excreted in urine. **Half-life:** 9–10 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May diminish effect of BCG (intra-vesical). RifAMPin may increase risk of hepatotoxicity. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, uric acid.

AVAILABILITY (Rx)

Tablets: 500 mg.

INDICATIONS/ROUTES/DOSAGE

Tuberculosis (in Combination With Other Antituberculars)

PO: ADULTS: Based on lean body weight. **40–55 KG:** 1,000 mg once daily or 1,500 mg 3 times/wk or 2,000 mg 2 times/wk; **56–75 KG:** 1,500 mg once daily or 2,500 mg 3 times/wk or 3,000 mg 2 times/wk; **76–90 KG:** 2,000 mg once daily or 3,000 mg 3 times/wk or 4,000 mg 2 times/wk (**maximum dose** regardless of weight). **CHILDREN:** 30–40 mg/kg/dose once daily. **Maximum:** 2,000 mg/day.

Dosage in Renal/Hepatic Impairment

CrCl less than 30 mL/min or receiving HD: 25–35 mg/kg/dose 3 times/wk (give after dialysis). Contraindicated in severe hepatic impairment.

SIDE EFFECTS

Frequent: Arthralgia, myalgia (usually mild, self-limited). **Rare:** Hypersensitivity reaction (rash, pruritus, urticaria), photosensitivity, gouty arthritis.

ADVERSE EFFECTS/TOXIC REACTIONS

Hepatotoxicity, gouty arthritis, thrombocytopenia, anemia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to pyrazinamide, isoniazid, ethionamide, niacin. Ensure collection of specimens for culture, sensitivity. Obtain CBC, LFT, serum uric acid levels.

INTERVENTION/EVALUATION

Monitor LFT results; be alert for hepatic reactions: jaundice, malaise, fever, abdominal (RUQ) tenderness, anorexia, nausea, vomiting (stop drug, notify physician promptly). Check serum uric acid levels; assess for hot, painful, swollen joints, esp. big toe, ankle, knee (gout). Evaluate serum blood glucose levels, diabetic status carefully (pyrazinamide makes management difficult). Assess for rash, skin eruptions. Monitor CBC for thrombocytopenia, anemia.

PATIENT/FAMILY TEACHING

- Do not skip doses; complete full length of therapy (may be mos or yrs).
- Office visits, lab tests are essential part of treatment.
- Take with food to reduce GI upset.
- Avoid excessive exposure to sun, ultraviolet light until photosensitivity is determined.
- Report any new symptom, immediately for jaundice (yellowing sclera of eyes/skin); unusual fatigue; fever; loss of appetite; hot, painful, swollen joints.

pyridostigmine

peer-id-oh-stig-meen

(Mestinon, Mestinon SR , Regonol)

Do not confuse pyridostigmine with physostigmine, or Regonol with Reglan or Renegal.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticholinesterase inhibitor. **CLINICAL:** Cholinergic muscle stimulant.

USES

Treatment of myasthenia gravis.

PRECAUTIONS

Contraindications: Hypersensitivity to pyridostigmine. Mechanical, intestinal or urinary obstruction. **Cautions:** Bronchial asthma, COPD, bradycardia, seizure disorder, hyperthyroidism, cardiac arrhythmias, peptic ulcer, renal impairment.

ACTION

Prevents destruction of acetylcholine by inhibiting the enzyme acetylcholinesterase, enhancing impulse transmission across neuromuscular junction. **Therapeutic Effect:** Produces miosis; increases intestinal, skeletal muscle tone; stimulates salivary, sweat gland secretions.

PHARMACOKINETICS

Poorly absorbed from GI tract. Metabolized in liver. Excreted primarily unchanged in urine. **Half-life:** 1–2 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: (*Regonol*): 5 mg/mL. **Syrup:** (*Mestinon*): 60 mg/5 mL. **Tablets:** (*Mestinon*): 60 mg.

 **Tablets: Extended-Release:** (*Mestinon Timespan*): 180 mg.

ADMINISTRATION/HANDLING**IV, IM**

- Give large parenteral doses concurrently with 0.6–1.2 mg atropine sulfate IV to minimize side effects.

PO

- Give with food, milk.
- Tablets may be crushed. Do not chew, crush extended-release tablets (may be broken).
- Give larger dose at times of increased fatigue (e.g., for those with difficulty in chewing, 30–45 min before meals).

IV INCOMPATIBILITIES

Do not mix with any other medications.

INDICATIONS/ROUTES/DOSAGE

Note: Highly individualized dosing ranges.

Myasthenia Gravis

PO: ADULTS, ELDERLY: (*Immediate-Release*): Initially, 60 mg 3 times/day. Dosage increased at 48-hr intervals. **Maintenance:** 60 mg–1.5 g/day divided into 5–6 doses/day. (Usual dose: 600 mg/day.) **CHILDREN:** Initially, 1 mg/kg/dose q4–6h. **Maximum:** 7 mg/kg/24 hr divided into 5–6 doses. Usual dose: 600 mg/day.

PO: (*Extended-Release*): ADULTS, ELDERLY: 180–540 mg 1–2 times/day with at least a 6-hr interval between doses.

IV, IM: ADULTS, ELDERLY: 2 mg or 1/30th of oral dose q2–3h. **CHILDREN:** 0.05–0.15 mg/kg/dose. **Maximum single dose:** 10 mg.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Miosis, increased GI/skeletal muscle tone, bradycardia, constriction of bronchi/ureters, diaphoresis, increased salivation. **Occasional:** Headache, rash, temporary decrease in diastolic B/P with mild reflex tachycar-

dia, short periods of atrial fibrillation (in hyperthyroid pts), marked drop in B/P (in hypertensive pts).

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose may produce cholinergic crisis, manifested as increasingly severe descending muscle weakness (appears first in muscles involving chewing, swallowing, followed by muscle weakness of shoulder girdle, upper extremities), respiratory muscle paralysis, followed by pelvis girdle/leg muscle paralysis. Requires withdrawal of all cholinergic drugs and immediate use of 1–4 mg atropine sulfate IV for adults, 0.01 mg/kg for infants and children younger than 12 yrs.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Larger doses should be given at time of greatest fatigue. Assess muscle strength before testing for diagnosis of myasthenia gravis and following drug administration. Avoid large doses in pts with megacolon, reduced GI motility.

INTERVENTION/EVALUATION

Have facial tissues readily available at pt's bedside. Monitor respirations closely during myasthenia gravis testing or if dosage is increased. Assess diligently for cholinergic reaction, bradycardia in myasthenic pt in crisis. Coordinate dosage time with periods of fatigue and increased/decreased muscle strength. Monitor for therapeutic response to medication (increased muscle strength, decreased fatigue, improved chewing/swallowing functions).

PATIENT/FAMILY TEACHING

- Report nausea, vomiting, diarrhea, diaphoresis, profuse salivary secretions, palpitations, muscle weakness, severe abdominal pain, difficulty breathing.

QUEtiapine

TOP
100

kwet-eye-a-peen
(SEROquel, SEROquel XR)

■ BLACK BOX ALERT ■ Increased risk of suicidal ideation and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders. Elderly with dementia-related psychosis are at increased risk for death.

Do not confuse QUEtiapine with OLANzapine, or SEROquel with SINEquan.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Dibenzodiazepine derivative. **CLINICAL:** Second-generation (atypical) antipsychotic.

USES

Treatment of schizophrenia. Treatment of acute manic episodes associated with bipolar disorder (alone or in combination with lithium or valproate). Maintenance treatment of bipolar disorder as an adjunct to lithium or valproic acid. Treatment of acute depressive episodes associated with bipolar disorder. **Extended-Release Only:** Adjunctive treatment to antidepressants in major depressive disorder (MDD). **OFF-LABEL:** Delirium in critically ill pts, psychosis/agitation related to Alzheimer's dementia. Treatment of autism, treatment-resistant obsessive compulsive disorder.

PRECAUTIONS

Contraindications: Hypersensitivity to QUEtiapine. **Cautions:** Renal/hepatic impairment, preexisting abnormal lipid profile, pts at risk for aspiration pneumonia, cardiovascular disease (e.g., HE, history of MI), cerebrovascular disease, dehydration, hypovolemia, history of drug abuse/dependence, seizure disorder, hypothyroidism, pts at risk for suicide, Parkinson's disease, decreased GI motility, urinary retention, narrow-angle

glaucoma, diabetes, visual problems, elderly, pts at risk for orthostatic hypotension. Avoid use in pts at risk for torsades de pointes (hypokalemia, hypomagnesemia, history of cardiac arrhythmias, congenital long QT syndrome, concurrent medications that prolong QT interval).

ACTION

Antagonizes DOPamine and serotonin (antipsychotic activity), histamine (somnolence), alpha₁-adrenergic (orthostatic hypotension) receptors. **Therapeutic Effect:** Diminishes symptoms associated with schizophrenia/bipolar disorders.

PHARMACOKINETICS

Rapidly absorbed. Protein binding: 83%. Widely distributed in tissues; CNS concentration exceeds plasma concentration. Metabolized in liver. Primarily excreted in urine. **Half-life:** 6 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. Not recommended for breastfeeding mothers. **Children:** Safety and efficacy not established in children less than 10 yrs of age (bipolar mania) or less than 13 yrs of age (schizophrenia). **Elderly:** No age-related precautions noted, but lower initial and target dosages may be necessary.

INTERACTIONS

DRUG: Medications prolonging QT interval (e.g., amiodarone, citalopram, dasatinib, haloperidol, ondansetron) may increase risk of QT prolongation. **Alcohol, other CNS depressants (e.g., LORazepam, morphine, zolpidem)** may increase CNS depression. May increase hypotensive effects of antihypertensives. **Strong CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin)** may decrease concentration/effect. **Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole)** may increase concentration/effect. **Anticholinergic agents (e.g., acli-**

dinium, ipratropium, tiotropium, umecclidinium) may increase anticholinergic effect. **HERBAL:** Herbs with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **St. John's wort** may decrease concentration/effect. **FOOD:** None known. **LAB VALUES:** May decrease total free thyroxine (T₄) serum levels. May increase serum cholesterol, triglycerides, ALT, AST, WBC, GGT. May produce false-positive pregnancy test result.

AVAILABILITY (Rx)

Tablets: 25 mg, 50 mg, 100 mg, 200 mg, 300 mg, 400 mg. **Tablets, Extended-Release:** 50 mg, 150 mg, 200 mg, 300 mg, 400 mg.

ADMINISTRATION/HANDLING

PO

- Give immediate-release tablets without regard to food.
- Do not break, crush, dissolve, or divide extended-release tablets.
- Extended-release tablets should be given without regard to food or with a light meal in evening.

INDICATIONS/ROUTES/DOSAGE

- When restarting pts who have been off QUetiapine for less than 1 wk, titration is not required and maintenance dose can be reinstated.
- When restarting pts who have been off QUetiapine for longer than 1 wk, follow initial titration schedule.
- When discontinuing, gradual tapering recommended to avoid withdrawal symptoms and minimize risk of relapse.

Schizophrenia

PO: (**Immediate-Release**): **ADULTS, ELDERLY:** Initially, 25 mg twice daily, then increase in 25–50-mg increments divided 2–3 times/day on the second and third days; may further increase up to target dose of 300–400 mg/day in 2–3 divided doses by the fourth day. Further adjustments of 25–50 mg twice daily may be made at intervals of 2 days or longer. **Maintenance:** 400–800 mg/day. **Maximum:** 800 mg/day.

(**Extended-Release**): Initially, 300 mg/day. May increase in increments of up to 300 mg/day at intervals as short as 1 day. Range: 400–800 mg/day. **Maximum:** 800 mg/day. (**Immediate-Release**): **CHILDREN 13 YRS AND OLDER:** Initially, 25 mg twice daily on day 1, 50 mg twice daily on day 2, then increase by 100 mg/day to target dose of 400 mg twice daily on day 5. May further increase to 800 mg/day in increments of 100 mg or less daily. Range: 400–800 mg/day. **Maximum:** 800 mg. Total dose may be divided in 3 doses/day. (**Extended-Release**): Initially, 50 mg once daily on day 1, 100 mg on day 2, until 400 mg once daily is reached on day 5. Range: 400–800 mg/day. **Maximum:** 800 mg/day.

Mania in Bipolar Disorder

PO: (**Immediate-Release**): **ADULTS, ELDERLY:** Initially, 100–200 mg once daily at bedtime or in 2 divided doses on day 1. May increase in increments of 100 mg/day to 200 mg twice daily on day 4. May further increase in increments of 200 mg/day to 800 mg/day. **Maximum:** 800 mg/day. (**Extended-Release**): Initially, 300 mg on day 1 in the evening; increase to 600 mg on day 2. Adjust dose base on response/tolerability. **Maximum:** 800 mg/day. (**Immediate-Release**): **CHILDREN 10 YRS AND OLDER:** 25 mg twice daily on day 1, 50 mg twice daily on day 2, then 100 mg twice daily on day 3, 150 mg twice daily on day 4, then continue at target dose of 200 mg twice daily on day 5. Usual range: 200–300mg twice daily. **Maximum:** 600 mg/day. (**Extended-Release**): 50 mg on day 1; 100 mg on day 2; then increase by 100 mg/day until target dose of 400 mg once daily on day 5. Usual range: 400–600 mg once daily.

Depression in Bipolar Disorder

PO: (**Immediate-Release**): **ADULTS, ELDERLY:** Initially, 50 mg/day on day 1, increase to 100 mg/day on day 2, then increase by 50–100 mg/day up to target dose of 300 mg/day. (**Extended-Release**): Initially, 50 mg on day 1 in the evening, 100 mg on day 2, 200 mg on day 3, 300 mg on day 4 and thereafter.

Adjunctive Therapy in MDD

PO: ADULTS, ELDERLY: (*Extended-Release*): Initially, 50 mg on days 1 and 2; then 150 mg on days 3 and 4; then 150–300 mg/day thereafter.

Dosage in Hepatic Impairment

(*Immediate-Release*): Initially, 25 mg/day. Increase by 25–50 mg/day to effective dose. (*Extended-Release*): Initially, 50 mg/day, increase by 50 mg/day until effective dose.

Dosage in Renal Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (19%–10%): Headache, drowsiness, dizziness. **Occasional (9%–3%):** Constipation, orthostatic hypotension, tachycardia, dry mouth, dyspepsia, rash, asthenia, abdominal pain, rhinitis. **Rare (2%):** Back pain, fever, weight gain.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose may produce heart block, hypotension, hypokalemia, tachycardia.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content. Obtain baseline CBC, hepatic enzyme levels before initiating treatment and periodically thereafter. Question medical history as listed in Precautions.

INTERVENTION/EVALUATION

Monitor mental status, onset of extrapyramidal symptoms. Assist with ambulation if dizziness occurs. Supervise suicidal-risk pt closely during early therapy (as psychosis, depression lessens, energy level improves, increasing suicide potential). Monitor B/P for hypotension, lipid profile, blood glucose, CBC, or worsening depression, unusual behavior. Assess pulse for tachycardia (esp. with rapid increase in dosage). Monitor daily pattern

of bowel activity, stool consistency. Assess for therapeutic response (improved thought content, increased ability to concentrate, improvement in self-care). Eye exam to detect cataract formation should be obtained q6mos during treatment.

PATIENT/ FAMILY TEACHING

- Avoid exposure to extreme heat.
- Drink fluids often, esp. during physical activity.
- Take medication as ordered; do not stop taking or increase dosage.
- Drowsiness generally subsides during continued therapy.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Avoid alcohol.
- Slowly go from lying to standing.
- Report suicidal ideation, unusual changes in behavior.

quinapril

kwin-a-pril
(Accupril)

BLACK BOX ALERT May cause fetal injury, mortality. Discontinue as soon as possible once pregnancy detected.

Do not confuse Accupril with Accolate, Accutane, Aciphex, or Monopril.

FIXED-COMBINATION(S)

Accuretic: quinapril/hydroCHLOROTHIAZIDE (a diuretic): 10 mg/12.5 mg, 20 mg/12.5 mg, 20 mg/25 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin-converting enzyme (ACE) inhibitor. **CLINICAL:** Antihypertensive.

USES

Treatment of hypertension. Used alone or in combination with other antihypertensives. Adjunctive therapy in management of HF. **OFF-LABEL:** Treatment of pediatric hypertension.

PRECAUTIONS

Contraindications: Hypersensitivity to quinapril. History of angioedema from previous treatment with ACE inhibitors, concomitant use with aliskiren in pts with diabetes. Concomitant use with neprilysin inhibitor (e.g., sacubitril) or within 36 hrs of switching to or from neprilysin inhibitor. **Cautions:** Renal impairment, hypertrophic cardiomyopathy with outflow tract obstruction, major surgery, HF, hypovolemia, unstented bilateral renal artery stenosis, hyperkalemia, concurrent potassium supplements, severe aortic stenosis, ischemic heart disease, cerebrovascular disease.

ACTION

Suppresses renin-angiotensin-aldosterone system, preventing conversion of angiotensin I to angiotensin II, a potent vasoconstrictor. Lower angiotensin II causes an increase in plasma renin activity and decreased aldosterone secretion. **Therapeutic Effect:** Reduces peripheral arterial resistance, B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	N/A	24 hrs

Readily absorbed from GI tract. Protein binding: 97%. Rapidly hydrolyzed to active metabolite. Primarily excreted in urine. Minimal removal by hemodialysis. **Half-life:** 1–2 hrs; metabolite, 3 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Unknown if distributed in breast milk. May cause fetal, neonatal mortality or morbidity. **Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to hypotensive effects.

INTERACTIONS

DRUG: Aliskiren may increase hyperkalemic effect. May increase potential for allergic reactions to allopurinol. **Angiotensin receptor blockers**

(e.g., losartan, valsartan) may increase adverse effects. May increase adverse effects of lithium, sacubitril. **HERBAL:** Herbals with hypertensive properties (e.g., licorice, yohimbe) or hypotensive properties (e.g., garlic, ginger, ginkgo biloba) may alter effects. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, bilirubin, creatinine, potassium, ALT, AST. May decrease serum sodium. May cause positive antinuclear antibody (ANA) titer.

AVAILABILITY (Rx)

Tablets: 5 mg, 10 mg, 20 mg, 40 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food. • Tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS: Initially, 10–20 mg/day. May adjust dosage at intervals of at least 2 wks or longer up to 80 mg/day in one or two divided doses. **ELDERLY:** Initially, 10 mg once daily. Titrate to optimal response.

Adjunct to Manage HF

PO: ADULTS, ELDERLY: Initially, 5 mg twice daily. Titrate at wkly intervals to 20–40 mg/day in 2 divided doses. Target dose: 20 mg twice daily.

Dosage in Renal Impairment

Hypertension

Creatinine Clearance	Initial Dose
More than 60 mL/min	10 mg
30–60 mL/min	5 mg
10–29 mL/min	2.5 mg

HF

Creatinine Clearance	Initial Dose
Greater than 30 mL/min	5 mg
10–30 mL/min	2.5 mg

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (7%–5%): Headache, dizziness.

Occasional (4%–2%): Fatigue, vomiting, nausea, hypotension, chest pain, cough, syncope. **Rare (less than 2%):** Diarrhea, cough, dyspnea, rash, palpitations, impotence, insomnia, drowsiness, malaise.

ADVERSE EFFECTS/TOXIC REACTIONS

Excessive hypotension (“first-dose syncope”) may occur in pts with HF, those who are severely salt/volume depleted. Angioedema, hyperkalemia occur rarely. Agranulocytosis, neutropenia may be noted in those with collagen vascular disease (scleroderma, systemic lupus erythematosus), renal impairment. Nephrotic syndrome may be noted in those with history of renal disease.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P immediately before each dose in addition to regular monitoring (be alert to fluctuations). Renal function tests should be performed before beginning therapy. In pts with prior renal disease, urine test for protein by dipstick method

should be made with first urine of day before beginning therapy and periodically thereafter. In pts with renal impairment, autoimmune disease, or taking drugs that affect leukocytes or immune response, CBC, differential count should be performed before beginning therapy and q2wks for 3 mos, then periodically thereafter.

INTERVENTION/EVALUATION

Monitor B/P (if excessive reduction in B/P occurs, place pt in supine position with legs slightly elevated), renal function, serum potassium, WBC. Assist with ambulation if dizziness occurs. Question for evidence of headache. Non-cola carbonated beverage, unsalted crackers, dry toast may relieve nausea.

PATIENT/FAMILY TEACHING

- Go slowly from lying to standing.
- Full therapeutic effect may take 1–2 wks.
- Report any sign of infection (sore throat, fever).
- Skipping doses or voluntarily discontinuing drug may produce severe rebound hypertension.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Avoid alcohol.

RABEprazole

 TOP
100

ra-bep-ra-zole

 (Aciphex, Aciphex Sprinkle, Pariet )

Do not confuse Aciphex with Accupril or Aricept, or RABEprazole with ARIpPrazole, lansoprazole, omeprazole, or raloxifene.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Proton pump inhibitor. **CLINICAL:** Gastric acid inhibitor.

USES

Short-term treatment (4–8 wks), maintenance of erosive or ulcerative gastroesophageal reflux disease (GERD). Treatment of daytime/nighttime heartburn, other symptoms of GERD. Short-term treatment (4 wks or less) in healing, symptomatic relief of duodenal ulcers. Long-term treatment of pathologic hypersecretory conditions, including Zollinger-Ellison syndrome. Treatment of *H. pylori* (in combination with amoxicillin and clarithromycin). Sprinkle dose form approved for treatment of GERD in children 1–11 yrs. **OFF-LABEL:** Maintenance of healing and prevention of relapse of duodenal ulcers. Treatment of NSAID-induced ulcers.

PRECAUTIONS

Contraindications: Hypersensitivity to RABEprazole, other proton pump inhibitors (e.g., omeprazole). Concurrent use with rilpivirine-containing products. **Cautions:** Severe hepatic impairment, osteoporosis.

ACTION

Suppresses gastric acid secretion by inhibiting H^+/K^+-ATP pump. **Therapeutic Effect:** Increases gastric pH, reducing gastric acid production.

PHARMACOKINETICS

Rapidly absorbed from GI tract after passing through stomach relatively intact

as delayed-release tablet. Protein binding: 96%. Metabolized in liver. Primarily excreted in urine. **Half-life:** 1–2 hrs (increased with hepatic impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease concentration/effect of **acalabrutinib, cefuroxime, erlotinib, neratinib, pazopanib**. **Strong CYP2C19 inducers (e.g., FLUoxetine), strong CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin)** may decrease concentration/effect. May decrease concentration of **ketoconazole, clopidogrel, atazanavir**. **HERBAL:** **St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, thyroid-stimulating hormone (TSH).

AVAILABILITY (Rx)

Tablets, Delayed-Release: 20 mg.

Capsule, Sprinkle: 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to food; best taken after breakfast. • Do not break, crush, dissolve, or divide tablet; give whole.

Sprinkle

• May give with antacid. • Administer 30 min before a meal. • Open capsule, sprinkle on soft food. Take within 15 min of preparation. • Do not chew, crush.

INDICATIONS/ROUTES/DOSAGE

GERD (Erosive or Ulcerative)

PO: ADULTS, ELDERLY: 20 mg/day for 4–8 wks. If inadequate response, may repeat for additional 8 wks. **Maintenance:** 20 mg/day.

Short-Term Treatment of Symptomatic GERD

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 20 mg/day for 4 wks. If inadequate response, may repeat additional 4 wks. **CHILDREN, 1–11 YRS, WEIGHING 15 KG OR GREATER:** 10 mg once daily. **WEIGHING LESS THAN 15 KG:** 5 mg once daily; may increase to 10 mg once daily.

Duodenal Ulcer

PO: ADULTS, ELDERLY: 20 mg/day after morning meal for 4 wks.

Pathologic Hypersecretory Conditions

PO: ADULTS, ELDERLY: Initially, 60 mg once daily. May increase to 60 mg twice daily.

H. Pylori Infection

PO: ADULTS, ELDERLY: 20 mg twice daily for 10–14 days (given with various antibiotic regimens).

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Use caution.

SIDE EFFECTS

Rare (less than 2%): Headache, nausea, dizziness, rash, diarrhea, malaise.

ADVERSE EFFECTS/TOXIC REACTIONS

Hyperglycemia, hypokalemia, hyponatremia, hyperlipemia occur rarely. May increase risk of bone fractures, *C. difficile*-associated colitis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question history of GI disease, ulcers, GERD.

INTERVENTION/EVALUATION

Evaluate for therapeutic response (relief of GI symptoms). Question if GI discomfort,

nausea, diarrhea, headache occurs. Assess skin for evidence of rash. Observe for evidence of dizziness; utilize appropriate safety precautions.

PATIENT/FAMILY TEACHING

- Swallow tablets whole; do not break, chew, dissolve, or divide tablets.
- Report headache.

raloxifene

TOP
100

ra-lox-i-feen
(Evista)

BLACK BOX ALERT Increases risk of deep vein thrombosis, pulmonary embolism. Women with coronary heart disease or pts at risk for coronary events are at increased risk for death due to stroke.

Do not confuse Evista with AVINza.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective estrogen receptor modulator (SERM).

CLINICAL: Osteoporosis preventive.

USES

Prevention/treatment of osteoporosis in postmenopausal women. Reduces risk of invasive breast cancer in postmenopausal women with osteoporosis and postmenopausal women at high risk for invasive breast cancer.

PRECAUTIONS

Contraindications: Hypersensitivity to raloxifene. Active or history of venous thromboembolic events, such as deep vein thrombosis (DVT), pulmonary embolism, retinal vein thrombosis; women who are or may become pregnant, breastfeeding. **Cautions:** Cardiovascular disease, renal/hepatic impairment, risk for venous thromboembolism, unexplained uterine bleeding, elevated triglycerides in response to oral estrogen therapy.

ACTION

Selective estrogen receptor modulator (SERM) that binds to estrogen receptors, increasing bone mineral density. Blocks estrogen effects in breast/uterus. **Therapeutic Effect:** Reduces bone resorption, increases bone mineral density, reduces incidence of fractures.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 95%. Metabolized in liver. Excreted primarily in feces. Unknown if removed by hemodialysis. **Half-life:** 27.7–32.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Contraindicated in pregnancy, breastfeeding. **Children:** Not used in this pt population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Bile acid sequestrants (e.g., cholestyramine) may decrease absorption/effect. May decrease absorption of levothyroxine. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May lower serum total cholesterol, LDL. May decrease platelet count, serum inorganic phosphate, albumin, calcium, protein.

AVAILABILITY (Rx)

Tablets: 60 mg.

ADMINISTRATION/HANDLING**PO**

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Note: Discontinue at least 72 hrs prior to and during prolonged immobilization (may increase risk for DVT/PE).

Prophylaxis/Treatment of Osteoporosis, Breast Cancer Risk Reduction

PO: ADULTS, ELDERLY: 60 mg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (25%–10%): Hot flashes, flu-like symptoms, arthralgia, sinusitis. **Occasional (9%–5%):** Weight gain, nausea, myalgia, pharyngitis, cough, dyspepsia, leg cramps, rash, depression. **Rare (4%–3%):** Vaginitis, UTI, peripheral edema, flatulence, vomiting, fever, migraine, diaphoresis.

ADVERSE EFFECTS/TOXIC REACTIONS

Pneumonia, gastroenteritis, chest pain, vaginal bleeding, breast pain occur rarely.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Question history of thrombosis (CVA, DVT, PE). Question for possibility of pregnancy. Drug should be discontinued 72 hrs before and during prolonged immobilization (postop recovery, prolonged bed rest). Therapy may be resumed only after pt is fully ambulatory. Determine serum total, LDL cholesterol before therapy and routinely thereafter.

INTERVENTION/EVALUATION

Monitor serum total cholesterol, total calcium, inorganic phosphate, total protein, albumin, bone mineral density, platelet count. Diligently monitor for CVA (aphasia, blindness, confusion, paresthesia, hemiparesis, syncope), DVT (arm/leg pain, swelling), pulmonary embolism (chest pain, dyspnea, hypoxia, tachycardia).

PATIENT/FAMILY TEACHING

- Avoid prolonged restriction of movement during travel (increased risk of venous thromboembolic events).
- Take supplemental calcium, vitamin D if daily dietary intake is inadequate.
- Engage in regular weight-bearing exercise.
- Modify, discontinue habits of cigarette smoking, alcohol consumption.
- Report symptoms of DVT (swelling, pain, hot feeling in the arms or legs), lung embolism (difficulty

breathing, chest pain, rapid heart rate), stroke (blindness, confusion, difficulty speaking, one-sided weakness, passing out).

raltegravir

TOP
100

ral-teg-ra-veer
(Isentress)

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Integrase inhibitor. **CLINICAL:** Antiretroviral (anti-HIV).

USES

Treatment of HIV-1 infection in adults and children 4 wks and older and weighing at least 3 kg. Used in combination with at least two other antiretroviral agents.

OFF-LABEL: Postexposure prophylaxis for occupational exposure to HIV.

PRECAUTIONS

Contraindications: Hypersensitivity to raltegravir. **Cautions:** Elderly, pts at risk for creatine kinase (CK) elevations and/or skeletal muscle abnormalities.

ACTION

Inhibits activity of HIV-1 integrase, an enzyme that incorporates viral DNA into host cell. **Therapeutic Effect:** Prevents integration and replication of viral HIV-1.

PHARMACOKINETICS

Variably absorbed following PO administration. Protein binding: 83%. Metabolized in liver. Excreted in feces (51%), urine (32%). **Half-life:** 9 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cross placenta. Breastfeeding not recommended. **Children:** Safety and efficacy not established in pts younger than 4 wks. **Elderly:** Age-related hepatic, renal, cardiac impairment requires strict monitoring.

INTERACTIONS

DRUG: Proton pump inhibitors (e.g., omeprazole, pantoprazole) may increase concentration. **Aluminum, magnesium salts, rifAMPin** may decrease levels/effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, bilirubin, aminotransferase, alkaline phosphatase, amylase, lipase, creatine kinase. May decrease lymphocytes, neutrophils (ANC), Hgb, platelets.

AVAILABILITY (Rx)

Packet, Oral: 100 mg. **Tablets, Chewable:** 25 mg, 100 mg.

 **Tablets, Film-Coated:** 400 mg, 600 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.
- Do not break, crush, dissolve, or divide film-coated tablets.
- Chewable tablets may be chewed or taken whole.
- **Oral Packet:** Mix with 5 mL water to provide a concentration of 20 mg/mL. Once mixed, measure dose with oral syringe. Give within 30 min of mixing.

INDICATIONS/ROUTES/DOSAGE

HIV Infection

PO: ADULTS, ELDERLY, CHILDREN WEIGHING 40 KG OR MORE: **Treatment naïve:** 400 mg twice daily or 1,200 mg (2 × 600 mg) once daily. **Treatment experienced:** 400 mg twice daily. (Dosage increased to 800 mg twice daily when given with rifAMPin [treatment naïve or experienced]). **CHILDREN WEIGHING 25 KG OR MORE (WHO CAN SWALLOW A TABLET):** 400 mg twice daily. **CHILDREN 2–11 YRS WEIGHING 40 KG OR MORE (CHEWABLE TABLETS):** 300 mg twice daily. **WEIGHING 28–39 KG:** 200 mg twice daily. **WEIGHING 20–27 KG:** 150 mg twice daily. **WEIGHING 14–19 KG:** 100 mg twice daily. **WEIGHING 11–13 KG:** 75 mg twice daily. **CHILDREN WEIGHING 14–19 KG (ORAL PACKET):** 100 mg twice daily. **WEIGHING 11–13 KG:** 80 mg twice daily.

WEIGHING 8–10 KG: 60 mg twice daily.**WEIGHING 6–7 KG:** 40 mg twice daily.**WEIGHING 4–5 KG:** 30 mg twice daily.**WEIGHING 3–4 KG:** 25 mg twice daily.**Dosage in Renal/Hepatic Impairment**

No dose adjustment.

SIDE EFFECTS**Frequent (17%–10%):** Diarrhea, nausea, headache. **Occasional (5%):** Fever. **Rare (2%–1%):** Vomiting, abdominal pain, fatigue, dizziness.**ADVERSE EFFECTS/TOXIC REACTIONS**

Hypersensitivity reactions, anemia, neutropenia, MI, gastritis, hepatitis, herpes simplex, toxic nephropathy, renal failure, chronic renal failure, renal tubular necrosis occur rarely.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain baseline CBC, BMP, LFT, CD4 count, viral load prior to initiation and at periodic intervals during therapy. Offer emotional support. Obtain medication history.

INTERVENTION/EVALUATION

Closely monitor for evidence of GI discomfort. Monitor daily pattern of bowel activity, stool consistency. Monitor serum chemistry tests for marked laboratory abnormalities. Assess for opportunistic infections: onset of fever, cough, other respiratory symptoms.

PATIENT/FAMILY TEACHING

- Report fever, abdominal pain, yellowing of skin/eyes, dark urine.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Raltegravir is not a cure for HIV infection, nor does it reduce risk of transmission to others.
- Pt may continue to experience illnesses, including opportunistic infections.

ramelteonra-mel-tee-on
(Rozerem)**Do not confuse ramelteon with Remeron, or Rozerem with Razadyne or Remeron.****CLASSIFICATION****PHARMACOTHERAPEUTIC:** Melatonin receptor agonist. **CLINICAL:** Hypnotic.**USES**

Treatment of insomnia in pts who experience difficulty with sleep onset.

PRECAUTIONS**Contraindications:** Hypersensitivity to ramelteon. Concurrent fluvoxamine therapy, history of angioedema with previous ramelteon therapy. **Cautions:** Depression, other psychiatric conditions, alcohol consumption, other CNS depressants, moderate hepatic impairment, severe sleep apnea, COPD; concomitant strong CYP1A2 inhibitors (e.g., fluvoxamine).**ACTION**Selectively targets melatonin receptors thought to be involved in maintenance of circadian rhythm underlying normal sleep-wake cycle. **Therapeutic Effect:** Prevents insomnia characterized by difficulty with sleep onset.**PHARMACOKINETICS**Rapidly absorbed following PO administration. Protein binding: 82%. Substantial tissue distribution. Metabolized in liver. Excreted in urine (84%), feces (4%). **Half-life:** 2–5 hrs.**LIFESPAN CONSIDERATIONS****Pregnancy/Lactation:** Unknown if distributed in breast milk. Breastfeeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** Age-related hepatic impairment may require dosage adjustment.

INTERACTIONS

DRUG: Fluconazole, ketoconazole may increase concentration/effect. **CNS depressants** (e.g., alcohol, morphine, oxyCODONE, zolpidem) may increase CNS depression. **Strong CYP3A4 inducers** (e.g., carbAMazepine, rifAMPin) may decrease concentration/effect. **Fluvoxamine** may increase concentration/effect; increase risk of toxicity. **HERBAL: Herbals with sedative properties** (e.g., chamomile, kava kava, valerian) may increase CNS depression. **FOOD:** Onset of action may be reduced if taken with or immediately after a **high-fat meal**. **LAB VALUES:** May decrease serum cortisol.

AVAILABILITY (Rx)

 **Tablets, Film-Coated:** (*Rozerem*): 8 mg.

ADMINISTRATION/HANDLING

PO

- Administer within 30 min before bedtime.
- Do not give with, or immediately following, a high-fat meal.
- Do not break, crush, dissolve, or divide tablet.

INDICATIONS/ROUTES/DOSAGE

Insomnia

PO: ADULTS, ELDERLY: 8 mg 30 min before bedtime. **Maximum:** 8 mg.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Not recommended.

SIDE EFFECTS

Frequent (7%–5%): Headache, dizziness, drowsiness (expected effect). **Occasional (4%–3%):** Fatigue, nausea, exacerbated insomnia. **Rare (2%):** Diarrhea, myalgia, depression, altered taste, arthralgia.

ADVERSE EFFECTS/TOXIC REACTIONS

May affect reproductive hormones in adults (decreased testosterone levels,

increased prolactin levels), resulting in unexplained amenorrhea, galactorrhea, decreased libido, impaired fertility. Complex sleep-related behavior may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, pulse, respirations. Raise bed rails, provide call light. Provide environment conducive to sleep (quiet environment, low/no lighting, TV off).

INTERVENTION/EVALUATION

Assess sleep pattern of pt. Evaluate for therapeutic response: rapid induction of sleep onset, decrease in number of nocturnal awakenings.

PATIENT/FAMILY TEACHING

- Take within 30 min before going to bed; confine activities to those necessary to prepare for bed.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Avoid alcohol.
- Do not take medication with or immediately after a high-fat meal.

ramipril

ram-i-pril
(*Altace*)

BLACK BOX ALERT ■ May cause fetal injury, mortality. Discontinue as soon as possible once pregnancy is detected. **Do not confuse Altace with alteplase, Amaryl, or Artane, or ramipril with enalapril or Monopril.**

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin-converting enzyme (ACE) inhibitor. **CLINICAL:** Antihypertensive.

USES

Treatment of hypertension. Used alone or in combination with other antihypertensives.

Treatment of HF following MI. Reduce risk of heart attack, stroke in pts 55 yrs and older at increased risk of developing major cardiovascular events. **OFF-LABEL:** HF. Delay progression of nephropathy, reduce risks of cardiovascular events in hypertensive pts with type 1 or type 2 diabetes.

PRECAUTIONS

Contraindications: Hypersensitivity to ramipril, other ACE inhibitors. History of ACE inhibitor–induced angioedema, concomitant use with aliskiren in pts with diabetes. Concomitant use or within 36 hrs of switching to or from a neprilysin inhibitor (e.g., sacubitril). **Cautions:** Renal impairment; elderly pts; collagen vascular disease; hyperkalemia; hypertrophic cardiomyopathy with outflow tract obstruction; unstented unilateral, bilateral renal artery stenosis; severe aortic stenosis; before, during, or immediately after major surgery; concomitant potassium supplements.

ACTION

Suppresses renin-angiotensin-aldosterone system. Blocks conversion of angiotensin I to angiotensin II, increases plasma renin activity, decreases aldosterone secretion. **Therapeutic Effect:** Reduces peripheral arterial resistance, decreasing B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1–2 hrs	3–6 hrs	24 hrs

Well absorbed from GI tract. Protein binding: 73%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 5.1 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. May cause fetal or neonatal mortality or morbidity. **Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to hypotensive effects.

INTERACTIONS

DRUG: Aliskiren may increase hyperkalemic effect. May increase potential for allergic reactions to allopurinol. Angiotensin receptor blockers (e.g., losartan, valsartan) may increase adverse effects. May increase adverse effects of lithium, sacubitril. **HERBAL:** Herbals with hypertensive properties (e.g., licorice, yohimbe) or hypotensive properties (e.g., garlic, ginger, ginkgo biloba) may alter effects. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, bilirubin, creatinine, potassium, ALT, AST. May decrease serum sodium. May cause positive antinuclear antibody (ANA) titer.

AVAILABILITY (Rx)

Capsules: 1.25 mg, 2.5 mg, 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.
- May mix with water, apple juice/sauce.

INDICATIONS/ROUTES/DOSAGE

Hypertension (Monotherapy)

PO: ADULTS, ELDERLY: Initially, 2.5 mg/day. Titrate to desired effect after 2–4 wks up to 20 mg daily in 1 or 2 divided doses. **Pts with volume depletion:** Initially, 1.25 mg daily. Titrate to desired response.

HF Following MI

PO: ADULTS, ELDERLY: Initially, 1.25–2.5 mg twice daily. Continue for 1 wk, then titrate upward q3wks to target dose of 5 mg twice daily.

Risk Reduction for MI/Stroke

PO: ADULTS, ELDERLY: Initially, 2.5 mg/day for 7 days, then 5 mg/day for 21 days, then 10 mg/day as a single dose (or in divided doses in hypertensive or recent post-MI pts).

Dosage in Renal Impairment

CrCl equal to or less than 40 mL/min: 25% of normal dose.

Renal Failure and Hypertension

Initially, 1.25 mg/day titrated upward. **Maximum:** 5 mg/day. **Renal failure and HF:** Initially, 1.25 mg/day, titrated up to 2.5 mg twice daily.

Dosage in Hepatic Impairment

No dose adjustment. Discontinue for jaundice or marked elevation of hepatic enzymes.

SIDE EFFECTS

Frequent (12%–5%): Cough, headache. **Occasional (4%–2%):** Dizziness, fatigue, nausea, asthenia. **Rare (less than 2%):** Palpitations, insomnia, nervousness, malaise, abdominal pain, myalgia.

ADVERSE EFFECTS/TOXIC REACTIONS

Excessive hypotension (“first-dose syncope”) may occur in pts with HF, severely salt or volume depleted. Angioedema, hyperkalemia occur rarely. Agranulocytosis, neutropenia may be noted in pts with collagen vascular disease (scleroderma, systemic lupus erythematosus), renal impairment. Nephrotic syndrome may be noted in those with history of renal disease. May cause angioedema of the face, neck, throat, tongue. Cholestatic jaundice, fulminant hepatic necrosis may occur.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain B/P immediately before each dose, in addition to regular monitoring (be alert to fluctuations). If excessive reduction in B/P occurs, place pt in supine position with legs elevated. Renal function tests should be performed before beginning therapy. Question history of hypersensitivity reaction, angioedema.

INTERVENTION/EVALUATION

In pts with prior renal disease, urine test for protein (by dipstick method) should be made with first urine of day before beginning therapy and periodically thereafter. In pts with renal impairment, autoimmune disease, or taking drugs that affect

leukocytes or immune response, CBC, differential count should be performed before beginning therapy and q2wks for 3 mos periodically thereafter. Monitor B/P, renal function, serum potassium, WBC. Assess for cough (frequent effect). Assist with ambulation if dizziness occurs. Assess lung sounds for rales, wheezing in pts with HF. Monitor urinalysis for proteinuria. Monitor serum potassium in pts on concurrent diuretic therapy.

PATIENT/FAMILY TEACHING

- Do not discontinue medication without physician’s approval.
- Slowly go from lying to standing to minimize hypotensive effect.
- Report palpitations, cough, chest pain.
- Dizziness may occur in first few days.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Avoid alcohol.
- Report swelling of the face, lips, or tongue.

ramucirumab

ra-mue-sir-ue-mab
(Cyramza)

BLACK BOX ALERT ■ May increase risk of severe, and sometimes fatal, hemorrhage, GI hemorrhage, and GI perforation. Permanently discontinue if severe bleeding occurs. May impair wound healing.

Do not confuse ramucirumab with ranibizumab.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Vascular endothelial growth factor (VEGF) inhibitor. Monoclonal antibody. **CLINICAL:** Antineoplastic.

USES

As a single agent or in combination with PACLitaxel, for treatment of advanced or metastatic gastric or gastroesophageal junction adenocarcinoma with disease

progression on or after prior fluoropyrimidine- or platinum-containing chemotherapy. In combination with DOCETaxel, for treatment of metastatic non-small-cell lung cancer (NSCLC) with disease progression on or after platinum-based chemotherapy. In combination with FOLFIRI, for treatment of metastatic colorectal cancer with disease progression on or after therapy with bevacizumab, oxaliplatin, and a fluoropyrimidine. Treatment of advanced or relapsed/refractory hepatocellular carcinoma (as a single agent).

PRECAUTIONS

Contraindications: Hypersensitivity to ramucirumab. **Cautions:** History of arterial/venous thromboembolism (e.g., MI, cardiac arrest, CVA, cerebral ischemia), hepatic cirrhosis, electrolyte imbalance, hypertension, GI bleeding/perforation, chronic/unhealed wounds; baseline neutropenia, thrombocytopenia.

ACTION

Binds vascular endothelial growth factor (VEGF) receptor 2 and blocks binding of VEGF ligands, VEGF-A, VEGF-C, and VEGF-D. **Therapeutic Effect:** Inhibits/reduces tumor vascularity and growth.

R

PHARMACOKINETICS

Metabolism not specified. Elimination not specified.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Contraception recommended during treatment and up to 3 mos after discontinuation. Must either discontinue drug or discontinue breastfeeding. Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase adverse effects/toxic reactions of **belimumab**. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase urine protein. May decrease neutrophils, serum sodium.

AVAILABILITY (Rx)

Injection Solution: 100 mg/10 mL, 500 mg/50 mL.

ADMINISTRATION/HANDLING

• Do not administer IV push or bolus. • Recommend premedication with IV histamine H₁ antagonist (e.g., diphenhydramine) prior to each infusion. Pts with prior Grade 1 or Grade 2 infusion reaction should also be premedicated with dexamethasone (or equivalent) and acetaminophen prior to each infusion. • Thoroughly flush IV with 0.9% NaCl upon infusion completion.

Reconstitution • Calculate dose, required solution volume, and number of vials needed using weight in kg. • Vials contain either 100 mg/10 mL or 500 mL/50 mL at concentration of 10 mg/mL. • Visually inspect for particulate matter. Discard if particulate matter or discoloration observed. • Using 250 mL 0.9% NaCl bag, withdraw and discard a volume equal to the total calculated volume of solution. • Slowly add required dose to diluent bag for final volume of 250 mL. Gently invert bag to mix; do not shake.

Rate of administration • Infuse over 60 min using 0.22-micron in-line filter via dedicated line.

Storage • Refrigerate vials in original carton until time of use. • Do not freeze. • Diluted solution may be refrigerated up to 24 hrs or stored at room temperature for up to 4 hrs. • Protect from light.

IV INCOMPATIBILITIES

Do not dilute in dextrose-containing fluids or infuse concomitantly with other electrolytes or medications.

INDICATIONS/ROUTES/DOSAGE

Gastric Cancer (Advanced or Metastatic)

IV; ADULTS, ELDERLY: 8 mg/kg every 14 days, either as a single agent or in combination with wkly PAClitaxel. Continue until disease progression or unacceptable toxicity.

NSCLC

IV: ADULTS, ELDERLY: 10 mg/kg on day 1 of a 21-day cycle in combination with DOCetaxel. Continue until disease progression or unacceptable toxicity.

Colorectal Cancer

IV: ADULTS, ELDERLY: 8 mg/kg q2wks, in combination with FOLFIRI (irinotecan, leucovorin, 5-fluorouracil). Continue until disease progression or unacceptable toxicity.

Hepatocellular Carcinoma

IV: ADULTS, ELDERLY: 8 mg/kg q2wks (as single agent). Continue until disease progression or unacceptable toxicity.

Dose Modification

Based on Common Terminology Criteria for Adverse Events (CTCAE).

Infusion-related reaction: Reduce infusion rate by 50% for Grade 1 or Grade 2 reaction. Permanently discontinue for Grade 3 or Grade 4 reaction.

Severe hypertension: Interrupt treatment until controlled with medical management. Permanently discontinue for severe hypertension that is not controlled with antihypertensive therapy.

Proteinuria: Interrupt treatment for urine protein level greater than or equal to 2 g/24 hrs. Restart treatment at reduced dose of 6 mg/kg every 14 days once urine protein level returns to less than 2 g/24 hrs. If level greater than or equal to 2 g/24 hrs recurs, interrupt treatment and reduce dose to 5 mg/kg every 14 days once level returns to less than 2 g/24 hrs. Permanently discontinue for urine protein level greater than 3 g/24 hrs or in the setting of nephrotic syndrome.

Wound healing complications: Interrupt treatment prior to scheduled surgery until wound is fully healed.

Arterial thromboembolic events, GI perforation, or Grade 3 or Grade 4 bleeding: Permanently discontinue.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Use caution.

SIDE EFFECTS

Occasional (16%–9%): Hypertension, diarrhea, headache. **Ramucirumab plus Paclitaxel: Frequent (57%–20%):** Fatigue, diarrhea, peripheral edema, hypertension, stomatitis.

ADVERSE EFFECTS/TOXIC REACTIONS

Severe, and sometimes fatal, hemorrhagic events including GI bleeding occurred in 3.4% of pts receiving single agent and in 4.3% of pts receiving combo therapy. GI perforations occurred in 0.7% of pts receiving single agent and in 1.2% of pts receiving combo therapy. Thromboembolic events including arterial thromboembolism, CVA, MI reported in 1.7% of pts. Severe hypertension occurred in 8% of pts receiving single agent and in 15% of pts receiving combo therapy despite medical management. Severe infusion-related reactions such as back pain/spasms, bronchospasm, chest pain, chills, dyspnea, flushing, hypotension, hypoxia, paresthesia, rigors/tremors, supraventricular tachycardia, wheezing occurred in 16% of pts. May cause ineffective wound healing or wound dehiscence requiring medical intervention. Reversible posterior leukoencephalopathy syndrome (RPLS) reported in less than 1% of pts. Proteinuria may indicate nephrotic syndrome. Clinical deterioration of hepatic cirrhosis, manifested by new-onset or worsening encephalopathy, ascites, or hepatorenal syndrome, was reported in pts receiving single agent. Other adverse reactions include epistaxis, intestinal obstruction, neutropenia, severe rash, thrombocytopenia. Immunogenicity (anti-ramucirumab antibodies) occurred in 6% of pts.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain CBC, BMP, urinalysis, urine protein, vital signs. Assess skin for open wounds. Question possibility of pregnancy,

current breastfeeding status. Receive full medication history including vitamins, herbal products. Question history of CVA, hepatic impairment/cirrhosis, hypertension, MI, prior hypersensitivity reaction. Offer emotional support.

INTERVENTION/EVALUATION

Monitor CBC, electrolytes, urinalysis, urine protein. Routinely assess vital signs and report hypertension. Persistent diastolic hypertension may indicate hypertensive emergency. Obtain ECG for arrhythmia, chest pain, palpitation. Consider RPLS in pts with altered mental status, confusion, headache, seizure, visual disturbances. Encourage PO intake. Screen for GI bleeding, GI perforation. Notify physician if any CTCAE toxicities occur (see Appendix M). Monitor for hypersensitivity reaction. Once infusion is completed, IV access must be flushed with NS.

PATIENT/FAMILY TEACHING

- Blood levels will be routinely monitored.
- Treatment may cause severe allergic reaction or infusion-related reaction.
- Avoid pregnancy; treatment may cause birth defects or miscarriage. Do not breastfeed. Contraception should be taken during treatment and up to 3 mos after discontinuation.
- Neurologic changes, including altered mental status, headache, seizures, trouble speaking, may indicate high blood pressure crisis or life-threatening brain swelling.
- Immediately report abdominal pain, GI bleeding, vomiting blood.
- Therapy may cause severe blood-clotting events such as heart attack or stroke.

raNITidine

ra-nit-i-deen

(Apo-RaNITidine , Zantac, Zantac-75, Zantac-150 Maximum Strength)

Do not confuse raNITidine with amantadine or riMANTAdine, or

Zantac with Xanax, Ziac, Zofran, or ZyrTEC.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Histamine H₂-receptor antagonist. **CLINICAL:** GI agent.

USES

Short-term treatment of active duodenal ulcer. Prevention of duodenal ulcer recurrence. Treatment of active benign gastric ulcer, pathologic GI hypersecretory conditions, acute gastroesophageal reflux disease (GERD), including erosive esophagitis. Maintenance of healed erosive esophagitis. **OTC:** Relief of heartburn, acid indigestion, sour stomach. **OFF-LABEL:** Treatment of upper GI bleeding. Prevention of stress-induced ulcers in ICU. Anaphylaxis (adjunct therapy). Premedication to prevent taxane hypersensitivity.

PRECAUTIONS

Contraindications: Hypersensitivity to raNITidine. **OTC:** Do not use if trouble or pain when swallowing food, vomiting with blood, or bloody or black stool is present. Do not use 150 mg with kidney disease (unless medically advised). **Cautions:** Renal/hepatic impairment, elderly pts, history of acute porphyria.

ACTION

Inhibits histamine action at histamine H₂-receptors of gastric parietal cells. **Therapeutic Effect:** Inhibits gastric acid secretion. Reduces gastric volume, hydrogen ion concentration.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 15%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life: PO:** 2.5 hrs; **IV:** 2–2.5 hrs (increased with renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** No age-related precautions noted. **Elderly:** Confusion more likely with hepatic/renal impairment.

INTERACTIONS

DRUG: Magnesium or aluminum antacids may decrease absorption. May decrease absorption of atazanavir, itraconazole, ketoconazole. May decrease concentration/effects of acalabrutinib, bosutinib, cefuroxime, neratinib, pazopanib. May increase concentration/effect of risedronate, warfarin. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** Interferes with skin tests using allergen extracts. May increase serum ALT, AST, GGT, creatinine.

AVAILABILITY (Rx)

Capsules: 150 mg, 300 mg. **Injection Solution:** 25 mg/mL. **Syrup:** 15 mg/mL. **Tablets:** 75 mg, 150 mg, 300 mg.

ADMINISTRATION/HANDLING

Reconstitution • For IV push, dilute each 50 mg with 20 mL 0.9% NaCl, D₅W. • For intermittent IV infusion (piggyback), dilute each 50 mg with 0.9% NaCl, D₅W to a maximum concentration of 0.5 mg/mL. • For IV infusion, dilute with 0.9% NaCl, D₅W to a maximum concentration of 2.5 mg/mL.

Rate of administration • Administer IV push over minimum of 5 min (prevents arrhythmias, hypotension). • Infuse IV piggyback over 15–20 min. • Infuse IV infusion over 24 hrs.

Storage • IV solutions appear clear, colorless to yellow (slight darkening does not affect potency). • IV infusion (piggyback) is stable for 48 hrs at room temperature (discard if discolored or precipitate forms).

IM

• May be given undiluted. • Give deep IM into large muscle mass.

PO

• Give without regard to food (best given with meals or at bedtime). • Do not administer within 1 hr of magnesium- or aluminum-containing antacids (decreases absorption).

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec).

IV COMPATIBILITIES

Dexmedetomidine (Precedex), diltiazem (Cardizem), DOBUTamine (Dobutrex), DOPamine (Intropin), heparin, HYDROMORPHONE (Dilaudid), insulin, lidocaine, LORazepam (Ativan), morphine, norepinephrine (Levophed), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Duodenal Ulcer

PO: ADULTS, ELDERLY: Treatment: 150 mg twice daily or 300 mg once daily. **Maintenance:** 150 mg once daily at bedtime. **CHILDREN 1 MO TO 16 YRS: Treatment:** 4–8 mg/kg/day in 2 divided doses. **Maximum:** 300 mg/day. **Maintenance:** 2–4 mg/kg/day once daily. **Maximum:** 150 mg/day.

Gastric Ulcer (Benign)

PO: ADULTS, ELDERLY: Treatment: 150 mg 2 times/day. **Maintenance:** 150 mg once daily at bedtime. **CHILDREN 1 MO–16 YRS: Treatment:** 4–8 mg/kg/day in 2 divided doses. **Maximum:** 300 mg/day. **Maintenance:** 2–4 mg/kg/day once daily. **Maximum (healing):** 150 mg/day.

Hypersecretory Conditions

PO: ADULTS, ELDERLY: 150 mg twice daily up to 6 g/day. **IV Infusion:** 6.25 mg/hr.

GERD

PO: ADULTS, ELDERLY: 75 mg twice daily. If symptoms persist after 2–4 wks, may increase to 150 mg twice daily for 2 wks. **CHILDREN 1 MO TO 16 YRS:** 5–10 mg/kg/day in 2 divided doses. **Maximum:** 300 mg/day.

Erosive Esophagitis

PO: ADULTS, ELDERLY: Treatment: 150 mg 4 times/day. **Maintenance:** 150 mg twice daily. **CHILDREN 1 MO TO 16**

1000 ranolazine

YRS: Treatment: 5–10 mg/kg/day in 2 divided doses. **Maximum:** 300 mg/day.

Prevention of Heartburn (OTC)

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 75–150 mg 30–60 min before eating or drinking beverages that cause heartburn. **Maximum:** 2 doses/day. Do not use more than 14 days.

Usual Parenteral Dosage

IV: ADULTS, ELDERLY: 50 mg q6–8h. **CHILDREN:** 2–4 mg/kg/day in divided doses q6–8h. **Maximum:** 50 mg/dose. **IV infusion:** 6.25 mg/hr.

Usual Neonatal Dosage

PO: NEONATES: 2 mg/kg/dose q8h. **IV: NEONATES:** Initially, 1.5 mg/kg/dose, then 1.5–2 mg/kg/day in divided doses q8h. **IV infusion: NEONATES:** Loading dose: 1.5 mg/kg, then 1–2 mg/kg/day (0.04–0.08 mg/kg/hr).

Dosage in Renal Impairment

CrCl less than 50 mL/min: Give 150 mg PO q24h or 50 mg IV q18–24h.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (2%): Diarrhea. **Rare (1%):** Constipation, headache (may be severe).

ADVERSE EFFECTS/TOXIC REACTIONS

Reversible hepatitis, blood dyscrasias occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain history of epigastric/abdominal pain.

INTERVENTION/EVALUATION

Assess mental status in elderly. Question present abdominal pain, GI distress.

PATIENT/FAMILY TEACHING

• Smoking decreases effectiveness of medication. • Do not take medicine

within 1 hr of magnesium- or aluminum-containing antacids. • Transient burning/pruritus may occur with IV administration. • Report headache. • Avoid alcohol, aspirin.

ranolazine

ra-noe-la-zeen
(Ranexa)

Do not confuse Ranexa with CeleXA.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Cardiovascular agent. **CLINICAL:** Antianginal agent.

USES

Treatment of chronic angina.

PRECAUTIONS

Contraindications: Hypersensitivity to ranolazine. Hepatic cirrhosis, concurrent use of strong CYP3A inhibitors (e.g., rifampin, carbamazepine) or CYP3A inducers (e.g., ketoconazole, itraconazole, fluconazole, clarithromycin, erythromycin). **Cautions:** Renal/hepatic impairment. Preexisting QT prolongation, concurrent use with medications known to prolong QT interval, pts 75 yrs of age or older, hypokalemia, hypomagnesemia.

ACTION

Inhibits inward current of sodium channel during cardiac repolarization, thereby reducing calcium influx. Decreased influx of calcium reduces ventricular tension, myocardial oxygen demand. Does not reduce heart rate, B/P. **Therapeutic Effect:** Exerts antianginal, anti-ischemic effects on cardiac tissue.

PHARMACOKINETICS

Absorption highly variable. Peak plasma concentration: 2–5 hrs. Rapidly, extensively metabolized in intestine, liver.

Protein binding: 62%. Excreted in urine (75%), feces (25%). **Half-life:** 7 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: See contraindications. **Strong CYP3A4 inducers** (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. **Calcium channel blockers** (e.g., diltiazem, verapamil), **strong CYP3A4 inhibitors** (e.g., clarithromycin, ketoconazole) may increase concentration/effect. May increase concentration/effect of digoxin, simvastatin, tacrolimus. **HERBAL:** St. John's wort may decrease concentration/effects. **FOOD:** Grapefruit products may increase plasma concentration, risk of QT prolongation. **LAB VALUES:** May slightly elevate serum BUN, creatinine.

AVAILABILITY (Rx)

Tablets, Extended-Release: 500 mg, 1,000 mg.

ADMINISTRATION/HANDLING

PO

- May give without regard to food.
- Do not break, crush, dissolve, or divide extended-release tablets.

INDICATIONS/ROUTES/DOSAGE

Chronic Angina

PO: ADULTS, ELDERLY: Initially, 500 mg twice daily. May increase to 1,000 mg twice daily, based on clinical response. Dose should not exceed 500 mg twice daily when used concurrently with moderate CYP3A inhibitors (e.g., diltiazem, verapamil).

Dosage in Renal/Hepatic Impairment

No dose adjustment (discontinue if acute renal failure develops). Contraindicated in pts with cirrhosis.

SIDE EFFECTS

Occasional (6%–4%): Dizziness, headache, constipation, nausea. **Rare (2%–1%):** Peripheral edema, abdominal pain, dry mouth, vomiting, tinnitus, vertigo, palpitations.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose manifested as confusion, diplopia, dizziness, paresthesia, syncope.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Receive full medication history and screen for contraindications. Question history of hepatic impairment, long QT syndrome. Record onset, type (sharp, dull, squeezing), radiation, location, intensity, duration of anginal pain, precipitating factors (exertion, emotional stress). Obtain baseline ECG.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Give with food if nausea occurs. Assess for relief of anginal pain. Monitor ECG, pulse for irregularities.

PATIENT/FAMILY TEACHING

- Avoid grapefruit products.
- Do not chew, crush, dissolve, or divide extended-release tablets.
- Avoid tasks requiring alertness, motor skills until response to drug is established.

rasagiline

ra-sa-ji-leen
(Azilect, Apo-Rasagiline) 
Do not confuse Azilect with Aricept.

CLASSIFICATION

PHARMACOTHERAPEUTIC: MAO type B inhibitor. **CLINICAL:** Antiparkinson agent.

USES

Treatment of signs/symptoms of Parkinson's disease as initial monotherapy or as adjunct therapy with or without levodopa.

PRECAUTIONS

Contraindications: Hypersensitivity to rasagiline. Concurrent use with methadone, tramadol, meperidine, MAOIs within 14 days of rasagiline, cyclobenzaprine, dextromethorphan, or St. John's wort.

Cautions: Hepatic impairment (avoid use in moderate to severe impairment); cardiovascular, cerebrovascular disease, pts with hypotension. Avoid foods high in tyramine. Do not use within 5 wks of stopping FLUoxetine; do not start tricyclic, SSRI, or SNRI within 2 wks of stopping rasagiline. History of major psychotic disorder.

ACTION

Irreversibly and selectively inhibits monoamine oxidase type B, an enzyme that plays a major role in catabolism of DOPamine. Inhibition of DOPamine depletion reduces symptomatic motor deficits of Parkinson's disease. **Therapeutic Effect:** Reduces symptoms of Parkinson's disease, appears to delay disease progression.

R**PHARMACOKINETICS**

Rapidly absorbed following PO administration. Protein binding: 88%–94%. Metabolized in liver. Excreted in urine (62%), feces (7%). **Half-life:** 1.3–3 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Alcohol may increase adverse effects. **Amphetamines, MAOIs (e.g., phenelzine, selegiline), sympathomimetics (e.g., DOPamine)** may cause hypertensive crisis. **Anorexiants**

(e.g., dexfenfluramine, fenfluramine, sibutramine), CNS stimulants (e.g., methylphenidate), cyclobenzaprine, dextromethorphan, meperidine, methadone, mirtazapine, serotonin or norepinephrine reuptake inhibitors (e.g., citalopram, sertraline, venlafaxine), tricyclic antidepressants (e.g., amitriptyline), venlafaxine may cause serotonin syndrome. May increase risk of atomoxetine, buPROPion toxicity. **Levodopa** may cause hypertensive/hypotensive reaction. **HERBAL:** Herbals with hypotensive properties (e.g., black cohosh, garlic) may increase effect. **FOOD:** Caffeine, foods/beverages containing tyramine may result in hypertensive reaction, hypertensive crisis. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, ALT, AST. May cause leukopenia.

AVAILABILITY (Rx)

Tablets: 0.5 mg, 1 mg.

ADMINISTRATION/HANDLING**PO**

• Give without regard to food. • Avoid food, beverages containing tyramine (e.g., cheese, sour cream, yogurt, pickled herring, liver, figs, raisins, bananas, avocados, soy sauce, broad beans, yeast extracts, meat tenderizers, red wine, beer), excessive amounts of caffeine (e.g., coffee, tea).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ When used in combination with levodopa, dosage reduction of levodopa should be considered.

Parkinson's Disease

PO: ADULTS, ELDERLY, MONOTHERAPY, ADJUNCTIVE THERAPY WITHOUT LEVODOPA: 1 mg once daily. **ADULTS, ELDERLY, ADJUNCTIVE THERAPY WITH LEVODOPA:** Initially, 0.5 mg once daily. If therapeutic response is not achieved, dose may be increased to 1 mg once

daily. **ADJUNCTIVE THERAPY WITHOUT LEVODOPA:** 1 mg once daily.

Dose Modification

Concomitant use of CYP1A2 inhibitors, ciprofloxacin: 0.5 mg once daily.

Dosage in Hepatic Impairment

Mild impairment: 0.5 mg once daily.
Moderate to severe impairment: Not recommended.

Dosage in Renal Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (14%–12%): Headache, nausea.
Occasional (9%–5%): Orthostatic hypotension, weight loss, dyspepsia, dry mouth, arthralgia, depression, hallucinations, constipation.
Rare (4%–2%): Fever, vertigo, ecchymosis, rhinitis, neck pain, arthritis, paresthesia.

ADVERSE EFFECTS/TOXIC REACTIONS

Increase in dyskinesia (impaired voluntary movement), dystonia (impaired muscular tone) occurs in 18% of pts, angina occurs in 9%. Gastroenteritis, conjunctivitis occur rarely (3% of pts).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline LFT, blood pressure. Receive full medication history and screen for interactions. Question history of severe hepatic impairment, cardiovascular disease.

INTERVENTION/EVALUATION

Give with food if nausea occurs. Monitor B/P. Instruct pt to slowly go from lying to standing to prevent orthostatic hypotension. Assess for clinical reversal of symptoms (improvement of tremor of head/hands at rest, mask-like facial expression, shuffling gait, muscular rigidity). If hallucinations or dyskinesia occurs, symptoms may be eliminated if levodopa dosage is reduced. Hallucinations generally are accompanied by confusion and, to a lesser extent, insomnia.

PATIENT/FAMILY TEACHING

- Orthostatic hypotension may occur more frequently during initial therapy.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Hallucinations may occur (more so in the elderly with Parkinson's disease), typically within first 2 wks of therapy.
- Avoid foods that contain tyramine (cheese, sour cream, beer, wine, pickled herring, liver, figs, raisins, bananas, avocados, soy sauce, yeast extracts, yogurt, papaya, broad beans, meat tenderizers), excessive amounts of caffeine (coffee, tea, chocolate), OTC preparations for hay fever, colds, weight reduction (may produce significant rise in B/P).
- Do not take any newly prescribed medications unless approved by prescriber who originally started therapy.

rasburicase

ras-bure-i-kase
(Elitek, Fasturtec )

BLACK BOX ALERT Severe hypersensitivity reactions including anaphylaxis reported. May cause severe hemolysis in pts with glucose-6-phosphate dehydrogenase (G6PD) deficiency. Screen pts at high risk for G6PD (African or Mediterranean descent) prior to therapy. Methemoglobinemia has been reported. Blood samples left at room temperature may interfere with uric acid measurements. Must collect blood samples in prechilled tubes containing heparin and immediately immerse in ice water bath. Assay plasma samples within 4 hrs of collection. Elitek enzymatically degrades uric acid in blood samples left at room temperature.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Urate-oxidase enzyme. **CLINICAL:** Antihyperuricemic.

USES

Initial management of uric acid levels in pts with leukemia, lymphoma, and solid tumor malignancies who are receiving chemotherapy expected to result in tumor lysis and subsequent elevation of plasma uric acid.

PRECAUTIONS

Contraindications: History of anaphylaxis or severe hypersensitivity to rasburicase. Prior rasburicase-associated drug reactions including hemolysis, methemoglobinemia. History of G6PD deficiency. **Cautions:** Pts at high risk for G6PD deficiency (e.g., African, Mediterranean, or Southeast Asian descent).

ACTION

A urate-oxidase enzyme that converts uric acid into allantoin (an inactive metabolite of uric acid). Does not inhibit formation of uric acid. **Therapeutic Effect:** Decreases uric acid levels.

PHARMACOKINETICS

Half-life: 16–23 hrs.

 **LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: Unknown if distributed in breast milk. Unknown if crosses placenta. May cause fetal harm. **Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin, ALT. May decrease serum phosphate.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 1.5 mg/vial, 7.5 mg/vial.

ADMINISTRATION/HANDLING

Reconstitution • Must use diluent provided in carton. • Reconstitute 1.5-mg vial with 1 mL of diluent or 7.5-mg

vial with 5 mL of diluent to provide concentration of 1.5 mg/mL. • Gently swirl to mix. Do not shake. • Inspect for particulate matter or discoloration. • Inject calculated dose into appropriate volume of 0.9% NaCl to achieve a final volume of 50 mL.

Rate of administration • Infuse over 30 min. • Do not use filter during reconstitution or infusion.

Storage • Refrigerate solution until time of use. • Discard after 24 hrs following reconstitution.

 **IV INCOMPATIBILITIES**

Do not mix with other IV medications.

INDICATIONS/ROUTES/DOSAGE

Note: Indicated only for a single course of treatment.

Management of Hyperuricemia

IV: ADULTS, ELDERLY, CHILDREN: 0.05–0.2 mg/kg once daily for 1–7 days.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (50%–46%): Vomiting, fever. **Occasional (27%–13%):** Nausea, headache, abdominal pain, constipation, diarrhea, mucositis, rash.

ADVERSE EFFECTS/TOXIC REACTIONS

Hypersensitivity reactions occurred in 4.3% of pts including injection irritation, peripheral edema, urticaria, pruritus. Anaphylaxis, hemolysis, methemoglobinemia occurred in less than 1%. Pulmonary hemorrhage, respiratory failure, supraventricular arrhythmias, ischemic coronary artery disorders, sepsis, abdominal, gastrointestinal infections occurred in greater than 2% of pts. Clinical tumor lysis syndrome (TLS), manifested by hyperuricemia, hyperkalemia, hyperphosphatemia, seizure, increased serum creatinine, renal failure reported in 3% of pts. Anti-rasburicase antibodies reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, BMP, LFT, serum phosphate, uric acid level; urine pregnancy if applicable. Question for history of prior hypersensitivity reactions. Assess G6PD deficiency risk in potential candidates.

INTERVENTION/EVALUATION

Offer antiemetics to control nausea, vomiting. Monitor CBC, BMP, LFT, serum phosphate. If hypersensitivity reaction occurs, stop infusion and immediately notify physician. Screen for clinical tumor lysis syndrome, hemolysis, methemoglobinemia. Follow strict procedure when collecting uric acid levels. Obtain ECG for chest pain/tightness, hyperkalemia, dyspnea. Assess skin for rash.

PATIENT/FAMILY TEACHING

- Report any allergic reaction, bronchospasm, chest pain or tightness, cough, difficulty breathing, dizziness, fainting, rash, or itching.

regorafenib

re-goe-raf-e-nib
(Stivarga)

■ **BLACK BOX ALERT** ■ Severe, sometimes fatal, hepatotoxicity reported. Monitor hepatic function prior to and during treatment. Interrupt, reduce, or discontinue therapy if hepatotoxicity or hepatocellular necrosis occurs.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Vascular endothelial growth factor (VEGF) inhibitor. Tyrosine kinase inhibitor.

CLINICAL: Antineoplastic.

USES

Treatment of metastatic colorectal cancer in pts who have been previously treated with fluoropyrimidine/oxaliplatin/

irinotecan-based chemotherapy, anti-VEGF or anti-EGFR therapy. Locally advanced, unresectable or metastatic GI stromal tumor previously treated with imatinib and SUNTInib. Treatment of hepatocellular carcinoma (HCC) previously treated with sorafenib.

PRECAUTIONS

Contraindications: Hypersensitivity to regorafenib. **Cautions:** Mild to moderate hepatic impairment (not recommended with severe hepatic impairment), hypertension (not recommended with severe or uncontrolled hypertension), recent surgical/dental procedures, chronic open wounds/ulcers, hemoptysis, concomitant warfarin therapy, cardiovascular disease, recent MI.

ACTION

Inhibits tyrosine kinase activity involved with tumor angiogenesis, oncogenesis, and maintenance of tumor microenvironment. **Therapeutic Effect:** Inhibits tumor cell growth and metastasis.

PHARMACOKINETICS

Readily absorbed following PO administration. Metabolized in liver. Protein binding: 99.5%. Peak plasma concentration: 4 hrs. Excreted in feces (71%), urine (19%). **Half-life:** 28 hrs (Range: 14–58 hrs).

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Not recommended in nursing mothers. Unknown if distributed in breast milk. Contraception recommended during treatment and up to 2 mos after discontinuation of therapy. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A4 inducers (e.g., carbamazepine, phenytoin) may decrease concentration/effects. Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole) may increase

concentration/effects. **HERBAL:** **St. John's wort** may decrease concentration/effects. **FOOD:** **Grapefruit products** may increase concentration/effects. **High-fat meal** may increase absorption/concentration. **LAB VALUES:** May decrease lymphocytes, neutrophils, platelets, serum calcium, phosphorus, potassium, sodium. May increase serum bilirubin, ALT, AST, lipase, amylase, INR, urine protein.

AVAILABILITY (Rx)

 **Tablets:** 40 mg.

ADMINISTRATION/HANDLING

PO

- Take at same time each day with low-fat (less than 30%) breakfast.
- Give whole; do not break, crush, dissolve, or divide tablet.

INDICATIONS/ROUTES/DOSAGE

Metastatic Colorectal Cancer, GI Stromal Tumor, Hepatocellular Carcinoma

PO: ADULTS/ELDERLY: 160 mg once daily for first 21 days of each 28-day cycle. Continue until disease progression or unacceptable toxicity.

Dosage Modification

Symptomatic Hypertension, Toxic Skin Reactions, Severe Side Effects (Grades 3–4)

PO: ADULTS/ELDERLY: Reduce dose to 120 mg once daily. If recovery does not occur within 7 days (despite dose reduction), interrupt treatment for minimum of 7 days and reassess. If recovery does not occur after interruption, reduce dose to 80 mg once daily. Discontinue for any of the following: intolerance of 80-mg dose; serum ALT or AST greater than 20 times upper limit of normal (ULN); serum ALT/AST greater than 3 times ULN and bilirubin greater than 2 times ULN; recurrent serum ALT/AST greater than 5 times ULN despite dose of 120 mg; recovery failure of Grade 3 or 4 side effects, toxic skin reaction.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Not recommended.

SIDE EFFECTS

Frequent (64%–26%): Asthenia/fatigue, anorexia, diarrhea, mucositis, weight loss, hypertension, dysphonia, generalized pain, fever, rash. **Occasional (10%–5%):** Headache, alopecia, dysgeusia, musculoskeletal stiffness, dry mouth. **Rare (2% or Less):** Tremor, gastric reflux.

ADVERSE EFFECTS/TOXIC REACTIONS

May cause GI perforation, GI fistula formation. Hemorrhaging of respiratory, GI, genitourinary tracts reported in 21% of pts. Hypertension (30% of pts) may lead to hypertensive crisis. May cause ineffective wound healing or wound dehiscence requiring medical intervention. Palmar-plantar erythrodysesthesia syndrome (PPES), a chemotherapy-induced skin condition that presents with redness, swelling, numbness, skin sloughing of hands, feet (45% of pts). Reversible posterior leukoencephalopathy syndrome (RPLS) reported in less than 1% of pts. May induce cardiac ischemia and/or MI. Severe, sometimes fatal, hepatotoxicity including hepatocellular necrosis reported in less than 1%. Various, unspecified infections reported in 31% of pts (most likely due to neutropenia).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline vital signs, CBC with differential, serum magnesium, phosphate, ionized calcium, urinalysis, urine pregnancy, urine protein, LFT, amylase, lipase, PT/INR. Assess recent surgical/dental procedures. Question possibility of pregnancy, current breastfeeding status. Obtain full medication history including herbal products. Question for history of hypertension, hepatic impairment, cardiovascular disease. Assess skin for open/unhealed wounds. Offer emotional support.

INTERVENTION/EVALUATION

Monitor B/P, CBC, electrolytes, urinalysis. Monitor LFT q2wks for 2 mos, then monthly; or every wk if elevated. Persistent diastolic hypertension may indicate hypertensive emergency. Obtain ECG for palpitation, chest pain, hypokalemia, hyperkalemia, hypocalcemia, bradycardia, ventricular arrhythmias. Reverse posterior leukoencephalopathy syndrome (RPLS) should be considered in pts with seizure, headache, visual disturbances, altered mental status, malignant hypertension. Assess hydration status. Encourage PO intake. Immediately report any hemorrhaging, bloody stools, hematuria, abdominal pain, hemoptysis (may indicate GI perforation/fistula formation).

PATIENT/FAMILY TEACHING

- Blood levels will be routinely monitored.
- Avoid pregnancy. Contraception should be practiced during treatment and up to 2 mos after last dose.
- Report any yellowing of skin or eyes, abdominal pain, bruising, black/tarry stools, dark urine, decreased urine output, skin changes.
- Report neurologic changes including confusion, seizures, vision loss, high blood pressure crisis (may indicate RPLS).
- Do not take herbal products.
- Notify physician before any planned surgical/dental procedures.
- Do not ingest grapefruit products.
- Take with low-fat food only.
- Drink liquids often if diarrhea occurs (may lead to dehydration).
- Immediately report bleeding of any kind.
- Swallow tablet whole; do not chew, crush, dissolve, or divide.

reslizumab

res-li-zoo-mab
(Cinqair)

Do not confuse reslizumab with certolizumab, daclizumab, eculizumab, efalizumab, mepolizumab, natalizumab,

omalizumab, pembrolizumab, tocilizumab, or vedolizumab, or Cinqair with Cinryze, Cinolar, Cinobac, Sinemet, Singulair, or SINEquan.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Interleukin-5 receptor antagonist. Monoclonal antibody. **CLINICAL:** Antiasthmatic.

USES

Add-on maintenance treatment of pts with severe asthma, aged 18 yrs and older, and with an eosinophil phenotype.

PRECAUTIONS

Contraindications: Hypersensitivity to reslizumab. **Cautions:** History of helminth (parasite) infection; long-term use of corticosteroids. Not indicated for treatment of other eosinophilic conditions; relief of acute bronchospasm, status asthmaticus, exercise-induced bronchospasm. History of anaphylaxis.

ACTION

Exact mechanism unknown. Inhibits signaling of interleukin-5 cytokine, reducing production and survival of eosinophils responsible for asthmatic inflammation and pathogenesis. **Therapeutic Effect:** Prevents inflammatory process. Decreases number of asthma exacerbations.

PHARMACOKINETICS

Widely distributed. Degraded into small peptides and amino acids via proteolytic enzymes. Peak plasma concentration: reached by end of infusion. Excretion not specified. **Half-life:** 24 days.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. However, human immunoglobulin G (IgG) is present in breast milk and is known to cross placenta. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None known. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase creatine phosphokinase (CPK).

AVAILABILITY (Rx)

Injection Solution: 100 mg/10 mL (10 mg/mL).

ADMINISTRATION/HANDLING

Preparation • Allow vial to warm to room temperature. • Visually inspect for particulate matter or discoloration. Solution should appear clear to slightly opalescent, colorless to pale yellow. • Proteinaceous particles may be present. • Air bubbles are expected and allowed. • Do not use if solution is cloudy or discolored or if foreign particles are observed. • Do not shake. • Withdraw proper dose volume from vial and dilute in 50 mL 0.9% NaCl bag. • Gently invert to mix. Do not shake (may cause foaming/precipitate formation). • Infuse via dedicated line. • After infusion is complete, flush IV line with 0.9% NaCl.

Rate of administration • Infuse over 20–50 mins (depending on total volume of infusion), using an in-line, low protein-binding filter (pore size: 0.2 micron).

Storage • Refrigerate unused vials. • Do not freeze. • Diluted solution may be refrigerated or stored at room temperature for up to 16 hrs. • If refrigerated, allow diluted solution to warm to room temperature before use. • Protect from light.

IV INCOMPATIBILITIES

Do not mix or infuse with other medications.

INDICATIONS/ROUTES/DOSAGE**Asthma (Severe)**

IV; ADULTS, ELDERLY: 3 mg/kg once q4wks.

Dosage in Renal/Hepatic Impairment

Not specified; use caution.

SIDE EFFECTS

Rare (3%–1%): Oropharyngeal pain, myalgia.

ADVERSE EFFECTS/TOXIC REACTIONS

Life-threatening anaphylaxis reported in less than 1% of pts. Hypersensitivity reactions including bronchospasm, dyspnea, hypoxia, rash, urticaria, vomiting usually occurred during infusion or within 20 mins after completion. Less than 1% of pts reported at least one malignant neoplasm within 6 mos of initiation. Unknown if treatment will influence the immunologic response to helminth (parasite) infection. Immunogenicity (auto-reslizumab antibodies) reported in 5% of pts.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain serum CPK. Verify presence of eosinophil phenotype. Question history of hypersensitivity reaction. Therapy should be administered in a health care setting by medical professionals who are trained and prepared to readily manage anaphylaxis. Have anaphylactic medications (e.g., antihistamine, bronchodilator, corticosteroid, EPINEPHrine, H₂ receptor antagonist), intubation kit, supplemental oxygen readily available before initiation. Inhaled or systemic corticosteroids should not be suddenly discontinued upon initiation. Corticosteroids that are not gradually reduced may cause withdrawal symptoms or unmask conditions that were originally suppressed with corticosteroid therapy. Pts with preexisting helminth infection should be treated prior to initiation.

INTERVENTION/EVALUATION

Obtain serum CPK in pts complaining of myalgia. Diligently observe for hypersensitivity/anaphylactic reaction during infusion and directly after completion. If anaphylaxis occurs, discontinue infusion and

provide immediate resuscitation support. Early detection is vital. Assess rate, depth, rhythm of respirations, oxygen saturation for therapeutic effectiveness. Assess lungs for wheezing, rales. Obtain pulmonary function test to assess disease improvement. Interrupt or discontinue therapy if helminth infection occurs, if worsening of asthma-related symptoms occurs (esp. in pts tapering off corticosteroids). Monitor for increased use of rescue inhalers; may indicate deterioration of asthma. Monitor for primary malignancies.

PATIENT/FAMILY TEACHING

- Treatment may cause life-threatening anaphylaxis. Immediately report allergic reactions such as difficulty breathing, hives, itching, low blood pressure, rash, swelling of the face or tongue, sudden coughing, vomiting, wheezing during infusion or immediately after infusion.
- Therapy not indicated for relief of acute asthma or bronchospasm.
- Have a rescue inhaler readily available.
- Increased use of rescue inhalers may indicate worsening of asthma.
- Seek medical attention if asthma symptoms worsen or remain uncontrolled.
- Do not stop corticosteroid therapy unless directed by prescriber.
- Treatment may increase risk of new cancers or alter the body's immune response to parasite infections.

ribavirin

rye-ba-vye-rin
(Rebetol, Ribasphere, Virazole)

■ BLACK BOX ALERT ■

Significant teratogenic/embryocidal effects. Hemolytic anemia is significant toxicity, usually occurring within 1–2 wks. May worsen cardiac disease and lead to fatal or nonfatal MI. Inhalation may interfere with safe and effective assisted ventilation. Monotherapy not effective for chronic hepatitis C virus infection.

Do not confuse ribavirin with riboflavin, rifAMPin, or Robaxin.

FIXED-COMBINATION(S)

With interferon alfa-2b (**Rebetrone**). Individually packaged.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic nucleoside. **CLINICAL:** Antihepaciviral.

USES

Inhalation: Treatment of respiratory syncytial virus (RSV) infections (esp. in pts with underlying compromising conditions such as chronic lung disorders, congenital heart disease, recent transplant recipients). **Capsule/tablet/oral solution:** Treatment of chronic hepatitis C virus infection in pts with compensated hepatic disease in combination with other medications.

PRECAUTIONS

Contraindications: Hypersensitivity to ribavirin. **Inhalation:** Women who are pregnant or may become pregnant. **Oral formulations:** Hemoglobinopathies (e.g., sickle cell anemia), men whose female partner is pregnant, women of childbearing age who are pregnant or may become pregnant. Concomitant use of didanosine. **Ribasphere, Rebetol Only:** CrCl less than 50 mL/min. **Cautions:** **Inhalation:** Pts requiring assisted ventilation, COPD, asthma. **PO:** Cardiac or pulmonary disease, elderly pts, history of psychiatric disorders, renal impairment, pts with sarcoidosis, pts with baseline risk of severe anemia.

ACTION

Inhibits replication of viral RNA, DNA, influenza virus RNA polymerase activity; interferes with expression of messenger RNA. **Therapeutic Effect:** Inhibits viral protein synthesis.

PHARMACOKINETICS

Readily absorbed. Peak concentrations:

Inhalation: At end of inhalation period.

Capsules: 3 hrs. **Tablets:** 2 hrs. Protein binding: None. Metabolized in liver and intracellularly. Primarily excreted in urine. **Half-life:** **Inhalation:** 6.5–11 hrs. **Capsules:** 298 hr at steady state. **Tablets:** 120–170 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in pregnancy. Females and males with female partners of reproductive potential must use 2 forms of effective contraception during treatment and for at least 6 mos after discontinuation. Unknown if excreted in breast milk. **Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase the adverse effects of **didanosine**. **Zidovudine** may increase adverse effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: (*Rebetol*, *Ribasphere*): 200 mg. **Powder for Solution, Nebulization:** (*Virazole*): 6 g. **Solution, Oral:** (*Rebetol*): 40 mg/mL. **Tablet:** 200 mg. (*Ribasphere*): 200 mg, 400 mg, 600 mg.

ADMINISTRATION/HANDLING**PO**

• Capsules may be taken without regard to food. • Do not break, crush, or open capsules. • Use oral solution in children 5 yrs or younger, those 47 kg or less, or those unable to swallow. • Give capsules with food when combined with peginterferon alfa-2b. • Tablets should be given with food.

Inhalation

◀ALERT▶ May be given via nasal or oral inhalation.

• Solution appears clear, colorless; is stable for 24 hrs at room temperature. • Discard solution for nebulization after 24 hrs. • Discard if discolored or cloudy. • Add 50–100 mL Sterile Water for Injection or Inhalation to 6-g vial. • Transfer to a flask, serving as reservoir for aerosol generator. • Further dilute to final volume of 300 mL, giving solution concentration of 20 mg/mL. • Use only aerosol generator available from manufacturer of drug. • Do not give concomitantly with other drug solutions for nebulization. • Discard reservoir solution when fluid levels are low and at least q24h. • Only experienced personnel should administer drug.

INDICATIONS/ROUTES/DOSAGE

Note: Combination therapy with peginterferon alone is not recommended in HCV guidelines.

Chronic Hepatitis C Virus Infection

PO: ADULTS, ELDERLY WEIGHING MORE THAN 75 KG: 1,200 mg daily in 2 divided doses. **WEIGHING 74 KG OR LESS:** 1,000 mg daily in 2 divided doses. **LOW INITIAL DOSE:** 600 mg/day. May increase as tolerated.

Dosage in Renal Impairment**Capsules/Oral Solution**

ADULTS: CrCl less than 50 mL/min: Contraindicated. **CHILDREN:** Serum creatinine more than 2 mg/dL: Discontinue treatment.

Ribasphere Tablets

ADULTS: CrCl less than 50 mL/min: Not recommended.

Dosage in Hepatic Impairment

Contraindicated.

Severe Lower Respiratory Tract Infection Caused by Respiratory Syncytial Virus (RSV)

Inhalation: CHILDREN, INFANTS: Use with Viratek small-particle aerosol generator at concentration of 20 mg/mL (6 g reconstituted with 300 mL Sterile Water for Injection) over 12–18 hrs/day for 3–7 days.

SIDE EFFECTS

Frequent (greater than 10%): Hemolytic anemia, dizziness, headache, fatigue, fever, insomnia, irritability, depression, emotional lability, impaired concentration, alopecia, rash, pruritus, nausea, anorexia, dyspepsia, vomiting, decreased hemoglobin, hemolysis, arthralgia, musculo-skeletal pain, dyspnea, sinusitis, flu-like symptoms. **Occasional (10%–1%):** Nervousness, altered taste, weakness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Cardiac arrest, apnea, ventilator dependence, bacterial pneumonia, pneumonia, pneumothorax occur rarely. If treatment exceeds 7 days, anemia may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain sputum specimens before giving first dose or at least during first 24 hrs of therapy. Assess respiratory status for baseline. **PO:** Obtain CBC with differential, pretreatment and monthly pregnancy test for women of childbearing age.

INTERVENTION/EVALUATION

Monitor Hgb, Hct, platelets, LFT, I&O, fluid balance carefully. Check hematology reports for anemia due to reticulocytosis when therapy exceeds 7 days. For ventilator-assisted pts, watch for “rainout” in tubing and empty frequently; be alert to impaired ventilation/gas exchange due to drug precipitate. Assess skin for rash. Monitor B/P, respirations; assess lung sounds.

PATIENT/FAMILY TEACHING

- Report immediately any difficulty breathing, itching/swelling/redness of eyes, severe abdominal pain, bloody diarrhea, unusual bleeding/bruising.
- Female pts should take measures to avoid pregnancy.
- Male pts must use condoms during sexual activity.

ribociclib

rye-boe-sye-klib
(Kisqali)

Do not confuse ribociclib with palbociclib or riboflavin.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Cyclin-dependent kinase inhibitor. **CLINICAL:** Antineoplastic.

USES

Used in combination with an aromatase inhibitor as initial endocrine-based therapy for treatment of postmenopausal women with hormone receptor (HR)–positive, human epidermal growth factor receptor 2 (HER2)–negative advanced or metastatic breast cancer. Treatment of HR-positive, HER2-negative advanced or metastatic breast cancer (in combination with fulvestrant) in pre-/perimenopausal or postmenopausal women as initial endocrine-based therapy.

PRECAUTIONS

Contraindications: Hypersensitivity to ribociclib. **Cautions:** Baseline hematologic cytopenias (anemia, thrombocytopenia, lymphopenia, neutropenia); electrolyte imbalance (correct abnormality prior to treatment), hepatic impairment, Avoid concomitant use of strong CYP3A inhibitors, strong CYP3A inducers, QTc interval–prolonging medications. Avoid use in pts with or at risk for QTc prolongation (e.g., congenital long QT syndrome, hypokalemia, hypomagnesemia; uncontrolled, significant cardiac disease including MI, HF, unstable angina, bradyarrhythmias).

ACTION

Blocks retinoblastoma protein phosphorylation and prevents progression through cell cycle, resulting in arrest of G₁ phase. **Therapeutic Effect:** Inhibits tumor growth.

PHARMACOKINETICS

Widely distributed. Metabolized extensively in liver via CYP3A4. Protein binding: 70%. Peak plasma concentration: 1–4 hrs. Excreted in feces (69%), urine (23%). **Half-life:** 30–55 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Indicated for postmenopausal women; however, may cause fetal harm/malformations when used during pregnancy. Females of reproductive potential should use effective contraception during treatment and for up to 3 wks after discontinuation. Unknown if distributed in breast milk. Breastfeeding not recommended during treatment and for up to 3 wks after discontinuation. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A inhibitors (e.g., clarithromycin, ketoconazole, ritonavir) may increase concentration/effect. Strong CYP3A inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. **QT interval-prolonging medications** (e.g., amiodarone, azithromycin, ceritinib, haloperidol, moxifloxacin) may increase risk of QT interval prolongation, torsades de pointes. May increase concentration/effect of aprepitant, bosutinib, budesonide, naloxegol, neratinib, olaparib, pimecrolimus. May decrease effect of BCG vaccine. May increase adverse effects/toxicity of natalizumab, pimecrolimus, tacrolimus. **HERBAL:** Echinacea, St. John's wort may decrease concentration/effect. **FOOD:** Grapefruit products, pomegranate may increase concentration/effect. **LAB VALUES:** May increase serum ALT, AST, bilirubin. May decrease ANC, Hgb, lymphocytes, leukocytes, neutrophils, platelets; serum potassium, phosphate.

AVAILABILITY (Rx)

Tablets: 200 mg. **Blister Pack:** (21 tablets, 42 tablets, 63 tablets).

ADMINISTRATION/HANDLING**PO**

• Give with or without food. • Swallow whole. Do not crush, chew, or split (do not take broken or cracked tablets). If a dose is missed or vomiting occurs after administration, do not give extra dose. Administer next dose at regularly scheduled time.

INDICATIONS/ROUTES/DOSAGE**Breast Cancer (Advanced or Metastatic)**

Note: A luteinizing hormone–releasing hormone (LHRH) agonist should be administered to premenopausal and perimenopausal women.

PO: ADULTS, ELDERLY: 600 mg once daily for 21 days, followed by 7 days off treatment of 28-day cycle. Use in combination with an aromatase inhibitor or fulvestrant. Continue until disease progression or unacceptable toxicity.

Dose Reduction for Adverse Events

Starting dose: 600 mg/day. **First dose reduction:** 400 mg/day. **Second dose reduction:** 200 mg/day. **Unable to tolerate 200 mg/day:** Permanently discontinue.

Dose Modification**Hepotoxicity (During Treatment)**

Note: Defined as hepatotoxicity without total bilirubin greater than 2 times upper limit of normal (ULN). If serum ALT, AST elevation greater than 3 times ULN with total bilirubin greater than 2 times ULN, permanently discontinue.

CTCAE Grade 1 serum ALT, AST elevation (up to 3 times ULN): No dose adjustment. **CTCAE Grade 2 serum ALT, AST elevation (greater than 3–5 times ULN) with baseline at less than Grade 2:** Withhold treatment until recovery to less than or equal to baseline grade, then resume at same dose level. If baseline at Grade 2, do not withhold treatment. If Grade 2 serum ALT, AST elevation recurs, then resume at reduced dose level. **CTCAE Grade 3 serum ALT, AST elevation (greater than 5–20 times ULN):** Withhold

treatment until recovery to less than or equal to baseline grade, then resume at reduced dose level. If Grade 3 serum ALT, AST elevation recurs, permanently discontinue. **CTCAE Grade 4 serum ALT, AST elevation (Greater than 20 times ULN):** Permanently discontinue.

Hematologic

CTCAE Grade 1 or 2 neutropenia (ANC 1000 cells/mm³ to less than the lower limit of normal): No dose adjustment. **CTCAE Grade 3 neutropenia (ANC 500 to less than 1000 cells/mm³):** Withhold treatment until recovery to Grade 2 or less, then resume at same dose level. If Grade 3 neutropenia recurs, withhold treatment until recovery to Grade 2 or less, then resume at reduced dose level. **CTCAE Grade 3 febrile neutropenia:** Withhold treatment until recovery to Grade 2 or less, then resume at reduced dose level. **Grade 4 neutropenia (ANC less than 500 cells/mm³):** Withhold treatment until recovery to Grade 2 or less, then resume at reduced dose level.

QTc Interval Prolongation

QTc interval prolongation greater than 480 msec: Withhold treatment until resolved to less than 481 msec, then resume at same dose level. If QTc interval prolongation greater than 480 msec recurs, withhold treatment until resolved to less than 481 msec, then resume at reduced dose level. **QTc interval prolongation greater than 500 msec:** Withhold treatment if QTc interval prolongation greater than 500 msec on at least two separate ECGs (within same visit). If QTc interval prolongation resolves to less than 481 msec after withholding treatment, resume at reduced dose level. **QTc interval prolongation greater than 500 msec (or greater than 60 msec from baseline) with torsades de pointes, polymorphic ventricular tachycardia, unexplained syncope, symptoms of serious arrhythmia:** Permanently discontinue.

Other Toxicities

Any other CTCAE Grade 1 or 2 toxicities: No dose adjustment. **Any other CTCAE Grade 3 toxicities:** Withhold treatment until resolved to Grade 1 or 0, then resume at same dose level. If Grade 3 toxicities recur, resume at reduced dose level. **Any other CTCAE Grade 4 toxicities:** Permanently discontinue.

Concomitant Use of Strong CYP3A Inhibitors

Reduce initial dose to 400 mg once daily if strong CYP3A inhibitor cannot be discontinued. If CYP3A inhibitor is discontinued, increase ribociclib dose (after at least 5 half-lives of CYP3A inhibitor have elapsed) to the dose used prior to initiating strong CYP3A inhibitor.

Dosage in Renal Impairment

Not specified; use caution.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment:** Reduce starting dose to 400 mg once daily.

SIDE EFFECTS

Frequent (52%–17%): Nausea, fatigue, diarrhea, alopecia, vomiting, constipation, headache, back pain, decreased appetite, rash. **Occasional (14%–11%):** Pruritus, pyrexia, insomnia, dyspnea, stomatitis, peripheral edema, abdominal pain.

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia, leukopenia, lymphopenia, neutropenia, thrombocytopenia are expected responses to therapy, but more severe reactions, including febrile neutropenia, may be life threatening. CTCAE Grade 3 or 4 neutropenia reported in 60% of pts. Severe hepatotoxicity reported in 10% of pts. QTc interval prolongation, infections including UTI may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain ANC, CBC, BMP, LFT, serum phosphate; vital signs, weight. Obtain ECG (note QTc interval). Initiate treatment only in pts with QTc interval less than 450 msec. Obtain pregnancy test in females of reproductive potential. Question plans of breastfeeding. Question history of cardiac disease, cardiac conduction disorders, hepatic impairment. Receive full medication history including herbal products and screen for interactions. Screen for risk of bleeding, QTc interval prolongation, active infection. Obtain dietary consult. Offer emotional support.

INTERVENTION/EVALUATION

Monitor ANC, CBC for myelosuppression; LFT for hepatotoxicity q2wks for the first 2 cycles, then prior to each subsequent cycle, then as clinically indicated. Monitor BMP, serum phosphate for electrolyte imbalance; consider correcting imbalances, esp. hypokalemia, hypomagnesemia (due to increased risk of cardiac arrhythmias, torsades de pointes). Obtain repeat ECG on day 14 of the first cycle and at the beginning of the second cycle, or more frequently if QTc interval prolongation occurs. Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash, lesions. Monitor weight, I&O.

PATIENT/FAMILY TEACHING

- Treatment may depress your immune system and reduce your ability to fight infection. Report symptoms of infection such as body aches, burning with urination, chills, cough, fatigue, fever. Avoid those with active infection.
- Report symptoms of bone marrow depression such as bruising, fatigue, fever, shortness of breath, weight loss; bleeding easily, bloody urine or stool.
- Do not take newly prescribed medications unless approved by the prescriber who originally started treatment.
- Report liver problems such as

bruising, confusion, amber or dark-colored urine; right upper abdominal pain, yellowing of the skin or eyes; heart arrhythmias (chest pain, difficulty breathing, palpitations, passing out).

- Therapy indicated for postmenopausal women; however, birth defects may occur when used during pregnancy. Females of childbearing potential should use effective contraception during treatment and for at least 3 wks after final dose.
- Do not breastfeed during treatment and for up to 3 wks after final dose.
- Do not ingest grapefruit products, Seville oranges, starfruit, pomegranate, herbal supplements.
- Report planned surgical/dental procedures.
- Immediately report bleeding of any kind.

rifabutin

rif-a-bue-tin
(Mycobutin)

Do not confuse rifabutin with rifAMPin.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Rifamycin derivative. **CLINICAL:** Antimycobacterial.

USES

Prevention of disseminated *Mycobacterium avium* complex (MAC) disease in those with advanced HIV infection. **OFF-LABEL:** Part of multidrug regimen for treatment of MAC. Alternative to rifAMPin as prophylaxis for latent tuberculosis infection, part of multidrug regimen for treatment of active tuberculosis infection.

PRECAUTIONS

Contraindications: Hypersensitivity to rifabutin, other rifamycins (e.g., rifAMPin). **Cautions:** Severe renal impairment. Avoid use in renal/hepatic impairment; do not give for MAC prophylaxis in pts with active TB.

ACTION

Inhibits DNA-dependent RNA polymerase. **Therapeutic Effect:** Prevents MAC disease.

PHARMACOKINETICS

Readily absorbed from GI tract. Protein binding: 85%. Widely distributed. Crosses blood-brain barrier. Extensive intracellular tissue uptake. Metabolized in liver. Excreted in urine (53%), feces (30%). Unknown if removed by hemodialysis. **Half-life:** 16–69 hrs.

 **LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease concentration/effect of **atovaquone, mycophenolate, tenofovir. Strong CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin)** may decrease concentration/effect. **Voriconazole** may increase concentration/effect. May decrease therapeutic effect of **oral contraceptives. HERBAL:** **St. John's wort** may decrease concentration/effect. **FOOD:** **High-fat meals** may delay absorption. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST.

AVAILABILITY (Rx)

Capsules: 150 mg.

ADMINISTRATION/HANDLING**PO**

- May take with meals to reduce nausea/vomiting.

INDICATIONS/ROUTES/DOSAGE**Prevention of MAC (Advanced HIV Infection)**

PO: ADULTS, ELDERLY: 300 mg once daily or 150 mg twice daily to reduce gastrointestinal upset. **CHILDREN, INFANTS:** 5 mg/kg once daily. **Maximum:** 300 mg once daily.

Dosage in Renal Impairment

CrCl less than 30 mL/min: Reduce dosage by 50%.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (30%): Red-orange or red-brown discoloration of urine, feces, saliva, skin, sputum, sweat, tears. **Occasional (11%–3%):** Rash, nausea, abdominal pain, diarrhea, dyspepsia, belching, headache, altered taste, uveitis, corneal deposits. **Rare (Less Than 2%):** Anorexia, flatulence, fever, myalgia, vomiting, insomnia.

ADVERSE EFFECTS/TOXIC REACTIONS

Hepatitis, anemia, thrombocytopenia, neutropenia occur rarely. May cause uveitis, *C. difficile*-associated diarrhea.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain chest X-ray; sputum, blood cultures. Biopsy of suspicious node(s) must be done to rule out active tuberculosis. Obtain baseline CBC, serum hepatic function tests.

INTERVENTION/EVALUATION

Monitor serum LFT, platelet count, Hgb, Hct. Avoid IM injections, rectal temperatures, other traumas that may induce bleeding. Check temperature; notify physician of flu-like syndrome, rash, GI intolerance. Monitor bowel pattern, stool consistency.

PATIENT/FAMILY TEACHING

- Urine, feces, saliva, sputum, perspiration, tears, skin may be discolored brown-orange.
- Soft contact lenses may be permanently discolored.
- Rifabutin may decrease efficacy of oral contraceptives; nonhormonal methods should be considered.
- Avoid crowds, those with infection.
- Report flu-like symptoms, nausea, vomiting, dark urine, unusual bruising/bleeding from any site, any visual disturbances, diarrhea.

rifAMPin

rif-am-pin

(Rifadin, Rofact )

Do not confuse Rifadin with Rifater or Ritalin, or rifAMPin with ribavirin, rifabutin, Rifamate, rifapentine, rifAXIMin, or Ritalin.

FIXED-COMBINATION(S)

Rifamate: rifAMPin/isoniazid (an anti-tubercular): 300 mg/150 mg. **Rifater:** rifAMPin/isoniazid/pyrazinamide (an anti-tubercular): 120 mg/50 mg/300 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Rifamycin derivative. **CLINICAL:** Antitubercular.

USES

In combination with other antitubercular agents for initial treatment, retreatment of active tuberculosis. Eliminates meningococci from nasopharynx of asymptomatic carriers. **OFF-LABEL:** Prophylaxis of *H. influenzae* type B infection, *Legionella* pneumonia, serious infections caused by *Staphylococcus* spp. (in combination with other agents). Treatment of prosthetic joint infection.

PRECAUTIONS

Contraindications: Concomitant therapy with atazanavir, darunavir, fosamprenavir, saquinavir, ritonavir, tipranavir; hypersensitivity to rifAMPin, other rifamycins. **Cautions:** Hepatic impairment, active or treated alcoholism, porphyria. Concurrent medications associated with hepatotoxicity.

ACTION

Interferes with bacterial RNA synthesis by binding to DNA-dependent RNA polymerase, preventing attachment to DNA, thereby blocking RNA transcription.

Therapeutic Effect: Bactericidal in susceptible microorganisms.

PHARMACOKINETICS

Well absorbed from GI tract (food delays absorption). Protein binding: 80%. Widely distributed. Metabolized in liver. Primarily eliminated by biliary system. Not removed by hemodialysis. **Half-life:** 3–5 hrs (increased in hepatic impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effects of atovaquone, diTIAZem, disopyramine, edoxaban, esomeprazole, methadone, mycophenolate, omeprazole, oral anticoagulants (e.g., apixaban, warfarin), oral contraceptives, phenytoin, ranolazine, tacrolimus, tenofovir, zolpidem. **HERBAL:** None significant. **FOOD:** Food decreases extent of absorption. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, uric acid, ALT, AST.

AVAILABILITY (Rx)

Capsules: 150 mg, 300 mg. **Injection, Powder for Reconstitution:** 600 mg.

ADMINISTRATION/HANDLING

Reconstitution • Reconstitute 600-mg vial with 10 mL Sterile Water for Injection to provide concentration of 60 mg/mL. • Withdraw desired dose and further dilute with 0.9% NaCl or D₅W to concentration not to exceed 6 mg/mL.

Rate of administration • For IV infusion only. Avoid IM, SQ administration. • Avoid extravasation (local irritation, inflammation). • Infuse over 30 min to 3 hrs.

Storage • Reconstituted vial is stable for 24 hrs. • Once reconstituted vial is further diluted, it is stable for 4 hrs in D₅W or 24 hrs in 0.9% NaCl.

PO

• Preferably give 1 hr before or 2 hrs following meals with 8 oz of water (may give with food to decrease GI upset; will delay absorption). • For pts unable to swallow capsules, contents may be mixed with applesauce, jelly. • Administer at least 1 hr before antacids, esp. those containing aluminum.

IV INCOMPATIBILITIES

DilTIAZem (Cardizem).

IV COMPATIBILITIES

D₅W if infused within 4 hrs (risk of precipitation beyond this time period).

INDICATIONS/ROUTES/DOSAGE

Tuberculosis

Note: A four-drug regimen (ethambutol, isoniazid, pyrazinamide, rifAMPin) is preferred for initial, empiric treatment.

PO, IV: ADULTS, ELDERLY: 10 mg/kg/day. **Maximum:** 600 mg/day. **CHILDREN:** 10–20 mg/kg/day usually as a single daily dose. **Maximum:** 600 mg/day.

Meningococcal Carrier

PO, IV: ADULTS, ELDERLY: 600 mg twice daily for 2 days. **PO only: CHILDREN 1 MO AND OLDER:** 10 mg/kg/dose q12h for 2 days. **Maximum:** 600 mg/dose. **CHILDREN YOUNGER THAN 1 MO:** 5 mg/kg/dose q12h for 2 days.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Red-orange or red-brown discoloration of urine, feces, saliva, skin, sputum, sweat, tears. **Occasional (5%–3%):** Hypersensitivity reaction (flushing, pruritus, rash). **Rare (2%–1%):** Diarrhea, dyspepsia, nausea, oral candida (sore mouth, tongue).

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatotoxicity (risk is increased when rifAMPin is taken with isoniazid), hepatitis, blood dyscrasias, Stevens-Johnson syndrome, antibiotic-associated colitis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, renal function test, LFT. Screen for concomitant medications known to cause hepatotoxicity. Question for hypersensitivity to rifAMPin, rifamycins. Ensure collection of diagnostic specimens.

INTERVENTION/EVALUATION

Assess IV site at least hourly during infusion; restart at another site at the first sign of irritation or inflammation. Monitor LFT, assess for hepatitis: jaundice, anorexia, nausea, vomiting, fatigue, weakness (hold rifAMPin, inform physician at once). Report hypersensitivity reactions promptly: any type of skin eruption, pruritus, flu-like syndrome with high dosage. Monitor daily pattern of bowel activity, stool consistency (potential for antibiotic-associated colitis). Monitor CBC results for blood dyscrasias; be alert for infection (fever, sore throat), unusual bruising/bleeding, unusual fatigue/weakness.

PATIENT/FAMILY TEACHING

• Preferably take on empty stomach with 8 oz of water 1 hr before or 2 hrs after meal (with food if GI upset). • Avoid alcohol. • Do not take any other medications without consulting physician, including antacids; must take rifAMPin at least 1 hr before antacid. • Urine, feces, sputum, sweat, tears may become red-orange; soft contact lenses may be permanently stained. • Report any new symptom immediately such as yellow eyes/skin, fatigue, weakness, nausea/vomiting, sore throat, fever, flu, unusual bruising/bleeding. • If taking oral contraceptives, check with physician (reliability may be affected).

rifAXIMin

rif-ax-i-min
(Xifaxan, Zaxine )

Do not confuse rifAXIMin with rifAMPin.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Anti-infective. **CLINICAL:** Site-specific antibiotic.

USES

Treatment of traveler's diarrhea caused by noninvasive strains of *E. coli*. Reduction of risk for recurrence of overt hepatic encephalopathy. Treatment of irritable bowel syndrome with diarrhea (IBS-D) in adults. **OFF-LABEL:** Treatment of hepatic encephalopathy. Treatment of *C. difficile*-associated diarrhea.

PRECAUTIONS

Contraindications: Hypersensitivity to rifAXIMin, other rifamycin antibiotics.

Cautions: Severe hepatic impairment.

ACTION

Inhibits bacterial RNA synthesis by binding to bacterial DNA-dependent RNA polymerase. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Less than 0.4% absorbed after PO administration. Primarily excreted in feces.

Half-life: 5.85 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Children:** Safety and efficacy not established in pts younger than 12 yrs for traveler's diarrhea; younger than 18 yrs for IBS-D. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effect of BCG (intra-vesical). **HERBAL:** None significant.

FOOD: None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

 **Tablets:** 200 mg, 550 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Do not break, crush, dissolve, or divide film-coated tablets.

INDICATIONS/ROUTES/DOSAGE

Traveler's Diarrhea

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 200 mg 3 times/day for 3 days.

Hepatic Encephalopathy

PO: ADULTS, ELDERLY: 550 mg 2 times/day or 400 mg 3 times/day.

IBS-D

PO: ADULTS, ELDERLY: 550 mg 3 times/day for 14 days. May repeat up to 2 times if symptoms recur.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (11%–5%): Flatulence, headache, abdominal discomfort, rectal tenesmus, defecation urgency, nausea. **Rare (4%–2%):** Constipation, fever, vomiting.

ADVERSE EFFECTS/TOXIC REACTIONS

Hypersensitivity reaction, superinfection occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check baseline hydration status: skin turgor, mucous membranes for dryness, urinary status. Assess stool frequency, consistency.

INTERVENTION/EVALUATION

Encourage adequate fluid intake. Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool

consistency. Assess for GI disturbances, blood in stool.

PATIENT/FAMILY TEACHING

- Report if diarrhea worsens or if blood occurs in stool, fever develops within 48 hrs.

risankizumab-rzaa

ris-an-kiz-ue-mab-rzaa
(Skyrizi)

Do not confuse risankizumab with ixekizumab.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Interleukin-23 antagonist. Monoclonal antibody. **CLINICAL:** Antipsoriatic agent.

USES

Treatment of moderate to severe plaque psoriasis in adults who are candidates for systemic therapy or phototherapy.

PRECAUTIONS

Contraindications: Hypersensitivity to risankizumab. **Cautions:** Conditions predisposing to infection (e.g., diabetes, immunocompromised pts, renal failure, open wounds), prior exposure to tuberculosis or use in pts who reside or travel to areas where TB is endemic. Avoid use during active infection. Concomitant use of live vaccines not recommended.

ACTION

Selectively binds to p19 subunit of interleukin-23 (IL-23) and inhibits interaction with IL-23 receptor. IL-23 is a cytokine that is involved in inflammatory and immune response. **Therapeutic Effect:** Alters biologic immune response; reduces inflammation of psoriatic lesions.

PHARMACOKINETICS

Widely distributed. Degraded into small peptides and amino acids via catabolic

pathway. Peak plasma concentration: 3–14 days. Steady state reached in 16 wks. **Half-life:** 28 days.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. However, human immunoglobulin G (IgG) is present in breast milk and is known to cross the placenta. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease therapeutic effects/increase adverse effects of **live vaccines**. **Belimumab, infliximab** may increase immunosuppressive effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Injection Solution, Prefilled Syringe: 75 mg/0.83 mL.

ADMINISTRATION/HANDLING

SQ

Preparation • Remove prefilled syringe from refrigerator and allow solution to warm to room temperature (approx. 15–30 min) with needle cap intact. • Visually inspect for particulate matter or discoloration. Solution should appear clear to slightly opalescent, colorless to slightly yellow in color. Do not use if solution is cloudy or discolored or if visible particles are observed.

Administration • Insert needle subcutaneously into outer thigh or abdomen and inject solution. Injections to the outer arms may only be performed by a healthcare professional. • Do not inject into areas of active skin disease or injury such as sunburns, skin rashes, inflammation, skin infections, or active psoriasis. • Rotate injection sites. • Do not administer IV or intramuscularly. • If a dose is missed, administer as soon as possible, then give next dose at regularly scheduled time.

Storage • Refrigerate prefilled syringes in original carton until time of use. • Protect from light. • Do not shake. • Do not freeze or expose to heating sources.

INDICATIONS/ROUTES/DOSAGE

Plaque Psoriasis

SQ: ADULTS, ELDERLY: 150 mg (two 75-mg injections) at wk 0 and wk 4, then q12wks thereafter.

Dosage in Renal Impairment

Mild to severe impairment: Not specified; use caution.

Dosage in Hepatic Impairment

Mild to severe impairment: Not specified; use caution.

SIDE EFFECTS

Rare (4%–2%): Headache, tension headache, sinus headache, fatigue, asthenia, injection site reactions (bruising, erythema, extravasation, hematoma, hemorrhage, infection, inflammation, irritation, pain, pruritus, swelling, warmth).

ADVERSE EFFECTS/TOXIC REACTIONS

Upper respiratory tract infections (bacterial, viral, unspecified) including nasopharyngitis, pharyngitis, rhinitis, sinusitis, tonsillitis reported in 13% of pts. Tinea infections reported in 1% of pts. Serious infections including cellulitis, herpes zoster, osteomyelitis, sepsis occurred in less than 1% of pts. Immunogenicity (auto-risankizumab antibodies) reported in 24% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Consider completion of age-appropriate immunizations prior to initiation. Pts should be evaluated for active tuberculosis and tested for latent infection prior to initiation and periodically during therapy. Induration of 5 mm or greater with tuberculin skin testing should be considered a positive test result when assessing

if treatment for latent tuberculosis is necessary. Screen for active infection or chronic infections. Conduct dermatologic exam; record characteristics of psoriatic lesions. Assess pt's willingness to self-inject medication. Teach proper injection techniques.

INTERVENTION/EVALUATION

Assess skin for improvement of lesions. Monitor for symptoms of tuberculosis (cough, fatigue, hemoptysis, nocturnal sweating, weight loss), including those who tested negative for latent tuberculosis infection prior to initiating therapy. Interrupt or discontinue treatment if serious infection, opportunistic infection, or sepsis occurs.

PATIENT/FAMILY TEACHING

- Treatment may depress your immune system and reduce your ability to fight infection. Report symptoms of infection such as body aches, burning with urination, chills, cough, fatigue, fever; fungal infections. Avoid those with active infection.
- Do not receive live vaccines.
- Expect frequent tuberculosis screening. Report symptoms of tuberculosis such as cough, fatigue, night sweats, weight loss, or coughing up blood.
- Report travel plans to possible endemic areas.

risedronate

ris-ed-roe-nate
(Actonel, Atelvia)

Do not confuse Actonel with Actos, or risedronate with alendronate.

FIXED-COMBINATION(S)

Actonel with Calcium: risedronate/calcium: 35 mg/6 × 500 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Bisphosphonate. **CLINICAL:** Calcium regulator.

USES

Actonel: Treatment of Paget's disease of bone. Treatment/prevention of osteoporosis in postmenopausal women, glucocorticoid-induced osteoporosis (daily dose 7.5 mg prednisONE or greater). Treatment of osteoporosis in men. **Atelvia:** Treatment of osteoporosis in postmenopausal women.

PRECAUTIONS

Contraindications: Hypersensitivity to risedronate, other bisphosphonates (e.g., alendronate); inability to stand or sit upright for at least 30 min; abnormalities of esophagus that delay esophageal emptying; hypocalcemia. **Cautions:** GI diseases (duodenitis, dysphagia, esophagitis, gastritis, ulcers [drug may exacerbate these conditions]), severe renal impairment (CrCl less than 30 mL/min).

ACTION

Inhibits bone resorption by action on osteoclasts or osteoclast precursors. **Therapeutic Effect: Osteoporosis:** Decreases bone resorption (indirectly increases bone mineral density). **Paget's Disease:** Inhibition of bone resorption causes a decrease (but more normal architecture) in bone formation.

PHARMACOKINETICS

Rapidly absorbed. Bioavailability decreased when administered with food. Protein binding: 24%. Not metabolized. Excreted unchanged in urine, feces. Not removed by hemodialysis. **Half-life:** 1.5 hrs (initial); 480 hrs (terminal).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Not indicated for use in this pt population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Antacids containing aluminum, calcium, magnesium; vitamin D may decrease absorption (avoid administration within 30 min of risedronate). **Histamine H₂ receptor antagonists** (e.g.,

famotidine, ranitidine), proton pump inhibitors (e.g., omeprazole, pantoprazole) may decrease concentration/effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

 **Tablets:** 5 mg, 30 mg, 35 mg, 150 mg. **Tablets, Delayed-Release:** 35 mg.

ADMINISTRATION/HANDLING**PO**

Actonel: • Administer 30–60 min before any food, drink, other oral medications to avoid interference with absorption. • Give on empty stomach with full glass of plain water (not mineral water). • Pt must avoid lying down for at least 30 min after swallowing tablet (assists with delivery to stomach, reduces risk of esophageal irritation). • Give whole; do not break, crush, dissolve, or divide tablet. • **Atelvia:** Take in morning immediately following breakfast with at least 4 oz water. • Remain upright for 30 min after taking dose.

INDICATIONS/ROUTES/DOSAGE**Paget's Disease**

PO: (Actonel): ADULTS, ELDERLY: 30 mg/day for 2 mos. Retreatment may occur after 2-mo post-treatment observation period.

Prophylaxis, Treatment of Postmenopausal Osteoporosis

PO: (Actonel): ADULTS, ELDERLY: 5 mg/day or 35 mg once wkly or 150 mg once monthly.

Treatment of Postmenopausal Osteoporosis

PO: (Atelvia): ADULTS, ELDERLY: 35 mg once wkly.

Treatment of Male Osteoporosis

PO: (Actonel): ADULTS, ELDERLY: 35 mg once wkly.

Glucocorticoid-Induced Osteoporosis

PO: (Actonel): ADULTS, ELDERLY: 5 mg/day.

Dosage in Renal Impairment

Not recommended with CrCl less than 30 mL/min.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (30%): Arthralgia. **Occasional (12%–8%):** Rash, diarrhea, constipation, nausea, abdominal pain, dyspepsia, flu-like symptoms, peripheral edema. **Rare (5%–3%):** Bone pain, sinusitis, asthenia, dry eye, tinnitus.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose produces hypocalcemia, hypophosphatemia, significant GI disturbances, osteonecrosis of jaw.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Assess symptoms of Paget's disease (bone pain, bone deformities). Hypocalcemia, vitamin D deficiency must be corrected before therapy begins. Obtain baseline laboratory studies, esp. serum electrolytes, renal function. Verify pt is able to stand or sit upright for at least 30 min.

INTERVENTION/EVALUATION

Check serum electrolytes (esp. calcium, ionized calcium, phosphorus, alkaline phosphatase levels). Monitor I&O, BUN, creatinine in pts with renal impairment.

PATIENT/FAMILY TEACHING

• Expected benefits occur only when medication is taken with full glass (6–8 oz) of plain water first thing in the morning and at least 30 min before first food, beverage, medication of the day. Any other beverage (mineral water, orange juice, coffee) significantly reduces absorption of medication. • Do not lie down for at least 30 min after taking medication (potentiates delivery to stomach, reduces risk of esophageal irritation). • Report swallowing difficulties,

pain when swallowing, chest pain, new/worsening heartburn. • Consider weight-bearing exercises; modify behavioral factors (cigarette smoking, alcohol consumption). • Report jaw pain, incapacitating bone, joint, or muscle pain.

risperiDONE

ris-per-i-done

(Perseis, RisperDAL, RisperDAL Consta, RisperIDONE M-Tab)

■ **BLACK BOX ALERT** ■ Increased risk of mortality in elderly pts with dementia-related psychosis, mainly due to pneumonia, HF.

Do not confuse RisperDAL with Restoril, or risperiDONE with ropINIrole.

◆ **CLASSIFICATION**

PHARMACOTHERAPEUTIC: Benzisoxazole derivative. **CLINICAL:** Second-generation (atypical) antipsychotic. Antimanic agent.

USES

Oral: Treatment of schizophrenia, irritability/aggression associated with autistic disease in children. Treatment of acute mania associated with bipolar disorder (monotherapy in children and adults; in combination with lithium or valproate in adults). **IM:** Management of schizophrenia, maintenance treatment of bipolar I disorder (monotherapy or in combination with lithium or valproate in adults). **OFF-LABEL:** Tourette's syndrome. Post-traumatic stress syndrome. Major depressive disorder.

PRECAUTIONS

Contraindications: Hypersensitivity to risperiDONE. **Cautions:** Renal/hepatic impairment, seizure disorder, cardiac disease, recent MI, breast cancer or other prolactin-dependent tumors, suicidal pts, pts at risk for aspiration pneumonia. Parkinson's disease, pts at

risk for orthostatic hypotension, elderly pts, diabetes, decreased GI motility, urinary retention, BPH, xerostomia, visual problems, pts exposed to temperature extremes, preexisting myelosuppression, narrow-angle glaucoma; pts with high risk of suicide.

ACTION

May antagonize DOPamine, serotonin receptors in both CNS and periphery. **Therapeutic Effect:** Suppresses psychotic behavior.

PHARMACOKINETICS

Well absorbed from GI tract; unaffected by food. Protein binding: 90%. Metabolized in liver. Primarily excreted in urine. **Half-life:** 3–20 hrs; metabolite, 21–30 hrs (increased in elderly). **Injection:** 3–6 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Breastfeeding not recommended. **Children:** Safety and efficacy not established in children younger than 13 yrs for schizophrenia, 10 yrs for bipolar mania, and 5 yrs for autistic disorder. **Elderly:** More susceptible to postural hypotension. Age-related renal/hepatic impairment may require dosage adjustment.

INTERACTIONS

DRUG: Alcohol, other CNS depressants (e.g., LORazepam, morphine, zolpidem) may increase CNS depression. **Strong CYP3A4 inducers** (e.g., carbAMazepine, phenytoin, rifAMPin) may decrease concentration/effect. **Anticholinergics** (e.g., aclidinium, ipratropium, tiotropium, umeclidinium) may increase anticholinergic effect. **HERBAL:** Herbs with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum prolactin, glucose, AST, ALT. May cause ECG changes.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: (*RisperDAL Consta*): 12.5 mg, 25 mg, 37.5 mg, 50 mg. **Oral Solution:** 1 mg/mL. **Syringe, Prefilled:** 90 mg, 120 mg. **Tablets:** 0.25 mg, 0.5 mg, 1 mg, 2 mg, 3 mg, 4 mg.

 **Tablets, Orally Disintegrating:** 0.25 mg, 0.5 mg, 1 mg, 2 mg, 3 mg, 4 mg.

ADMINISTRATION/HANDLING

 **ALERT** Do not administer via IV route.

IM

Reconstitution • Use only diluent and needle supplied in dose pack. • Prepare suspension according to manufacturer's directions. • May be given up to 6 hrs after reconstitution, but immediate administration is recommended. • If 2 min pass between reconstitution and injection, shake upright vial vigorously back and forth to resuspend solution.

Rate of administration • Inject IM into upper outer quadrant of gluteus maximus or into deltoid muscle in upper arm.

Storage • Store at room temperature.

PO

• Give without regard to food. • May mix oral solution with water, coffee, orange juice, low-fat milk. Do not mix with cola, tea.

Orally Disintegrating Tablet

• Remove from blister pack immediately before administration. • Using gloves, place immediately on tongue. • Tablet dissolves in seconds. • Pt may swallow with or without liquid. • Do not split or chew.

SQ

Insert needle subcutaneously into abdomen only and inject solution. • Do not inject into areas of active skin disease or injury such as sunburns, skin rashes, inflammation, skin infections, or active psoriasis. • Rotate injection sites. • Do not rub injection site.

INDICATIONS/ROUTES/DOSAGE**Schizophrenia**

PO: ADULTS: Initially, 1–2 mg/day as single or 2 divided doses. May increase gradually (1–2 mg/day at intervals of at least 24 hrs). Usual dosage range: 2–6 mg/day. **ELDERLY:** Initially, 0.5 mg twice daily. May increase slowly at increments of no more than 0.5 mg twice daily. Range: 2–6 mg/day. **CHILDREN 13–17 YRS:** Initially, 0.5 mg/day (as single daily dose). May increase by 0.5–1 mg/day at intervals of greater than 24 hrs to recommended dose of 3 mg/day. **IM: ADULTS, ELDERLY:** Initially, 12.5–25 mg q2wks. **Maximum:** 50 mg q2wks. Dosage adjustments should not be made more frequently than every 4 wks. **SQ: ADULTS, ELDERLY:** 90–120 mg once monthly.

Bipolar Mania

PO: ADULTS: Initially, 1–3 mg in 1 or 2 divided doses. May increase by 1 mg/day at 24-hr intervals. Usual dose: 4–6 mg/day. **ELDERLY:** Initially, 0.5 mg twice daily. Titrate slowly. **PO: CHILDREN 10–17 YRS:** Initially, 0.5 mg/day. May increase by 0.5–1 mg/day at intervals of greater than 24 hrs to recommended dose of 2.5 mg/day. **IM: ADULTS, ELDERLY:** 25 mg q2wks. May increase dose in increments of 12.5 mg no sooner than 4 wks. **Maximum:** 50 mg q2wks.

Autism

CHILDREN 5 YRS AND OLDER WEIGHING MORE THAN 19 KG: Initially, 0.5 mg/day. May increase to 1 mg after 4 days. May further increase dose by 0.5 mg/day in greater than 2-wk intervals. Range: 0.5–3 mg/day. **CHILDREN 5 YRS AND OLDER WEIGHING 15–19 KG:** Initially, 0.25 mg/day. May increase to 0.5 mg/day after 4 days. May further increase dose by 0.25 mg/day in greater than 2-wk intervals. Range: 0.5–3 mg/day.

Dosage in Renal/Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Initial dosage for adults, elderly pts is 0.5 mg twice daily. Dosage is titrated slowly to desired effect.

SIDE EFFECTS

Frequent (26%–13%): Agitation, anxiety, insomnia, headache, constipation. **Occasional (10%–4%):** Dyspepsia, rhinitis, drowsiness, dizziness, nausea, vomiting, rash, abdominal pain, dry skin, tachycardia. **Rare (3%–2%):** Visual disturbances, fever, back pain, pharyngitis, cough, arthralgia, angina, aggressive behavior, orthostatic hypotension, breast swelling.

ADVERSE EFFECTS/TOXIC REACTIONS

Rare reactions include tardive dyskinesia (characterized by tongue protrusion, puffing of the cheeks, chewing or puckering of mouth), neuroleptic malignant syndrome (hyperpyrexia, muscle rigidity, altered mental status, irregular pulse or B/P, tachycardia, diaphoresis, cardiac arrhythmias, rhabdomyolysis, acute renal failure). Hyperglycemia, life-threatening events such as ketoacidosis and hyperosmolar coma, death have been reported.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Renal function test, LFT should be performed before therapy begins. Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content, baseline weight. Obtain fasting serum glucose, CBC.

INTERVENTION/EVALUATION

Monitor B/P, heart rate, weight, LFT, ECG. Monitor for fine tongue movement (may be first sign of tardive dyskinesia, which may be irreversible). Monitor for suicidal ideation. Assess for therapeutic response (greater interest in surroundings, improved self-care, increased ability to concentrate, relaxed facial expression). Monitor for potential neuroleptic malignant syndrome: fever, muscle rigidity, irregular B/P or pulse, altered mental status. Monitor fasting serum glucose periodically during therapy.

PATIENT/FAMILY TEACHING

- Avoid tasks that may require alertness, motor skills until response to drug is established (may cause dizziness/drowsiness).
- Avoid alcohol.
- Go from lying to standing slowly.
- Report trembling in fingers, altered gait, unusual muscular/skeletal movements, palpitations, severe dizziness/fainting, swelling/pain in breasts, visual changes, rash, difficulty breathing.

riTUXimabTOP
100 HIGH
ALERT

ri-tux-i-mab

(Rituxan, Rituxan Hycela)

BLACK BOX ALERT Profound, occasionally fatal infusion-related reactions reported during first 30–120 min of first infusion. Tumor lysis syndrome leading to acute renal failure may occur 12–24 hrs following first dose. Severe, sometimes fatal, mucocutaneous reactions resulting in progressive multifocal leukoencephalopathy (PML) and death reported. Test all pts for hepatitis B virus (HBV) infection prior to initiation. HBV reactivation may cause fulminant hepatitis, hepatic failure, and death.

Do not confuse Rituxan with Remicade, or riTUXimab with bevacizumab, inFLIXimab, brentuximab, obinutuzumab, ofatumumab, ramucirumab, ruxolitinib.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Anti-CD20 monoclonal antibody. **CLINICAL:** Disease-modifying antirheumatic drug (DMARD), antineoplastic, immunosuppressant.

USES

riTUXimab: Treatment of CD20-positive non-Hodgkin's lymphomas (NHL): relapsed or refractory, low-grade, or follicular B-cell NHL; follicular B-cell NHL (previously untreated); nonprogressive,

low-grade B-cell NHL; diffuse large B-cell NHL, previously untreated. Treatment of CD20-positive chronic lymphocytic leukemia (CLL), in combination with fludarabine and cyclophosphamide (FC). Treatment of adults with moderate to severe active rheumatoid arthritis (RA), in combination with methotrexate, who have had an inadequate response to one or more TNF antagonists. Treatment of granulomatosis with polyangiitis (GPA) (Wegener's granulomatosis) and microscopic polyangiitis (MPA). Treatment of moderate to severe pemphigus vulgaris. **OFF-LABEL:** Treatment of autoimmune hemolytic anemia, chronic immune thrombocytopenic purpura (ITP), systemic autoimmune disease (other than rheumatoid arthritis), Burkitt's lymphoma, CNS lymphoma, Hodgkin's lymphoma. **Rituxan Hycela:** Treatment of adults with relapsed or refractory follicular lymphoma as a single agent; previously untreated follicular lymphoma, in combination with first-line chemotherapy and, in pts achieving a complete or partial response to rituximab in combination with chemotherapy, as a single agent; nonprogressing (including stable disease) follicular lymphoma as a single agent after first-line cyclophosphamide, vincristine and predniSONE chemotherapy. Treatment of adults with diffuse large B-cell lymphoma in adults (previously untreated) in combination with cyclophosphamide, doxorubicin, vincristine, predniSONE, or other anthracycline-based chemotherapy regimens. Treatment of CLL, in combination with fludarabine and cyclophosphamide (previously untreated and previously treated CLL). Limitations: Only indicated in pts who have had at least one full dose of intravenous rituximab. Not indicated for treatment of nonmalignant conditions.

PRECAUTIONS

Contraindications: Hypersensitivity to riTUXimab. **Cautions:** Baseline anemia, neutropenia, thrombocytopenia; active infection, conditions predisposing to infection (e.g., diabetes, renal failure, immunocompromised pts, open

wounds); pts at risk for tumor lysis syndrome (high tumor burden). History of cardiac disease, elderly pts, pulmonary disease, renal impairment, hepatitis B virus (HBV) infection, hepatitis C virus (HCV) infection; pts at risk for GI perforation (Crohn's disease, diverticulitis, GI tract malignancies, peptic ulcers, peritoneal malignancies). Avoid administration of live or live attenuated vaccines during treatment and after discontinuation until B cells are no longer depleted.

ACTION

Binds to CD20, the antigen found on surface of B lymphocytes. Activates B-cell cytotoxicity. B cells may also play a role in development/progression of RA. Hyaluronidase increases the absorption rate of rituximab by increasing permeability of SQ tissue. **Therapeutic Effect:** Produces cytotoxicity, reduces tumor size. Signs/symptoms of rheumatoid arthritis are reduced; structural damage delayed.

PHARMACOKINETICS

Rapidly depletes B cells. **Half-life:** 59.8 hrs after first infusion, 174 hrs after fourth infusion.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm due to fetal B-cell depletion and lymphocytopenia in neonates. Unknown if distributed in breast milk. Females of reproductive potential should use effective contraception during treatment and for up to 12 mos after discontinuation. Breastfeeding not recommended during treatment and for at least 6 mos after discontinuation. **Children:** Safety and efficacy not established. **Elderly:** Increased risk of cardiac/pulmonary adverse reactions.

INTERACTIONS

DRUG: Denosumab, pimecrolimus, tacrolimus may increase risk of adverse effects. May increase toxic effects of abatacept, belimumab, clozapine, leflunomide, natalizumab. Roflumilast may increase

immunosuppressive effect. May increase immunosuppressive effect of fingolimod. May decrease concentration/effect of nivolumab, sipuleucel-T. Trastuzumab may increase neutropenic effect. May decrease therapeutic effect; increase risk of adverse effect of live vaccines. **HERBAL:** Echinacea may decrease therapeutic effect. **FOOD:** None known. **LAB VALUES:** May increase serum creatinine, glucose; LDH. May decrease Hgb, Hct, leukocytes, lymphocytes, neutrophils, platelets, RBCs; B-cell counts, immunoglobulin concentrations. May diminish diagnostic effect of *Coccidioides immitis* skin test.

AVAILABILITY (Rx)

Injection Solution, IV: 10 mg/mL (10 mL, 50 mL). **Injection Solution, SQ: (Rituxan Hycela):** 1,400 mg/23,400 units, 1,600 mg/26,800 units.

ADMINISTRATION/HANDLING

ALERT Do not give by IV push or bolus. Must be administered by a health care professional who is experienced in management of severe infusion reactions.

Reconstitution • Dilute with 0.9% NaCl or D₅W to provide final concentration of 1–4 mg/mL in infusion bag.

Rate of administration • Initially infuse at rate of 50 mg/hr. If no hypersensitivity or infusion-related reaction, may increase infusion rate in 50 mg/hr increments q30min to maximum 400 mg/hr. • Subsequent infusion can be given at 100 mg/hr and increased by 100 mg/hr increments q30min to maximum 400 mg/hr.

Storage • Refrigerate vials. • Diluted solution is stable for 24 hrs if refrigerated or at room temperature.

SQ

Preparation • Visually inspect for particulate matter or discoloration. Solution should appear clear to opalescent, colorless to slightly yellow in color. Do

not use if solution is cloudy, discolored, or if visible particles are observed.

Administration • For 1,400 mg/23,400 unit dose (11.7 mL), insert needle subcutaneously into abdomen and inject solution over 5 min. • For 1,600 mg/26,800 unit dose (13.4 mL), insert needle subcutaneously into abdomen and inject solution over 7 min. • Do not inject into areas of active skin disease or injury such as sunburns, skin rashes, inflammation, skin infections, or active psoriasis. • If administration is interrupted, continue administering at the same site (or at different site) but only in the SQ abdomen. • Do not administer IV or intramuscular. • Rotate injection sites.

Storage • Refrigerate unused vials until time of use. • Protect from light. • Do not freeze or expose to heating sources. • Once transferred to syringe, may refrigerate for up to 48 hrs or store at room temperature for up to 8 hrs.

IV INCOMPATIBILITIES

Do not mix with any other medications.

INDICATIONS/ROUTES/DOSAGE

NHL (Relapsed/Refractory, Low-Grade or Follicular CD20-Positive B-cell)

IV: ADULTS: 375 mg/m² wkly for 4 or 8 doses.

SQ: ADULTS: 1,400 mg/23,400 units once wkly for 3 or 7 wks following full dose of IV rituximab at wk 1 (e.g., 4 or 8 wks total). **ADULTS (RETREATMENT):** 1,400 mg/23,400 units once wkly for 3 wks following full dose of IV rituximab at wk 1 (e.g., 4 wks total).

NHL (Diffuse Large B-cell)

IV: ADULTS: 375 mg/m² on day 1 of each cycle up to 8 doses.

SQ: ADULTS: 1,400 mg/23,400 units on day 1 of cycles 2–8 of CHOP chemotherapy for up to 7 cycles following full dose of IV rituximab at day 1, cycle 1 of CHOP therapy.

NHL (Follicular, CD20-Positive, B-cell, Previously Untreated)

IV: ADULTS: 375 mg/m² on day 1 of each cycle up to 8 doses. **Maintenance (single agent):** 375 mg/m² q8wks for 12 doses.

SQ: ADULTS: 1,400 mg/23,400 units on day 1 of cycles 2–8 (q21 days), for up to 7 cycles following full dose of IV rituximab on day 1 of cycle 1 (e.g., up to 8 cycles total). In pts with partial or complete response, start maintenance therapy 8 wks after completion. Administer as single agent q8wks for 12 doses.

NHL (Nonprogressive, CD20-Positive, B-cell Following 6–8 Cycles of Cyclophosphamide, VinCRISTine, and PrednisOLONE [CVP Therapy])

IV: ADULTS: 375 mg/m² once wkly for 4 doses q6mos. **Maximum:** 16 doses.

SQ: ADULTS: 1,400 mg/23,400 units once wkly for 3 wks (e.g., 4 wks total) at 6-mo intervals following completion of CVP therapy and a full dose of IV rituximab at wk 1. **Maximum:** 16 doses.

NHL (Combination with Ibritumomab)

IV: ADULTS: 250 mg/m² day 1; repeat in 7–9 days with ibritumomab.

Rheumatoid Arthritis

IV: ADULTS: 1,000 mg every 2 wks times 2 doses in combination with methotrexate. May repeat course q24wks (if needed, no sooner than 16 wks).

CLL

IV: ADULTS: 375 mg/m² in first cycle (on day prior to fludarabine/cyclophosphamide) and 500 mg/m² on day 1 in cycles 2–6, administered every 28 days.

SQ: ADULTS: 1,600 mg/26,800 units on day 1 of cycles 2–6 (q28 days) for a total of 5 cycles following full dose of IV rituximab on day 1 of cycle 1 (e.g., 6 cycles total).

GPA, MPA

IV: ADULTS: 375 mg/m² once wkly for 4 wks (in combination with

methylPREDNISolone IV for 1–3 days, then daily predniSONE).

Pemphigus vulgaris

IV: ADULTS, ELDERLY: 1,000 mg q2wks for 2 doses (in combination with a tapering course of glucocorticoids), then 500 mg at months 12 and 18 and q6mos thereafter.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Note: Side effects may vary depending on dose and indicated treatment. **Frequent (53%–14%):** Fever, chills, asthenia, constipation, nausea, headache, paresthesia, night sweats, pyrexia, rash, pruritus, abdominal pain, alopecia. **Occasional (13%–5%):** Cough, pain, rhinitis, peripheral neuropathy, back pain, bone pain, diarrhea, vomiting, dizziness, myalgia, arthralgia, hypotension, insomnia, erythema, throat irritation, urticaria, muscle spasm, dyspnea, hypertension, chest pain, flushing, anxiety, peripheral edema.

ADVERSE EFFECTS/ TOXIC REACTIONS

Anemia, leukopenia, lymphopenia, neutropenia, thrombocytopenia are expected responses to therapy. Severe infusion reactions including anaphylaxis, angioedema, ARDS, bronchospasm, hypotension, hypoxia, pulmonary infiltrates were reported. Cardiac events including cardiogenic shock, MI, ventricular fibrillation may occur, particularly in pts with history of preexisting cardiac conditions. Severe, and sometimes fatal, mucocutaneous reactions including paraneoplastic pemphigus, Stevens-Johnson syndrome, lichenoid dermatitis, vesicubullous dermatitis, toxic epidermal necrolysis may occur. Progressive multifocal leukoencephalopathy (PML), an opportunistic viral infection of the brain caused by the JC virus, may result in progressive permanent disability and death. Infections including upper respiratory tract infection, pneumonia, pharyngitis,

nasopharyngitis, bronchitis, UTI, sinusitis, conjunctivitis, influenza occurred in 15%–4% of pts. May cause HBV reactivation, resulting in fulminant hepatitis, hepatic failure, and death. Tumor lysis syndrome may present as acute renal failure, hypocalcemia, hyperuricemia, hyperphosphatemia. Fatal cases of bowel perforation/obstruction were reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC; pregnancy test in females of reproductive potential; LFT in pts with history of HCV, HBV infection. Test all pts for hepatitis B virus infection. Initiate anti-HBV therapy if warranted. Recommend continuous ECG monitoring during initial infusions. Screen for active infection. Pretreatment with acetaminophen and diphenhydrAMINE before each infusion may prevent infusion-related effects. Confirm compliance of effective contraception. Conduct baseline dermatological exam and assess skin for open/unhealed wounds, lesions, moles. Receive full medication history and screen for interactions. Question history of cardiac disease, GI perforation, chronic infections, renal impairment. All pts planning to receive SQ dose must complete at least one full intravenous dose. Recommend prophylactic treatment for *Pneumocystis jiroveci* (PCP) and herpes virus infection in pts with CLL during treatment and for up to 12 mos after discontinuation. Offer emotional support.

INTERVENTION/EVALUATION

Monitor CBC at regular intervals. Monitor serum calcium, phosphate, uric acid if tumor lysis syndrome is suspected (acute renal failure, electrolyte imbalance, cardiac arrhythmias, seizures). Monitor for infections of any kind. Monitor for an infusion-related reaction; generally occurs within 30 min–2 hrs of beginning first infusion. Slowing infusion resolves symptoms. If given SQ, monitor pt at least 15 min following administration. Pts who present with abdominal pain, fever,

nausea, vomiting should be evaluated for bowel perforation/obstruction. Assess mouth for ulcerations; skin for cutaneous reactions. Closely monitor for exacerbation of hepatitis or HBV reactivation (amber- to orange-colored urine, fatigue, jaundice, nausea, vomiting). Due to risk of cardiovascular events, have emergency resuscitation equipment ready available. Offer antiemetic if nausea occurs, anti-diarrheal if diarrhea occurs. Monitor daily pattern of bowel activity, stool consistency. Ensure adequate hydration, nutrition. Monitor weight, I&Os

PATIENT/FAMILY TEACHING

- Treatment may depress the immune system and reduce the ability to fight infection. Report symptoms of infection such as body aches, burning with urination, chills, cough, fatigue, fever. Avoid those with active infection.
- Therapy may cause tumor lysis syndrome (a condition caused by the rapid breakdown of cancer cells), which can cause kidney failure and can be fatal. Report decreased urination, amber-colored urine, confusion, difficulty breathing, fatigue, fever, muscle or joint pain, palpitations, seizures, vomiting.
- Report symptoms of bone marrow depression such as bruising, fatigue, fever, shortness of breath, weight loss; bleeding easily, bloody urine or stool.
- Treatment may cause fetal harm. Use effective contraception during treatment and for at least 12 mos after last dose. Breastfeeding not recommended during treatment and for at least 6 mos after last dose.
- PML, an opportunistic viral infection of the brain, may cause progressive, permanent disabilities and death. Report symptoms of PML, brain hemorrhage such as confusion, memory loss, paralysis, trouble speaking, vision loss, seizures, weakness.
- Immediately report symptoms of infusion reactions (difficulty breathing, itching, hives, palpitations, rash, swelling of the face or tongue); severe mucocutaneous reactions (blisters, peeling of skin, ulceration of the mouth);

HBV reactivation (fatigue, yellowing of the skin or eyes); bowel obstruction or perforation (abdominal pain, fever, nausea, vomiting); cardiovascular events (chest pain, cold/clammy skin, difficulty breathing, fainting, irregular heartbeat, palpitations, sweating).

- Do not take newly prescribed medications unless approved by the prescriber who originally started treatment.

rivaroxaban

TOP
100

rye-va-rox-a-ban
(Xarelto)

BLACK BOX ALERT ■ Epidural/spinal hematomas may occur in pts receiving neuraxial anesthesia or spinal puncture, resulting in long-term or permanent paralysis. Factors increasing risk of epidural/spinal hematoma include indwelling epidural catheters, concomitant drugs such as NSAIDs, platelet inhibitors, other anticoagulants; history of traumatic or repeated spinal or epidural punctures, history of spinal deformity or spinal surgery. Monitor for signs and symptoms of neurologic impairment. Consider benefits and risks before neuraxial intervention in anticoagulated pts or planned thromboprophylaxis. Increased risk of stroke may occur in pts with atrial fibrillation when discontinuing for reasons other than bleeding.

Do not confuse rivaroxaban with argatroban.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Factor Xa inhibitor. Direct oral anticoagulant.

CLINICAL: Anticoagulant.

USES

Prophylaxis of deep vein thrombosis (DVT) in pts undergoing knee or hip replacement surgery. Prevents stroke/systemic embolism in pts with nonvalvular atrial fibrillation. Treatment of DVT/PE. Reduces risk of recurrent DVT/PE following 6 mos of

treatment. In combination with aspirin, reduces risk of major CV events (e.g., MI, stroke) in pts with chronic coronary artery disease (CAD) or peripheral artery disease (PAD).

PRECAUTIONS

Contraindications: Hypersensitivity to rivaroxaban. Active major bleeding. **Cautions:** Renal/hepatic impairment, pts at increased risk of bleeding (e.g., thrombocytopenia, stroke, severe uncontrolled hypertension), elderly pts; avoid use with heparin, low molecular weight heparin (LMWH), aspirin, warfarin, NSAIDs. Pts with prosthetic heart valves or significant rheumatic heart disease.

ACTION

Selectively and reversibly blocks active site of factor Xa, a key factor in the intrinsic and extrinsic pathway of blood coagulation cascade. Inhibits platelet activation and fibrin clot formation. **Therapeutic Effect:** Inhibits blood coagulation.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Peak plasma concentration: 2–4 hrs. Absorption dependent on site of drug release within GI tract. Avoid administration into small intestine due to reduced absorption. Protein binding: 92%–95%. Metabolized in liver. Excreted in urine (66%), feces (28%). **Half-life:** 5–9 hrs, 11–13 hrs (elderly pts).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Use during pregnancy should be avoided. Unknown if excreted in breast milk. **Children:** Safety and efficacy not established. **Elderly:** May be at increased risk for bleeding due to age-related renal impairment. Use caution.

INTERACTIONS

DRUG: Strong CYP3A4 inhibitors (e.g., ketoconazole, clarithromycin, ritonavir) may increase concentration, risk of bleeding. **Anticoagulants** (e.g., heparin, warfarin), **antiplatelets** (e.g., aspirin,

clopidogrel), **NSAIDs** (e.g., ibuprofen, ketorolac, naproxen) may increase bleeding risk. **Apixaban, dabigatran, edoxaban** may increase anticoagulant effect. **HERBAL:** Herbs with anticoagulant/antiplatelet properties (e.g., garlic, ginger, ginkgo biloba) may increase risk of bleeding. **FOOD:** Grapefruit products may increase risk of bleeding. **LAB VALUES:** May decrease platelets. May increase serum ALT, AST, bilirubin.

AVAILABILITY (Rx)

Tablets: 10 mg, 15 mg, 20 mg.

ADMINISTRATION/HANDLING

PO

- Administer doses of 15 mg or greater with food; doses of 10 mg/day may be given without regard to food.
- DVT prophylaxis (knee, hip):** Give without regard to food.
- Nonvalvular atrial fibrillation:** Give with evening meal.

INDICATIONS/ROUTES/DOSAGE

Note: Avoid in pts with BMI greater than 40 kg/m² or weight greater than 120 kg due to lack of clinical data in this population.

DVT Prophylaxis, Knee Replacement

PO: ADULTS: 10 mg daily for minimum 10–14 days up to 35 days. Initiate at least 6–10 hrs after surgery once hemostasis established. **CrCl less than 30 mL/min:** Avoid use.

DVT Prophylaxis, Hip Replacement

PO: ADULTS: 10 mg daily for 10–14 days (minimum) up to 35 days. Initiate at least 6–10 hrs after surgery once hemostasis established. **CrCl less than 30 mL/min:** Avoid use.

Nonvalvular Atrial Fibrillation

PO: ADULTS: **CrCl greater than 50 mL/min:** 20 mg daily. **CrCl 15–50 mL/min:** 15 mg daily. **CrCl less than 15 mL/min:** Avoid use.

Treatment of DVT/PE

PO: ADULTS, ELDERLY: 15 mg twice daily for 3 wks, then 20 mg once daily.

Reduce Risk of DVT/PE (After 6 mos Treatment)

PO: ADULTS, ELDERLY: 10 mg once daily up to 6–12 mos.

Reduce Risk of CV Events

PO: ADULTS, ELDERLY: 2.5 mg twice daily (in combination with aspirin [75–100 mg] once daily).

Dosage in Renal Impairment

CrCl less than 30 mL/min: Avoid use in DVT/PE, postoperative thromboprophylaxis. **Nonvalvular atrial fibrillation:** **CrCl 15–50 mL/min:** 15 mg once daily with evening meal. **CrCl less than 15 mL/min:** Avoid use.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment:** Avoid use.

SIDE EFFECTS

Rare (3%–1%): Wound secretion/oozing, extremity pain, muscle spasm, syncope, pruritus.

ADVERSE EFFECTS/TOXIC REACTIONS

Increased risk of bleeding/hemorrhagic events including retroperitoneal hemorrhage, cerebral hemorrhage, subdural hematoma, epidural/spinal hematoma (esp. with epidural catheters, spinal trauma). Serious reactions including jaundice, cholestasis, cytolytic hepatitis, Stevens-Johnson syndrome, hypersensitivity reaction, anaphylaxis reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, serum chemistries, PT/INR, vital signs, urine pregnancy if applicable. Obtain ECG for pts with a history of atrial fibrillation. Question for history of bleeding disorders, recent surgery, spinal punctures, intracranial hemorrhage, bleeding ulcers, open wounds, anemia, renal/hepatic impairment. Receive full medication history including herbal products.

INTERVENTION/EVALUATION

Monitor CBC, serum chemistries, renal function, occult urine/stool. Be alert for complaints of abdominal/back pain, headache, confusion, weakness, vision change (may indicate hemorrhage). Question for increased menstrual bleeding/discharge. Assess peripheral pulses; skin for ecchymosis, petechiae. Check for excessive bleeding from minor cuts, scratches. Assess urine output for hematuria. Immediately report suspected pregnancy.

PATIENT/FAMILY TEACHING

- Do not take/discontinue any medication except on advice of physician.
- Avoid alcohol, aspirin, NSAIDs.
- Consult physician before surgery, dental work.
- Use electric razor, soft toothbrush to prevent bleeding.
- Report any unusual bleeding/bruising, spinal/epidural hematomas (e.g., tingling, numbness, muscular weakness).
- Report if pregnant or planning to become pregnant.
- Avoid grapefruit products.

rivastigmine

riv-a-stig-meen
(Exelon)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Acetylcholinesterase inhibitor. **CLINICAL:** Anti-Alzheimer's dementia agent.

USES

Oral: Treatment of mild to moderate dementia of Alzheimer's or mild to moderate dementia of Parkinson's disease. **Transdermal:** Treatment of mild, moderate, or severe dementia of the Alzheimer type. Treatment of mild to moderate dementia associated with Parkinson's disease. **OFF-LABEL:** Lewy body dementia.

PRECAUTIONS

Contraindications: Hypersensitivity to rivastigmine, other carbamate derivatives

(e.g., neostigmine), history of application site reactions with rivastigmine patch. **Cautions:** Peptic ulcer disease, concurrent use of NSAIDs, sick sinus syndrome, bradycardia or supraventricular conduction defects, urinary obstruction, seizure disorders, asthma, COPD, pts with body weight less than 50 kg.

ACTION

Increases acetylcholine in CNS by reversibly inhibiting hydrolysis by cholinesterase. **Therapeutic Effect:** Slows progression of symptoms of Alzheimer's disease, dementia of Parkinson's disease.

PHARMACOKINETICS

Rapidly, completely absorbed. Protein binding: 40%. Widely distributed throughout body. Rapidly, extensively metabolized. Primarily excreted in urine.

Half-life: 1.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Not indicated for use in this pt population.

Elderly: No age-related precautions noted.

INTERACTIONS

DRUG: May interfere with **anticholinergics** (e.g., dicyclomine, glycopyrrolate, scopolamine) effects. May increase the bradycardic effect of **beta blockers** (e.g., atenolol, carvedilol, metoprolol). May increase the adverse effects of **metoclopramide**. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Transdermal Patch: 4.6 mg/24 hrs, 9.5 mg/24 hrs, 13.3 mg/24 hrs.

 **Capsules:** 1.5 mg, 3 mg, 4.5 mg, 6 mg.

ADMINISTRATION/HANDLING

PO

• Give morning and evening doses with food. • Give capsule whole; do not break, cut, or open.

Transdermal Patch

• May apply the day following the last oral dose. • Apply to upper or lower back, upper arm, or chest. • Avoid reapplication to same spot of skin for 14 days. • Do not apply to red, irritated, or broken skin. • Avoid eye contact. • After removal, fold patch to press adhesive together and discard.

INDICATIONS/ROUTES/DOSAGE

Alzheimer's Dementia (Mild to Moderate)

PO: ADULTS, ELDERLY: Initially, 1.5 mg twice daily. May increase at intervals of at least 2 wks to 3 mg twice daily, then 4.5 mg twice daily, and finally 6 mg twice daily. **Maximum:** 6 mg twice daily.

Transdermal: Initially, 4.6 mg/24 hrs. May increase at intervals of at least 4 wks to 9.5 mg/24 hrs and then to 13.3 mg/24 hrs.

Alzheimer's Dementia (Severe)

Transdermal: ADULTS, ELDERLY: Initially, 4.6 mg/24 hrs. May increase at intervals of at least 4 wks to 9.5 mg/24 hrs and then to 13.3 mg/24 hrs.

Parkinson's Dementia

PO: ADULTS, ELDERLY: Initially, 1.5 mg twice daily. May increase at intervals of at least 4 wks to 3 mg twice daily, then 4.5 mg twice daily, and finally 6 mg twice daily. **Maximum:** 6 mg twice daily.

Transdermal: Initially, 4.6 mg/24 hrs. May increase after 4 wks to 9.5 mg/24 hrs and then to 13.3 mg/24 hrs.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Oral: No dose adjustment.

Transdermal: Maximum: 4.6 mg/24 hrs.

SIDE EFFECTS

Frequent (47%–17%): Nausea, vomiting, dizziness, diarrhea, headache, anorexia.

Occasional (13%–6%): Abdominal pain, insomnia, dyspepsia (heartburn, indigestion, epigastric pain), confusion, UTI, depression. **Rare (5%–3%):** Anxiety, drowsiness, constipation, malaise, hallucinations,

tremor, flatulence, rhinitis, hypertension, flu-like symptoms, weight loss, syncope.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose can produce cholinergic crisis, characterized by severe nausea/vomiting, increased salivation, diaphoresis, bradycardia, hypotension, respiratory depression, seizures.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline vital signs. Assess history for peptic ulcer, urinary obstruction, asthma, COPD, cardiac disease. Assess cognitive, behavioral, functional deficits.

INTERVENTION/EVALUATION

Monitor for cholinergic reaction: GI discomfort/cramping, feeling of facial warmth, excessive salivation, diaphoresis, lacrimation, pallor, urinary urgency, dizziness. Monitor for nausea, diarrhea, headache, insomnia.

PATIENT/ FAMILY TEACHING

- Take with meals (at breakfast, dinner).
- Swallow capsule whole. Do not break, chew, or divide capsules.
- Report nausea, vomiting, diarrhea, diaphoresis, increased salivary secretions, severe abdominal pain, dizziness.

rizatriptan

rye-za-trip-tan
(Maxalt, Maxalt-MLT, Maxalt RPD )

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin 5-HT₁ receptor agonist. **CLINICAL:** Antimigraine.

USES

Treatment of acute migraine headache with or without aura.

PRECAUTIONS

Contraindications: Hypersensitivity to rizatriptan. Basilar or hemiplegic migraine, history of stroke or transient ischemic attack; severe cardiovascular disease, coronary artery vasospasm, peripheral vascular disease, ischemic bowel disease, uncontrolled hypertension, use within 24 hrs of ergotamine-containing preparations or another serotonin receptor agonist, MAOI use within 14 days. **Cautions:** Mild to moderate renal/hepatic impairment, dialysis pts, elderly pts, pt profile suggesting cardiovascular risks (e.g., hypertension, diabetes, hypercholesterolemia).

ACTION

Binds selectively to serotonin 5-HT₁ receptors in cranial arteries producing vasoconstriction. **Therapeutic Effect:** Relieves migraine headache.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: 14%. Crosses blood-brain barrier. Metabolized by liver. Excreted primarily in urine (82%), feces (12%). **Half-life:** 2–3 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Ergot derivatives (e.g., ergotamine) may increase vasoconstrictive effect. **Strong CYP3A4 inhibitors** (e.g., clarithromycin, ketoconazole) may increase concentration/effect. **MAOIs** (e.g., phenelzine, selegiline), **propranolol** may dramatically increase concentration (avoid concurrent use). **HERBAL:** None significant. **FOOD:** All foods delay peak drug concentration by 1 hr. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets (Maxalt): 5 mg, 10 mg. **Tablets, Orally Disintegrating: (Maxalt-MLT):** 5 mg, 10 mg.

ADMINISTRATION/HANDLING**PO**

• Orally disintegrating tablet is packaged in individual aluminum pouch. • Open packet with dry hands. • Place tablet onto tongue, allow to dissolve, swallow with saliva. Administration with water is not necessary.

INDICATIONS/ROUTES/DOSAGE**Acute Migraine Headache**

PO: ADULTS OLDER THAN 18 YRS, ELDERLY: 5–10 mg. If significant improvement is not attained, dose may be repeated after 2 hrs. **Maximum:** 30 mg/24 hrs. (Use 5 mg/dose in pts taking propranolol with maximum of 15 mg/24 hrs.) **CHILDREN 6–17 YRS WEIGHING 40 KG OR GREATER:** 10 mg as single dose. (Maximum 5 mg as single dose with propranolol.) **WEIGHING LESS THAN 40 KG:** 5 mg as a single dose. (Not recommended if taking propranolol.)

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (9%–7%): Dizziness, drowsiness, paresthesia, fatigue. **Occasional (6%–3%):** Nausea, chest pressure, dry mouth.

Rare (2%): Headache; neck, throat, jaw pressure; photosensitivity.

ADVERSE EFFECTS/TOXIC REACTIONS

Cardiac reactions (ischemia, coronary artery vasospasm, MI), noncardiac vasospasm-related reactions (hemorrhage, CVA) occur rarely, particularly in pts with hypertension, diabetes, strong family history of coronary artery disease, obesity, smokers, males older than 40 yrs, postmenopausal women.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Question for history of peripheral vascular disease, renal/hepatic impairment. Question pt regarding onset, location, duration of migraine, possible precipitating symptoms.

INTERVENTION/EVALUATION

Monitor for evidence of dizziness. Assess for photophobia, phonophobia (sound sensitivity, nausea, vomiting), relief of migraine headache.

PATIENT/FAMILY TEACHING

• Take single dose as soon as symptoms of an actual migraine headache appear. • Medication is intended to relieve migraine, not to prevent or reduce number of attacks. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report immediately if palpitations, pain/tightness in chest/throat, pain/weakness of extremities occurs. • Do not remove orally disintegrating tablet from blister pack until just before dosing. • Use protective measures against exposure to UV light, sunlight (sunscreen, protective clothing).

roflumilast

roe-floo-mi-last
(Daliresp, Daxas )

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Phosphodiesterase 4 (PDE4) inhibitor.
CLINICAL: Anti-COPD agent.

USES

Adjunct to bronchodilator therapy for maintenance treatment of severe COPD associated with chronic bronchitis and history of exacerbations.

PRECAUTIONS

Contraindications: Hypersensitivity to roflumilast. Moderate to severe hepatic

impairment. **Cautions:** Mild hepatic impairment, history of depression, suicidal ideation. Not indicated as bronchodilator or for relief of acute bronchospasm.

ACTION

Selectively inhibits PDE₄, causing an accumulation of cyclic AMP within inflammatory/structural cells necessary in pathogenesis of COPD. Produces anti-inflammatory effects (reduces cytokine release, inhibits neutrophil infiltration in lungs). **Therapeutic Effect:** Reduces risk of exacerbation of COPD/chronic bronchitis.

PHARMACOKINETICS

Readily absorbed after PO administration. Maximum plasma concentration: 0.5–2 hrs. Protein binding: 99%. Metabolized in liver. Primarily excreted in urine (70%). **Half-life:** 17 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Not recommended for nursing mothers. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A₄ inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease efficacy. Strong CYP3A₄ inhibitors (e.g., clarithromycin, ketoconazole) may increase concentration. **HERBAL:** St. John's wort may decrease concentration/effect. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 250 mcg, 500 mcg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Adjunct in Severe COPD

PO: ADULTS, ELDERLY: Initially, 250 mg once daily for 4 wks, then 500 mcg once

daily. **Note:** 250 mcg dose is not considered therapeutic (given in attempt to improve tolerability).

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment:** Contraindicated.

SIDE EFFECTS

Occasional (10%–4%): Diarrhea, nausea, headache. **Rare (3%–2%):** Back pain, flu-like symptoms, insomnia, dizziness, decreased appetite, vomiting, abdominal pain, rhinitis, muscle spasm, tremor, dyspepsia.

ADVERSE EFFECTS/TOXIC REACTIONS

Psychiatric events including worsening depression, suicidal ideation, anxiety reported in less than 2% of pts. Moderate to severe weight loss may result in discontinuation.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess vital signs, O₂ saturation, lung sounds, body weight. Question for history of depression, anxiety, suicidal ideation, dehydration, COPD, hepatic impairment. Assess plans for breastfeeding. Obtain full medication history.

INTERVENTION/EVALUATION

Monitor vital signs, O₂ saturation, mental status, body weight. Assess for dehydration if diarrhea occurs (skin turgor, mucous membranes, decreased urine output, dizziness, dry mouth).

PATIENT/FAMILY TEACHING

- Report changes in mood or behavior, thoughts of suicide, insomnia, anxiety.
- Report any weight loss.
- Increase fluid intake if dehydration is suspected.
- Worsening cough, fever, difficulty breathing may indicate exacerbation/infection.
- Immediately report if pregnancy is suspected.

rolapitantroe-la-pi-tant
(Varubi)**Do not confuse rolapitant with aprepitant, fosaprepitant.**◆ **CLASSIFICATION****PHARMACOTHERAPEUTIC:** Substance P/neurokinin (P/NK) receptor antagonist. **CLINICAL:** Antinausea, antiemetic.**USES**

Prevention of delayed nausea and vomiting associated with initial and repeat courses of emetogenic cancer chemotherapy, including, but not limited to, highly emetogenic chemotherapy, in combination with other antiemetic agents.

PRECAUTIONS**Contraindications:** Hypersensitivity to rolapitant. CYP2D6 substrates with a narrow therapeutic index (e.g., thioridazine). **Cautions:** Mild to moderate hepatic impairment, pts at risk for QT interval prolongation or ventricular arrhythmia (congenital long QT syndrome, medications that prolong QT interval, hypokalemia, hypomagnesemia). Not recommended in severe hepatic impairment.**ACTION**Selectively and competitively inhibits human substance P/NK₁ receptors. **Therapeutic Effect:** Decreases nausea and vomiting associated with chemotherapy.**PHARMACOKINETICS**Readily absorbed. Widely distributed. Metabolized in liver. Protein binding: greater than 99%. Peak plasma concentration: 4 hrs. Excreted in urine (14%), feces (73%). **Half-life:** 158 hrs. **LIFESPAN CONSIDERATIONS****Pregnancy/Lactation:** Safety and efficacy not established during pregnancy. Unknown if distributed in breast milk.**Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.**INTERACTIONS****DRUG:** Thioridazine may increase risk of torsades de pointes, QT interval prolongation (contraindicated). **Strong CYP3A inducers** (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. May increase concentration/effect of **BCRP substrates** (e.g., methotrexate, rosuvastatin), **CYP2D6 substrates** (e.g., pimozide), **P-gp substrates** (e.g., digoxin). **HERBAL:** St. John's wort may decrease concentration/effect. **FOOD:** None significant. **LAB VALUES:** May decrease Hct, Hgb, neutrophils, RBC.**AVAILABILITY (Rx)****Emulsion, IV:** 166.5 mg/92.5 ml. **Tablets:** 90 mg.**ADMINISTRATION/HANDLING****Rate of administration** • Infuse over 30 minutes. Do not dilute. • Solution is compatible with 0.9% NaCl, D5W or Lactated Ringers via Y-site.**Storage** • Store at room temperature.**PO**

• Administer approx. 1–2 hrs prior to chemotherapy. • Give without regard to food. Administer prior to initiation of each chemotherapy cycle at no less than 2-wk intervals.

INDICATIONS/ROUTES/DOSAGE**Chemotherapy-Associated Nausea/Vomiting****PO: ADULTS, ELDERLY:** 180 mg once on day 1 (in combination with dexamethasone and a 5-HT₃ receptor antagonist). Do not give rolapitant at intervals of less than 2 wks.**IV: ADULTS, ELDERLY:** 166.5 mg given within 2 hrs prior to initiation of chemotherapy on day 1 (in combination with dexamethasone and a 5-HT₃ receptor antagonist).

Dosage in Renal Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Not specified; use caution.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Treatment not recommended.

SIDE EFFECTS

Occasional (9%–6%): Decreased appetite, hiccups, dizziness. **Rare (4%–3%):** Abdominal pain.

ADVERSE EFFECTS/TOXIC REACTIONS

Torsades de pointes, QT prolongation reported in pts taking thioridazine concomitantly; avoid use. Baseline electrolyte imbalance may increase risk of arrhythmias.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain CBC, BMP, serum magnesium. Question history of arrhythmias, hepatic impairment, congenital long QT syndrome. Receive medication history and screen for interactions. Assess hydration status. Obtain ECG in pts taking concomitant drugs that prolong QT interval.

INTERVENTION/EVALUATION

Periodically monitor CBC, BMP. Monitor hydration, nutritional status, I&O. Correct electrolyte imbalances prior to each dose. If CYP2D6 substrate medications cannot be withheld, diligently monitor for QT interval prolongation, ventricular arrhythmias. Assist with ambulation if dizziness occurs. Assess for anemia-related symptoms.

PATIENT/FAMILY TEACHING

- Therapy may alter effectiveness of other drugs. Do not take any newly prescribed medications unless approved by doctor who originally started treatment.
- Report symptoms of arrhythmias such as chest pain, dizziness, fainting, fatigue, palpitations, shortness of breath.
- Do not take herbal products or ingest grapefruit

products. • Report persistent nausea, vomiting despite treatment.

romiDEPsin

roe-mi-dep-sin
(Istodax)

Do not confuse romiDEPsin with romiPLOstim.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Histone deacetylase (HDAC) inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of refractory cutaneous T-cell lymphoma (CTCL) or refractory peripheral T-cell lymphoma (PTCL).

PRECAUTIONS

Contraindications: Hypersensitivity to romiDEPsin. **Cautions:** Moderate or severe hepatic impairment, end-stage renal impairment, preexisting cardiac disease, pts with QT interval prolongation, concomitant administration of medications prolonging QT interval, hypokalemia, hypomagnesemia. Avoid concomitant strong CYP3A4 inhibitors/inducers; caution with moderate CYP3A4 inhibitors or P-glycoprotein inhibitors.

ACTION

Catalyzes acetyl group removal from protein lysine residues, resulting in acetyl group accumulation, which alters chromatin structure and transcription factor activation, terminating cell growth. **Therapeutic Effect:** Induces cell-cycle arrest, cell death.

PHARMACOKINETICS

Extensively metabolized. Protein binding: 92%–94%. **Half-life:** 3 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast

milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A4 inhibitors (e.g., clarithromycin, itraconazole, ritonavir) may increase concentration. Strong CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration. QT interval-prolonging medications (e.g., amiodarone, azithromycin, ceritinib, haloperidol, moxifloxacin) may increase risk of QT interval prolongation, cardiac arrhythmias. May increase adverse effects; decrease therapeutic effect of vaccines (live). **HERBAL:** Echinacea may decrease therapeutic effect. **FOOD:** Grapefruit products may increase concentration/effects. **LAB VALUES:** May decrease Hgb, Hct, WBC count, platelets, serum magnesium, calcium, potassium, sodium, albumin, phosphates. May increase serum glucose, ALT, AST, uric acid. May alter serum magnesium.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution, 2-Vial Kit: 10 mg.

R

ADMINISTRATION/HANDLING

Reconstitution • Reconstitute powder with 2 mL of supplied diluent (80% propylene glycol, 20% dehydrated alcohol). • Swirl contents gently to dissolve powder. • Reconstituted solution provides 5 mg/mL. Further dilute in 500 mL 0.9% NaCl.

Rate of administration • Infuse over 4 hrs.

Storage • Reconstituted solution is stable for at least 24 hrs at room temperature. • Solution appears clear, colorless. Discard if precipitate is present or solution is discolored.

INDICATIONS/ROUTES/DOSAGE

CTCL, PTCL

IV: ADULTS, ELDERLY: 14 mg/m² administered over 4 hrs on days 1, 8, and 15 of a 28-day cycle. Repeat cycles every 28

days if pt continues to benefit from and tolerates therapy.

Dose Modification

Hematologic Toxicity

Grade 3 or 4 neutropenia or thrombocytopenia: Delay treatment until ANC 1,500 cells/mm³ or more and/or platelets 75,000 cells/mm³ or more (or baseline), then resume at 14 mg/m².

Grade 4 neutropenia or thrombocytopenia requiring platelet transfusion: Delay treatment until recovered to Grade 1 or 0 (or baseline), then permanently reduce dose to 10 mg/m².

Nonhematologic Toxicity (Excluding Alopecia)

Grade 2 or 3 toxicity: Delay treatment until recovered to Grade 1 or 0 (or baseline); may restart at 14 mg/m².

Grade 4, recurrent Grade 3 toxicity: Delay treatment until recovered to Grade 1 or 0 (or baseline), then permanently reduce dose to 10 mg/m². **Recurrent Grade 3 or 4 toxicity (with dose reduction):** Permanently discontinue.

Dosage in Renal Impairment

No dose adjustment. Use caution in end-stage-renal disease.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment:** Use caution.

SIDE EFFECTS

Frequent (57%–23%): Nausea, fatigue, vomiting, anorexia. **Occasional (20%–7%):** Diarrhea, fever, distorted sense of taste, constipation, hypotension, pruritus. **Rare (4%–2%):** Dermatitis, T-wave and ST-wave changes on ECG.

ADVERSE EFFECTS/TOXIC REACTIONS

Infection (47% of pts), including sepsis, arrhythmias, acute respiratory distress syndrome, acute renal failure. Anemia occurs in 19% of pts, thrombocytopenia in 17% of pts, neutropenia in 11% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Provide emotional support. Baseline CBC, BMP, LFT, PT/INR, serum magnesium, ionized calcium; capillary blood glucose; ECG should be obtained prior to therapy at baseline and routinely thereafter. Inform women of childbearing potential of risk to fetus if pregnancy occurs.

INTERVENTION/EVALUATION

Calculate daily absolute neutrophil count (ANC). Closely monitor hematologic, chemistry parameters, ECG. Diligently monitor for infection. Provide antiemetics to control nausea/vomiting.

PATIENT/FAMILY TEACHING

- Diarrhea may cause dehydration, electrolyte depletion.
- Do not have immunizations without physician's approval (lowers body's resistance).
- Avoid contact with those who recently received live virus vaccine.
- Avoid crowds, those with infection.
- May reduce effectiveness of estrogen-containing contraceptives.
- Report excessive nausea or vomiting, palpitations, chest pain, shortness of breath. Seek immediate medical attention if unusual bleeding occurs.

romosozumab-aqqg

roe-moe-soz-ue-mab
(Evenity)

BLACK BOX ALERT May increase risk of myocardial infarction (MI), cerebrovascular accident (CVA), cardiovascular death. Do not initiate in pts with recent (within 1 yr) MI, CVA. In pts with other cardiovascular risks, consider whether the benefits of treatment outweigh the risks. Discontinue treatment in pts who develop MI, CVA.

Do not confuse romosozumab with atezolizumab, mepolizumab, pembrolizumab, trastuzumab, or vedolizumab, or Evenity with Emgality.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Sclerostin inhibitor. Monoclonal antibody.
CLINICAL: Osteoporosis agent.

USES

Treatment of postmenopausal women with osteoporosis at high risk for fracture, defined as history of osteoporotic fracture, multiple risk factors for fracture, or pts who have failed or intolerant to other osteoporosis therapy.

PRECAUTIONS

Contraindications: Hypersensitivity to romosozumab-aqqg. Hypocalcemia prior to initiation. **Cautions:** Severe renal impairment (eGFR 15–29 mL/min) or receiving dialysis; pts at risk for osteonecrosis of the jaw (cancer, radiotherapy, poor oral hygiene, pre-existing dental disease or infection, anemia, coagulopathy, recent dental procedures, tooth extraction). History of MI, CVA, cardiovascular disease. Avoid use in pts with recent (within 1 yr) MI, CVA.

ACTION

Stimulates osteoblastic activity by inhibiting sclerostin, a regulatory factor in bone metabolism. **Therapeutic Effect:** Increases bone mass, improves bone structure and strength, decreases bone reabsorption.

PHARMACOKINETICS

Widely distributed. Degraded into small peptides and amino acids via catabolic pathway. Peak plasma concentration: 5 days. Steady state reached in 3 mos. **Half-life:** 12.8 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not indicated in female pts of reproductive potential. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease calcium.

AVAILABILITY (Rx)

Injection Solution, Prefilled Syringe: 105 mg/1.17 mL.

ADMINISTRATION/HANDLING**SQ**

Preparation • Remove prefilled syringe from refrigerator and allow solution to warm to room temperature (at least 30 min) with needle cap intact. • Visually inspect for particulate matter or discoloration. Solution should appear clear to opalescent, colorless to slightly yellow in color. Do not use if solution is cloudy or discolored or if visible particles are observed.

Administration • Insert needle subcutaneously into upper arm, outer thigh, or abdomen and inject solution. • Do not inject into areas of active skin disease or injury such as sunburns, skin rashes, inflammation, skin infections, or active psoriasis. • Rotate injection sites.

• Do not administer IV or intramuscularly. • If a dose is missed, administer as soon as possible, then give next dose at the date of last dose.

Storage • Refrigerate prefilled syringes in original carton until time of use. • Protect from light. • Do not shake. • Do not freeze or expose to heating sources. • If not refrigerated, may store at room temperature (up to 77°F) for no more than 30 days. Discard if not used within 30 days.

INDICATIONS/ROUTES/DOSAGE**Postmenopausal Osteoporosis**

SQ: ADULTS, ELDERLY: 210 mg (two 105-mg injections) once monthly for 12 mos. Give with supplemental calcium and vitamin D.

Dosage in Renal Impairment

Mild to severe impairment: No dose adjustment.

Dosage in Hepatic Impairment

Mild to severe impairment: Not specified; use caution.

SIDE EFFECTS

Occasional (13%–6%): Arthralgia, headache. **Rare (4%–2%):** Injection site reactions (pain, erythema), muscle spasms, peripheral edema, asthenia, neck pain, insomnia, paresthesia.

ADVERSE EFFECTS/TOXIC REACTIONS

MI, CVA, cardiovascular death reported in less than 1% of pts. Hypocalcemia reported in less than 1% of pts. Pts with severe renal impairment (eGFR 15–29 mL/min) or receiving dialysis have an increased risk of hypocalcemia. Hypersensitivity reactions including angioedema, erythema multiforme, dermatitis, rash, urticaria may occur. Symptomatic hypocalcemia reported in 7% of pts. Osteonecrosis of the jaw may present as mandibular pain, jaw bone erosion, periodontal/gingival infection or ulceration, osteomyelitis, slow healing of the mouth after dental procedures. Pts with cancer, radiotherapy, poor oral hygiene, preexisting dental disease or infection, anemia, coagulopathy may be at increased risk of developing osteonecrosis of the jaw. Atypical subtrochanteric and diaphyseal femoral fractures may occur with little or no trauma. Immunogenicity (auto-romosozumab antibodies) reported in 18% of pts.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain serum calcium level. Hypocalcemia must be corrected prior to initiation. Calcium and vitamin D supplementation is recommended during treatment. Question history of MI, CVA, cardiovascular disease, renal impairment. Do not initiate in pts with recent (within 1 yr) MI, CVA. To assess the risk of osteonecrosis of the jaw, the prescriber should perform an oral examination prior to initiation.

Question recent dental procedures or tooth extraction.

INTERVENTION/EVALUATION

Monitor serum calcium levels periodically, esp. in pts with severe renal impairment or receiving dialysis. Monitor for symptoms of CVA (aphasia, altered mental status, headache, hemiplegia, vision loss); MI (chest pain, dyspnea, syncope, diaphoresis, arm/jaw pain), osteonecrosis of the jaw (jaw pain/numbness, loosening of teeth, poor healing of the gums); hypocalcemia (muscle spasm, myalgia, paresthesia, seizures, QT interval prolongation, ventricular arrhythmias; Chvostek's sign, Trousseau's sign). A dull, aching thigh or groin pain should be evaluated for possible femoral fractures. Monitor for hypersensitivity reactions.

PATIENT/FAMILY TEACHING

- Report symptoms of heart attack (chest pain, difficulty breathing, jaw pain, nausea, pain that radiates to the arm or jaw, sweating), stroke (confusion, one-sided weakness, loss of consciousness, trouble speaking, vision loss); atypical leg fractures (dull, aching thigh or groin pain).
- Treatment may cause low blood calcium levels; report difficulty swallowing, fatigue, muscle cramps, muscle weakness, palpitations, paralysis, numbness, tingling, seizures.
- Treatment may cause lack of blood supply to the jaw bone when the bone is exposed, which may lead to jaw necrosis. Report jaw pain or numbness, loosening of teeth, poor healing of the gums. Maintain proper oral hygiene.
- Allergic reactions such as swelling of the face or tongue, rash, itching may occur.

rOPINIRole

roe-pin-i-role

(Requip, Requip XL)

Do not confuse rOPINIRole with RisperDAL or risperidONE.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: DOPamine agonist. **CLINICAL:** Antiparkinson agent.

USES

Treatment of signs/symptoms of idiopathic Parkinson's disease. **Immediate-Release Only:** Treatment of moderate to severe primary restless legs syndrome (RLS).

PRECAUTIONS

Contraindications: Hypersensitivity to rOPINIRole. **Cautions:** History of orthostatic hypotension, cardiovascular or cerebrovascular disease, syncope, hallucinations (esp. in elderly pts), concurrent use of CNS depressants, preexisting dyskinesia, hepatic or severe renal dysfunction (end-stage renal disease [ESRD]), major psychotic disorder, elderly pts.

ACTION

Stimulates postsynaptic DOPamine receptors in caudate putamen in the brain. **Therapeutic Effect:** Relieves signs/symptoms of Parkinson's disease.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 40%. Widely distributed. Extensively metabolized. Steady-state concentrations achieved within 2 days. Excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 6 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. Drug activity possible in breastfeeding infant. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted, but hallucinations may occur more frequently.

INTERACTIONS

DRUG: Ciprofloxacin may increase concentration. **Alcohol, CNS depressants (e.g., LORazepam, morphine, zolpidem)** may increase CNS depressant effects. **Antipsychotic agents (e.g., haloperidol)** may decrease therapeutic

effect. **HERBAL:** Herbs with hypotensive properties (e.g., garlic, ginger, ginkgo biloba) may increase hypotensive effect. **FOOD:** All foods delay peak plasma levels by 1 hr but do not affect drug absorption. **LAB VALUES:** May increase serum alkaline phosphatase.

AVAILABILITY (Rx)

Tablets: 0.25 mg, 0.5 mg, 1 mg, 2 mg, 3 mg, 4 mg, 5 mg.

 **Tablets, Extended-Release:** 2 mg, 4 mg, 6 mg, 8 mg, 12 mg.

ADMINISTRATION/HANDLING

PO

- May give without regard to food.
- Do not break, crush, dissolve, or divide extended-release tablets.

INDICATIONS/ROUTES/DOSAGE

Parkinson's Disease

PO: (Immediate-Release): **ADULTS, ELDERLY:** Initially, 0.25 mg 3 times/day. Based on individual pt response, dosage should be titrated with wkly increments. **Wk 1:** 0.25 mg 3 times/day; total daily dose: 0.75 mg. **Wk 2:** 0.5 mg 3 times/day; total daily dose: 1.5 mg. **Wk 3:** 0.75 mg 3 times/day; total daily dose: 2.25 mg. **Wk 4:** 1 mg 3 times/day; total daily dose: 3 mg. **After wk 4:** May increase dose by 1.5 mg/day on wkly basis up to dose of 9 mg/day. May then further increase by 3 mg/day on wkly basis up to total dose of 24 mg/day (ESRD: 18 mg). **(Extended-Release):** Initially, 2 mg once daily for 1–2 wks. May increase by 2 mg/day at 1 wk or longer interval. **Maximum:** 24 mg/day. ESRD: 18 mg.

Discontinuation Taper

Gradually taper over 7 days as follows: Decrease frequency from 3 times/day to twice daily for 4 days, then decrease from twice daily to once daily for remaining 3 days.

Restless Legs Syndrome

PO: (Immediate-Release): **ADULTS, ELDERLY:** 0.25 mg once daily for days 1 and 2. May increase to 0.5 mg daily for days 3–7 and after 7 days to 1 mg daily. May further titrate upward in 0.5-mg increments q7days

until reaching daily dose of 3 mg during wk 6. Daily dose may be increased to maximum of 4 mg beginning wk 7. Give all doses 1–3 hrs before bedtime. ESRD: 3 mg maximum.

Dosage in Renal/Hepatic Impairment

No dose adjustment. Use caution with severe renal impairment. Titrate cautiously in pts with hepatic impairment.

SIDE EFFECTS

Frequent (60%–40%): Nausea, dizziness, extreme drowsiness. **Occasional (12%–5%):** Syncope, vomiting, fatigue, viral infection, dyspepsia, diaphoresis, asthenia, orthostatic hypotension, abdominal discomfort, pharyngitis, abnormal vision, dry mouth, hypertension, hallucinations, confusion. **Rare (Less Than 4%):** Anorexia, peripheral edema, memory loss, rhinitis, sinusitis, palpitations, impotence.

ADVERSE EFFECTS/TOXIC REACTIONS

Dyskinesia, impulsive/compulsive behavior (pathologic gambling, hypersexuality, binge-eating) occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Parkinson's disease: Assess signs/symptoms (e.g., tremor, gait). **Restless legs syndrome:** Assess frequency of symptoms, sleep pattern.

INTERVENTION/EVALUATION

Assess for clinical improvement, clinical reversal of symptoms (improvement of tremors of head/hands at rest, mask-like facial expression, shuffling gait, muscular rigidity). Assist with ambulation if dizziness occurs. Monitor B/P, daytime alertness.

PATIENT/FAMILY TEACHING

- Drowsiness, dizziness may be an initial response to drug.
- Postural hypotension may occur more frequently during initial therapy. Slowly go from lying to standing.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- If nausea occurs,

take medication with food. • Hallucinations may occur, more so in the elderly than in younger pts with Parkinson's disease. • Report occurrence of falling asleep during activities of daily living, new or worsening symptoms, changes in B/P, fainting, unusual urges. • Avoid alcohol.

rosuvastatin

TOP
100

roe-soo-va-sta-tin
(Apo-Rosuvastatin , Crestor)

Do not confuse rosuvastatin with atorvastatin, lovastatin, nystatin, pitavastatin, or simvastatin.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: HMG-CoA reductase inhibitor. **CLINICAL:** Anti-hyperlipidemic.

USES

Adjunct to diet therapy in pts with primary hyperlipidemia and mixed dyslipidemia; to decrease elevated total, LDL cholesterol, serum triglyceride levels; increases HDL. Adjunct to diet to slow progression of atherosclerosis in pts with elevated cholesterol. Treatment of primary dysbetalipoproteinemia, homozygous familial hypercholesterolemia (HoFH). Treatment of pts ages 10–17 yrs with heterozygous familial hypercholesterolemia (HeFH) to reduce elevated total cholesterol, LDL cholesterol, and apolipoprotein B. Primary prevention of cardiovascular disease (risk reduction of MI, stroke, arterial revascularization) without clinically evident CAD, but with multiple risk factors.

PRECAUTIONS

Contraindications: Hypersensitivity to rosuvastatin. Active hepatic disease, breastfeeding, pregnancy, unexplained, persistent elevations of hepatic enzymes.

Cautions: Anticoagulant therapy, hepatic impairment, substantial alcohol consumption, elective major surgery, renal

impairment, acute renal failure, uncontrolled hypothyroidism, elderly pts.

ACTION

Interferes with cholesterol biosynthesis by inhibiting conversion of the enzyme HMG-CoA to mevalonate, a precursor to cholesterol. **Therapeutic Effect:** Decreases LDL, VLDL, plasma triglyceride levels; increases HDL concentration.

PHARMACOKINETICS

Protein binding: 88%. Minimal hepatic metabolism. Primarily excreted in feces. **Half-life:** 19 hrs (increased in severe renal dysfunction).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in pregnancy (suppression of cholesterol biosynthesis may cause fetal toxicity), lactation. Risk of serious adverse reactions in breastfeeding infants. **Children:** Safety and efficacy not established in children younger than 7 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Aluminum- and magnesium-containing antacids may decrease concentration/effects. Increased risk of myopathy with colchicine, cyclosporine, fenofibrate, fenofibrate derivatives, gemfibrozil, niacin. May increase anticoagulant effect of warfarin. **HERBAL:** None significant. **FOOD:** Red yeast rice contains 2.4 mg lovastatin per 600 mg rice. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, creatinine phosphokinase, glucose, transaminases. May produce hematuria, proteinuria.

AVAILABILITY (Rx)

Tablets: 5 mg, 10 mg, 20 mg, 40 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. May give at any time of day.

INDICATIONS/ROUTES/DOSAGE

Hyperlipidemia, Dyslipidemia, Atherosclerosis, Dysbetalipoproteinemia, Primary Prevention of Cardiovascular Disease

PO: ADULTS, ELDERLY: Usual starting dosage is 10–20 mg/day, with adjustments based on lipid levels; monitor q2–4wks until desired level is achieved. Lower starting dose of 5 mg is recommended in pts of Asian ancestry. **Maximum:** 40 mg/day. Range: 5–40 mg/day.

HoFH

PO: ADULTS, ELDERLY: Initially, 20 mg/day. **Range:** 5–40 mg/day. **Maximum:** 40 mg/day. **CHILDREN 7 YRS AND OLDER:** 20 mg once daily.

HeFH

PO: CHILDREN 10–17 YRS: Initially, 20 mg once daily. **Range:** 5–20 mg once daily. **Maximum:** 20 mg. **8–9 YRS:** 5–10 mg once daily. **Maximum:** 10 mg.

Concurrent CycloSPORINE Use

PO: ADULTS, ELDERLY: 5 mg/day maximum.

Concurrent Gemfibrozil, Atazanavir/Ritonavir, Lopinavir/Ritonavir or Simeprevir Therapy

PO: ADULTS, ELDERLY: Initially, 5 mg/day. 10 mg/day maximum.

Dosage in Renal Impairment (CrCl Less Than 30 mL/min)

PO: ADULTS, ELDERLY: 5 mg/day; do not exceed 10 mg/day.

Dosage in Hepatic Impairment

Contraindicated in active in liver disease.

SIDE EFFECTS

Generally well tolerated. Side effects are usually mild, transient. **Occasional (9%–3%):** Pharyngitis, headache, diarrhea, dyspepsia, nausea, depression. **Rare (Less Than 3%):** Myalgia, asthenia, back pain.

ADVERSE EFFECTS/TOXIC REACTIONS

Potential for ocular lens opacities. Hypersensitivity reaction, hepatitis, rhabdomyolysis occur rarely.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain dietary history, esp. fat consumption. Question for possibility of pregnancy. Assess baseline lab results: serum cholesterol, triglycerides, LFT.

INTERVENTION/EVALUATION

Monitor serum cholesterol, HDL, LDL, triglycerides for therapeutic response. Lipid levels should be monitored within 2–4 wks of initiation of therapy or change in dosage. Monitor LFT at 12 wks following initiation of therapy, at any elevation of dose, and periodically (e.g., semiannually) thereafter. Monitor CPK if myopathy is suspected. Monitor daily pattern of bowel activity, stool consistency. Assess for headache, sore throat. Be alert for myalgia, weakness.

PATIENT/FAMILY TEACHING

- Use appropriate contraceptive measures.
- Periodic lab tests are essential part of therapy.
- Maintain appropriate diet (important part of treatment).
- Report unexplained muscle pain, tenderness, weakness, esp. if associated with fever, malaise.

rucaparib

roo-kap-a-rib
(Rubraca)

Do not confuse rucaparib with neratinib, niraparib, olaparib.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Poly (ADP-ribose) polymerase (PARP) inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of deleterious germline and/or somatic BRCA mutation–associated (detected by FDA-approved test) advanced ovarian cancer in pts who have been treated with two or more lines of chemotherapy. Maintenance treatment of recurrent ovarian cancer in pts who are in complete or partial response to platinum-based chemotherapy.

PRECAUTIONS

Contraindications: Hypersensitivity to rucaparib. **Cautions:** Baseline hematologic cytopenias (anemia, neutropenia, thrombocytopenia, lymphocytopenia).

ACTION

Inhibits poly (ADP-ribose) polymerase (PARP) enzymes (involved in DNA transcription, cell-cycle regulation, and DNA repair). By inhibiting PARP, may cause PARP DNA complexes resulting in DNA damage and cellular death. **Therapeutic Effect:** Inhibits tumor cell growth and metastasis.

PHARMACOKINETICS

Widely distributed. Metabolized in liver. Protein binding: 70%. Peak plasma concentration: 1.9 hrs. Excretion not specified. **Half-life:** 17–19 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm. Females of reproductive potential should use effective contraception during treatment and up to 6 mos after discontinuation. Unknown if distributed in breast milk. Breastfeeding not recommended during treatment and for at least 2 wks after discontinuation. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effect of BCG vaccine. May increase concentration/effect of cilostazol, lomitapide, pimozide, rasagiline, tiZANidine. **HERBAL:** None significant. **FOOD:** None known. **LAB**

VALUES: May increase serum ALT, AST, cholesterol, creatinine. May decrease ANC, Hgb, absolute lymphocyte count, platelets.

AVAILABILITY (Rx)

Tablets: 200 mg, 250 mg, 300 mg.

ADMINISTRATION/HANDLING**PO**

• Give with or without food. • If a dose is missed or vomiting occurs after administration, do not give extra dose. Administer next dose at regularly scheduled time.

INDICATIONS/ROUTES/DOSAGE

Note: Administer only to pts with deleterious germline and/or somatic BRCA mutation.

Ovarian Cancer (Advanced or Maintenance of Recurrent)

PO: ADULTS, ELDERLY: 600 mg twice daily about 12 hrs apart. Continue until disease progression or unacceptable toxicity.

Dose Reduction Schedule

Starting dose: 600 mg twice daily. **First dose reduction:** 500 mg twice daily. **Second dose reduction:** 400 mg twice daily. **Third dose reduction:** 300 mg twice daily.

Dose Modification**Adverse Events, Non-Hematologic Toxicity**

Either withhold treatment or reduce dosage per dose reduction schedule.

Hematologic Toxicity

Withhold treatment until improved to CTCAE Grade 1 or 0 and investigate cause. If myelodysplastic syndrome or acute myeloid leukemia confirmed, permanently discontinue.

Dosage in Renal Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment, ESRD:** Not specified; use caution.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment:** Not specified; use caution.

SIDE EFFECTS

Frequent (77%–21%): Nausea, asthenia, fatigue, vomiting, constipation, dysgeusia, decreased appetite, diarrhea, abdominal pain, dyspnea. **Occasional (17%–9%):** Dizziness, rash, pyrexia, photosensitivity reaction, pruritus.

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia, lymphopenia, neutropenia, thrombocytopenia are expected responses to therapy. Myelodysplastic syndrome/acute myeloid leukemia reported in less than 1% of pts. Infections including nasopharyngitis, pharyngitis, upper respiratory tract infection occurred in 43% of pts. Febrile neutropenia reported in less than 1% of pts. Palmar-plantar erythrodysesthesia syndrome (PPES), a chemotherapy-induced skin condition, that presents with redness, swelling, numbness, skin sloughing of the hands and feet, was reported in 2% of pts.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain baseline CBC, vital signs, weight. Do not initiate therapy until pts have recovered from hematologic toxicities caused by previous chemotherapy. Obtain pregnancy test in females of reproductive potential. Question plans of breastfeeding. Question history of hepatic/renal impairment, hypercholesterolemia. Screen for risk of bleeding, active infection. Offer emotional support.

INTERVENTION/EVALUATION

Monitor CBC monthly; serum cholesterol, creatinine periodically. For prolonged hematologic toxicities caused by other chemotherapies, monitor CBC wkly until recovery. If hematologic levels have not recovered to CTCAE Grade 1 or 0 after 4 wks, consider hematology consultation for further investigations including bone marrow analysis, blood sample for cytogenetics. Diligently monitor for infection. Monitor for myelodysplastic syndrome, acute myeloid leukemia. Assess skin for rash, lesions, sloughing. Monitor for decreased urine output, renal dysfunction.

PATIENT/FAMILY TEACHING

- Treatment may depress your immune system response and reduce your ability to fight infection. Report symptoms of infection such as body aches, chills, cough, fatigue, fever. Avoid those with active infection.
- Report bleeding or easy bruising, bloody urine or stool, frequent infections, fatigue, shortness of breath, weakness, weight loss; may indicate acute bone marrow depression or acute leukemia.
- Avoid pregnancy; treatment may cause birth defects. Females of childbearing potential should use effective contraception during treatment and for at least 6 mos after last dose.
- Do not breastfeed during treatment and for at least 2 wks after final dose.
- Do not take herbal supplements.
- Report planned surgical/dental procedures.

rufinamide

rue-**fin**-a-myde
(Banzel)

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Triazole derivative. **CLINICAL:** Anticonvulsant.

USES

Adjunctive therapy in treatment of seizures associated with Lennox-Gastaut syndrome in adults and children 1 yr and older.

PRECAUTIONS

Contraindications: Hypersensitivity to rufinamide. Familial short QT syndrome. **Cautions:** Other drugs that shorten QT interval, clinical depression, pts at high risk for suicide, mild to moderate hepatic impairment (not recommended in pts with severe hepatic impairment), concurrent use with hormonal contraceptives.

ACTION

Modulates activity of sodium channels. Prolongs inactive state of the sodium channel in cortical neurons, limits sustained repetitive firing of sodium-dependent

action potential, inhibiting excitatory neurotransmitter release. **Therapeutic Effect:** Decreases frequency/severity of seizure activity.

PHARMACOKINETICS

Well absorbed following PO administration. Protein binding: 34%. Extensively metabolized via hydrolysis. Excreted primarily in urine. **Half-life:** 6–10 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May produce fetal skeletal abnormalities. May be distributed in breast milk. **Children:** Safety and efficacy not established in pts younger than 4 yrs. **Elderly:** Age-related renal, hepatic, or cardiac impairment may require initiation of therapy at low end of dosing range.

INTERACTIONS

DRUG: May increase concentration of **PHENobarbital**, **phenytoin**. May decrease concentration of **carbAMazepine**. **Valproate** may increase concentration. **Alcohol**, **CNS depressants** (e.g., **LORazepam**, **morphine**, **zolpidem**) may increase CNS depressant effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease WBC count.

AVAILABILITY (Rx)

Oral Suspension: 40 mg/mL. **Tablets, Film-Coated:** 200 mg, 400 mg.

ADMINISTRATION/HANDLING

PO

- Give with food.
- Film-coated tablets may be cut or crushed for dosing flexibility.
- Shake oral suspension well before each dose; use bottle adapter and dosing syringes provided.

INDICATIONS/ROUTES/DOSAGE

Lennox-Gastaut Seizures

Note: Discontinue therapy gradually to minimize potential of increased seizure frequency (e.g., decrease by 25% q2days).

PO: ADULTS, ELDERLY: Initially, 400–800 mg/day, given in 2 equally divided doses. Dose should be increased by 400–800

mg/day every 2 days. **Maximum:** 3,200 mg/day, administered in 2 equally divided doses. **CHILDREN 1 YR AND OLDER:** Treatment should be initiated at a daily dose of 10 mg/kg/day, given in 2 equally divided doses. Increase by 10-mg/kg increments every other day to a target dose of 45 mg/kg/day or 3,200 mg/day, whichever is less, administered in 2 equally divided doses.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: Use caution. **Severe impairment:** Not recommended.

SIDE EFFECTS

Children: Frequent (27%–11%): Headache, dizziness, fatigue, nausea, drowsiness, diplopia. **Occasional (6%–4%):** Tremor, nystagmus, blurred vision, vomiting. **Rare (3%):** Ataxia, upper abdominal pain, anxiety, constipation, dyspepsia, back pain, gait disturbance, vertigo. **Adults: Frequent (17%–7%):** Lethargy, vomiting, headache, fatigue, dizziness, nausea. **Occasional (5%–4%):** Influenza, nasopharyngitis, anorexia, rash, ataxia, diplopia. **Rare (3%):** Bronchitis, sinusitis, psychomotor hyperactivity, upper abdominal pain, aggression, ear infection, inattention, pruritus.

ADVERSE EFFECTS/TOXIC REACTIONS

Suicidal ideation or behavior occurs rarely, noted as early as 1 wk after initiation of therapy and persisting for at least 24 wks. Shortening of the QT interval (up to 20 msec), hypersensitivity reaction (rash, fever, urticaria) have been noted. Abrupt withdrawal may precipitate seizure, status epilepticus.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (intensity, frequency, duration, level of consciousness). Obtain baseline ECG. Initiate seizure precautions.

INTERVENTION/EVALUATION

Provide safety measures as needed. Observe frequently for recurrence of seizure activity. Assess for clinical improvement (decrease in intensity, frequency of seizures). Assist with ambulation if drowsiness, lethargy occur. Question for evidence of headache.

PATIENT/FAMILY TEACHING

- Do not abruptly withdraw medication (may precipitate seizures).
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Strict maintenance of drug therapy is essential for seizure control.
- Avoid alcohol.
- Female pts of childbearing age should be informed that concurrent use of rufinamide with hormonal contraceptives may render contraceptive less effective; nonhormonal forms of contraception are recommended.
- Be alert for any unusual changes in mood/behavior (may increase risk of suicidal ideation/behavior).

ruxolitinib

rux-oh-li-ti-nib
(Jakafi)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Janus-associated tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of intermediate or high-risk myelofibrosis, including primary myelofibrosis, post-polycythemia vera myelofibrosis, post-essential thrombocythemia myelofibrosis. Treatment of polycythemia vera. Treatment of steroid-refractory acute graft-versus-host disease (GVHD) in adults and children 12 yrs and older.

PRECAUTIONS

Contraindications: Hypersensitivity to ruxolitinib. **Cautions:** Pts at risk for developing bacterial, fungal, or viral infections, renal/hepatic impairment, concomitant

use of strong CYP3A4 inhibitors, history of bradycardia, conduction disturbances, ischemic heart disease, HE.

ACTION

Inhibits Janus-associated kinases (JAKs) JAK1 and JAK2, which mediates the signaling of cytokines and growth factor important for hematopoiesis and immune function. In myelofibrosis and polycythemia vera JAK1/2 activity is dysregulated. **Therapeutic Effect:** Modulates the affected JAK1/2 activity.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Widely distributed. Protein binding: 97%. Metabolized in liver. Excreted in urine (74%), feces (22%). **Half-life:** 3–5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Not recommended in nursing mothers. Must either discontinue drug or discontinue breastfeeding. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole) may increase concentration/effects. May increase adverse effects; decrease therapeutic effect of vaccines (live). **HERBAL:** None known. **FOOD:** Grapefruit products may increase concentration. **LAB VALUES:** May decrease platelets, RBC, Hgb, Hct, WBC. May increase serum bilirubin, ALT, AST, cholesterol.

AVAILABILITY (Rx)

Tablets: 5 mg, 10 mg, 15 mg, 20 mg, 25 mg.

ADMINISTRATION/HANDLING**PO**

- Give without regard to food.

Feeding Tube

- Suspend tablet in 40 mL water and stir for 10 min.
- May administer suspension

within 6 hrs after tablet has dispersed. • Flush with 75 mL water after administration.

INDICATIONS/ROUTES/DOSAGE

Myelofibrosis

PO: ADULTS: 20 mg twice daily if platelets greater than 200,000 cells/mm³, or 15 mg twice daily if platelets 100,000–200,000 cells/mm³, or 5 mg twice daily if platelets 50,000 to less than 100,000 cells/mm³. Dose reduction based on platelet response. **Maximum:** 25 mg twice daily.

Polycythemia Vera

PO: ADULTS, ELDERLY: Initially, 10 mg bid. Doses titrated based on safety/efficacy.

GVHD

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Initially, 5 mg twice daily. May increase to 10 mg twice daily after at least 3 days (if ANC and platelets have not decreased by 50% or greater from baseline).

Dosage in Renal/Hepatic Impairment

Initial dose 10 mg bid.

Dosage in Renal Impairment

CrCl 15–59 mL/min	Platelets 100,000–150,000/mm ³	10 mg twice daily
CrCl 15–59 mL/min	Platelets less than 100,000/mm ³	Avoid use
End-stage renal disease (ESRD) on dialysis	Platelets 100,000–200,000/mm ³	15 mg after dialysis on days of dialysis
ESRD on dialysis	Platelets greater than 200,000/mm ³	20 mg after dialysis on days of dialysis
ESRD not requiring dialysis		Avoid use

Dosage in Hepatic Impairment

Hepatic impairment	Platelets 100,000–150,000/mm ³	10 mg twice daily
Hepatic impairment	Platelets less than 100,000/mm ³	Avoid use

SIDE EFFECTS

Frequent (23%–14%): Bruising, dizziness, vertigo, labyrinthitis, headache. **Occasional (9%–7%):** Weight gain, flatulence.

ADVERSE EFFECTS/TOXIC REACTIONS

May cause severe thrombocytopenia (70% of pts), anemia (96% of pts), neutropenia (18% of pts), which may improve with reduced dose or by temporarily withholding regimen. Anemic pts may require blood transfusions. Increased risk of developing opportunistic bacterial, mycobacterial, fungal, viral infections including herpes zoster, urinary tract infection, urosepsis, renal infection, pyuria. Increased risk of bleeding disorders including ecchymosis, hematoma, injection site hematoma, peri-orbital hematoma, petechiae, purpura.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, serum chemistries, renal function, LFT, urinalysis, cholesterol level. Assess recent vaccinations status. Receive full medication history including herbal products. Question for possibility of pregnancy, renal/hepatic impairment, HIV.

INTERVENTION/EVALUATION

Monitor CBC (every 2–4 wks until doses stabilized), serum chemistries, renal function, LFT, cholesterol. Obtain urinalysis with reflex culture for suspected UTI. Routinely assess vital signs, I&O, breath sounds, gait. Monitor temperature; be alert for fever, infectious process. Avoid IM injections, rectal temperatures, other traumas that induce bleeding. Assess skin for petechiae, hematoma, purpura.

PATIENT/FAMILY TEACHING

- Report any new bruising/bleeding, bloody stools or urine, fever, chills, rash, painful urination, suspected infection, fatigue, shortness of breath.
- Do not breastfeed.
- Avoid grapefruit products.
- Open skin lesions, blisters may signal herpes infection.
- Blood work will be routinely monitored; if on dialysis, take only following dialysis.

sacubitril-valsartansak-ue-bi-tril
(Entresto)

■ **BLACK BOX ALERT** ■ May cause fetal harm, mortality. Discontinue as soon as pregnancy detected.

◆ **CLASSIFICATION**

PHARMACOTHERAPEUTIC: Combination of sacubitril, a neprilysin inhibitor, and valsartan, an angiotensin II receptor blocker. **CLINICAL:** Reduces risk of complications in HF.

USES

To reduce the risk of cardiovascular death and hospitalization in pts with chronic HF (NYHA class II-IV) and reduced ejection fraction.

PRECAUTIONS

Contraindications: Hypersensitivity to sacubitril or valsartan; history of angioedema related to angiotensin-converting enzyme (ACE) inhibitor or angiotensin receptor blockers (ARB); concomitant use or within 36 hrs of ACE inhibitors; concomitant use of aliskiren in pts with diabetes. **Cautions:** Baseline anemia, dehydration, hypovolemia, sodium depletion; concomitant use of potassium-sparing diuretics or potassium supplements; hepatic/renal impairment; unstented bilateral/unilateral renal artery stenosis; significant aortic/mitral stenosis. Pts with orthostatic hypotension.

ACTION

Sacubitril inhibits neprilysin, increasing peptide levels that are degraded by neprilysin (e.g., natriuretic peptides). Valsartan directly antagonizes angiotensin II receptors; blocks vasoconstrictor, aldosterone secreting effects of angiotensin II, inhibiting binding of angiotensin II to AT₁ receptors. **Therapeutic Effect:** Decreases risk of mortality in

pts with chronic HF; produces vasodilation; decreases peripheral resistance; decreases B/P.

PHARMACOKINETICS

Widely distributed. Sacubitril is converted by esterases; not significantly metabolized after conversion. Valsartan is minimally metabolized in liver. Protein binding (both): 94%–97%. Peak plasma concentration: sacubitril: 30 min, valsartan: 1.5 hrs. Steady-state concentration: 3 days. Excretion: sacubitril: urine (52%–68%), feces (37%–48%); valsartan: feces (86%), urine (13%). **Half-life:** sacubitril: 1.4 hrs; valsartan: 9.9 hrs.

 **LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm/mortality. Unknown if distributed in breast milk. Must either discontinue drug or discontinue breastfeeding. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: ACE inhibitors (e.g., enalapril, ramipril) may increase risk of angioedema (contraindicated). **Potassium-sparing diuretics** (e.g., spironolactone) may increase risk of hyperkalemia. **NSAIDs** (e.g., ibuprofen, naproxen) may worsen renal function. May increase concentration/effect of lithium. **HERBAL:** Herbals with hypertensive properties (e.g., licorice, yohimbe) or hypotensive properties (e.g., garlic, ginger, ginkgo biloba) may alter effects. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, creatinine, potassium. May decrease Hct, Hgb.

AVAILABILITY (Rx)

Fixed-Dose Combination Tablets: (*Sacubitril/valsartan*): 24 mg/26 mg, 49 mg/51 mg, 97 mg/103 mg.

ADMINISTRATION/HANDLING**PO**

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

HF

Note: Allow a 36-hr washout period when switching from or to an ACE inhibitor. After initial dose, may double dose as tolerated q2–4wks to target dose of 97 mg/103 mg.

PO: ADULTS, ELDERLY: (Previously taking high dose of ACE inhibitor [greater than 10 mg enalapril or equivalent] or ARB [greater than 160 mg valsartan or equivalent]): Initially, 49 mg/51 mg twice daily. (Previously taking low dose of ACE inhibitor [10 mg or less of enalapril or equivalent] or ARB): 24 mg/26 mg twice daily. (Not currently taking an ACE inhibitor or ARB): 24 mg/26 mg twice daily.

Dosage in Renal Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Initially, 24 mg/26 mg twice daily. **Maintenance:** May double each dose every 2–4 wks up to 97 mg/103 mg twice daily based on tolerability.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate impairment:** Initially, 24 mg/26 mg twice daily. **Maintenance:** May double each dose every 2–4 wks up to 97 mg/103 mg twice daily based on tolerability. **Severe impairment:** Treatment not recommended.

SIDE EFFECTS

Occasional (9%): Cough, dizziness.

ADVERSE EFFECTS/TOXIC REACTIONS

Angioedema (less than 1% of pts), hypotension (18% of pts), orthostatic hypotension (2% of pts), impairment/decrease in renal function due to inhibition of renin-angiotensin-aldosterone system (5% of pts), elevation of serum creatinine greater than 50% from baseline (1.4% of pts), renal impairment including oliguria, azotemia, acute renal failure (5% of pts), hyperkalemia (12% of pts), serum potassium elevation greater than 5.5 mEq/L (4% of pts) have occurred.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline BMP; CBC in pts with baseline anemia. Obtain B/P, heart rate immediately before each dose, in addition to regular monitoring (be alert for fluctuations). Assess hydration status. Correct hydration/sodium depletion prior to initiation. Receive medication history and screen for interactions, esp. concomitant use of aliskiren, ACE inhibitors, ARBs, potassium-sparing diuretics, potassium supplements. Verify negative pregnancy status. Question history of hepatic/renal impairment, renal artery stenosis; angioedema, hypersensitivity reaction.

INTERVENTION/EVALUATION

Monitor BMP, esp. serum BUN, creatinine, potassium. Monitor for hyperkalemia, hypotension. If hypotension occurs, place pt in supine position, feet slightly elevated; consider interrupting treatment or altering dose of diuretic, antihypertensive drugs and screen for dehydration/serum sodium depletion. If pt positive for dehydration, be cautious with PO/IV administration. Overhydration may exacerbate HF. Assist with ambulation if dizziness occurs. Monitor for hypersensitivity reaction, including angioedema. If angioedema occurs, interrupt treatment and institute therapy to protect airway patency.

PATIENT/FAMILY TEACHING

- Go slowly from lying to standing.
- Be cautious of fluid intake. Overhydration may lead to worsening of HF, while underhydration may lead to low blood pressure.
- Report urine changes such as darkened urine, decreased output.
- Immediately report allergic reactions such as difficulty breathing, itching, rash, tongue swelling; symptoms of high potassium levels such as extreme fatigue, muscle weakness, palpitations; suspected pregnancy.
- Do not breastfeed.
- Diuretics (water pills) may increase risk of low pressure or low potassium levels.

safinamide

sa-fin-a-mide
(Xadago)

Do not confuse safinamide with ethionamide, niacinamide, procainamide, pyrazinamide, or Xadogo with Xanax, Xarelto, or Xalatan.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoamine oxidase type B (MAO-B) inhibitor. **CLINICAL:** Antiparkinson agent.

USES

Adjunctive treatment to levodopa/carbidopa in pts with Parkinson's disease experiencing "off" episodes. Not indicated as a monotherapy.

PRECAUTIONS

Contraindications: Hypersensitivity to safinamide. Severe hepatic impairment. Concomitant use of other MAOIs, potent inhibitors of MAOI (e.g., linezolid), amphetamine (and derivatives), cyclobenzaprine, dextromethorphan, methylphenidate, opioid medications, St. John's wort, selective serotonin-norepinephrine reuptake inhibitors (SNRIs), tricyclic or triazolopyridine antidepressants. **Cautions:** Ophthalmic disorders (e.g., any active retinopathy, history of retinal/macular degeneration, uveitis, inherited retinal conditions, history of hereditary retina disease, albinism, retinitis, pigmentosa); hypertension, psychiatric disorders (e.g., schizophrenia, bipolar disorder, psychosis); history of dyskinesia, pts with impulse control disorder; concomitant use of serotonergic drugs; moderate hepatic impairment.

ACTION

Exact mechanism in Parkinson's disease unknown. Selectively inhibits MAO-B activity. Inhibits catabolism of dopamine,

increasing dopamine levels and thereby increasing dopaminergic activity in the brain. **Therapeutic Effect:** Reduces effects of Parkinson's disease.

PHARMACOKINETICS

Absorbed quickly. Widely distributed. Metabolized in liver by nonmicrosomal enzymatic activity. Protein binding: 88%. Peak plasma concentration: 2–3 hrs. Excreted primarily in urine (76%). **Half-life:** 20–26 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Breastfeeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Amphetamine (or derivatives), cyclobenzaprine, methylphenidate, isoniazid, IV methylene blue opioids (e.g., fentaNYL, traMADol), linezolid, other MAOIs (e.g., phenelzine, selegiline), SNRIs (e.g., DULoxetine, venlafaxine), tricyclic antidepressants (e.g., amitriptyline) may increase risk of serotonin syndrome, hypertensive crisis; use contraindicated. **Dextromethorphan** may increase risk of psychosis, abnormal behavior. **HERBAL:** None significant. **FOOD:** Foods/beverages that are high in tyramine (e.g., aged cheese, pickled herring, red wine) may cause release of norepinephrine, resulting in hypertension. **LAB VALUES:** May increase serum ALT, AST.

AVAILABILITY (Rx)

Tablets: 50 mg, 100 mg.

ADMINISTRATION/HANDLING**PO**

- Give with or without food at the same time every day.
- If a dose is missed or vomiting occurs after administration, do not give extra dose. Administer next dose at regularly scheduled time.

INDICATIONS/ROUTES/DOSAGE

Parkinson's Disease

PO: ADULTS, ELDERLY: 50 mg once daily. If response is inadequate, may increase to 100 mg once daily after 2 wks of treatment. (When discontinuing from 100 mg/day, decrease to 50 mg/day for 1 wk before discontinuing therapy to avoid risk of withdrawal-emergent hyperpyrexia and confusion.)

Dosage in Renal Impairment

Not specified; use caution.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate impairment:** Do not exceed maximum dose of 50 mg/day. **Severe impairment:** Treatment contraindicated. If hepatic impairment progresses from moderate to severe impairment, permanently discontinue.

SIDE EFFECTS

Frequent (21%): Dyskinesia. **Occasional (3%):** Nausea. **Rare (2% or less):** Orthostatic hypotension, anxiety, cough, dyspepsia.

ADVERSE EFFECTS/TOXIC REACTIONS

Hypertension, worsening of hypertension, hypertensive crisis was reported. Life-threatening serotonin syndrome may include mental status changes (agitation, hallucinations, delirium, coma), autonomic instability (tachycardia, labile blood pressure, dizziness, sweating, flushing, hyperthermia), neuromuscular symptoms (tremor, rigidity, myoclonus [localized muscle twitching], hyperactive reflexes, incoordination). May cause sudden onset of sleep (without warning) during normal daily activities or while driving, which may result in accidents, injury. Impulsive or compulsive behaviors including gambling, sexual urges, binge eating, intense urge to spend money have occurred. Neuroleptic malignant syndrome (hyperpyrexia, muscle rigidity, altered mental status, autonomic instability [irregular pulse or blood pressure, tachycardia, diaphoresis,

and cardiac arrhythmia], elevated creatinine, phosphokinase, myoglobinuria [rhabdomyolysis], acute renal failure) may be associated with rapid dose reduction, withdrawal, changes that increase central dopaminergic tone. Hypersensitivity reactions (including angioedema), retinal degeneration, loss of photoreceptors, major psychotic episodes (psychosis, hallucinations), dyskinesia, falls were reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P. Assess symptoms of Parkinson's disease (e.g., muscular rigidity, pen rolling motion, gait disturbance, tremors), emotional state. Receive full medication history and screen for contraindications/interactions. Question history of ocular disease (personal or family history), dyskinesia, compulsive/impulsive behavior, psychosis, falls. Due to risk of suddenly falling asleep, discuss avoidance of driving vehicles, operating machinery. Conduct baseline ophthalmologic exam, visual acuity. Initiate fall precautions.

INTERVENTION/EVALUATION

Periodically monitor B/P. Assess for clinical improvement, reversal of symptoms (improvement of hand, head tremor at rest, mask-like facial expression, muscular rigidity). Monitor for dyskinesia (difficulty with movement), psychosis/hallucinations; symptoms of serotonin syndrome, neuroleptic malignant syndrome. Question for episodes of sudden-onset sleep, accidents, falls, impulsivity. Assess for new-onset ocular/retinal disorders. Monitor for hypersensitivity reactions. Assist with ambulation.

PATIENT/FAMILY TEACHING

- Therapy may cause sudden sleep without drowsiness or warning, which may cause accidents and injury. Avoid tasks that require alertness, motor skills until response to drug is established. Driving, operating machinery is extremely

risky. • Report symptoms of overproduction of serotonin including confusion, excessive talking, hallucinations, headache, hyperactivity, insomnia, racing thoughts, seizure activity, tremors; sexual dysfunction, fever. • Rapid dose reduction or withdrawal may cause neuroleptic malignant syndrome (confusion, high fever, muscle rigidity, high or irregular B/P, heart arrhythmias), a life-threatening condition that can be confused with symptoms of severe infection. • Report vision changes; impulsive binge eating, gambling, sexual urges, inability to stop spending money; swelling of the face, tongue, throat. • Due to high risk of drug interactions, do not take newly prescribed medication, herbal supplements unless approved by prescriber who originally started treatment. • Avoid foods high in tyramine (aged, cured, fermented, pickled, smoked food).

salmeterol

TOP
100

sal-met-er-all
(Serevent Diskhaler Disk , Serevent Diskus)

BLACK BOX ALERT ■ Long-acting beta₂-adrenergic agonists may increase risk of asthma-related deaths and asthma-related hospitalizations in pediatric and adolescent pts. Use only as adjuvant therapy in pts who are currently receiving but not adequately controlled on long-term asthma control medication.

Do not confuse salmeterol with Solu-Medrol, or Serevent with Atrovent, Combivent, Serentil, or Sinemet.

FIXED-COMBINATION(S)

Advair Diskus: salmeterol/fluticasone (a corticosteroid): 50 mcg/100 mcg, 50 mcg/250 mcg, 50 mcg/500 mcg.

Advair HFA: salmeterol/fluticasone (a corticosteroid): 21 mcg/45 mcg, 21 mcg/115 mcg, 21 mcg/230 mcg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Beta₂-adrenergic agonist (long-acting).
CLINICAL: Bronchodilator.

USES

Prevention of exercise-induced bronchospasm, bronchospasm; maintenance treatment of asthma and prevention of bronchospasm in pts with reversible obstructive airway disease, including those with symptoms of nocturnal asthma. Long-term maintenance treatment of bronchospasm associated with COPD (including emphysema and chronic bronchitis).

PRECAUTIONS

Contraindications: Hypersensitivity to salmeterol. Treatment of status asthmaticus, acute episodes of asthma or COPD. Use as monotherapy in treatment of asthma without concomitant long-term asthma control medication (e.g., inhaled corticosteroids). **Cautions:** Not for acute symptoms; may cause paradoxical bronchospasm, severe asthma. Cardiovascular disorders (coronary insufficiency, arrhythmias, hypertension), seizure disorders, diabetes, hyperthyroidism, hepatic impairment, hypokalemia.

ACTION

Stimulates beta₂-adrenergic receptors in lungs, resulting in relaxation of bronchial smooth muscle. **Therapeutic Effect:** Relieves bronchospasm, reducing airway resistance.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Inhalation (asthma)	30–45 min	2–4 hrs	12 hrs
Inhalation (COPD)	2 hrs	3.25–4.75 hrs	12 hrs

Low systemic absorption; acts primarily in lungs. Protein binding: 95%. Metabolized in liver. Excreted in urine (25%), feces (60%). **Half-life:** 5.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** No age-related precautions in pts older than 4 yrs. **Elderly:** Lower dosages may be needed (may be more susceptible to tachycardia, tremors).

INTERACTIONS

DRUG: Beta blockers (e.g., carvedilol, metoprolol) may reduce effect; may produce bronchospasm. **Strong CYP3A4 inhibitors** (e.g., clarithromycin, ketoconazole, ritonavir), **MAOIs** (e.g., phenelzine, selegiline), **tricyclic antidepressants** (e.g., amitriptyline, doxepin) may increase concentration/effects (wait 14 days after stopping MAOIs, tricyclic antidepressants before starting salmeterol). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum potassium. May increase serum glucose.

AVAILABILITY (Rx)

Aerosol Powder Breath Activated, Inhalation: 50 mcg/inhalation.

ADMINISTRATION/HANDLING

Inhalation

- Do not shake or prime. Before inhaling the dose, breath out fully (do not exhale into Diskus device). Activate and use only in level horizontal position.
- Inhale quickly and deeply through Diskus.
- Hold breath as long as possible before exhaling slowly.
- Do not use a spacer or wash mouthpiece.

INDICATIONS/ROUTES/DOSAGE

Maintenance and Prevention Therapy for Asthma, Bronchospasm

Inhalation: ADULTS, ELDERLY, CHILDREN 4 YRS AND OLDER: 1 inhalation (50 mcg) q12h (used in combination with inhaled corticosteroids not as monotherapy).

Prevention of Exercise-Induced Bronchospasm

Inhalation: ADULTS, ELDERLY, CHILDREN 4 YRS AND OLDER: 1 inhalation at least 30

min before exercise. Additional doses should not be given for 12 hrs. Do not administer if already giving salmeterol twice daily.

Maintenance Therapy for COPD

Inhalation: ADULTS, ELDERLY: 1 inhalation (50 mcg) q12h.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (28%): Headache. **Occasional (7%–3%):** Cough, tremor, dizziness, vertigo, throat dryness/irritation, pharyngitis. **Rare (less than 3%):** Palpitations, tachycardia, nausea, heartburn, GI distress, diarrhea.

ADVERSE EFFECTS/TOXIC REACTIONS

May prolong QT interval (can precipitate ventricular arrhythmias). Hypokalemia, hyperglycemia may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question history of cardiac disease, hepatic impairment, seizure disorder. Screen for concomitant medications known to prolong QT interval. Assess lung sounds, vital signs.

INTERVENTION/EVALUATION

Monitor rate, depth, rhythm, type of respiration; quality/rate of pulse, B/P. Assess lungs for wheezing, rales, rhonchi. Periodically evaluate serum potassium levels.

PATIENT/FAMILY TEACHING

- Not for relief of acute episodes.
- Keep canister at room temperature (cold decreases effects).
- Do not stop medication or exceed recommended dosage.
- Report chest pain, dizziness.
- Wait at least 1 full min before second inhalation.
- Administer dose 30–60 min before exercise when used to prevent exercise-induced bronchospasm.
- Avoid excessive use of caffeine derivatives (coffee, tea, colas, chocolate).

sargramostim

sar-**gra**-moe-stim
(Leukine)

Do not confuse Leukine with leucovorin or Leukeran.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Colony-stimulating factor. **CLINICAL:** Hematopoietic agent.

USES

Acute myelogenous leukemia (AML: following induction chemotherapy): Shortens time to neutrophil recovery; reduces incidence of severe infections. **Bone marrow transplant (allogeneic or autologous):** For graft failure, engraftment delay. **Myeloid reconstitution following allogeneic or autologous bone marrow transplant. Peripheral stem cell transplant (allogeneic or autologous):** Mobilizes hematopoietic progenitor cells. **Hematopoietic radiation injury syndrome (acute):** Treatment to increase survival due to acute exposure to myelosuppressive radiation doses. **OFF-LABEL:** Primary prophylaxis of neutropenia.

PRECAUTIONS

Contraindications: Hypersensitivity to sargramostim. Concurrent (24 hrs preceding or following) myelosuppressive chemotherapy or radiation, pts with excessive leukemic myeloid blasts in bone marrow or peripheral blood (greater than 10%), known hypersensitivity to yeast-derived products. **Cautions:** Preexisting HF, fluid retention, cardiovascular disease, pulmonary disease (hypoxia, pulmonary infiltrates), renal/hepatic impairment.

ACTION

Stimulates proliferation/differentiation and functional activity of eosinophils, monocytes, neutrophils, and macrophages. **Therapeutic Effect:** Assists bone marrow in making new WBCs, increases their chemotactic, antifungal, antiparasitic activity.

Increases cytoneoplastic cells, activates neutrophils to inhibit tumor cell growth.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV (increase WBCs)	7–14 days	N/A	1 wk

Detected in serum within 5 min after SQ administration. **Peak serum levels:** 1–3 hrs. **Half-life:** IV: 1 hr; SQ: 3 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase adverse effects of **tisagenlecleucel, vaccines (live)**. May decrease therapeutic effect of **vaccines (live)**. **Corticosteroids (e.g., dexamethasone, prednisONE)** may increase myeloproliferative effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, bilirubin, creatinine. May decrease serum albumin.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 250 mcg.

ADMINISTRATION/HANDLING

SQ

May be given without further dilution.

IV

Reconstitution • To 250-mcg vial, add 1 mL Sterile Water for Injection (preservative free) or Bacteriostatic Water for Injection. Direct diluent to side of vial, gently swirl contents to avoid foaming; do not shake or vigorously agitate. • After reconstitution, further dilute in 25–50 mL 0.9% NaCl to a concentration of 10 mcg/mL or greater. If final concentration less than 10 mcg/mL, 1 mg of human albumin per 1 mL of 0.9% NaCl should be added to provide a final albumin

concentration of 0.1% (e.g., 1 mL 5% albumin per 50 mL 0.9% NaCl).

ALERT Albumin is added before addition of sargramostim (prevents drug adsorption to components of drug delivery system).

Rate of administration • Give each single dose over 30 min, 2 hr, 6 hr, or continuous infusion.

Storage • Refrigerate powder, reconstituted solution, diluted solution for injection. • Do not shake. • Reconstituted solutions are clear, colorless. • Use within 6 hrs; discard unused portions. • Use 1 dose per vial; do not reenter vial.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), ondansetron (Zofran).

IV COMPATIBILITIES

Dexamethasone (Decadron), diphenhydramine (Benadryl), famotidine (Pepcid), granisetron (Kytrel), heparin, metoclopramide (Reglan), promethazine (Phenergan).

INDICATIONS/ROUTES/DOSAGE

Neutrophil Recovery Following Chemotherapy in AML

IV infusion: ADULTS 55 YRS OR OLDER: 250 mcg/m²/day (as 4-hr infusion) starting approximately 4 days following completion of induction chemotherapy (if day 10 bone marrow is hypoplastic with less than 5% blasts). Continue until ANC is greater than 1,500 cells/mm³ for 3 consecutive days or a maximum of 42 days. If WBC greater than 50,000 cells/mm³ and/or ANC greater than 20,000 cells/mm³, interrupt treatment or reduce dose by 50%.

Myeloid Recovery Following Bone Marrow Transplant (BMT)

IV infusion: ADULTS, ELDERLY: Usual parenteral dosage: 250 mcg/m²/day (as 2-hr infusion). Begin 2–4 hrs after autologous bone marrow infusion and not less than 24 hrs after last dose of chemotherapy or last radiation treatment, when post marrow infusion ANC is less than

500 cells/mm³. Continue until ANC greater than 1,500 cells/mm³ for 3 consecutive days. If WBC greater than 50,000 cells/mm³ and/or ANC greater than 20,000 cells/mm³, interrupt treatment or reduce dose by 50%. Discontinue if blast cells appear or underlying disease progresses.

Bone Marrow Transplant Failure, Engraftment Delay

IV infusion: ADULTS, ELDERLY: 250 mcg/m²/day for 14 days. Infuse over 2 hrs. May repeat after 7 days off therapy if engraftment has not occurred. A third course with 500 mcg/m²/day for 14 days may be tried if engraftment still has not occurred.

Stem Cell Transplant, Mobilization

IV, SQ: ADULTS: 250 mcg/m²/day IV (as 24-hr infusion) or SQ once daily. Continue same dose throughout peripheral blood progenitor cell collection. If WBC greater than 50,000 cells/mm³, reduce dose by 50%.

Stem Cell Transplant, Post-transplant

IV, SQ: ADULTS, ELDERLY: 250 mcg/m²/day IV (as 24-hr infusion) or SQ once daily beginning immediately following infusion of progenitor cells. Continue until ANC greater than 1,500 cells/mm³ for 3 consecutive days.

Hematopoietic Radiation Injury Syndrome (Acute)

SQ: ADULTS, ELDERLY WEIGHING MORE THAN 40 KG: 7 mcg/kg once daily. Begin treatment as soon as possible after suspected or confirmed exposure to radiation doses greater than 2 (gray) Gy. Do not delay if CBC not available. Continue until ANC remains greater than 1,000 cells/mm³ for 3 consecutive CBCs (obtain q3days) or ANC exceeds 10,000 cells/mm³ after radiation-induced nadir.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: GI disturbances (nausea, diarrhea, vomiting, stomatitis, anorexia, abdominal pain), arthralgia or myalgia, headache, malaise, rash, pruritus.

Occasional: Peripheral edema, weight gain, dyspnea, asthenia, fever, leukocytosis, capillary leak syndrome (fluid retention, irritation at local injection site, peripheral edema). **Rare:** Tachycardia, arrhythmias, thrombophlebitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pleural/pericardial effusion occurs rarely after infusion.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, BMP, LFT, vital signs. Question history of cardiac/pulmonary disease, renal/hepatic impairment.

INTERVENTION/EVALUATION

Monitor CBC with differential, serum renal/hepatic function, pulmonary function, vital signs, weight. Monitor for supraventricular arrhythmias during administration (particularly in pts with history of cardiac arrhythmias). Assess closely for dyspnea during and immediately following infusion (particularly in pts with history of lung disease). If dyspnea occurs during infusion, cut infusion rate by half. If dyspnea continues, stop infusion immediately. If neutrophil count exceeds 20,000 cells/mm³ or platelet count exceeds 500,000 cells/mm³, stop infusion or reduce dose by half, based on clinical condition of pt. Blood counts return to normal or baseline 3–7 days after discontinuation of therapy.

PATIENT/FAMILY TEACHING

- Report difficulty breathing, esp. during or immediately after infusion.
- May increase risk of cardiac arrhythmias; report dizziness, fainting, palpitations.
- Treatment may cause edema, fluid collection in the lungs or around the heart.

sarilumab

sar-il-ue-mab
(Kevzara)

BLACK BOX ALERT Tuberculosis (TB), invasive fungal infections, other opportunistic infections leading to hospitalization and death were reported. Avoid use in pts with active infection. Withhold treatment until serious infection is controlled. Test for TB prior to and during treatment, regardless of initial result; if positive, start treatment for TB prior to initiation.

Do not confuse sarilumab with adalimumab, avelumab, belimumab, brodalumab, dupilumab, ipilimumab, nivolumab, or panitumumab.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Interleukin-6 receptor antagonist. Monoclonal antibody. **CLINICAL:** Antirheumatic, disease modifying.

USES

Treatment of adults with moderately to severely active rheumatoid arthritis who have had an inadequate response or intolerance to one or more DMARDs. May use as monotherapy or in combination with nonbiologic DMARDs (do not use in combination with biologic DMARDs).

PRECAUTIONS

Contraindications: Hypersensitivity to sarilumab. **Cautions:** Hyperlipidemia, hypertriglyceridemia, active hepatic disease or hepatic impairment; recent travel or residence in endemic TB or mycosis areas; history of chronic opportunistic infections (esp. bacterial, invasive fungal, mycobacterial, protozoal, viral, TB); conditions predisposing to infection (e.g., diabetes, immunocompromised pts, renal failure, open wounds); history of HIV, herpes zoster, hepatitis B virus (HBV) infection, malignancies; baseline neutropenia, thrombocytopenia; pts at risk for GI perforation (Crohn's disease, diverticulitis, GI tract malignancies, peptic ulcers, peritoneal malignancies). Not recommended in pts with active infection, concomitant use of biological DMARDs;

baseline ANC less than 2000 cells/mm³, platelet count less than 150,000 cells/mm³, serum ALT, AST above 1.5 times upper limit of normal (ULN).

ACTION

Binds to interleukin-6 (IL-6) receptor, inhibiting signaling of IL-6, a cytokine involved in inflammatory and immune responses. **Therapeutic Effect:** Reduces inflammation of RA.

PHARMACOKINETICS

Widely distributed. Peak plasma concentration: 2–4 days. Excretion (200 mg dose): linear, nonsaturable proteolytic pathway. (150 mg dose): Nonlinear, saturable target mediated pathway. **Half-life:** Concentration dependent: 200 mg q2wks (up to 10 days); 150 mg q2wks (up to 8 days).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses the placental barrier, esp. during the third trimester. Unknown if distributed in breast milk; however, maternal immunoglobulin G (IgG) is present in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Use caution (increased incidence of infections).

INTERACTIONS

DRUG: May decrease therapeutic effect of BCG (intravesical), vaccines (live). May increase adverse effects of belimumab, natalizumab, vaccines (live). **HERBAL:** Echinacea may decrease the therapeutic effect. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, cholesterol, LDL, HDL, triglycerides. May decrease leukocytes, neutrophils, platelets.

AVAILABILITY (Rx)

Injection Solution: 150 mg/1.14 mL, 200 mg/1.14 mL.

ADMINISTRATION/HANDLING

SQ

Preparation • Remove prefilled syringe from refrigerator and allow solution to warm to room temperature

(approx. 30 min) with needle cap intact. • Visually inspect for particulate matter or discoloration. Solution should appear clear, colorless to slightly yellow in color. Do not use if solution is cloudy, discolored, or visible particles are observed.

Administration • Insert needle subcutaneously into upper arms, outer thigh, or abdomen and inject solution. • Do not inject into areas of active skin disease or injury such as sunburns, skin rashes, inflammation, skin infections, or active psoriasis. • Do not administer IV or intramuscularly. • Rotate injection sites.

Storage • Refrigerate in original carton until time of use. • Protect from light. • May store at room temperature for up to 14 days. Once warmed to room temperature, do not place back into refrigerator. • Do not freeze or expose to heating sources. • Do not shake.

INDICATIONS/ROUTES/DOSAGE

Note: Do not initiate if ANC is less than 2,000 cells/mm³; platelets less than 150,000 cells/mm³; or serum ALT or AST greater than 1.5 times ULN.

Rheumatoid Arthritis

SQ: ADULTS, ELDERLY: 200 mg once q2wks.

Dose Modification

Neutropenia

ANC greater than 1000 cells/mm³: No dose adjustment. **ANC 500–1000 cells/mm³:** Withhold treatment until ANC greater than 1000 cells/mm³, then resume at 150 mg once q2wks. May increase to 200 mg once q2wks as clinically indicated. **ANC less than 500 cells/mm³:** Permanently discontinue.

Hepatotoxicity

Serum ALT elevation up to 3 times ULN: Consider modifying dose of concomitant DMARDs. **Serum ALT elevation greater than 3–5 times ULN:** Withhold treatment until serum ALT less than 3 times ULN, then resume at 150 mg once q2wks. May increase to

200 mg once q2wks as clinically indicated. **Serum ALT elevation greater than 5 times ULN:** Permanently discontinue.

Serious Infection

Withhold treatment until serious infection is controlled, then resume as clinically indicated.

Thrombocytopenia

Platelet count 50,000–100,000 cells/mm³: Withhold treatment until platelet count greater than 100,000 cells/mm³, then resume at 150 mg once q2wks. May increase to 200 mg once q2wks as clinically indicated. **Platelet count less than 50,000 cells/mm³:** Permanently discontinue if confirmed by repeat testing.

Dosage in Renal Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Not specified; use caution.

Dosage in Hepatic Impairment

Not specified; use caution.

SIDE EFFECTS

Rare (4%–2%): Injection site reactions (pain, erythema, pruritus).

ADVERSE EFFECTS/TOXIC REACTIONS

Serious, sometimes fatal, infections including aspergillosis, candidiasis, cellulitis, Cryptococcus, histoplasmosis, pneumonia, sepsis, tuberculosis; bacterial, mycobacterial, invasive fungal, opportunistic, viral infections were reported. Nasopharyngitis, upper respiratory tract infections, urinary tract infections occurred in 2–4% of pts. Neutropenia may increase risk of serious infection. GI perforation may occur, esp. in pts with history of diverticulitis or concomitant use of NSAIDs, corticosteroids. May increase risk for new malignancies. Hypersensitivity reactions including rash, urticaria reported in less than 1% of pts. May increase risk of HBV reactivation, which may result in fulminant hepatitis, hepatic failure, death. Immunogenicity (auto-sarilumab antibodies) was reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC (note neutrophil, platelet count), LFT, lipid panel. Assess onset, location, duration of pain, inflammation. Inspect appearance of affected joints for immobility, deformities. Pts should be evaluated for active tuberculosis and tested for latent infection prior to initiation and periodically during therapy. Induration of 5 mm or greater with tuberculin skin testing should be considered a positive test result when assessing if treatment for latent tuberculosis is necessary. Question history of chronic infections, opportunistic infections, herpes infection. Screen for active infection. Assess skin for open wounds. Question history of active hepatic disease, GI perforation, malignancies, HIV, HBV, hypersensitivity reactions. Receive full medication history and screen for interactions. Assess pt's willingness to self-inject medication.

INTERVENTION/EVALUATION

Assess for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength. Monitor neutrophil count, platelet count, LFT 4–6 wks after initiation, then q3mos thereafter. Monitor lipid panel 4–6 wks after initiation, then q6mos thereafter. Monitor for symptoms of tuberculosis, including those who tested negative for latent tuberculosis infection prior to initiating therapy. Interrupt or discontinue treatment if serious infection, opportunistic infection, or sepsis occurs and initiate appropriate antimicrobial therapy. Closely monitor for HBV reactivation.

PATIENT/FAMILY TEACHING

- Treatment may depress your immune system and reduce your ability to fight infection. Report symptoms of infection such as body aches, burning with urination, chills, cough, fatigue, fever. Avoid those with active infection.
- Do not receive live vaccines.
- Expect frequent tuberculosis screening. Report travel plans to possible

endemic areas. • A health care provider will show you how to properly prepare and inject medication. You must demonstrate correct preparation and injection techniques before using medication at home. • Report allergic reactions such as itching, hives, rash. • Immediately report severe or persistent abdominal pain, bloody stool, fever; may indicate tear in GI tract. • Treatment may cause reactivation of HBV, new cancers. • Therapy may decrease platelet count, which may increase risk of bleeding. • Report liver problems such as bruising, confusion, amber or dark-colored urine; right upper abdominal pain; yellowing of the skin or eyes.

sAXagliptin

sax-a-glip-tin
(Onglyza)

Do not confuse SAXagliptin with SITagliptin or SUMAtriptan.

FIXED-COMBINATION(S)

Kombiglyze XR: SAXagliptin/metFORMIN (an antidiabetic): 2.5 mg/1,000 mg, 5 mg/500 mg, 5 mg/1,000 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: DDP-4 inhibitor (gliptins). **CLINICAL:** Antidiabetic agent.

USES

Adjunctive treatment to diet and exercise to improve glycemic control in pts with type 2 diabetes as monotherapy or in combination with other antidiabetic agents.

PRECAUTIONS

Contraindications: Hypersensitivity to SAXagliptin. Type 1 diabetes, ketoacidosis. **Cautions:** Concurrent use of other glucose-lowering agents may increase risk of hypoglycemia, moderate to severe renal impairment, end-stage renal disease requiring hemodialysis, concurrent

use of strong CYP3A4 inhibitors (e.g., clarithromycin).

ACTION

Slows the inactivation of incretin hormones by inhibiting DDP-4 enzyme. Incretin hormones increase insulin synthesis/release from pancreas and decrease glucagon secretion. **Therapeutic Effect:** Regulates glucose homeostasis.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Oral	—	—	24 hrs

Rapidly absorbed following PO administration. Extensively metabolized. Excreted by both renal and hepatic pathways. **Half-life:** 2.5 hrs; metabolite, 3.1 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May increase hypoglycemic effects of insulin, sulfonylureas (e.g., glipizide, glyBURIDE). Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole) may increase concentration/effect. CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifAMPin) may decrease concentration/effect. **HERBAL:** Herbals with hypoglycemic properties (e.g., fenugreek) may increase effect. **FOOD:** Grapefruit products may increase concentration. **LAB VALUES:** May slightly decrease WBCs, lymphocytes. May increase serum creatinine.

AVAILABILITY (Rx)

 **Tablets, Film-Coated:** 2.5 mg, 5 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to food. • Do not break, crush, dissolve, or divide film-coated tablets.

INDICATIONS/ROUTES/DOSAGE**Type 2 Diabetes**

PO: ADULTS, ELDERLY: 2.5 or 5 mg once daily. **Concurrent strong CYP3A4 inhibitors (e.g., ketoconazole):** 2.5 mg once daily. **Hemodialysis:** Give dose after dialysis.

Dosage in Renal Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment: CrCl less than 50 mL/min:** 2.5 mg once daily.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (7%): Headache. **Rare (3%–1%):** Peripheral edema, sinusitis, abdominal pain, gastroenteritis, vomiting, rash.

**ADVERSE EFFECTS/
TOXIC REACTIONS**

Lymphopenia, rash occur rarely. Upper respiratory tract infection, urinary tract infection occur in approximately 7% of pts.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Check serum blood glucose before administration. Discuss lifestyle to determine extent of learning, emotional needs. Ensure follow-up instruction if pt or family does not thoroughly understand diabetes management or glucose-testing technique.

INTERVENTION/EVALUATION

Assess for hypoglycemia (diaphoresis, tremors, dizziness, anxiety, headache, tachycardia, perioral numbness, hunger, diplopia, difficulty concentrating), hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, dim vision, fatigue, deep, rapid breathing). Be alert to conditions that alter glucose requirements (fever, increased activity or stress, surgical procedures).

PATIENT/FAMILY TEACHING

- Diabetes requires lifelong control. Prescribed diet and exercise are principal parts of treatment; do not skip or delay meals.
- Continue to adhere to dietary instructions, regular exercise program, regular testing of blood glucose.
- When taking combination drug therapy or when glucose demands are altered (fever, infection, trauma, stress, heavy physical activity), have a source of glucose available to treat symptoms of hypoglycemia.

scopolamine

sko-e-pol-a-meen
(Trans-Derm Scop, Buscopan )

FIXED-COMBINATION(S)

Donnatal: scopolamine/atropine (anticholinergic)/hyoscyamine (anticholinergic)/PHENobarbital (sedative): 0.0065 mg/0.0194 mg/0.1037 mg/16.2 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticholinergic. **CLINICAL:** Antinausea, antiemetic.

USES

Prevention of motion sickness, postop nausea/vomiting. **OFF-LABEL:** Breakthrough treatment of nausea/vomiting associated with chemotherapy.

PRECAUTIONS

Contraindications: Hypersensitivity to scopolamine. Narrow-angle glaucoma. **Cautions:** Hepatic/renal impairment, cardiac disease (hypertension, HF), seizure disorder, psychoses, coronary artery disease, prostatic hyperplasia, urinary retention, reflux esophagitis, ulcerative colitis, hyperthyroidism, GI obstruction, hiatal hernia, elderly pts.

ACTION

Competitively inhibits action of acetylcholine in smooth muscle, secretory glands, and CNS. **Therapeutic Effect:** Prevents motion-induced nausea/vomiting.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; unknown if distributed in breast milk. **Children:** May be more susceptible to adverse effects. **Elderly:** Dizziness, hallucinations, confusion may require dosage adjustment. Use caution.

INTERACTIONS

Transdermal: **DRUG:** None significant. **HERBAL:** None significant. **FOOD:** Grapefruit products may increase concentration/effects. **LAB VALUES:** May interfere with gastric secretion test.

AVAILABILITY (Rx)

Transdermal System: (Trans-Derm Scop): 1.5 mg.

ADMINISTRATION/HANDLING**Transdermal**

- Apply patch to hairless area behind one ear.
- If dislodged or on for more than 72 hrs, replace with fresh patch.
- Do not cut/trim.
- Limit contact with water.

INDICATIONS/ROUTES/DOSAGE**Prevention of Motion Sickness**

Transdermal: ADULTS: One system at least 4 hrs prior to exposure and q72h as needed.

Postop Nausea/Vomiting

Transdermal: ADULTS, ELDERLY: 1 system no sooner than 1 hr before surgery and removed 24 hrs after surgery.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (greater than 15%): Dry mouth, drowsiness, blurred vision. **Rare**

(5%–1%): Dizziness, restlessness, hallucinations, confusion, difficulty urinating, rash.

ADVERSE EFFECTS/TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Assess for use of other CNS depressants, drugs with anticholinergic action, history of narrow-angle glaucoma. Question medical history as listed in Precautions.

INTERVENTION/EVALUATION

Monitor for dehydration. Observe for improvement of symptoms.

PATIENT/FAMILY TEACHING

- Avoid tasks requiring alertness, motor skills until response to drug is established (may cause drowsiness, disorientation, confusion).
- Use only 1 patch at a time; do not cut.
- Wash hands after administration.

secukinumab

sek-ue-kin-ue-mab
(Cosentyx, Cosentyx Sensor Pen)
Do not confuse secukinumab with canakinumab, ranibizumab, trastuzumab, ustekinumab

CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. Human interleukin-17A antagonist. **CLINICAL:** Antipsoriasis agent.

USES

Treatment of moderate to severe plaque psoriasis in adult pts who are candidates for systemic therapy or phototherapy, active psoriatic arthritis (PsA), active ankylosing spondylitis (AS).

PRECAUTIONS

Contraindications: Hypersensitivity to secukinumab. **Cautions:** Elderly, active Crohn's disease, HIV infection, concomitant use of immunosuppressants; conditions predisposing to infections (e.g., diabetes, renal failure, immunocompromised pts, open wounds); hypersensitivity to latex (injector pen/prefilled syringe), preexisting or recent-onset CNS demyelinating disorders (e.g., multiple sclerosis, polyneuropathy); exposure to tuberculosis. Administration of live vaccines not recommended.

ACTION

Selectively binds to the interleukin-17A (IL-17A) cytokine, inhibiting its interaction with the IL-17 receptor. IL-17A is involved in inflammatory and immune responses. **Therapeutic Effect:** Inhibits release of proinflammatory cytokines.

PHARMACOKINETICS

Widely distributed. Degraded into small peptides and amino acids via catabolic pathway. Peak plasma concentration: 6 days. Steady state reached in 24 wks. Excretion not defined. **Half-life:** 22–31 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease efficacy/immune response of **live vaccines**; may increase risk of toxic effects of **live vaccines**. **HERBAL:** **Echinacea** may decrease the therapeutic effect. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injector Pen: 150 mg/mL solution. **Prefilled Syringe:** 150 mg/mL solution.

ADMINISTRATION/HANDLING**SQ**

• Follow instructions for preparation according to manufacturer guidelines.

Administration • Insert needle subcutaneously into upper arms, outer thigh, or abdomen and inject solution. • Do not inject into areas of active skin disease or injury such as sunburns, skin rashes, inflammation, skin infections, or active psoriasis. • Rotate injection sites.

Storage • Refrigerate until time of use. • Allow injector pen/prefilled syringe/vial to warm to room temperature before use (15–30 min). Do not freeze.

INDICATIONS/ROUTES/DOSAGE**Plaque Psoriasis**

SQ: ADULTS, ELDERLY: 300 mg every wk for 5 doses, then 300 mg q4wks. (Some pts may only require 150 mg.)

PsA, AS

Note: With coexistent plaque psoriasis, use dose for plaque psoriasis.

SQ: ADULTS, ELDERLY: Initially, 150 mg at wks 0, 1, 2, 3, and 4, then q4wks or 150 mg q4wks. For active PsA, may consider dose of 300 mg.

Dosage in Renal/Hepatic Impairment

Not studied; use caution.

SIDE EFFECTS

Rare (4%–1%): Diarrhea, urticaria, rhinorrhea.

**ADVERSE EFFECTS/
TOXIC REACTIONS**

May increase risk of infection including tuberculosis. Infection processes including nasopharyngitis (11% of pts), upper respiratory tract infection (2.5% of pts), mucocutaneous infection with candida (1.2% of pts), rhinitis, pharyngitis, oral herpes (1% of pts) have occurred. May cause exacerbation of Crohn's disease. Hypersensitivity reactions including anaphylaxis were reported. Immunogenicity (auto-secukinumab antibodies) occurred in less than 1% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline vital signs. Pts should be evaluated for active tuberculosis and tested for latent infection prior to initiating treatment and periodically during therapy. Induration of 5 mm or greater with tuberculin skin testing should be considered a positive test result when assessing if treatment for latent tuberculosis is necessary. Antifungal therapy should be considered for those who reside or travel to regions where mycoses are endemic. Do not initiate therapy during active infection. Question history of active Crohn's disease, hepatitis B or C virus infection, HIV infection, demyelinating disorders, cardiovascular disease; concomitant use of immunosuppressive agents.

INTERVENTION/EVALUATION

Monitor skin for disease improvement. Monitor for symptoms of tuberculosis, including those who tested negative for latent tuberculosis infection prior to initiating therapy. Interrupt or discontinue treatment if serious infection, opportunistic infection, or sepsis occurs. Monitor for hypersensitivity reaction.

PATIENT/FAMILY TEACHING

- Treatment may depress your immune system response and reduce your ability to fight infection. Report symptoms of infection such as body aches, chills, cough, fatigue, fever. Avoid those with active infection.
- Do not receive live vaccines.
- Expect frequent tuberculosis screening.
- Report travel plans to possible endemic areas.
- Injector pen/prefilled syringe should not be used by pts with latex allergy.
- Immediately report itching, hive, rash, swelling of the face or tongue; may indicate allergic reaction.
- Treatment may cause worsening of Crohn's disease.

selegiline

se-le-ji-leen
(Emsam, Zelapar)

■ BLACK BOX ALERT ■ Antidepressants increase risk of suicidal thoughts and behavior in pediatrics and young adults. Monitor closely for changes in behavior, suicidal ideation.

Do not confuse Eldepryl with Elavil or enalapril, selegiline with Salagen, sertraline, or Stelazine, or Zelapar with Zaleplon, Zemplar, or ZYPREXA.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: MAOI.

CLINICAL: Antiparkinson agent, antidepressant.

USES

Oral: Adjunct to levodopa/carbidopa in treatment of Parkinson's disease. **Transdermal:** Treatment of major depressive disorder (MDD). **OFF-LABEL:** Treatment of ADHD, early Parkinson's disease.

PRECAUTIONS

Contraindications: Hypersensitivity to selegiline. Concurrent use of meperidine.

Orally Disintegrating Tablet (additional): Concurrent use of cyclobenzaprine, dextromethorphan, methadone, St. John's wort, traMADol, oral selegiline, other MAOIs within 14 days of selegiline.

Transdermal (additional): Pheochromocytoma; concurrent use of buPROPion, SSRIs (e.g., FLUoxetine), SNRIs (e.g., DULoxetine), tricyclic antidepressants, busPIRone, traMADol, methadone, dextromethorphan, St. John's wort, mirtazapine, cyclobenzaprine, oral selegiline, other MAOIs, carBAMazepine, OXcarbapazine, sympathomimetics (e.g., amphetamines, cold products containing vasoconstrictors). Elective surgery requiring general anesthesia, local anesthesia containing sympathomimetics; foods high

in tyramine content. **Cautions:** Renal/hepatic impairment, depression, elderly pts, major psychiatric disorder; pts at high risk of suicide; pts at high risk of hypotension (cerebrovascular disease, cardiovascular disease, hypovolemia).

ACTION

Irreversibly inhibits activity of monoamine oxidase type B (enzyme that breaks down DOPamine), thereby increasing dopaminergic action. **Therapeutic Effect:** Relieves signs/symptoms of Parkinson's disease (tremor, akinesia, posture/equilibrium disorders, rigidity). Improves mood with MDD.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	—	24–72 hrs

Rapidly absorbed from GI tract. Crosses blood-brain barrier. Protein binding: 90%. Metabolized in liver. Primarily excreted in urine. **Half-life: PO:** 10 hrs. **Transdermal:** 18–25 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **FLUoxetine**, **fluvoxamine**, **PARoxetine**, **sertraline**, **venlafaxine** may cause mania, serotonin syndrome (altered mental status, restlessness, diaphoresis, diarrhea, fever). **Meperidine** may cause serotonin syndrome reaction (e.g., excitation, diaphoresis, rigidity, hypertension/hypotension, coma, death). **Tricyclic antidepressants** (e.g., **amitriptyline**, **doxepin**) may cause diaphoresis, hypertension, syncope, altered mental status, hyperpyrexia, seizures, tremors (wait 14 days between stopping selegiline and starting tricyclic antidepressants). **Alcohol** may increase

adverse effects. **HERBAL:** **Herbals with hypotensive properties** (e.g., **garlic**, **ginger**, **ginkgo biloba**) may increase hypotensive effect. **FOOD:** **Tyramine-rich foods** may produce hypertensive reactions. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: 5 mg. **Tablets:** 5 mg. **Tablets, Orally Disintegrating:** (*Zelapar*): 1.25 mg. **Transdermal:** (*Emsam*): 6 mg/24 hrs, 9 mg/24 hrs, 12 mg/24 hrs.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Avoid tyramine-containing foods, large quantities of caffeine-containing beverages.

PO (Orally Disintegrating Tablets)

• Give in morning before breakfast and without liquid. • Peel off backing with dry hands (do not push tablets through foil). • Immediately place on top of tongue, allow to disintegrate. • Avoid food, liquids for 5 min before and after taking selegiline.

Transdermal

• Apply to dry, intact skin on upper torso or thigh, outer surface of upper arm. • Avoid exposure to external heat source. • Normal exposure to water unlikely to affect adhesion. • If patch becomes loose, press back into place. If patch falls off again, apply a new patch; follow same dose schedule. • Rotate application sites.

INDICATIONS/ROUTES/DOSAGE

Adjunctive Treatment of Parkinson's Disease

PO: ADULTS: (*Capsule, Tablet*): 5 mg at breakfast and lunch, given concomitantly with each dose of carbidopa and levodopa. **ELDERLY:** Initially, 5 mg in the morning. May increase up to 10 mg/day. **ADULTS, ELDERLY:** (*Orally Disintegrating Tablet*): Initially, 1.25 mg daily for at least 6 wks. May increase to maximum of 2.5 mg/day.

Major Depressive Disorder

Transdermal: ADULTS: Initially, 6 mg/24 hrs. May increase in 3 mg/24 hrs increments at minimum of 2 wks. **Maximum:** 12 mg/24 hrs. **ELDERLY: Maximum:** 6 mg/24 hrs.

Dosage in Renal/Hepatic Impairment

Orally disintegrating tablet: Not recommended in severe impairment. **Oral:** Use caution. **Transdermal:** No dose adjustment.

SIDE EFFECTS

Frequent (10%–4%): Nausea, dizziness, light-headedness, syncope, abdominal discomfort. **Occasional (3%–2%):** Confusion, hallucinations, dry mouth, vivid dreams, dyskinesia. **Rare (1%):** Headache, myalgia, anxiety, diarrhea, insomnia.

**ADVERSE EFFECTS/
TOXIC REACTIONS**

Symptoms of overdose may vary from CNS depression (sedation, apnea, cardiovascular collapse, death) to severe paradoxical reactions (hallucinations, tremor, seizures). Impaired motor coordination, (loss of balance, blepharospasm, facial grimaces, feeling of heaviness in lower extremities), depression, nightmares, delusions, overstimulation, sleep disturbance, anger, hallucinations, confusion may occur.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Receive full medication history and screen for contraindications/interactions. Question medical history as listed in Precautions. Assess current state of mental health.

INTERVENTION/EVALUATION

Be alert to neurologic effects (headache, lethargy, mental confusion, agitation). Monitor for evidence of dyskinesia (difficulty with movement). Assess for clinical reversal of symptoms (improvement of tremors of head/hands at rest, mask-like facial expression, shuffling gait, muscular

rigidity). Monitor for unusual behavior, worsening depression, suicidal ideation, especially at initiation of therapy or with changes in dosage.

PATIENT/FAMILY TEACHING

- Tolerance to dizziness, light-headedness develops during therapy.
- To reduce hypotensive effect, slowly go from lying to standing.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Dry mouth, drowsiness, dizziness may be an expected response to drug.
- Avoid alcohol.
- Report worsening depression, unusual behavior, thoughts of suicide.
- Avoid tyramine-rich foods.
- Do not take newly prescribed medications unless approved by prescriber who originally started treatment.
- Do not take herbal supplements.

semaglutide

sem-a-gloo-tide
(Ozempic, Rybelsus)

BLACK BOX ALERT Thyroid C-cell tumors have occurred in rodent studies with glucagon-like peptide-1 (GLP-1) receptor agonists; unknown if relevant in humans. Contraindicated in pts with a personal/family history of medullary thyroid carcinoma or in pts with multiple endocrine neoplasia syndrome type 2.

Do not confuse semaglutide with albiglutide, dulaglutide, liraglutide, or teduglutide.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Glucagon-like peptide-1 (GLP-1) receptor agonist. **CLINICAL:** Antidiabetic.

USES

Adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus.

PRECAUTIONS

Contraindications: Hypersensitivity to semaglutide. Personal/family history of medullary thyroid carcinoma (MTC). Pts with multiple endocrine neoplasia syndrome type 2 (MEN2). **Cautions:** Mild to moderate gastroparesis, renal impairment. History of pancreatitis. Not recommended in pts with severe GI disease, diabetic ketoacidosis, type 1 diabetes mellitus, or pancreatitis, or for use as first-line treatment regimen.

ACTION

Agonist of human glucagon-like peptide-1 (GLP-1). Increases glucose-dependent insulin secretion. Decreases inappropriate glucagon secretion. Slows gastric emptying. **Therapeutic Effect:** Augments glucose-dependent insulin secretion.

PHARMACOKINETICS

Widely distributed. Metabolized by proteolytic enzymes via protein degradation into small peptides, amino acids. Protein binding: greater than 99%. Peak plasma concentration: 1–3 days. Steady state reached in 4–5 wks. Excreted in urine (3% unchanged), feces. **Half-life:** 7 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Due to extended clearance period, recommend discontinuation of therapy at least 2 mos before planned pregnancy. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase hypoglycemic effect of **insulins, sulfonylureas (e.g., glipizide, glyburide)**. **HERBAL:** Herbs with hypoglycemic properties (e.g., fenugreek) may increase effect. **FOOD:** None known. **LAB VALUES:** Expected to decrease serum glucose, Hgb A1c. May increase serum amylase, lipase.

AVAILABILITY (Rx)

Injection Solution, Prefilled Injector Pen: 1 mg/dose or 0.25 mg or 0.5 mg per dose (2 mg/1.5 mL). **Tablets:** 3 mg, 7 mg, 14 mg.

ADMINISTRATION/HANDLING**PO**

• Administer on an empty stomach, at least 30 min before the first food intake, beverage, or other oral medications of the day. • Take with 4 oz of plain water only. Eat 30–60 min after dose. • Administer whole; do not break, cut, or crush. Tablets cannot be chewed.

SQ

Guidelines • Administer any time of the day, without regard to food, on the same day of each wk. May change administration day if the time between two doses is at least 2 days. • If dose is missed, administer within 5 days of missed dose. If more than 5 days pass after missed dose, wait until next regularly scheduled dose.

Preparation • Visually inspect for particulate matter or discoloration. Solution should appear clear, colorless, and free of particles. Do not use if solution is cloudy, discolored, or visible particles are observed.

Administration • Insert needle subcutaneously into abdomen, outer thigh, or upper arm, and inject solution. • Do not inject into areas of active skin disease or injury such as sunburns, skin rashes, inflammation, skin infections, or active psoriasis. • Do not administer IV or intramuscular. • Rotate injection sites.

Storage • Refrigerate unused injector pens. • Once used, may refrigerate or store at room temperature for up to 56 days. • Do not freeze. • Protect from sunlight.

INDICATIONS/ROUTES/DOSAGE**Type 2 Diabetes Mellitus**

SQ: ADULTS, ELDERLY: Initially, 0.25 mg once wkly for 4 wks, then increase to 0.5 mg once wkly for at least 4 wks. If glyce-mic response is inadequate, may further increase to a maximum of 1 mg once wkly.

PO: ADULTS, ELDERLY: Initially, 3 mg once daily for 30 days, then increase to 7 mg once daily for at least 30 days. May further increase to 14 mg once daily. **Note:** The 3 mg dose is intended only for therapy initiation.

Dosage in Renal/Hepatic Impairment

Mild to severe impairment: No dose adjustment.

SIDE EFFECTS

Occasional (15%–5%): Nausea, vomiting, diarrhea, abdominal pain, constipation.

Rare (less than 1%): Injection site reactions (pain, erythema), fatigue, dysgeusia, dizziness.

ADVERSE EFFECTS/TOXIC REACTIONS

May increase risk of acute renal failure or worsening of chronic renal impairment (esp. with dehydration), severe gastroparesis, pancreatitis, thyroid C-cell tumors. Hypersensitivity reactions including anaphylaxis, angioedema were reported. May increase risk of hypoglycemia when used with other hypoglycemic agents, insulin. Diabetic retinopathy complications reported in 1% of pts. Worsening of diabetic retinopathy has been associated with rapid improvement of glucose control. Cholelithiasis reported in 2% of pts. Immunogenicity (anti-semaglutide antibody formation) reported in 1% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline fasting glucose level, Hgb A1c. Obtain BUN, serum creatinine, eGFR, CrCl in pts with renal impairment. Question history of medullary thyroid carcinoma, multiple endocrine neoplasia syndrome type 2, hypersensitivity reaction, pancreatitis. Screen for use of other hypoglycemic agents, insulin. Assess pt's understanding of diabetes management, routine home glucose monitoring. Assess hydration status. Obtain dietary consult for nutritional education. Assess pt's willingness to self-inject medication.

INTERVENTION/EVALUATION

Monitor capillary blood glucose levels, Hgb A1c; renal function in pts with renal impairment reporting severe GI symptoms such as diarrhea, gastroparesis, vomiting. Monitor for hypersensitivity reaction. Screen for thyroid tumors (dysphagia, dyspnea, persistent hoarseness, neck mass). If tumor is suspected, consider endocrinologist consultation. Clinical significance of serum calcitonin level or thyroid ultrasound with GLP-1–associated thyroid tumors is debated/unknown. Assess for hypoglycemia (anxiety, confusion, diaphoresis, diplopia, dizziness, headache, hunger, perioral numbness, tachycardia, tremors), hyperglycemia (confusion, fatigue, Kussmaul breathing, nausea, polyuria, vomiting). Screen for glucose-altering conditions: fever, stress, surgical procedures, trauma. Monitor for pancreatitis (severe, steady abdominal pain often radiating to the back [with or without vomiting]). Encourage fluid intake. Monitor I&Os.

PATIENT/FAMILY TEACHING

- A health care provider will show you how to properly prepare and inject medication. You must demonstrate correct preparation and injection techniques before using medication at home.
- Diabetes mellitus requires lifelong control. Diet and exercise are principal parts of treatment; do not skip or delay meals.
- Test blood sugar regularly.
- Monitor daily calorie intake.
- When taking additional medications to lower blood sugar or when glucose demands are altered (fever, infection, stress, trauma), have low blood sugar treatment available (glucagon, oral dextrose).
- Therapy may increase risk of thyroid cancer; report lumps or swelling of the neck, hoarseness, shortness of breath, trouble swallowing.
- Persistent, severe abdominal pain that radiates to the back (with or without vomiting) may indicate acute pancreatitis.
- Report allergic reactions of any kind, esp. difficulty breathing, itching, rash, swelling of the face or throat.
- Kidney injury or kidney failure may occur; report decreased urine output, amber-colored urine, flank pain.

sertraline

ser-tra-leen
(Zoloft)

BLACK BOX ALERT ■ Increased risk of suicidal ideation and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse sertraline with selegiline, Serentil, or Serevent, or Zoloft with Zocor.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective serotonin reuptake inhibitor. **CLINICAL:** Antidepressant, anxiolytic, obsessive-compulsive disorder adjunct.

USES

Treatment of major depressive disorders, panic disorder, obsessive-compulsive disorder (OCD), post-traumatic stress disorder (PTSD), premenstrual dysphoric disorder (PMDD), social anxiety disorder. **OFF-LABEL:** Eating disorders, bulimia nervosa, generalized anxiety disorder (GAD).

PRECAUTIONS

Contraindications: Hypersensitivity to sertraline. MAOI use within 14 days (concurrently or within 14 days of stopping an MAOI or sertraline). Concurrent use of oral concentrate (contains alcohol) with disulfiram. Concurrent use with pimozide; initiation in pts treated with linezolid or methylene blue. **Cautions:** Seizure disorder, hepatic impairment, pts at risk for uric acid nephropathy, elderly pts, pts in third trimester of pregnancy, pts at high risk for suicide, family history of bipolar disorder or mania, pts with risk factors for QT prolongation (e.g., hypokalemia, hypomagnesemia), alcoholism. Pts in whom weight loss is undesirable.

ACTION

Blocks reuptake of the neurotransmitter serotonin at CNS neuronal presynaptic membranes, increasing availability at

postsynaptic receptor sites. **Therapeutic Effect:** Relieves depression, reduces obsessive-compulsive behavior, decreases anxiety.

PHARMACOKINETICS

Incompletely, slowly absorbed from GI tract; food increases absorption. Protein binding: 98%. Widely distributed. Metabolized in liver. Excreted in urine (45%), feces (45%). Not removed by hemodialysis. **Half-life:** 26 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Children and adolescents are at increased risk for suicidal ideation and behavior or worsening of depression, esp. during the first few mos of therapy. **Elderly:** No age-related precautions noted, but lower initial dosages recommended.

INTERACTIONS

DRUG: Alcohol, disulfiram may increase adverse effects. **Anticoagulants** (e.g., heparin, rivaroxaban, warfarin), **antiplatelets** (e.g., aspirin, clopidogrel), **NSAIDs** (e.g., ibuprofen, ketorolac, naproxen) may increase risk of bleeding. **MAOIs** (e.g., phenelzine, selegiline) may cause neuroleptic malignant syndrome, serotonin syndrome. Concomitant use of other **serotonergic drugs** (e.g., busPIRone, carBAMazepine, fentaNYL, linezolid, lithium, SNRIs [e.g., DULoxetine, venlafaxine]) may cause serotonin syndrome. May increase concentration, toxicity of **tricyclic antidepressants** (e.g., amitriptyline, doxepin). **HERBAL:** Glucosamine, herbs with anticoagulant/antiplatelet properties (e.g., garlic, ginger, ginkgo biloba, ginseng) may increase concentration/effect. **FOOD:** Grapefruit products may increase concentration/effect. **LAB VALUES:** May increase total serum cholesterol, triglycerides, ALT, AST. May decrease serum uric acid.

AVAILABILITY (Rx)

Oral Concentrate: 20 mg/mL. **Tablets:** 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

- Give with food, milk if GI distress occurs.
- Oral concentrate must be diluted before administration. Mix with 4 oz water, ginger ale, lemon/lime soda, or orange juice *only*. Give immediately after mixing.

INDICATIONS/ROUTES/DOSAGE

Depression

PO: ADULTS: Initially, 50 mg/day. May increase by 25–50 mg/day at 7-day intervals up to 200 mg/day. **ELDERLY:** Initially, 25 mg/day. May increase by 25–50 mg/day at 7-day intervals up to 200 mg/day.

Obsessive-Compulsive Disorder (OCD)

PO: ADULTS, CHILDREN 13–17 YRS: Initially, 50 mg/day with morning or evening meal. May increase by 25–50 mg/day at 7-day intervals up to 200 mg/day. **ELDERLY, CHILDREN 6–12 YRS:** Initially, 25 mg/day. May increase by 25–50 mg/day at 7-day intervals. **Maximum:** 200 mg/day.

Panic Disorder

PO: ADULTS, ELDERLY: Initially, 25 mg once daily for 3–7 days. May increase to 50 mg/day. May further increase dose based on response and tolerability in increments of 25–50 mg at intervals of at least 1 wk. **Maximum:** 200 mg/day.

Post-Traumatic Stress Disorder (PTSD), Social Anxiety Disorder (SAD)

PO: ADULTS, ELDERLY: Initially, 25–50 mg/day. May increase by 25–50 mg/day at 7-day intervals. Range: 50–200 mg/day. **Maximum:** 200 mg/day.

Premenstrual Dysphoric Disorder (PMDD)

PO: ADULTS: Initially, 50 mg/day either daily throughout menstrual cycle or limited to luteal phase of menstrual cycle. May increase up to 150 mg/day per menstrual cycle in 50-mg increments when dosing

throughout menstrual cycle or 100 mg/day when dosing during luteal phase only.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (26%–12%): Headache, nausea, diarrhea, insomnia, drowsiness, dizziness, fatigue, rash, dry mouth. **Occasional (6%–4%):** Anxiety, nervousness, agitation, tremor, dyspepsia, diaphoresis, vomiting, constipation, sexual dysfunction, visual disturbances, altered taste. **Rare (less than 3%):** Flatulence, urinary frequency, paresthesia, hot flashes, chills.

ADVERSE EFFECTS/TOXIC REACTIONS

Serotonin syndrome (seizures, arrhythmias, high fever), neuroleptic malignant syndrome (muscle rigidity, cognitive changes), suicidal ideation have occurred.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess appearance, behavior, speech patterns, level of interest, mood. For pts on long-term therapy, CBC, renal function, LFT should be performed periodically.

INTERVENTION/EVALUATION

Assess mental status for depression, suicidal ideation (esp. at beginning of therapy or change in dosage), anxiety, social function, panic attack. Monitor daily pattern of bowel activity, stool consistency. Assist with ambulation if dizziness occurs.

PATIENT/FAMILY TEACHING

- Dry mouth may be relieved by sugarless gum, sips of water.
- Report headache, fatigue, tremor, sexual dysfunction.
- Avoid tasks that require alertness, motor skills until response to drug is established (may cause dizziness, drowsiness).
- Take with food if nausea occurs.
- Inform physician if pregnancy

occurs. • Avoid alcohol. • Do not take OTC medications without consulting physician. • Report worsening of depression, suicidal ideation.

sevelamer

TOP
100

se-vel-a-mer

(Renagel, Renvela)

Do not confuse Renagel with Reglan, Regonol, or Renvela, or sevelamer with Savella.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Polymeric phosphate binder. **CLINICAL:** Electrolyte modifier, antihyperphosphatemia agent.

USES

Control of serum phosphorus in pts with chronic renal disease on hemodialysis.

PRECAUTIONS

Contraindications: Hypersensitivity to sevelamer. Bowel obstruction. **Cautions:** Dysphagia, severe GI tract motility disorders, major GI tract surgery.

ACTION

Binds with phosphate within the intestinal lumen without altering calcium, aluminum, or bicarbonate concentration. **Therapeutic Effect:** Inhibits phosphate absorption. Decreases serum phosphate concentration.

PHARMACOKINETICS

Not absorbed systemically. Unknown if removed by hemodialysis.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease concentration/effect of **fluoroquinolones** (e.g., **levoFLOXacin**), **levothyroxine**, **mycophenolate**.

HERBAL: None significant. **FOOD:** May cause reduced absorption of **vitamins D, E, K, folic acid**. **LAB VALUES:** Expected to decrease serum phosphate.

AVAILABILITY (Rx)

Powder for Oral Suspension: (**Renvela**): 0.8 g/pack, 2.4 g/pack.

 **Tablets:** 800 mg.

ADMINISTRATION/HANDLING

PO

• Give with meals. • Space other medication by at least 1 hr before or 3 hrs after sevelamer. • Give tablets whole; do not break, crush, dissolve, or divide. • **Oral Suspension:** Mix 0.8 g with 30 mL water (2.4 g with 60 mL water). Stir vigorously to suspend (does not dissolve) just prior to drinking.

INDICATIONS/ROUTES/DOSAGE

Hyperphosphatemia

PO: ADULTS, ELDERLY: 800–1,600 mg with each meal, depending on severity of hyperphosphatemia (5.5–7.4 mg/dL: 800 mg 3 times/day; 7.5–8.9 mg/dL: 1,200–1,600 mg 3 times/day; 9 mg/dL or greater: 1,600 mg 3 times/day). **Maintenance:** Based on serum phosphorus concentrations. Goal range: 3.5–5.5 mg/dL.

Serum Phosphorus

Concentration	Dosage
Greater than 5.5 mg/dL	Increase by 400–800 mg per meal at 2-wk intervals
3.5–5.5 mg/dL	Maintain current dosage
Less than 3.5 mg/dL	Decrease by 400–800 mg per meal

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (20%–11%): Infection, pain, hypotension, diarrhea, dyspepsia, nausea, vomiting. **Occasional (10%–1%):** Headache, constipation, hypertension, increased cough.

ADVERSE EFFECTS/TOXIC REACTIONS

Thrombosis occurs rarely.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain baseline chemistries, esp serum calcium, phosphate; assess for bowel obstruction.

INTERVENTION/EVALUATION

Monitor serum phosphate, bicarbonate, chloride, calcium.

PATIENT/FAMILY TEACHING

- Take with meals, swallow tablets whole; do not chew, crush, dissolve, or divide tablets.
- Report persistent headache, nausea, vomiting, diarrhea, hypotension.

simvastatinTOP
100

sim-va-sta-tin
(FloLipid, Zocor)

Do not confuse simvastatin with atorvastatin, lovastatin, nystatin, pitavastatin, or pravastatin, or Zocor with Cozaar, Lipitor, Zolof, or ZyrTEC.

FIXED-COMBINATION(S)

Juvisync: simvastatin/SITagliptin (an antidiabetic agent): 10 mg/100 mg, 20 mg/100 mg, 40 mg/100 mg. **Simcor:** simvastatin/niacin (an antilipemic agent): 20 mg/500 mg, 40 mg/500 mg, 20 mg/750 mg, 20 mg/1000 mg, 40 mg/1000 mg. **Vytorin:** simvastatin/ezetimibe (a cholesterol absorption inhibitor): 10 mg/10 mg, 20 mg/10 mg, 40 mg/10 mg, 80 mg/10 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Hydroxymethylglutaryl-CoA (HMG-CoA) reductase inhibitor. **CLINICAL:** Anti-hyperlipidemic.

USES

Secondary prevention of cardiovascular events in pts with hypercholesterolemia and coronary heart disease (CHD) or at high risk for CHD. Treatment of hyperlipidemias to reduce elevations in total serum cholesterol, LDL-C, apolipoprotein B, triglycerides, VLDL-C and increase HDL-C. Treatment of homozygous familial hypercholesterolemia (HoFH). Treatment of heterozygous familial hypercholesterolemia (HeFH) in adolescents (10–17 yrs, females more than 1 yr postmenarche).

PRECAUTIONS

Contraindications: Hypersensitivity to simvastatin. Active hepatic disease or unexplained, persistent elevations of hepatic function test results, pregnancy, breast-feeding, concurrent use of strong CYP3A4 inhibitors (e.g., clarithromycin, cycloSPORINE, gemfibrozil). **Cautions:** History of hepatic disease, diabetes, severe renal impairment, substantial alcohol consumption. Withholding or discontinuing simvastatin may be necessary when pt is at risk for renal failure secondary to rhabdomyolysis. Concomitant use of other medications associated with myopathy.

ACTION

Interferes with cholesterol biosynthesis by inhibiting conversion of the enzyme HMG-CoA to mevalonate. **Therapeutic Effect:** Decreases LDL, cholesterol, VLDL, triglyceride levels; increase in HDL concentration.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 95%. Metabolized in liver. Excreted in feces (60%), urine (13%). Unknown if removed by hemodialysis.

Route	Onset	Peak	Duration
PO (to reduce cholesterol)	3 days	14 days	N/A

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in pregnancy (suppression of cholesterol biosynthesis may cause fetal toxicity), lactation. Risk of serious adverse reactions in breastfeeding infants. **Children:** Safety and efficacy not established in children less than 10 yrs of age or in premenarchal girls. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CycloSPORINE, Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole), amiodarone, calcium channel blockers (e.g., diTIAZem, verapamil), colchicine, fibrates, gemfibrozil, niacin, ranolazine may increase risk of acute renal failure, rhabdomyolysis. Strong CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifAMPin) may decrease concentration/effect. **HERBAL:** St. John's wort may decrease concentration. **FOOD:** Grapefruit products may increase concentration, toxicity. Red yeast rice contains 2.4 mg lovastatin per 600 mg rice. **LAB VALUES:** May increase serum creatine kinase (CK), transaminase.

S

AVAILABILITY (Rx)

Oral Suspension: 20 mg/5 mL, 40 mg/5 mL.
Tablets: 5 mg, 10 mg, 20 mg, 40 mg, 80 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.
- Administer in evening for maximum efficacy. Shake suspension well for 20 sec before administering.

INDICATIONS/ROUTES/DOSAGE

Note: Limit 80-mg dose to pts taking simvastatin longer than 12 mos without evidence of myopathy.

Prevention of Cardiovascular Events

PO: ADULTS, ELDERLY: 10–20 mg once daily. Range: 5–40 mg/day.

Hyperlipidemias

PO: ADULTS, ELDERLY: Initially, 10–20 mg once daily. **Pts with CHD or CHD risk equivalents:** Initially, 40 mg/day. **Range:** 5–40 mg/day.

Homozygous Familial Hypercholesterolemia (HoFH)

PO: ADULTS, ELDERLY: 40 mg once daily in evening.

Heterozygous Familial Hypercholesterolemia (HeFH)

PO: CHILDREN 10–17 YRS: 10 mg once daily in evening. May increase to 20 mg once daily after 6 wks. May further increase to 40 mg once daily after additional 6 wks. **Maximum dose:** 40 mg/day.

Dosing Adjustment with Medications

(CycloSPORINE, gemfibrozil): Do not exceed 10 mg/day. (Amiodarone, amLODIPine, ranolazine): Do not exceed 20 mg/day. (diTIAZem, dronedarone, verapamil): Do not exceed 10 mg/day. (Lomitapide): Reduce simvastatin dose by 50% when initiating lomitapide. Do not exceed 20 mg/day.

Dosage in Renal Impairment

CrCl less than 30 mL/min: Initially, 5 mg/day.

Dosage in Hepatic Impairment

Contraindicated with active hepatic disease.

SIDE EFFECTS

Generally well tolerated. Side effects are usually mild and transient. **Occasional (3%–2%):** Headache, abdominal pain/cramps, constipation, upper respiratory tract infection. **Rare (less than 2%):** Diarrhea, flatulence, asthenia, nausea/vomiting, depression.

ADVERSE EFFECTS/TOXIC REACTIONS

Potential for ocular lens opacities. Hypersensitivity reaction, hepatitis occur rarely. Myopathy (muscle pain, tenderness, weakness with elevated serum creatine kinase [CK], sometimes taking the form of rhabdomyolysis) has occurred.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain dietary history, esp. fat consumption. Question for possibility of pregnancy before initiating therapy. Question for history of hypersensitivity to simvastatin. Assess baseline lab results: serum cholesterol, LDL, VLDL, HDL, triglycerides, LFT.

INTERVENTION/EVALUATION

Monitor serum cholesterol, triglyceride lab results for therapeutic response. Monitor LFT. Monitor daily pattern of bowel activity, stool consistency. Assess for headache, myopathy.

PATIENT/FAMILY TEACHING

- Use appropriate contraceptive measures.
- Periodic lab tests are essential part of therapy.
- Maintain appropriate diet. Avoid grapefruit products.
- Report unexplained muscle pain, tenderness, weakness.

siponimod

si-pon-i-mod
(Mayzent)

Do not confuse siponimod with fingolimod.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Sphingosine-1-phosphate receptor modulator. **CLINICAL:** Multiple sclerosis agent.

USES

Treatment of relapsing forms of multiple sclerosis (MS), including clinically isolated syndrome, relapsing-remitting disease, and active secondary progressive disease, in adults.

PRECAUTIONS

Contraindications: Hypersensitivity to siponimod. Pts with CYP2C9*3/*3 genotype. Recent (within 6 mos) MI, unstable angina, CVA, TIA, decompensated HF requiring hospitalization, NYHA class III/IV HF. Sick sinus syndrome, Mobitz type II second- or third-degree AV block (unless pt has functioning pacemaker). **Cautions:** Conditions predisposing to infection (e.g., diabetes, immunocompromised pts, renal failure, open wounds), baseline sinus bradycardia, severe hepatic impairment, hypertension, altered pulmonary function, pts at risk for developing AV block (congenital heart disease, ischemic heart disease, HF), pts at risk for macular edema (e.g., diabetes, history of uveitis); history of syncope, thromboembolic events (CVA, pulmonary embolism, MI [more than 6 mos prior]). Concomitant use of antiarrhythmics, beta blockers, calcium channel blockers, immunosuppressants, immune modulators, anti-neoplastics, QT interval-prolonging medications. Not recommended in pts with severe active infection; history of cardiac arrest, cerebrovascular disease, uncontrolled hypertension, or severe, untreated sleep apnea unless approved by a cardiologist.

ACTION

Blocks capacity of lymphocytes to move out from lymph nodes, reducing the number of lymphocytes available to the CNS. **Therapeutic Effect:** May involve reduction of lymphocyte migration into the CNS, reducing inflammation.

PHARMACOKINETICS

Widely distributed. Metabolized in liver. Protein binding: 68%. Peak plasma

concentration: 4 hrs. Steady state reached in 6 days. Excreted primarily in feces. **Half-life:** 30 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm. Female pts of reproductive potential should use effective contraception during treatment and up to 10 days after discontinuation. Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Age-related hepatic impairment may increase risk of adverse effects/hepatic injury.

INTERACTIONS

DRUG: Beta blockers (e.g., carvedilol, metoprolol), bretylium, calcium channel blockers (e.g., diltiazem, verapamil), ceritinib, digoxin, lacosamide may increase risk of AV block, bradycardia. May increase QT interval—prolonging effect of amiodarone, azithromycin, haloperidol. May decrease therapeutic effect of BCG (intravesical), live vaccines. May increase toxic effect of live vaccines. Fluconazole may increase concentration/effect. Rifampin may decrease concentration/effect. May increase toxic effects of denosumab, leflunomide, natalizumab, tacrolimus. May decrease therapeutic effect of nivolumab, sipuleucel-T, tertotomide. May increase immunosuppressive effect of tofacitinib, other immunosuppressants. **HERBAL:** Echinacea may decrease therapeutic effect. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, bilirubin, GGT. Expected to cause a dose-dependent reduction in peripheral lymphocyte count to 20%–30% of baseline values.

AVAILABILITY (Rx)

Tablets: 0.25 mg, 2 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Starter pack should be used in pts who titrate to 2 mg maintenance

dose. Do not use starter pack in pts who titrate to 1 mg maintenance dose. • If one dose titration is missed for more than 24 hrs, reinitiate treatment starting with day 1 of titration regimen. • If treatment is interrupted for more than 4 consecutive days after initial titration is completed, reinitiate treatment starting with day 1 of titration regimen.

INDICATIONS/ROUTES/DOSAGE

Multiple Sclerosis (Relapsing)

PO: ADULTS, ELDERLY: (Pts with CYP2C9 genotypes *1/*1, *1/*2, or *2/*2): 0.25 mg on day 1, then 0.25 mg on day 2, then 0.5 mg on day 3, then 0.75 mg on day 4, then 1.25 mg on day 5. **Maintenance:** 2 mg once daily starting on day 6. **(Pts with CYP2C9 genotypes *1/*3 or *2/*3):** 0.25 mg on day 1, then 0.25 mg on day 2, then 0.5 mg on day 3, then 0.75 mg on day 4. **Maintenance:** 1 mg once daily starting on day 5.

Dosage in Renal Impairment

Mild to severe impairment: No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Use caution.

SIDE EFFECTS

Occasional (15%–6%): Headache, hypertension, peripheral edema, nausea, dizziness, diarrhea, extremity pain.

ADVERSE EFFECTS/TOXIC REACTIONS

Life-threatening infections (bronchitis, sinusitis, upper respiratory tract infection, fungal skin infection) reported in 3% of pts. Fatal cases of cryptococcal meningitis, disseminated cryptococcal infections were reported. Herpes zoster infections reported in 5% of pts. Reactivation of herpes viral infection may cause varicella zoster meningitis. Progressive multifocal leukoencephalopathy (PML), an opportunistic viral infection of the brain caused by the JC virus, may result

in progressive permanent disability and death. Posterior reversible encephalopathy syndrome, a dysfunction of the brain that may evolve into an ischemic CVA or cerebral hemorrhage, may occur. Macular edema reported in 2% of pts. Pts with diabetes or history of uveitis are at an increased risk for developing macular edema. Bradycardia reported in 4% of pts. AV conduction delays reported in 5% of pts. Dose-dependent reductions of pulmonary function (absolute forced expiratory volume over 1 sec) reported in 3% of pts. Hepatic injury (transaminitis) reported in 10% of pts. Seizures reported in 2% of pts. Falls reported in 11% of pts. Rebound or severe exacerbation of disease may occur after discontinuation. May increase risk of hypertension, new malignancies. Fatal thromboembolic events including CVA, pulmonary embolism, MI reported in 3% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, LFT, ECG. Test all pts for CYP2C9 variants to determine CYP2C9 genotype.

Assess baseline symptoms of MS (e.g., bladder/bowel dysfunction, cognitive impairment, depression, dysphagia, fatigue, gait disorder, numbness/tingling, pain, seizures, spasticity, tremors, weakness). Consultation with a cardiologist is advised in pts with QT interval prolongation greater than 500 msec; arrhythmias requiring treatment with Class Ia or Class III antiarrhythmic; ischemic heart disease, HF; history of cardiac arrest, recent MI; history of Mobitz type II second- or third-degree AV block, sick sinus syndrome, sinoatrial heart block. First-dose monitoring is recommended in pts with preexisting cardiac conditions (baseline sinus bradycardia, first- or second-degree [Mobitz type I], history of MI [more than 6 mos prior], HF) in a medical setting that can adequately treat symptomatic bradycardia. Pts without a documented history of vaccination against varicella zoster or a confirmed history of varicella infection

(chickenpox) should be tested for antibodies prior to initiation. A full vaccination course for varicella in antibody-negative pts is recommended prior to initiation. Perform baseline ophthalmologic evaluation of the fundus (including the macula) prior to initiation. Receive full medication history and screen for interaction (esp. immunosuppressants; drugs known to bradycardia, AV conduction delay). Question history as listed in Precautions. Screen for active infection.

INTERVENTION/EVALUATION

At initial treatment (within first 4–6 hrs after dose), therapy reduces heart rate, AV conduction. In pts with preexisting cardiac conditions, monitor for symptomatic bradycardia for at least 6 hrs after first dose with hourly pulse, B/P, and then obtain ECG at the end of day 1. If heart rate is less than 45 beats/min, QTc interval is 500 msec or greater, or new-onset second-degree (or higher) AV block is present after 6 hrs of first dose, continue monitoring until resolved. If intervention is required, continue heart monitoring overnight and repeat 6-hr monitoring after second dose. Conduct ophthalmic examination with any change of vision. Pts with altered mental status, seizures, visual disturbances, unilateral weakness should be evaluated for cryptococcal meningitis, varicella zoster meningitis, posterior reversible encephalopathy syndrome, PML. Persistent immunosuppressive effects may occur for up to 3–4 wks after discontinuation. Closely monitor for adverse effects if other immunosuppressants are initiated within the first 3–4 wks after discontinuation. Monitor B/P for hypertension. Monitor for systemic or local infections, herpetic infections; symptoms of new malignancies. Conduct neurologic assessment. Assess for symptoms improvement of MS. Monitor for symptoms of MI (chest pain, diaphoresis, left arm/jaw pain, increased serum troponin, ST segment elevation), CVA (aphasia, altered mental status, facial droop, hemiplegia, vision loss), pulmonary embolism (chest pain, dyspnea, tachycardia).

S

PATIENT/FAMILY TEACHING

• Treatment may depress your immune system and reduce your ability to fight infection. Report symptoms of infection such as body aches, burning with urination, chills, cough, fatigue, fever. Avoid those with active infection. • Any change of vision will require an immediate eye examination. • PML, an opportunistic viral infection of the brain, may cause progressive, permanent disabilities or death. Report symptoms of PML such as confusion, memory loss, paralysis, trouble speaking, vision loss, seizures, weakness. • Treatment may worsen high blood pressure or cause new cancers. • Report liver problems (abdominal pain, bruising, clay-colored stool, amber or dark colored urine, yellowing of the skin or eyes), lung problems (reduced lung function, shortness of breath), heart arrhythmias (chest pain, dizziness, fainting, palpitations, slow or rapid heart rate, irregular heart rate). • Posterior reversible encephalopathy syndrome, a dysfunction of the brain that may cause a stroke or bleeding in the brain, may occur. • Treatment may cause life-threatening blood clots; report symptoms of heart attack (chest pain, difficulty breathing, jaw pain, nausea, pain that radiates to the left arm, sweating), lung embolism (difficulty breathing, chest pain, rapid heart rate), stroke (confusion, difficulty speaking, one-sided weakness or paralysis, loss of vision). • Female pts of childbearing potential must use effective contraception during treatment and for at least 10 days after last dose. Do not breastfeed. • Due to high risk of interactions, do not take newly prescribed medications unless approved by the provider who originally started treatment. • Do not receive live vaccines for at least 4 wks after last dose. • Severe worsening of MS symptoms may occur after stopping treatment.

sirolimus

sir-oh-li-mus
(Rapamune)

■ **BLACK BOX ALERT** ■ Increased susceptibility to infection and potential for development of lymphoma may result from immunosuppression. Not recommended for liver or lung transplant pts. Use only by physicians experienced in immunosuppressive therapy and management of transplant pts.

Do not confuse Rapamune with Rapaflo, or sirolimus with everolimus, pimecrolimus, tacrolimus, or temsirolimus.

◆ **CLASSIFICATION**

PHARMACOTHERAPEUTIC: mTOR kinase inhibitor. **CLINICAL:** Immunosuppressant.

USES

Prophylaxis of organ rejection in pts receiving renal transplant (in combination with cycloSPORINE and corticosteroids). Treatment of lymphangiomyomatosis. **OFF-LABEL:** Prophylaxis of organ rejection in heart transplant recipients. Prevention of acute graft-vs-host disease in allogeneic stem cell transplantation. Treatment of refractory acute or chronic graft-vs-host disease. Rescue agent for acute and chronic organ rejection.

PRECAUTIONS

Contraindications: Hypersensitivity to sirolimus. **Cautions:** Cardiovascular disease (HF, hypertension); pulmonary disease, hepatic impairment, renal impairment, hyperlipidemia, perioperative period due to increased chance of surgical complications from impaired wound and tissue healing. Concurrent use with medications that may alter renal function.

ACTION

Inhibits T-lymphocyte activation and proliferation in response to antigenic and cytokine stimulation, and inhibits antibody production. **Therapeutic Effect:** Inhibits acute rejection of allografts and prolongs graft survival.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 92%. Extensively metabolized in liver. Primarily excreted in feces (91%).

Half-life: 57–63 hrs.

 **LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established in pts younger than 13 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inducers (e.g., carbamazepine, rifabutin, rifampin) may decrease concentration/effects. CYP3A4 inhibitors (e.g., clarithromycin, erythromycin, itraconazole, verapamil) may increase concentration, toxicity. May increase concentration/effects of cycloSPORINE (take sirolimus 4 hrs after cycloSPORINE for renal transplant). May decrease the therapeutic effect; increase adverse effects of vaccines (live). **HERBAL:** St. John's wort may decrease concentration. **Echinacea** may decrease the therapeutic effect. **FOOD:** Grapefruit products may increase risk of myelotoxicity, nephrotoxicity. **LAB VALUES:** May increase serum ALT, AST, alkaline phosphatase, LDH, BUN, creatine phosphate, cholesterol, triglycerides, creatinine. May alter WBC, serum glucose, calcium. May decrease Hgb, Hct.

AVAILABILITY (Rx)

Oral Solution: 1 mg/mL.

 **Tablets:** 0.5 mg, 1 mg, 2 mg.

ADMINISTRATION/HANDLING

- Doses should be taken 4 hrs after cycloSPORINE.
- Take consistently with or without food.
- Do not break, crush, dissolve, or divide tablets.
- Mix oral solution with only water or orange juice, stir vigorously, drink immediately.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Tablets and oral solution are not bioequivalent. (However, clinical equivalence shown at 2 mg dose.)

Prevention of Organ Transplant Rejection (Low to Moderate Risk)

PO: ADULTS, CHILDREN 13 YRS AND OLDER WEIGHING MORE THAN 40 KG: Loading dose: 6 mg on day 1. **Maintenance:** 2 mg/day. ADULTS, CHILDREN 13 YRS AND OLDER WEIGHING LESS THAN 40 KG: Loading dose: 3 mg/m² on day 1. **Maintenance:** 1 mg/m²/day.

Prevention of Organ Transplant Rejection (High Risk)

PO: ADULTS: Loading dose: Up to 15 mg on day 1. **Maintenance:** 5 mg/day. Obtain trough between 5–7 days. Continue therapy for 1 yr following transplantation. Further adjustments based on clinical status.

Lymphangioliomyomatosis

PO: ADULTS, ELDERLY: Initially, 2 mg/day with dosage adjustment to maintain concentration between 5–15 ng/mL. Obtain serum trough level after 10–20 days. Once maintenance dose is adjusted, further adjustments should be made at 7- to 14-day intervals. Once a stable dose is attained, serum trough levels should be assessed at least q3mos.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Loading dose: No change. **Maintenance dose:** Mild to moderate impairment: Reduce dose by 33%. Severe impairment: Reduce dose by 50%.

SIDE EFFECTS

Occasional: Hypercholesterolemia, hyperlipidemia, hypertension, rash. **High doses (5 mg/day):** Anemia, arthralgia, diarrhea, hypokalemia, peripheral edema, thrombocytopenia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatotoxicity occurs rarely. Skin carcinoma (including basal cell, squamous cell, melanoma) has been observed.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain LFT. Assess for pregnancy, lactation. Question for medication usage (esp. cycloSPORINE, diTIAZem, ketoconazole, rifAMPin). Determine if pt has chickenpox, herpes zoster, malignancy, infection.

INTERVENTION/EVALUATION

Monitor serum renal function, LFT periodically. Monitor serum cholesterol, triglycerides, platelets; Hgb. Obtain trough concentration 10–20 days after dose. Once maintenance dose is adjusted, make further adjustments at intervals of 7–14 days. Once stable dose is attained, assess trough concentration at least q3mos.

PATIENT/FAMILY TEACHING

- Avoid those with colds, other infections.
- Avoid grapefruit products.
- Avoid exposure to sunlight, artificial light sources.
- Strict monitoring is essential in identifying, preventing symptoms of organ rejection.
- Do not chew, crush, dissolve, or divide tablets.

SITagliptin

TOP 100 HIGH ALERT

sit-a-glip-tin
(Januvia)**Do not confuse Januvia with Enjuvia, Jantoven, or Janumet,**

or SITagliptin with SAXagliptin or SUMAtriptan.

FIXED-COMBINATION(S)

Janumet, Janumet XR: SITagliptin/metFORMIN (an antidiabetic): 50 mg/500 mg, 50 mg/1,000 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: DPP-4 inhibitors (gliptins). **CLINICAL:** Antidiabetic agent.

USES

Adjunctive treatment to diet, exercise to improve glycemic control in pts with type 2 diabetes as monotherapy or in combination with other antidiabetic agents.

PRECAUTIONS

Contraindications: Hypersensitivity to SITagliptin. **Cautions:** Type 1 diabetes, diabetic ketoacidosis, renal impairment, end-stage renal disease, history of pancreatitis, angioedema with other DPP-4 inhibitors. Concurrent use of other glucose-lowering agents may increase risk of hypoglycemia.

ACTION

Inhibits DPP-4 enzyme, causing prolonged active incretin levels. Incretin regulates glucose homeostasis. **Therapeutic Effect:** Regulates glucose homeostasis. Increases synthesis and release of insulin from pancreatic cells; lowers glucagon secretion from pancreas, decreases hepatic glucose production.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	N/A	1–4 hrs	24 hrs

Rapidly absorbed. Protein binding: 38%. Excreted in urine (87%), feces (13%). **Half-life:** 12 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May enhance hypoglycemic effect of insulin, sulfonylureas (e.g., glipiZIDE, glyBURIDE). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May slightly increase WBCs, particularly neutrophil count. May increase serum creatinine.

AVAILABILITY (Rx)

 **Tablets, Film-Coated:** 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING**PO**

• May give without regard to food. • Do not break, crush, dissolve, or divide film-coated tablets.

INDICATIONS/ROUTES/DOSAGE**Type 2 Diabetes**

PO: ADULTS OVER 18 YRS, ELDERLY: 100 mg once daily.

Dosage in Renal Impairment

CrCl 30 mL/min to less than 50 mL/min: 50 mg once daily. **CrCl less than 30 mL/min, ESRD, dialysis:** 25 mg once daily.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (5% and greater): Headache, nasopharyngitis. **Rare (3%–1%):** Diarrhea, abdominal pain, nausea.

ADVERSE EFFECTS/TOXIC REACTIONS

Hypersensitivity reactions including angioedema, Stevens-Johnson syndrome reported. Acute pancreatitis occurs rarely.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Check serum glucose concentration before administration. Assess renal function. Discuss lifestyle to determine extent of learning, emotional needs. Ensure follow-up instruction if pt, family do not thoroughly understand diabetes management, glucose-testing technique.

INTERVENTION/EVALUATION

Monitor serum glucose, Hgb A1c, BUN, creatinine. Assess for hypoglycemia (diaphoresis, tremor, dizziness, anxiety, headache, tachycardia, perioral numbness, hunger, diplopia, difficulty concentrating), hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, dim vision, fatigue, deep, rapid breathing). Be alert to conditions that alter glucose requirements (fever, increased activity, stress, trauma, surgical procedures).

PATIENT/FAMILY TEACHING

• Diabetes requires lifelong control. • Prescribed diet, exercise are principal part of treatment; do not skip, delay meals. • Continue to adhere to dietary instructions, regular exercise program, regular testing of serum glucose. • When taking combination drug therapy or when glucose demands are altered (fever, infection, trauma, stress, heavy physical activity), have source of glucose available to treat symptoms of hypoglycemia. • Report nausea, vomiting, anorexia, severe abdominal pain, pancreatitis.

sodium bicarbonate

soe-dee-um bye-kar-boe-nate
(Neut)

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkalinizing agent. **CLINICAL:** Antacid, electrolyte supplement, urinary/systemic alkalinizer.

USES

Management of metabolic acidosis, gastric hyperacidity. Alkalinization agent for urine; hyperkalemia treatment; management of overdose of tricyclic antidepressants and aspirin. **OFF-LABEL:** Prevention of contrast-induced nephropathy.

PRECAUTIONS

Contraindications: Hypersensitivity to sodium bicarbonate. Hypernatremia, alkalosis, unknown abdominal pain, hypocalcemia, severe pulmonary edema.

Cautions: HF, edematous states, renal insufficiency, cirrhosis.

ACTION

Dissociates to provide bicarbonate ion.

Therapeutic Effect: Neutralizes hydrogen ion concentration, raises blood, urinary pH.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	15 min	N/A	1–3 hrs
IV	Immediate	N/A	8–10 min

Well absorbed following PO administration, sodium bicarbonate dissociates to sodium and bicarbonate ions. With increased hydrogen ion concentrations, bicarbonate ions combine with hydrogen ions to form carbonic acid, which then dissociates to CO₂, which is excreted by the lungs. Plasma concentration regulated by kidney (ability to form, excrete bicarbonate).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May produce hypernatremia, increase tendon reflexes in neonate or fetus whose mother is administered chronically high doses. May be distributed in breast milk.

Children: No age-related precautions noted. Do not use as antacid in pts younger than 6 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May increase concentration, toxicity of **quinidine**, **quinine**. May decrease effects of **lithium**. **HERBAL:** None significant. **FOOD:** **Milk, other dairy products** may result in milk-alkali syndrome. **LAB VALUES:** May increase serum, urinary pH.

AVAILABILITY (Rx)

Injection Solution (Rx): 0.5 mEq/mL (4.2%), 1 mEq/mL (8.4%). **Tablets (OTC):** 325 mg, 650 mg.

ADMINISTRATION/HANDLING

ALERT For direct IV administration in neonates or infants, use 0.5 mEq/mL concentration.

Reconstitution • May give undiluted. **Rate of administration** • For IV push, give up to 1 mEq/kg over 1–3 min for cardiac arrest. • For IV infusion, do not exceed rate of infusion of 1 mEq/kg/hr. • For children younger than 2 yrs, premature infants, neonates, administer by slow infusion, up to 10 mEq/min.

Storage • Store at room temperature.

PO

- Give 1–3 hrs after meals.

IV INCOMPATIBILITIES

Amiodarone (Cordarone), ascorbic acid, calcium chloride, dilTIAZem (Cardizem), DOBUTamine (Dobutrex), DOPamine (Intropin), HYDROMorphone (Dilaudid), magnesium sulfate, midazolam (Versed), norepinephrine (Levophed), ondansetron (Zofran).

IV COMPATIBILITIES

Dexmedetomidine (Precedex), furosemide (Lasix), heparin, insulin, lidocaine, mannitol, milrinone (Primacor), morphine, phenylephrine (Neo-Synephrine), potassium chloride, propofol (Diprivan), vancomycin (Vancocin).

INDICATIONS/ROUTES/DOSAGE

ALERT May give by IV push, IV infusion, or orally. Dose individualized based on severity of acidosis, laboratory values, pt age, weight, clinical conditions. Do not fully correct bicarbonate deficit during the first 24 hrs (may cause metabolic alkalosis).

Cardiac Arrest

ALERT Routine use not recommended.

IV: ADULTS, ELDERLY: Initially, 1 mEq/kg. May repeat based on arterial blood gases.
CHILDREN, INFANTS: Initially, 0.5–1 mEq/kg. May repeat based on arterial blood gases.

Metabolic Acidosis (Mild to Moderate)

IV: ADULTS, ELDERLY, CHILDREN: 2–5 mEq/kg over 4–8 hrs. May repeat based on acid-base status.

Prevention of Contrast-Induced Nephropathy

IV infusion: ADULTS, ELDERLY: 154 mEq/L sodium bicarbonate in D₅W solution: 3 mL/kg/hr 1 hr immediately before contrast injection, then 1 mL/kg/hr during contrast exposure and for 6 hrs after procedure.

Metabolic Acidosis (Associated with Chronic Renal Failure)

PO: ADULTS, ELDERLY: Initially, 15.4–23.1 mEq/day in divided doses. Titrate to normal serum bicarbonate level of 23–29 mEq/L.

Renal Tubular Acidosis (Distal)

PO: ADULTS, ELDERLY: 0.5–2 mEq/kg/day in 4–6 divided doses. **CHILDREN:** 2–3 mEq/kg/day in divided doses.

Renal Tubular Acidosis (Proximal)

PO: ADULTS, ELDERLY, CHILDREN: 5–10 mEq/kg/day in divided doses. Maintenance dose to maintain serum bicarbonate in normal range.

Urine Alkalinization

PO: ADULTS, ELDERLY: Initially, 4 g, then 1–2 g q4h. **Maximum:** 16 g/day (8 g/day in adults older than 60 yrs).

Antacid

PO: ADULTS, ELDERLY: 300 mg–2 g 1–4 times/day.

Hyperkalemia

IV: ADULTS, ELDERLY: 50 mEq over 5 min.

SIDE EFFECTS

Frequent: Abdominal distention, flatulence, belching.

ADVERSE EFFECTS/TOXIC REACTIONS

Excessive, chronic use may produce metabolic alkalosis (irritability, twitching, paresthesia, cyanosis, slow or shallow respirations, headache, thirst, nausea). Fluid overload results in headache, weakness, blurred vision, behavioral changes, incoordination, muscle twitching, elevated B/P, bradycardia, tachypnea, wheezing, coughing, distended neck veins. Extravasation may occur at the IV site, resulting in tissue necrosis, ulceration.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Assess for signs and symptoms of acidosis, alkalosis. Do not give PO medication within 1 hr of antacids.

INTERVENTION/EVALUATION

Monitor serum, urinary pH, CO₂ level, serum electrolytes, plasma bicarbonate levels. Watch for signs of metabolic alkalosis, fluid overload. Assess for clinical improvement of metabolic acidosis (relief from hyperventilation, weakness, disorientation). Monitor daily pattern of bowel activity, stool consistency. Monitor serum phosphate, calcium, uric acid levels. Assess for relief of gastric distress.

sodium chloride**HIGH ALERT**

so-dee-um klor-ide
(Muro 128, Nasal Moist, Ocean, SalineX)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Electrolyte supplement. **CLINICAL:** Electrolyte, isotonic volume expander, ophthalmic adjunct.

USES

Parenteral: Source of hydration; prevention/treatment of sodium, chloride deficiencies (hypertonic for severe deficiencies). Prevention of muscle cramps, heat prostration occurring with excessive perspiration. **Nasal:** Restores moisture, relieves dry, inflamed nasal membranes. **Ophthalmic:** Therapy in reduction of corneal edema, diagnostic aid in ophthalmoscopic exam.

PRECAUTIONS

Contraindications: Hypersensitivity to sodium chloride. Fluid retention, hypernatremia, hypertonic uterus. **Cautions:** HE, renal impairment, cirrhosis, hypertension, edema. Do not use sodium chloride preserved with benzyl alcohol in neonates.

ACTION

Sodium is a major cation of extracellular fluid. **Therapeutic Effect:** Controls water distribution, fluid and electrolyte balance, osmotic pressure of body fluids; maintains acid-base balance.

PHARMACOKINETICS

Well absorbed from GI tract. Widely distributed. Primarily excreted in urine and, to a lesser degree, in sweat, tears, saliva.

 **LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: No precautions noted. **Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effect of **lithium**. May enhance adverse/toxic effects of **tolvaptan**. **HERBAL:** None significant.

FOOD: None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Concentrate (Rx): 23.4% (4 mEq/mL). **Injection Solution (Rx):** 0.45%, 0.9%, 3%. **Irrigation (Rx):** 0.45%, 0.9%. **Nasal Gel (OTC):** (*Nasal Moist*): 0.65%. **Nasal Solution (OTC):** (*SalineX*): 0.4% (*Nasal Moist, Ocean*): 0.65%. **Ophthalmic**

Ointment (OTC): (*Muro 128*): 5%. **Ophthalmic Solution (OTC):** (*Muro 128*): 2%, 5%.

 **Tablets (OTC):** 1 g.

ADMINISTRATION/HANDLING

 **IV**

- Hypertonic solutions (3% or 5%) are administered via large vein; avoid infiltration; do not exceed 100 mL/hr. • Vials containing 2.5–4 mEq/mL (concentrated NaCl) must be diluted with D₅W or D₁₀W before administration.

PO

- Do not crush/break enteric-coated or extended-release tablets. • Administer with full glass of water.

Nasal

- Instruct pt to begin inhaling slowly just before releasing medication into nose.
- Instruct pt to inhale slowly, then release air gently through mouth. • Continue technique for 20–30 sec.

Ophthalmic

- Place gloved finger on lower eyelid and pull out until pocket is formed between eye and lower lid. • Place prescribed number of drops (or ¼–½ inch of ointment) into pocket. • Instruct pt to close eye gently for 1–2 min so that medication will not be squeezed out of sac. • When lower lid is released, have pt keep eye open without blinking for at least 30 sec for solution; for ointment, have pt close eye, roll eyeball around to distribute medication. • When using drops, apply gentle finger pressure to lacrimal sac at inner canthus for 1 min to minimize systemic absorption.

INDICATIONS/ROUTES/DOSAGE

 **ALERT** Dosage based on age, weight, clinical condition; fluid, electrolyte, acid-base balance status.

Usual Parenteral Dosage

IV: ADULTS, ELDERLY, CHILDREN: Determined by laboratory determinations

(mEq). Dosage varies widely based on clinical conditions.

Usual Oral Dosage

PO: ADULTS, ELDERLY: 1–2 g 3 times/day.

Usual Nasal Dosage

Intranasal: ADULTS, ELDERLY, CHILDREN: 2–3 sprays as needed.

Usual Ophthalmic Dosage

Ophthalmic solution: ADULTS, ELDERLY: Apply 1–2 drops q3–4h.

Ophthalmic ointment: ADULTS, ELDERLY: Apply once daily or as directed.

SIDE EFFECTS

Frequent: Facial flushing. **Occasional:** Fever; irritation, phlebitis, extravasation at injection site. **Ophthalmic:** Temporary burning, irritation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Too-rapid administration may produce peripheral edema, HF, pulmonary edema. Excessive dosage may produce hypokalemia, hypervolemia, hypernatremia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline serum electrolyte studies. Assess fluid balance (I&O, daily weight, lung sounds, edema).

INTERVENTION/EVALUATION

Monitor fluid balance (I&O, daily weight, lung sounds, edema), IV site for extravasation. Monitor serum electrolytes, acid-base balance, B/P. Hypernatremia associated with edema, weight gain, elevated B/P; hyponatremia associated with muscle cramps, nausea, vomiting, dry mucous membranes.

PATIENT/FAMILY TEACHING

- Temporary burning, irritation may occur upon instillation of eye medication.
- Discontinue eye medication and report if severe pain, headache, rapid change in vision (peripheral, direct), sudden appearance of floating spots, acute redness of eyes, pain on exposure to light, double vision occurs.

sofosbuvir/ velpatasvir

soe-fos-bue-vir/vel-pat-as-vir
(Eplclusa)

Do not confuse sofosbuvir with boceprevir, dasabuvir, fosamprenavir, or simeprevir, or velpatasvir with daclatasvir, grazoprevir, or paritaprevir.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Nucleotide analog NS5B polymerase inhibitor, NS5A inhibitor. **CLINICAL:** Antiviral.

USES

Treatment of chronic hepatitis C virus (HCV) genotype 1, 2, 3, 4, 5, or 6 infection in adult pts without cirrhosis, or with compensated cirrhosis, or in combination with ribavirin in pts with decompensated cirrhosis.

PRECAUTIONS

Contraindications: Hypersensitivity to sofosbuvir, velpatasvir. If given with ribavirin, contraindications to ribavirin apply. **Cautions:** Anemia (when used with ribavirin), renal impairment, end-stage renal disease requiring hemodialysis, hepatic disease unrelated to HCV infection, HIV infection. Concomitant use of amiodarone (with or without beta blockers) in pts with underlying cardiac disease. Concomitant use of P-glycoprotein inducers, moderate CYP2B6 inducers, strong CYP2C8 inducers, moderate or strong CYP3A4 inducers not recommended.

ACTION

Sofosbuvir inhibits the HCV NS5B RNA-dependent RNA polymerase. Velpatasvir inhibits the VCV NS5A protein. **Therapeutic Effect:** Inhibits viral replication of HCV.

PHARMACOKINETICS

Rapidly absorbed following oral administration. Widely distributed. Metabolized in liver. Protein binding: sofosbuvir: 61%–68%; velpatasvir: greater than 99.5%. Peak plasma concentration: sofosbuvir: 0.5–1 hr; velpatasvir: 3 hrs. Excretion: sofosbuvir: urine (80%), feces (14%); velpatasvir: feces (94%), urine (0.4%). **Half-life:** sofosbuvir: 0.5 hr; velpatasvir: 15 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: When used with ribavirin, therapy is contraindicated in pregnant women and in men whose female partners are pregnant. Female and male pts of reproductive potential must use effective contraception for at least 6 mos following discontinuation (if therapy includes ribavirin). Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Moderate or potent inducers of CYP2B6, CYP2C8, CYP3A4, P-glycoprotein (e.g., carbamazepine, phenytoin, oxcarbazepine, rifampicin) may decrease concentration/effect of sofosbuvir/velpatasvir. **Amiodarone (with or without beta blockers [e.g., carvedilol, metoprolol])** may significantly increase risk of symptomatic bradycardia. **Proton pump inhibitors (e.g., omeprazole, pantoprazole)** may decrease concentration/effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin (indirect), creatine phosphokinase (CPK), lipase.

AVAILABILITY (Rx)

Tablets, Fixed-Dose: sofosbuvir 400 mg/velpatasvir 100 mg.

ADMINISTRATION/HANDLING**PO**

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE**Hepatitis C Virus Infection**

PO: ADULTS, ELDERLY: 1 tablet (sofosbuvir/velpatasvir) once daily.

Treatment Regimen and Duration

Pts without cirrhosis or pts with compensated cirrhosis (Child-Pugh A): 1 tablet once daily for 12 wks.

Pts with decompensated cirrhosis (Child-Pugh B or C): 1 tablet once daily with ribavirin for 12 wks.

Dosage in Renal Impairment

Mild to moderate impairment: CrCl greater than or equal to 30 mL/min: No dose adjustment. **Severe impairment: CrCl less than 30 mL/min, end-stage renal disease:** Not specified; use caution.

Dosage in Hepatic Impairment

Mild to severe impairment: No dose adjustment.

SIDE EFFECTS

Frequent (22%–15%): Headache, fatigue. **Occasional (9%–5%):** Nausea, asthenia, insomnia, irritability. **Rare (2%):** Rash.

**ADVERSE EFFECTS/
TOXIC REACTIONS**

Symptomatic bradycardia requiring pacemaker intervention was reported in pts taking amiodarone and sofosbuvir, in combination with daclatasvir or simeprevir. Cardiac arrest was reported in a pt taking amiodarone in combination with sofosbuvir and ledipasvir. Bradycardia usually occurred within hrs to days, but may occur up 2 wks after initiation (when used with amiodarone). Pts with underlying cardiac disease or advanced hepatic disease or taking concomitant beta blockers are at an increased risk for bradycardia when used concomitantly with amiodarone. Depression reported in 1% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC (when used with ribavirin), renal function test, LFT, HCV-RNA level; serum lipase, CPK; pregnancy test in female pts of reproductive potential. Confirm hepatitis C virus genotype. Question history of renal impairment, hepatic disease unrelated to HCV infection; HIV infection or use of antiretroviral therapy. Receive full medication history, and screen for interactions (esp. concomitant use of amiodarone).

INTERVENTION/EVALUATION

Monitor serum lipase, CPK. Periodically monitor HCV-RNA level for treatment effectiveness. If unable to discontinue amiodarone, recommend inpatient cardiac monitoring for at least 48 hrs, followed by outpatient or self-monitoring of HR for at least 2 wks after initiation. Cardiac monitoring is also recommended in pts who discontinue amiodarone just prior to initiation. Reinforce birth control compliance and obtain monthly pregnancy tests in female pts of reproductive potential taking concomitant ribavirin. Encourage nutritional intake.

PATIENT/FAMILY TEACHING

- Pts who take amiodarone during therapy may require inpatient and outpatient cardiac monitoring (and in some cases, pacemaker implantation) due to an increased risk of slow heartbeats or cardiac arrest. If amiodarone cannot be interrupted or discontinued, immediately report symptoms of slow heartbeat such as chest pain, confusion, dizziness, fainting, light-headedness, memory problems, palpitations, weakness.
- Treatment may be used in combination with ribavirin. Inform pt of contraindications/adverse effects of ribavirin therapy. If therapy includes ribavirin, female pts of reproductive potential should avoid pregnancy during treatment and up to 6 mos after last dose.
- Immediately report suspected pregnancy.
- Do not breastfeed.
- Do not take newly prescribed medications unless approved by prescriber who originally started

treatment.

- Do not take herbal products.
- Avoid alcohol.
- Maintain proper nutritional intake.

sofosbuvir/velpatasvir/voxilaprevir

soe-fos-bue-vir/vel-pat-as-vir/vox-i-la-pre-vir
(Vosevi)

BLACK BOX ALERT ■ Test all pts for hepatitis B virus (HBV) infection prior to initiation. HBV reactivation was reported in HBV/HCV co-infected pts who were undergoing or had completed treatment with HCV direct-acting antivirals and were not receiving HBV antiviral therapy. HBV reactivation may cause fulminant hepatitis, hepatic failure, and death.

Do not confuse sofosbuvir with boceprevir, dasabuvir, or simeprevir; or velpatasvir with daclatasvir, grazoprevir, or paritaprevir; or voxilaprevir with boceprevir, grazoprevir, or paritaprevir.

CLASSIFICATION

PHARMACOTHERAPEUTIC: NS5A inhibitor, polymerase inhibitor, NS3/4A inhibitor, NS5B RNA polymerase inhibitor. **CLINICAL:** Antihepaciviral.

USES

Treatment of adults with chronic hepatitis C virus (HCV) infection without cirrhosis or with compensated cirrhosis who have genotype 1, 2, 3, 4, 5, or 6 infection and have previously been treated with an HCV regimen containing an NS5A inhibitor or who have genotype 1a or 3 infection and have previously been treated with an HCV regimen containing sofosbuvir without an NS5A inhibitor.

PRECAUTIONS

Contraindications: Hypersensitivity to sofosbuvir, velpatasvir, voxilaprevir. Concomitant use of rifAMPin. **Cautions:** Moderate to severe hepatic impairment, HIV infection. Concomitant use of amiodarone, beta blockers. Pts with underlying cardiac disease and/or liver disease may increase risk of bradycardia. Concomitant use of P-glycoprotein inducers, moderate or strong CYP2C8 inducers, moderate or strong CYP3A4 inducers not recommended.

ACTION

Sofosbuvir inhibits the HCV NS5B RNA-dependent RNA polymerase, velpatasvir inhibits the HCV NS5A protein, voxilaprevir inhibits the NS3/4A protease, necessary for proteolytic cleavage of HCV-encoded polyprotein. **Therapeutic Effect:** Inhibits viral replication of hepatitis C virus.

PHARMACOKINETICS

Widely distributed. Metabolized in liver. Protein binding: sofosbuvir: 61%–65%; velpatasvir: greater than 99.5%; voxilaprevir: greater than 99%. Peak plasma concentration: sofosbuvir: 2 hrs; velpatasvir: 4 hrs; voxilaprevir: 4 hrs. Excreted in sofosbuvir: urine (80%), feces (14%); velpatasvir: feces (94%), urine (0.4%); voxilaprevir: primarily in feces. **Half-life:** sofosbuvir: 0.5 hrs; velpatasvir: 17 hrs; voxilaprevir: 33 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Amiodarone may increase risk of symptomatic bradycardia. **Aluminum- or magnesium-containing antacids, H₂-receptor antagonists (e.g., famotidine), proton pump inhibitors (e.g., omeprazole)** may decrease concentration/effect. **Anticonvulsants (e.g., carbamazepine, phenytoin), antimycobacterials (e.g., rifabutin,**

rifAMPin), tipranavir/ritonavir may decrease concentration/effects. **Moderate or potent inducers of CYP2B6, CYP2C8, CYP3A4, P-glycoprotein (e.g., carbamazepine, phenytoin, oxycarbazepine, rifampicin)** may decrease concentration/effect. May increase concentration/effect of **rosuvastatin. Proton pump inhibitors (e.g., lansoprazole, pantoprazole)** may decrease concentration/effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin, creatine kinase, lipase.

AVAILABILITY (Rx)

Tablets, Fixed-Dose Combination: 400 mg (sofosbuvir)/100 mg (velpatasvir)/100 mg (voxilaprevir).

ADMINISTRATION/HANDLING**PO**

- Give with food.

INDICATIONS/ROUTES/DOSAGE

Note: For pts with genotype 3 infection with prior NS5A inhibitor failure and cirrhosis, concomitant ribavirin should be used.

Hepatitis C Virus Infection

PO: ADULTS, ELDERLY: 1 tablet (sofosbuvir/velpatasvir/voxilaprevir) once daily for 12 wks.

Dosage in Renal Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment, ESRD:** Not recommended due to higher exposure of sofosbuvir.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment:** Not recommended due to higher exposure of voxilaprevir.

SIDE EFFECTS

Frequent (21%–13%): Headache, fatigue, diarrhea, nausea. **Occasional (6%–1%):** Asthenia, insomnia, rash.

ADVERSE EFFECTS/TOXIC REACTIONS

HBV reactivation was reported in pts co-infected with HBV/HVC; may result in fulminant hepatitis, hepatic failure, death. Cardiac arrest, symptomatic bradycardia, pacemaker implantation were reported in pts taking concomitant amiodarone. Bradycardia usually occurred within hrs to days, but may occur up to 2 wks after initiation. Pts with underlying cardiac disease, advanced hepatic disease, or pts taking concomitant beta blockers are at an increased risk for bradycardia when used concomitantly with amiodarone. Psychiatric disorders including depression may occur. Angioedema, blistering skin rashes may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain renal function test, LFT, HCV-RNA level; serum lipase, CPK; pregnancy test in females of reproductive potential. Confirm hepatitis C virus genotype. Question history of renal impairment, hepatic disease unrelated to HCV infection; HIV infection; concomitant use of antiretroviral therapy. Receive full medication history and screen for interactions (esp. concomitant use of amiodarone).

INTERVENTION/EVALUATION

Monitor serum lipase, CK. Periodically monitor HCV-RNA level for treatment effectiveness. If unable to discontinue amiodarone, recommend inpatient cardiac monitoring for at least 48 hrs, followed by outpatient or self-monitoring of HR for at least 2 wks after initiation. Cardiac monitoring is also recommended in pts who discontinue amiodarone just prior to initiation. Encourage nutritional intake. Monitor for new-onset or worsening of depression.

PATIENT/FAMILY TEACHING

- Pts who take amiodarone (an antiarrhythmic) during therapy may require inpatient and outpatient cardiac monitoring (and in some cases, pacemaker implantation) due to an increased risk of slow heart rate or cardiac arrest. If amiodarone therapy cannot be withheld or stopped, immediately report symptoms of slow heart rate such as chest pain, confusion, dizziness, fainting, light-headedness, memory problems, palpitations, weakness.
- There is a high risk of drug interactions with other medications. Do not take newly prescribed medications unless approved by prescriber who originally started treatment.
- Do not take herbal products.
- Avoid alcohol.
- Report signs of depression.

solifenacin

TOP
100

sol-i-fen-a-sin
(VESicare)

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticholinergic agent, muscarinic receptor antagonist. **CLINICAL:** Urinary antispasmodic.

USES

Treatment of overactive bladder with symptoms of urinary frequency, urgency, or urge incontinence.

PRECAUTIONS

Contraindications: Hypersensitivity to solifenacin. Gastric retention, uncontrolled narrow-angle glaucoma, urinary retention. **Cautions:** Bladder outflow obstruction, GI obstructive disorders, decreased GI motility, controlled narrow-angle glaucoma, renal/hepatic impairment, congenital or acquired QT prolongation, concurrent medications that prolong QT interval, hypokalemia, hypomagnesemia, hot weather and/or exercise.

ACTION

Inhibits muscarinic receptors. **Therapeutic Effect:** Decreases urinary bladder contractions, increases residual urine volume, decreases detrusor muscle pressure.

PHARMACOKINETICS

Well absorbed. Protein binding: 98%. Metabolized in liver. Excreted in urine (69%), feces (23%). **Half-life:** 40–68 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., ketoconazole, erythromycin, azole antifungals, clarithromycin) may increase concentration/effect. Aclidinium, ipratropium, tiotropium, umeclidinium may increase anticholinergic effect. **Strong CYP3A4 inducers** (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. **HERBAL:** St. John's wort may decrease concentration/effect. **FOOD:** Grapefruit products may increase concentration/effect. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Tablets: 5 mg, 10 mg.

ADMINISTRATION/HANDLING**PO**

- Give without regard to food. Swallow tablets whole, with liquids.

INDICATIONS/ROUTES/DOSAGE**Overactive Bladder**

PO: ADULTS, ELDERLY: 5 mg/day; if tolerated, may increase to 10 mg/day.

Dosage with Potent CYP3A4 Inhibitors

Maximum: 5 mg/day.

Dosage in Renal/Hepatic Impairment

Severe renal impairment (CrCl less than 30 mL/min) or moderate hepatic impairment: Maximum dosage is 5 mg/day. Not recommended in severe hepatic impairment.

SIDE EFFECTS

Frequent (28%–13%): Dry mouth, constipation. **Occasional (5%–3%):** Blurred vision, UTI, dyspepsia, nausea. **Rare (2%–1%):** Dizziness, dry eyes, fatigue, depression, edema, hypertension, epigastric pain, vomiting, urinary retention.

ADVERSE EFFECTS/TOXIC REACTIONS

Angioneurotic edema, GI obstruction occur rarely. Overdose can result in severe anticholinergic effects.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Assess symptoms of overactive bladder before beginning the drug. Question medical history as listed in Precautions. Screen for concomitant medications known to prolong QT interval. Obtain baseline ECG.

INTERVENTION/EVALUATION

Monitor I&O, anticholinergic effects, creatinine clearance. Assess for decrease in symptoms. Obtain bladder scan if urinary retention is suspected.

PATIENT/FAMILY TEACHING

- Avoid tasks requiring alertness, motor skills until response to drug is established.
- Anticholinergic side effects include constipation, urinary retention, blurred vision, heat prostration in hot environment.
- Use caution during exercise, exposure to heat.

somatropin

soe-ma-troe-pin
(Genotropin, Genotropin Miniquick, Humatrope, Norditropin FlexPro,

Nutropin, Nutropin AQ NuSpin, Omnitrope, Saizen, Serostim, Zomacton, Zorbtive)

Do not confuse somatropin with SUMatriptan.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Polypeptide hormone. **CLINICAL:** Growth hormone.

USES

Adults: Growth deficiency due to pituitary disease, hypothalamic disease, surgery, radiation, or trauma. **Serostim:** AIDS-related wasting or cachexia. **Zorbtive:** Short bowel syndrome. **Children:** Long-term treatment of growth failure due to lack of or inadequate endogenous growth hormone secretion; chronic renal insufficiency; short stature, Turner's syndrome, Prader-Willi syndrome, or homeobox gene deficiency; idiopathic short stature. **OFF-LABEL:** Treatment of pediatric HIV pts with wasting/cachexia; HIV adipose redistribution syndrome.

PRECAUTIONS

Contraindications: Hypersensitivity to growth hormone. Pts with Prader-Willi syndrome with growth hormone deficiency who are severely obese or have severe respiratory impairment, Prader-Willi syndrome without growth hormone deficiency, children with closed epiphyses, acute critical illness due to complications after open heart or abdominal surgery, multiple accidental trauma, acute respiratory failure, active neoplasia, diabetic retinopathy. Active malignancy, progression of active growing intracranial lesion or tumor. **Cautions:** Diabetes, elderly pts.

ACTION

Stimulates cartilaginous growth areas of long bones; increases number, size of skeletal muscle cells; influences size of organs; increases RBC mass by

stimulating erythropoietin. Influences metabolism of carbohydrates (decreases insulin sensitivity), fats (mobilizes fatty acids), minerals (retains phosphorus, sodium, potassium by promotion of cell growth), proteins (increases protein synthesis). **Therapeutic Effect:** Stimulates growth.

PHARMACOKINETICS

Well absorbed after SQ, IM administration. Localized primarily in kidneys, liver. **Half-life:** **IV:** 20–30 min; **SQ, IM:** 3–5 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Corticosteroids (e.g., hydrocortisone, prednisONE) may inhibit growth response. **Oral estrogens** may decrease response to somatropin. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, inorganic phosphorus, parathyroid hormone. May decrease glucose tolerance. May slightly decrease thyroid function.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: (*Genotropin*): 5 mg, 12 mg. (*Genotropin Miniquick*): 0.2 mg, 0.4 mg, 0.6 mg, 0.8 mg, 1 mg, 1.2 mg, 1.4 mg, 1.6 mg, 1.8 mg, 2 mg. (*Omnitrope*): 5.8 mg. (*Saizen*): 5 mg, 8.8 mg. (*Serostim*): 4 mg, 5 mg, 6 mg. (*Zomacton*): 5 mg, 10 mg. (*Zorbtive*): 8.8 mg. **Injection Solution:** (*Omnitrope*): 5 mg/1.5 mL, 10 mg/1.5 mL. (*Norditropin FlexPro Pen*): 5 mg/1.5 mL, 10 mg/1.5 mL, 30 mg/3 mL. (*Nutropin AQ NuSpin*): 5 mg/2 mL, 10 mg/2 mL, 20 mg/2 mL.

ADMINISTRATION/HANDLING

◀ **ALERT** ▶ **Neonate:** Benzyl alcohol as a preservative has been associated

with fatal toxicity (gasping syndrome) in premature infants. Reconstitute with Sterile Water for Injection only. Use only 1 dose per vial. Discard unused portion.

Reconstitution • Genotropin, Genotropin Miniquick: Reconstitute with diluent provided. **Humatrope:** Reconstitute with 1.5–5 mL diluent provided, swirl gently, do not shake. **Humatrope Cartridge:** Dilute with solution provided with cartridge only. **Nutropin:** Reconstitute each 5 mg with 1.5–5 mL diluent, swirl gently, do not shake. **Omnitrope:** Reconstitute with diluents provided, swirl gently, do not shake. **Saizen:** 5 mg: Reconstitute with 1–3 mL diluent provided, swirl gently, do not shake. 8.8 mg: Reconstitute with 2–3 mL diluent provided, swirl gently, do not shake. **Serostim:** Reconstitute with Sterile Water for Injection. **Zorbtive:** Reconstitute with 1–2 mL Bacteriostatic Water for Injection.

Storage • Long-term: Refrigerate all products except Zorbtive. Once reconstituted, Humatrope, Nutropin, Saizen, Zorbtive stable for 14 days, Genotropin for 21 days, Humatrope Cartridge for 28 days. **Genotropin Miniquick:** Refrigerate, use within 24 hrs.

INDICATIONS/ROUTES/DOSAGE

Growth Hormone Deficiency

SQ: (*Genotropin, Omnitrope*): **ADULTS:** 0.04 mg/kg wkly divided into 6–7 equal doses/wk. May increase at 4- to 8-wk intervals to maximum of 0.08 mg/kg/wk. **CHILDREN:** 0.16–0.24 mg/kg wkly divided into equal daily doses.

SQ: (*Humatrope*): **ADULTS:** 0.006 mg/kg once daily. May increase to maximum of 0.0125 mg/kg/day. **CHILDREN:** 0.18–0.3 mg/kg wkly divided into alternate-day doses or 6 doses/wk.

SQ: (*Norditropin*): **ADULTS:** 0.004 mg/kg/day. May increase after 6 wks up to 0.016 mg/kg/day. **CHILDREN:** 0.024–0.034 mg/kg/dose 6–7 days/wk.

SQ: (*Nutropin, Nutropin AQ*): **ADULTS:** 0.006 mg/kg once daily. May increase to maximum of 0.025 mg/kg/

day (younger than 35 yrs) or 0.0125/kg/day (35 yrs and older). **CHILDREN:** 0.3–0.7 mg/kg wkly divided into equal daily doses.

SQ: (*Saizen*): **ADULTS:** 0.005 mg/kg/day. May increase up to 0.01 mg/kg/day after 4 wks. **CHILDREN:** 0.18 mg/kg/wk divided into equal daily doses or 0.06 mg/kg 3 times/wk or as 0.03 mg/kg administered 6 days/wk.

Chronic Renal Insufficiency

SQ: (*Nutropin, Nutropin AQ*): **CHILDREN:** 0.35 mg/kg wkly divided into equal daily doses. Continue until the time of renal transplantation.

Turner's Syndrome

SQ: (*Humatrope, Nutropin, Nutropin AQ*): **CHILDREN:** 0.375 mg/kg wkly divided into equal doses 3–7 times/wk. (*Genotropin, Omnitrope*): 0.33 mg/kg wkly divided into 6–7 doses.

AIDS-Related Wasting

SQ: (*Serostim*): **ADULTS WEIGHING MORE THAN 55 KG:** 6 mg once daily at bedtime. **ADULTS WEIGHING 45–55 KG:** 5 mg once daily at bedtime. **ADULTS WEIGHING 35–44 KG:** 4 mg once daily at bedtime. **ADULTS WEIGHING LESS THAN 35 KG:** 0.1 mg/kg once daily at bedtime.

Short Bowel Syndrome

SQ: (*Zorbtive*): **ADULTS:** 0.1 mg/kg/day. **Maximum:** 8 mg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Otitis media, other ear disorders (with Turner's syndrome).

Occasional: Carpal tunnel syndrome, gynecomastia, myalgia, peripheral edema, fatigue, asthenia. **Rare:** Rash, pruritus, visual changes, headache, nausea, vomiting, injection site pain/swelling, abdominal pain, hip/knee pain.

ADVERSE EFFECTS/TOXIC REACTIONS

Pancreatitis occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline lab chemistries, thyroid function, serum glucose level. Obtain full medical history (drug has multiple contraindications).

INTERVENTION/EVALUATION

Monitor bone growth, growth rate in relation to pt's age. Monitor serum calcium, glucose, phosphorus levels; renal, parathyroid, thyroid function. Observe for decreased muscle wasting in AIDS pts.

PATIENT/FAMILY TEACHING

- Follow correct procedure to reconstitute drug for administration and for safe handling/disposal of needles.
- Regular follow-up with physician is important part of therapy.
- Report development of severe headache, visual changes, pain in hip/knee, limping.

sonidegib

soe-ni-deg-ib
(Odomzo)

BLACK BOX ALERT ■ May cause embryo-fetal death/severe malformations when given during pregnancy. Verify pregnancy status before initiation. Female patients of reproductive potential must use effective contraception during treatment and for at least 20 mos after discontinuation. Due to the potential risk of exposure through semen, male patients must use condoms during sexual activity (even after a vasectomy) during treatment and for at least 8 mos after discontinuation.

Do not confuse sonidegib with vismodegib.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Hedgehog pathway inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of adult pts with locally advanced basal cell carcinoma that has recurred following surgery or radiation therapy, or those who are not candidates for surgery or radiation.

PRECAUTIONS

Contraindications: Hypersensitivity to sonidegib. **Cautions:** Renal/hepatic impairment. Avoid concomitant use of strong or moderate CYP3A inhibitors, strong or moderate CYP3A inducers.

ACTION

Basal cell cancer is associated with mutation in Hedgehog pathway components, which can activate the pathway, causing nonrestrictive proliferation of skin basal cells. Binds to and inhibits smoothed homologue (SMO), the protein involved in Hedgehog signal transduction. **Therapeutic Effect:** Inhibits tumor cell growth and metastasis.

PHARMACOKINETICS

Poorly absorbed after PO administration (less than 10%). Metabolized in liver. Protein binding: greater than 97%. Peak plasma concentration: 2–4 hrs. Steady state reached in 4 mos. Excreted in feces (70%), urine (30%). **Half-life:** 28 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal death/malformations. Unknown if distributed in breast milk. Must either discontinue drug or discontinue breastfeeding. Female patients of reproductive potential must use effective contraception during treatment and up to 20 mos after discontinuation. May compromise female fertility. **Males:** Male patients must use condoms during sexual activity (even after a vasectomy) during treatment and up to 8 mos

after discontinuation. **Children:** Safety and efficacy not established. **Elderly:** May have increased risk of severe musculoskeletal adverse events (e.g., muscle spasms, myopathy).

INTERACTIONS

DRUG: Strong CYP3A inhibitors (e.g., clarithromycin, ketoconazole), moderate CYP3A inhibitors (e.g., atazanavir, fluconazole) may increase concentration/effect. Strong CYP3A inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. **HERBAL:** None significant. **FOOD:** High-fat meals may increase absorption/concentration. **LAB VALUES:** May increase serum ALT/AST, amylase, creatinine, CK, glucose, lipase. May decrease Hct, Hgb, lymphocytes.

AVAILABILITY (Rx)

Capsules: 200 mg.

ADMINISTRATION/HANDLING

PO

- Give on an empty stomach at least 1 hr before or 2 hrs after a meal.

INDICATIONS/ROUTES/DOSAGE

Basal Cell Carcinoma

PO: ADULTS, ELDERLY: 200 mg once daily. Continue until disease progression or unacceptable toxicity.

Dose Modification

Interrupt therapy for severe or intolerable musculoskeletal adverse reactions; first occurrence of serum CK level 2.5–10 times upper limit of normal (ULN); recurrent serum CK level 2.5–5 times ULN. Once resolved, resume at 200 mg once daily.

Discontinuation

Permanently discontinue treatment for serum CK level greater than 2.5 times ULN with worsening renal function; serum CK level greater than 10 times ULN; recurrent serum CK level greater than 5 times

ULN; recurrent severe or intolerable musculoskeletal adverse reactions.

Renal Impairment

No dose adjustment.

Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment:** Not studied; use caution.

SIDE EFFECTS

Frequent (54%–23%): Muscle spasm, alopecia, dysgeusia, fatigue, nausea, diarrhea, musculoskeletal pain, decreased appetite. **Occasional (19%–10%):** Myalgia, abdominal pain, headache, generalized pain, vomiting, pruritus.

ADVERSE EFFECTS/TOXIC REACTIONS

Musculoskeletal events occurred in 68% of pts. Common Terminology Criteria for Adverse Events (CTCAE) Grade 3 or 4 musculoskeletal events (9% of pts) may require administration of muscle relaxants, analgesics/narcotics, magnesium supplementation, IV hydration. Serum CK level elevations usually occur before musculoskeletal pain or spasms. Increased serum CK levels reported in 61% of pts. The median onset of serum CK elevation was approx. 12 wks. May increase risk of rhabdomyolysis. Amenorrhea lasting longer than 18 mos has occurred.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline capillary blood glucose, CBC, LFT, serum CK level, renal function test. Verify negative pregnancy status before initiation. Question current breastfeeding status. Receive medication history and screen for interactions. Assess hydration status. Offer emotional support.

INTERVENTION/EVALUATION

Monitor renal function, serum CK levels periodically and with any musculoskeletal adverse events. If musculoskeletal adverse reactions occur with serum CK

levels greater than 2.5 times ULN, obtain serum CK level at least wky until resolution. Offer antiemetics for nausea/vomiting. Monitor urine color, output. Serum CK level elevation or worsening of renal function may indicate rhabdomyolysis. Monitor pregnancy status during therapy.

PATIENT/FAMILY TEACHING

- Treatment may cause severe muscle damage, which may cause kidney damage.
- Report dark-colored urine or decreased urine output despite hydration.
- Immediately report musculoskeletal symptoms such as muscle pain/spasms/tenderness/weakness.
- Do not donate blood or blood products during treatment and up to 20 mos after discontinuation.
- Males must use condoms during sexual activity during treatment and up to 8 mos following discontinuation.
- Treatment may cause birth defects or miscarriage.
- Immediately report suspected pregnancy.
- Hair loss is an expected side effect.
- Swallow capsules whole; do not chew, crush, cut or open.
- Take on empty stomach at least 1 hr before or 2 hrs after a meal.

SORafenib

soe-raf-e-nib
(NexAVAR)

Do not confuse NexAVAR with NexIUM, or SORafenib with imatinib or SUNItinib.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Vascular endothelial growth factor (VEGF) inhibitor. Tyrosine kinase inhibitor.

CLINICAL: Antineoplastic.

USES

Treatment of advanced renal cell carcinoma, unresectable hepatocellular carcinoma, locally recurrent or metastatic progressive

differentiated thyroid carcinoma refractive to radioactive iodine treatment. **OFF-LABEL:** Recurrent or metastatic angiosarcoma, resistant gastrointestinal stromal tumor.

PRECAUTIONS

Contraindications: Hypersensitivity to SORafenib. Use in combination with CARBOplatin and PACLitaxel in pts with squamous cell lung cancer. **Cautions:** Underlying or poorly controlled hypertension, pts with congenital long QT syndrome, medications that prolong QT interval, electrolyte imbalance (hypokalemia, hypomagnesemia), unstable coronary artery disease, recent MI, HF, concurrent use with strong CYP3A4 inducers.

ACTION

Inhibits tumor cell proliferation by inhibiting intracellular Raf kinases and cell surface kinase receptors. **Therapeutic Effect:** Inhibits tumor growth and metastasis

PHARMACOKINETICS

Metabolized in liver. Protein binding: 99.5%. Excreted mainly in feces, with lesser amount excreted in urine. **Half-life:** 25–48 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Adequate contraception should be used during therapy and for at least 2 wks after therapy completion. Unknown if distributed in breast milk. Breastfeeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A4 inducers (e.g., carBAMazepine, PHENobarbital, rifAMPin) may decrease concentration. **QT interval–prolonging medications** (e.g., amiodarone, azithromycin, ceritinib, haloperidol, moxifloxacin) may increase risk of QT interval prolongation, cardiac arrhythmias. May increase adverse effects of carboplatin. May

increase anticoagulant effect of **warfarin**. **HERBAL:** **Echinacea** may decrease the therapeutic effect. **St. John's wort** may decrease concentration/effect. **FOOD:** **High-fat meals** decrease effectiveness. **LAB VALUES:** May increase serum lipase, amylase, bilirubin, alkaline phosphatase, transaminases. May decrease serum phosphorus, lymphocytes, WBCs, Hgb, Hct.

AVAILABILITY (Rx)

 **Tablets:** (*NexAVAR*): 200 mg.

ADMINISTRATION/HANDLING

PO

- Give 1 hr before or 2 hrs after eating (high-fat meal reduces effectiveness).
- Swallow tablet whole; do not break, crush, dissolve, or divide tablet.

INDICATIONS/ROUTES/DOSAGE

Renal Cell Carcinoma, Hepatocellular Carcinoma, Thyroid Carcinoma

PO: ADULTS, ELDERLY: 400 mg (2 tablets) twice daily without food. Continue until disease progression or unacceptable toxicity.

Dosage in Renal Impairment

Creatinine

Clearance	Dosage
40–59 mL/min	400 mg twice daily
20–39 mL/min	200 mg twice daily
Hemodialysis	200 mg once daily

Dosage in Hepatic Impairment

Bilirubin greater than 1 to 1.5 times upper limit of normal (ULN) and/or AST greater than ULN: 400 mg twice daily. **Bilirubin greater than 1.5 to 3 times ULN and any AST:** 200 mg twice daily. **Albumin less than 2.5 g/dL (any bilirubin/AST):** 200 mg once daily.

SIDE EFFECTS

Frequent (43%–16%): Diarrhea, rash, fatigue, exfoliative dermatitis, alopecia, nausea, pruritus, hypertension, anorexia, vomiting. **Occasional**

(15%–10%): Constipation, minor bleeding, dyspnea, sensory neuropathy, cough, abdominal pain, dry skin, weight loss, joint pain, headache. **Rare (9%–1%):** Acne, flushing, stomatitis, mucositis, dyspepsia, arthralgia, myalgia, hoarseness.

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia, neutropenia, thrombocytopenia, leukopenia occur in less than 10% of pts. Pancreatitis, gastritis, erectile dysfunction occur occasionally. Hemorrhage, cardiac ischemia/infarction, hypertensive crisis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Monitor B/P w/ky during first 6 wks of therapy and routinely thereafter. CBC, serum chemistries including electrolytes, renal function, LFT, chest X-ray should be performed before therapy begins and routinely thereafter.

INTERVENTION/EVALUATION

Determine serum amylase, lipase, phosphate concentrations frequently during therapy. Monitor CBC for evidence of myelosuppression. Monitor for blood dyscrasias (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness). Monitor for signs of neuropathy (gait disturbances, fine motor control difficulties, numbness).

PATIENT/FAMILY TEACHING

- Report any episode of chest pain.
- Do not have immunizations without physician's approval (drug lowers resistance). Avoid contact with those who have recently taken live virus vaccine.
- Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site.
- Swallow whole; do not chew, crush, dissolve, or divide tablet.
- Avoid administration after high-fat meals.

sotalol

**HIGH
ALERT**

soe-ta-lol

(Betapace, Betapace AF, Ryosol , Sorine, Sotylize)

BLACK BOX ALERT ■ Initiation, titration to occur in a hospital setting with continuous ECG to monitor potential onset of life-threatening arrhythmias. Calculate CrCl prior to dosing. Adjust dose based on CrCl. Betapace should not be substituted for Betapace AF.

Do not confuse Betapace with Betapace AF, or sotalol with Stadol or Sudafed.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Nonselective beta-adrenergic blocking agent.

CLINICAL: Antiarrhythmic Class II.

USES

Treatment of documented, life-threatening ventricular arrhythmias. Maintain normal sinus rhythm in pts with symptomatic atrial fibrillation/flutter. **OFF-LABEL:** Fetal tachycardia, treatment of atrial fibrillation with hypertrophic cardiomyopathy.

PRECAUTIONS

Contraindications: Hypersensitivity to sotalol. Cardiogenic shock, congenital or acquired long QT syndrome, second- or third-degree heart block (unless functioning pacemaker is present), sinus bradycardia, uncontrolled HF, bronchial asthma or related bronchospastic conditions. **Betapace, Betapace AF, Sotylize (additional):** Baseline QT interval greater than 450 msec, bronchospastic conditions, CrCl less than 40 mL/min, serum potassium less than 4 mEq/L, sick sinus syndrome. **Cautions:** Pts with history of ventricular tachycardia, ventricular fibrillation, cardiomegaly, compensated HF, diabetes mellitus, QT interval prolongation, concurrent medications that prolong QT interval,

hypokalemia, hypomagnesemia, renal impairment, within first 2 wks post MI, peripheral vascular disease, Raynaud's syndrome, myasthenia gravis, psychiatric disease, bronchospastic disease. Concurrent use of digoxin, verapamil, diltiazem, history of severe anaphylaxis to allergens.

ACTION

Prolongs cardiac action potential, effective refractory period, QT interval. Decreases heart rate, AV node conduction; increases AV node refractoriness. **Therapeutic Effect:** Produces antiarrhythmic activity.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1–2 hrs	2.5–4 hrs	8–16 hrs

Well absorbed from GI tract. Protein binding: None. Widely distributed. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 12 hrs (increased in elderly, renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Age-related peripheral vascular disease may increase susceptibility to decreased peripheral circulation. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Calcium channel blockers (e.g., diltiazem, verapamil) may increase effect on AV conduction, B/P. May mask symptoms of hypoglycemia, prolong hypoglycemic effects of insulin, oral hypoglycemics (e.g., glipizide, metformin). QT-prolonging medications (e.g., amiodarone, ciprofloxacin, haloperidol, ondansetron) may increase risk of prolonged QT interval. **HERBAL:** Herbs with hypotensive properties (e.g.,

garlic, ginger, ginkgo biloba) may alter effects. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, glucose, alkaline phosphatase, LDH, lipoprotein, ALT, AST, triglycerides, potassium, uric acid.

AVAILABILITY (Rx)

Solution, Intravenous: 150 mg/10 mL. **Solution, Oral:** 5 mg/mL. **Tablets:** 80 mg, 120 mg, 160 mg, 240 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Give at same time each day.

INDICATIONS/ROUTES/DOSAGE

Note: Baseline QTc interval and CrCl must be determined before initiation.

Ventricular Arrhythmias

PO: ADULTS, ELDERLY: Initially, 80 mg twice daily. May increase in 80-mg increments at 3-day intervals. Range: 160–320 mg/day in 2–3 divided doses. **Maximum:** 640 mg/day in life-threatening refractive arrhythmias.

IV: Initially, 75 mg infused over 5 hrs twice daily. Range: 75–150 mg twice daily. **Maximum:** 300 mg twice daily.

Atrial Fibrillation, Atrial Flutter

PO: ADULTS, ELDERLY: Initially, 80 mg twice daily. May increase to 120–160 mg twice daily.

IV: Initially, 75 mg infused over 5 hrs twice daily. Usual dose: 112.5 mg twice daily. **Maximum:** 150 mg twice daily.

Usual Dosage for Children

PO: Initially, 90 mg/m²/day in 3 divided doses. May incrementally increase up to a maximum of 180 mg/m²/day not to exceed maximum adult dose of 320 mg/day.

Dosage in Renal Impairment

Dosage interval is modified based on creatinine clearance.

Atrial Fibrillation/Flutter

Creatinine Clearance	Dosage
Greater than 60 mL/min	12 hrs
40–60 mL/min	24 hrs
Less than 40 mL/min	Contraindicated

Ventricular Arrhythmias

Creatinine Clearance	Dosage
Greater than 60 mL/min	12 hrs
30–60 mL/min	24 hrs
10–29 mL/min	q36–48h

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Diminished sexual function, drowsiness, insomnia, asthenia.

Occasional: Depression, cold hands/feet, diarrhea, constipation, anxiety, nasal congestion, nausea, vomiting.

Rare: Altered taste, dry eyes, pruritus, paresthesia of fingers, toes, scalp.

ADVERSE EFFECTS/TOXIC REACTIONS

Bradycardia, HF, hypotension, bronchospasm, hypoglycemia, prolonged QT interval, torsades de pointes, ventricular tachycardia, premature ventricular complexes may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Baseline QTc interval and CrCl must be determined prior to initiation. Pt must be on continuous cardiac monitoring upon initiation of therapy. Do not administer without consulting physician if pulse is 60 beats/min or less. Question medical history as listed in Precautions.

INTERVENTION/EVALUATION

Diligently monitor for arrhythmias. Assess B/P for hypotension, pulse for bradycardia. Assess for HF: dyspnea, peripheral edema, jugular vein distention, increased weight, rales in lungs, decreased urinary output.

PATIENT/FAMILY TEACHING

• Do not discontinue, change dose without physician approval. • Avoid tasks requiring alertness, motor skills until

response to drug is established (may cause drowsiness). • Periodic lab tests, ECGs are essential part of therapy. • Report rapid heartbeat, chest pain, swelling of ankles/legs, difficulty breathing.

spironolactone

spir-on-oh-lak-tone
(Aldactone, CaroSpir)

BLACK BOX ALERT ■ Has been shown to produce tumors in chronic toxicity animal studies.

Do not confuse Aldactone with Aldactazide.

FIXED-COMBINATION(S)

Aldactazide: spironolactone/hydro-CHLOROthiazide (a thiazide diuretic): 25 mg/25 mg, 50 mg/50 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Aldosterone receptor antagonist. **CLINICAL:** Potassium-sparing diuretic, antihypertensive.

USES

Management of edema in cirrhotic pts when edema is unresponsive to fluid and sodium restriction. Heart failure (NYHA class III–IV and reduced ejection fraction) to increase survival, manage edema, and to reduce need for hospitalization for HF. Management of hypertension (unresponsive to other therapies). Treatment of primary hyperaldosteronism. **OFF-LABEL:** Treatment of edema, hypertension in children, female acne, female hirsutism. Ascites due to cirrhosis.

PRECAUTIONS

Contraindications: Hypersensitivity to spironolactone. Hyperkalemia, Addison's disease, concomitant use with eplerenone.

Cautions: Dehydration, hyponatremia, concurrent use of supplemental potassium, elderly pts, mild renal impairment,

declining renal function, ACE inhibitors or angiotensin receptor blockers.

ACTION

Interferes with sodium reabsorption by competitively inhibiting action of aldosterone in distal tubule, promoting sodium and water excretion, increasing potassium retention. May decrease effect of aldosterone on arteriolar smooth muscle. **Therapeutic Effect:** Produces diuresis, lowers B/P.

PHARMACOKINETICS

Well absorbed from GI tract (absorption increased with food). Protein binding: 91%–98%. Metabolized in liver to active metabolite. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 78–84 min.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Active metabolite excreted in breast milk. Breastfeeding not recommended. **Children:** No age-related precautions noted. **Elderly:** May be more susceptible to developing hyperkalemia. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: ACE inhibitors (e.g., captopril, lisinopril), angiotensin receptor blockers (e.g., valsartan), eplerenone, potassium-containing medications, potassium supplements may increase risk of hyperkalemia. May decrease therapeutic effect of digoxin. **NSAIDs** (e.g., ibuprofen, ketorolac, naproxen) may decrease antihypertensive effect. **HERBAL:** Herbals with hypertensive properties (e.g., licorice, yohimbe) or hypotensive properties (e.g., garlic, ginger, ginkgo biloba) may alter effects. **FOOD:** Food increases absorption. **LAB VALUES:** May increase urinary calcium excretion, serum BUN, glucose, creatinine, magnesium, potassium, uric acid. May decrease serum sodium.

AVAILABILITY (Rx)**Oral Suspension:** 25 mg/5 mL.**Tablets:** 25 mg, 50 mg, 100 mg.**ADMINISTRATION/HANDLING****PO**

- Take with food to reduce GI irritation and increase absorption. **Suspension:**
- Shake well. • May give with or without food (give consistently with respect to food).

INDICATIONS/ROUTES/DOSAGE**Edema (For Cirrhosis)**

PO: ADULTS, ELDERLY: (*Tablet*): Initially, 100 mg/day as single dose. May titrate q3–5 days based on response and tolerability. **Maximum dose:** 400 mg once daily.

Hypertension

PO: ADULTS, ELDERLY: (*Tablet*): Initially, 12.5–25 mg once daily. May titrate q2wks as needed. **Maximum:** 100 mg. (*Suspension*): 20–100 mg daily in 1 or 2 divided doses. May titrate q2wks.

Primary Aldosteronism

PO: ADULTS, ELDERLY: Initially, 12.5–25 mg once daily. Gradually titrate to the lowest effective dose. **Maximum dose:** 400 mg/day.

HF

PO: ADULTS, ELDERLY: (*Tablet*): Initially, 12.5–25 mg/day. May double the dose q4wks if serum potassium remains less than 5 mEq/L and renal function remains stable. **Maximum:** 50 mg/day. in 1 or 2 divided doses. (*Suspension*): Initially, 10–20 mg once daily. May titrate to 37.5 mg once daily if serum potassium remains less than 5 mEq/L and renal function remains stable.

Dosage in Renal Impairment

CrCl 50 mL/min or greater: Initially, 12.5–25 mg once daily. **Maintenance:** 25 mg once or twice daily.

CrCl 30–49 mL/min: Initially, 12.5 mg once daily or every other day. **Maintenance:** 12.5–25 mg once daily. **CrCl less than 30 mL/min:** Not recommended.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Hyperkalemia (in pts with renal insufficiency, those taking potassium supplements), dehydration, hyponatremia, lethargy. **Occasional:** Nausea, vomiting, anorexia, abdominal cramps, diarrhea, headache, ataxia, drowsiness, confusion, fever. **Male:** Gynecomastia, impotence, decreased libido. **Female:** Menstrual irregularities (amenorrhea, postmenopausal bleeding), breast tenderness. **Rare:** Rash, urticaria, hirsutism.

ADVERSE EFFECTS/TOXIC REACTIONS

Severe hyperkalemia may produce arrhythmias, bradycardia, ECG changes (tented T waves, widening QRS complex, ST segment depression). May proceed to cardiac standstill, ventricular fibrillation. Cirrhosis pts at risk for hepatic decompensation if dehydration, hyponatremia occurs. Pts with primary aldosteronism may experience rapid weight loss, severe fatigue during high-dose therapy.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Weigh pt; initiate strict I&O. Evaluate hydration status by assessing mucous membranes, skin turgor. Obtain baseline serum electrolytes, renal/hepatic function, urinalysis. Assess for edema; note location, extent. Check baseline vital signs, note pulse rate/regularity.

INTERVENTION/EVALUATION

Monitor serum electrolyte values, esp. for increased potassium, BUN, creatinine. Monitor B/P. Monitor for hyponatremia: mental confusion, thirst, cold/clammy skin, drowsiness, dry mouth. Monitor for hyperkalemia: colic, diarrhea, muscle twitching followed by weakness/paralysis, arrhythmias. Obtain daily weight. Note changes in edema, skin turgor.

PATIENT/FAMILY TEACHING

• Expect increase in volume, frequency of urination. • Therapeutic effect takes several days to begin and can last for several days when drug is discontinued. This may not apply if pt is on a potassium-losing drug concomitantly (diet, use of supplements should be established by physician). • Report irregular or slow pulse, symptoms of electrolyte imbalance (see previous Intervention/Evaluation). • Avoid foods high in potassium, such as whole grains (cereals), legumes, meat, bananas, apricots, orange juice, potatoes (white, sweet), raisins. • Avoid alcohol. • Avoid tasks that require alertness, motor skills until response to drug is established (may cause drowsiness).

sulfamethoxazole-trimethoprim

sul-fa-meth-ox-a-zole-trye-meth-oh-prim

(Bactrim, Bactrim DS, Sulfatrim)

Do not confuse Bactrim with bacitracin or Bactroban.

FIXED-COMBINATION(S)

Bactrim, Septra: sulfamethoxazole/trimethoprim: 5:1 ratio remains constant in all dosage forms (e.g., 400 mg/80 mg).

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Sulfonamide derivative. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to *S. pneumoniae*, *H. influenzae*, *E. coli*, *Klebsiella* spp., *Enterobacter* spp., *M. morgani*, *P. mirabilis*, *P. vulgaris*, *S. flexneri*, *Pneumocystis jiroveci*, including acute or complicated and recurrent or chronic UTI, *Pneumocystis*

jiroveci pneumonia (PCP), shigellosis, enteritis, otitis media, chronic bronchitis, traveler's diarrhea. Prophylaxis of PCP. Acute exacerbation of COPD. **OFF-LABEL:** Chronic prostatitis, prophylaxis for UTI, MRSA infections, prosthetic joint infection.

PRECAUTIONS

Contraindications: Hypersensitivity to any sulfa medication, trimethoprim. History of drug-induced immune thrombocytopenia with sulfonamides or trimethoprim, infants younger than 4 wks, megaloblastic anemia due to folate deficiency, severe hepatic/renal impairment. Concomitant administration of dofetilide. **Cautions:** Pts with G6PD deficiency, impaired renal/hepatic function, porphyria, pts with allergies or asthma, elderly pts, alcoholism, thyroid dysfunction, concurrent anticonvulsant therapy.

ACTION

Sulfamethizole: Interferes with bacterial folic acid synthesis and growth. **Trimethoprim:** Inhibits dihydrofolic acid reduction. **Therapeutic Effect:** Bactericidal in susceptible microorganisms.

PHARMACOKINETICS

Rapidly, well absorbed from GI tract. Protein binding: 45%–60%. Widely distributed. Metabolized in liver. Excreted in urine. Minimally removed by hemodialysis. **Half-life:** sulfamethoxazole, 6–12 hrs; trimethoprim, 6–17 hrs (increased in renal impairment).

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated during pregnancy at term and during lactation. Readily crosses placenta. Distributed in breast milk. May produce kernicterus in newborn. **Children:** Contraindicated in pts younger than 2 mos; may increase risk of kernicterus in newborn. **Elderly:** Increased risk for

S

severe skin reaction, myelosuppression, decreased platelet count.

INTERACTIONS

DRUG: May increase concentration/effect of **phenytoin**, **digoxin**, **oral hypoglycemics** (e.g., **glipiZIDE**, **metFORMIN**), **warfarin**. May increase adverse effects of **methotrexate**. **Strong CYP3A4 inducers** (e.g., **carBAMazepine**, **phenytoin**, **rifAMPin**) may decrease concentration/effect. Trimethoprim may increase concentration/effect of **dofetilide**. **Leucovorin** may increase adverse effects of trimethoprim. **HERBAL:** **St. John's wort** may decrease concentration/effect. **Herbals with hypoglycemic properties** (e.g., **fenugreek**) may increase concentration/effect. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, creatinine, ALT, AST, bilirubin.

AVAILABILITY (Rx)

⚠ALERT All dosage forms have same 5:1 ratio of sulfamethoxazole (SMZ) to trimethoprim (TMP).

Injection Solution: SMZ 80 mg and TMP 16 mg per mL. **Oral Suspension:** SMZ 200 mg and TMP 40 mg per 5 mL. **Tablets:** (**Bactrim**): SMZ 400 mg and TMP 80 mg. **Tablets, Double Strength:** (**Bactrim DS**, **Sepra DS**): SMZ 800 mg and TMP 160 mg.

ADMINISTRATION/HANDLING

Reconstitution • For IV infusion (piggyback), dilute each 5 mL with 75–125 mL D₅W. • Do not mix with other drugs or solutions.

Rate of administration • Infuse over 60–90 min. Must avoid bolus or rapid infusion. • Do not give IM. • Ensure adequate hydration.

Storage • IV infusion (piggyback) stable for 2 hrs (5 mL/75 mL D₅W), 4 hrs (5 mL/100 mL D₅W), 6 hrs (5 mL/125 mL D₅W). • Discard if cloudy or precipitate forms.

PO

• Store tablets, suspension at room temperature. • Administer without regard to food. • Give with at least 8 oz water.

IV INCOMPATIBILITIES

Fluconazole (Diflucan), foscarnet (Foscavir), midazolam (Versed), vinorelbine (Navelbine).

IV COMPATIBILITIES

Dexmedetomidine (Precedex), dilTIA-Zem (Cardizem), heparin, HYDROmorphone (Dilaudid), LORazepam (Ativan), magnesium sulfate, morphine, niCARDipine (Cardene).

INDICATIONS/ROUTES/DOSAGE

Usual Adult/Elderly Dosage Range

PO: 1–2 double-strength tablets q12–24h. **IV:** 8–20 mg/kg/day as trimethoprim in divided doses q6–12h.

Usual Dosage Range for Infants 2 Mos and Older, Children, Adolescents

PO/IV: 6–12 mg TMP/kg/day in divided doses q12h. **Maximum single dose:** 160 mg TMP.

Dosage in Renal Impairment

Creatinine

Clearance	Dosage
15–30 mL/min	50% of usual dosage
Less than 15 mL/min	Not recommended
HD	2.5–10 mg/kg trimethoprim q24h (or 5–20 mg/kg 3 times/wk) (give after HD)
CRRT	2.5–7.5 mg/kg trimethoprim q12h

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Anorexia, nausea, vomiting, rash (generally 7–14 days after therapy begins), urticaria. **Occasional:** Diarrhea, abdominal pain, pain/irritation at IV infusion site. **Rare:** Headache, vertigo, insomnia, seizures, hallucinations, depression.

ADVERSE EFFECTS/TOXIC REACTIONS

Rash, fever, sore throat, pallor, purpura, cough, shortness of breath may be early signs of serious adverse effects. Fatalities are rare but have occurred in sulfonamide therapy following Stevens-Johnson syndrome, toxic epidermal necrolysis, fulminant hepatic necrosis, agranulocytosis, aplastic anemia, other blood dyscrasias. Myelosuppression, decreased platelet count, severe dermatologic reactions may occur, esp. in the elderly.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain history for hypersensitivity to trimethoprim or any sulfonamide, sulfite sensitivity, bronchial asthma. Determine serum renal, hepatic, hematologic baselines.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash, pallor, purpura. Check IV site, flow rate. Monitor renal, hepatic, hematology function. Assess I&O. Check for CNS symptoms (headache, vertigo, insomnia, hallucinations). Monitor vital signs at least twice daily. Monitor for cough, shortness of breath. Assess for overt bleeding, ecchymosis, edema.

PATIENT/FAMILY TEACHING

- Continue medication for full length of therapy.
- Space doses evenly around the clock.
- Take oral doses with 8 oz water and drink several extra glasses of water daily.
- Report immediately any new symptoms, esp. rash, other skin changes, bleeding/bruising, fever, sore throat, diarrhea.
- Avoid prolonged exposure to UV, direct sunlight.

sulfaSALazine

sul-fa-sal-a-zeen

(Apo-SulfaSALazine , Azulfidine, Azulfidine EN-tabs, Salazopyrin , Salazopyrin EN-Tabs )

Do not confuse Azulfidine with Augmentin or azaTHIOprine, or sulfaSALazine with sulfADIAZINE or sulfiSOXAZOLE.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: 5-Aminosalicylic acid derivative. **CLINICAL:** Anti-inflammatory.

USES

Treatment of mild to moderate ulcerative colitis, adjunctive therapy in severe ulcerative colitis, rheumatoid arthritis (RA), juvenile rheumatoid arthritis. **OFF-LABEL:** Treatment of ankylosing spondylitis, Crohn's disease, psoriasis, psoriatic arthritis.

PRECAUTIONS

Contraindications: Hypersensitivity to sulfaSALazine, sulfa, salicylates; porphyria; GI or GU obstruction. **Cautions:** Severe allergies, bronchial asthma, impaired hepatic/renal function, G6PD deficiency, blood dyscrasias, history of recurring or chronic infections.

ACTION

Modulates local mediators of inflammatory response. Inhibits tumor necrosis factor (TNF). **Therapeutic Effect:** Decreases inflammatory response, interferes with GI secretion. Effect appears topical rather than systemic.

PHARMACOKINETICS

Poorly absorbed from GI tract. Cleaved, absorbed in colon by intestinal bacteria, forming sulfapyridine and mesalamine (5-ASA). Widely distributed. Metabolized via colonic intestinal flora. Primarily excreted in urine. **Half-life:** 5.7–10 hrs.

 **LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: May produce infertility, oligospermia in men while taking medication. Readily crosses placenta; if given near term, may produce jaundice, hemolytic anemia, kernicterus in newborn. Distributed in breast milk. Pt should not breastfeed premature infant or those with hyperbilirubinemia or G6PD deficiency. **Children:** No age-related precautions noted in pts older than 2 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** Impairs folate absorption. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: (Azulfidine): 500 mg.

 **Tablets, Delayed-Release: (Azulfidine EN-tabs):** 500 mg.

ADMINISTRATION/HANDLING**PO**

- Space doses evenly (intervals not to exceed 8 hrs).
- Administer after meals or with food.
- Swallow enteric-coated tablets whole; do not break, crush, dissolve, or divide.
- Give with 8 oz of water; encourage several glasses of water between meals.

INDICATIONS/ROUTES/DOSAGE**Ulcerative Colitis**

PO: ADULTS, ELDERLY: Initially, 3-4 g/day in divided doses q8h. May initiate at 1-2 g/day to reduce GI intolerance. **Maximum:** 6 g/day. **Maintenance:** 2 g/day in divided doses at intervals less than or equal to q8h. **CHILDREN 6 YRS AND OLDER:** Initially, 40-70 mg/kg/day in 3-6 divided doses. **Maximum initial dose:** 4 g/day. **Maintenance:** 30-70 mg/kg/day in 3-6 divided doses. **Maximum daily dose:** 4 g/day.

Rheumatoid Arthritis (RA)

PO: (Delayed-Release Tablets): ADULTS, ELDERLY: Initially, 0.5 g once

daily or 1 g/day in 2 divided doses for 1 wk. Increase by 0.5 g/wk, up to 2 g/day in 2 divided doses. **Maximum:** 3 g/day (if response to 2 g/day is inadequate after 12 wks of treatment).

Juvenile Rheumatoid Arthritis (JRA)

PO: (Delayed-Release Tablets): CHILDREN 6-16 YRS: Initially, 10 mg/kg/day. May increase by 10 mg/kg/day at wkly intervals. Range: 30-50 mg/kg/day. **Maximum:** 2 g/day.

Dosage in Renal/Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (33%): Anorexia, nausea, vomiting, headache, oligospermia (generally reversed by withdrawal of drug). **Occasional (3%):** Hypersensitivity reaction (rash, urticaria, pruritus, fever, anemia). **Rare (less than 1%):** Tinnitus, hypoglycemia, diuresis, photosensitivity.

ADVERSE EFFECTS/TOXIC REACTIONS

Anaphylaxis, Stevens-Johnson syndrome, hematologic toxicity (leukopenia, agranulocytosis), hepatotoxicity, nephrotoxicity occur rarely.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Question for hypersensitivity to medications. Check initial urinalysis, CBC, serum renal function, LFT.

INTERVENTION/EVALUATION

Monitor I&O, urinalysis, renal function tests; ensure adequate hydration (minimum output 1,500 mL/24 hrs) to prevent nephrotoxicity. Assess skin for rash (discontinue drug, notify physician at first sign). Monitor daily pattern of bowel activity, stool consistency. (Dosage increase may be needed if diarrhea continues, recurs.) Monitor CBC closely; assess for and report immediately any hematologic effects (bleeding, ecchymoses, fever,

pharyngitis, pallor, weakness, purpura). Monitor LFT; observe for jaundice.

PATIENT/FAMILY TEACHING

- May cause orange-yellow discoloration of urine, skin.
- Space doses evenly around the clock.
- Take after or with food with 8 oz of water; drink several glasses of water between meals.
- Swallow enteric-coated tablets whole; do not chew, crush, dissolve, or divide tablets.
- Continue for full length of treatment; may be necessary to take drug even after symptoms relieved.
- Routinely monitor blood levels.
- Inform dentist, surgeon of sulfaSALazine therapy.
- Avoid exposure to sun, ultraviolet light until photosensitivity determined (may last for mos after last dose).

SUMatriptan

soo-ma-trip-tan

(Imitrex, Onzetra, Sumavel DosePro, Xsail, Zembrace SymTouch)

Do not confuse SUMatriptan with SAXagliptin, SITagliptin, somatropin, or ZOLMitriptan.

FIXED-COMBINATION(S)

Treximet: SUMatriptan/naproxen (an NSAID): 85 mg/500 mg, 10 mg/60 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin 5-HT₁ receptor agonist. **CLINICAL:** Antimigraine.

USES

PO, SQ, Intranasal, Transdermal: Acute treatment of migraine headache with or without aura. **SQ: (Excluding Zembrace)** Treatment of cluster headaches.

PRECAUTIONS

Contraindications: Hypersensitivity to SUMatriptan. Management of hemiplegic

or basilar migraine, peripheral vascular disease, CVA, ischemic heart disease (including angina pectoris, history of MI, silent ischemia, Prinzmetal's angina), severe hepatic impairment, transient ischemic attack, uncontrolled hypertension, MAOI use within 14 days, use within 24 hrs of ergotamine preparations or another 5-HT₁ agonist. **Cautions:** Mild to moderate hepatic impairment, history of seizure disorder, controlled hypertension, elderly pts.

ACTION

Binds selectively to serotonin 5-HT₁ receptors in cranial arteries, producing vasoconstrictive effect on cranial blood vessels. **Therapeutic Effect:** Relieves migraine headache.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Nasal	15 min	N/A	24–48 hrs
PO	30 min	2 hrs	24–48 hrs
SQ	10 min	1 hr	24–48 hrs

Rapidly absorbed after SQ administration. Absorption after PO administration is incomplete; significant amounts undergo hepatic metabolism, resulting in low bioavailability (about 14%). Protein binding: 10%–21%. Widely distributed. Undergoes first-pass metabolism in liver. Excreted in urine. **Half-life:** 2 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Ergotamine-containing medications may produce vasospastic reaction. **MAOIs (e.g., phenelzine, selegiline)** may increase concentration, half-life. **SSRIs (e.g., escitalopram, PARoxetine, sertraline)** and **SNRIs (e.g., DULoxetine, venlafaxine)** may increase risk of serotonin syndrome.

HERBAL: None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Prefilled Autoinjector: 4 mg/0.5 mL, 6 mg/0.5 mL. (*Zembrace SymTouch*): 3-mg prefilled syringe. **Injection Solution:** (*Imitrex*): 4 mg/0.5 mL, 6 mg/0.5 mL. (*Sumavel DosePro*): 4 mg/0.5 mL, 6 mg/0.5 mL. **Nasal Powder:** (*Onzetra, Xsail*): **Capsules:** 11 mg (to be used with Xsail breath powdered nasal device). **Nasal Spray:** (*Imitrex Nasal*): 5 mg/actuation, 20 mg/actuation. **Tablets:** (*Imitrex*): 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

SQ

- Follow manufacturer's instructions for autoinjection device use.
- Administer needleless (Sumavel DosePro) only to abdomen or thigh.

PO

- Swallow tablets whole. Do not break, crush, dissolve, or divide.
- Take with full glass of water.

Nasal

- Unit contains only one spray—do not test before use.
- Instruct pt to gently blow nose to clear nasal passages.
- With head upright, close one nostril with index finger, breathe out gently through mouth.
- Have pt insert nozzle into open nostril about one-half inch, close mouth and, while taking a breath through nose, release spray dosage by firmly pressing plunger.
- Instruct pt to remove nozzle from nose and gently breathe in through nose and out through mouth for 10–20 sec; do not breathe in deeply.

INDICATIONS/ROUTES/DOSAGE

Acute Migraine Headache

PO: ADULTS, ELDERLY: 50–100 mg. Dose may be repeated after at least 2 hrs. **Maximum:** 100 mg/single dose; 200 mg/24 hrs.

SQ: ADULTS, ELDERLY: Initially, up to 6 mg. **Maximum:** Up to two 6-mg injections/24 hrs (separated by at least 1 hr).

(*Zembrace SymTouch*): 3-mg single dose. **Maximum:** 12 mg/24 hrs. Separate dose by at least 1 hr.

Intranasal: ADULTS, ELDERLY: (Spray): Initially, 5 mg, 10 mg, or 20 mg once in one nostril. May repeat once after at least 2 hrs. **Maximum:** 40 mg/24h. (*Nasal Powder*): Initially, a single dose of 22 mg (11 mg in each nostril). May repeat once after at least 2 hrs. **Maximum:** 44 mg/24 hrs separated by at least 2 hrs.

Cluster Headaches

SQ: ADULTS, ELDERLY: Initially, 6 mg. May repeat after 1 hr. **Maximum:** 6 mg/dose; two 6-mg doses/24 hrs.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: Maximum PO dose: 50 mg. **Severe impairment:** Contraindicated.

SIDE EFFECTS

Frequent: PO (10%–5%): Tingling, nasal discomfort. **SQ (greater than 10%):** Injection site reactions, tingling, warm/hot sensation, dizziness, vertigo. **Nasal (greater than 10%):** Altered taste, nausea, vomiting. **Occasional: PO (5%–1%):** Flushing, asthenia, visual disturbances. **SQ (10%–2%):** Burning sensation, numbness, chest discomfort, drowsiness, asthenia. **Nasal (5%–1%):** Nasopharyngeal discomfort, dizziness. **Rare: PO (less than 1%):** Agitation, eye irritation, dysuria. **SQ (less than 2%):** Anxiety, fatigue, diaphoresis, muscle cramps, myalgia. **Nasal (less than 1%):** Burning sensation.

ADVERSE EFFECTS/TOXIC REACTIONS

Excessive dosage may produce tremors, redness of extremities, reduced respirations, cyanosis, seizures, paralysis. Serious arrhythmias occur rarely, esp. in pts with

hypertension, obesity, smokers, diabetes, strong family history of coronary artery disease. Serotonin syndrome may occur (agitation, confusion, hallucinations, hyperreflexia, myoclonus, shivering, tachycardia).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Receive full medical history, medication history and screen for contraindications. Obtain pregnancy test in female pts of reproductive potential. Question regarding onset, location, duration of migraine, possible precipitating symptoms.

INTERVENTION/EVALUATION

Evaluate for relief of migraine headache and resulting photophobia, phonophobia (sound sensitivity), nausea, vomiting.

PATIENT/FAMILY TEACHING

- Follow proper technique for loading of autoinjector, injection technique, discarding of syringe.
- Do not use more than 2 injections during any 24-hr period and allow at least 1 hr between injections.
- Report immediately if wheezing, palpitations, skin rash, facial swelling, pain/tightness in chest/throat occur.

SUNtinib

HIGH
ALERT

soo-nit-in-ib
(Sutent)

BLACK BOX ALERT Hepato-toxicity may be severe and/or result in fatal liver failure.

Do not confuse SUNtinib with imatinib or SORafenib.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Vascular endothelial growth factor (VEGF) inhibitor. Tyrosine kinase inhibitor.

CLINICAL: Antineoplastic.

USES

Treatment of GI stromal tumor (GIST) after disease progression while on or demonstrating intolerance to imatinib. Treatment of advanced renal cell carcinoma (RCC). Adjuvant treatment of adults at high risk of recurrent RCC following nephrectomy. Treatment of pancreatic neuroendocrine tumor (PNET). **OFF-LABEL:** Non-GI stromal tumor, soft tissue sarcomas, advanced thyroid cancer.

PRECAUTIONS

Contraindications: Hypersensitivity to SUNtinib. **Cautions:** Cardiac dysfunction, bradycardia, electrolyte imbalance, bleeding tendencies, hypertension, history of prolonged QT interval, medications that prolong QT interval, hypokalemia, hypomagnesemia, concurrent use of strong CYP3A4 inducers or inhibitors, HF, renal/hepatic impairment, pregnancy.

ACTION

Inhibitory action against multiple receptor tyrosine kinases including growth factor receptors, vascular endothelial growth factors, colony-stimulating factor receptors, glial cell-line neurotrophic factor receptors. **Therapeutic Effect:** Prevents tumor cell growth, produces tumor regression, inhibits metastasis.

PHARMACOKINETICS

Metabolized in liver. Protein binding: 95%. Excreted in feces (61%), urine (16%). **Half-life:** 40–60 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Has potential for embryotoxic, teratogenic effects. Breastfeeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A4 inhibitors (e.g., clarithromycin, itraconazole, ketoconazole, voriconazole) may increase concentration, toxicity. Strong CYP3A4 inducers (e.g., carBAMazepine,

PHENobarbital, phenytoin, rifAMPin may decrease concentration/effects. **QT interval–prolonging medications** (e.g., **amiodarone, haloperidol, moxifloxacin**) may increase risk of QT interval prolongation, cardiac arrhythmias. May increase adverse effects of **bevacizumab**. May increase adverse effects; decrease therapeutic effect of **vaccines (live)**. **HERBAL: St. John's wort** may decrease concentration. **Herbals with hypoglycemic properties** (e.g., **fenugreek**) may increase hypoglycemic effect. **Echinacea** may decrease therapeutic effect. **FOOD: Grapefruit products** may increase concentration/effect. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, amylase, lipase, creatinine, ALT, AST. May alter serum potassium, sodium, uric acid. May produce thrombocytopenia, neutropenia. May decrease serum phosphate, thyroid function levels.

AVAILABILITY (Rx)

Capsules: 12.5 mg, 25 mg, 37.5 mg, 50 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food. Avoid grapefruit products.

INDICATIONS/ROUTES/DOSAGE

GI Stromal Tumor, Renal Cell Carcinoma, RCC (Adjuvant Treatment)

PO: ADULTS, ELDERLY: 50 mg once daily for 4 wks, followed by 2 wks off in 6-wk cycle.

Pancreatic Neuroendocrine Tumor

PO: ADULTS, ELDERLY: 37.5 mg once daily continuously without a scheduled off-treatment period. **Maximum:** 50 mg/day.

Dose Modification

PO: ADULTS, ELDERLY: Dosage increase or reduction in 12.5-mg increments is recommended based on safety and tolerability.

Concomitant Use of Strong CYP3A4 Inhibitors

Consider a dose reduction to a minimum of 37.5 mg/day (GIST, RCC) or 25 mg/day (PNET).

Concomitant Use of CYP3A4 Inducers

Consider a dose increase (monitor carefully for toxicity) to maximum of 87.5 mg/day (GIST, RCC) or 62.5 mg (PNET).

Dosage in Renal Impairment

No initial dose adjustment; subsequent adjustment may be needed.

Dosage in Hepatic Impairment

No dose adjustment initially; Grade 3 or 4 hepatotoxicity during treatment: withhold/discontinue if hepatotoxicity does not resolve.

SIDE EFFECTS

Stromal tumor: Common (42%–30%): Fatigue, diarrhea, anorexia, abdominal pain, nausea, hyperpigmentation. **Frequent (29%–18%):** Mucositis/stomatitis, vomiting, asthenia, altered taste, constipation, fever. **Occasional (15%–8%):** Hypertension, rash, myalgia, headache, arthralgia, back pain, dyspnea, cough. **Renal carcinoma: Common (74%–43%):** Fatigue, diarrhea, nausea, mucositis/stomatitis, dyspepsia, altered taste. **Frequent (38%–20%):** Rash, vomiting, constipation, hyperpigmentation, anorexia, arthralgia, dyspnea, hypertension, headache, abdominal pain. **Occasional (18%–11%):** Limb pain, peripheral/periorbital edema, dry skin, hair color change, myalgia, cough, back pain, dizziness, fever, tongue pain, flatulence, alopecia, dehydration.

ADVERSE EFFECTS/TOXIC REACTIONS

Palmar-plantar erythrodysesthesia syndrome (PPES) occurs occasionally (14%), manifested as blistering/rash/peeling of skin on palms of hands, soles of feet. Bleeding, decrease in left ventricular ejection fraction, deep vein thrombosis (DVT), pancreatitis, neutropenia, seizures occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question possibility of pregnancy. Obtain baseline CBC, BMP, LFT before beginning

therapy and prior to each treatment. Obtain baseline ECG, thyroid function tests. Question medical history as listed in Precautions.

INTERVENTION/EVALUATION

Assess eye area, lower extremities for early evidence of fluid retention. Offer antiemetics to control nausea, vomiting. Monitor daily pattern of bowel activity, stool consistency. Monitor CBC for evidence of neutropenia, thrombocytopenia; assess LFT for hepatotoxicity. Monitor for PPES. Monitor B/P.

PATIENT/FAMILY TEACHING

- Avoid crowds, those with known infection.
- Avoid contact with anyone who recently received live virus vaccine.
- Do not have immunizations without physician's approval (drug lowers resistance).
- Avoid pregnancy; use effective contraceptive measures.
- Promptly report fever, unusual bruising/bleeding from any site.

suvorexant

soo-voe-**rex**-ant
(Belsomra)

◆ **CLASSIFICATION**

PHARMACOTHERAPEUTIC: Orexin receptor antagonist. **CLINICAL:** Hypnotic.

USES

Treatment of insomnia, characterized by difficulties with sleep onset and/or sleep maintenance.

PRECAUTIONS

Contraindications: Hypersensitivity to suvorexant. History of narcolepsy. **Cautions:** History of COPD, depression, debilitation, drug dependency, obstructive sleep apnea, respiratory disease, pts at high risk of suicide; concomitant use of CNS depressants, strong CYP3A4 inhibitors/inducers. Concomitant use of other insomnia medications not recommended.

ACTION

Suppresses wake drive of the orexin neuropeptide signaling system, the central promoter of wakefulness. Blocks binding of orexin neuropeptides orexin A and orexin B to receptors of OX1R and OX2R. **Therapeutic Effect:** Induces sleep with fewer nighttime awakenings; improves sleep pattern.

PHARMACOKINETICS

Rapidly absorbed. Metabolized in liver. Protein binding: greater than 99%. Peak plasma concentration: 2 hrs. Excreted in feces (66%), urine (23%). **Half-life:** 12 hrs.

 **LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Alcohol, CNS depressants (e.g., LORazepam, morphine, zolpidem) may increase CNS depression. **Moderate CYP3A4 inhibitors** (e.g., ciprofloxacin, diITIAZem), **strong CYP3A4 inhibitors** (e.g., clarithromycin, ketoconazole) may increase concentration/effect, CNS depression. **Strong CYP3A4 inducers** (e.g., rifAMPin, phenytoin) may decrease concentration/effect. May increase concentration/effect of digoxin. **HERBAL:** Herbs with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. St. John's wort may decrease concentration/effect. **FOOD:** Grapefruit products may increase concentration/effect. **LAB VALUES:** May increase serum cholesterol.

AVAILABILITY (Rx)

Tablets: 5 mg, 10 mg, 15 mg, 20 mg.

ADMINISTRATION/HANDLING

PO

- Administer no more than once per night, within 30 min of bedtime.
- Do not administer unless 7 hrs or greater is dedicated for

S

sleep. • For faster sleep onset, do not give with or immediately after meal.

INDICATIONS/ROUTES/DOSAGE

Insomnia

PO: ADULTS, ELDERLY: 10 mg once daily within 30 min of bedtime. May increase to 20 mg.

Dose Modification

Concomitant use with other CNS depressants, moderate CYP3A4 inhibitors: Decrease starting dose to 5 mg once at bedtime. May increase to 10 mg once at bedtime. **Concomitant use of strong CYP3A4 inhibitors:** Not recommended. **Daytime somnolence:** Decrease dose or discontinue if daytime somnolence.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Not recommended.

SIDE EFFECTS

Occasional (7%): Headache, somnolence. **Rare (3%–2%):** Dizziness, diarrhea, dry mouth, upper respiratory tract infection, abnormal dreams, cough.

S

ADVERSE EFFECTS/TOXIC REACTIONS

Obese pts and female pts may have increased exposure-related effects compared to nonobese pts and male pts, respectively. May impair daytime wakefulness even when taken as prescribed. Impairment can occur in the absence of symptoms and may not be reliably detected by ordinary clinical exam. CNS depression may persist for up to several days. May increase risk of falling asleep while driving. Abnormal thinking and behavioral changes such as amnesia, anxiety, lowered sexual inhibition, hallucinations, and driving, preparing and eating meals, and making phone calls

while “asleep” have been reported. May increase risk of suicidal ideation, worsening of depression. Sleep paralysis (inability to move or speak for up to several min during sleep-wake transitions) and hypnagogic/hypnopompic hallucinations (including vivid and disturbing perceptions) may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess sleep pattern, ability to fall asleep. Provide environment conducive to restful sleep. Initiate fall precautions. Raise bed rails, provide call light. Receive full medication history, including herbal products, and screen for medication interactions. Question history of comorbidities, esp. mental health disorders, substance abuse.

INTERVENTION/EVALUATION

Monitor sleep pattern. Evaluate for therapeutic response: decrease in number of nocturnal awakenings, increase in length of sleep. Diligently monitor for daytime somnolence and CNS depressant effects regardless of compliance. Worsening of insomnia, emergence of new cognitive or behavioral abnormalities, or treatment failure after 7–10 days may indicate underlying psychiatric disorder.

PATIENT/FAMILY TEACHING

- Report nighttime episodes of “sleep” driving, preparing food, making phone calls, or having sex while not fully awake.
- Do not abruptly discontinue medication after long-term use.
- Avoid tasks that require alertness, motor skills until drug response established.
- Treatment may cause next-day impairment, drowsiness, or falling asleep while driving despite taking medication as prescribed (esp. pts taking higher doses).
- Do not ingest alcohol or grapefruit products.
- Do not take drug unless a full night can be dedicated to sleep.
- Immediately report worsening of depression or thoughts of suicide.

tacrolimus

ta-kro-e-li-mus

(Astagraf XL, Envarsus XR, Prograf, Protopic)

■ BLACK BOX ALERT ■ Increased susceptibility to infection and potential for development of lymphoma. Extended-release associated with increased mortality in female liver transplant recipients. Topical form associated with rare cases of malignancy. Topical form should be used only for short-term and intermittent treatment. Use in children younger than 2 yrs of age not recommended. Use only 0.03% ointment for children 2–15 yrs of age. Administer under supervision of physician experienced in immunosuppressive therapy.

Do not confuse Protopic with Protonix, or tacrolimus with everolimus, pimecrolimus, sirolimus, or temsirolimus.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Calcineurin inhibitor. **CLINICAL:** Immunosuppressant.

USES

PO, Injection: Prevention of organ rejection in pts receiving allogeneic liver, kidney, heart transplant. Should be used concurrently with adrenal corticosteroids. In heart and kidney transplant pts, should be used in conjunction with aza-THIOprine or mycophenolate. **Topical:** Moderate to severe atopic dermatitis in immunocompetent pts. **OFF-LABEL:** Prevention of organ rejection in lung, small bowel recipients; prevention and treatment of graft-vs-host disease in allogeneic hematopoietic stem cell transplantation.

PRECAUTIONS

Contraindications: Hypersensitivity to tacrolimus. **Cautions:** Hypersensitivity to HCO-60 polyoxyl 60 hydrogenated castor oil (used in solution for injection). Renal/hepatic impairment, concurrent use with

other nephrotoxic drugs (e.g., cycloSPO-RINE), concurrent use of strong CYP3A4 inhibitors or inducers. Avoid use of potassium-sparing diuretics, ACE inhibitors, potassium-based salt substitutes. Pts at risk for pure red cell aplasia (e.g., concurrent use of mycophenolate); pts at risk for QT prolongation, hypokalemia, hypomagnesemia. **Topical:** Exposure to sunlight.

ACTION

Inhibits T-lymphocyte activation by binding to intracellular protein FKBP-12, forming a complex with calcineurin-dependent proteins, inhibiting calcineurin phosphatase activity. **Therapeutic Effect:** Suppresses immunologically mediated inflammatory response; prevents organ transplant rejection.

PHARMACOKINETICS

Variably absorbed after PO administration (food reduces absorption). Protein binding: 99%. Metabolized in liver. Primarily excreted in feces. Not removed by hemodialysis. **Half-life:** 21–61 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Hyperkalemia, renal dysfunction noted in neonates. Distributed in breast milk. Breastfeeding not recommended. **Children:** May require higher dosages (decreased bioavailability, increased clearance). May make post-transplant lymphoproliferative disorder more common, esp. in pts younger than 3 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Aluminium-containing antacids may increase concentration. **Strong CYP3A4 inhibitors** (e.g., clarithromycin, ketoconazole, ritonavir), calcium channel blockers (e.g., diLTIAZem, verapamil) may increase concentration/effects. **Strong CYP3A4 inducers** (e.g., carBAMazepine, phenytoin, rifAMPin) may decrease concentration/effects. **CycloSPORINE, foscarnet** may increase nephrotoxic effect. May decrease

therapeutic effect; increase adverse effect of **vaccines (live)**. **Enzalutamide** may decrease concentration/effect. **Eplerenone, potassium-sparing diuretics (e.g., spironolactone)** may increase hyperkalemic effect. **HERBAL: Echinacea** may decrease therapeutic effect. **St. John's wort** may decrease concentration/effect. **FOOD: Food** decreases rate/extent of absorption. **Grapefruit products** may increase concentration, toxicity (potential for nephrotoxicity). **LAB VALUES:** May increase serum ALT, AST, amylase, bilirubin, BUN, cholesterol, creatinine, potassium, glucose, triglycerides. May decrease serum magnesium; Hgb, Hct, platelets. May alter leukocytes.

AVAILABILITY (Rx)

Capsules: (Prograf): 0.5 mg, 1 mg, 5 mg.

Injection Solution: (Prograf): 5 mg/mL.

Ointment: (Protopic): 0.03%, 0.1%.

 **Capsules, Extended-Release: (Astagraf XL):** 0.5 mg, 1 mg, 5 mg. **Tablets, Extended-Release: (Envarsus XR):** 0.75 mg, 1 mg, 4 mg.

ADMINISTRATION/HANDLING

Reconstitution • Dilute with appropriate amount (250–1,000 mL, depending on desired dose) 0.9% NaCl or D₅W to provide concentration between 0.004 and 0.02 mg/mL.

Rate of administration • Give as continuous IV infusion. • Continuously monitor pt for anaphylaxis for at least 30 min after start of infusion. • Stop infusion immediately at first sign of hypersensitivity reaction.

Storage • Store diluted infusion solution in glass or polyethylene containers and discard after 24 hrs. • Do not store in PVC container (decreased stability, potential for extraction).

PO

• Avoid grapefruit products. • **Immediate-Release:** Administer without regard to food. Be consistent with timing of administration. • **Extended-Release:** Administer at least 1 hr before or

2 hrs after a meal. Do not crush, cut, dissolve, or divide; swallow whole.

Topical

• For external use only. • Do not cover with occlusive dressing. • Rub gently, completely onto clean, dry skin.

IV INCOMPATIBILITIES

Acyclovir.

IV COMPATIBILITIES

Calcium gluconate, dexamethasone (Decadron), diphenhydramine (Benadryl), DOBUTamine (Dobutrex), DOPamine (Intropin), furosemide (Lasix), heparin, HYDROMorphone (Dilaudid), insulin, leucovorin, LORazepam (Ativan), morphine, nitroglycerin, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Note: Give initial postoperative dose no sooner than 6 hrs after liver or heart transplant and within 24 hrs of kidney transplant.

Prevention of Liver Transplant Rejection

PO: ADULTS, ELDERLY: (Immediate-Release): 0.1–0.15 mg/kg/day in 2 divided doses 12 hrs apart (in combination with corticosteroids). Titrate to target trough concentration. **CHILDREN:** 0.15–0.2 mg/kg/day in 2 divided doses 12 hrs apart. Titrate to target trough concentration.

IV: ADULTS, ELDERLY, CHILDREN: 0.03–0.05 mg/kg/day as continuous infusion.

Prevention of Kidney Transplant Rejection

PO: ADULTS, ELDERLY: (Immediate-Release): 0.2 mg/kg/day (in combination with azaTHIOprine) in 2 divided doses 12 hrs apart or 0.1 mg/kg/day (in combination with mycophenolate) in 2 divided doses 12 hrs apart. Titrate to target trough concentration. **(Extended-Release**

[Astagraf XL]): (With Basiliximab Induction): (Prior to or within 48 hrs of transplant completion): 0.15–0.2 mg/kg once daily (in combination with corticosteroids and mycophenolate). Titrate to target trough concentration. **(Without Basiliximab Induction):** Preoperative dose: 0.1 mg/kg (administer within 12 hrs prior to

reperfusion). Postoperative dosing: 0.2 mg/kg once daily (in combination with corticosteroids and mycophenolate). Give at least 4 hrs after preoperative dose and within 12 hrs of reperfusion. Titrate to target trough concentration. (**Extended-Release [Envarsus XL]**): 0.14 mg/kg/day.

IV: ADULTS, ELDERLY: 0.03–0.05 mg/kg/day as continuous infusion.

Prevention of Heart Transplant Rejection

Note: Recommended in combination with azaTHIOprine or mycophenolate.

PO: ADULTS, ELDERLY: Initially, 0.075 mg/kg/day in 2 divided doses 12 hrs apart. Titrate to target trough concentration.

IV: ADULTS, ELDERLY: 0.01 mg/kg/day as continuous infusion.

Atopic Dermatitis

Topical: ADULTS, ELDERLY, CHILDREN 15 YRS AND OLDER: Apply 0.03% or 0.1% ointment to affected area twice daily. **CHILDREN 2–15 YRS:** Use 0.03% ointment. Continue treatment for 1 wk after symptoms have resolved. If no improvement within 6 wks, re-examine to confirm diagnosis.

SIDE EFFECTS

Frequent (greater than 30%): Headache, tremor, insomnia, paresthesia, diarrhea, nausea, constipation, vomiting, abdominal pain, hypertension. **Occasional (29%–10%):** Rash, pruritus, anorexia, asthenia, peripheral edema, photosensitivity.

ADVERSE EFFECTS/TOXIC REACTIONS

Nephrotoxicity (elevated serum creatinine, decreased urinary output), neurotoxicity (tremor, headache, altered mental status), pleural effusion occur commonly. Thrombocytopenia, leukocytosis, anemia, atelectasis, sepsis, infection occur occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Screen for active infection. Question history of renal impairment. Receive full med-

ication history and screen for interaction (esp. use of other immunosuppressants). Have aqueous solution of EPINEPHrine 1:1,000, O₂ available at bedside before beginning IV infusion.

INTERVENTION/EVALUATION

CBC should be performed wkly during first mo of therapy, twice monthly during second and third mos of treatment, then monthly throughout the first yr. Monitor BUN, serum creatinine, CrCL, eGFR pts with renal impairment. Monitor LFT periodically. Assess continuously for first 30 min following start of infusion and at frequent intervals thereafter. Monitor I&O closely. Monitor for infections.

PATIENT/FAMILY TEACHING

- Treatment may depress your immune system and reduce your ability to fight infection. Report symptoms of infection such as body aches, burning with urination, chills, cough, fatigue, fever. Avoid those with active infection.
- Report decreased urination, chest pain, headache, dizziness, respiratory infection, rash, unusual bleeding/bruising.
- Avoid exposure to sun, artificial light (may cause photosensitivity reaction).
- Do not take within 2 hrs of taking antacids.
- Do not ingest grapefruit products.

talazoparib

tal-a-zoe-pa-rib
(Talzenna)

Do not confuse talazoparib with niraparib, olaparib, or rucaparib, or Talzenna with Senna.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Poly (ADP-ribose) polymerase (PARP) inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of adults with deleterious or suspected deleterious germline BRCA-

mutation (*gBRCAm*) HER2-negative locally advanced or metastatic breast cancer.

PRECAUTIONS

Contraindications: Hypersensitivity to talazoparib. **Cautions:** Baseline anemia, leukopenia, neutropenia, thrombocytopenia; renal/hepatic impairment, conditions predisposing to infection (e.g., diabetes, renal failure, immunocompromised pts, open wounds); concomitant use of P-gp inhibitors. Do not initiate in pts who have not recovered from hematological toxicities related to prior chemotherapy.

ACTION

Inhibits poly (ADP-ribose) polymerase (PARP) enzymatic activity. PARP enzymes are involved in DNA transcription, cell cycle regulation and DNA repair. Inhibition causes cell death due to DNA damage. **Therapeutic Effect:** Inhibits tumor cell growth and metastasis.

PHARMACOKINETICS

Widely distributed. Metabolized by oxidation, dehydrogenation, and conjugation (with minimal hepatic metabolism). Protein binding: 74%. Peak plasma concentration: 1–2 hrs. Excreted in urine (69%), feces (20%). **Half-life:** 90 (±58) hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm. Female pts of reproductive potential must use effective contraception during treatment and for at least 7 mos after discontinuation. Unknown if distributed in breast milk. Breastfeeding not recommended during treatment and for at least 1 mo after discontinuation. **Males:** Male pts with female partners of reproductive potential must use effective contraception during treatment and for at least 4 mos after discontinuation. May impair fertility. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Certain P-gp inhibitors (e.g., amiodarone, carvedilol, clarithromycin, itraconazole, verapamil) may significantly increase concentration/effect. **Cladribine** may increase myelosuppression. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST, glucose. May decrease Hgb, leukocytes, neutrophils, lymphocytes, platelets; serum calcium.

AVAILABILITY (Rx)

Capsules: 0.25 mg, 1 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to meals.
- Administer capsules whole; do not break, cut, or open. Capsules cannot be chewed.
- If a dose is missed or vomiting occurs after administration, do not give extra dose. Administer next dose at regularly scheduled time.

INDICATIONS/ROUTES/DOSAGE

Note: Administer only to pts with germline BRCA mutation.

Breast Cancer

PO: ADULTS, ELDERLY: 1 mg once daily. Continue until disease progression or unacceptable toxicity.

Dose Reduction Schedule

First reduction: 0.75 mg once daily.
Second reduction: 0.5 mg once daily.
Third reduction: 0.25 mg once daily.
Unable to tolerate 0.25 mg dose: Permanently discontinue.

Dose Modification

Based on Common Terminology Criteria for Adverse Events (CTCAE).

Hematologic Toxicity

Hemoglobin less than 8 g/dL: Withhold treatment until improved to 9 g/dL (or greater), then resume at next reduced dose.

Platelet count less than 50,000 cells/mm³: Withhold treatment until improved to 75,000 cells/mm³ (or greater), then resume at next reduced dose. **Neutrophil count less than 1,000 cells/mm³:** Withhold treatment until improved to 1,500 cells/mm³ (or greater), then resume at next reduced dose.

Nonhematologic Toxicity

Any Grade 3 or 4 adverse reaction: Withhold treatment until improved to Grade 1 or 0, then consider resuming at a reduced dose or discontinue.

Concomitant Use of P-gp Inhibitors

Reduce dose to 0.75 mg once daily. If P-gp inhibitor is discontinued for 3–5 half-lives, resume talazoparib dose to the dose used prior to starting P-gp inhibitor.

Dosage in Renal Impairment

Mild impairment: No dose adjustment. **Moderate impairment (CrCl 30–59 mL/min):** Reduce dose to 0.75 mg once daily. **Severe impairment:** Not specified; use caution.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment:** Not specified; use caution.

SIDE EFFECTS

Frequent (62%–21%): Fatigue, asthenia, nausea, headache, vomiting, alopecia, diarrhea, decreased appetite.

ADVERSE EFFECTS/TOXIC REACTIONS

Myelosuppression (anemia, leukopenia, neutropenia, thrombocytopenia) has occurred. Grade 3 (or higher) anemia, neutropenia, thrombocytopenia reported in 39%–15% of pts. Acute myeloid leukemia, myelodysplastic syndrome was reported in pts who received prior chemotherapy with platinum agents and/or DNA-damaging agents.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC; pregnancy test in female pts of reproductive potential. Question plans of breastfeeding. Confirm compliance of effective contraception. Obtain renal function test (BUN, serum creatinine, CrCl, eGFR) in pts with renal impairment; LFTs in pts with hepatic impairment. Question history of hepatic/renal impairment, prior treatment with other chemotherapeutic agents. Receive full medication history and screen for interactions (esp. P-gp inhibitors). Screen for active infection. Do not initiate in pts who have not recovered from hematological toxicities related to prior chemotherapy. Offer emotional support.

INTERVENTION/EVALUATION

Monitor CBC monthly. If hematologic toxicities occur, monitor CBC w/ky until blood counts recover. If blood counts do not recover, consider hematology consultation for further investigations such as bone marrow analysis and blood sample for cytogenetics. Monitor for acute myeloid leukemia, myelodysplastic syndrome (bleeding, bruising easily; fatigue, frequent infections, pyrexia, hematuria, melena, weakness, weight loss; cytopenias, increased requirements for blood transfusion). If acute myeloid leukemia or myelodysplastic syndrome occurs, discontinue treatment. If concomitant use of P-gp inhibitor is unavoidable, monitor for adverse reactions/drug toxicities. Diligently screen for infections. Monitor daily pattern of bowel activity, stool consistency. Encourage nutritional intake.

PATIENT/FAMILY TEACHING

- Treatment may depress your immune system and reduce your ability to fight infection. Report symptoms of infection such as body aches, burning with urination, chills, cough, fatigue, fever. Avoid those with active infection.
- Treatment may cause severe bone marrow depression or new-onset myeloid leukemia;

report bruising, fatigue, fever, frequent infections, shortness of breath, weight loss; bleeding easily, blood in urine or stool. • Avoid pregnancy. Female pts of childbearing potential must use effective contraception during treatment and for at least 7 mos after last dose. Do not breastfeed. Male pts with female partners of childbearing potential must use effective contraception during treatment and for at least 4 mos after last dose. • Treatment may impair fertility in males. • Report liver problems (abdominal pain, bruising, clay-colored stool, amber- or dark-colored urine, yellowing of the skin or eyes). • There is a high risk of interactions with other medications. Do not take newly prescribed medications unless approved by prescriber who originally started treatment.

tamoxifen

**HIGH
ALERT**

ta-MOKS-i-fen
(Nolvadex-D , Soltamox)

BLACK BOX ALERT Serious, possibly life-threatening CVA, pulmonary emboli, uterine malignancy (endometrial adenocarcinoma, uterine sarcoma) have occurred. **Do not confuse tamoxifen with pentoxifylline, tamsulosin, or temazepam.**

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective estrogen receptor modulator (SERM). Estrogen receptor antagonist. **CLINICAL:** Antineoplastic.

USES

Adjunct treatment in advanced breast cancer after primary treatment with surgery and radiation, reduction of risk of breast cancer in women at high risk, reduction of risk of invasive breast cancer in women with ductal carcinoma in situ (DCIS), metastatic breast cancer in women and men.

OFF-LABEL: Ovarian cancer (advanced and/or recurrent), treatment of endometrial cancer; risk reduction of breast cancer in women with Paget's disease of the breast.

PRECAUTIONS

Contraindications: Hypersensitivity to tamoxifen. Concomitant warfarin therapy when used in treatment of breast cancer in high-risk women, history of deep vein thrombosis (DVT) or pulmonary embolism (in high-risk women for breast cancer and in women with DCIS). **Cautions:** Thrombocytopenia, pregnancy, history of thromboembolic events, hyperlipidemia, concomitant strong CYP2D6 inhibitors and/or moderate CYP2D6 inhibitors.

ACTION

Competitively binds to estrogen receptors on tumor, producing a complex. **Therapeutic Effect:** Inhibits DNA synthesis and estrogen effects. Slows tumor growth.

PHARMACOKINETICS

Well absorbed from GI tract. Metabolized in liver. Primarily excreted in feces. **Half-life:** 7 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. May cause fetal harm. Unknown if distributed in breast milk. Breastfeeding not recommended. Nonhormonal contraceptives recommended during therapy and for at least 2 mos after discontinuation. **Children:** Safe and effective in girls 2–10 yrs with McCune-Albright syndrome, precocious puberty. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole) may increase concentration/effect. May increase effect of warfarin. May decrease effect of anastrozole. Moderate/strong CYP2D6 inhibitors

(e.g., FLUoxetine, sertraline) may decrease efficacy and increase risk of breast cancer. **HERBAL:** St. John's wort may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May increase serum cholesterol, calcium, triglycerides, AST, ALT.

AVAILABILITY (Rx)

Solution, Oral: (*Soltamox*): 10 mg/5 mL.

Tablets: 10 mg, 20 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.
- Use supplied dosing cup for oral solution.

INDICATIONS/ROUTES/DOSAGE

Metastatic Breast Cancer (Males and Females)

PO: ADULTS, ELDERLY: 20–40 mg/day. Give doses greater than 20 mg/day in 2 divided doses.

Breast Cancer Treatment

PO: ADJUVANT THERAPY (FEMALES), PREMENOPAUSAL WOMEN: 20 mg once daily for 5 yrs. May continue for total of 10 yrs if premenopausal or perimenopausal after 5 yrs. If postmenopausal after 5 yrs, may continue for total of 10 yrs or switch to an AI up to total of 10 yrs of endocrine therapy. **POSTMENOPAUSAL WOMEN:** Total duration of 10 yrs, or tamoxifen for an initial duration of 5 yrs, followed by an AI for up to 5 yrs (for total duration of 10 yrs) or tamoxifen for 2–3 yrs, followed by an AI for up to 5 yrs (for a total duration of 7–8 yrs) or an AI for 5 yrs.

Ductal Carcinoma in Situ (DCIS)

PO: ADULTS, ELDERLY: 20 mg once daily for 5 yrs.

Breast Cancer Risk Reduction

PO: ADULTS, ELDERLY: 20 mg once daily for 5 yrs.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Women (greater than 10%): Hot flashes, nausea, vomiting. **Occasional:** Headache, nausea, vomiting, rash, bone pain, confusion, weakness, drowsiness. **Women (9%–1%):** Changes in menstruation, genital itching, vaginal discharge, endometrial hyperplasia, polyps. **Men:** Impotence, decreased libido.

ADVERSE EFFECTS/TOXIC REACTIONS

Retinopathy, corneal opacity, decreased visual acuity noted in pts receiving extremely high dosages (240–320 mg/day) for longer than 17 mos.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, serum calcium, estrogen receptor assay prior to therapy. Obtain baseline breast and gynecologic exams, mammogram results. Question history of thrombosis (DVT, PE).

INTERVENTION/EVALUATION

Obtain CBC, serum calcium periodically. Be alert to increased bone pain; ensure adequate pain relief. Monitor I&O, weight. Monitor for symptoms of DVT (leg or arm pain/swelling), PE (chest pain, dyspnea, tachycardia). Assess for hypercalcemia (increased urinary volume, excessive thirst, nausea, vomiting, constipation, hypotonicity of muscles, deep bone/flank pain, renal stones).

PATIENT/FAMILY TEACHING

- Report vaginal bleeding/discharge/itching, leg cramps, weight gain, shortness of breath, weakness.
- May initially experience increase in bone, tumor pain (appears to indicate good tumor response).
- Report persistent nausea, vomiting.
- Report symptoms of DVT (e.g., swelling, pain, hot feeling in the arms or legs; discoloration of extremity), lung embolism (e.g., difficulty breathing, chest pain, rapid heart rate).
- Nonhormonal contraceptives are recommended during treatment.

tamsulosin

tam-soo-loe-sin
(Flomax, Flomax CR⁺)

Do not confuse Flomax with Flonase, Flovent, Foltx, Fosamax, or Volmax, or tamsulosin with tamoxifen or terazosin.

FIXED-COMBINATION(S)

Jalyn: tamsulosin/dutasteride (an androgen hormone inhibitor): 0.4 mg/0.5 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Alpha₁-adrenergic blocker. **CLINICAL:** Benign prostatic hyperplasia agent.

USES

Treatment of symptoms of benign prostatic hyperplasia (BPH). **OFF-LABEL:** Treatment of bladder outlet obstruction or dysfunction. To facilitate expulsion of ureteral stones (distal).

PRECAUTIONS

Contraindications: Hypersensitivity to tamsulosin. **Cautions:** Concurrent use of phosphodiesterase (PDE5) inhibitors (e.g., sildenafil, tadalafil, vardenafil), pts with orthostatic hypotension.

ACTION

Antagonist of alpha receptors in prostate. **Therapeutic Effect:** Relaxes smooth muscle in bladder neck and prostate; improves urinary flow, symptoms of prostatic hyperplasia.

PHARMACOKINETICS

Well absorbed, widely distributed. Protein binding: 94%–99%. Metabolized in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 9–13 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not indicated for use in women. **Children:** Not indicated in this pt population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Other alpha-adrenergic blocking agents (e.g., doxazosin, prazosin, terazosin) may increase alpha-blockade effects. Sildenafil, tadalafil, vardenafil may cause symptomatic hypotension. **Strong CYP3A4 inhibitors** (e.g., clarithromycin, ketoconazole, ritonavir) may increase concentration. **Strong CYP3A4 inducers** (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. **HERBAL:** Herbals with hypotensive properties (e.g., garlic, ginger, ginkgo biloba) may alter effects. **St. John's wort** may decrease concentration/effect. **FOOD:** Grapefruit products may increase risk for orthostatic hypotension. **LAB VALUES:** None known.

AVAILABILITY (Rx)

 **Capsules:** 0.4 mg.

ADMINISTRATION/HANDLING

PO

- Give at same time each day, 30 min after the same meal.
- Do not break, crush, or open capsule.

INDICATIONS/ROUTES/DOSAGE

Benign Prostatic Hyperplasia (BPH)

PO: **ADULTS:** 0.4 mg once daily, approximately 30 min after same meal each day. May increase dosage to 0.8 mg if inadequate response in 2–4 wks.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (9%–7%): Dizziness, drowsiness. **Occasional (5%–3%):** Headache, anxiety, insomnia, orthostatic hypotension. **Rare (less than 2%):** Nasal congestion, pharyngitis, rhinitis, nausea, vertigo, impotence.

ADVERSE EFFECTS/TOXIC REACTIONS

First-dose syncope (hypotension with sudden loss of consciousness) may occur within 30–90 min after initial dose. May be preceded by tachycardia (pulse rate of 120–160 beats/min).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess history of prostatic hyperplasia (difficulty initiating urine stream, dribbling, sense of urgency, leaking). Question for sensitivity to tamsulosin, or use of other alpha-adrenergic blocking agents. Obtain vital signs.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Monitor renal function, I&O, weight changes, peripheral edema, B/P. Monitor for first-dose syncope.

PATIENT/FAMILY TEACHING

- Take at same time each day, 30 min after the same meal.
- Go from lying to standing slowly.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Do not break, crush, open capsule.
- Avoid grapefruit products.

tapentadol

ta-pen-ta-dol
(Nucynta, Nucynta ER, Nucynta IR )

■ BLACK BOX ALERT ■

Exposes pt to risks of opioid addiction, abuse, misuse. Serious, life-threatening respiratory depression may occur. Accidental ingestion can result in a fatal overdose. May cause neonatal opioid withdrawal syndrome. Avoid alcohol while taking tapentadol ER. Benzodiazepines, CNS depressants may cause profound sedation, respiratory depression, coma, or death.

Do not confuse tapentadol with tramADol.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Centrally acting opioid (Schedule II). **CLINICAL:** Analgesic.

USES

Nucynta: Relief of moderate to severe acute pain in adults 18 yrs and older. **Nucynta ER:** Management of moderate to severe chronic or neuropathic pain associated with diabetic peripheral neuropathy when around-the-clock analgesic is needed for extended period.

PRECAUTIONS

Contraindications: Hypersensitivity to tapentadol. Severe respiratory depression, acute or severe bronchial asthma, hypercapnia in uncontrolled settings, known or suspected paralytic ileus, concurrent use or ingestion within 14 days of MAOI use. **Cautions:** Respiratory disease or respiratory compromise (e.g., hypoxia, hypercapnia, or decreased respiratory reserve), asthma, COPD, severe obesity, sleep apnea syndrome, CNS depression, pts with head injury, intracranial lesions, pancreatic or biliary disease, renal or hepatic impairment, seizure disorder, conditions that increase risk of seizures, pts at risk for hypotension, adrenal insufficiency, concurrent use with serotonergic agents, elderly pts, debilitated or cachetic pts. History of substance abuse.

ACTION

Binds to mu-opioid receptors in the central nervous system, causing inhibition of ascending pain pathways; increases norepinephrine by inhibiting its reabsorption into nerve cells. **Therapeutic Effect:** Produces analgesia. Reduces level of pain perception.

PHARMACOKINETICS

Metabolized in liver. Primarily excreted in the urine. Widely distributed. Protein binding: 20%. **Half-life:** 4 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Not recommended for use in this pt population. **Elderly:** Age-related renal impairment may increase risk of side effects.

INTERACTIONS

DRUG: Alcohol, CNS depressants (e.g., LORazepam, morphine, zolpidem) may increase CNS depression, respiratory depression. **MAOIs** (e.g., phenelzine, selegiline), **SSRIs** (e.g., FLUoxetine) may increase risk of serotonin syndrome.

HERBAL: Herbals with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 50 mg, 75 mg, 100 mg.

 **Tablets, Extended-Release:** 50 mg, 100 mg, 150 mg, 200 mg, 250 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.
- Tablets may be crushed.
- Give extended-release tablets whole; do not break, crush, dissolve, or divide.

INDICATIONS/ROUTES/DOSAGE

Note: Not recommended in severe renal or hepatic impairment.

Pain Control

PO: ADULTS, ELDERLY: (*Nucynta*): 50–100 mg q4–6h as needed (may administer an additional dose 1h or longer after initial dose). **Maximum:** 600 mg/day (700 mg on day 1). (*Nucynta ER*): Initially, 50 mg twice daily (12 hrs apart). May increase by 50 mg twice daily q3days to effective dose. Range: 100–250 mg twice daily. **Maximum:** 500 mg/day.

Conversion to Extended-Release

Conversion from other oral opioids: Initially, 50 mg q12h. (*Immediate-*

Release Tapentadol): Use same total daily dose but divide into 2 equal doses given twice daily. **Maximum:** 500 mg daily.

Neuropathic Pain Associated with Diabetic Peripheral Neuropathy

PO: ADULTS, ELDERLY: (*Extended-Release*): Initially, 50 mg q12h. Titrate in increments of 50 mg no more frequently than twice daily q3days. Range: 100–250 mg q12h.

Dosage in Renal Impairment

CrCl 30 mL/min or greater: No adjustment. **CrCl less than 30 mL/min:** Not recommended.

Dosage in Hepatic Impairment

(*Immediate-Release*): Moderate impairment: 50 mg q8h. **Maximum:** 3 doses/24 hrs. (*Extended-Release*): Initially, 50 mg/day. **Maximum:** 100 mg/day.

SIDE EFFECTS

Frequent (greater than 10%): Nausea, dizziness, vomiting, sleepiness, headache.

ADVERSE EFFECTS/TOXIC REACTIONS

Respiratory depression, serotonin syndrome have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, and duration of pain. Obtain vital signs before giving medication. If respirations are 12/min or lower, withhold medication, contact physician. Question medical history as listed in Precautions.

INTERVENTION/EVALUATION

Be alert for decreased respirations or B/P. Initiate deep breathing and coughing exercises, particularly in pts with impaired pulmonary function. Assess for clinical improvement and record onset of pain relief.

PATIENT/FAMILY TEACHING

- Avoid tasks that require alertness, motor skills until response to drug is estab-

lished. • Avoid alcohol, CNS depressants. • Report nausea, vomiting, shortness of breath, difficulty breathing.

tedizolid

ted-eye-zoe-lid
(Sivextro)

Do not confuse tedizolid with linezolid.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Oxazolidinone-class antibacterial. **CLINICAL:** Antibiotic.

USES

Treatment of adult pts with acute bacterial skin and skin structure infections (ABSSSI) caused by susceptible strains of gram-positive microorganisms including *Staphylococcus aureus* (including methicillin-susceptible and methicillin-resistant strains), *S. agalactiae*, *S. anginosus* group (including *S. anginosus*, *S. intermedius*, *S. constellatus*), *S. pyogenes*, and *E. faecalis*.

PRECAUTIONS

Contraindications: Hypersensitivity to tedizolid. **Cautions:** History of *C. difficile* infection or antibiotic-associated colitis, myelosuppression, neutropenia, peripheral/optic neuropathy.

ACTION

Inhibits cellular protein synthesis by binding to 50S subunit of bacterial ribosome. **Therapeutic Effect:** Antibiotic (bacteriostatic).

PHARMACOKINETICS

Readily absorbed following PO administration. Protein binding: 70%–90%. Peak plasma concentration: PO: 3 hrs; IV: end of infusion. Excreted in feces (82%), urine (18%). Minimally removed by hemodialysis. **Half-life:** 12 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established in pts younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effect of BCG (intravesical). **Maprotiline, buprenorphine, tapentadol, carbamazepine** may enhance adverse/toxic effects. May enhance hypertensive effect of **bupropion**. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease Hgb, platelets, neutrophils. May increase serum ALT, AST.

AVAILABILITY (Rx)

Lyophilized Powder for Injection: 200 mg/vial. **Tablets:** 200 mg.

ADMINISTRATION/HANDLING

• Vials contain no preservatives or bacteriostatic agents. • Must reconstitute with Sterile Water for Injection and subsequently dilute with 0.9% NaCl only. • Do not inject as IV push or bolus.

Reconstitution • Reconstitute vial with 4 mL of Sterile Water for Injection. • To avoid foaming, alternate between gentle swirling and inversion until powder is completely dissolved. If foaming occurs, let vial stand until foam dispersed. • Visually inspect for particulate matter or discoloration. Do not use if particulate matter is observed. • Withdraw 4 mL of solution with vial in upright position; do not invert vial during draw-up. • Further dilute in 250 mL 0.9% NaCl. • Gently invert bag to mix; do not shake.

Rate of administration • Infuse over 1 hr via dedicated line.

Storage • Reconstituted solution should appear clear, colorless to yellow. • Administer within 24 hrs of reconstitution. • May

refrigerate or store solution at room temperature up to 24 hrs.

PO

- Give without regard to food.

IV INCOMPATIBILITIES

Any solutions containing divalent cations (e.g., Ca^{2+} , Mg^{2+}), lactated Ringer's injection. Do not infuse with other medications.

INDICATIONS/ROUTES/DOSAGE**Acute Bacterial Skin and Skin Structure Infection**

PO, IV; ADULTS, ELDERLY: 200 mg once daily for 6 days.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (8%–3%): Nausea, headache, diarrhea, vomiting. **Rare (2%):** Dizziness, dermatitis, insomnia.

ADVERSE EFFECTS/TOXIC REACTIONS

Safety and efficacy in pts with neutropenia not established. Antibacterial activity may be reduced in the absence of granulocytes. *C. difficile*-associated diarrhea with severity ranging from mild diarrhea to fatal colitis has been reported for up to 2 mos following administration. Treatment in the absence of proven or strongly suspected bacterial infection may increase risk of drug-resistant bacteria. Infusion/hypersensitivity reactions (pruritus, urticaria, flushing, hypertension, palpitations, tachycardia), optic disorders (asthenopia, blurry vision, neuropathy, visual impairment, vitreous floaters), neurologic disorders (hypoesthesia, paresthesia, peripheral neuropathy, cranial nerve VII paralysis), infections (oral candidiasis, vulvovaginal mycotic infection) occur rarely.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain baseline CBC (note WBC, bands), wound culture/sensitivity, vital signs. Question history of recent *C. difficile* infection, hypersensitivity reaction. Assess skin wound characteristics; hydration status. Question pt's usual stool characteristics (color, frequency, consistency).

INTERVENTION/EVALUATION

Monitor skin infection/wound for improvement. Monitor daily pattern of bowel activity, stool consistency; increasing severity may indicate antibiotic-associated colitis. If frequent diarrhea occurs, obtain *C. difficile* toxin screen and initiate isolation precautions until result confirmed. Encourage PO intake. Monitor I&O. Monitor for infusion-related/hypersensitivity reaction.

PATIENT/FAMILY TEACHING

- It is essential to complete drug therapy despite symptom improvement. Early discontinuation may result in antibacterial resistance or an increased risk of recurrent infection.
- Report episodes of diarrhea, esp. following wks after treatment completion. Frequent abdominal pain, blood-streaked stool, diarrhea, fever, may indicate infectious diarrhea, which may be contagious.
- Drink plenty of fluids.

teduglutide

te-due-gloo-tide
(Gattex, Revestive )

Do not confuse teduglutide with liraglutide or albiglutide, or Gattex with Gas-X.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Glucagon-like peptide-2 (GLP-2) analogue.
CLINICAL: Short bowel syndrome (short gut syndrome, short gut) agent.

USES

Treatment of adults and pediatric pts 1 yr and older with short bowel syndrome (SBS) who are dependent on parenteral support.

PRECAUTIONS

Contraindications: Hypersensitivity to teduglutide. **Cautions:** Cardiovascular disease, HE, pts at increased risk for malignancy, biliary tract (gallbladder, pancreatic) disease, hypervolemia, stenosis, renal impairment.

ACTION

Analogue of naturally occurring peptide secreted in distal intestine, known to increase intestinal, portal blood flow, and inhibit gastric secretion. **Therapeutic Effect:** Improves intestinal absorption.

PHARMACOKINETICS

Degrades into small peptides, amino acids via catabolic pathway. Primarily excreted in urine. Bioavailability: 86–89% following SQ injection. Peak plasma concentration: 3–5 hrs. **Half-life:** 1.3–2 hrs.

 **LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration/effects of **benzodiazepines** (e.g., **ALPRAZolam**, **LORazepam**). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 5 mg (delivers maximum of 0.38 mL containing 3.8 mg teduglutide).

ADMINISTRATION/HANDLING**SQ**

Reconstitution • If diluent syringe (contains 0.5 mL Sterile Water for Injection)

has a white snap-off cap, snap or twist off white cap. • If diluent syringe has a gray screw top, unscrew top counterclockwise. • Push prefilled syringe into vial containing teduglutide. • After all diluent has gone into vial, remove syringe, needle and discard. • Allow vial to sit for 30 sec. • Gently roll vial for 15 sec (do not shake) and let stand for 2 min. • Withdraw prescribed dose, discard remaining fluid.

Administration • Insert needle subcutaneously into upper arms, outer thigh, or abdomen, and inject solution. • Do not inject into areas of active skin disease or injury such as sunburns, skin rashes, inflammation, skin infections, or active psoriasis. • Do not administer IV or intramuscularly. • Rotate injection sites.

Storage • Store kit in refrigerator. • Reconstituted solution should appear as a clear, colorless to light straw-colored liquid. • Discard if particulate is present. • Drug should be completely dissolved before solution is withdrawn from vial.

INDICATIONS/ROUTES/DOSAGE**Short Bowel Syndrome**

SQ: ADULTS/ELDERLY: 0.05 mg/kg once daily. **CHILDREN 1 YR OR OLDER, WEIGHING 10 KG OR MORE:** 0.05 mg/kg/dose. **Maximum:** 0.05 mg/dose.

Dosage in Moderate to Severe Renal Impairment

SQ: ADULTS/ELDERLY: CrCl less than 50 mL/min: 50% dose reduction.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (30%–22%): Abdominal pain, nausea, injection site reactions. **Occasional (18%–14%):** Headache, abdominal distention, vomiting. **Rare (9%):** Flatulence, hypersensitivity, appetite disorders, sleep disturbances.

ADVERSE EFFECTS/TOXIC REACTIONS

Upper respiratory tract infection occurs in 12% of pts. Fluid overload (hypervolemia) reported in 7% of pts. Potential for hypovolemia is increased in pts with cardiovascular disease, HF. Therapy increases risk for acceleration for neoplastic growth. Cholecystitis, cholangitis, cholelithiasis, pancreatitis have been reported.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain baseline serum chemistries, LFT, lipase, amylase. Colonoscopy (or alternate imaging) with removal of polyps should be completed within 5 mos prior to initiating treatment.

INTERVENTION/EVALUATION

Follow-up colonoscopy (or alternate imaging) is recommended at the end of 1 year. If no polyp is found, subsequent colonoscopies should be done no less frequently than every 5 yrs. If a polyp is found, adherence to current polyp follow-up guidelines is recommended. Discovery of intestinal obstruction, intestinal malignancy necessitates discontinuation of treatment. Subsequent laboratory assessments, LFT are recommended every 6 mos. If clinically meaningful elevation is seen, further diagnostic workup is recommended as clinically indicated.

PATIENT/FAMILY TEACHING

- Teach proper use and administration of medication.
- Be aware of need for any new supplies.
- Instruct pt in preparation of medication, and observe correct administration technique.
- Report yellowing of skin or eyes, dark urine, changes in stool color or consistency, severe abdominal pain, nausea, vomiting, sudden weight gain, swelling, or difficulty breathing.

telavancin

tel-a-van-sin
(Vibativ)

BLACK BOX ALERT Pts with preexisting renal impairment (CrCl less than 50 mL/min) who are treated for hospital-acquired pneumonia may have increased mortality risk when compared to vancomycin. May cause new or worsening renal impairment. May cause fetal harm (low birth weight, limb malformations). Women of childbearing potential should have pregnancy test before treatment; avoid use during pregnancy unless benefit to pt outweighs fetal risk.

Do not confuse telavancin with dalbavancin or oritavancin; or Vibativ with Vibra-Tabs or vigabatrin.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Lipoglycopeptide antibacterial. **CLINICAL:** Antibiotic.

USES

Treatment of complicated skin, soft tissue infections (cSSSI) caused by gram-positive microorganisms, including methicillin-susceptible or methicillin-resistant *S. aureus*, vancomycin-susceptible *Enterococcus*. Treatment of hospital-acquired and ventilator-associated bacterial pneumonia (HABP/VABP) caused by susceptible isolates of *S. aureus*.

PRECAUTIONS

Contraindications: Prior hypersensitivity reactions to telavancin. Concomitant use of IV unfractionated heparin. **Cautions:** Renal impairment (CrCl 50 mL/min or less), concurrent therapy with other nephrotoxic medications (e.g., NSAIDs, ACE inhibitors, aminoglycosides). Avoid use in pts with history of congenital QT syndrome, known prolongation of QT interval, uncompensated HF, severe left ventricular

hypertrophy, or receiving treatment with other drugs known to prolong QT interval, hypokalemia, hypomagnesemia, known vancomycin hypersensitivity.

ACTION

Inhibits bacterial cell wall synthesis by blocking polymerization and cross-linking of peptidoglycan. Disrupts membrane potential and changes cell wall permeability. **Therapeutic Effect:** Bactericidal. Antibiotic.

PHARMACOKINETICS

Not metabolized in liver; pathway unspecified. Protein binding: 90%. Primarily excreted unchanged in urine. Not removed by hemodialysis. **Half-life:** 8–9 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm at regular dosage. Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may increase risk of nephrotoxicity; dosage adjustment recommended.

INTERACTIONS

DRUG: QT interval-prolonging medications (e.g., amiodarone, azithromycin, ceritinib, haloperidol, moxifloxacin) may increase risk of QT interval prolongation, cardiac arrhythmias. May decrease therapeutic effect of heparin. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May alter serum potassium. May increase serum bilirubin, ALT, AST, BUN, creatinine; PT, aPTT, INR. May decrease Hgb, Hct, WBC count.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 750 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ Give by intermittent IV infusion (piggyback). Do not give by IV push (may result in hypotension).

Reconstitution • Reconstitute with 45 mL Sterile Water for Injection, D₅W, or 0.9% NaCl to provide concentration of 15 mg/mL (total volume approximately 50 mL). • Prior to administration, further dilute with D₅W or 0.9% NaCl to final concentration of 0.6–8 mg/mL. • Do not shake.

Rate of administration • Infuse over at least 60 min. Flush line with D₅W or 0.9% NaCl before and after administration.

Storage • Discard if particulate is present. • Following reconstitution, drug is stable for 4 hrs at room temperature or 72 hrs if refrigerated in vial or infusion bag.

IV INCOMPATIBILITIES

Amphotericin, colistimethate, levoFLOXacin (Levaquin), micafungin (Mycamine).

IV COMPATIBILITIES

Azithromycin, caspofungin, cefepime, ceftAZidime, ceftRIAXone, ciprofloxacin, doripenem, doxycycline, gentamicin, ertapenem, fluconazole, meropenem, tobramycin, pantoprazole, piperacillin-tazobactam, tigecycline.

INDICATIONS/ROUTES/DOSAGE

Usual Parenteral Dosage

IV infusion: ADULTS, ELDERLY: 10 mg/kg once every 24 hrs for 7–14 days (cSSSI); 14–21 days (HABP/VABP). Duration based on severity, infection site, and clinical progress of pt.

Dosage in Renal Impairment

Creatinine

Clearance	Dosage
50 mL/min or greater	10 mg/kg every 24 hrs
30–49 mL/min	7.5 mg/kg every 24 hrs
10–29 mL/min	10 mg/kg every 48 hrs
Less than 10 mL/min	No dose adjustment (not studied)

Dosage in Hepatic Impairment

No dose adjustment (unless concomitant renal impairment).

SIDE EFFECTS

Frequent (33%–27%): Altered taste, nausea. **Occasional (14%–6%):** Vomiting, foamy urine, diarrhea, dizziness, pruritus. **Rare (4%–2%):** Rigors, rash, infusion site pain, anorexia, infusion site erythema.

ADVERSE EFFECTS/TOXIC REACTIONS

Nephrotoxicity (acute kidney injury, acute tubular necrosis, renal failure), diarrhea due to *C. difficile* may occur. “Red-man syndrome” (characterized by erythema on face, neck, upper torso), tachycardia, hypotension, myalgia, angioedema may occur from too-rapid rate of infusion. May cause QT interval prolongation.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain pregnancy test prior to treatment. Obtain baseline serum BUN, creatinine, creatinine clearance prior to initiating therapy, every 48–72 hrs, and after treatment is completed. Obtain culture and sensitivity tests before giving first dose (therapy may begin before results are known). Question history of renal impairment, long QT interval syndrome, HE.

INTERVENTION/EVALUATION

Monitor renal function tests, I&O. Assess skin for rash. Avoid rapid infusion (“red-man syndrome”). Monitor daily pattern of bowel activity, stool consistency. Obtain *C. difficile* PCR test if diarrhea occurs. Monitor ECG for QT interval prolongation, cardiac arrhythmias.

PATIENT/FAMILY TEACHING

- Use effective contraception during treatment.
- Report rash, signs/symptoms of nephrotoxicity, diarrhea.
- Blood levels will be monitored routinely.
- Report chest pain, irregular heart rhythm, palpitations, passing out.

telmisartan

tel-mi-sar-tan

(Apo-Telmisartan , Micardis)

BLACK BOX ALERT ■ May cause fetal injury, mortality. Discontinue as soon as possible once pregnancy is detected.

FIXED-COMBINATION(S)

Micardis HCT: telmisartan/hydro-CHLORothiazide (a diuretic): 40 mg/12.5 mg, 80 mg/12.5 mg. **Twynsta:** telmisartan/amLODIPine (a calcium channel blocker): 40 mg/5 mg, 40 mg/10 mg, 80 mg/5 mg, 80 mg/10 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin II receptor antagonist. **CLINICAL:** Antihypertensive.

USES

Treatment of hypertension alone or in combination with other antihypertensives. Reduces cardiovascular risk in pts 55 yrs of age and older unable to take ACE inhibitors and at high risk of major cardiovascular event (e.g., MI, stroke).

PRECAUTIONS

Contraindications: Hypersensitivity to telmisartan. Concurrent use with aliskiren in pts with diabetes. **Cautions:** Hypovolemia, hyperkalemia, hepatic/renal impairment, renal artery stenosis (unilateral, bilateral), biliary obstructive disease, significant aortic/mitral stenosis. Concurrent use with ramipril not recommended. Avoid potassium supplements.

ACTION

Blocks vasoconstrictor and aldosterone-secreting effects of angiotensin II, inhibiting binding of angiotensin II to AT₁ receptors. **Therapeutic Effect:** Causes vasodilation, decreases peripheral resistance, decreases B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (reduce B/P)	1–2 hrs	—	24 hrs

Rapidly, completely absorbed. Protein binding: greater than 99%. Metabolized in liver. Excreted in feces. Unknown if removed by hemodialysis. **Half-life:** 24 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if drug is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: NSAIDs (e.g., **ibuprofen**, **ketorolac**, **naproxen**) may increase adverse effects. May increase **lithium** concentration, risk of toxicity. **Aliskiren** may increase hyperkalemic effect. May increase adverse effect/toxicity of **ACE inhibitors** (e.g., **benazepril**, **lisinopril**, **ramipril**). **HERBAL:** Herbals with **hypertensive properties** (e.g., **licorice**, **yohimbe**) or **hypotensive properties** (e.g., **garlic**, **ginger**, **ginkgo biloba**) may alter effects. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, creatinine, uric acid, cholesterol. May decrease Hgb, Hct.

AVAILABILITY (Rx)

Tablets: 20 mg, 40 mg, 80 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: Initially, 20–40 mg once daily. Titrate based on pt's response up to 80 mg once daily.

Cardiovascular Risk Reduction

PO: ADULTS, ELDERLY: 80 mg once daily.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Use with caution.

SIDE EFFECTS

Occasional (7%–3%): Upper respiratory tract infection, sinusitis, back/leg pain, diarrhea. **Rare (1%):** Dizziness, headache, fatigue, nausea, heartburn, myalgia, cough, peripheral edema.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdosage may manifest as hypotension, tachycardia; bradycardia occurs less often.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P, apical pulse immediately before each dose, in addition to regular monitoring (be alert to fluctuations). If excessive reduction in B/P occurs, place pt in supine position, feet slightly elevated. Assess medication history (esp. diuretics). Question for history of hepatic/renal impairment, renal artery stenosis. Obtain serum BUN, creatinine, Hgb, Hct, vital signs (particularly B/P, pulse rate).

INTERVENTION/EVALUATION

Monitor B/P, pulse, serum electrolytes, renal function. Monitor for hypotension when initiating therapy.

PATIENT/FAMILY TEACHING

- Avoid tasks that require alertness, motor skills until response to drug is established (possible dizziness effect).
- Maintain proper hydration.
- Avoid pregnancy.
- Immediately report suspected pregnancy.
- Report any sign of infection (sore throat, fever).
- Avoid excessive exertion during hot weather (risk of dehydration, hypotension).

telotristat ethyl

tel-oh-tri-state eth-il
(Xermelo)

Do not confuse telotristat with Triostat, or Xermelo with Xarelto.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Tryptophan hydroxylase inhibitor. **CLINICAL:** GI agent.

USES

Treatment of carcinoid syndrome diarrhea in combination with somatostatin analog (SSA) therapy in adults with symptoms inadequately controlled by SSA therapy.

PRECAUTIONS

Contraindications: Hypersensitivity to telotristat, telotristat ethyl. **Cautions:** Pts with advanced carcinoid tumors may be at risk for altered structural integrity of the GI wall. Conditions that may impair integrity of GI wall (e.g., Crohn's disease, diverticulitis, GI tract malignancies, intestinal adhesions, Ogilvie's syndrome, peptic ulcers, peritoneal malignancies).

ACTION

Inhibits enzyme tryptophan hydroxylase (TPH). TPH converts tryptophan to 5-hydroxytryptophan, and then to serotonin, reducing overproduction and biosynthesis of peripheral serotonin. **Therapeutic Effect:** Reduces frequency of carcinoid syndrome diarrhea.

PHARMACOKINETICS

Does not cross blood-brain barrier. Undergoes hydrolysis via carboxylesterases to active metabolite telotristat. Protein binding: greater than 99%. Peak plasma concentration: 1–3 hrs (telotristat). Excreted in feces (93%), urine (less than 1%). **Half-life:** 5 hrs (telotristat).

🕒 LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if crosses placenta or distributed in breast milk. May increase risk of constipation in nursing infants. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Octreotide may decrease concentration/effect (give short-acting octreotide at least 30 min after telotristat ethyl). **HERBAL:** None significant. **FOOD:** High-fat meals increases drug exposure. **LAB VALUES:** May increase alkaline phosphatase, ALT, AST, GGT.

AVAILABILITY (Rx)

Tablets: 250 mg.

ADMINISTRATION/HANDLING**PO**

• Give with food. • If applicable, give short-acting octreotide at least 30 mins after telotristat ethyl. • If a dose is missed, do not give extra dose. Administer next dose at regularly scheduled time.

INDICATIONS/ROUTES/DOSAGE**Carcinoid Syndrome Diarrhea**

PO: ADULTS, ELDERLY: 250 mg 3 times/day.

Dosage in Renal Impairment

Creatinine clearance greater than 20 mL/min: No dose adjustment. **ESRD requiring hemodialysis:** Not studied; use caution.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment:** Not studied; use caution.

SIDE EFFECTS

Occasional (13%–5%): Nausea, headache, peripheral edema, flatulence, decreased appetite, pyrexia, abdominal pain, abdominal distension, constipation.

ADVERSE EFFECTS/TOXIC REACTIONS

Severe constipation resulting in GI perforation, bowel obstruction may occur. Depression reported in 9% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question characteristics of diarrhea, frequency of bowel movements. Assess bowel sounds. Question history of GI obstruction, GI perforation, baseline GI disease. Assess hydration status.

INTERVENTION/EVALUATION

Assess bowel sounds. Monitor for severe, persistent, or worsening of abdominal pain. Discontinue if severe constipation, severe abdominal pain, GI perforation, bowel obstruction occurs. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

- Take with food.
- Immediately report severe, persistent abdominal pain; abdominal distension, fever, nausea, vomiting; may indicate tear or blockage in GI tract.
- Report severe constipation.
- Do not breastfeed.
- If therapy includes somatostatin, take somatostatin at least 30 mins after dose.

temozolomide

HIGH ALERT

tem-oh-zoe-loe-myde
(Temodal , Temodar)

Do not confuse Temodar with Tambocor.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Imidazo-tetrazine derivative, alkylating agent.

CLINICAL: Antineoplastic.

USES

Treatment of adults with refractory anaplastic astrocytoma, newly diagnosed glioblastoma multiforme (concomitantly with radiotherapy, then as maintenance therapy). **OFF-LABEL:** Malignant glioma, metastatic melanoma, metastatic CNS

lesions, cutaneous T-cell lymphomas, advanced neuroendocrine tumors, soft tissue sarcoma, pediatric neuroblastoma. Ewing's sarcoma (recurrent or progressive).

PRECAUTIONS

Contraindications: Hypersensitivity to temozolomide, dacarbazine. **Cautions:** Severe renal/hepatic impairment, pregnancy.

ACTION

Produces cytotoxic effect through alkylation of DNA, causing DNA double strand breaks and apoptosis. **Therapeutic Effect:** Inhibits DNA replication, causing cell death.

PHARMACOKINETICS

Rapidly, completely absorbed after PO administration. Protein binding: 15%. Peak plasma concentration: 1 hr. Penetrates blood-brain barrier. Excreted in urine (38%), feces (19%). **Half-life:** 1.6–1.8 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. May produce malformation of external organs, soft tissue, skeleton. If possible, avoid use during pregnancy. Unknown if drug is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Pts older than 70 yrs may experience higher risk of developing Grade 4 neutropenia, Grade 4 thrombocytopenia.

INTERACTIONS

DRUG: Valproic acid may increase adverse effects. **Bone marrow depressants** (e.g., cladribine) may increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** Echinacea may decrease effects. **FOOD:** All foods decrease rate, extent of drug absorption. **LAB VALUES:** May decrease Hgb,

neutrophils, platelets, WBC count, lymphocytes.

AVAILABILITY (Rx)

Capsules: 5 mg, 20 mg, 100 mg, 140 mg, 180 mg, 250 mg. **Injection, Powder for Reconstitution:** 100 mg.

ADMINISTRATION/HANDLING

- Reconstitute each 100-mg vial with 41 mL Sterile Water for Injection to provide concentration of 2.5 mg/mL.
- Swirl gently; do not shake.
- Do NOT further dilute.
- Infuse over 90 min.
- Stable for 14 hrs (includes infusion time).

PO

- Food reduces rate, extent of absorption; increases risk of nausea, vomiting.
- For best results, administer at bedtime.
- Give capsule whole with glass of water. Do not break, open, or crush capsules.

INDICATIONS/ROUTES/DOSAGE

Anaplastic Astrocytoma (Refractory)

IV infusion, PO: ADULTS, ELDERLY: Initially, 150 mg/m²/day for 5 consecutive days of 28-day treatment cycle. Subsequent doses of 100–200 mg/m²/day based on platelet count, absolute neutrophil count (ANC) during previous cycle. **Maintenance:** 200 mg/m²/day for 5 days q4wks if ANC greater than 1,500 cells/mm³ and platelets more than 100,000 cells/mm³. Continue until disease progression is observed. Minimum: 100 mg/m²/day for 5 days q4wks.

Glioblastoma Multiforme

Note: *Pneumocystis carinii* pneumonia (PCP) prophylaxis required during concomitant phase and continue in pts who develop lymphocytopenia until recovery to Grade 1 or less. **IV infusion, PO: ADULTS, ELDERLY: Concomitant phase:** 75 mg/m² daily for 42 days (with focal radiotherapy) if ANC 1,500 cells/mm³ or greater, platelet count 100,000 cells/mm³ or greater, and nonhemato-

logic toxicity Grade 1 or less. **Maintenance phase: (begin 4 wks after concomitant phase completion): (Cycle 1):** 150 mg/m² once daily for 5 days followed by 23 days without treatment. **(Cycles 2–6):** May increase to 200 mg/m² once daily for 5 days followed by 23 days without treatment if ANC greater than 1,500 cells/mm³, platelets greater than 100,000 cells/mm³, and nonhematologic toxicity with previous cycle is Grade 2 or less (exclude alopecia, nausea, vomiting).

Dosage in Renal/Hepatic Impairment

No dose adjustment. Use caution in severe hepatic impairment.

SIDE EFFECTS

Frequent (53%–33%): Nausea, vomiting, headache, fatigue, constipation, seizure. **Occasional (16%–10%):** Diarrhea, asthenia, fever, dizziness, peripheral edema, incoordination, insomnia. **Rare (9%–5%):** Paresthesia, drowsiness, anorexia, urinary incontinence, anxiety, pharyngitis, cough.

ADVERSE EFFECTS/TOXIC REACTIONS

Myelosuppression is characterized by neutropenia and thrombocytopenia, with elderly pts and women showing higher incidence of developing severe myelosuppression. Usually occurs within first few cycles; is not cumulative. Nadir occurs in approximately 26–28 days, with recovery within 14 days of nadir. May increase occurrence of *Pneumocystis carinii* pneumonia, myelodysplastic syndrome including myeloid leukemia, or secondary malignancies.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC. Before dosing, ANC must be greater than 1,500 cells/mm³ and platelet count greater than 100,000 cells/mm³. Potential for nausea, vomiting (readily controlled with antiemetic therapy). Offer emotional support.

INTERVENTION/EVALUATION

Obtain CBC on day 22 (21 days after first dose) or within 48 hrs of that day, and wkly, until ANC is greater than 1,500 cells/mm³ and platelet count is greater than 100,000 cells/mm³. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness).

PATIENT/FAMILY TEACHING

- To reduce nausea/vomiting, take on an empty stomach at bedtime.
- Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site, or difficulty breathing.
- Avoid crowds, those with infection.
- Do not have immunizations without physician's approval.
- Avoid pregnancy.

temsirolimus

HIGH ALERT

tem-sir-oh-li-mus
(Torisel)

Do not confuse temsirolimus with everolimus, sirolimus, or tacrolimus.

◆ **CLASSIFICATION**

PHARMACOTHERAPEUTIC: mTOR kinase inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of advanced renal cell carcinoma.

PRECAUTIONS

Contraindications: Hypersensitivity to temsirolimus. Moderate-severe hepatic impairment; serum bilirubin greater than 1.5 times upper limit of normal (ULN).

Cautions: Hypersensitivity to sirolimus, mild hepatic impairment, diabetes, hyperlipidemia. Concurrent use with other

medication that may cause angioedema (e.g., ACE inhibitors).

ACTION

Prevents activation of mTOR (mechanistic target of rapamycin), preventing tumor cell division. **Therapeutic Effect:** Inhibits tumor cell growth, produces tumor regression.

PHARMACOKINETICS

Metabolized in liver. Excreted primarily in feces. **Half-life:** 17 hrs.

 **LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole, ritonavir) may increase concentration/effect. CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. May decrease the therapeutic effect; increase adverse effects of vaccines (live).

HERBAL: St. John's wort may decrease plasma concentration/effect. Echinacea may decrease the therapeutic effect.

FOOD: Grapefruit products may increase plasma concentration/effect. **LAB**

VALUES: May increase serum bilirubin, alkaline phosphatase, AST, creatinine, glucose, cholesterol, triglycerides. May decrease WBCs, neutrophils, Hgb, platelets, serum phosphorus, potassium.

AVAILABILITY (Rx)

Injection Solution Kit: 25 mg/mL supplied with 1.8-mL diluent vial.

ADMINISTRATION/HANDLING

 **IV**

Reconstitution • Inject 1.8 mL of diluent into vial. • The vial contains an

T

overflow of 0.2 mL (30 mg/1.2 mL). • Due to the overflow, the drug concentration of resulting solution will be 10 mg/mL. • A total volume of 3 mL will be obtained, including the overflow. • Mix well by inverting the vial. Allow sufficient time for air bubbles to subside. • Mixture must be injected rapidly into 250 mL 0.9% NaCl. • Invert bag to mix; avoid excessive shaking (may cause foaming).

Rate of administration • Administer through an in-line filter not greater than 5 microns; infuse over 30–60 min. • Final diluted infusion solution should be completed within 6 hrs from the time drug solution and diluent mixture is added to the 250 mL 0.9% NaCl.

Storage • Refrigerate kit. • Reconstituted solution appears clear to slightly turbid, colorless to yellow, and free from visible particulates. • The 10 mg/mL drug solution/diluent mixture is stable for up to 24 hrs at room temperature. • Solutions diluted for infusion (in 250 mL 0.9% NaCl) must be infused within 6 hrs of preparation.

IV INCOMPATIBILITIES

Both acids and bases degrade solution; combinations of temsirolimus with agents capable of modifying solution pH should be avoided.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Pretreat with IV diphenhydramine 25–50 mg, 30 min before infusion.

Renal Cancer

IV: ADULTS/ELDERLY: 25 mg once wkly. Treatment should continue until disease progresses or unacceptable toxicity occurs.

Dose Modification

Concomitant CYP3A4 inhibitors: Consider dose of 12.5 mg/wk. **Concomitant CYP3A4 inducers:** Consider dose of 50 mg/wk.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild impairment: Reduce dose to 15 mg/wk. **Moderate to severe impairment:** Contraindicated.

SIDE EFFECTS

Common (51%–32%): Asthenia, rash, mucositis, nausea, edema (facial edema, peripheral edema), anorexia. **Frequent (28%–20%):** Generalized pain, dyspnea, diarrhea, cough, fever, abdominal pain, constipation, back pain, impaired taste.

Occasional (19%–8%): Weight loss, vomiting, pruritus, chest pain, headache, nail disorder, insomnia, nosebleed, dry skin, acne, chills, myalgia.

ADVERSE EFFECTS/TOXIC REACTIONS

UTI occurs in 15% of pts, hypersensitivity reaction in 9%, pneumonia in 8%, upper respiratory tract infection, hypertension, conjunctivitis in 7%.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question possibility of pregnancy. Obtain baseline CBC, serum chemistries, renal function, LFT routinely thereafter. Offer emotional support.

INTERVENTION/EVALUATION

Offer antiemetics to control nausea, vomiting. Monitor daily pattern of bowel frequency, stool consistency. Assess skin for evidence of rash, edema. Monitor CBC, particularly Hgb, platelets, neutrophil count; LFT, renal function tests. Monitor for shortness of breath, fatigue, hypertension. Assess oropharynx for stomatitis, mucositis.

PATIENT/FAMILY TEACHING

- Avoid crowds, those with known infection.
- Avoid contact with anyone who recently received live virus vaccine.
- Do not have immunizations without physician's approval (drug lowers body resistance).
- Promptly report fever, unusual bruising/bleeding from any site.

teriflunomide

ter-i-floo-noe-myde
(Aubagio)

■ BLACK BOX ALERT ■ May result in major birth defects. Pregnancy must be excluded before initiating therapy and must be avoided during treatment or prior to completion of an accelerated elimination procedure. Severe hepatic injury may occur. Do not initiate with acute/chronic liver disease or serum ALT greater than 2 times upper limit of normal.

Do not confuse teriflunomide with leflunomide.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Pyrimidine synthesis inhibitor, immunomodulatory agent. **CLINICAL:** Multiple sclerosis agent.

USES

Treatment of relapsing forms of multiple sclerosis.

PRECAUTIONS

Contraindications: Hypersensitivity to teriflunomide, leflunomide. Pregnant women or women of childbearing potential who are not using reliable contraception, severe hepatic impairment, concurrent use of leflunomide. **Cautions:** Concomitant neurotoxic medications, diabetes, pulmonary disease, severe immunodeficiency or bone marrow dysplasia, history of significant hematologic abnormalities, uncontrolled infection, history of new/recurrent infections, pts older than 60 yrs.

ACTION

Inhibits pyrimidine synthesis, exhibiting anti-inflammatory and antiproliferative properties. **Therapeutic Effect:** May reduce number of activated lymphocytes in the CNS. May slow progression of multiple sclerosis.

PHARMACOKINETICS

Well absorbed following PO administration. Peak concentration: 1–4 hrs. Protein binding: greater than 99%. Metabolized by hydrolysis. Excreted in urine (23%), feces (38%). **Half-life:** 18–19 days.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May produce embryo-fetal toxicity. Pregnancy contraindicated. Avoid breastfeeding. Detected in human semen. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration/effects of **CYP2C8 substrates (e.g., repaglinide, PACLitaxel, rosuvastatin, topotecan)**. May decrease concentration/effects of **warfarin, CYP1A2 substrates (e.g., DULoxetine, tiZANidine)**. May decrease the therapeutic effect; increase adverse effects of **vaccines (live)**. **HERBAL:** **Echinacea** may decrease the therapeutic effect. **FOOD:** None known. **LAB VALUES:** May increase serum potassium, ALT, AST, alkaline phosphatase, bilirubin. May decrease WBCs, neutrophil count.

AVAILABILITY (Rx)

Tablets: 7 mg, 14 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Multiple Sclerosis

PO: ADULTS, ELDERLY: 7 mg or 14 mg once daily.

Adjustment of Toxicity

ALT elevation greater than 3 times ULN: Discontinue teriflunomide and initiate drug elimination procedures: cholestyramine 8 g q8h for 11 days (if not tolerated, may decrease to 4 g q8h) or activated charcoal 50 g q12h for 11 days. **Note:** The 11 days do not need to be

consecutive unless plasma concentration needs to be lowered rapidly.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Contraindicated.

SIDE EFFECTS

Frequent (19%–6%): Headache, diarrhea, nausea, alopecia, paresthesia, upper abdominal pain. **Occasional (4%–3%):** Hypertension, oral herpes, anxiety, hypertension, toothache, musculoskeletal pain. **Rare (2%–1%):** Seasonal allergy, sciatica, burning sensation, carpal tunnel syndrome, blurred vision, acne, pruritus, myalgia, abdominal distention, conjunctivitis.

ADVERSE EFFECTS/TOXIC REACTIONS

Influenza occurs in 12% of pts, upper respiratory infection with sinusitis, bronchitis in 9%. Cystitis, sinusitis, viral gastroenteritis may occur. Neutropenia, leukopenia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Because of high potential for birth defects/fetal death, female pts must avoid pregnancy. Obtain baseline PPD for latent TB. Obtain CBC, hepatic function test results prior to treatment and monthly for 6 mos thereafter. Obtain baseline pregnancy test. Assess baseline symptoms of MS (e.g., bladder/bowel dysfunction, cognitive impairment, depression, dysphagia, fatigue, gait disorder, numbness/tingling, pain, seizures, spasticity, tremors, weakness).

INTERVENTION/EVALUATION

Monitor for signs/symptoms of infection. Treatment should not be initiated if pt has active infection; discontinua-

tion of treatment must be considered. If drug-induced hepatic impairment, peripheral neuropathy, severe skin reaction occur, discontinue medication, begin accelerated elimination procedure (cholestyramine or charcoal for 11 days). Monitor for symptom improvement of MS.

PATIENT/FAMILY TEACHING

- Women of childbearing potential must be counseled regarding fetal risk, use of reliable contraceptives confirmed, possibility of pregnancy excluded.
- May take without regard to food.
- Report symptoms of infection such as body aches, chills, cough, fatigue, fever.

teriparatide

ter-i-par-a-tide
(Forteo)

BLACK BOX ALERT ■ Increased risk of osteosarcoma; risk dependent on dose and duration.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Parathyroid hormone. **CLINICAL:** Osteoporosis agent.

USES

Treatment of postmenopausal women with osteoporosis who are at increased risk for fractures. Treatment of men with primary or hypogonadal osteoporosis who are at high risk for fractures. High-risk pts include those with a history of osteoporotic fractures, who have failed previous osteoporosis therapy, or were intolerant of previous osteoporosis therapy. Treatment of glucocorticoid-induced osteoporosis in men and women.

PRECAUTIONS

Contraindications: Hypersensitivity to teriparatide. **Cautions:** Conditions that increase risk of osteosarcoma (e.g., Paget's disease, unexplained elevations

of alkaline phosphatase level, children or young adults with open epiphyses, prior skeletal radiation therapy, implant therapy), hypercalcemia, hypercalcemic disorders (e.g., hyperparathyroidism), bone metastases, history of skeletal malignancies, metabolic bone diseases other than osteoporosis, cardiac disease, renal/hepatic impairment, pts at risk for orthostasis, active or recent urolithiasis.

ACTION

Stimulates osteoblast function. Increases calcium absorption from GI tract/renal tubular reabsorption. **Therapeutic Effect:** Increases bone mineral density, bone mass/strength, reduces osteoporosis-related fractures.

PHARMACOKINETICS

Extensively absorbed following SQ injection. Metabolized in liver. Excreted in urine. **Half-life:** 1 hr.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum calcium (transient), uric acid.

AVAILABILITY (Rx)

Injection Solution: 600 mcg/2.4 mL (injector pen containing 28 daily doses of 20 mcg).

ADMINISTRATION/HANDLING

SQ

- Refrigerate, but minimize time out of refrigerator. Do not freeze; discard if frozen.
- Administer into thigh, abdominal wall.

INDICATIONS/ROUTES/DOSAGE

Osteoporosis

SQ: ADULTS, ELDERLY: 20 mcg once daily into thigh, abdominal wall. Continue for up to 2 yrs (lifetime duration).

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional: Leg cramps, nausea, dizziness, headache, orthostatic hypotension, tachycardia.

ADVERSE EFFECTS/TOXIC REACTIONS

Angina pectoris has been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain urinary, serum calcium, ionized calcium levels, serum parathyroid hormone levels, bone mineral density.

INTERVENTION/EVALUATION

Monitor bone mineral density, urinary/serum calcium levels, serum parathyroid hormone levels. Observe for symptoms of hypercalcemia. Monitor B/P for hypotension, pulse for tachycardia. Question medical history as listed in Precautions.

PATIENT/FAMILY TEACHING

- Go from lying to standing slowly.
- Report persistent symptoms of hypercalcemia (nausea, vomiting, constipation, lethargy, asthenia).

testosterone

TOP
100

HIGH
ALERT

tes-**tos**-te-rone

(Andriol , Androderm, AndroGel Pump, Aveed, Depo-Testosterone, Fortesta, Natesto, Striant, Testim, Testopel, Vogelxo)

BLACK BOX ALERT

Virilization in children and women may occur following secondary exposure to testosterone topical gel and solution. **Aveed:** Serious pulmonary oil microembolism reaction and anaphylaxis reported during or immediately after administration.

Do not confuse testosterone with testolactone.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Androgen. **CLINICAL:** Sex hormone.

USES

Androgen replacement therapy in treatment of delayed male puberty, male hypogonadism (congenital or acquired), inoperable female breast cancer pts who are 1–5 yrs postmenopausal.

PRECAUTIONS

Contraindications: Hypersensitivity to testosterone. Breastfeeding, pregnant or who may become pregnant, prostate (known or suspected) or breast cancer in males. **Depo-Testosterone (additional):** Severe cardiac/hepatic/renal disease. **Cautions:** Renal/hepatic/cardiac dysfunction, pts with history of MI or CAD; conditions influenced by edema (e.g., seizure disorder, migraines).

ACTION

Promotes growth, development of male sex organs, maintains secondary sex characteristics in androgen-deficient males. **Therapeutic Effect:** Relieves androgen deficiency.

PHARMACOKINETICS

Well absorbed after IM administration. Protein binding: 98%. Metabolized in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 10–100 min.

**LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: Contraindicated in pregnant women, women who may become pregnant, or during lactation. **Children:** Safety and efficacy not established; use with caution. **Elderly:** May increase risk of hyperplasia, stimulate growth of occult prostate carcinoma.

INTERACTIONS

DRUG: May increase hepatotoxic effect of **cycloSPORINE**. May increase the anticoagulant effect of **warfarin**. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase Hgb, Hct, LDL, serum alkaline phosphatase, bilirubin, calcium, potassium, sodium, AST. May decrease HDL.

AVAILABILITY (Rx)

Gel, Topical: (*AndroGel, Testim*): 1%, 1.62%. (*Vogelxo*): 50-mg packet or tube, 12.5 mg/actuation metered dose pump. (*Fortesta*): 10 mg/actuation. **Injection:** (*Cypionate [Depo-Testosterone]*): 100 mg/mL, 200 mg/mL. (*Enanthate [Delatestryl]*): 200 mg/mL. (*Aveed [Undecanoate]*): 750 mg/3 mL. **Mucoadhesive, for Buccal Application:** (*Striant*): 30 mg. **Nasal Gel:** (*Natesto*): 5.5 mg/actuation. **Pellet for SQ Implantation:** 12.5 mg, 25 mg, 37.5 mg, 50 mg, 75 mg. **Solution, Metered Dose Pump:** (*Axiron*): 30 mg/actuation. **Transdermal System Patch:** (*Androderm*): 2 mg/day or 4 mg/day.

ADMINISTRATION/HANDLING
IM

- Give deep in gluteal muscle. • Do not give IV. • Warming or shaking redissolves crystals that may form in long-acting preparations. • Wet needle of syringe may cause solution to become cloudy; this does not affect potency.

Buccal

- (*Striant*): Apply to gum area (above incisor tooth). • Hold firmly in place

for 30 sec to ensure adhesion. Instruct pt to not chew or swallow. • Not affected by food, toothbrushing, gum, chewing, alcoholic beverages. • Remove before placing new system.

Transdermal

• (**Androderm**): Apply to clean, dry area on skin on back, abdomen, upper arms, thighs. • Do not use tape to secure. Avoid bathing, swimming for at least 3 hrs after each application. • Do not apply to bony prominences (e.g., shoulder) or oily, damaged, irritated skin. Do not apply to scrotum. • Rotate application site with 7-day interval to same site.

Transdermal Gel

• (**AndroGel**, **Testim**, **Vogelxo**): Apply (morning preferred) to clean, dry, intact skin of shoulder, upper arms. (AndroGel 1% may also be applied to abdomen.) • Upon opening packet(s), squeeze entire contents into palm of hand, immediately apply to application site. • Allow to dry. • Do not apply to genitals. • (**Fortesta**): Apply to skin of front and inner thighs.

Topical Solution

• (**Axiron**): Apply using applicator to axilla at same time each morning. • Avoid washing site for 2 hrs after application.

INDICATIONS/ROUTES/DOSAGE

Male Hypogonadism

IM: ADULTS: (**Enanthate**): 75–100 mg/wk or 150–200 mg q2wks. (**Undecanoate**): 750 mg at initiation, 4 wks and q10 wks thereafter. **CHILDREN 12 YRS AND OLDER:** (**Cypionate or Enanthate**): Initiation of pubertal growth: 25–75 mg q3–4wks, gradually titrate q6–9mos to 100–150 mg. Duration: 3–4yrs. **Maintenance virilizing dose:** 200–250 mg q3–4wks. May convert to other testosterone replacement dosages once expected adult height and adequate virilization achieved. **SQ: (Pellets): ADULTS, CHILDREN 12 YRS AND OLDER:** 150–450 mg q3–6mos.

Topical gel: (Fortesta): 40 mg once daily in morning. Range: 10–70 mg. **Maximum:** 70 mg. (**Vogelxo**): 50 mg once daily (one tube or one packet or 4 pump actuations).

Topical solution: (Axiron): ADULTS, ELDERLY: 60 mg once daily (1 pump activation of 30 mg to each axilla). Range: 30–120 mg.

Transdermal patch: (Androderm): ADULTS, ELDERLY: Start therapy with 4 mg/day patch applied at night. Apply patch to abdomen, back, thighs, upper arms. Dose adjustment based on testosterone levels. Range: 2–6 mg/day.

Transdermal gel: ADULTS, ELDERLY: (AndroGel 1%): Initial dose of 5 g delivers 50 mg testosterone and is applied once daily to abdomen, shoulders, upper arms. May increase to 7.5 g (75 mg testosterone), then to 10 g (100 mg testosterone), if necessary. (**AndroGel 1.62%):** Initial dose of 40.5 mg applied once daily in the morning to shoulder and upper arms. May increase to 81 mg. Further adjustments based on testosterone levels.

Transdermal gel: (Testim, Vogelxo): ADULTS, ELDERLY: Initial dose of 5 g delivers 50 mg testosterone and is applied once daily to the shoulders, upper arms. May increase to 10 g (100 mg testosterone).

Buccal: (Striant): ADULTS, ELDERLY: 30 mg q12h.

Nasal gel: (Natesto): ADULTS ELDERLY: 11 mg (2 actuations, 1 per each nostril) 3 times/day (6–8 hrs apart).

Delayed Male Puberty

IM: (Cypionate or Enanthate): ADOLESCENTS: 50–200 mg q2–4wks for limited duration (4–6 months).

SQ: (Pellets): ADULTS: 150–450 mg q3–6mos.

Breast Carcinoma

IM: (Testosterone Cypionate, Testosterone Ethanate): ADULTS: 200–400 mg q2–4wks.

Dosage in Renal/Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent: Gynecomastia, acne. **Females:** Hirsutism, amenorrhea, other menstrual irregularities; deepening of voice; clitoral enlargement (may not be reversible when drug is discontinued). **Occasional:** Edema, nausea, insomnia, oligospermia, priapism, male-pattern baldness, bladder irritability, hypercalcemia (in immobilized pts, those with breast cancer), hypercholesterolemia, inflammation/pain at IM injection site. **Transdermal:** Pruritus, erythema, skin irritation. **Rare:** Polycythemia (with high dosage), hypersensitivity.

ADVERSE EFFECTS/TOXIC REACTIONS

Peliosis hepatitis (presence of blood-filled cysts in parenchyma of liver), hepatic neoplasms, hepatocellular carcinoma have been associated with prolonged high-dose therapy. Anaphylactic reactions occur rarely. Venous thromboembolism (e.g., DVT, PE) reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baseline weight, B/P, Hgb, Hct. Check LFT, electrolytes, cholesterol. Wrist X-rays may be ordered to determine bone maturation in children. Question history of hepatic/renal impairment, seizure disorder, thromboembolism (CVA, MI, pulmonary embolism).

INTERVENTION/EVALUATION

Weigh daily, report wky gain of more than 5 lb; evaluate for edema. Monitor I&O. Monitor B/P. Assess serum electrolytes, cholesterol, Hgb, Hct (periodically for high dosage), LFT, radiologic exam of wrist, hand (when using in prepubertal children). With breast cancer or immobility, check for hypercalcemia (lethargy, muscle weakness, confusion, irritability). Ensure

adequate intake of protein, calories. Assess for virilization. Monitor sleep patterns. Monitor for CVA (aphasia, confusion, paresthesia, hemiparesis, seizures), MI (chest pain, diaphoresis, left arm/jaw pain, increased serum troponin, ST segment elevation), pulmonary embolism (chest pain, dyspnea, hypoxia, tachycardia).

PATIENT/FAMILY TEACHING

- Regular visits to physician and monitoring tests are necessary.
- Do not take any other medication without consulting physician.
- Maintain diet high in protein, calories.
- Food may be better tolerated in small, frequent feedings.
- Weigh daily; report 5 lb/wk gain.
- Report nausea, vomiting, acne, pedal edema.
- **Females:** Promptly report menstrual irregularities, hoarseness, deepening of voice.
- **Males:** Report frequent erections, difficulty urinating, gynecomastia.
- Treatment may cause arterial or venous blood clots; report symptoms of heart attack (chest pain, difficulty breathing, jaw pain, nausea, pain that radiates to the left arm, sweating), stroke (blindness, confusion, one-sided weakness, loss of consciousness, trouble speaking, seizures); DVT (swelling, pain, hot feeling in the arms or legs), lung embolism (difficulty breathing, chest pain, rapid heart rate).

tiaGABine

tye-a-ga-been
(Gabitril)

Do not confuse tiaGABine with tiZANidine.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective GABA reuptake inhibitor. **CLINICAL:** Anticonvulsant.

USES

Adjunctive therapy for treatment of partial seizures in adults and children 12 yrs or older.

PRECAUTIONS

Contraindications: Hypersensitivity to tiaGABine. **Cautions:** Hepatic impairment. Pts at risk for suicidal behavior/thoughts.

ACTION

Enhances activity of gamma-aminobutyric acid (GABA), the major inhibitory neurotransmitter in the CNS. **Therapeutic Effect:** Inhibits seizure activity.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 96%. Metabolized in liver. Primarily excreted in feces. **Half-life:** 2–5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May produce teratogenic effects. Distributed in breast milk. **Children:** Safety and efficacy not established in pts younger than 12 yrs. **Elderly:** Age-related hepatic impairment may require dosage adjustment.

INTERACTIONS

DRUG: CNS depressants (e.g., alcohol, morphine, oxyCODONE, zolpidem) may increase CNS depression. **Strong CYP3A4 inducers** (e.g., carBA-Mazepine, phenytoin, rifAMPin) may decrease concentration/effect. **Strong CYP3A4 inhibitors** (e.g., clarithromycin, ketoconazole) may increase concentration/effect. **HERBAL:** Herbs with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **St. John's wort** may decrease concentration/effect. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 2 mg, 4 mg, 12 mg, 16 mg.

ADMINISTRATION/HANDLING

- Give with food.

INDICATIONS/ROUTES/DOSAGE

Note: Pts not taking enzyme-inducing antiepileptic drugs (AEDs): Lower doses required and slower titration may be needed. Do not use a loading dose, rapid titration, and/or increase in large-dose increments.

Partial Seizures

PO: ADULTS, ELDERLY: Pts receiving enzyme-inducing AED regimens: Initially, 4 mg once daily. May increase by 4–8 mg/day at wkly intervals. **Maintenance:** 32–56 mg/day in 2–4 divided doses. **CHILDREN 12–18 YRS: Pts receiving enzyme-inducing AED regimens:** Initially, 4 mg once daily for 1 wk. May increase by 4 mg in 2 divided doses for 1 wk, then may increase by 4–8 mg at wkly intervals thereafter. **Maximum:** 32 mg/day in 2–4 divided doses.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (34%–20%): Dizziness, asthenia (loss of strength, energy), drowsiness, nervousness, confusion, headache, infection, tremor. **Occasional:** Nausea, diarrhea, abdominal pain, impaired concentration.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose characterized by agitation, confusion, hostility, weakness. Full recovery occurs within 24 hrs of discontinuation. Depression, suicidal ideation.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (intensity, frequency, duration, level of consciousness). Observe frequently for recurrence of seizure activity. Initiate seizure precautions.

INTERVENTION/EVALUATION

For pts on long-term therapy, serum hepatic/renal function tests, CBC should be performed periodically. Assist with ambulation if

dizziness occurs. Assess for clinical improvement (decrease in intensity, frequency of seizures). Monitor for depression, unusual behavior, suicidal ideation or thoughts.

PATIENT/FAMILY TEACHING

- Go from lying to standing slowly.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Avoid alcohol.
- Report worsening seizure activity, thoughts of suicide, increased depression.

ticagrelor

tye-ka-grel-or
(Brilinta)

BLACK BOX ALERT May cause significant, sometimes fatal bleeding. Do not use with active bleeding or history of intracranial bleeding. Do not initiate in pts planning urgent coronary artery bypass graft (CABG) surgery. Discontinue at least 5 days prior to any surgery. Suspect bleeding in any pt who is hypotensive and has had recent percutaneous coronary intervention (PCI), CABG, or other surgical procedures. If possible, manage bleeding without discontinuing therapy to decrease risk of cardiovascular events. Aspirin maintenance doses greater than 100 mg/day may reduce effectiveness and should be strictly avoided.

CLASSIFICATION

PHARMACOTHERAPEUTIC: P2Y₁₂ platelet aggregation inhibitor. **CLINICAL:** Antiplatelet.

USES

Reduce rate of cardiovascular death, MI, stroke in pts with acute coronary syndrome (ACS) or history of MI. Reduce rate of stent thrombosis in pts who have been stented for treatment of ACS.

PRECAUTIONS

Contraindications: Hypersensitivity to ticagrelor. History of intracranial hemorrhage, active pathologic bleeding, severe

hepatic impairment. **Cautions:** Moderate hepatic impairment, renal impairment, history of hyperuricemia or gouty arthritis. Pts at increased risk of bradycardia, concurrent use of strong CYP3A4 inhibitors or inducers, elderly pts. (Recommend holding dose 5 days before planned surgery if applicable.) Pts with risk factors for bleeding (e.g., trauma, peptic ulcer disease).

ACTION

Reversibly inhibits platelet P2Y₁₂ ADP receptor to prevent signal transduction and platelet activation. **Therapeutic Effect:** Reduces platelet aggregation.

PHARMACOKINETICS

Readily absorbed after PO administration. Protein binding: 99%. Metabolized in liver. Primarily excreted in feces (58%), urine (26%). **Half-life:** 7–9 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Must either discontinue breastfeeding or discontinue drug therapy. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Aspirin greater than 100 mg/day may decrease effectiveness. **CYP3A4 inhibitors** (e.g., clarithromycin, ketoconazole) may increase concentration/effects. **CYP3A4 inducers** (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effects. **Anticoagulants** (e.g., warfarin), **antiplatelets** (e.g., aspirin, clopidogrel), **NSAIDs** (e.g., ibuprofen, ketorolac, naproxen) may increase risk of bleeding. May increase adverse effects of **apixaban, dabigatran, edoxaban**. May increase concentration of **digoxin, simvastatin, lovastatin**. **HERBAL:** St. John's wort may decrease concentration/effect. **Herbals with anticoagulant/antiplatelet properties** (e.g., garlic, ginger, ginkgo biloba), **glucosamine** may increase risk

of bleeding. **FOOD:** Grapefruit products may increase potential for bleeding. **LAB VALUES:** May increase serum uric acid, creatinine.

AVAILABILITY (Rx)

Tablets: 60 mg, 90 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.
- May be crushed, mixed with water, and drunk immediately (refill glass with water, stir and drink contents).

INDICATIONS/ROUTES/DOSAGE

Acute Coronary Syndrome

PO: ADULTS: Initially, 180 mg once, then 90 mg twice daily. (begin 12h after initial loading dose). Give with aspirin 325 mg once (loading dose), then maintain with aspirin 75–100 mg daily. Continue for up to 12 mos, then decrease dose to 60 mg twice daily.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate impairment:** Use caution. **Severe impairment:** Avoid use.

SIDE EFFECTS

Occasional (13%–7%): Dyspnea, headache. **Rare (5%–3%):** Cough, dizziness, nausea, diarrhea, back pain, fatigue.

ADVERSE EFFECTS/TOXIC REACTIONS

Life-threatening events including intracranial bleeding, epistaxis, intrapericardial bleeding with cardiac tamponade, hypovolemic shock requiring vasopressor support or blood transfusion reported. Pts with history of sick sinus syndrome, second- or third-degree AV block, bradycardic syncope have increased risk of bradycardia. May induce episodes of atrial fibrillation, hypotension, hypertension. Gynecomastia reported in less than 1% of men.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, serum chemistries, renal function, LFT. Question for history of bleeding, stomach ulcers, colon polyps, head trauma, cardiac arrhythmias, unstable angina, recent MI, hepatic impairment, hypertension, stroke. Receive full medication history including herbal products. Question for history of COPD, chronic bronchitis, emphysema, asthma, exertional dyspnea.

INTERVENTION/EVALUATION

Routinely screen for bleeding. Assess skin for bruising, hematoma. Monitor renal function, uric acid, digoxin levels if applicable. Report hematuria, epistaxis, coffee-ground emesis, black/tarry stools. Monitor ECG for chest pain, shortness of breath, syncope.

PATIENT/FAMILY TEACHING

- It may take longer to stop bleeding during therapy.
- Do not vigorously blow nose.
- Use soft toothbrush, electric razor to decrease risk of bleeding.
- Immediately report bloody stool, urine, or nosebleeds.
- Report all newly prescribed medications.
- Inform physician of any planned dental procedures or surgeries.

tigecycline

tye-gee-sye-kleen
(Tygacil)

BLACK BOX ALERT An increase in all-cause mortality observed in Phase 3 and 4 clinical trials. Use is reserved when alternate treatment is not appropriate.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Glycylcycline. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to *E. coli*, *E. faecalis*, *S. aureus*, *S. aga-*

lactiae, *S. anginosus* group (includes *S. anginosus*, *S. intermedius*, *S. constellatus*), *S. pyogenes*, *B. fragilis*, *Citrobacter freundii*, *E. cloacae*, *K. oxytoca*, *K. pneumoniae*, *B. thetaiotaomicron*, *B. uniformis*, *B. vulgatus*, *C. perfringens*, *Peptostreptococcus micros* including complicated skin/skin structure infections, complicated intra-abdominal infections, community-acquired bacterial pneumonia.

PRECAUTIONS

Contraindications: Hypersensitivity to tigecycline. **Cautions:** Hypersensitivity to tetracyclines, pregnancy, hepatic impairment, monotherapy for pts with intestinal perforation. Do not use for diabetic foot infections, healthcare (hospital)-acquired pneumonia, or ventilator-associated pneumonia.

ACTION

Inhibits protein synthesis by binding to ribosomal receptor sites of bacterial cell wall. **Therapeutic Effect:** Bacteriostatic effect.

PHARMACOKINETICS

Extensive tissue distribution, minimally metabolized. Excreted by biliary/fecal route (59%), urine (33%). Protein binding: 71%–89%. **Half-life:** Single dose: 27 hrs; following multiple doses: 42 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. May be distributed in breast milk. Permanent discoloration of the teeth (brown-gray) may occur if used during tooth development. **Children:** Safety and efficacy not established in pts younger than 8 yrs. Use is reserved for when no effective alternative is available. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration of **warfarin**, increase bleeding time. **HERBAL:** None significant. **FOOD:** None

known. **LAB VALUES:** May increase serum alkaline phosphatase, amylase, BUN, bilirubin, glucose, LDH, ALT, AST. May decrease Hgb, WBCs, thrombocytes, serum potassium, protein.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Tygacil): 50-mg vial.

ADMINISTRATION/HANDLING

Reconstitution • Add 5.3 mL 0.9% NaCl or D₅W to each 50-mg vial. • Swirl gently to dissolve. • Resulting solution is 10 mg/mL. • Immediately withdraw 5 mL reconstituted solution and add to 100 mL 0.9% NaCl or D₅W bag for infusion (final concentration should not exceed 1 mg/mL).

Rate of administration • Administer over 30–60 min every 12 hrs. • May be given through a dedicated line or piggyback. If same line is used for sequential infusion of several different drugs, line should be flushed before and after infusion of tigecycline with either 0.9% NaCl or D₅W.

Storage • Reconstituted solution is stable for up to 6 hrs at room temperature or up to 24 hrs if refrigerated. • Reconstituted solution appears yellow to red-orange. • Discard if solution is discolored (green, black) or precipitate forms.

IV INCOMPATIBILITIES

Amphotericin B, methylPREDNISolone, voriconazole.

IV COMPATIBILITIES

Amikacin, azithromycin, aztreonam, cefepime, cefTAZidime, ciprofloxacin, doripenem, ertapenem, fluconazole, gentamicin, linezolid, piperacillin-tazobactam, potassium chloride, telavancin, tobramycin, vancomycin.

INDICATIONS/ROUTES/DOSAGE

Systemic Infections

IV: ADULTS OVER 18 YRS, ELDERLY: Initially, 100 mg, followed by 50 mg

every 12 hrs for 5–14 days. **CHILDREN 12 YRS AND OLDER:** 50 mg q12h. **CHILDREN 8–11 YRS:** 1.2–2 mg/kg q12h. **Maximum:** 50 mg/dose.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment in mild to moderate impairment. **Severe impairment: IV: ADULTS OVER 18 YRS, ELDERLY:** Initially, 100 mg, followed by 25 mg every 12 hrs.

SIDE EFFECTS

Frequent (29%–13%): Nausea, vomiting, diarrhea. **Occasional (7%–4%):** Headache, hypertension, dizziness, increased cough, delayed healing. **Rare (3%–2%):** Peripheral edema, pruritus, constipation, dyspepsia, asthenia (loss of strength, energy), hypotension, phlebitis, insomnia, rash, diaphoresis.

ADVERSE EFFECTS/TOXIC REACTIONS

Dyspnea, abscess, pseudomembranous colitis (abdominal cramps, severe watery diarrhea, fever) ranging from mild to life-threatening may result from altered bacterial balance in GI tract.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, hepatic function test. Question for history of allergies, esp. tetracyclines, before therapy.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Be alert for superinfection: fever, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Nausea, vomiting may be controlled by antiemetics.

PATIENT/FAMILY TEACHING

- Report diarrhea, rash, mouth soreness, other new symptoms.

tildrakizumab-asmn

til-dra-kiz-ue-mab-asmn
(Ilumya)

Do not confuse tildrakizumab-asmn with atezolizumab, benralizumab, certolizumab, daclizumab, eculizumab, efalizumab, mepolizumab, tositumomab, or trastuzumab.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Interleukin-23 antagonist. Monoclonal antibody. **CLINICAL:** Antipsoriatic agent.

USES

Treatment of moderate to severe plaque psoriasis in adults who are candidates for systemic therapy or phototherapy.

PRECAUTIONS

Contraindications: Hypersensitivity to tildrakizumab-asmn. **Cautions:** Conditions predisposing to infection (e.g., diabetes, immunocompromised pts, renal failure, open wounds), prior exposure to tuberculosis. Concomitant use of live vaccines not recommended.

ACTION

Selectively binds to p19 subunit of interleukin-23 (IL-23) and inhibits interaction with IL-23 receptor. IL-23 is a cytokine that is involved in inflammatory and immune response. **Therapeutic Effect:** Alters biologic immune response; reduces inflammation.

PHARMACOKINETICS

Widely distributed. Degraded into small peptides and amino acids via catabolic pathway. Peak plasma concentration: 6 days. Steady state reached in 16 wks. **Half-life:** 23 days.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. However, human immunoglobulin G (IgG) is present

in breast milk and is known to cross the placenta. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease therapeutic effect of **live vaccines**. May increase risk of adverse effects/toxic reactions of **belimumab, live vaccines**. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Injection Solution, Prefilled Syringe: 100 mg/mL.

ADMINISTRATION/HANDLING

SQ

Preparation • Remove prefilled syringe from refrigerator and allow solution to warm to room temperature (approx. 30 mins) with needle cap intact. • Visually inspect for particulate matter or discoloration. Solution should appear clear to slightly opalescent, colorless to slightly yellow in color. Do not use if solution is cloudy, discolored, or if visible particles are observed. • If present, air bubbles do not need to be removed before administration.

Administration • Insert needle subcutaneously into upper arms, outer thigh, or abdomen and inject solution. • Do not inject into areas of active skin disease or injury such as sunburns, skin rashes, inflammation, skin infections, or active psoriasis. • Do not administer IV or intramuscular. • Rotate injection sites.

Storage • Refrigerate prefilled syringes in original carton until time of use. • Protect from light. • May store at room temperature for up to 30 days. Once warmed to room temperature, do not place back into refrigerator. • Do not freeze or expose to heating sources. • Do not shake.

INDICATIONS/ROUTES/DOSAGE

Plaque Psoriasis

SQ; ADULTS, ELDERLY: 100 mg at wk 0 and wk 4, then q12wks thereafter.

Dosage in Renal/Hepatic Impairment

Not specified; use caution.

SIDE EFFECTS

Rare (3%–2%): Injection site reactions (bruising, edema, erythema, hematoma, hemorrhage, inflammation, pain, pruritus, swelling, urticaria), diarrhea.

ADVERSE EFFECTS/TOXIC REACTIONS

Hypersensitivity reactions including angioedema, urticaria may occur. Upper respiratory tract infections reported in 14% of pts. Infections reported in 23% of pts. May increase risk of serious infections. Immunogenicity (auto-tildrakizumab-asmn antibodies) occurred in 7% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Consider completion of immunizations before initiation. Pts should be evaluated for active tuberculosis and tested for latent infection before initiation and periodically during therapy. Induration of 5 mm or greater with tuberculin skin testing should be considered a positive test result when assessing if treatment for latent tuberculosis is necessary. Screen for active infection. Question history of chronic infections, hypersensitivity reactions. Conduct dermatologic exam; record characteristics of psoriatic lesions.

INTERVENTION/EVALUATION

Assess skin for improvement of lesions. Monitor for symptoms of tuberculosis, including those who tested negative for latent tuberculosis infection before initiating therapy. Interrupt or discontinue treatment if serious infection, opportunistic infection, or sepsis occurs. Monitor for hypersensitivity reaction, angioedema.

PATIENT/FAMILY TEACHING

• Treatment may depress your immune system and reduce your ability to fight infection. Report symptoms of infection

such as body aches, burning with urination, chills, cough, fatigue, fever. Avoid those with active infection. • Do not receive live vaccines. • Expect frequent tuberculosis screening. • Report travel plans to possible endemic areas. • Report allergic reactions such as itching, swelling of the face or tongue.

tiotropium

TOP
100

tye-oh-trope-ee-yum
(Spiriva HandiHaler, Spiriva Respimat)

Do not confuse Spiriva with Inspan, or tiotropium with ipratropium.

FIXED-COMBINATION(S)

Stiolto Respimat: tiotropium/olodaterol (a bronchodilator): 2.5 mcg/2.5 mcg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticholinergic (long-acting). **CLINICAL:** Bronchodilator.

USES

Long-term maintenance treatment of bronchospasm associated with COPD, including chronic bronchitis, emphysema, and for reducing COPD exacerbations. **Spiriva Respimat only:** Maintenance treatment of asthma in pts 6 yrs and older.

PRECAUTIONS

Contraindications: Hypersensitivity to tiotropium. History of hypersensitivity to ipratropium. **Cautions:** Narrow-angle glaucoma, prostatic hypertrophy, bladder neck obstruction, moderate to severe renal impairment, history of hypersensitivity to atropine, myasthenia gravis.

ACTION

Competitively and reversibly inhibits action of acetylcholine at muscarinic recep-

tors in bronchial smooth muscle. **Therapeutic Effect:** Causes bronchodilation.

PHARMACOKINETICS

Binds extensively to tissue. Protein binding: 72%. Metabolized by oxidation. Excreted in urine. **Half-life:** 5–6 days.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Higher frequency of dry mouth, constipation, UTI noted with increasing age.

INTERACTIONS

DRUG: Concurrent administration with anticholinergics (e.g., acclidinium, umeclidinium, ipratropium) may increase adverse effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Inhalation Spray: (*Spiriva Respimat*): 1.25 mcg/actuation, 2.5 mcg/actuation. **Powder for Inhalation:** (*Spiriva*): 18 mcg/capsule (in blister packs).

ADMINISTRATION/HANDLING

Inhalation

• (*Spiriva*): Open dustcap of HandiHaler by pulling it upward, then open mouthpiece. • Place capsule in center chamber and firmly close mouthpiece until a click is heard, leaving the dustcap open. • Hold HandiHaler device with mouthpiece upward, press piercing button completely in once, and release. • Instruct pt to breathe out completely before breathing in slowly and deeply but at rate sufficient to hear the capsule vibrate. • Have pt hold breath as long as it is comfortable until exhaling slowly. • Instruct pt to repeat once again to ensure full dose is received. • (*Spiriva Respimat*): Refer to manufacturer's pt instructions.

Storage • Store at room temperature. Do not expose capsules to extreme tem-

perature, moisture. • Do not store capsules in HandiHaler device. • Use immediately once foil is peeled back or removed.

INDICATIONS/ROUTES/DOSAGE

CPD (Maintenance Treatment, Reduction of CPD Exacerbations)

Inhalation: ADULTS, ELDERLY: (*Spiriva*): 18 mcg (1 capsule)/day via HandiHaler inhalation device. (*Spiriva Respimat [2.5 mcg/actuation]*): 2 inhalations (2.5 mg/inhalation) once daily.

Asthma

Inhalation: ADULTS, ELDERLY, CHILDREN 6 YRS AND OLDER: (*Spiriva Respimat [1.25 mcg/actuation]*): 2 inhalations of 1.25 mcg once daily. Maximum benefit may take up to 4–8 wks.

Dosage in Renal Impairment

CrCl 60 mL/min or less: Use caution in moderate to severe impairment.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (16%–6%): Dry mouth, sinusitis, pharyngitis, dyspepsia, UTI, rhinitis. **Occasional (5%–4%):** Abdominal pain, peripheral edema, constipation, epistaxis, vomiting, myalgia, rash, oral candidiasis.

ADVERSE EFFECTS/TOXIC REACTIONS

Angina pectoris, depression, flu-like symptoms, glaucoma, increased intraocular pressure occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question history of glaucoma, bladder outlet obstruction, renal impairment, myasthenia gravis. Auscultate lung sounds.

INTERVENTION/EVALUATION

Monitor rate, depth, rhythm, type of respiration; quality, rate of pulse. Assess lung sounds for rhonchi, wheezing,

rales. Monitor ABGs. Observe for clavicular retractions, hand tremor. Evaluate for clinical improvement (quieter, slower respirations, relaxed facial expression, cessation of clavicular retractions).

PATIENT/FAMILY TEACHING

- Increase fluid intake (decreases lung secretion viscosity).
- Do not use more than 1 capsule for inhalation in a 24h period.
- Rinsing mouth with water immediately after inhalation may prevent mouth/throat dryness, thrush.
- Avoid excessive use of caffeine derivatives (chocolate, coffee, tea, cola, cocoa).
- Report eye pain/discomfort, blurred vision, visual halos.

tipiracil/trifluridine

trye-flure-i-deen/tye-pir-a-sil
(Lonsurf)

Do not confuse trifluridine with floxuridine, or tipiracil with tipifarnib or Pipracil.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimetabolite/thymidine phosphorylase inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of pts with metastatic colorectal cancer who have been previously treated with fluoropyrimidine-, oxaliplatin-, and irinotecan-based chemotherapy, an anti-vascular endothelial growth factor (VEGF) biological therapy, and if RAS wild-type, an anti-epidermal growth factor (EGFR) therapy. Treatment of metastatic gastric or gastroesophageal junction adenocarcinoma previously treated with a fluoropyrimidine, a platinum, and either a taxane or irinotecan.

PRECAUTIONS

Contraindications: Hypersensitivity to trifluridine or tipiracil. **Cautions:** Baseline anemia, leukopenia, neutropenia, thrombocytopenia; active infection, pts at increased

risk of infection (e.g., diabetes, indwelling catheters), pts with high tumor burden, history of pulmonary embolism; pregnancy, moderate to severe hepatic impairment.

ACTION

Trifluridine (active cytotoxic component) interferes with DNA synthesis and cell proliferation of cancer cells. Tipiracil increases exposure of trifluridine by inhibiting metabolism via thymidine phosphorylase. **Therapeutic Effect:** Inhibits tumor cell growth and metastasis.

PHARMACOKINETICS

Rapidly absorbed. Metabolized by thymidine phosphorylase (not metabolized in liver). Protein binding: trifluridine: 96%; tipiracil: 8%. Peak plasma concentration: 2 hrs. Excreted primarily in urine (50%). **Half-life:** trifluridine: 1.4 hrs (2.1 hrs at steady state); tipiracil: 2.1 hrs (2.4 hrs at steady state).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm. Female pts of reproductive potential must use effective contraception during treatment. Unknown if distributed in breast milk. Breastfeeding not recommended. **Males:** Due to risk of potential exposure, male pts must use condoms during sexual activity during treatment and up to 3 mos after discontinuation. **Children:** Safety and efficacy not established. **Elderly:** May have increased risk of neutropenia, thrombocytopenia.

INTERACTIONS

DRUG: May decrease therapeutic effect; increase adverse effects of **vaccines (live)**. **HERBAL:** **Echinacea** may decrease therapeutic effect. **FOOD:** None known. **LAB VALUES:** Expected to decrease Hct, Hgb, platelets, neutrophils, RBC, WBC.

AVAILABILITY (Rx)

Fixed-Dose Combination Tablets: (*Trifluridine/Tipiracil*): 15 mg/6.14 mg, 20 mg/8.19 mg.

ADMINISTRATION/HANDLING

PO

- Give within 1 hr of completion of morning and evening meals. Do not give on empty stomach.

INDICATIONS/ROUTES/DOSAGE

Note: Do not initiate the cycle until ANC is 1,500 cells/mm³ or greater; febrile neutropenia is resolved; platelet count is 75,000 cells/mm³ or greater; Grade 3 or 4 nonhematologic toxicity is resolved to Grade 1 or 0.

Colorectal, Gastric Cancer

PO: ADULTS, ELDERLY: (Dose based on trifluridine component) 35 mg/m² (rounded to nearest 5-mg increment) twice daily on days 1–5 and days 8–12 of 28-day cycle. Continue until disease progression or unacceptable toxicity. **Maximum:** 80 mg/dose (based on trifluridine component).

Dose Modification

Based on Common Terminology Criteria for Adverse Events (CTCAE).

Hematologic/Nonhematologic Toxicity

Interrupt treatment for ANC less than 500 cells/mm³; febrile neutropenia; platelet count less than 50,000 cells/mm³; Grade 3 or 4 nonhematologic toxicity. Do not restart until ANC is 1,500 cells/mm³ or greater; febrile neutropenia is resolved; platelet count is 75,000 cells/mm³ or greater; Grade 3 or 4 nonhematologic toxicity is resolved to Grade 1 or 0 (except Grade 3 nausea and/or vomiting controlled by antiemetic therapy; Grade 3 diarrhea responsive to antidiarrheal medication). Once resolved, resume at decreased incremental dose of 5 mg/m² from previous dose. A maximum of 3 dose reductions is allowed to dosage minimum of 20 mg/m² twice daily. Do not increase dose after it has been reduced.

Dosage in Renal Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Not studied; use caution.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment:** Not studied; use caution.

SIDE EFFECTS

Frequent (52%–19%): Asthenia, fatigue, nausea, diarrhea, decreased appetite, vomiting, abdominal pain, pyrexia. **Occasional (8%–7%):** Stomatitis, dysgeusia, alopecia.

ADVERSE EFFECTS/TOXIC REACTIONS

Severe and/or life-threatening myelosuppression including anemia (77% of pts), Grade 3 anemia (18% of pts), neutropenia (67% of pts), Grade 3 or 4 neutropenia (27% and 11% of pts), thrombocytopenia (42% of pts), Grade 3 or 4 thrombocytopenia (5% and 1% of pts), febrile neutropenia (3.8% of pts) may occur. Infectious processes including nasopharyngitis, urinary tract infection reported in 2%–4% of pts. Pulmonary embolism occurred in 2% of pts. Interstitial lung disease occurs rarely.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain baseline CBC and screen for anemia, neutropenia, thrombocytopenia. Obtain vital signs. Verify pregnancy status before start of each cycle. Screen for active infection, history of pulmonary embolism. Assess hydration status. Question pt's usual stool characteristics (color, frequency, consistency).

INTERVENTION/EVALUATION

Follow proper handling and disposal procedures for cytotoxic drugs. Monitor ANC, CBC on day 15 of each cycle. If any Grade 3 or 4 hematologic toxicity occurs, repeat ANC, CBC more frequently. If chest pain, dyspnea, tachycardia occurs, provide supplemental O₂ and obtain radiologic testing to rule out pulmonary embolism. Diligently monitor for infection. Monitor daily stool pattern, consistency. Encourage PO intake.

Monitor for bleeding if thrombocytopenia occurs.

PATIENT/FAMILY TEACHING

- Blood levels will be monitored regularly.
- Treatment may cause fetal harm. Female pts of childbearing potential should use effective contraception during treatment. Immediately report suspected pregnancy. Do not breastfeed.
- Male pts must use condoms during sexual activity.
- Immediately report chest pain, difficult breathing, fast heart rate, rapid breathing; may indicate life-threatening blood clot in the lungs.
- Report symptoms of bone marrow suppression or infection such as bruising easily, chills, cough, dizziness, fainting, fever, shortness of breath, weakness, or burning with urination.
- Avoid crowds, those with active infection.
- Take within 1 hr of breakfast and evening meal.
- Drink plenty of fluids.
- Report diarrhea, nausea, vomiting that is not controlled by antinausea, anti-diarrheal medication.
- Report bleeding of any kind.

tisagenlecleucel

tis-a-jen-lek-loo-sel
(Kymriah)

BLACK BOX ALERT Life-threatening cytokine release syndrome (CRS) was reported. Do not administer in pts with inflammatory disorders or severe active infection. Treat CRS with tocilizumab and corticosteroids. Life-threatening neurologic toxicities may occur. Monitor for neurological events after treatment.

Do not confuse tisagenlecleucel with sipuleucel-T or Kymriah with Kynamro.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Anti-CD19. Chimeric antigen receptor (CAR) T-cell immunotherapy. **CLINICAL:** Antineoplastic.

USES

Treatment of B-cell precursor acute lymphoblastic leukemia (ALL) that is refractory or in second or later relapse in pts up to 25 yrs of age. Treatment of adults with relapsed or refractory large B-cell lymphoma after two or more lines of systemic therapy including diffuse large B-cell lymphoma (DLBCL) not otherwise specified, high-grade B-cell lymphoma and DLBCL arising from follicular lymphoma. Limitations: Not indicated for treatment of primary central nervous system lymphoma.

PRECAUTIONS

Contraindications: Hypersensitivity to tisagenlecleucel. **Cautions:** Electrolyte imbalance, elderly pts, renal impairment, pulmonary disease, cardiac disease; baseline anemia, neutropenia, leukopenia, lymphopenia, thrombocytopenia; conditions predisposing to infection (e.g., diabetes, renal failure, immunocompromised pts, open wounds); history of venous thromboembolism (DVT, PE); pts at risk for acute thrombosis (immobility, indwelling venous catheter/access device, morbid obesity, underlying atherosclerosis, genetic hypercoagulable conditions); history of HIV infection, hepatitis B or C virus infection; pts at risk for tumor lysis syndrome (high tumor burden). Not recommended during active infection or in pts with inflammatory disorders. Avoid administration of live vaccines during treatment and after discontinuation until B cells are no longer depleted.

ACTION

A CD-19–directed genetically modified autologous T-cell immunotherapy that reprograms T cells with a transgene encoding a chimeric antigen receptor, which identifies and eliminates CD19-expressing malignant and normal cells. CAR recognizes CD19 and is fused to CD137 (enhances expansion and persistence of tisagenlecleucel) and CD3 zeta (a critical component for initiating T-cell activation

and antitumor activity). **Therapeutic Effect:** Causes antitumor activity by initiating activation of T cells.

PHARMACOKINETICS

Highly distributed into bone marrow. Peak plasma concentration: approx. 10 days. **Half-life:** 17 days (ALL); 45 days (DCBC).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm due to fetal B-cell depletion and neonatal lymphocytopenia. Unknown if distributed in breast milk. **Children:** Safety and efficacy has been established. **Elderly:** Safety and efficacy not established.

INTERACTIONS

DRUG: Systemic corticosteroids (e.g., dexamethasone, prednisone) may decrease therapeutic effect; may increase risk of infection. May decrease therapeutic effect of vaccines. May increase adverse/toxic effects of live vaccines. **Granulocyte colony-stimulating factors, sargramostim** may increase adverse/toxic effects of tisagenlecleucel. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, bilirubin. May decrease serum potassium, phosphorus, sodium; B-cell counts, fibrinogen, immunoglobulin concentrations, leukocytes, lymphocytes, neutrophils, platelets. May prolong aPTT.

AVAILABILITY (Rx)

Patient-Specific Autologous Infusion: 0.2–5 × 10⁶ CAR-positive viable T cells/kg, 0.1–2.5 × 10⁸ CAR-positive viable T cells, 0.6–6 × 10⁸ CAR-positive viable T cells.

ADMINISTRATION/HANDLING

◀ALERT▶ Premedicate with acetaminophen and diphenhydramine (or another H1 antihistamine) approx. 30–60 min before infusion. Do not use a leukocyte-depleting filter during infu-

sion. Infusion bags contain human cells genetically modified with a lentivirus. Follow biosafety handling and safety guidelines.

Preparation • Verify the number of infusion bags needed for dose (up to 3 cryopreserved patient-specific infusion bags may be required to complete a single dose). • Verify dose with Certificate of Conformance (CoC) and Certificate of Analysis (CoA). • Thawing time must be coordinated with infusion time. If more than 1 bag is needed for dose, recommend thawing 1 bag at a time (allows verification that the previous bag was administered safely). • Match pt identity with infusion bag identifiers. • Visually inspect for cracks or breaks. Do not infuse if cracks or breaks are present. • Prime infusion tubing with 0.9% NaCl. • **Thawing:** Place infusion bag inside a second sterile bag to safeguard infusion bag from leaks and to protect ports from contamination. • Thaw 1 bag at a time using either a water bath at 37°C or dry thawing method. • Continue to thaw until no ice is visible on infusion bag. Then remove bag from thawing device. • Visually inspect for clumps. Gently mix if clumps are present (small clumps should disperse). • Do not infuse if bag is leaking, damaged, or if clumps do not disperse after gentle mixing. • Do not spin down, wash, or resuspend contents.

Rate of administration • Infuse at 10–20 mL/min (adjust as needed for small children who require smaller volumes) until all contents are infused. • Upon completion, rinse infusion bag with 10–30 mL of 0.9% NaCl (while maintaining a closed system) to ensure that as many cells as possible are administered.

Storage • Infusion bags are frozen until time of use. • Thawed infusion

bags that have reached room temperature must be infused within 30 min. • Do not store thawed infusion bags at 37°C.

INDICATIONS/ROUTES/DOSAGE

Note: Single-dose infusion(s) contains specimen of chimeric antigen receptor (CAR)-positive viable T cells. Dose is based on weight at the time of leukapheresis.

ALL (Relapsed/Refractory)

Note: Give 2–14 days following lymphodepleting chemotherapy with fludarabine and cyclophosphamide.

IV: ADULTS YOUNGER THAN 25 YRS, CHILDREN WEIGHING 50 KG OR LESS: 0.2–5 × 10⁶ CAR-positive viable T cells/kg. **WEIGHING 50 KG OR MORE:** 0.1–2.5 × 10⁸ CAR-positive viable T cells.

DLBCL (Relapsed/Refractory)

Note: Give 2–11 days following lymphodepleting chemotherapy with fludarabine and cyclophosphamide.

IV: ADULTS: 0.6–6 × 10⁸ CAR-positive viable T cells.

Dosage in Renal /Hepatic Impairment

Not specified; use caution.

SIDE EFFECTS

Frequent (40%–18%): Pyrexia, decreased appetite, headache, migraine, tachycardia, nausea, diarrhea, vomiting, fatigue, malaise, cough, edema (generalized, peripheral), delirium, agitation, hallucination, irritability, restlessness, generalized pain, constipation. **Occasional (16%–6%):** Abdominal pain, rash (maculopapular, papular, pruritic), myalgia, arthralgia, anxiety, tachypnea, chills, fluid overload, back pain, sleep disorder, insomnia, nightmares, nasal congestion, tremor, dizziness, oropharyngeal pain. **Rare (3%–1%):** Speech disorder (dysarthria, aphasia), visual impairment, motor dysfunction, muscle spasm.

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia, leukopenia, lymphopenia, neutropenia, thrombocytopenia are expected responses to therapy, but more severe reactions including bone marrow depression, febrile neutropenia may be life-threatening. Prolonged cytopenias may occur for several wks following lymphodepleting chemotherapy. Life-threatening CRS reported in up to 79% of pts. Symptoms of CRS may include asthenia, hypotension, nausea, pyrexia; elevated ALT/AST, bilirubin; disseminated intravascular coagulation (DIC), capillary leak syndrome, hemophagocytic lymphohistiocytosis/macrophage activation syndrome (HLH/MAS). Median time to onset of CRS was 3–10 days. Infusion reactions may be clinically indistinguishable from CRS. Life-threatening neurological toxicities including altered mental status, balance disorders, confusion, disorientation, encephalopathy, seizures, speech disorders, syncope occurred in up to 72% of pts. Median time to onset of neurological toxicities was 6–14 days. Cardiac events including cardiac failure, cardiac arrest may occur, esp. in pts with history of cardiac disease. Life-threatening opportunistic infections, bacterial/viral/fungal infections, sepsis were reported. Other life-threatening or fatal events may include abdominal compartment syndrome, acute kidney injury, ARDS, graft-versus-host disease, multiple organ dysfunction syndrome, respiratory distress/failure, seizures, thrombosis (DVT, PE, venous thrombosis). May cause HBV reactivation, resulting in fulminant hepatitis, hepatic failure, or death. Tumor lysis syndrome may present as acute renal failure, hypocalcemia, hyperuricemia, hyperphosphatemia. Hypogammaglobulinemia, agammaglobulinemia (IgG) (related to B-cell aplasia) reported in 43% of pts. May increase risk of new malignancies. Hypersensitivity reactions including anaphylaxis may occur. Immunogenicity (anti-mCAR19 antibodies) occurred in 5% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, BMP, LFT, vital signs; pregnancy test in females of reproductive potential. Test all pts for hepatitis B or C virus infection, HIV infection before cell collection. Withhold infusion if any of the following are present: active graft-versus-host disease, unresolved adverse effect from previous chemotherapies (e.g., cardiac reactions, hypotension, pulmonary reactions); severe, uncontrolled infection; worsening of leukemia burden following lymphodepleting chemotherapy. Ensure that tocilizumab, emergency resuscitative equipment are readily available before initiation and following completion. Question history of cardiac disease, pulmonary disease, chronic infections, renal impairment, thrombosis. Question for recent administration of vaccines, live vaccines. Offer emotional support.

INTERVENTION/EVALUATION

Monitor ANC, CBC, BMP, LFT, vital signs as clinically indicated; immunoglobulin levels after treatment (and in newborns of treated mothers). Manage hypogammaglobulinemia as clinically appropriate. Obtain serum calcium, phosphate, uric acid if tumor lysis syndrome is suspected (presents as acute renal failure, electrolyte imbalance, cardiac arrhythmias, seizures). Diligently monitor for CRS. Recommend observation 2–3 times/wk during the first wk at a health care facility. Follow manufacturer's guidelines regarding management of CRS (e.g., administration of IV fluids, vasopressors, tocilizumab). Monitor for infections of any kind. Due to risk of cardiovascular events, have emergency resuscitation equipment readily available. Conduct routine neurological assessments. Monitor for symptoms of DVT (leg or arm pain/swelling), PE (chest pain, dyspnea, tachycardia). Monitor for bleeding events, renal toxicity (anuria, hypertension, generalized edema, flank pain),

secondary malignancies, recurrence of cancer, HBV reactivation (amber to orange-colored urine, fatigue, jaundice, nausea, vomiting), neurological toxicities. Monitor weight, I&Os; daily pattern of bowel activity, stool consistency. Ensure adequate hydration, nutrition.

PATIENT/FAMILY TEACHING

• Treatment may depress your immune system and reduce your ability to fight infection. Report symptoms of infection such as body aches, burning with urination, chills, cough, fatigue, fever. Avoid those with active infection. • Report symptoms of bone marrow depression such as bruising, fatigue, fever, shortness of breath, weight loss, bleeding easily, bloody urine or stool. • CRS, a life-threatening condition caused by immune activation, may occur; report difficulty breathing, headache, fever, low blood pressure, rash, rapid heart rate. Stay within the proximity of a health care facility for at least 4 wks after infusion. • Therapy may cause tumor lysis syndrome (a condition caused by the rapid breakdown of cancer cells), which can cause kidney failure and can be fatal. Report decreased urination, amber-colored urine, confusion, difficulty breathing, fatigue, fever, muscle or joint pain, palpitations, seizures, vomiting. • Effective contraception may be required based on treatment with other medications. • Report cardiovascular events (e.g., difficulty breathing, fainting, irregular heartbeats, palpitations, sweating). • Report bleeding of any kind. • If applicable, vaccinations should be up-to-date at least 6 wks before starting treatment. Do not receive live vaccines. • Report symptoms of DVT (e.g., swelling, pain, hot feeling in the arms or legs; discoloration of extremity), lung embolism (e.g., difficulty breathing, chest pain, rapid heart rate). • Report liver problems such as bruising, confusion, dark or amber-colored urine, right upper abdominal pain, or yellowing of the skin or eyes; kidney problems such as decreased urine output, dark-colored urine;

allergic reactions such as difficulty breathing, hives, low blood pressure, rash, swelling of the face or tongue. • Treatment may cause reactivation of chronic viral infections, new cancers.

tiZANidine

tye-zan-i-deen
(Zanaflex)

Do not confuse tiZANidine with tiaGABine.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Alpha₂-adrenergic agonist. **CLINICAL:** Antispastic.

USES

Acute and intermittent management of muscle spasticity (spasms, stiffness, rigidity), spasticity associated with multiple sclerosis or spinal cord injury.

PRECAUTIONS

Contraindications: Hypersensitivity to tiZANidine. Concurrent use with strong CYP1A2 inhibitors (e.g., ciprofloxacin, fluvoxamine). **Cautions:** Renal/hepatic disease, pts at risk for severe hypotensive effects, cardiac disease, psychiatric disorders, elderly pts.

ACTION

Increases presynaptic inhibition of spinal motor neurons mediated by alpha₂-adrenergic agonists, reducing facilitation to postsynaptic motor neurons. **Therapeutic Effect:** Reduces muscle spasticity.

PHARMACOKINETICS

Metabolized in liver. Primarily excreted in urine. **Half-life:** 2 hrs.

INTERACTIONS

DRUG: Alcohol, other CNS depressants (e.g., LORazepam, morphine,

zolpidem) may increase CNS depressant effects. **Strong CYP1A2 inhibitors** (e.g., ciprofloxacin, fluvoxamine) may increase concentration/adverse effects (contraindicated). **HERBAL:** Herbs with hypotensive properties (e.g., garlic, ginger, ginkgo biloba) may alter effects. Herbs with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST.

AVAILABILITY (Rx)

Capsules: 2 mg, 4 mg, 6 mg. **Tablets:** 2 mg, 4 mg.

ADMINISTRATION/HANDLING

PO

- Capsules may be opened and sprinkled on food.
- May give without regard to food.
- Administration should be consistent and not switched between giving with or without food.

INDICATIONS/ROUTES/DOSAGE

Muscle spasticity

PO: ADULTS, ELDERLY: Initially, 2 mg once daily at bedtime. May increase by 2–4 mg at intervals of 1–4 days. **Maximum:** 36 mg/day in 3–4 divided doses. **Discontinuation of therapy:** Gradually taper dose by 2–4 mg daily.

Dosage in Renal Impairment

May require dose reduction/less frequent dosing. **CrCl less than 25 mL/min:** Reduce dose by 50%. If higher doses needed, increase dose instead of frequency.

Dosage in Hepatic Impairment

Avoid use if possible. If used, monitor for adverse effects (e.g., hypotension).

SIDE EFFECTS

Frequent (49%–41%): Dry mouth, drowsiness, asthenia. **Occasional (16%–4%):** Dizziness, UTI, constipation. **Rare (3%):** Nervousness, amblyopia, pharyngitis, rhinitis, vomiting, urinary frequency.

ADVERSE EFFECTS/TOXIC REACTIONS

Hypotension may be associated with bradycardia, orthostatic hypotension, and, rarely, syncope. Risk of hypotension increases as dosage increases; hypotension is noted within 1 hr after administration. May cause visual hallucinations.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Record onset, type, location, duration of muscular spasm. Check for immobility, stiffness, swelling. Obtain LFT.

INTERVENTION/EVALUATION

Assist with ambulation at all times. For those on long-term therapy, serum hepatic/renal function tests should be performed periodically. Evaluate for therapeutic response (decreased intensity of skeletal muscle pain/tenderness, improved mobility, decrease in spasticity). Go from lying to standing slowly.

PATIENT/FAMILY TEACHING

- Avoid tasks that require alertness, motor skills until response to drug is established.
- Avoid sudden changes in posture.
- May cause hypotension, sedation, impaired coordination.
- Avoid alcohol.

tobramycin

toe-bra-mye-sin
(TOBI, Tobrex)

BLACK BOX ALERT May cause neurotoxicity, nephrotoxicity, ototoxicity. Ototoxicity usually is irreversible. Increased risk of neuromuscular blockade, including respiratory paralysis, particularly

when given after anesthesia or muscle relaxants. May cause fetal harm.

Do not confuse tobramycin with vancomycin, or Tobrex with TobraDex.

FIXED-COMBINATION(S)

TobraDex: tobramycin/dexamethasone (a steroid): 0.3%/0.1% per mL or per g. **Zylet:** tobramycin/loteprednol: 0.3%/0.5%.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Aminoglycoside. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to *P. aeruginosa*, other gram-negative organisms including skin/skin structure, bone, joint, respiratory tract infections; postop, burn, intra-abdominal infections; complicated UTI; septicemia; meningitis. **Ophthalmic:** Superficial eye infections: blepharitis, conjunctivitis, keratitis, corneal ulcers. **Inhalation:** Bronchopulmonary infections (*Pseudomonas aeruginosa*) in pts with cystic fibrosis.

PRECAUTIONS

Contraindications: Hypersensitivity to tobramycin, other aminoglycosides (cross-sensitivity) and their components.

Cautions: Renal impairment, preexisting auditory or vestibular impairment, conditions that depress neuromuscular transmission, Parkinson's disease, myasthenia gravis, hypocalcemia, pregnancy, elderly pts.

ACTION

Irreversibly binds to protein on bacterial ribosomes. **Therapeutic Effect:** Interferes with protein synthesis of susceptible microorganisms.

PHARMACOKINETICS

Rapid, complete absorption after IM administration. Protein binding: less than 30%. Widely distributed (does not cross blood-

brain barrier; low concentrations in CSF). Excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 2–4 hrs (increased in renal impairment, neonates; decreased in cystic fibrosis, febrile or burn pts).

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug readily crosses placenta; distributed in breast milk. May cause fetal nephrotoxicity. Ophthalmic form should not be used in breastfeeding mothers and only when specifically indicated in pregnancy. **Children:** Immature renal function in neonates, premature infants may increase risk of toxicity. **Elderly:** Age-related renal impairment may increase risk of toxicity; dosage adjustment recommended.

INTERACTIONS

DRUG: May decrease therapeutic effect of **BCG (intravesical)**, **vaccine (live)**. **Foscarnet**, **mannitol** may increase nephrotoxic effect. **Penicillin** may decrease concentration/effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, bilirubin, creatinine, alkaline phosphatase, LDH, ALT, AST. May decrease serum calcium, magnesium, potassium, sodium. Therapeutic peak serum level: 5–20 mcg/mL; therapeutic trough serum level: 0.5–2 mcg/mL. Toxic peak serum level: greater than 20 mcg/mL; toxic trough serum level: greater than 2 mcg/mL.

AVAILABILITY (Rx)

Infusion, Premix: 60 mg/50 mL, 80 mg/100 mL. **Inhalation Powder: (TOBI Podhaler):** 28 mg in a capsule. **Injection, Powder for Reconstitution:** 1.2 g. **Injection Solution:** 10 mg/mL, 40 mg/mL. **Ointment, Ophthalmic: (Tobrex):** 0.3%. **Solution, Nebulization: (TOBI):** 60 mg/mL. **Solution, Ophthalmic: (Tobrex):** 0.3%.

ADMINISTRATION/HANDLING

⚠ **ALERT** Coordinate peak and trough lab draws with administration times.

Reconstitution • Dilute with 50–100 mL D₅W or 0.9% NaCl. Amount of diluent for infants, children depends on individual need.

Rate of administration • Infuse over 30–60 min.

Storage • Store vials at room temperature. • Solutions may be discolored by light or air (does not affect potency). • Reconstituted solution stable for 24 hrs at room temperature or 96 hrs if refrigerated.

IM

• To minimize discomfort, give deep IM slowly. • Less painful if injected into gluteus maximus rather than lateral aspect of thigh.

Inhalation

• Refrigerate. • May store at room temperature up to 28 days after removing from refrigerator. • Do not use if cloudy or contains particulates. • **Podhaler:** Pt must not swallow capsules. • Doses should be as close as possible to 12 hrs apart and not less than 6 hrs apart. • Use Podhaler device supplied.

Ophthalmic

• Place gloved finger on lower eyelid, pull out until pocket is formed between eye and lower lid. • Place correct number of drops (14–12 inch ointment) into pocket. • **Solution:** Apply digital pressure to lacrimal sac for 1–2 min (minimizes drainage into nose/throat, reducing risk of systemic effects). • **Ointment:** Instruct pt to close eye for 1–2 min, rolling eyeball (increases contact area of drug to eye). • Remove excess solution/ointment around eye.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), heparin, indomethacin (Indocin), piperacillin-tazobactam (Zosyn), propofol (Diprivan), sargramostim (Leukine, Prokine).

IV COMPATIBILITIES

Amiodarone (Cordarone), calcium gluconate, cefepime, ceftazoline, ceftAZidime, dexmedetomidine (Precedex), dilTIAZem (Cardizem), furosemide (Lasix), HYDROMORPHONE (Dilaudid), insulin, linezolid (Zyvox), magnesium sulfate, midazolam (Versed), morphine, niCARDipine (Cardene), tigecycline (Tygacil).

INDICATIONS/ROUTES/DOSAGE

◀ ALERT ▶ Space parenteral doses evenly around the clock. Dosage based on ideal body weight. Peak, trough levels determined periodically to maintain desired serum concentrations (minimizes risk of toxicity). Recommended peak level: 4–10 mcg/mL; trough level: 0.5–2 mcg/mL.

Usual Parenteral Dosage

IV: ADULTS, ELDERLY: 3–7.5 mg/kg/day in 3 divided doses. Once-daily dosing: 4–7 mg/kg every 24 hrs. **CHILDREN 5 YRS AND OLDER:** 2–2.5 mg/kg/dose q8h. **CHILDREN YOUNGER THAN 5 YRS:** 2.5 mg/kg/dose q8h. **NEONATES LESS THAN 1 KG (14 DAYS OR YOUNGER):** 5 mg/kg/dose q48h; **(15–28 DAYS):** 5 mg/kg/dose q36h. **1–2 KG (7 DAYS OR YOUNGER):** 5 mg/kg/dose q48h; **(8–28 DAYS):** 5 mg/kg/dose q36h. **GREATER THAN 2 KG (7 DAYS OR YOUNGER):** 4 mg/kg q24h; **(8–28 DAYS):** 4–5 mg/kg q24h.

Usual Ophthalmic Dosage

Ophthalmic ointment: ADULTS, ELDERLY, CHILDREN 2 MOS AND OLDER: Apply 12 inch to conjunctiva q8–12h (q3–4h for severe infections). **Ophthalmic solution: ADULTS, ELDERLY, CHILDREN 2 MOS AND OLDER:** 1–2 drops in affected eye q4h (2 drops/hr for severe infections).

Usual Inhalation Dosage (Cystic Fibrosis)

Inhalation high dose: ADULTS, CHILDREN 6 YRS AND OLDER: 300 mg q12h 28 days on, 28 days off. (**Tobi Podhaler**): Four 28-mg capsules twice daily for 28 days followed by 28 days off.

Dosage in Renal Impairment

Dosage and frequency modified based on degree of renal impairment, serum drug concentration. After loading dose of 1–2 mg/kg, maintenance dose and frequency are based on serum creatinine levels, creatinine clearance.

Creatinine Clearance Dosing Interval

41–60 mL/min	q12h
21–40 mL/min	q24h
10–20 mL/min	q48h
Less than 10 mL/min	q72h
Hemodialysis	Loading dose 2–3 mg/kg then 1–2 mg/kg q48–72h
Continuous renal replacement therapy	Loading dose 2–3 mg/kg then 1–2.5 mg/kg q24–48h

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional: IM: Pain, induration.

IV: Phlebitis, thrombophlebitis. **Topical:** Hypersensitivity reaction (fever, pruritus, rash, urticaria). **Ophthalmic:** Tearing, itching, redness, eyelid swelling.

Rare: Hypotension, nausea, vomiting.

ADVERSE EFFECTS/TOXIC REACTIONS

Nephrotoxicity (acute kidney injury, acute tubular necrosis, renal failure) may be reversible if drug is stopped at first sign of symptoms. Irreversible ototoxicity (dizziness, ringing/roaring in ears, hearing loss), neurotoxicity (headache, dizziness, lethargy, tremor, visual disturbances) occur occasionally. Risk increases with higher dosages or prolonged therapy or if solution is applied directly to mucosa. Superinfections, particularly fungal infections, may result from bacterial imbalance with any administration route. Anaphylaxis may occur.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Dehydration must be treated before beginning parenteral therapy. Question for history of allergies, esp. aminoglyco-

sides, sulfite (and parabens for topical, ophthalmic routes). Establish baseline hearing acuity. Obtain baseline lab tests, esp. renal function.

INTERVENTION/EVALUATION

Monitor I&O (maintain hydration), urinalysis, renal function. Monitor results of peak/trough blood tests. **Therapeutic serum level:** peak: 5–20 mcg/mL; trough: 0.5–2 mcg/mL. **Toxic serum level:** peak: greater than 20 mcg/mL; trough: greater than 2 mcg/mL. Be alert to ototoxic, neurotoxic symptoms. Evaluate IV site for phlebitis (heat, pain, red streaking over vein). Assess for rash. Be alert for superinfection, particularly anal/genital pruritus, changes of oral mucosa, diarrhea. When treating pts with neuromuscular disorders, assess respiratory response carefully. **Ophthalmic:** Assess for redness, swelling, itching, tearing.

PATIENT/FAMILY TEACHING

- Report any hearing, visual, balance, urinary problems, even after therapy is completed.
- **Ophthalmic:** Blurred vision, tearing may occur briefly after application.
- Report persistent tearing, redness, irritation.

tocilizumab

toe-si-liz-oo-mab
(Actemra)

BLACK BOX ALERT ■ Tuberculosis, serious invasive fungal infections, other opportunistic infections have occurred. Test for tuberculosis prior to and during treatment, regardless of initial result. Consider treatment of latent TB prior to initiation.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Interleukin (IL)-6 receptor inhibitor.
CLINICAL: Antirheumatic, disease-modifying agent.

USES

Treatment of moderate to severe rheumatoid arthritis in adults who had inadequate response to disease-modifying antirheumatic drugs (DMARDs). Treatment of active systemic juvenile idiopathic arthritis (SJIA) in pts 2 yrs of age and older. Treatment of active polyarticular juvenile idiopathic arthritis (PJIA) in pts 2 yrs and older. Treatment of adults and children 2 yrs of age and older with chimeric antigen receptor (CAR) T cell–induced severe or life-threatening cytokine release syndrome. Treatment of giant cell arteritis in adults.

PRECAUTIONS

Contraindications: Hypersensitivity to tocilizumab. **Cautions:** Platelet count 100,000 cells/mm³ or less, ANC less than 2,000 cells/mm³, ALT, AST greater than 1.5 times upper limit of normal (ULN) prior to treatment. Do not administer to pts with active infection. Preexisting or recent-onset CNS demyelinating disorders, including multiple sclerosis; pts with chronic or recurrent infection or who have been exposed to tuberculosis; hematologic cytopenia, hepatic impairment, elderly pts, pts at increased risk of GI perforation. Avoid live vaccinations.

ACTION

Binds to IL-6 receptors, inhibiting signals of proinflammatory cytokines. **Therapeutic Effect:** Inhibits/slows structural joint damage, improves physical function.

PHARMACOKINETICS

Distributed in steady state of plasma and tissue compartments. Undergoes biphasic elimination from circulation. **Half-life:** 11–13 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established in conditions other than SJIA. **Elderly:** Cautious use due to increased risk of serious infections, malignancy.

INTERACTIONS

DRUG: May increase adverse effects of **abatacept, belimumab, natalizumab, tofacitinib, vaccines (live)**. May decrease therapeutic effect of **vaccines (live)**. **Baricitinib** may increase adverse effects. May increase immunosuppressive effect of **anti-TNF agents (e.g., adalimumab, etanercept, infliximab)**. **HERBAL:** Echinacea may alter levels/effects. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, lipids. May decrease platelets, neutrophils.

AVAILABILITY (Rx)

Injection Solution: 20 mg/mL (80 mg/4 mL, 200 mg/10 mL, 400 mg/20 mL). **Syringe for SQ Administration:** 162 mg/0.9 mL. **Syringe Auto-injector:** 162 mg/0.9 mL.

ADMINISTRATION/HANDLING

◀ ALERT ▶ Do not infuse IV push or bolus.

Reconstitution • Dilute in 100 mL 0.9% NaCl (50 mL 0.9% NaCl for SJIA pts weighing less than 30 kg). • Prior to mixing, withdraw and discard volume of NaCl equal to volume of patient-dosed solution. • Invert bag to avoid foaming. • Inject solution and dilute for mixture that equals 50 mL or 100 mL in NaCl bag.

Rate of administration • Infuse over 1 hr.

Storage • Refrigerate vials; do not freeze. • Diluted solutions may be stored for 24 hrs at room temperature or refrigerated. • Protect from light until time of use. • Solution appears colorless. Discard solution if it appears cloudy, discolored, or contains particulate.

INDICATIONS/ROUTES/DOSAGE

Note: Do not infuse concomitantly in same IV line with other drugs. Do not begin if ANC less than 2,000 cells/mm³, platelets less than 100,000 cells/mm³, or ALT or AST more than 1.5 times ULN.

Moderate to Severely Active Rheumatoid Arthritis

IV: ADULTS, ELDERLY: 4 mg/kg every 4 wks initially. May increase to 8 mg/kg every 4 wks. **Maximum:** 800 mg per dose. **SQ: ADULTS, ELDERLY WEIGHING 100 KG OR GREATER:** 162 mg/wk. **WEIGHING LESS THAN 100KG:** 162 mg every other wk. May increase to every wk based on clinical response.

Cytokine Release Syndrome

IV: ADULTS, CHILDREN WEIGHING 30 KG OR GREATER: 8 mg/kg. **PTS WEIGHING LESS THAN 30 KG:** 12 mg/kg. If no clinical improvement, 3 additional doses may be given with an interval of at least 8 hrs. **Maximum:** 800 mg/dose.

Giant Cell Arteritis

SQ: ADULTS, ELDERLY: 162 mg once every wk (in combination with tapering course of glucocorticoid). May be given alone following discontinuation of glucocorticoid.

Dosage Modification

Hepatic enzyme levels greater than ULN.

Lab Value	Recommendation
1–3 times ULN	Dose modify concomitant DMARDs or reduce dose to 4 mg/kg until ALT, AST normalized
Greater than 3–5 times ULN	Interrupt treatment until ALT, AST less than 3 times ULN, then follow guidelines for 1–3 times ULN
Greater than 5 times ULN	Discontinue treatment

SJIA

IV: CHILDREN WEIGHING 30 KG OR GREATER: 8 mg/kg q2wks. **CHILDREN WEIGHING LESS THAN 30 KG:** 12 mg/kg q2wks.

SQ: CHILDREN WEIGHING 30 KG OR GREATER: 162 mg once every wk. **CHILDREN WEIGHING LESS THAN 30 KG:** 162 mg q2wks.

PJIA

IV: CHILDREN WEIGHING 30 KG OR GREATER: 8 mg/kg q4wks. **CHILDREN WEIGHING LESS THAN 30 KG:** 10 mg/kg q4wks.

SQ: WEIGHING 30 KG OR GREATER: 162 mg q2wks. **WEIGHING LESS THAN 30 KG:** 162 mg q3wks.

Dosage in Renal Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment:** Use caution (not studied).

Dosage in Hepatic Impairment

Not recommended.

SIDE EFFECTS

Occasional (8%–6%): Upper respiratory tract infection, nasopharyngitis, headache, hypertension. **Rare (5%–3%):** Infusion reaction, dizziness, bronchitis, rash, oral ulceration.

ADVERSE EFFECTS/TOXIC REACTIONS

Up to 48% of pts experience elevated ALT, AST. Neutropenia, thrombocytopenia occur in 4% of pts. Serious infections, including sepsis, pneumonia, tuberculosis, invasive fungal infections, hepatitis B, have occurred. Anaphylactic reaction, rash, pruritus, urticaria, bronchospasm, swelling, dyspnea occur in less than 0.2% of pts; hypersensitivity reactions (hypertension, headaches, flushing) occur more frequently. Increased risk of lymphoma, melanoma. New onset or exacerbation of CNS demyelinating disorders, including multiple sclerosis. Risk of gastric perforation with concomitant use of NSAIDs, corticosteroids.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Evaluate pt for active tuberculosis and test for latent infection prior to initiating treatment and periodically during therapy. Induration of 5 mm or greater with tuberculin skin testing should be considered a positive test result when assessing for latent tuberculosis. Antifungal therapy should be considered for pts who reside or travel to regions where mycoses are endemic. Do not initiate therapy during an active infection. Viral reactivation can occur in cases

of herpes zoster, HIV. Assess baseline lab results (hepatic enzymes, cholesterol, triglycerides, platelets, neutrophils) q4–8wks during treatment. Pts should report history of diverticulitis, weakened immune system, HIV, hepatic disease, GI bleeding, hemoptysis, diarrhea, weight loss, cancer, prior cancer treatment, use of NSAIDs, glucocorticosteroids.

INTERVENTION/EVALUATION

Monitor hepatitis B carriers during and several months following therapy. If reactivation occurs, consider interrupting treatment. Monitor pts for signs/symptoms of tuberculosis regardless of baseline PPD. Discontinue treatment if pt develops acute infection, opportunistic infection, or sepsis and initiate appropriate antimicrobial therapy. Monitor warfarin, theophylline, cycloSPORINE levels for therapeutic ranges. Modify, interrupt, or discontinue treatment if ALT, AST is 1–5 times ULN.

PATIENT/FAMILY TEACHING

- Inform pt that therapy may lower immune system response.
- Detail any concomitant immunosuppressive therapy, methotrexate.
- Report any history of HIV, fungal infections, hepatitis B, multiple sclerosis, hemoptysis, tuberculosis, or close relatives with active tuberculosis.
- Report any travel plans to possible endemic areas.
- Report signs/symptoms of stomach pain to evaluate risk of gastric perforation or history of taking NSAIDs, corticosteroids, methotrexate.
- Pt will need blood levels drawn q4–8wks during treatment along with routine tuberculosis screening.
- Seek immediate medical attention if adverse reaction occurs.
- Do not receive live vaccines during therapy.
- Notify physician if pregnant or planning on becoming pregnant.
- During treatment, report any signs of liver problems, such as stomach pains, yellowing of skin/eyes, dark-amber urine, clay-colored or bloody stools, fatigue, reduced appetite, coffee-ground emesis.
- Pt must adhere to strict dosing

schedule. • Decreased platelet count may lead to risk of bleeding.

tofacitinib

toe-fa-sye-ti-nib
(Xeljanz, Xeljanz XR)

BLACK BOX ALERT ■ Increased risk for developing bacterial, viral, invasive fungal, other opportunistic infections including tuberculosis, cryptococcosis, pneumocystosis that may lead to hospitalization or death; infections often occurred in combination with other immunosuppressants (methotrexate, corticosteroids). Closely monitor for development of infection. Test for latent tuberculosis prior to treatment and during treatment, regardless of initial result. Treatment for latent TB should be initiated before use. Malignancies including lymphoma, nonmelanoma skin cancer reported. Increased rate of Epstein-Barr virus-associated post-transplant lymphoproliferative disorder observed in renal transplant pts who are treated with tofacitinib and other immunosuppressive therapy drugs.

Do not confuse tofacitinib with tipifarnib or Xeljanz with Xeloda.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Janus-associated kinase (JAK) inhibitor.
CLINICAL: Antirheumatic, disease-modifying.

USES

Treatment of adult pts with moderate to severe active rheumatoid arthritis with previous inadequate response or intolerance to methotrexate. May be used as monotherapy or in combination with methotrexate or other nonbiologic disease-modifying antirheumatic drugs (DMARDs). Treatment of active psoriatic arthritis (PsA) in pts who have had inadequate response to methotrexate, other DMARDs. Treatment of moderate to severe active ulcerative colitis (UC) in adults. Do not use in combination with other biologic

DMARDs or with potent immunosuppressants (e.g., azaTHIOprine, cycloSPORINE).

PRECAUTIONS

Contraindications: Hypersensitivity to tofacitinib. **Cautions:** Pts exposed to TB, history of serious opportunistic infections, conditions that predispose to infections (e.g., diabetes), pts at risk for GI perforation (e.g., diverticulitis), pts who resided or traveled in areas where TB is endemic, moderate to severe renal impairment, elderly pts, hepatic impairment, history of anemia, hyperlipidemia, hepatitis, Asian ancestry, pts with history of interstitial lung disease, heart rate less than 60 bpm, conduction abnormalities, ischemic heart disease, HE

ACTION

Inhibits JAK enzymes, which are intracellular enzymes involved in stimulating hematopoiesis and immune cell functioning through a signaling pathway. **Therapeutic Effect:** Reduces inflammation, tenderness, swelling of joints; slows or prevents progressive joint destruction in rheumatoid arthritis (RA). Prevents cytokine or growth factor gene expression, reducing circulating natural killer cells and increasing B cells.

PHARMACOKINETICS

Rapidly absorbed following PO administration. Protein binding: 40%. Peak concentration: 30–60 min. Metabolized in liver. Excreted primarily in urine. **Half-life:** 3 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not recommended in nursing mothers. Must either discontinue drug or discontinue breastfeeding. Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Increased risk for serious infections, malignancy.

INTERACTIONS

DRUG: Immunosuppressants (e.g., azaTHIOprine, cycloSPORINE) may increase risk for added immunosuppression, infection. **CYP3A4 inhibitors** (e.g., ketoconazole) may increase concen-

tration/effect. **CYP3A4 inducers** (e.g., phenytoin, rifAMPin) may decrease concentration/effect. May increase adverse effects; decrease therapeutic effect of vaccines (live). **HERBAL:** St. John's wort may decrease concentration/effect. **Echinacea** may decrease the therapeutic effect. **FOOD:** None known. **LAB VALUES:** May increase ALT, AST, bilirubin, lipids, creatinine. May decrease Hgb, neutrophils, lymphocytes.

AVAILABILITY (Rx)

Tablets, Film-Coated: (*Xeljanz*): 5 mg. (*Xeljanz XR*): 11 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Do not cut, split, crush, or chew XR tablet.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Do not initiate treatment in pts with baseline active infection (systemic/localized), severe hepatic impairment, lymphocytes less than 500 cells/mm³, ANC less than 1,000 cells/mm³, Hgb less than 9 g/dL.

Rheumatoid Arthritis (Monotherapy or with Nonbiologic DMARD)

PO: ADULTS/ELDERLY: (*Xeljanz*): 5 mg twice daily. (*Xeljanz XR*): 11 mg once daily.

PsA (with Nonbiologic DMARD)

PO: ADULTS/ELDERLY: (*Xeljanz*): 5 mg twice daily. (*Xeljanz XR*): 11 mg once daily.

UC

PO: ADULTS/ELDERLY: (*Xeljanz*): Induction: 10 mg twice daily for 8 wks. May transition to maintenance dose or continue 10 mg twice daily for additional 8 wks. Discontinue if 10 mg twice daily is ineffective after 4 mos. **Maintenance:** 5 mg twice daily. May increase to 10 mg twice daily for shortest duration. Use lowest effective dose to maintain response.

Dose Modification

Reduce to 5 mg once daily for any of the following: moderate to severe renal impair-

ment, moderate hepatic impairment, concurrent use of potent CYP3A4 inhibitors, concurrent use of one or more moderate CYP3A4 or potent CYP2C19 inhibitors.

Lymphopenia

Interrupt treatment until lymphocytes greater than or equal to 500 cells/mm³. Discontinue if lymphocytes less than 500 cells/mm³ after repeat testing.

Neutropenia

Interrupt treatment until neutrophils greater than 1,000 cells/mm³. Discontinue if neutrophils less than 500 cells/mm³ after repeat testing.

Anemia

Interrupt treatment until Hgb greater than or equal to 9 g/dL or baseline Hgb decreases less than or equal to 2 g/dL after repeat testing.

Hepatotoxicity

Interrupt treatment until diagnosis of drug-induced hepatic injury has been excluded.

Dosage in Renal Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment:** 5 mg once daily.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate impairment:** 5 mg once daily. **Severe impairment:** Not recommended.

SIDE EFFECTS

Rare (4%–2%): Upper respiratory tract infection, diarrhea, nasopharyngitis, headache, hypertension.

ADVERSE EFFECTS/TOXIC REACTIONS

Neutropenia, lymphopenia may increase risk for infection. Serious infections may include aspergillosis, BK virus, cellulitis, coccidioidomycosis, cryptococcus, cytomegalovirus, esophageal candidiasis, histoplasmosis, invasive fungal infections, listeriosis, pneumocystosis, pneumonia, tuberculosis, UTI, sepsis. Increased risk for

various malignancies. May induce viral reactivation of hepatitis B or C virus infection, herpes zoster, HIV. Epstein-Barr virus–associated post-transplant lymphoproliferative disorder reported in 2% of pts with renal transplant. Increased risk for GI perforation.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain vital signs, CBC, BMP, LFT, lipid panel, urine pregnancy test results. Evaluate for active tuberculosis (TB) and test for latent infection prior to and during treatment. Induration of 5 mm or greater with purified protein derivative (PPD) is considered positive result when assessing for latent TB. Question possibility of pregnancy or breastfeeding. Screen for history/co-morbidities. Obtain full medication history including vitamins, herbal products.

INTERVENTION/EVALUATION

Obtain CBC every 4–8 wks, then every 3 mos, lipid panel 4–8 wks after initiation; hepatic function panel if hepatic impairment suspected. Monitor for TB regardless of baseline PPD. Consider discontinuation if pt develops acute infection, opportunistic infection, sepsis; initiate appropriate antimicrobial therapy. Immediately report any hemorrhaging, melena, abdominal pain, hemoptysis (may indicate GI perforation).

PATIENT/FAMILY TEACHING

- Routinely monitor blood levels.
- Therapy will lower immune system response.
- Do not receive live virus vaccines.
- Other immunosuppressant drugs may increase risk for infection.
- Expect routine TB screening.
- Fever, cough, burning with urination, body aches, chills, skin changes may indicate infection.
- Report history of HIV, recent infections, hepatitis B or C, TB or close relatives who have active TB.
- Report any travel plans to possible endemic areas.
- Notify physician if pregnant or planning pregnancy.
- Do not breastfeed.
- Immediately report bleeding of any kind.
- Yellowing of skin or eyes, right upper quadrant abdominal pain, bruising, clay-colored

stool, dark urine may indicate liver problem. • Avoid grapefruit products.

tolterodine

tol-ter-oh-deen
(Detrol, Detrol LA)

Do not confuse Detrol with Ditropan, or tolterodine with fesoterodine.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimuscarinic agent. **CLINICAL:** Antispasmodic.

USES

Treatment of overactive bladder in pts with symptoms of urinary frequency, urgency, or urge incontinence.

PRECAUTIONS

Contraindications: Hypersensitivity to tolterodine or fesoterodine. Gastric retention, uncontrolled narrow-angle glaucoma, urinary retention. **Cautions:** Renal impairment, clinically significant bladder outflow obstruction (risk of urinary retention), GI obstructive disorders (e.g., pyloric stenosis [risk of gastric retention]), treated narrow-angle glaucoma, myasthenia gravis, prolonged QT interval (congenital/medications, hypokalemia, hypomagnesemia), hepatic impairment, elderly.

ACTION

Antagonist of muscarinic receptors mediating urinary bladder contraction. Increases residual urine volume, reduces detrusor muscle pressure. **Therapeutic Effect:** Decreases urinary frequency, urgency.

PHARMACOKINETICS

Immediate-release form rapidly, well absorbed after PO administration. Protein binding: 96%. Metabolized in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** Immediate-release: 2–10 hrs. Extended-release: 7–18 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. Breastfeeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole) may increase concentration. Strong CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. Anticholinergics (e.g., acclidinium, ipratropium, tiotropium, umecclidinium) may increase anticholinergic effect. Strong CYP2D6 inhibitors (e.g., FLUoxetine, PARoxetine) may inhibit drug metabolism. **HERBAL:** St. John's wort may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Tablets: (Detrol): 1 mg, 2 mg.

⚡ Capsules, Extended-Release: (Detrol LA): 2 mg, 4 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to food. • Give extended-release capsules whole; do not break, crush, or open.

INDICATIONS/ROUTES/DOSAGE

Overactive Bladder

PO: ADULTS, ELDERLY: (*Immediate-Release*): 1–2 mg twice daily (**WITH CYP3A4 INHIBITORS**): 1 mg twice daily. (*Extended-Release*): 2–4 mg once daily. (**WITH CYP3A4 INHIBITORS**): 2 mg once daily.

Dosage in Renal/Hepatic Impairment

Mild to moderate impairment: (*Immediate-Release*): 1 mg twice daily. Use caution. (*Extended-Release*): 2 mg once daily. Use caution. **Severe impairment:** Not recommended.

SIDE EFFECTS

Frequent (40%): Dry mouth. **Occasional (11%–4%):** Headache, dizziness, fatigue, constipation, dyspepsia, upper respiratory tract infection, UTI, dry eyes, abnormal vision (accommodation problems), nausea, diarrhea. **Rare (3%):** Drowsiness, chest/back pain, arthralgia, rash, weight gain, dry skin.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose can result in severe anticholinergic effects, including abdominal cramps, facial warmth, excessive salivation/lacrimation, diaphoresis, pallor, urinary urgency, blurred vision, prolonged QT interval.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Assess degree of overactive bladder (urinary urgency, frequency, incontinence). Question history as listed in Precautions.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Question for visual changes. Monitor incontinence, postvoid residuals.

PATIENT/FAMILY TEACHING

- May cause blurred vision, dry eyes/mouth, constipation.
- Report any confusion, altered mental status.
- Avoid tasks that require alertness, motor skills until response to drug is established.

topiramate

toe-**peer**-a-mate
(Qudexy XR, Topamax, Topamax Sprinkle, Trokendi XR)

Do not confuse Topamax or topiramate with TEGretol, TEGretol XR, or Toprol XL.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Miscellaneous agent. **CLINICAL:** Anticonvulsant.

USES

Monotherapy for treatment of partial-onset or primary generalized tonic-clonic seizures in pts 2 yrs and older (immediate-release, Qudexy XR) or 6 yrs and older (Trokendi XR). Adjunctive therapy for partial-onset, primary generalized tonic-clonic seizures or seizures associated with Lennox-Gastaut syndrome in pts 2 yrs and older (immediate-release, Qudexy XR) or 6 yrs and older (Trokendi XR). Prevention of migraine headache in pts 12 yrs and older. **OFF-LABEL:** Neuropathic pain, diabetic neuropathy, prophylaxis of cluster headaches, infantile spasms.

PRECAUTIONS

Contraindications: Hypersensitivity to topiramate. **Extended-Release: Trokendi XR:** Recent alcohol use (within 6 hrs prior to or after). **Qudexy XR:** Pts with metabolic acidosis who are taking metFORMIN. **Cautions:** Hepatic/renal impairment, elderly pts, pts who are at high risk for suicide, respiratory impairment, pts with congenital metabolism dysfunction or decreased mitochondrial activity. During strenuous exercise, exposure to high environmental temperature, concomitant use of medications with anticholinergic activity.

ACTION

Blocks neuronal sodium channels, enhances GABA activity; antagonizes glutamate receptors and weakly inhibits carbonic anhydrase. **Therapeutic Effect:** Decreases seizure activity.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 15%–41%. Metabolized in liver. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 21 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** No age-related precautions noted in pts older than 2 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Alcohol, other CNS depressants (e.g., LORazepam, morphine, zolpidem) may increase CNS depression. **Strong CYP3A4 inducers** (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. **Carbonic anhydrase inhibitors** may increase risk of kidney stone formation and severity of metabolic acidosis. May decrease effectiveness of **oral contraceptives**. **Salicylates** (e.g., aspirin), **thiazide diuretics** (e.g., hydrochlorothiazide) may increase concentration/effect. **HERBAL:** Herbs with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May reduce serum bicarbonate, increase ALT, AST.

AVAILABILITY (Rx)

Capsules (Sprinkle): 15 mg, 25 mg.

Tablets: (Topamax): 25 mg, 50 mg, 100 mg, 200 mg.

 **Capsules, Extended-Release: (Trokendi XR):** 25 mg, 50 mg, 100 mg, 200 mg. **(Qudexy XR):** 25 mg, 50 mg, 100 mg, 150 mg, 200 mg.

ADMINISTRATION/HANDLING**PO**

• Do not break, crush, dissolve, or divide tablets (bitter taste). • Give without regard to food. • Sprinkle capsules may either be swallowed whole or contents sprinkled on teaspoonful of soft food and swallowed immediately; do not chew. • **(Trokendi XR):** Give whole. Do not sprinkle on food, chew, or crush. **(Qudexy XR):** Swallow whole; may open and sprinkle on spoonful of soft food.

INDICATIONS/ROUTES/DOSAGE

Note: Do not abruptly discontinue; taper gradually to prevent rebound effects.

Adjunctive Treatment of Partial-Onset Seizures, Lennox-Gastaut Syndrome (LGS), Tonic-Clonic Seizures

PO: ADULTS, ELDERLY, CHILDREN 17 YRS AND OLDER: (Immediate-Release):

Initially, 25 mg once or twice daily for 1 wk. May increase by 25–50 mg/day at wkly intervals. Usual maintenance dose: 100–200 mg twice daily (partial-onset) or 200 mg 2 times/day (primary tonic-clonic). **Maximum:** 400 mg/day. **CHILDREN 2–16 YRS:** Initially, 1–3 mg/kg/day to maximum of 25 mg at night for 1 wk. May increase by 1–3 mg/kg/day at wkly intervals given in 2 divided doses. **Maintenance:** 5–9 mg/kg/day in 2 divided doses. **ADULTS, ELDERLY: (Extended-Release):** Initially, 25–50 mg/day. Increase by 25–50 mg/day at wkly intervals, up to 400 mg/day. **CHILDREN 2 YRS AND OLDER:** Initially, 25 mg (based on range of 1–3 mg/kg) once daily at bedtime for 1 wk. Increase dose by 1–3 mg/kg at 1–2 wk intervals up to 5–9 mg/kg once daily.

Monotherapy with Partial-Onset, Tonic-Clonic Seizures

PO: ADULTS, ELDERLY, CHILDREN 10 YRS AND OLDER: (Immediate-Release): Initially, 25 mg twice daily. May increase at wkly intervals up to 400 mg/day according to the following schedule: Wk 1, 25 mg twice daily. Wk 2, 50 mg twice daily. Wk 3, 75 mg twice daily. Wk 4, 100 mg twice daily. Wk 5, 150 mg twice daily. Wk 6, 200 mg twice daily. **CHILDREN 2–9 YRS:** Initially, 25 mg/day. Then 25 mg 2 times/day wk 2; then increase by 25–50 mg/day at wkly intervals up to minimum dose. (See table below.) **ADULTS, ELDERLY, CHILDREN 10 YRS OR OLDER: (Extended-Release): (Qudexy XR, Trokendi XR):** Initially, 50 mg once daily. Increase by 50 mg/day at wkly intervals for first 4 wks, then by 100 mg/day for wks 5 and 6, up to 400 mg/day. **CHILDREN 2–9 YRS: (Qudexy XR): 6–9 YRS: (Trokendi XR):** Initially, 25 mg once daily in evening. May increase to 50 mg once daily in wk 2, then 25–50 mg/day at wkly intervals over 5–7 wks up to **Minimum daily dose: (32 KG OR MORE):** 250 mg; (12–31 KG): 200 mg; (11 KG OR LESS): 150 mg. **Maximum daily dose: (38 KG OR MORE):** 400 mg; (23–38 KG): 350 mg; (12–22 KG): 300 mg; (11 KG OR LESS): 250 mg.

Wgt.	Minimum	Maximum
11 kg or less	150 mg/day in 2 divided doses	250 mg/day in 2 divided doses
12–22 kg	200 mg/day in 2 divided doses	300 mg/day in 2 divided doses
23–31 kg	200 mg/day in 2 divided doses	350 mg/day in 2 divided doses
32–38 kg	250 mg/day in 2 divided doses	350 mg/day in 2 divided doses
39 kg or greater	250 mg/day in 2 divided doses	400 mg/day in 2 divided doses

Migraine Prevention

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: (*Immediate-Release*): Initially, 25 mg/day. May increase by 25 mg/day at 7-day intervals up to a total daily dose of 100 mg/day in 2 divided doses. (***Extended-Release***): [***Qudexy XR***]: Initially, 25 mg once daily at bedtime. May increase wkly by 25 mg increments up to 100 mg once daily.

Dosage in Renal Impairment

Reduce drug dosage by 50% and titrate more slowly in pts who have CrCl less than 70 mL/min.

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (30%–10%): Drowsiness, dizziness, ataxia, nervousness, nystagmus, diplopia, paresthesia, nausea, tremor. **Occasional (9%–3%):** Confusion, breast pain, dysmenorrhea, dyspepsia, depression, asthenia, pharyngitis, weight loss, anorexia, rash, musculoskeletal pain, abdominal pain, difficulty with coordination, sinusitis, agitation, flu-like symptoms. **Rare (3%–2%):** Mood disturbances (e.g., irritability, depression), dry mouth, aggressive behavior, impaired heat regulation.

ADVERSE EFFECTS/TOXIC REACTIONS

Psychomotor slowing, impaired concentration, language problems (esp.

word-finding difficulties), memory disturbances occur occasionally. Metabolic acidosis, suicidal ideation occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Seizures: Review history of seizure disorder (intensity, frequency, duration, level of consciousness). Initiate seizure precautions. Provide quiet, dark environment. Question for sensitivity to topiramate, pregnancy, use of other anticonvulsant medication (esp. carbamazepine, valproic acid, phenytoin). **Migraine:** Assess pain location, duration, intensity. Assess renal function.

INTERVENTION/EVALUATION

Observe frequently for recurrence of seizure activity. Assess for clinical improvement (decrease in intensity/frequency of seizures). Monitor renal function tests, LFT. Assist with ambulation if dizziness occurs.

PATIENT/FAMILY TEACHING

- Avoid tasks that require alertness, motor skills until response to drug is established (may cause dizziness, drowsiness, impaired concentration).
- Drowsiness usually diminishes with continued therapy.
- Avoid use of alcohol, other CNS depressants.
- Do not abruptly discontinue drug (may precipitate seizures).
- Strict maintenance of drug therapy is essential for seizure control.
- Do not chew, crush, dissolve, or divide tablets (bitter taste).
- Maintain adequate fluid intake (decreases risk of renal stone formation).
- Report blurred vision, eye pain.
- Report suicidal ideation, depression, unusual behavior.
- Use caution with activities that may increase core temperature (exposure to extreme heat, dehydration).
- Instruct pt to use alternative/additional means of contraception (topiramate decreases effectiveness of oral contraceptives).

topotecan**HIGH
ALERT**toe-poe-tee-kan
(Hycamtin)

■ BLACK BOX ALERT ■ Must be administered by personnel trained in administration/handling of chemotherapeutic agents. Potent immunosuppressant; severe neutropenia (absolute neutrophil count [ANC] less than 500 cells/mm³) occurs in 60% of pts. Do not administer with baseline neutrophils less than 1,500 cells/mm³ and platelets less than 100,000 cells/mm³.

Do not confuse Hycamtin with Hycomine, Mycamine, or topotecan with irinotecan.

◆ **CLASSIFICATION**

PHARMACOTHERAPEUTIC: Topoisomerase inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of metastatic ovarian cancer, relapsed or refractory small cell lung cancer, recurrent or resistant cervical cancer (in combination with CISplatin). **OFF-LABEL:** Treatment of central nervous system lesions/lymphoma, Ewing's sarcoma, rhabdomyosarcoma, neuroblastoma, acute myeloid leukemia.

PRECAUTIONS

Contraindications: Hypersensitivity to topotecan. Baseline neutrophil count less than 1,500 cells/mm³ and platelet count less than 100,000 cells/mm³, severe myelosuppression. **Cautions:** Mild myelosuppression, renal impairment, breastfeeding, pregnancy, elderly pts. Pts at risk for developing interstitial lung disease (e.g., lung cancer, pulmonary fibrosis).

ACTION

Interacts with topoisomerase I, an enzyme that relieves torsional strain in DNA by inducing reversible single-strand breaks. Prevents religation of DNA strand, resulting in damage to double-strand DNA, cell

death. Acts at S phase of cell cycle. **Therapeutic Effect:** Produces cytotoxic effect.

PHARMACOKINETICS

Hydrolyzed to active form after IV administration. Protein binding: 35%. Excreted in urine. **Half-life:** 2–3 hrs (increased in renal impairment).

 **LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: May cause fetal harm. Avoid pregnancy; breastfeeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Live virus vaccines may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **Other bone marrow depressants (e.g., cladribine)** may increase risk of myelosuppression. **BCRP/ABCG2 inhibitors (e.g., omeprazole, verapamil), P-glycoprotein/ABCB1 inhibitors (e.g., amLODIPine, digoxin)** may increase concentration/effect. **HERBAL:** Echinacea may decrease effectiveness. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin, ALT, AST, alkaline phosphatase. May decrease RBC, leukocyte, neutrophil, platelet counts, Hgb, Hct.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 4 mg (single-dose vial). **Injection Solution:** 1 mg/mL (4 mL).

 **Capsules:** 0.25 mg, 1 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ Because topotecan may be carcinogenic, mutagenic, teratogenic, handle drug with extreme care during preparation/administration.

PO

- May take with or without food.
- Swallow whole; do not break, crush, dissolve, or divide capsule.
- Do not give replacement dose if vomiting occurs.

Reconstitution • Reconstitute each 4-mg vial (lyophilized powder) with 4 mL Sterile Water for Injection. • Further dilute with 50–100 mL 0.9% NaCl or D₅W. **Rate of administration** • Administer as IV infusion over 30 min. • Extravasation associated with only mild local reactions (erythema, ecchymosis). **Storage** • Store vials (lyophilized powder) at room temperature; refrigerate diluted solution. Diluted solution for infusion stable for 24 hrs at room temperature.

IV INCOMPATIBILITIES

Dexamethasone (Decadron), 5-fluorouracil, mitoMYcin (Mutamycin).

IV COMPATIBILITIES

CARBOplatin (Paraplatin), CISplatin (Platinol AQ), cyclophosphamide (Cytosan), DOXOrubicin (Adriamycin), etoposide (VePesid), gemcitabine (Gemzar), granisetron (Kytril), ondansetron (Zofran), PACLitaxel (Taxol), palonosetron (Aloxi), vinCRISTine (Oncovin).

INDICATIONS/ROUTES/DOSAGE

⚠️ ALERT Do not give topotecan if baseline neutrophil count is less than 1,500 cells/mm³ and platelet count is less than 100,000 cells/mm³. For retreatment, neutrophils should be greater than 1,000 cells/mm³, platelets greater than 100,000 cells/mm³, and Hgb 9 g/dL or greater.

Ovarian Carcinoma

IV: ADULTS, ELDERLY: 1.5 mg/m²/day over 30 min for 5 consecutive days, beginning on day 1 of 21-day course. Continue until disease progression or unacceptable toxicity. **Neutrophils less than 500 cells/mm³ or platelets less than 25,000 cells/mm³:** Reduce dose to 1.25 mg/m²/day for subsequent cycles.

Small Cell Lung Cancer

PO: ADULTS, ELDERLY: 2.3 mg/m²/day for 5 days; repeat q21days (dose rounded

to nearest 0.25 mg). **For severe neutropenia or prolonged neutropenia, platelets less than 25,000 cells/mm³, recovery from Grade 3 or 4 diarrhea:** Reduce dose by 0.4 mg/m²/day for subsequent cycles.

IV: ADULTS, ELDERLY: 1.5 mg/m²/day for 5 consecutive days q21days. **Neutrophils less than 500 cells/mm³ or platelets less than 25,000 cells/mm³:** Reduce dose to 1.25 mg/m²/day for subsequent cycles.

Cervical Cancer

IV: ADULTS, ELDERLY: 0.75 mg/m²/day for 3 days (followed by CISplatin 50 mg/m² on day 1 only). Repeat q21days (baseline neutrophil count greater than 1,500 cells/mm³ and platelet count greater than 100,000 cells/mm³). For severe febrile neutropenia (neutrophils less than 1,000 cells/mm³ with temperature of 38°C) or platelet count less than 25,000 cells/mm³: Reduce dose to 0.6 mg/m²/day for subsequent cycles. If necessary, further decrease dose to 0.45 mg/m²/day. Continue for a maximum of 6 cycles (in non-responders) or until disease progression or unacceptable toxicity.

Dosage in Renal Impairment

IV: No dosage adjustment is necessary in pts with mild renal impairment (CrCl 40–60 mL/min). For moderate renal impairment (CrCl 20–39 mL/min), give 0.75 mg/m².

PO: CrCl 30–49 mL/min: 1.5 mg/m²/day. May increase by 0.4 mg/m²/day following first cycle if no GI/hematologic toxicities occur. **CrCl less than 30 mL/min:** Decrease dose to 0.6 mg/m²/day. May increase by 0.4 mg/m²/day following first cycle if no GI/hematologic toxicities occur.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (77%–21%): Nausea, vomiting, diarrhea, total alopecia, headache, dyspnea. **Occasional (9%–3%):** Paresthesia, constipation, abdominal pain. **Rare:** Anorexia, malaise, arthralgia, asthenia, myalgia.

ADVERSE EFFECTS/TOXIC REACTIONS

Severe neutropenia (absolute neutrophil count [ANC] less than 500 cells/mm³) occurs in 60% of pts (develops at median of 11 days after day 1 of initial therapy). Thrombocytopenia occurs in 26% of pts. Severe anemia (RBC count less than 8 g/dL) occurs in 40% of pts (develops at median of 15 days after day 1 of initial therapy). Severe diarrhea may occur.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Offer emotional support. Assess CBC with differential before each dose. Myelosuppression may precipitate life-threatening hemorrhage, infection, anemia. If platelet count drops, minimize trauma to pt (e.g., IM injections, pt positioning). Premedicate with antiemetics on day of treatment, starting at least 30 min before administration.

INTERVENTION/EVALUATION

Assess for bleeding, signs of infection, anemia. Monitor hydration status, I&O, serum electrolytes (severe diarrhea, vomiting are common side effects). Monitor CBC for evidence of myelosuppression. Monitor renal function, LFT. Assess response to medication; provide interventions (e.g., small, frequent meals; antiemetics for nausea/vomiting). Question for complaints of headache. Assess breathing pattern for evidence of dyspnea.

PATIENT/FAMILY TEACHING

- Hair loss is reversible but new hair may have different color, texture.
- Diarrhea may cause dehydration, electrolyte depletion.
- Antiemetic and antidiarrheal medications may reduce side effects.
- Notify physician if diarrhea, vomiting, persistent fever, bruising/bleeding, yellowing of eyes/skin occur.
- Do not have immunizations without physician's approval (drug lowers resistance).
- Avoid contact with those who have recently received live virus vaccine.

torsemide

to-re-se-myde
(Demadex)

Do not confuse torsemide with furosemide.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Loop diuretic. **CLINICAL:** Antihypertensive, diuretic.

USES

Treatment of hypertension either alone or in combination with other antihypertensives. (Not recommended for initial treatment of hypertension.) Edema associated with HF, hepatic/renal impairment.

PRECAUTIONS

Contraindications: Hypersensitivity to torsemide or any sulfonyleurea. Anuria, hepatic coma. **Cautions:** Pts with cirrhosis, hypotension, hypokalemia.

ACTION

Enhances excretion of sodium, chloride, potassium, water at ascending limb of loop of Henle and distal renal tubules. Reduces plasma, extracellular fluid volume. **Therapeutic Effect:** Produces diuresis, relieves edema; lowers B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (diuresis)	30–60 min	1–2 hrs	6–8 hrs

Rapidly, well absorbed from GI tract. Protein binding: 97%–99%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2–4 hrs.

 LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: NSAIDs (e.g., ibuprofen, ketorolac, naproxen), aspirin may increase risk of renal impairment. May increase risk of digoxin toxicity associated with torsemide-induced hypokalemia. May increase risk of lithium toxicity. **Bile acid sequestrants** (e.g., cholestyramine), **sucralfate** may decrease absorption. May increase hyponatremic effect of **desmopressin**. May increase concentration/effect of **foscarnet**. **HERBAL:** Herbals with **hypertensive properties** (e.g., licorice, yohimbe) or **hypotensive properties** (e.g., garlic, ginger, ginkgo biloba) may alter effects. **Licorice** may increase hypokalemic effect. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, creatinine, uric acid. May decrease serum calcium, chloride, magnesium, potassium, sodium.

AVAILABILITY (Rx)

Tablets: 5 mg, 10 mg, 20 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food. Give with food to avoid GI upset, preferably with breakfast (prevents nocturia).

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: Initially, 2.5–5 mg/day. May increase to 10 mg/day if no response in 4–6 wks. **Range:** 5–10 mg/day.

Edema Associated with HF

PO: ADULTS, ELDERLY: Initially, 10–20 mg/day. May increase by approximately doubling dose until desired therapeutic effect is attained. **Maximum:** 200 mg.

Edema Associated with Chronic Renal Failure

PO: ADULTS, ELDERLY: Initially, 20 mg/day. May increase by approximately doubling dose until desired therapeutic effect is attained. **Maximum:** 200 mg/day.

Edema Associated with Hepatic Cirrhosis

PO: ADULTS, ELDERLY: Initially, 5–10 mg once daily. May increase gradually by

doubling dose until the desired diuretic response is achieved. **Maximum single dose:** 40 mg.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (10%–4%): Headache, dizziness, rhinitis. **Occasional (3%–1%):** Asthenia, insomnia, nervousness, diarrhea, constipation, nausea, dyspepsia, edema, ECG changes, pharyngitis, cough, arthralgia, myalgia. **Rare (less than 1%):** Syncope, hypotension, arrhythmias.

ADVERSE EFFECTS/TOXIC REACTIONS

Ototoxicity may occur with too-rapid IV administration or with high doses; must be given slowly. Overdose produces acute, profound water loss, volume/electrolyte depletion, dehydration, decreased blood volume, circulatory collapse.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain serum electrolyte levels, esp. potassium. Obtain baseline weight; check for edema. Assess lungs for crackles, signs of HF. Obtain B/P.

INTERVENTION/EVALUATION

Monitor B/P, serum electrolytes (esp. potassium), I&O, weight. Notify physician of any hearing abnormality. Note extent of diuresis. Assess lungs for rales. Check for signs of edema, particularly of dependent areas. Although less potassium is lost with torsemide than with furosemide, assess for signs of hypokalemia (change of muscle strength, tremor, muscle cramps, altered mental status, cardiac arrhythmias).

PATIENT/FAMILY TEACHING

- Take medication in morning to prevent nocturia.
- Expect increased urinary volume, frequency.
- Report palpitations, muscle weakness, cramps, nausea, dizziness.
- Do not take other medications (including OTC drugs) without consulting physician.
- Eat foods high in

potassium such as whole grains (cereals), legumes, meat, bananas, apricots, orange juice, potatoes (white, sweet), raisins.

trabectedin

tra-**bek**-te-din
(Yondelis)

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkylating agent. **CLINICAL:** Antineoplastic.

USES

Treatment of unresectable or metastatic soft tissue sarcoma (liposarcoma or leiomyosarcoma) in pts who have received a prior anthracycline-containing regimen.

PRECAUTIONS

Contraindications: Hypersensitivity reaction, anaphylactic reaction to trabectedin.

Cautions: Baseline anemia, neutropenia, thrombocytopenia; chronic liver disease, cirrhosis, hepatic impairment, hepatitis; renal impairment; history of DVT, pulmonary embolism; recent MI, cardiomyopathy, HE. Concomitant use of strong CYP3A inducers, strong CYP3A inhibitors not recommended.

ACTION

Binds to guanine residues in the minor groove of DNA, leading to cell cycle disruption and cellular death. Blocks cell cycle at G₂/M phase. **Therapeutic Effect:** Inhibits tumor cell growth and metastasis.

PHARMACOKINETICS

Widely distributed. Metabolized in liver. Protein binding: 97%. Excreted in feces (58%), urine (6%). Hemodialysis not expected to enhance elimination. **Half-life:** 175 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm/malformations. Female pts of reproductive potential should use effective contraception during treatment and up to 2 mos after dis-

continuation. Breastfeeding not recommended. **Males:** Male pts with female partners of reproductive potential should use barrier methods, abstinence during treatment and up to 5 mos after discontinuation. May impair fertility in both females and males. **Children:** Safety and efficacy not established. **Elderly:** Safety and efficacy not established.

INTERACTIONS

DRUG: Strong CYP3A inducers (e.g., carbamazepine, phenobarbital, rifampin) may decrease concentration/effect. Strong CYP3A inhibitors (e.g., clarithromycin, ketoconazole) may increase concentration/effect. Alcohol may increase hepatotoxic effect. May decrease therapeutic effect; increase adverse effects of vaccines (live). **HERBAL:** Echinacea may decrease therapeutic effect. **FOOD:** None known. **LAB VALUES:** May decrease Hgb, Hct, platelets, neutrophils, RBCs; serum albumin, phosphate. May increase serum alkaline phosphatase, ALT, AST, bilirubin, CPK, creatinine. May reduce diagnostic effect of *Coccidioides immitis* skin test.

AVAILABILITY (Rx)

Powder for Reconstitution: 1 mg.

ADMINISTRATION/HANDLING

Reconstitution • Contents are hazardous; use cytotoxic precautions during handling and disposal. • Reconstitute with 20 mL Sterile Water for Injection for final concentration of 0.05 mg/mL. • Shake until fully dissolved. • Visually inspect solution for particulate matter or discoloration. Solution should appear clear, colorless to pale brownish-yellow in color. Discard if solution is discolored or particles are observed. • Dilute in 500 mL 0.9% NaCl or D₅W bag. • See manufacturer guidelines for materials/containers that are compatible with diluted solution.

Infusion guidelines • Premedicate with dexamethasone 20 mg IV (or appropriate corticosteroid) 30 min prior to each

infusion. • Infuse diluted solution immediately after reconstitution. • Use an in-line, 0.2-micron polyethersulfone filter. • Infuse via dedicated central venous line using an infusion pump.

Rate of administration • Infuse over 24 hrs.

Storage • Refrigerate unused vials. • Diluted solution must be administered within 30 hrs of reconstitution.

IV INCOMPATIBILITIES

Do not mix or infuse with other medications.

INDICATIONS/ROUTES/DOSAGE

Liposarcoma, Leiomyosarcoma

IV infusion: ADULTS, ELDERLY: 1.5 mg/m² once q3wks until disease progression or unacceptable toxicity.

Dosage in Renal Impairment

CrCl greater than or equal to 30 mL/min or greater: No dose adjustment. **CrCl greater less than 30 mL/min or end-stage renal disease:** Not specified; use caution.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate impairment:** 0.9 mg/m² once q3wks. **Severe impairment:** Not recommended.

Dose Reduction for Normal Hepatic Function or Mild Hepatic Impairment

Initial dose: 1.5 mg/m² once q3wks. **First dose reduction:** 1.2 mg/m² once q3wks. **Second dose reduction:** 1 mg/m² once q3wks.

Dose Reduction for Moderate Hepatic Impairment

Initial dose: 0.9 mg/m² once q3wks. **First dose reduction:** 0.6 mg/m² once q3wks. **Second dose reduction:** 0.3 mg/m² once q3wks.

Dose Modification

Hepatotoxicity

Serum ALT/AST greater than 2.5 times upper limit of normal (ULN): Delay next dose for up to 3 wks.

Serum alkaline phosphatase greater than 2.5 times ULN; serum ALT/AST greater than 5 times ULN; total serum bilirubin greater than ULN: Delay next dose for up to 3 wks, then resume at reduced dose level.

Hematologic Toxicity

Absolute neutrophil count (ANC) less than 1,500 cells/mm³: Delay next dose for up to 3 wks. **ANC less than 1,000 cells/mm³ with fever or infection; ANC less than 500 cells/mm³ lasting more than 5 days:** Delay next dose for up to 3 wks, then resume at reduced dose level. **Platelet count less than 100,000 cells/mm³:** Delay next dose for up to 3 wks. **Platelet count less than 25,000 cells/mm³:** Delay next dose for up to 3 wks, then resume at reduced dose level.

Nonhematologic Toxicity

CPK greater than 2.5 times ULN: Delay next dose for up to 3 wks. **CPK greater than 5 times ULN:** Delay next dose for up to 3 wks, then resume at reduced dose level.

Decreased LVEF less than lower limit of normal or clinical evidence of cardiomyopathy: Delay next dose for up to 3 wks. **Decreased LVEF with an absolute decrease of 10% or more from baseline and less than lower limit of normal, or clinical evidence of cardiomyopathy:** Delay next dose for up to 3 wks, then resume at reduced dose level.

Any other Grade 3 or 4 reaction: Delay next dose for up to 3 wks, then resume at reduced dose level.

Permanent Discontinuation

Permanently discontinue for persistent adverse effects requiring a delay of treatment for more than 3 wks; continued adverse effects after reducing dose to 1 mg/m² in pts with normal hepatic function, or 0.3 mg/m² in pts with preexisting moderate hepatic impairment; severe hepatic dysfunction with bilirubin 2 times ULN, and ALT/AST 3 times ULN, and alkaline phosphatase less than 2 times ULN in

T

prior treatment cycle in pts with baseline normal hepatic function; exacerbation of hepatic dysfunction in pts with preexisting moderate hepatic impairment.

SIDE EFFECTS

Frequent (75%–25%): Nausea, fatigue, asthenia, malaise, vomiting, decreased appetite, constipation, diarrhea, peripheral edema, dyspnea, headache. **Occasional (15%–11%):** Insomnia, arthralgia, myalgia, paresthesia.

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia, neutropenia, thrombocytopenia are expected responses to therapy. Life-threatening, sometimes fatal, neutropenic sepsis (3% of pts) may occur. Grade 3 or 4 neutropenia (43% of pts), febrile neutropenia (5% of pts) were reported. Fatal rhabdomyolysis, muscular toxicity may result in renal failure. CPK elevation occurred in 32% of pts; Grade 3 or 4 CPK elevation occurred in 6% of pts. Hepatotoxicity, including hepatic failure, may occur. LFT elevation occurred in 70%–90% of pts. Cardiomyopathy including decreased ejection fraction, diastolic dysfunction, HF, right ventricular dysfunction reported in 6% of pts; Grade 3 or 4 cardiomyopathy reported in 4% of pts. Drug extravasation may result in tissue necrosis requiring debridement. Other adverse effects may include phlebitis (15% of pts), pulmonary embolism (less than 10% of pts), hypersensitivity reaction.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain ANC, CBC, CPK, BMP, LFT; vital signs prior to each dose and periodically thereafter. Obtain baseline echocardiogram to assess LVEF. Verify placement of central venous line. Receive full medication history. Assess nutritional status. Question history of DVT, pulmonary embolism, cardiac disease, recent MI; renal/hepatic impairment; prior hypersensitivity reaction. Screen for active infection. Offer emotional support.

INTERVENTION/EVALUATION

Monitor ANC, CBC for anemia, neutropenia, thrombocytopenia; CPK, serum creatinine for rhabdomyolysis, renal failure; LFT for hepatotoxicity; BMP for electrolyte imbalance (esp. in pts with diarrhea, vomiting, malnutrition); vital signs. Assess LVEF by echocardiogram at 2- to 3-mo intervals (or more frequently in pts with cardiomyopathy). Diligently screen for infections, sepsis. Monitor for DVT (leg or arm pain/swelling), rhabdomyolysis (decreased urinary output, amber-colored urine, fatigue, muscle pain/weakness), pulmonary embolism (sudden chest pain, dyspnea, hypoxia, tachycardia), HF (dyspnea, fatigue, palpitations, edema, exercise intolerance); hypersensitivity reaction; side effects of dexamethasone (e.g., hyperglycemia, weight loss, decreased appetite). Monitor I&O. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

- Treatment may depress your immune system and reduce your ability to fight infection. Report symptoms of infection such as body aches, chills, cough, fatigue, fever. Avoid those with active infection.
- Blood levels, echocardiograms will be routinely monitored.
- Life-threatening events, such as heart failure (shortness of breath, fast or slow heart rate, exercise intolerance, swelling of the ankles or legs), liver injury or failure (abdominal pain, easy bruising, clay-colored stools, dark-amber urine, fatigue, loss of appetite, yellowing of skin or eyes), muscle toxicity (muscle pain/weakness, kidney failure), blood clots in lungs (difficulty breathing, fast heart rate, chest pain), may occur.
- Avoid pregnancy. Female pts of childbearing potential should use effective contraception during treatment and for at least 2 mos after last dose. Do not breastfeed. Male pts with female partners of reproductive potential should use condoms during sexual activity for at least 5 mos after last dose.
- Treatment may impair fertility.
- Avoid grape-

fruit products, herbal supplements. • Do not receive live vaccines.

traMADol

tram-a-dol

(Apo-TraMADol , ConZip, Synapryn FusePaq, Ultram)

BLACK BOX ALERT Exposes pt to risks of opioid addiction, abuse, misuse. Serious, life-threatening respiratory depression may occur. Extended-release tablets must be swallowed whole. Crushing, chewing, or dissolving of ER tablets can result in a fatal overdose. May cause neonatal opioid withdrawal syndrome. Concomitant use of alcohol, benzodiazepines, CNS depressants may cause profound sedation, respiratory depression, coma, or death. Use with any CYP3A4 inhibitor may result in increased concentration/effect, which may cause potentially fatal respiratory depression.

Do not confuse traMADol with tapentadol, Toradol, or Tramdate, or Ultram with Ultracet.

FIXED-COMBINATION(S)

Ultracet: traMADol/acetaminophen (a non-narcotic analgesic): 37.5 mg/325 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Centrally acting synthetic opioid. **CLINICAL:** Analgesic.

USES

Immediate-Release: Management of moderate to moderately severe pain.

Extended-Release: Around-the-clock management of moderate to moderately severe pain for extended period.

PRECAUTIONS

Contraindications: Hypersensitivity to traMADol, opioids. Pediatric pts under 12 yrs of age; post-op management in pts under 18 yrs following tonsillectomy and/or

adenoidectomy; severe respiratory depression; acute bronchial asthma in absence of appropriate monitoring; GI obstruction (paralytic ileus [known or suspected]). Concomitant use with or within 14 days following MAOI therapy. **Cautions:** CNS depression, anoxia, advanced hepatic cirrhosis, respiratory depression, elevated ICP, history of seizures or risk for seizures, hepatic/renal impairment, treatment of acute abdominal conditions, opioid-dependent pts, head injury, myxedema, hypothyroidism, hypoadrenalism, pregnancy. Avoid use in pts who are suicidal or addiction prone, emotionally disturbed, depressed, heavy alcohol users, elderly pts, debilitated pts.

ACTION

Binds to mu-opioid receptors in CNS, inhibiting ascending pain pathway. Inhibits reuptake of norepinephrine, serotonin, inhibiting descending pain pathways. **Therapeutic Effect:** Reduces pain.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	Less than 1 hr	2–3 hrs	9 hrs

Rapidly, almost completely absorbed after PO administration. Protein binding: 20%. Metabolized in liver (reduced in pts with advanced cirrhosis). Primarily excreted in urine. Minimally removed by hemodialysis. **Half-life:** 6–7 hrs (increased in renal/hepatic failure).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Children:** Safety and efficacy not established in children 16 yrs or less. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Alcohol, other CNS depressants (e.g., LORazepam, morphine, zolpidem) may increase CNS depression. **CYP3A4 inhibitors** (e.g., clarithromycin, ketoconazole) may increase concentration/effect. May increase

• Canadian trade name

 Non-Crushable Drug

 High Alert drug

CNS depressant effect; decrease therapeutic effect of **carBAMazepine**. **CarBAMazepine** may decrease concentration/effect. **Strong CYP2D6 inhibitors** (e.g., **FLUoxetine**, **PARoxetine**) may decrease therapeutic effect. **HERBAL: Herbals with sedative properties** (e.g., **chamomile**, **kava kava**, **valerian**) may increase CNS depression. **St. John's wort** may decrease concentration/effect. **FOOD:** None known. **LAB VALUES:** May increase serum creatinine, ALT, AST. May decrease Hgb. May cause proteinuria.

AVAILABILITY (Rx)

Tablets, Immediate-Release: 50 mg. **Suspension, Oral:** (*Synapryn FusePaq*): 10 mg/mL.

 **Capsules, Extended-Release:** 100 mg, 150 mg, 200 mg, 300 mg. **Tablets, Extended-Release:** 100 mg, 200 mg, 300 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food but consistently with or without meals.
- Extended-Release: Swallow whole; do not break, crush, dissolve, or divide.

INDICATIONS/ROUTES/DOSAGE

Moderate to Moderately Severe Pain

PO: (Immediate-Release): ADULTS, ELDERLY, CHILDREN 17 YRS AND OLDER: 50–100 mg q4–6h. **Maximum:** 400 mg/day for pts 75 yrs and younger; 300 mg/day for pts older than 75 yrs.

PO: (Extended-Release): ADULTS, ELDERLY, CHILDREN 18 YRS AND OLDER: Initially, 100 mg once daily. Titrate q5days. **Maximum:** 300 mg once daily.

Dosage in Renal Impairment

(Immediate-Release): For pts with CrCl less than 30 mL/min, increase dosing interval to q12h. **Maximum:** 200 mg/day. Do not use extended-release.

Dosage in Hepatic Impairment

(Immediate-Release): Cirrhosis: Dosage is decreased to 50 mg q12h. Do not use extended-release with severe hepatic impairment.

SIDE EFFECTS

Frequent (25%–15%): Dizziness, vertigo, nausea, constipation, headache, drowsiness.

Occasional (10%–5%): Vomiting, pruritus, CNS stimulation (e.g., nervousness, anxiety, agitation, tremor, euphoria, mood swings, hallucinations), asthenia, diaphoresis, dyspepsia, dry mouth, diarrhea. **Rare (less than 5%):** Malaise, vasodilation, anorexia, flatulence, rash, blurred vision, urinary retention/frequency, menopausal symptoms.

ADVERSE EFFECTS/TOXIC REACTIONS

Seizures reported in pts receiving tramADol within recommended dosage range. May have prolonged duration of action, cumulative effect in pts with hepatic/renal impairment, serotonin syndrome (agitation, hallucinations, tachycardia, hyperreflexia). May cause suicidal ideation and behavior.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain. Assess drug history, esp. carBAMazepine, analgesics, CNS depressants, MAOIs. Review past medical history, esp. epilepsy, seizures. Assess renal function, LFT.

INTERVENTION/EVALUATION

Monitor pulse, B/P, renal/hepatic function. Assist with ambulation if dizziness, vertigo occurs. Dry crackers, cola may relieve nausea. Palpate bladder for urinary retention. Monitor daily pattern of bowel activity, stool consistency. Sips of water may relieve dry mouth. Assess for clinical improvement, record onset of relief of pain. Monitor closely for misuse or abuse.

PATIENT/FAMILY TEACHING

- May cause physical dependence.
- Pts with history of drug abuse are at increased risk for misuse or abuse. Take medication only as prescribed.
- Avoid alcohol, other narcotics, sedatives.
- May cause drowsiness, dizziness, blurred vision.
- Avoid tasks requiring alertness, motor skills until response to drug is established.
- Report

severe constipation, difficulty breathing, excessive sedation, seizures, muscle weakness, tremors, chest pain, palpitations.

trametinib

tra-me-ti-nib
(Mekinist)

Do not confuse trametinib with imatinib or tipifarnib.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: MEK inhibitor. **CLINICAL:** Antineoplastic.

USES

Used as a single agent or in combination with dabrafenib for treatment of unresectable or metastatic melanoma with BRAF V600E or V600L mutations, as detected by FDA-approved test. Single-agent regimen is not indicated in pts who have received prior BRAF-inhibitor therapy. Adjuvant treatment of melanoma in combination with dabrafenib in pts with BRAF V600E or BRAF V600K mutations and lymph node involvement, following complete resection. Treatment of locally advanced or metastatic anaplastic thyroid cancer (in combination with dabrafenib). Treatment of metastatic non-small-cell lung cancer (NSCLC) in pts with BRAF V600E mutation in combination with dabrafenib.

PRECAUTIONS

Contraindications: Hypersensitivity to trametinib. **Cautions:** Cardiac/pulmonary impairment, preexisting diabetes or diabetes.

ACTION

Inhibits mitogen-activated extracellular kinase (MEK). MEK is a downstream effector of protein kinase Brf (BRAF). **Therapeutic Effect:** Inhibits cell proliferation and causes cell cycle arrest.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 97.4%. Peak plasma concentration: 1.5 hrs. Metabolized in liver. Excreted in feces (80%), urine (20%). **Half-life:** 3.9–4.8 days.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy. May cause fetal harm. Must use effective nonhormonal contraception during treatment and for at least 4 wks after discontinuation (intrauterine device, barrier methods). Unknown if distributed in breast milk. Must either discontinue breastfeeding or discontinue treatment. **Children:** Safety and efficacy not established. **Elderly:** May have increased risk of adverse effects, skin lesions, primary malignancies. **Males:** May decrease sperm count.

INTERACTIONS

DRUG: None significant. **HERBAL:** None known. **FOOD:** **High-fat meals** may decrease absorption/effect. **LAB VALUES:** **Single regimen:** May increase serum alkaline phosphatase, ALT, AST. May decrease serum albumin; Hgb, Hct. **Combination regimen:** May increase serum alkaline phosphatase, ALT, AST, bilirubin, calcium, creatinine, glucose, GGT, potassium. May decrease Hgb, Hct, leukocytes, lymphocytes, neutrophils, platelets; serum albumin, calcium, magnesium, phosphorus, potassium, sodium.

AVAILABILITY (Rx)

Tablets: 0.5 mg, 2 mg.

ADMINISTRATION/HANDLING

PO

- Administer at least 1 hr before or 2 hrs after meal.

INDICATIONS/ROUTES/DOSAGE

Melanoma (Metastatic or Unresectable)

PO: ADULTS/ELDERLY: 2 mg once daily (either as a single agent or in combination with dabrafenib). Continue until disease progression or unacceptable toxicity.

Melanoma (Adjuvant Treatment)

PO: ADULTS, ELDERLY: 2 mg once daily (in combination with dabrafenib). Continue for up to 1 yr in absence of disease progression or unacceptable toxicity.

Thyroid Cancer

PO: ADULTS, ELDERLY: 2 mg once daily (in combination with dabrafenib). Continue until disease progression or unacceptable toxicity.

NSCLC (Metastatic)

PO: ADULTS, ELDERLY: 2 mg once daily in combination with dabrafenib. Continue until disease progression or unacceptable toxicity.

Dose Reduction Schedule

Trametinib regimen: FIRST DOSE REDUCTION: 1.5 mg once daily. **SECOND DOSE REDUCTION:** 1 mg once daily. Discontinue if unable to tolerate 1-mg dose. **Dabrafenib combination regimen: FIRST DOSE REDUCTION:** 100 mg twice daily. **SECOND DOSE REDUCTION:** 75 mg twice daily. **THIRD DOSE REDUCTION:** 50 mg twice daily. Discontinue if unable to tolerate 50-mg dose.

Dose Modification

Based on Common Terminology Criteria for Adverse Events (CTCAE) grading 1–4.

Cardiac: ASYMPTOMATIC DECREASE IN LEFT VENTRICULAR EJECTION FRACTION (LVEF) GREATER THAN 10% FROM BASELINE: Withhold trametinib up to 4 wks. If LVEF improved, resume at lower dose level. Discontinue if not improved. Do not modify dabrafenib dose. **SYMPTOMATIC HF OR DECREASE IN LVEF GREATER THAN 20% FROM BASELINE:** Discontinue trametinib. Withhold dabrafenib until improved, then resume at lower dose level.

Cutaneous events: INTOLERABLE GRADE 2 SKIN TOXICITY OR GRADE 3–4 TOXICITY: Withhold both regimens for up to 3 wks. If improved, resume both at lower dose level. Discontinue both regimens if not improved.

Febrile events: FEVER OF 101.3°F–104°F: Do not modify trametinib dose. Withhold dab-

rafenib until fever resolved, then resume at either same dose or lower dose level. **FEVER GREATER THAN 104°F OR FEVER COMPLICATED BY DEHYDRATION, HYPOTENSION, RENAL FAILURE:** Withhold trametinib until resolved, then resume at either same dose or lower dose level. Withhold dabrafenib until resolved, then resume at either lower dose level or discontinue.

New primary malignancies: CUTANEOUS: No changes required for either regimen. **NONCUTANEOUS:** Do not change trametinib dose. Discontinue dabrafenib in pts who develop RAS mutation-positive malignancies.

Nonspecific adverse reactions: INTOLERABLE GRADE 2 OR ANY GRADE 3: Withhold both regimens until resolved to Grade 0–1, then resume at lower dose level. Discontinue both regimens if not improved. **FIRST OCCURRENCE OF ANY GRADE 4 REACTIONS:** Withhold both regimens until resolved to Grade 0–1, then resume at lower dose level or discontinue.

Ocular toxicities: GRADE 2–3 RETINAL PIGMENT EPITHELIAL DETACHMENTS: Withhold trametinib up to 3 wks. If improved to Grade 0–1, resume at lower dose level. Discontinue if not improved. Do not modify dabrafenib. **RETINAL VEIN OCCLUSION:** Discontinue trametinib. Do not modify dabrafenib. **UVEITIS OR IRITIS:** Do not modify trametinib. Withhold dabrafenib for up to 6 wks. If improved to Grade 0–1, then resume at same dose level. Discontinue if not improved.

Pulmonary: INTERSTITIAL LUNG DISEASE: Discontinue trametinib. Do not modify dabrafenib.

Venous thromboembolism: UNCOMPLICATED DVT OR PE: Withhold trametinib for up to 3 wks. If improved to Grade 0–1, then resume at lower dose level. Discontinue if not improved. Do not modify dabrafenib. **LIFE-THREATENING PE:** Discontinue both regimens.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Single Regimen

Frequent (57%–32%): Rash, diarrhea, lymphedema, peripheral edema. **Occasional (19%–10%):** Dermatitis acneiform, hypertension, stomatitis, mouth ulceration, mucosal ulceration, abdominal pain, dry skin, pruritus, paronychia, folliculitis, cellulitis, dizziness, dysgeusia, blurred vision, dry eye.

Combination Regimen

Frequent (71%–40%): Pyrexia, chills, fatigue, rash, nausea, vomiting. **Occasional (36%–11%):** Diarrhea, abdominal pain, peripheral edema, headache, cough, arthralgia, night sweats, myalgia, constipation, decreased appetite, back pain, dry skin, insomnia, dermatitis acneiform, dizziness, muscle spasm, extremity pain, actinic keratosis, erythema, oral/throat pain, urinary tract infection, pruritus, dry mouth, dehydration.

ADVERSE EFFECTS/TOXIC REACTIONS

Primary malignancies including basal or squamous cell carcinoma, keratoacanthoma, pancreatic adenocarcinoma, glioblastoma (brain cancer) reported. DVT, PE reported in 9% of pts. May increase cell proliferation of wild-type BRAF melanoma or new malignant melanomas. Serious, sometimes fatal intracranial or gastric bleeding occurred in 5% of pts. Other hemorrhagic events may include conjunctival/gingival/rectal/hemorrhoidal/vaginal bleeding, epistaxis (nosebleed), melena (bloody stools). Cardiomyopathy, HE, decreased LVEF reported in 7%–9% of pts. Ocular toxicities such as retinal vein occlusion, retinal detachment, vision loss, glaucoma, uveitis, iritis reported. Cough, dyspnea, hypoxia, pleural effusion, infiltrates may indicate interstitial lung disease. Serious febrile reactions may lead to renal failure, severe dehydration, hypotension, rigors. Skin toxicities including palmar-plantar erythrodysesthesia syndrome (PPES), papilloma have occurred. Hyperglycemia reported in 2%–5% of pts. Other effects may include

hypertension, rhabdomyolysis. May prolong QT interval of cardiac cycle.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, serum metabolic panel (with LFT), magnesium, phosphate, ionized calcium, capillary glucose level, vital signs. Obtain BRAF V600E mutation history, negative pregnancy status, ophthalmologic exam with visual acuity, echocardiogram, ECG before initiating treatment. Assess skin for moles, lesions, papillomas. Question current breastfeeding status. Receive full medication history including herbal products. Question any history as listed in Precautions. Offer emotional support.

INTERVENTION/EVALUATION

Offer emotional support. Monitor CBC, serum electrolytes, capillary blood glucose, stool characteristics routinely. Monitor for signs of hyperglycemia (thirst, polyuria, confusion, dehydration). Assess skin for new lesions, toxicities every 2 mos during treatment and at least 6 mos after discontinuation. Obtain LVEF by echocardiogram 1 mo after initiation, then every 2–3 mos; ophthalmologic exam with any vision changes. Immediately report any altered mental status, bleeding events, vision changes, eye pain/swelling/infection, fever, urinary changes. Screen for bleeding of any kind. If dyspnea or leg swelling occurs, contact physician and initiate appropriate medical therapy (may require oxygen therapy, ECG, or radiologic test to rule out DVT, PE, or ILLD).

PATIENT/FAMILY TEACHING

- Blood work, cardiac function tests, eye exams will be performed routinely.
- Treatment may lead to heart failure, vision changes, lung complications, difficulty breathing, fever, skin toxicities (such as severe rash, peeling), high blood pressure, severe diarrhea.
- Report bloody stools/urine, heavy menstruation, or nosebleeds.
- Do not breastfeed.
- Avoid pregnancy; nonhormonal contraception should be used during treatment and up to 4

wks after treatment. • Take medication at least 1 hr before or at least 2 hrs after meal (food reduces absorption). • Report any increased urination, thirst, confusion (may indicate high blood sugar); chest pain, eye pain, fever, leg swelling, new skin moles or lesions, vision changes. • Minimize sunlight exposure. • Males may experience a decreased sperm count. • Report any newly prescribed medications.

trastuzumab

TOP
100 HIGH
ALERT

tras-too-zoo-mab
(Herceptin)

BLACK BOX ALERT Anaphylactic reaction, infusion reaction, acute respiratory distress syndrome have been associated with fatalities. Reduction in left ventricular ejection fraction, severe heart failure may result in thrombus formation, stroke, cardiac death. Exposure during pregnancy may result in pulmonary hypoplasia, skeletal malformations, neonatal death.

Do not confuse trastuzumab with ado-trastuzumab.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: HER2 receptor antagonist. Monoclonal antibody. **CLINICAL:** Antineoplastic.

USES

Treatment of HER2-overexpressing breast cancer (adjuvant), metastatic breast cancer, metastatic gastric or gastroesophageal junction adenocarcinoma (in pts without prior treatment). **OFF-LABEL:** Treatment of HER2-positive metastatic breast cancer in pts who have not received prior anti-HER2 therapy or in pts whose cancer has progressed on prior trastuzumab therapy (in combination with lapatinib).

PRECAUTIONS

Contraindications: Hypersensitivity to trastuzumab. **Cautions:** Preexisting cardiac disease or dysfunction, preexisting

pulmonary disease or extensive pulmonary tumor involvement, pregnancy.

ACTION

Binds to extracellular domain of human epidermal growth factor receptor 2 (HER2) protein, inhibiting proliferation of tumor cells that overexpresses HER2 protein. **Therapeutic Effect:** Inhibits growth of tumor cells, mediates antibody-dependent cellular cytotoxicity.

PHARMACOKINETICS

Half-life: 11–23 days.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Women should use effective contraception during treatment and for at least 7 mos after discontinuation. Unknown if distributed in breast milk. Breastfeeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** Age-related cardiac dysfunction may require dosage adjustment.

INTERACTIONS

DRUG: May increase levels/toxicity of **belimumab**. May decrease concentration/effect of **paclitaxel (conventional)**. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 150 mg, 440 mg.

ADMINISTRATION/HANDLING

Reconstitution • Reconstitute 440-mg vial with 20 mL Bacteriostatic Water for Injection (150-mg vial with 7.4 mL Sterile Water for Injection) to yield concentration of 21 mg/mL. • Add calculated dose to 250 mL 0.9% NaCl (do not use D₅W). • Gently mix contents in bag.

Rate of administration • Do not give IV push or bolus. • Give loading dose (4 mg/kg) over 90 min. Give

maintenance infusion (2 mg/kg) over 30 min.

Storage • Refrigerate. • Reconstituted solution appears colorless to pale yellow. • Reconstituted solution in vial is stable for 28 days if refrigerated after reconstitution with Bacteriostatic Water for Injection (if using Sterile Water for Injection without preservative, use immediately; discard unused portions). • Solution diluted in 250 mL 0.9% NaCl stable for 24 hrs if refrigerated.

IV INCOMPATIBILITIES

Do not mix with D₅W or any other medications.

INDICATIONS/ROUTES/DOSAGE

Note: Do not substitute with adotrastuzumab emtansine.

Breast Cancer (Adjuvant)

IV: ADULTS, ELDERLY: (With concurrent PACLitaxel or DOCetaxel): Initially, 4 mg/kg as 90-min infusion, then 2 mg/kg wkly as 30-min infusion for 12 wks followed 1 wk later (when concurrent chemotherapy completed) by 6 mg/kg infusion over 30–90 min q3wks for total therapy duration of 52 wks. **(With DOCetaxel/CARBOplatin):** Initially, 4 mg/kg as 90-min infusion, then 2 mg/kg wkly as 30-min infusion for a total of 18 wks, followed 1 wk later (when concurrent chemotherapy completed) by 6 mg/kg infused over 30–90 min q3wks for total therapy duration of 52 wks. **(Following multimodality chemotherapy):** Initially, 8 mg/kg over 90 min, then 6 mg/kg over 30–90 min q3wks for total of 52 wks.

Breast Cancer (Metastatic)

IV: ADULTS, ELDERLY: (Either as single agent or in combination with PACLitaxel): Initially, 4 mg/kg as 90-min infusion, then 2 mg/kg as 30-min infusion wkly until disease progression.

Gastric Cancer

IV: ADULTS, ELDERLY: (In combination with CISplatin and either capecitabine or fluorouracil for 6 cycles, then as

monotherapy): Initially, 8 mg/kg over 90 min, then 6 mg/kg over 30–90 min q3wks until disease progression.

Dosage Adjustment in Cardiotoxicity

Left ventricular ejection fraction (LVEF) 16% or greater decrease from baseline WNL (within normal limits) or LVEF below normal limits and 10% or greater decrease from baseline: Hold treatment for 4 wks. Repeat LVEF q4wks. Resume therapy if LVEF returns to normal limits in 4–8 wks and remains at 15% or less decrease from baseline.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (greater than 20%): Pain, asthenia, fever, chills, headache, abdominal pain, back pain, infection, nausea, diarrhea, vomiting, cough, dyspnea. **Occasional (15%–5%):** Tachycardia, HF, flu-like symptoms, anorexia, edema, bone pain, arthralgia, insomnia, dizziness, paresthesia, depression, rhinitis, pharyngitis, sinusitis. **Rare (less than 5%):** Allergic reaction, anemia, leukopenia, neuropathy, herpes simplex.

ADVERSE EFFECTS/TOXIC REACTIONS

Cardiomyopathy, ventricular dysfunction, HF occur rarely. Pancytopenia may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Evaluate left ventricular function. Obtain baseline echocardiogram, ECG, multi-gated acquisition (MUGA) scan. Obtain CBC at baseline and at regular intervals during therapy.

INTERVENTION/EVALUATION

Frequently monitor for deteriorating cardiac function. Assist with ambulation if asthenia occurs. Monitor for fever, chills, abdominal pain, back pain. Offer antiemetics if nausea, vomiting occur. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

- Do not have immunizations without physician's approval (lowers resistance).
- Avoid contact with those who have recently taken oral polio vaccine.
- Avoid crowds, those with infection.

traZODone**traz-o-done**(Apo-TraZODone , Novo-TraZODone )

BLACK BOX ALERT Increased risk of suicidal ideation and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse traZODone with traMADol or ziprasidone.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin reuptake inhibitor/antagonist.

CLINICAL: Antidepressant.

USES

Treatment of major depressive disorder (MDD). **OFF-LABEL:** Insomnia.

PRECAUTIONS

Contraindications: Hypersensitivity to traZODone. Use of MAOIs (concurrently or within 14 days of discontinuing traZODone or MAOI); initiation in pt receiving linezolid or IV methylene blue.

Cautions: Cardiac disease, arrhythmias, cerebrovascular disease, hepatic/renal impairment, pts at high risk of suicide. Conditions predisposing to priapism (e.g., sickle cell anemia); concurrent use of antihypertensives; history of seizure disorder or conditions predisposing to seizures (e.g., alcoholism); elderly pts.

ACTION

Blocks reuptake of serotonin at neuronal presynaptic membranes, increasing its availability at postsynaptic receptor sites.

Therapeutic Effect: Relieves depression.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 85%–95%. Metabolized in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 5–9 hrs (increased in elderly).

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug crosses placenta; minimally distributed in breast milk. **Children:** Safety and efficacy not established in pts younger than 6 yrs.

Elderly: More likely to experience sedative, hypotensive effects; lower dosage recommended.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole) may increase concentration/effect. May increase concentration/effect of phenytoin. **Strong CYP3A4 inducers** (e.g., carbamazepine, rifampin) may decrease concentration/effect. May increase QT interval-prolonging effect of clarithromycin. Linezolid, venlafaxine may increase serotonergic effect. **MAOIs** (e.g., phenelzine, selegiline) may increase adverse effects. **HERBAL:** St. John's wort may decrease concentration/effect. **FOOD:** None known. **LAB VALUES:** May decrease WBC, neutrophil counts.

AVAILABILITY (Rx)

Tablets: 50 mg, 100 mg, 150 mg, 300 mg.

ADMINISTRATION/HANDLING**PO**

- Give shortly after snack, meal (reduces risk of dizziness).
- Tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Therapeutic effect may take up to 6 wks to occur.

Depression

PO: ADULTS: Initially, 50 mg twice daily. May increase in increments of 50 mg/day q3–7 days up to 75–150 mg twice daily.

May further increase by 50–100 mg/day q2–4 wks. Usual dosage range: 200 to 400 mg/day. **Maximum:** 600 mg/day. **ELDERLY:** Initially, 25–50 mg at bedtime. May increase by 25–50 mg every 3–7 days. Range: 75–150 mg/day.

Dosage in Renal/Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (9%–3%): Drowsiness, dry mouth, light-headedness, dizziness, headache, blurred vision, nausea, vomiting. **Occasional (3%–1%):** Nervousness, fatigue, constipation, myalgia/arthralgia, mild hypotension. **Rare:** Photosensitivity reaction.

ADVERSE EFFECTS/TOXIC REACTIONS

Priapism, altered libido, retrograde ejaculation, impotence occur rarely. Appears to be less cardiotoxic than other antidepressants, although arrhythmias may occur in pts with preexisting cardiac disease.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess mental status, mood, behavior. For pts on long-term therapy, serum hepatic/renal function tests, blood counts should be performed periodically. Elderly pts are more likely to experience sedative, hypotensive effects. Question history as listed in Precautions.

INTERVENTION/EVALUATION

Monitor for suicidal ideation (esp. at beginning of therapy or dosage change). Assess appearance, behavior, speech pattern, level of interest, mood. Monitor WBC, neutrophil count, hepatic enzymes. Assist with ambulation if dizziness, light-headedness occurs.

PATIENT/FAMILY TEACHING

- Immediately discontinue medication, consult physician if priapism occurs.
- **Immediate-Release:** May take after meal, snack.
- **Extended-Release:**

Take on empty stomach. • May take at bedtime if drowsiness occurs. • Change positions slowly to avoid hypotensive effect. • Avoid tasks that require alertness, motor skills until response to drug is established. • Tolerance to sedative, anticholinergic effects usually develops during early therapy. • Photosensitivity to sun may occur. • Dry mouth may be relieved by sugarless gum, sips of water. • Report visual disturbances, worsening depression, suicidal ideation, unusual changes in behavior. • Do not abruptly discontinue medication. • Avoid alcohol.

trospium

tro-spee-um

(Trosec , Sanctura XR )

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticholinergic. **CLINICAL:** Antispasmodic.

USES

Treatment of overactive bladder with symptoms of urge urinary incontinence, urgency, urinary frequency.

PRECAUTIONS

Contraindications: Hypersensitivity to trospium. Pts with or at increased risk of gastric retention, uncontrolled narrow-angle glaucoma, urinary retention.

Cautions: Decreased GI motility, renal/hepatic impairment, obstructive GI disorders, ulcerative colitis, intestinal atony, myasthenia gravis, controlled narrow-angle glaucoma, bladder flow obstruction, Alzheimer's disease, hot weather/exercise, elderly pts.

ACTION

Antagonizes effect of acetylcholine on muscarinic receptors, producing parasympatholytic action. **Therapeutic Effect:** Reduces smooth muscle tone in bladder.

PHARMACOKINETICS

Minimally absorbed after PO administration. Protein binding: 50%–85%. Distributed in plasma. Excreted in feces (82%), urine (6%). **Half-life:** 20 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** Higher incidence of dry mouth, constipation, dyspepsia, UTI, urinary retention in pts 75 yrs and older.

INTERACTIONS

DRUG: Alcohol may increase CNS depression. **Anticholinergics (e.g., acclidinium, ipratropium, tiotropium, umeclidinium)** may increase anticholinergic effect. **HERBAL:** None significant. **FOOD:** High-fat meals may reduce absorption. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 20 mg. **Capsules, Extended-Release:** 60 mg.

ADMINISTRATION/HANDLING**PO**

- Store at room temperature.
- Give at least 1 hr before meals or on an empty stomach.
- Do not break, crush, dissolve, or divide tablets or extended-release capsules; swallow whole.
- Administer tablets at bedtime, capsules in morning with full glass of water, 1 hr before eating.

INDICATIONS/ROUTES/DOSAGE**Overactive Bladder**

PO: ADULTS: (Immediate-Release): 20 mg twice daily. **ELDERLY 75 YRS AND OLDER:** 20 mg once daily at bedtime. **ADULTS, ELDERLY: (Extended-Release):** 60 mg once daily in the morning.

Dosage in Renal Impairment

CrCl less than 30 mL/min: Immediate-release dose is reduced to 20 mg once daily at bedtime. Extended-release not recommended.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment:** Use with caution.

SIDE EFFECTS

Frequent (20%): Dry mouth. **Occasional (10%–4%):** Constipation, headache. **Rare (less than 2%):** Fatigue, upper abdominal pain, dyspepsia (heartburn, indigestion, epigastric pain), flatulence, dry eyes, urinary retention.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose may result in severe anticholinergic effects, characterized by nervousness, restlessness, nausea, vomiting, confusion, diaphoresis, facial flushing, hypertension, hypotension, respiratory depression, irritability, lacrimation. Supraventricular tachycardia and hallucinations occur rarely.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Assess for presence of dysuria, urinary urgency, frequency, incontinence.

INTERVENTION/EVALUATION

Monitor for symptomatic relief. Monitor I&O; palpate bladder for retention. Monitor daily pattern of bowel activity, stool consistency. Dry mouth may be relieved by sips of tepid water.

PATIENT/FAMILY TEACHING

- Report nausea, vomiting, diaphoresis, increased salivary secretions, palpitations, severe abdominal pain.
- Swallow tablets, extended-release capsules whole.
- Give 1 hr before meals.

umeclidinium

ue-mek-li-din-ee-um
(Incruse Ellipta)

Do not confuse umeclidinium with aclidinium or clidinium.

FIXED-COMBINATION(S)

Anoro Ellipta: umeclidinium/vilanterol (bronchodilator): 62.5 mcg/25 mcg. **Trelegy Ellipta:** umeclidinium/fluticasone (corticosteroid)/vilanterol (bronchodilator): 62.5 mcg/100 mcg/25 mcg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticholinergic. **CLINICAL:** Bronchodilator (long-acting).

USES

Long-term, once-daily maintenance treatment of airflow obstruction in pts with COPD including chronic bronchitis and/or emphysema.

PRECAUTIONS

Contraindications: Hypersensitivity to umeclidinium. Severe hypersensitivity to milk proteins or any drug components. **Cautions:** Bladder neck obstruction, myasthenia gravis, narrow-angle glaucoma, prostatic hypertrophy, urinary retention. Not recommended in pts with acutely deteriorating COPD requiring emergent relief of acute symptoms.

ACTION

Inhibits muscarinic M₃ receptor in lungs, resulting in relaxation of bronchial smooth muscle. **Therapeutic Effect:** Relieves bronchospasm, reduces airway resistance, improves bronchodilation.

PHARMACOKINETICS

Rapidly absorbed following inhalation. Primarily metabolized by enzyme cytochrome P4502D6. Protein binding: 89%.

Peak concentration: 5–15 min. Steady state reached within 14 days. **Half-life:** 11 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Must either discontinue drug or discontinue breastfeeding. **Children:** Not indicated in this pt population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Anticholinergics (e.g., aclidinium, ipratropium, tiotropium) may increase anticholinergic effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Inhalation Powder: 62.5 mcg/capsule (in blister packs containing 7 or 30 doses).

ADMINISTRATION/HANDLING

Inhalation

Administration • Follow instructions for preparation according to manufacturer guidelines. • Do not shake or prime. Prior to inhaling dose, exhale fully (do not exhale into inhaler). Close lips tightly around inhaler and inhale (rapidly, steadily, and deeply). Do not breathe through nose or block air vent with fingers. • Remove mouthpiece and hold breath for 3–4 sec, then breathe out slowly and gently. Do not close container until medication has been inhaled. • Close lid cover.

Storage • Store at room temperature up to 6 wks after opening tray. • Do not refrigerate or freeze. • Protect from sunlight and moisture. • Discard after counter reaches 0. • Do not reuse inhaler.

INDICATIONS/ROUTES/DOSAGE

COPD

Inhalation: ADULTS, ELDERLY: One inhalation (62.5 mcg) once daily, at same time each day. **Maximum:** 1 inhalation/24 hrs.

Dose Modification

Deterioration of COPD: Discontinue treatment. Institute short-acting bronchodilators and supportive pulmonary therapy.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Use caution.

SIDE EFFECTS

Occasional (8%–5%): Nasopharyngitis, upper respiratory tract infection. **Rare**

(3%–1%): Cough, arthralgia, viral respiratory tract infection, pharyngitis, myalgia, abdominal pain, toothache, tachycardia.

ADVERSE EFFECTS/TOXIC REACTIONS

Life-threatening asthma-related events, bronchospasm, worsening of COPD-related symptoms have been reported. Hypersensitivity reactions may occur (esp. in pts with undiagnosed severe milk protein allergy or allergy to products containing lactose). Worsening of narrow-angle glaucoma (eye pain, blurry vision, visual halos, colored images in association with red eyes from conjunctival congestion and corneal edema) may occur. May cause worsening of urinary retention, esp. in pts with prostatic hypertrophy or bladder neck obstruction.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain baseline O₂ saturation, vital signs; pulmonary function test, if applicable. Assess respiratory rate, depth, rhythm. Assess lung sounds for wheezing, rales. Screen for concomitant use of anticholinergic medications. Question history of asthma, BPH, bladder neck obstruction, glaucoma. Teach proper inhaler priming and administration techniques. Conduct ophthalmologic exam in pts with narrow-angle glaucoma.

INTERVENTION/EVALUATION

Routinely monitor O₂ saturation, vital signs. Auscultate lung sounds and monitor for symptom improvement. Recommend discontinuation of short-acting beta₂-agonists while on long-term therapy. Monitor for COPD deterioration, narrow-angle glaucoma, urinary retention/obstruction. Monitor for increased use of rescue inhaler; may indicate worsening of respiratory status.

PATIENT/FAMILY TEACHING

- Report fever, productive cough, body aches, paradoxical bronchospasm, difficulty breathing; may indicate lung infection, worsening of COPD.
- Therapy not intended for acute COPD symptom relief, and extra doses are not advised.
- Report symptoms of acute narrow-angle glaucoma, urinary retention, bladder distention.
- Refill prescription when counter on left of inhaler reaches red area of scale.
- Follow manufacturer guidelines for proper use of inhaler.
- Drink plenty of fluids (decreases lung secretion viscosity).
- Rinse mouth with water after inhalation to decrease mouth/throat irritation.

ustekinumabTOP
100

yoo-ste-kin-ue-mab
(Stelara)

Do not confuse Stelara with Aldara, or ustekinumab with inFLIXimab or riTUXimab.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Interleukin-12, interleukin-23 inhibitor, monoclonal antibody. **CLINICAL:** Antipsoriasis agent.

USES

Treatment of adults, adolescents 12 yrs or older with moderate to severe plaque

psoriasis who are candidates for systemic therapy or phototherapy. Treatment of adults with active psoriatic arthritis alone or in combination with methotrexate. Treatment of adults with moderate to severe active Crohn's disease.

PRECAUTIONS

Contraindications: Hypersensitivity to ustekinumab. **Cautions:** History of chronic infection, recurrent infection, active tuberculosis, prior malignancy, renal/hepatic impairment. Avoid use of live vaccines.

ACTION

Strongly binds with cellular components involved in responses to inflammation and immune system, thereby decreasing likelihood of aggravating psoriatic eruptions. **Therapeutic Effect:** Significantly slows growth, migration of circulating total lymphocytes (predominant in psoriatic lesions).

PHARMACOKINETICS

Following SQ injections, clearance is affected by body weight, is not affected by gender or race. Degraded into small peptides and amino acids via catabolic pathways. Steady state reached in 28 wks. **Half-life:** 10–126 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Not indicated for use in this pt population. **Elderly:** Age-related increased incidence of infection requires cautious use.

INTERACTIONS

DRUG: May increase immunosuppressive effect of **inFLIXimab**. May decrease therapeutic effect; increase adverse effects of **vaccines (live)**. **HERBAL:** **Echinacea** may decrease concentration/effect. **FOOD:** None known. **LAB VALUES:** May increase lymphocyte count.

AVAILABILITY (Rx)

Injection Solution, Intravenous: 130 mg/26 mL. **Injection Solution, SQ (Prefilled Syringes):** 45 mg/0.5 mL, 90 mg/mL.

ADMINISTRATION/HANDLING

Reconstitution • Calculate the number of vials needed for dose based on pt's weight. • Withdraw and discard a volume from 250-mL 0.9% NaCl infusion bag equal to the volume of vials needed for dose. • Withdraw calculated dose from vial or vials and add to infusion bag to equal a final volume of 250 mL. • Visually inspect for particulate matter or discoloration. Do not use if solution is cloudy, discolored, or if visible particles are observed.

Rate of administration • Infuse over at least 60 min. Use an in-line, low-protein-binding filter (0.2 microns).

Storage • Refrigerate unused vials in original carton until time of use. • Protect from light. • Keep vials upright. • Diluted solution may be stored at room temperature for up to 4 hrs.

SQ

Preparation • Visually inspect for particulate matter or discoloration. Solution should appear clear and colorless to slightly yellow in color. • Solution may contain a few small translucent or white particles.

Administration • Insert needle subcutaneously into upper arm, outer thigh, or abdomen and inject solution. • Do not inject into areas of active skin disease or injury such as sunburns, skin rashes, inflammation, skin infections, or active psoriasis. • Do not administer IV or intramuscular. • Rotate injection sites.

Storage • Refrigerate prefilled syringes in original carton until time of use. • Protect from light. • Do not freeze or expose to heating sources. • Do not shake.

INDICATIONS/ROUTES/DOSAGE**Plaque Psoriasis**

SQ: ADULTS, ELDERLY WEIGHING 100 KG OR LESS: Initially, 45 mg, then 45 mg 4 wks later, followed by 45 mg every 12 wks. **WEIGHING MORE THAN 100 KG:** Initially, 90 mg, then 90 mg 4 wks later, followed by 90 mg every 12 wks. **Note:** 45 mg also efficacious; however, 90 mg is recommended due to greater efficacy. **CHILDREN 12 YRS AND OLDER WEIGHING MORE THAN 100 KG:** Initially, 90 mg, repeat in 4 wks, then q12 wks. **WEIGHING 61–100 KG:** Initially, 45 mg, repeat in 4 wks, then q12 wks. **WEIGHING 60 KG OR LESS:** Initially, 0.75 mg/kg, repeat in 4 wks, then q12 wks.

Psoriatic Arthritis

SQ: ADULTS, ELDERLY: Initially, 45 mg repeated in 4 wks followed by 45 mg q12wks. **PTS WITH COEXISTENT MODERATE TO SEVERE PLAQUE PSORIASIS WEIGHING MORE THAN 100 KG:** Initially, 90 mg repeated in 4 wks, then 90 mg q12wks.

Crohn's Disease

IV infusion: ADULTS, ELDERLY: Initially, (as a single dose) 520 mg (greater than 85 kg); 390 mg (56–85 kg); 260 mg (up to 54 kg).

SQ: Maintenance: 90 mg q8wks beginning 8 wks following the IV induction dose.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (8%–4%): Nasopharyngitis, upper respiratory tract infection, headache.

Rare (3%–1%): Fatigue, diarrhea, back

pain, dizziness, pruritus, injection site erythema, myalgia, depression.

ADVERSE EFFECTS/TOXIC REACTIONS

Worsening of psoriasis, thrombocytopenia, malignancies, serious infections (cellulitis, diverticulitis, gastroenteritis, pneumonia, osteomyelitis, UTI, postoperative wound infection) have been noted. Reversible posterior leukoencephalopathy syndrome (headache, seizures, confusion, visual disturbances) occurs rarely.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Pts should not receive live vaccines during treatment, 1 yr prior to initiating treatment, or 1 yr following discontinuation of treatment. Inform pt of duration of treatment and required monitoring procedures. Assess skin prior to therapy; document extent and location of psoriasis lesions. Test pt for tuberculosis infection prior to initiating treatment.

INTERVENTION/EVALUATION

Closely monitor for signs/symptoms of active tuberculosis during and after treatment. Assess skin throughout therapy for evidence of improvement of psoriasis lesions. Monitor for worsening of lesions.

PATIENT/FAMILY TEACHING

- If appropriate, pt may self-inject after proper training in preparation and injection technique.
- Report any signs of infection.
- If new diagnosis of malignancy occurs, inform physician of current treatment with ustekinumab.

valACYclovir

val-a-sye-kloe-veer
(Valtrex)

Do not confuse valACYclovir with acyclovir or valGANciclovir, or Valtrex with Valcyte.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Nucleoside analogue DNA polymerase inhibitor. **CLINICAL:** Antiviral.

USES

Treatment of herpes zoster (shingles) in immunocompetent pts. Treatment of initial and recurrent genital herpes in immunocompetent adults. Prevention of recurrent genital herpes and reduction of transmission of genital herpes in immunocompetent pts. Suppression of genital herpes in HIV-infected pts. Treatment of herpes labialis (cold sores). Treatment of chickenpox in immunocompetent children. **OFF-LABEL:** Prophylaxis and treatment of cancer-related HSV, VZV.

PRECAUTIONS

Contraindications: Hypersensitivity to acyclovir, valACYclovir. **Cautions:** Renal impairment, concurrent use of nephrotoxic agents, elderly pts.

ACTION

Converted to acyclovir by intestinal/hepatic metabolism. Competes for viral DNA polymerase; inhibits incorporation into viral DNA. **Therapeutic Effect:** Inhibits DNA synthesis and viral replication.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 13%–18%. Rapidly converted by hydrolysis to active compound acyclovir. Widely distributed to tissues, body fluids (including CSF). Primarily excreted in urine. Removed by hemodialysis. **Half-life: Acyclovir:** 2.5–3.3 hrs (increased in renal impairment).

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cross placenta. May be distributed in breast milk. **Children:** Safety and efficacy not established in children younger than 2 yrs (chickenpox); younger than 12 yrs (cold sores). **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Nephrotoxic medications (e.g., foscarnet, gentamicin) may increase risk of nephrotoxicity, renal impairment. May increase concentration/effect of tiZANidine. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 500 mg, 1,000 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • If GI upset occurs, give with meals.

INDICATIONS/ROUTES/DOSAGE

Herpes Zoster (Shingles)

PO: ADULTS, ELDERLY: (Immunocompetent): 1 g 3 times/day for 7 days. **(Immunocompromised):** 1 g 3 times/day for 7–14 days.

Herpes Simplex (Cold Sores)

PO: ADULTS, ELDERLY: (Immunocompetent): 2 g twice daily for 1 day (separate by 12 hrs). **(Immunocompromised):** 1 g 2 times/day for 5–10 days.

Initial Episode of Genital Herpes

PO: ADULTS, ELDERLY: (Immunocompetent): 1 g twice daily for 10 days. **(Immunocompromised):** 1 g 2 times/day for 5–10 days.

Recurrent Episodes of Genital Herpes

PO: ADULTS, ELDERLY: (Immunocompetent): 500 mg twice daily for 3 days. **(Immunocompromised):** 1 g 2 times/day for 5–10 days.

Suppressive Therapy of Genital Herpes

PO: ADULTS, ELDERLY: (Immunocompetent): 500 mg twice daily or 1 g once

daily (500 mg once daily in pts with 9 or fewer recurrences/yr). (**Immunocompromised**): 500 mg 2 times/day.

Chickenpox

PO: CHILDREN 2–17 YRS: (Immunocompetent): 20 mg/kg/dose 3 times/day for 5 days. **Maximum:** 1 g 3 times/day.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance. **HD:** Give dose postdialysis.

Cold Sores/Herpes Zoster

Creatinine Clearance	Herpes Zoster	Cold Sores
30–49 mL/min	1 g q12h	1 g q12h × 2 doses
10–29 mL/min	1 g q24h	500 mg q12h × 2 doses
Less than 10 mL/min	500 mg q24h	500 mg as single dose

Genital Herpes

Creatinine Clearance	Initial Episode	Recurrent Episode	Suppressive Therapy
10–29 mL/min	1 g q24h	500 mg q24h	500 mg q24–48h
Less than 10 mL/min	500 mg q24h	500 mg q24h	500 mg q24–48h

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Herpes zoster (17%–10%): Nausea, headache. **Genital herpes (17%):** Headache. **Occasional:** Herpes zoster (7%–3%): Vomiting, diarrhea, constipation (50 yrs and older), asthenia, dizziness (50 yrs and older). **Genital herpes (8%–3%):** Nausea, diarrhea, dizziness. **Rare:** Herpes zoster (3%–1%): Abdominal pain, anorexia. **Genital herpes (3%–1%):** Asthenia, abdominal pain.

ADVERSE EFFECTS/TOXIC REACTIONS

Neutropenia, thrombocytopenia, renal failure occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly to valACYclovir, acyclovir. Tissue cultures for herpes zoster, herpes simplex should be obtained before giving first dose (therapy may proceed before results are known). Assess medical history, esp. HIV infection, bone marrow or renal transplantation, renal/hepatic impairment. Assess characteristics, frequency of lesions.

INTERVENTION/EVALUATION

Monitor CBC, LFT, renal function, urinalysis. Evaluate cutaneous lesions. Provide analgesics, comfort measures for herpes zoster (esp. exhausting to elderly). Encourage fluids. Keep pt's fingernails short, hands clean.

PATIENT/FAMILY TEACHING

- Drink adequate fluids.
- Do not touch lesions with fingers to avoid spreading infection to new site.
- **Genital herpes:** Continue therapy for full length of treatment.
- Space doses evenly.
- Avoid sexual intercourse during duration of lesions to prevent infecting partner.
- ValACYclovir does not cure herpes.
- Report if lesions recur or do not improve.
- Pap smears should be done at least annually due to increased risk of cervical cancer in women with genital herpes.
- Initiate treatment at first sign of recurrent episode of genital herpes or herpes zoster (early treatment within first 24–48 hrs is imperative for therapeutic results).

valbenazine

val-ben-a-zeen
(Ingrezza)

Do not confuse with carBAMazepine, deutetrabenazine, or tetrabenazine.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Central monoamine-depleting agent. Vesicular monoamine transporter-2 (VMAT2)

inhibitor. **CLINICAL:** Reduces tardive dyskinesia.

USES

Treatment of adults with tardive dyskinesia.

PRECAUTIONS

Contraindications: Hypersensitivity to valbenazine. **Cautions:** Pts at risk for falls, severe osteoporosis; concomitant use with strong CYP2D6 inhibitors, strong CYP3A4 inhibitors or in a poor CYP2D6 metabolizer, QTc interval–prolonging medications. Pts with congenital QT syndrome, arrhythmias associated with prolonged QT interval. Pts with depression or suicidal ideation, moderate to severe hepatic impairment. Avoid use in severe renal impairment.

ACTION

Exact mechanism of action for dyskinesia unknown. Thought to be mediated by reversible inhibition of VMAT2, a transporter that regulates uptake of monoamine from the cytoplasm to the synaptic vesicle for storage and release. **Therapeutic Effect:** Reduces abnormal involuntary movements; improves motor function.

PHARMACOKINETICS

Widely distributed. High-fat meals decrease absorption. Metabolized by hydrolysis to active metabolite. Protein binding: greater than 99%. Peak plasma concentration: 30–60 min (metabolite: 4–8 hrs). Excreted in urine (60%), feces (30%). **Half-life:** 15–22 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Breastfeeding not recommended during treatment and for at least 5 days after discontinuation. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Deutetrabenazine, tetrabenazine may enhance adverse/toxic effects. **Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole, riton-**

avir), strong CYP2D6 inhibitors (e.g., FLUoxetine, PARoxetine) may increase concentration/effect. **Strong CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin)** may decrease concentration/effect. May increase concentration/adverse effects of **MAOIs (e.g., phenelzine, selegiline).** **HERBAL:** St. John's wort may decrease concentration/effect. **FOOD:** None known. **LAB VALUES:** May increase alkaline phosphatase, bilirubin, prolactin, glucose.

AVAILABILITY (Rx)

Capsules: 40 mg, 80 mg.

ADMINISTRATION/HANDLING

PO

- Give with or without food.

INDICATIONS/ROUTES/DOSAGE

Tardive Dyskinesia

PO: ADULTS, ELDERLY: 40 mg once daily. May increase to 80 mg once daily if tolerated after 7 days.

Dose Modification

CYP2D2 poor metabolizers: Consider reducing dose based on tolerability.

Dosage in Renal Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Not recommended.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment:** 40 mg once daily.

SIDE EFFECTS

Occasional (13%–3%): Somnolence, fatigue, sedation, dry mouth, constipation, attention disturbance, blurry vision, urinary retention, gait disturbance, dizziness, balance disorder, vomiting. **Rare (2%):** musculoskeletal disorders, arthralgia.

ADVERSE EFFECTS/TOXIC REACTIONS

May increase risk of falls, injury. Elevated serum alkaline phosphatase, bilirubin

may indicate risk of cholestasis. May cause QTc prolongation in pts who are CYP2D6 poor metabolizers or taking concomitant CYP2D6 inhibitors, which may increase the risk of torsades de pointes, sudden cardiac death. VMAT2 inhibitors are associated with elevated serum prolactin levels, which may cause low estrogen levels, thereby increasing risk of amenorrhea, galactorrhea, gynecmastia, osteoporosis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline LFTs, ECG (pts at risk for QT prolongation). Assess for depression or suicidal ideation. Assess baseline of abnormal involuntary movements. Receive full medication history and screen for interactions. Initiate fall precautions. Offer emotional support.

INTERVENTION/EVALUATION

Assess for clinical improvement, reversal of symptoms (lip smacking, puckering, tongue protrusion or chewing, jaw movement, rapid blinking of the eye; slow, deliberate movements; rapid jerking motion that interrupts normal coordinated movement). Assist with ambulation.

PATIENT/FAMILY TEACHING

- Therapy is not a cure, but it may help with abnormal involuntary movements associated with disease.
- Do not take newly prescribed medications unless approved by prescriber that originally started treatment.
- Report fainting, chest pain, palpitations, irregular heart rhythm.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Do not breastfeed during treatment and for at least 5 days after final dose.

valGANciclovir

val-gan-sye-kloe-veer

(Apo-ValGANciclovir , Valcyte)

BLACK BOX ALERT ■ May adversely affect spermatogenesis, fertility. Risk for granulocytopenia, anemia, thrombocytopenia.

Do not confuse Valcyte with Valium or Valtrex, or valGANciclovir with valACYclovir.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic nucleoside. **CLINICAL:** Antiviral.

USES

Adults: Treatment of cytomegalovirus (CMV) retinitis in AIDS. Prevention of CMV disease in high-risk renal, cardiac, renal-pancreas transplant pts. **Children:** Prevention of CMV disease in high-risk renal (4 mos to 16 yrs) and cardiac transplant pts (1 mo to 16 yrs).

PRECAUTIONS

Contraindications: Hypersensitivity to valGANciclovir, ganciclovir. **Cautions:** Use extreme caution in children due to long-term carcinogenicity, reproductive toxicity. Renal impairment, concurrent nephrotoxic medications, preexisting bone marrow suppression or cytopenias, history of cytopenic reactions to other drugs, elderly pts (at greater risk for renal impairment).

ACTION

Inhibits binding of deoxyguanosine triphosphate to DNA polymerase. **Therapeutic Effect:** Inhibits viral DNA synthesis.

PHARMACOKINETICS

Well absorbed, rapidly converted to ganciclovir by intestinal mucosal cells and hepatocytes. Widely distributed including CSF, ocular tissue. Slowly metabolized intracellularly. Primarily excreted in urine. Removed by hemodialysis. **Half-life: Ganciclovir:** 4 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm/malforma-

tions. Female pts of reproductive potential should use effective contraception during treatment. Avoid breastfeeding; may be resumed no sooner than 72 hrs after last dose. May impair fertility in both females and males. **Children:** Safety and efficacy not established in pts younger than 1 month. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Bone marrow depressants may increase myelosuppression. May increase concentration/effect of **didanosine**, **mycophenolate**. **Probenecid** may decrease renal clearance, increase concentration. May increase nephrotoxic effect of **amphotericin**, **cycloSPORINE**. May increase adverse effects of **zidovudine**. **Zidovudine (AZT)** may increase risk of hematologic toxicity. **HERBAL:** None significant. **FOOD:** All foods maximize drug bioavailability. **LAB VALUES:** May decrease creatinine clearance, platelet count, neutrophils, Hgb, Hct. May increase serum creatinine.

AVAILABILITY (Rx)

Powder for Oral Solution: 50 mg/mL (100 mL).

 **Tablets:** 450 mg.

ADMINISTRATION/HANDLING

PO

- Take with meals.
- Do not break, crush, dissolve, or divide tablets; give whole (potential carcinogen).
- Avoid contact with skin.
- Wash skin with soap, water if contact occurs.
- Store oral suspension in refrigerator. Discard after 49 days.

INDICATIONS/ROUTES/DOSAGE

Note: Do not use if absolute neutrophil count (ANC) less than 500 cells/mm³, platelets less than 25,000 cells/mm³, or Hgb less than 8 g/dL.

Cytomegalovirus (CMV) Retinitis (AIDS-Related)

PO: ADULTS: Initially, 900 mg (two 450-mg tablets) twice daily for 14–21 days. **Maintenance:** 900 mg once daily.

Prevention of CMV After Transplant

PO: ADULTS, ELDERLY: 900 mg once daily beginning within 10 days of transplant and continuing until 100 days (heart, kidney, or pancreas transplant) or 200 days (kidney transplant) post-transplant. **CHILDREN 1 MO–16 YRS:** Once daily based on body surface area (BSA) and CrCl using formula: (Dose = 7 × BSA × CrCl). **Maximum:** 900 mg/day.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance.

Creatinine Clearance	Induction Dosage	Maintenance Dosage
60 mL/min or higher	900 mg twice daily	900 mg once daily
40–59 mL/min	450 mg twice daily	450 mg once daily
25–39 mL/min	450 mg once daily	450 mg every 2 days
10–24 mL/min	450 mg every 2 days	450 mg twice wkly

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (16%–9%): Diarrhea, neutropenia, headache. **Occasional (8%–3%):** Nausea. **Rare (less than 3%):** Insomnia, paresthesia, vomiting, abdominal pain, fever.

ADVERSE EFFECTS/TOXIC REACTIONS

Hematologic toxicity, including severe neutropenia (most common), anemia, thrombocytopenia, leukopenia, aplastic anemia, pancytopenia, bone marrow suppression may occur. Retinal detachment occurs rarely. Overdose may result in renal toxicity. May decrease sperm production, fertility.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, serum chemistries, renal function, urinalysis; pregnancy test. Receive full medication history.

INTERVENTION/EVALUATION

Monitor I&O, ensure adequate hydration (minimum 1,500 mL/24 hrs). Diligently evaluate CBC for decreased WBCs, Hgb, Hct, platelets; changes in urinary characteristics, consistency. Question pt regarding vision, therapeutic improvement, complications.

PATIENT/FAMILY TEACHING

- ValGANCiclovir provides suppression, not cure, of CMV retinitis.
- Frequent blood tests are necessary during therapy because of toxic nature of drug.
- Ophthalmologic exam q4–6wks during treatment is advised.
- Report any new symptom promptly.
- May temporarily or permanently inhibit sperm production in men, suppress fertility in women.
- Barrier contraception should be used during and for 90 days after therapy (mutagenic potential).
- Swallow whole; do not chew, crush, dissolve, or divide.
- Avoid handling broken/crushed tablets, oral solution.
- Report fever, chills, unusual bleeding/bruising, urinary changes.

valproic acid

val-**pro**-ick as-id

(Apo-Divalproex , Depacon, Depakene, Depakote, Depakote ER, Depakote Sprinkle, Novo-Divalproex )

BLACK BOX ALERT Embryo, fetal neural tube defects (spina bifida) have occurred. Life-threatening pancreatitis, complete hepatic failure have occurred.

Do not confuse Depakene with Depakote.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Histone deacetylase inhibitor. **CLINICAL:** Anticonvulsant, antimanic, antimigraine.

USES

Monotherapy/adjunctive therapy of complex partial seizures, simple and complex absence seizures. Adjunctive therapy of multiple seizures including absence sei-

zures. **Additional uses for Depakote, Depakote ER:** Treatment of manic episodes with bipolar disorder, prophylaxis of migraine headaches. **OFF-LABEL:** Refractory status epilepticus, diabetic neuropathy. Mood stabilizer for behaviors in dementia.

PRECAUTIONS

Contraindications: Hypersensitivity to valproic acid. Active hepatic disease, urea cycle disorders, known mitochondrial disorders caused by mutation in mitochondrial DNA polymerase gamma (POLG). Children under 2 yrs of age suspected of having POLG-related disorder. Migraine prevention in pregnant women. **Cautions:** Children younger than 2 yrs. Pts at risk for hepatotoxicity. History of hepatic impairment, bleeding abnormalities, pts at high risk for suicide, elderly pts.

ACTION

Directly increases concentration of inhibitory neurotransmitter gamma-aminobutyric acid (GABA). **Therapeutic Effect:** Decreases seizure activity, stabilizes mood, prevents migraine headache.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 80%–90%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 9–16 hrs (may be increased in hepatic impairment, elderly pts, children younger than 18 mos).

 **LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: Drug crosses placenta; is distributed in breast milk. **Children:** Increased risk of hepatotoxicity in pts younger than 2 yrs. **Elderly:** No age-related precautions, but lower dosages recommended.

INTERACTIONS

DRUG: Cholestyramine, rifAMPin may decrease concentration/effect. May increase adverse effects of lamoTRigine, LORazepam. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum LDH,

bilirubin, ALT, AST. **Therapeutic serum level:** 50–100 mcg/mL; **toxic serum level:** greater than 100 mcg/mL.

AVAILABILITY (Rx)

Capsules: (*Depakene*): 250 mg. **Capsules, Sprinkle:** (*Depakote Sprinkle*): 125 mg. **Injection Solution:** (*Depacon*): 100 mg/mL. **Oral Solution:** (*Depakene*): 250 mg/5 mL.

 **Tablets, Delayed-Release:** (*Depakote*): 125 mg, 250 mg, 500 mg. **Tablets, Extended-Release:** (*Depakote ER*): 250 mg, 500 mg.

ADMINISTRATION/HANDLING

Reconstitution • Dilute each single dose with at least 50 mL D₅W, 0.9% NaCl, or lactated Ringer's.

Rate of administration • Infuse over 60 min at rate of 20 mg/min or less. • Alternatively, single doses of up to 45 mg/kg given over 5–10 min (1.5–6 mg/kg/min).

Storage • Store vials at room temperature. • Diluted solutions stable for 24 hrs. • Discard unused portion.

PO

• May give without regard to food. Do not mix oral solution with carbonated beverages (may cause mouth/throat irritation). • May sprinkle capsule (*Depakote Sprinkle*) contents on applesauce and give immediately (do not chew sprinkle beads). • Give delayed-release/extended-release tablets whole. Do not crush, break, open delayed-release capsule (*Stavzor*). • Regular-release and delayed-release formulations usually given in 2–4 divided doses/day. Extended-release formulation (*Depakote ER*) usually given once daily.

 **IV COMPATIBILITIES**

Cefepime, cefTAZidime.

INDICATIONS/ROUTES/DOSAGE

Seizures

PO: ADULTS, ELDERLY, CHILDREN 10 YRS AND OLDER: Initially, 10–15 mg/kg/day. May increase by 5–10 mg/kg/day at

wkly intervals up to 60 mg/kg/day. **Usual adult dosage:** 1,000–2,500 mg/day. **IV: ADULTS, ELDERLY, CHILDREN:** Same daily dose divided q6h.

Manic Episodes

PO: ADULTS, ELDERLY: Initially, 500–750 mg/day. May increase by 250–500 mg q1–3days to reach desired clinical effect and therapeutic serum concentration. **Maximum:** 60 mg/kg/day.

Prevention of Migraine Headaches

PO: (Extended-Release [Depakote ER]): ADULTS, ELDERLY: Initially, 500 mg once daily. May increase up to 1,000 mg once daily.

PO: (Delayed-Release [Depakote]): ADULTS, ELDERLY, CHILDREN 16 YRS AND OLDER: Initially, 250 mg twice daily. May increase up to 1,000 mg/day in 2 divided doses.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: Not recommended. **Severe impairment:** Contraindicated.

SIDE EFFECTS

Frequent: Epilepsy: Abdominal pain, irregular menses, diarrhea, transient alopecia, indigestion, nausea, vomiting, tremors, fluctuations in body weight. **Mania (22%–19%):** Nausea, drowsiness. **Occasional: Epilepsy:** Constipation, dizziness, drowsiness, headache, skin rash, unusual excitement, restlessness. **Mania (12%–6%):** Astenia, abdominal pain, dyspepsia, rash. **Rare: Epilepsy:** Mood changes, diplopia, nystagmus, spots before eyes, unusual bleeding/bruising.

ADVERSE EFFECTS/TOXIC REACTIONS

Hepatotoxicity may occur, particularly in first 6 mos of therapy. May be preceded by loss of seizure control, malaise, weakness, lethargy, anorexia, vomiting rather than abnormal LFT results. Blood dyscrasias may occur.

* Canadian trade name

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Anticonvulsant: Review history of seizure disorder (intensity, frequency, duration, level of consciousness). Initiate safety measures, quiet dark environment. CBC should be performed before and 2 wks after therapy begins, then 2 wks following maintenance dose. Obtain baseline LFT. **Antimanic:** Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content. **Antimigraine:** Question pt regarding onset, location, duration of migraine, possible precipitating symptoms.

INTERVENTION/EVALUATION

Monitor CBC, LFT, serum ammonia. **Anticonvulsant:** Observe frequently for recurrence of seizure activity. Assess skin for ecchymoses, petechiae. Monitor for clinical improvement (decrease in intensity/frequency of seizures). **Antimanic:** Question for suicidal ideation. Assess for therapeutic response (interest in surroundings, increased ability to concentrate, relaxed facial expression). **Antimigraine:** Evaluate for relief of migraine headache and resulting photophobia, phonophobia, nausea, vomiting. **Therapeutic serum level:** 50–100 mcg/mL; **toxic serum level:** greater than 100 mcg/mL.

PATIENT/ FAMILY TEACHING

• Do not abruptly discontinue medication after long-term use (may precipitate seizures). • Strict maintenance of drug therapy is essential for seizure control. • Avoid tasks that require alertness, motor skills until response to drug is established. • Drowsiness usually disappears during continued therapy. • Avoid alcohol. • Report liver problems such as nausea, vomiting, lethargy, altered mental status, weakness, loss of appetite, abdominal pain, yellowing of skin, unusual bruising/bleeding. • Report if seizure control worsens, suicidal ideation (depression, unusual changes in behavior, suicidal thoughts) occurs.

valsartan

val-sar-tan

(Apo-Valsartan , Diovan)

BLACK BOX ALERT May cause fetal injury, mortality. Discontinue as soon as possible once pregnancy is detected.

Do not confuse Diovan with Zyban, or valsartan with losartan or Valstar.

FIXED-COMBINATION(S)

Diovan HCT: valsartan/hydroCHLORothiazide (a diuretic): 80 mg/12.5 mg, 160 mg/12.5 mg, 160 mg/25 mg, 320 mg/12.5 mg, 320 mg/25 mg. **Byvalson:** valsartan/nebivolol (a beta blocker): 80 mg/5 mg. **Exforge:** valsartan/amLODIPine (a calcium channel blocker): 160 mg/5 mg, 160 mg/10 mg, 320 mg/5 mg, 320 mg/10 mg. **Exforge HCT:** valsartan/amLODIPine (a calcium channel blocker)/hydroCHLORothiazide (a diuretic): 160 mg/5 mg/12.5 mg, 160 mg/5 mg/25 mg, 160 mg/10 mg/12.5 mg, 160 mg/10 mg/25 mg, 320 mg/10 mg/25 mg. **Valturna:** valsartan/aliskiren (a direct renin inhibitor): 160 mg/150 mg, 320 mg/300 mg.

◆ **CLASSIFICATION**

PHARMACOTHERAPEUTIC: Angiotensin II receptor antagonist. **CLINICAL:** Antihypertensive.

USES

Treatment of hypertension alone or in combination with other antihypertensives. Treatment of HF (NYHA Class II–IV). Reduce mortality in high-risk pts (left ventricular failure/dysfunction) following MI.

PRECAUTIONS

Contraindications: Hypersensitivity to valsartan. Concomitant use with aliskiren in pts with diabetes. **Cautions:** Concurrent use of potassium-sparing diuretics or potas-

sium supplements, mild to severe hepatic impairment, unstented bilateral/unilateral renal artery stenosis, renal impairment, significant aortic/mitral stenosis, elderly pts.

ACTION

Directly antagonizes angiotensin II receptors. Blocks vasoconstrictor, aldosterone-secreting effects of angiotensin II, inhibiting binding of angiotensin II to AT₁ receptors. **Therapeutic Effect:** Produces vasodilation, decreases peripheral resistance, decreases B/P.

PHARMACOKINETICS

Poorly absorbed after PO administration. Food decreases peak plasma concentration. Protein binding: 95%. Metabolized in liver. Excreted in feces (83%), urine (13%). Unknown if removed by hemodialysis. **Half-life:** 6 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Potassium-sparing drugs (e.g., spironolactone, triamterene), potassium supplements may increase serum potassium. Aliskiren may increase hyperkalemic effect. May increase adverse/toxicity of ACE inhibitors (e.g., benazepril, lisinopril). **HERBAL:** Herbals with hypertensive properties (e.g., licorice, yohimbe) or hypotensive properties (e.g., garlic, ginger, ginkgo biloba) may alter effects. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin, ALT, AST, BUN, creatinine, potassium. May decrease Hgb, Hct, WBC.

AVAILABILITY (Rx)

Tablets: 40 mg, 80 mg, 160 mg, 320 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: Initially, 80–160 mg/day in pts who are not volume depleted. **Maximum:** 320 mg/day. **CHILDREN 6–16 YRS:** Initially, 1.3 mg/kg once daily (**Maximum:** 40 mg). May increase up to 2.7 mg/kg once daily (**Maximum:** 160 mg/day).

HF

PO: ADULTS, ELDERLY: Initially, 20–40 mg twice daily. May increase up to 160 mg twice daily. **Maximum:** 320 mg/day.

Post-MI, Left Ventricular Dysfunction

PO: ADULTS, ELDERLY: May initiate 12 hrs or longer following MI. Initially, 20 mg twice daily. May increase within 7 days to 40 mg twice daily. May further increase up to target dose of 160 mg twice daily.

Dosage in Renal Impairment

CrCl greater than 30 mL/min: No dose adjustment. **CrCl 30 mL/min or less: ADULTS:** Safety/efficacy not established. **CHILDREN 6–16 YRS:** Not recommended.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Rare (2%–1%): Insomnia, fatigue, heartburn, abdominal pain, dizziness, headache, diarrhea, nausea, vomiting, arthralgia, edema.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdosage may manifest as hypotension, tachycardia. Bradycardia occurs less often. Viral infection, upper respiratory tract infection (cough, pharyngitis, sinusitis, rhinitis) occur rarely.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain CBC, BMP, LFT. Obtain B/P, apical pulse immediately before each dose, in addition to regular monitoring (be alert to fluctuations). If excessive reduction in B/P occurs, place pt in supine position, feet slightly elevated. Question for possibility of pregnancy. Assess medication history (esp. diuretic). Question for history of hepatic/renal impairment, renal artery stenosis, history of severe HF.

INTERVENTION/EVALUATION

Maintain hydration (offer fluids frequently). Assess for evidence of upper respiratory infection. Monitor serum electrolytes, renal function, LFT, Hgb, Hct, urinalysis, B/P, pulse. Observe for symptoms of hypotension.

PATIENT/ FAMILY TEACHING

- Females of childbearing potential must use effective contraception during treatment.
- Inform physician as soon as possible if pregnancy occurs.
- Report any sign of infection (sore throat, fever).
- Do not stop taking medication.
- Report swelling of extremities, chest pain, palpitations; decreased urine output, amber-colored urine, fatigue, yellowing of the skin or eyes.

vancomycin

van-koe-mye-sin
(Vancocin)

Do not confuse vancomycin with clindamycin, gentamicin, tobramycin, or Vibramycin.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Tricyclic glycopeptide antibiotic. **CLINICAL:** Antibiotic.

USES

Systemic: Treatment of infections caused by staphylococcal, streptococcal spp. bacteria. **PO:** Treatment of *C. difficile*-associated diarrhea and treatment of enterocolitis caused by *S. aureus* (including MRSA). **OFF-LABEL:** Treatment of infections caused by gram-positive organisms in pts with serious allergies to beta-lactam antibiotics; treatment of beta-lactam-resistant gram-positive infections. Surgical prophylaxis, treatment of prosthetic joint infection.

PRECAUTIONS

Contraindications: Hypersensitivity to vancomycin. **Cautions:** Renal impairment; concurrent therapy with other ototoxic, nephrotoxic medications, elderly pts, dehydration.

ACTION

Binds to bacterial cell walls, altering cell membrane permeability, inhibiting RNA synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

PO: Poorly absorbed from GI tract. Primarily excreted in feces. **Parenteral:** Widely distributed (except CSF). Protein binding: 10%–50%. Primarily excreted unchanged in urine. Not removed by hemodialysis. **Half-life:** 4–11 hrs (increased in renal impairment).

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug crosses placenta, distributed in breast milk following IV administration. **Children:** Close monitoring of serum levels recommended in premature neonates, young infants. **Elderly:** Age-related renal impairment may increase risk of ototoxicity, nephrotoxicity; dosage adjustment recommended.

INTERACTIONS

DRUG: May increase concentration/effects of **aminoglycosides** (e.g.,

amikacin, gentamicin). **Bile acid sequestrants** (e.g., cholestyramine) may decrease therapeutic effect (oral vancomycin). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase BUN. **Therapeutic peak serum level:** (Not routinely obtained) 20–40 mcg/mL; **therapeutic trough serum level:** 10–20 mcg/mL. **Toxic peak serum level:** greater than 40 mcg/mL; **toxic trough serum level:** greater than 20 mcg/mL.

AVAILABILITY (Rx)

Capsules: (*Vancocin*): 125 mg, 250 mg. **Infusion, Premix:** (*Vancocin HCl*): 500 mg/100 mL, 750 mg/150 mL, 1 g/200 mL. **Injection, Powder for Reconstitution:** (*Vancocin HCl*): 500 mg, 750 mg, 1 g. **Oral Solution:** 25 mg/mL, 50 mg/mL. **Oral Suspension:** 50 mg/mL.

ADMINISTRATION/HANDLING

ALERT Give by intermittent IV infusion (piggyback) or continuous IV infusion. Do not give IV push (may result in exaggerated hypotension or red man syndrome).

Reconstitution • For intermittent IV infusion (piggyback), reconstitute each 500-mg vial with 10 mL Sterile Water for Injection (20 mL for 1-g vial) to provide concentration of 50 mg/mL. • Further dilute with D₅W or 0.9% NaCl to final concentration not to exceed 5 mg/mL.

Rate of administration • Administer over 60 min or longer (30 min for each 500 mg recommended). • Monitor B/P closely during IV infusion.

Storage • Reconstituted vials are stable for 14 days at room temperature or if refrigerated. • Diluted solutions are stable for 14 days if refrigerated or 7 days at room temperature. • Discard if precipitate forms.

PO

• May give with food. • Powder for injection may be reconstituted and diluted for oral administration.

IV INCOMPATIBILITIES

Albumin, amphotericin B complex (Abelcet, AmBisome, Amphotec), aztreonam (Azactam), ceFAZolin (Ancef), cefotaxime (Claforan), ceFOXitin (Mefoxin), ceFTAZidime (Fortaz), ceFTRIAXone (Rocephin), cefuroxime (Zinacef), foscarnet (Foscavir), heparin, nafcillin (Nafcil), piperacillin and tazobactam (Zosyn).

IV COMPATIBILITIES

Amiodarone (Cordarone), calcium gluconate, dexmedetomidine (Precedex), diLTIAZem (Cardizem), HYDROmorphone (Dilaudid), insulin, LORazepam (Ativan), magnesium sulfate, midazolam (Versed), morphine, niCARDipine (Cardene), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Note: Initial IV dosing in nonobese pts is based on actual body weight. Subsequent dosing is adjusted based on serum trough concentrations and renal function. Pt-specific dosing may be necessary to determine dose and interval (e.g., morbid obesity, critical illness, unstable renal function).

Usual Parenteral Dosage

IV: ADULTS, ELDERLY: 15–20 mg/kg/dose (rounded to nearest 250 mg) q8–12h. Dosage requires adjustment in renal impairment. **Usual Maximum Dose:** 2 g. **CHILDREN OLDER THAN 1 MO:** 10–15 mg/kg/dose q6h. **Maximum:** 2,000 mg/dose. **NEONATES:** Loading dose of 20 mg/kg; then, 15 mg/kg q48h up to 10–15 mg/kg/dose q6–8h.

Staphylococcal Enterocolitis, Antibiotic-Associated Pseudomembranous Colitis Caused by *Clostridium Difficile*

PO: ADULTS, ELDERLY: 125–500 mg 4 times/day for 10–14 days. **CHILDREN:** 40 mg/kg/day in 3–4 divided doses for 7–10 days. **Maximum:** 2 g/day.

Dosage in Renal Impairment

After loading dose, subsequent dosages and frequency are modified based on creatinine clearance, severity of infection, and serum concentration of drug.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: **PO:** Bitter/unpleasant taste, nausea, vomiting, mouth irritation (with oral solution). **Rare:** **Parenteral:** Phlebitis, thrombophlebitis, pain at peripheral IV site, dizziness, vertigo, tinnitus, chills, fever, rash, necrosis with extravasation. **PO:** Rash.

ADVERSE EFFECTS/TOXIC REACTIONS

Nephrotoxicity (acute kidney injury, acute tubular necrosis, renal failure), ototoxicity (temporary or permanent hearing loss) may occur. Too-rapid infusion may cause red man syndrome, a common adverse reaction characterized by pruritus, urticaria, erythema, angioedema, tachycardia, hypotension, myalgia, maculopapular rash (usually appears on face, neck, upper torso). Cardiovascular toxicity (cardiac depression, arrest) occurs rarely. Onset usually occurs within 30 min of start of infusion, resolves within hrs following infusion. May result from too-rapid rate of infusion.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Avoid other ototoxic, nephrotoxic medications if possible. Obtain culture, sensitivity test before giving first dose (therapy may begin before results are known). Consider placement of central venous line/PICC line.

INTERVENTION/EVALUATION

Monitor serum renal function tests, I&O. Assess skin for rash. Check hearing acuity, balance. Monitor B/P carefully during infusion. Monitor for red man syndrome. Evaluate IV site for phlebitis (heat, pain, red streaking over vein). Obtain vancomycin peak/trough level as ordered by physician or pharmacist.

Therapeutic serum level: peak: 20–40 mcg/mL; **trough:** 10–20 mcg/mL. **Toxic serum level: peak:** greater than 40 mcg/mL; **trough:** greater than 20 mcg/mL.

PATIENT/ FAMILY TEACHING

- Continue therapy for full length of treatment.
- Doses should be evenly spaced.
- Report ringing in ears, hearing loss, changes in urinary frequency or consistency.
- Lab tests are important part of total therapy.

vandetanib

van-**det**-a-nib
(Caprelsa)

BLACK BOX ALERT Can prolong QT interval (torsades de pointes and sudden cardiac death reported). Do not use in pts with hypokalemia, hypocalcemia, hypomagnesemia, congenital long QT syndrome. Electrolyte imbalances must be corrected prior to initiating therapy. If medication that prolongs QT interval is needed, more frequent ECG monitoring is recommended. ECGs should be obtained during wks 2–4 and wks 8–12 after starting therapy and 3 mos thereafter. Any dose reduction or interruption related to QT prolongation greater than 2 wks must have frequent ECG monitoring as noted above. Only certified prescribers and pharmacies with a restricted distribution program are able to prescribe and dispense.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Epidermal growth factor receptor (EGFR) inhibitor. Vascular endothelial growth factor (VEGF) inhibitor. Tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of symptomatic or progressive medullary thyroid cancer in pts with unresectable locally advanced or metastatic disease.

PRECAUTIONS

Contraindications: Hypersensitivity to vandetanib. Congenital long QT syndrome. **Cautions:** Pregnancy, concurrent medications that prolong QT interval,

hypokalemia, hypomagnesemia, hypothyroidism, cerebrovascular disease, moderate to severe renal/hepatic impairment, hypertension, uncompensated HF, history of torsades de pointes.

ACTION

Inhibits tyrosine kinases including epidermal growth factor (EGF) and vascular endothelial growth factor (VEGF). Blocks intracellular signaling, angiogenesis, and cellular proliferation. **Therapeutic Effect:** Inhibits thyroid tumor cell growth and metastasis.

PHARMACOKINETICS

Slowly absorbed following PO administration. Peak concentration: 4–10 hrs. Metabolized in liver. Protein binding: 90%. Excreted in feces (44%), urine (25%). **Half-life:** 19 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Avoid pregnancy. Must use effective contraception during treatment and for at least 4 mos after treatment. Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Medications prolonging QT interval (e.g., amiodarone, azithromycin, citalopram, clarithromycin, dronedarone, haloperidol, levofloxacin, quetiapine) may increase risk of QT prolongation. **CYP3A4 inducers** (e.g., carbamazepine, oxcarbazepine, phenytoin, rifampin) may decrease concentration/effects. **HERBAL:** St. John's wort may decrease concentration/effect. **FOOD:** Grapefruit products may increase risk of torsades de pointes, myelotoxicity. **LAB VALUES:** May decrease WBC, Hgb, neutrophils. May increase serum bilirubin, ALT, AST, creatinine; urine protein. May alter serum calcium, glucose, magnesium, potassium.

AVAILABILITY (Rx)

Tablets: 100 mg, 300 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Do not crush. • May disperse in 2 oz of noncarbonated water and stir for 10 min until tablet is evenly dispersed (will not completely dissolve). Administer dispersion immediately. Rinse residue in glass with 4 oz water and administer. Can be given via feeding tube. • Direct contact of crushed tablets with skin or mucous membranes should be strictly avoided. If contact occurs, wash thoroughly.

Storage • Contact pharmacy to properly discard out-of-date tablets.

INDICATIONS/ROUTES/DOSAGE

Thyroid Cancer

Note: Do not begin unless QT_c interval is less than 450 msec. Maintain serum calcium and magnesium within normal limits. Maintain serum potassium at least 4 mEq/L or greater.

PO: ADULTS, ELDERLY: 300 mg once daily. Continue until disease progression or unacceptable toxicity.

Dosage Adjustment for QT Prolongation or Toxicity

Interrupt therapy until resolved or improved, then restart at 100–200 mg once daily.

Dosage in Renal Impairment

CrCl less than 50 mL/min: 200 mg once daily. Closely monitor QT interval.

Dosage in Hepatic Impairment

Mild impairment: No dose adjustment. **Moderate to severe impairment:** Not recommended.

SIDE EFFECTS

Frequent (57%–21%): Diarrhea/colitis, rash, dermatitis acneiform/acne, nausea, headache, fatigue, anorexia, abdominal pain.

Occasional (15%–10%): Dry skin, vomiting, asthenia, photosensitivity, insomnia, na-

sopharyngitis, dyspepsia, cough, pruritus, weight decrease, depression.

ADVERSE EFFECTS/TOXIC REACTIONS

Prolonged QT interval resulting in torsades de pointes, ventricular arrhythmias, sudden cardiac death have been reported. Frequent diarrhea may result in electrolyte imbalances. Severe skin reactions, including Stevens-Johnson syndrome, have been reported. Interstitial lung disease (ILD) or pneumonitis reported (may result in respiratory-related death). Consider ILD in pts with hypoxia, pleural effusion, cough, dyspnea. Ischemic cerebrovascular events have been reported. Life-threatening events including hypertensive crisis, reversible posterior leukoencephalopathy syndrome (RPLS) have been noted. Adverse reactions resulting in death included respiratory failure/arrest, aspiration pneumonia, cardiac failure, sepsis, GI bleeding.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC with differential, serum chemistries, magnesium, ionized calcium, TSH, UA, ECG, vital signs. Obtain negative urine pregnancy before therapy. Question for history of congenital long QT syndrome, HF, arrhythmias, hepatic/renal impairment, seizures, CVA, hemorrhagic events, HTN. Obtain full medication history including contraception. Perform full head-to-toe exam including visual acuity, thorough skin assessment.

INTERVENTION/EVALUATION

Monitor blood levels including electrolytes esp. during episodes of diarrhea. Obtain ECG during wks 2–4, wks 8–12, then every 3 mos thereafter. Obtain ECG for palpitations, chest pain, hypokalemia, hyperkalemia, hypocalcemia, bradycardia, ventricular arrhythmias, syncope. Report any respiratory changes including dyspnea, cough (may indicate ILD). Reversible posterior leukoencephalopathy

syndrome should be considered in pts with seizures, headache, visual disturbances, confusion, altered mental status. Ophthalmologic exams including slit lamp recommended in pts with visual disturbances.

PATIENT/FAMILY TEACHING

- Blood levels, ECGs will be routinely monitored.
- Strictly avoid pregnancy. Contraception should be taken during treatment and 4 mos after discontinuation.
- Changes in mental status, seizures, headache, blurry vision, trouble speaking, one-sided weakness may indicate stroke, high blood pressure crisis, or life-threatening brain swelling. Immediately report any newly prescribed medications.
- Do not take herbal products.
- Limit exposure to sunlight.
- Report any yellowing of skin or eyes, abdominal pain, bruising, black/tarry stools, dark urine, decreased urine output, skin changes.
- Report palpitations, chest pain, shortness of breath, dizziness, fainting (may indicate arrhythmia).

varenicline

var-en-i-kleen
(Champix , Chantix)

BLACK BOX ALERT Risk of psychiatric symptoms and suicidal behavior. Agitation, hostility, depressed mood have been reported.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective partial nicotine agonist. **CLINICAL:** Smoking deterrent.

USES

Aid to smoking-cessation treatment.

PRECAUTIONS

Contraindications: Hypersensitivity to varenicline. **Cautions:** Renal impairment, history of suicidal ideation or preexisting psychiatric illness, bipolar disorder, depression, schizophrenia. History of seizures or factors that lower seizure threshold.

ACTION

Prevents nicotine stimulation of mesolimbic dopamine system associated with nicotine addiction. **Therapeutic Effect:** Decreases desire to smoke.

PHARMACOKINETICS

Completely absorbed following PO administration. Absorption unaffected by food, time-of-day dosing. Peak plasma concentration: 3–4 hrs. Steady state reached within 4 days. Protein binding: 20%. Minimal metabolism. Removed by hemodialysis. Primarily excreted unchanged in urine. **Half-life:** 24 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Not recommended. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Histamine H₂ receptor antagonists (e.g., famotidine, ranitidine) may increase concentration/effect. May increase concentration/ effect of nicotine. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

 **Tablets, Film-Coated:** 0.5 mg, 1 mg.

ADMINISTRATION/HANDLING

- Give after meal and with full glass of water.
- Do not break, crush, dissolve, or divide film-coated tablets.

INDICATIONS/ROUTES/DOSAGE

⚠️ ALERT Therapy should start 1 wk before stopping smoking.

Smoking Deterrent

PO: ADULTS, ELDERLY: Days 1–3: 0.5 mg once daily. Days 4–7: 0.5 mg twice daily. **Day 8–end of treatment:** 1 mg twice daily. Therapy should last for total of 12 wks. Pts who have successfully stopped smoking at the end of 12 wks should continue with an

additional 12 wks of treatment to increase likelihood of long-term abstinence.

Dosage in Renal Impairment

CrCl less than 30 mL/min: 0.5 mg once daily. **Maximum:** 0.5 mg twice daily.

End-stage renal disease, undergoing hemodialysis: **Maximum:** 0.5 mg once daily.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (30%–13%): Nausea, insomnia, headache, abnormal dreams. **Occasional (8%–5%):** Constipation, abdominal discomfort, fatigue, dry mouth, flatulence, altered taste, dyspepsia, vomiting, anxiety, depression, irritability. **Rare (3%–1%):** Drowsiness, rash, increased appetite, lethargy, nightmares, gastroesophageal reflux disease, rhinorrhea, agitation, mood swings.

ADVERSE EFFECTS/TOXIC REACTIONS

Abrupt withdrawal may cause irritability, sleep disturbances in 3% of pts. Hypertension, angina pectoris, arrhythmia, bradycardia, coronary artery disease, gingivitis, anemia, lymphadenopathy occur rarely. May cause bizarre behavior, suicidal ideation.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Screen, evaluate for coronary heart disease (history of MI, angina pectoris), cardiac arrhythmias, suicidal ideation. Assess smoking pack/yr history.

INTERVENTION/EVALUATION

Discontinue use if cardiovascular symptoms occur or worsen. Monitor for psychiatric symptoms (changes in behavior, mood, level of interest, appearance). Assess for cravings, noncompliance with cessation.

PATIENT/FAMILY TEACHING

- Initiate treatment 1 wk before quit-smoking date.
- Take with food and

with full glass of water. • With twice-daily dosing, take 1 tablet in morning, 1 in evening. • Report persistent nausea, insomnia. • Report change in behavior, mood, level of interest, appearance.

vasopressin

vay-soe-pres-in

(Pressyn , Pressyn AR , Vasostrict)

Do not confuse Pitressin with Pitocin.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Posterior pituitary hormone. **CLINICAL:** Vasopressor, antidiuretic hormone analogue.

USES

Prevention/control of polydipsia, polyuria, dehydration in pts with neurogenic diabetes insipidus or differential diagnosis of diabetes insipidus. Vasoconstriction: To increase blood pressure in adults with vasodilatory shock who remain hypotensive despite fluids and catecholamines. **OFF-LABEL:** Adjunct in treatment of acute massive GI hemorrhage or esophageal varices.

PRECAUTIONS

Contraindications: Hypersensitivity to vasopressin. **Cautions:** Seizure disorder, migraine, asthma, vascular disease, renal/cardiac disease, goiter (with cardiac complications), arteriosclerosis, nephritis, elderly pts.

ACTION

Stimulates a family of arginine vasopressin (AVP) receptors. **Therapeutic Effect:** Increases systemic vascular resis-

tance and mean arterial BP; increases water permeability at renal tubules, causing a decreased urine volume and increased osmolality; causes smooth muscle contraction in GI tract.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	N/A	N/A	0.5–1 hr
IM, SQ	1–2 hrs	N/A	2–8 hrs

Distributed throughout extracellular fluid. Metabolized in liver, kidney. Primarily excreted in urine. **Half-life:** 10–20 min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Caution in giving to breastfeeding women. **Children/Elderly:** Caution due to risk of water intoxication/hyponatremia.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 20 units/mL.

ADMINISTRATION/HANDLING

Reconstitution • Dilute with D₅W or 0.9% NaCl to concentration of 0.1–1 unit/mL (usual concentration: 100 units/500 mL D₅W).

Rate of administration • Give as IV infusion.

Storage • Store at room temperature.

IM, SQ

• Give with 1–2 glasses of water to reduce side effects.

IV INCOMPATIBILITIES

Furosemide (Lasix), phenytoin (Dilantin).

IV COMPATIBILITIES

Amiodarone, argatroban, diltiazem (Cardizem), DOBUTamine (Dobutrex), DOPamine (Intropin), heparin, insulin, milrinone (Primacor), nitroglycerin, norepinephrine (Levophed), pantoprazole (Protonix), phenylephrine (Neo-Synephrine).

INDICATIONS/ROUTES/DOSAGE

Diabetes Insipidus

Note: May be administered intranasally by nasal spray or on cotton pledgets; dosage is individualized.

IM, SQ: ADULTS, ELDERLY: 5–10 units 2–4 times/day. **CHILDREN:** 2.5–10 units, 2–4 times/day.

Vasodilatory Shock

IV infusion: ADULTS, ELDERLY: Initially, 0.03 units/min. Titrate by 0.005 units/min at 10–15-min intervals. **Maximum:** 0.1 units/min.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Pain at injection site (with vasopressin tannate). **Occasional:** Abdominal cramps, nausea, vomiting, diarrhea, dizziness, diaphoresis, pale skin, circumoral pallor, tremors, headache, eructation, flatulence. **Rare:** Chest pain, confusion, allergic reaction (rash, urticaria, pruritus, wheezing, difficulty breathing, facial/peripheral edema), sterile abscess (with vasopressin tannate).

ADVERSE EFFECTS/TOXIC REACTIONS

Anaphylaxis, MI, water intoxication have occurred. Elderly, very young are at higher risk for water intoxication.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baselines for weight, B/P, pulse, serum electrolytes, Hgb, Hct, urine specific gravity.

INTERVENTION/EVALUATION

Monitor I&O closely, restrict intake as necessary to prevent water intoxication. Weigh daily if indicated. Check B/P, pulse frequently. Monitor serum electrolytes, Hgb, Hct, urine specific gravity. Evaluate injection site for erythema, pain, abscess. Report side effects to physician for dose reduction. Be alert for early signs of water intoxication (drowsiness, listlessness, headache, seizures). Observe for evidence of GI bleeding. Withhold medication, report immediately any chest pain, allergic symptoms.

PATIENT/FAMILY TEACHING

- Promptly report headache, chest pain, shortness of breath, other symptoms.
- Stress importance of I&O.
- Avoid alcohol.
- Report confusion, seizure activity.

vedolizumab

ve-doe-liz-ue-mab
(Entyvio)

Do not confuse vedolizumab with certolizumab, eculizumab, natalizumab, omalizumab, tocilizumab.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective adhesion molecule inhibitor. Monoclonal antibody. **CLINICAL:** GI agent.

USES

Treatment of adult pts with moderately to severely active ulcerative colitis (UC) who have had an inadequate response with, lost response to, or were intolerant to a tumor necrosis factor (TNF) blocker or immunomodulator; or had an inadequate response with, were intolerant to, or demonstrated dependence on corticosteroids. Treatment of adult pts with moderately to severely active Crohn's disease (CD) who

have had an inadequate response with, lost response to, or were intolerant to a TNF blocker or immunomodulator; or had an inadequate response with, were intolerant to, or demonstrated dependence on corticosteroids.

PRECAUTIONS

Contraindications: Hypersensitivity to vedolizumab. **Cautions:** Hepatic impairment, immunocompromised pts, live vaccine administration. Active infections (not recommended during active infection), conditions predisposing to infections (e.g., diabetes, renal failure, open wounds, indwelling catheters). Preexisting or recent-onset CNS demyelinating disorders including multiple sclerosis.

ACTION

Binds to T-lymphocyte integrin receptors and blocks the interaction with mucosal addressin cell adhesion molecule-1 (MAdCAM-1). Inhibits migration and homing of memory T-lymphocytes into inflamed GI tissue. **Therapeutic Effect:** Reduces chronic inflammation of colon.

PHARMACOKINETICS

Metabolism not specified. Excretion not specified. **Half-life:** 25 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Use caution when administering to nursing women. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

V

INTERACTIONS

DRUG: Anti-TNF agents (e.g., adalimumab, certolizumab, etanercept, infliximab) may increase adverse effects. May decrease the therapeutic effect; increase adverse effects of vaccines (live). **HERBAL:** Echinacea may decrease the therapeutic effect. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, bilirubin.

AVAILABILITY (Rx)

Lyophilized Powder for Injection: 300 mg.

ADMINISTRATION/HANDLING

• Do not administer IV push or bolus. • Reconstitute with Sterile Water for Injection and subsequently dilute with 0.9% NaCl only. • After infusion completed, flush IV line with 30 mL of 0.9% NaCl.

Reconstitution • Remove flip cap and swab with alcohol. • Reconstitute vial with 4.8 mL Sterile Water for Injection. Direct stream toward glass wall to avoid excessive foaming. • Gently swirl contents for at least 15 sec until completely dissolved. • Do not shake or invert vial. • Allow solution to sit at room temperature for up to 20 min to allow remaining foam to settle and powder to dissolve. If not fully dissolved after 20 min, allow additional 10 min for dissolution. Do not use if product is not dissolved within 30 min. • Visually inspect for particulate matter and discoloration. Do not use if discolored or if particle matter is observed. • Prior to withdrawing solution, invert vial 3 times to ensure mixing. • Withdraw 5 mL and further dilute in 250 mL 0.9% NaCl bag. • Infuse immediately.

Rate of administration • Infuse over 30 min.

Storage • Reconstituted solution should appear clear to opalescent, colorless to light brownish yellow and free of particles. • May refrigerate diluted solution for up to 4 hrs.

INDICATIONS/ROUTES/DOSAGE

Ulcerative Colitis and Crohn's Disease

IV: ADULTS, ELDERLY: 300 mg once at wk 0, wk 2, and wk 6, then every 8 wks thereafter. Discontinue in pts who do not show evidence of therapeutic benefit by wk 14.

Dosage in Renal Impairment

Use caution.

Dosage in Hepatic Impairment

Use caution. Discontinue for jaundice or signs/symptoms of hepatic injury.

SIDE EFFECTS

Occasional (13%–4%): Nasopharyngitis, headache, arthralgia, nausea, pyrexia, upper respiratory tract infection, fatigue, cough, bronchitis, influenza, back pain. **Rare (3%):** Rash, pruritus, sinusitis, oropharyngeal pain, extremity pain.

ADVERSE EFFECTS/TOXIC REACTIONS

Infusion-related reactions, including anaphylaxis, characterized by bronchospasm, dyspnea, flushing, hypotension, laryngeal edema, nausea, pyrexia, tachycardia, wheezing, vomiting, reported in less than 1% of pts. May increase risk of severe infections such as anal abscess, cytomegaloviral colitis, giardiasis, *Listeria* meningitis, *Salmonella* sepsis, TB, UTI, which may lead to fatal sepsis. PML (weakness, paralysis, vision loss, aphasia, cognition impairment) has occurred rarely; however, immunocompromised pts are at increased risk for development. Drug-induced hepatotoxicity with serum ALT, AST greater than 3 times upper limit of normal reported in less than 2% of pts. Malignancies including B-cell lymphoma, breast cancer, colon cancer, lung cancer of primary neuroendocrine carcinoma, lung neoplasm, malignant hepatic neoplasm, melanoma, renal cancer, squamous cell carcinoma, transitional cell carcinoma occur rarely. Immunogenicity (anti-vedolizumab antibodies) occurred in 4%–13% of pts.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain CBC, LFT. Prior to initiating treatment, all pts should be up to date with all immunizations according to proper guidelines. Continuously screen for active infection. Evaluate for active TB and test for latent infection prior to and during treatment. Induration of 5

mm or greater with tuberculin skin test should be considered a positive result when assessing for latent TB. Antifungal therapy should be considered for those who reside in or travel to regions where mycoses are endemic. Have supplemental oxygen, anaphylaxis kit readily available. Conduct full neurologic exam. Question history of malignancies.

INTERVENTION/EVALUATION

Routinely monitor LFT. Withhold treatment if acute infection, opportunistic infection, sepsis occurs and initiate appropriate antimicrobial therapy. Monitor for hypersensitivity reaction. Infusion-related reactions generally occur within 2 hrs after infusion. Consider administration of antihistamine, antipyretic, and/or corticosteroid if mild to moderate hypersensitivity reaction occurs. If anaphylaxis occurs, provide immediate resuscitation support. Monitor for new onset or worsening of neurologic symptoms, esp. in pts with CNS disorders; may indicate PML.

PATIENT/FAMILY TEACHING

- Blood levels, TB screening will be routinely monitored.
- Therapy may lower immune system response. Report travel plans to possible endemic areas.
- Do not receive live vaccines unless approved by your doctor.
- Report history of fungal infections, multiple sclerosis, TB or close relatives who have active TB.
- Infusion may cause severe allergic reactions such as face/tongue swelling, hives, itching, low blood pressure, trouble breathing, or, in some cases, anaphylaxis.
- Do not breast-feed.
- Abdominal pain, bruising, clay-colored stools, dark-amber urine, fatigue, loss of appetite, yellowing of skin or eyes may indicate liver problem.
- Paralysis, vision changes, impaired speech, altered mental status may indicate life-threatening neurologic event called progressive multifocal leukoencephalopathy (PML).

vemurafenib

vem-ue-**raf**-e-nib
(Zelboraf)

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: BRAF kinase inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of unresectable or metastatic melanoma with a BRAF V600E mutation as detected by FDA-approved test. Treatment of Erdheim-Chester disease (ECD) in pts with a BRAF V600E mutation.

PRECAUTIONS

Contraindications: Hypersensitivity to vemurafenib. **Cautions:** Avoid sun exposure. Prior radiation therapy. Prolonged QT syndrome, concurrent use of medications that prolong QT interval, hepatic impairment, uncorrected electrolyte imbalance (hypokalemia, hypomagnesemia), elderly pts.

ACTION

Inhibits kinase activity of certain mutated forms of BRAF. **Therapeutic Effect:** Blocks tumor cell proliferation in melanoma with the mutation.

PHARMACOKINETICS

Readily absorbed after PO administration. Protein binding: 99%. Minimally metabolized in liver. Primarily excreted in feces (94%). **Half-life:** 57 hrs. Range: 30–120 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy. May cause fetal harm. Must use effective contraception during treatment and for at least 2 mos after discontinuation. Unknown if distributed in breast milk. Must either discontinue breastfeeding or discontinue therapy. **Children:** Safety and efficacy not established. **Elderly:** May have increased risk of adverse reactions, side effects.

INTERACTIONS

DRUG: Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole) may increase concentration/effect. Strong CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. May increase concentration/effect of digoxin. Medications that prolong QT interval (e.g., amiodarone, azithromycin, clarithromycin, haloperidol, moxifloxacin) may increase risk of QT interval prolongation. May increase bleeding effect with warfarin. **HERBAL:** St. John's wort may decrease concentration/effect. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST, gamma-glutamyl transferase (GGT), bilirubin.

AVAILABILITY (Rx)

 **Film-Coated Tablets:** 240 mg.

ADMINISTRATION/HANDLING

PO

- Give in morning and evening approximately 12 hrs apart.
- Give without regard to food.
- Do not break, crush, dissolve, or divide tablets; swallow whole.
- Give with full glass of water.

INDICATIONS/ROUTES/DOSAGE

Note: Management of adverse drug reactions may require dose reduction, treatment interruption, or discontinuation.

ECD, Melanoma

PO: ADULTS, ELDERLY: 960 mg twice daily (in morning and evening about 12 hrs apart). Continue until disease progression or unacceptable toxicity.

Dosage Modification

Based on Common Terminology Criteria for Adverse Events (CTCAE). **Grade 1 or Grade 2 (tolerable):** No dose adjustment. **Grade 2 (intolerable) or Grade 3: First incident:** Interrupt treatment until toxicity returns to Grade 0 or 1, then resume at 720 mg twice daily. **Second incident:** Interrupt treatment, then resume at 480 mg

twice daily. **Third incident:** Discontinue. **Grade 4: First incident:** Interrupt treatment, then resume at 480 mg twice daily. **Second incident:** Discontinue.

Dosage in Renal/Hepatic Impairment

Mild to moderate impairment: No dose adjustment.

Severe impairment: Use with caution.

SIDE EFFECTS

Frequent (53%–33%): Arthralgia, alopecia, fatigue, rash, nausea. **Occasional (28%–11%):** Diarrhea, hyperkeratosis, headache, pruritus, pyrexia, dry skin, extremity pain, anorexia, vomiting, peripheral edema, erythema, dysgeusia, myalgia, constipation, asthenia. **Rare (8%–5%):** Maculopapular rash, actinic keratosis, musculoskeletal pain, back pain, cough, papular rash.

ADVERSE EFFECTS/TOXIC REACTIONS

Cutaneous squamous cell carcinoma (cuSCC) and keratoacanthomas reported in 24% of pts. Pts at increased risk of cuSCC include elderly pts, pts with prior skin cancer, chronic sun exposure. Hypersensitivity reactions including erythema, hypotension, anaphylaxis reported. Mild to severe photosensitivity was reported. Serious dermatologic reactions include Stevens-Johnson syndrome, toxic epidermal necrolysis. Ophthalmologic reactions including uveitis reported. Increased LFT may lead to discontinuation.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Confirm presence of BRAF V600E mutation. Review history for previous radiation therapy. Obtain serum chemistries, renal function test, serum magnesium, ionized calcium, ECG, PT/INR if taking warfarin. Assess skin for moles, lesions, papilloma, and perform full dermatologic exam. Obtain baseline ophthalmologic exam, visual acuity. Assess medication history for QT-prolonging drugs. Obtain negative urine pregnancy before initiating treatment. Offer emotional support.

INTERVENTION/EVALUATION

Monitor ECG 15 days after initiation, then monthly for first 3 mos, then q3mos thereafter. Routinely assess skin and for 6 mos after discontinuation. Immediately report any new skin lesions. Obtain ECG for palpitations, chest pain, hypokalemia, hyperkalemia, hypocalcemia, bradycardia, ventricular arrhythmias, syncope. Monitor PT/INR while pt is on warfarin. Pruritus, difficulty breathing, erythema, hypotension may indicate anaphylaxis.

PATIENT/FAMILY TEACHING

- Blood levels, ECG, eye examinations are routinely ordered.
- Strictly avoid pregnancy. Contraception should be used during treatment and for 2 mos after last dose.
- Avoid sunlight exposure.
- Report any skin changes, including new warts, sores, reddish bumps that bleed or do not heal, change in mole size or color.
- Report yellowing of skin or eyes, abdominal pain, bruising, black/tarry stools, dark urine, decreased urine output, skin changes.
- Report palpitations, chest pain, shortness of breath, dizziness, fainting (may indicate arrhythmia).

venetoclax

ven-et-oh-klax
(Venclexta)

Do not confuse venetoclax or Venclexta with Venelex.

CLASSIFICATION

PHARMACOTHERAPEUTIC: B-cell lymphoma-2 inhibitor. **CLINICAL:** Antineoplastic.

USES

Monotherapy or in combination with rituximab for treatment of pts with chronic lymphocytic leukemia (CLL) or small lymphocytic leukemia (SLL) with or without 17p deletion who have received at least one prior therapy. Treatment

of newly diagnosed acute myeloid leukemia (AML) (in combination with azacitidine, decitabine, or low-dose cytarabine) in pts 75 yrs of age or older, or with comorbidities precluding use of intensive induction chemotherapy.

PRECAUTIONS

Contraindications: Hypersensitivity to venetoclax. Concomitant use of strong CYP3A inhibitors at initiation and during ramp-up phase. **Cautions:** Baseline anemia, leukopenia, neutropenia, thrombocytopenia; concomitant use of moderate CYP3A inhibitors, P-gp inhibitors; active infection or pts at increased risk of infection (diabetes, kidney failure, indwelling catheters, open wounds), hepatic/renal impairment, electrolyte imbalance; history of gout; pts at high risk for tumor lysis syndrome (high tumor burden).

ACTION

Binds to and inhibits B-cell lymphoma-2 protein and displaces proapoptotic proteins, restoring process of apoptosis. **Therapeutic Effect:** Inhibits tumor cell growth and metastasis.

PHARMACOKINETICS

Widely distributed. Metabolized in liver. Protein binding: highly bound (unspecified). Peak plasma concentration: 5–8 hrs. Excreted in feces (greater than 99%). **Half-life:** 26 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm/malformations. Female and male pts of reproductive potential should use effective contraception during treatment and for at least 30 days after discontinuation. Unknown if distributed in breast milk. Breastfeeding not recommended. May impair fertility in males. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A inhibitors (e.g., clarithromycin, ketoconazole),

moderate CYP3A inhibitors (e.g., diltiazem, fluconazole, verapamil), P-gp inhibitors (e.g., cyclosporine, ranolazine, ticagrelor) may increase concentration/effect. Strong CYP3A inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. May increase concentration/effect of digoxin. May decrease the therapeutic effect; increase adverse effects of vaccines (live). **HERBAL:** Bitter orange may increase concentration/effect. **FOOD:** Grapefruit products, Seville oranges, starfruit may increase concentration/effect. Low-fat meals, high-fat meals increase exposure/concentration. **LAB VALUES:** May decrease Hgb, Hct, neutrophils, platelets, RBCs; serum calcium, potassium. Tumor lysis syndrome may result in elevated serum phosphate, potassium, uric acid.

AVAILABILITY (Rx)

Tablets: 10 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

- Give with food and water at same time each day.
- Administer tablets whole; do not cut, crush, or divide.
- If a dose is missed by no more than 8 hrs, administer as soon as possible. If dose is missed by more than 8 hrs or if vomiting occurs after dosing, skip dose and administer the next dose on schedule.

INDICATIONS/ROUTES/DOSAGE

CLL

PO: ADULTS, ELDERLY: **Week 1:** 20 mg once daily for 7 days. **Week 2:** 50 mg once daily for 7 days. **Week 3:** 100 mg once daily for 7 days. **Week 4:** 200 mg once daily for 7 days. **Week 5 and thereafter:** 400 mg once daily. Continue until disease progression or unacceptable toxicity. **In combination with rituximab:** **Week 5 and thereafter:** 400 mg once daily. Continue until disease progression or unacceptable toxicity for up to 24 mos from day 1 (cycle 1) of rituximab. Begin rituximab after receiving venetoclax

at 400 mg once daily for 7 days. **In combination with obinutuzumab:** Obinutuzumab begins on day 1 of cycle 1. Begin venetoclax on day 22 of cycle 1 (based on 5-wk ramp-up schedule). Ramp-up is completed at end of cycle 2. **Cycle 3 (day 1 and beyond):** 400 mg once daily until end of cycle 12. Each cycle is 28 days.

AML

PO: ADULTS 75 YRS OR OLDER: Day 1: 100 mg once daily. **Day 2:** 200 mg once daily. **Day 3:** 400 mg once daily. **In combination with azaCITIDine or decitabine: Day 4 and beyond:** 400 mg once daily. Continue until disease progression or unacceptable toxicity. **In combination with low-dose cytarabine: Day 4 and beyond:** 600 mg once daily. Continue until disease progression or unacceptable toxicity.

Dose Modification

Based on Common Terminology Criteria for Adverse Events (CTCAE). For pts with dose interruption greater than 1 wk during 5-wk ramp-up phase or greater than 2 wks at 400 mg daily dose, reassess risk of tumor lysis syndrome to determine if reinitiation with a reduced dose is needed. Consider discontinuation in pts who require reduced dosage of less than 100 mg for more than 2 wks.

Dose Reduction Schedule

Note: During ramp-up phase, continue reduced dose for 1 wk before increasing dose. **Dose interruption at 400 mg:** Resume at 300 mg. **Dose interruption at 300 mg:** Resume at 200 mg. **Dose interruption at 200 mg:** Resume at 100 mg. **Dose interruption at 100 mg:** Resume at 50 mg. **Dose interruption at 50 mg:** Resume at 20 mg. **Dose interruption at 20 mg:** Resume at 10 mg.

Tumor Lysis Syndrome

Any occurrence of blood chemistry abnormalities: Withhold next dose, then resume at same dose if resolved within 24–48 hrs of last dose. If not resolved within 48 hrs, resume at reduced dose.

Any event of tumor lysis syndrome: Resume at reduced dose once resolved.

Grade 3 or 4 Nonhematologic Toxicity

First occurrence: Withhold treatment until resolved to Grade 1 or baseline, then resume at same dose. **Second and subsequent occurrences:** Withhold treatment until resolved, then follow dose reduction schedule (or reduce dose at prescriber's discretion).

Hematologic Toxicity

First occurrence of Grade 3 or 4 neutropenia with infection or fever; Grade 4 hematologic toxicity (except lymphopenia): Withhold treatment until resolved to Grade 1 or baseline, then resume at same dose. **Second and subsequent occurrences:** Withhold treatment until resolved, then follow dose reduction schedule (or reduce dose at prescriber's discretion).

Concomitant Use CYP3A Inhibitors, P-gp Inhibitors

Strong CYP3A inhibitors: Avoid inhibitor or reduce venetoclax dose by at least 75%. **Moderate CYP3A inhibitors or P-gp Inhibitors:** Avoid inhibitor or reduce venetoclax dose by at least 50%.

Dosage in Renal/Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Not specified; use caution.

SIDE EFFECTS

Frequent (35%–14%): Diarrhea, nausea, fatigue, pyrexia, vomiting, headache, constipation. **Occasional (13%–10%):** Cough, peripheral edema, back pain.

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia, neutropenia, thrombocytopenia are expected responses to therapy. Grade 3 or 4 neutropenia reported in 41% of pts. Pts with high tumor burden, renal impairment, concomitant use of strong or moderate CYP3A inhibitors, P-gp inhibitors may experience life-threatening tumor lysis syndrome, which mainly occurs during the 5-wk ramp-up phase and as early

as 6–8 hrs after dose (hospitalization may be necessary). Tumor lysis syndrome may cause renal failure requiring emergent dialysis. Other reactions may include upper respiratory tract infection, pneumonia, autoimmune hemolytic anemia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain ANC, CBC, BMP, renal function test; serum phosphate, calcium; vital signs prior to initiation and periodically thereafter. Obtain pregnancy test in female pts of reproductive potential. Question history of hepatic/renal impairment, gout. Assess all pts for high risk of tumor lysis syndrome and provide adequate hydration and antihyperuricemics (according to manufacturer guidelines) prior to first dose. Conduct tumor burden assessments including blood chemistries, radiologic testing (e.g., CT scan). Correct electrolyte imbalances prior to initiation. Receive full medication history (esp. CYP3A inhibitors, P-gp inhibitors, drugs with narrow therapeutic index). Screen for active infection. Offer emotional support.

INTERVENTION/EVALUATION

Monitor ANC, CBC for anemia, leukopenia, neutropenia, thrombocytopenia. Diligently monitor for tumor lysis syndrome (acute renal failure, electrolyte imbalance, cardiac arrhythmias, seizures). Monitor for infection and provide appropriate antimicrobial therapy if indicated. To reduce risk of neutropenia-associated infection, consider administration of granulocyte-colony stimulating factor (e.g., filgrastim). Monitor for toxicities if discontinuation of CYP3A inhibitors, P-gp inhibitors is unavoidable. Monitor I&O. Assess hydration status.

PATIENT/FAMILY TEACHING

- Treatment may depress your immune system and reduce your ability to fight infection. Report symptoms of infection such

as body aches, chills, cough, fatigue, fever. Avoid those with active infection. • Therapy may cause tumor lysis syndrome (a condition caused by the rapid breakdown of cancer cells), which can cause kidney failure and may lead to death. Report decreased urination, amber-colored urine, confusion, difficulty breathing, fatigue, fever, muscle or joint pain, palpitations, seizures, vomiting. • Drink at least 6–8 glasses of water every day. • Avoid pregnancy. Female and male pts of childbearing potential should use effective contraception during treatment and for at least 30 days after last dose. Do not breast-feed. • Treatment may impair fertility. • Avoid grapefruit products, Seville oranges, starfruit, herbal supplements. • Do not take newly prescribed medications unless approved by prescriber who originally started therapy. • Do not receive live vaccines.

venlafaxine

ven-la-**fax**-een
(Effexor XR)

BLACK BOX ALERT ■ Increased risk of suicidal ideation and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin-norepinephrine reuptake inhibitor (SNRI). **CLINICAL:** Antidepressant.

USES

Treatment of depression. Treatment of generalized anxiety disorder (GAD), social anxiety disorder (SAD). Treatment of panic disorder, with or without agoraphobia. **OFF-LABEL:** Treatment of attention-deficit hyperactivity disorder (ADHD), obsessive-compulsive disorder (OCD), hot flashes, diabetic neuropathy, post-traumatic stress disorder (PTSD).

PRECAUTIONS

Contraindications: Hypersensitivity to venlafaxine. Use of MAOIs intended to treat psychiatric disorders concurrently or within 14 days of discontinuing MAOI. Initiation of MAOI to treat psychiatric disorder within 7 days of discontinuing venlafaxine, initiation in pts receiving linezolid or IV methylene blue. **Cautions:** Seizure disorder, renal/hepatic impairment, pts at high risk for suicide, recent MI, mania, volume-depleted pts, narrow-angle glaucoma, HF, hyperthyroidism, abnormal platelet function, elderly pts.

ACTION

Potentiates CNS neurotransmitter activity by inhibiting reuptake of serotonin, norepinephrine, and, to lesser degree, DOPAmine. **Therapeutic Effect:** Relieves depression.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 25%–30%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 3–7 hrs; metabolite, 9–13 hrs (increased in hepatic/renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Children, adolescents are at increased risk for suicidal ideation and behavior, worsening depression, esp. during first few mos of therapy. **Elderly:** Use caution.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole) may increase concentration/effects. MAOIs (e.g., phenelzine, selegiline) may cause neuroleptic malignant syndrome, autonomic instability (including rapid fluctuations of vital signs), extreme agitation, hyperthermia, altered mental status, myoclonus, rigidity, coma. **Strong CYP3A4 inducers** (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. May increase risk of bleeding with

NSAIDs (e.g., ibuprofen, ketorolac, naproxen), aspirin, warfarin. **HERBAL:** St. John's wort may decrease concentration/effect. **Herbals with anticoagulant/antiplatelet properties** (e.g., garlic, ginger, ginkgo biloba), glucosamine may increase risk of bleeding. **FOOD:** Grapefruit products may increase concentration/effect. **LAB VALUES:** May increase serum cholesterol CPK, LDH, prolactin, GGT.

AVAILABILITY (Rx)

Tablets: 25 mg, 37.5 mg, 50 mg, 75 mg, 100 mg.

 **Capsules, Extended-Release: (Effexor XR):** 37.5 mg, 75 mg, 150 mg. **Tablets, Extended-Release:** 37.5 mg, 75 mg, 150 mg, 225 mg.

ADMINISTRATION/HANDLING

PO

- Give with food. • Scored tablet may be crushed. • Do not break, crush, dissolve, or divide extended-release tablets. • May open capsule, sprinkle on applesauce. Give immediately without chewing and follow with full glass of water.

INDICATIONS/ROUTES/DOSAGE

Depression

PO: (Immediate-Release): ADULTS, ELDERLY: Initially, 37.5–75 mg/day in 2–3 divided doses with food. May increase up to 75 mg/day at intervals of 4 days or longer. Usual dose: 75–225 mg/day. **Maximum:** 375 mg/day in 3 divided doses.

PO: (Extended-Release): ADULTS, ELDERLY: Initially, 37.5–75 mg/day as single dose with food. May increase by 75 mg/day at intervals of 4 days or longer. Usual dose: 75–225 mg once daily. **Maximum:** 225 mg/day.

Generalized Anxiety Disorder (GAD)

PO: (Extended-Release): ADULTS, ELDERLY: Initially, 37.5–75 mg/day (pts initiated at 37.5 mg once daily may increase to 75 mg once daily after 4–7 days). May increase by 75 mg/day at 4-day intervals up to 225 mg/day.

Panic Disorder

PO: (*Extended-Release*): **ADULTS, ELDERLY:** Initially, 37.5 mg/day. May increase to 75 mg after 7 days followed by increases of 75 mg/day at 7-day intervals up to 225 mg/day.

Social Anxiety Disorder (SAD)

PO: (*Extended-Release*): **ADULTS, ELDERLY:** 75 mg once daily.

Dosage in Renal/Hepatic Impairment

Consider decreasing venlafaxine dosage by 50% in pts with moderate hepatic impairment, 25% in pts with mild to moderate renal impairment, 50% in pts on dialysis (withhold dose until completion of dialysis). When discontinuing therapy, taper dosage slowly over 2 wks.

SIDE EFFECTS

Frequent (greater than 20%): Nausea, drowsiness, headache, dry mouth. **Occasional (20%–10%):** Dizziness, insomnia, constipation, diaphoresis, nervousness, asthenia, ejaculatory disturbance, anorexia. **Rare (less than 10%):** Anxiety, blurred vision, diarrhea, vomiting, tremor, abnormal dreams, impotence.

ADVERSE EFFECTS/TOXIC REACTIONS

Sustained increase in diastolic B/P of 10–15 mm Hg occurs occasionally. Serotonin syndrome (agitation, confusion, hallucinations, hyperreflexia), neuroleptic malignant syndrome (muscular rigidity, fever, cognitive changes), suicidal ideation have occurred.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain initial weight, B/P. Assess appearance, behavior, speech pattern, level of interest, mood. Assess risk of suicide.

INTERVENTION/EVALUATION

Monitor signs/symptoms of depression, B/P, weight. Assess sleep pattern for evidence of insomnia. Check during waking

hours for drowsiness, dizziness, anxiety; provide assistance as necessary. Assess appearance, behavior, speech pattern, level of interest, mood for therapeutic response. Monitor for suicidal ideation (esp. at initiation of therapy or changes in dosage).

PATIENT/ FAMILY TEACHING

- Take with food to minimize GI distress.
- Do not increase, decrease, suddenly stop medication.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Report if breastfeeding, pregnant, or planning to become pregnant.
- Avoid alcohol.
- Report worsening depression, suicidal ideation, unusual changes in behavior.

verapamil

ver-**ap**-a-mil

(Calan, Calan SR, Verelan, Verelan PM, Covera-HS , Isoptin SR )

Do not confuse Calan with Covera-HS or Verelan with Voltaren.

FIXED-COMBINATION(S)

Tarka: verapamil/trandolapril (an ACE inhibitor): 240 mg/1 mg, 180 mg/2 mg, 240 mg/2 mg, 240 mg/4 mg.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Calcium channel blocker (nondihydropyridine). **CLINICAL:** Antihypertensive, antianginal, antiarrhythmic (class IV).

USES

Parenteral: Management of supraventricular tachyarrhythmias (SVT, rapid conversion to sinus rhythm), temporary control of rapid ventricular rate in atrial flutter/fibrillation. **PO:** Treatment of angina at rest (e.g., vasospastic angina,

unstable angina, chronic stable angina). Control of ventricular rate at rest and during stress in chronic atrial flutter and/or fibrillation. Management of hypertension. Prophylaxis of repetitive paroxysmal supraventricular tachycardia (PSVT).

PRECAUTIONS

Contraindications: Hypersensitivity to verapamil. Atrial fibrillation/flutter in presence of accessory bypass tract (e.g., Wolff-Parkinson-White, Lown-Ganong-Levine syndromes), severe left ventricular dysfunction, cardiogenic shock, second- or third-degree heart block (except with pacemaker), hypotension (SBP less than 90 mm Hg), sick sinus syndrome (except with pacemaker). **IV:** Current use of IV beta-blocking agents, ventricular tachycardia. **Cautions:** Renal/hepatic impairment, concomitant use of beta blockers and/or digoxin, myasthenia gravis, elderly pts, hypertrophic cardiomyopathy. Avoid use in HF.

ACTION

Inhibits calcium ion entry across cardiac, vascular smooth-muscle cell membranes, dilating coronary arteries, peripheral arteries, arterioles. **Therapeutic Effect:** Decreases heart rate, myocardial contractility; slows SA, AV conduction. Decreases total peripheral vascular resistance by vasodilation.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 90% (60% in neonates). Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** **Single dose:** 2–8 hrs; **multiple doses:** 4.5–12 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug crosses placenta; distributed in breast milk. Breastfeeding not recommended. **Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May increase hypotensive effect of **beta blockers** (e.g., carvedilol, metoprolol). May increase concentration/effects of **statins** (e.g., atorvastatin, simvastatin), **dofetilide**. **Strong CYP3A4 inhibitors** (e.g., clarithromycin, ketoconazole) may increase concentration/effect. May increase concentration of **cycloSPORINE**, **carBAMazepine**. **CYP3A4 inducers** (e.g., carBAMazepine, phenytoin, rifAMPin) may decrease concentration/effect. **HERBAL:** **St. John's wort** may decrease concentration/effect. **Herbals with hypertensive properties** (e.g., licorice, yohimbe) or **hypotensive properties** (e.g., garlic, ginger, ginkgo biloba) may alter effects. **FOOD:** **Grapefruit products** may increase concentration/effect. **LAB VALUES:** ECG may show prolonged PR interval. **Therapeutic serum level:** 0.08–0.3 mcg/mL; **toxic serum level:** N/A.

AVAILABILITY (Rx)

Injection Solution: 2.5 mg/mL. **Tablets:** 40 mg, 80 mg, 120 mg.

 **Capsules, Extended-Release:** 100 mg, 120 mg, 180 mg, 200 mg, 240 mg, 300 mg, 360 mg. **Tablets, Extended-Release:** 120 mg, 180 mg, 240 mg.

ADMINISTRATION/HANDLING

Reconstitution • May give undiluted. **Rate of administration** • Administer IV push over 2 min for adults, children; give over 3 min for elderly. • Continuous ECG monitoring during IV injection is required for children, recommended for adults. • Monitor ECG for rapid ventricular rate, extreme bradycardia, heart block, asystole, prolongation of PR interval. Notify physician of any significant changes. • Monitor B/P q5–10min. • Pt should remain recumbent for at least 1 hr after IV administration. **Storage** • Store vials at room temperature.

PO

- Do not give with grapefruit products.
- Do not crush or cut extended-release tablets, capsules. Give extended-release tablets with food.
- Sustained-release capsules may be opened and sprinkled on applesauce, then swallowed immediately (do not chew).

IV INCOMPATIBILITIES

Albumin, amphotericin B complex (Abelcet, AmBisome, Amphotec), nafcillin (Nafcil), propofol (Diprivan), sodium bicarbonate.

IV COMPATIBILITIES

Amiodarone (Cordarone), calcium chloride, calcium gluconate, dexamethasone (Decadron), digoxin (Lanoxin), DOBUTamine (Dobutrex), DO-Pamine (Intropin), furosemide (Lasix), heparin, HYDROMorphone (Dilaudid), lidocaine, magnesium sulfate, metoclopramide (Reglan), milrinone (Primacor), morphine, multivitamins, nitroglycerin, norepinephrine (Levophed), potassium chloride, potassium phosphate, procainamide (Pronestyl), propranolol (Inderal).

INDICATIONS/ROUTES/DOSAGE**Supraventricular Tachyarrhythmias (SVT)**

IV: ADULTS, ELDERLY: Initially, 5–10 mg over 2 min. May give 10 mg 15–30 min after initial dose. **CHILDREN 1–15 YRS:** 0.1–0.3 mg/kg over 2 min. **Maximum initial dose:** 5 mg. May repeat in 15–30 min. **Maximum second dose:** 10 mg.

Angina, Unstable Angina, Chronic Stable Angina

PO: (Immediate-Release): ADULTS, ELDERLY: 80–60 mg 3 times daily.

Atrial Fibrillation (Rate Control)

IV: ADULTS, ELDERLY: Initially, 0.075–0.15 mg/kg (usual: 5–10 mg) over 2 min. May repeat with 10 mg after 15–30 min. **PO: (Immediate-Release):** 240–480 mg/day in 3–4 divided doses.

Hypertension

PO: (Immediate-Release): ADULTS, ELDERLY: Initially, 40–120 mg 3 times/day. Range: 240–480 mg/day in divided doses.

PO: (Extended-Release [Calan SR]): ADULTS, ELDERLY: Initially, 120–180 mg once daily. May increase at wkly intervals to 240 mg once daily, then 180 mg twice daily. **Maximum:** 240 mg twice daily.

PO: (Extended-Release [Verelan]): ADULTS, ELDERLY: Initially, 120–240 mg once daily. May increase dose at wkly intervals to 180 mg/day, then 240 mg/day, then 360 mg/day, then 480 mg/day maximum.

PO: (Extended-Release [Verelan PM]): ADULTS, ELDERLY: Initially, 100–200 mg once daily at bedtime. May increase dose at wkly intervals to 300 mg once daily, then 400 mg once daily maximum.

Chronic Atrial Fibrillation (Rate Control), SVT

PO: (Immediate-Release): ADULTS, ELDERLY: 240–480 mg/day in 3–4 divided doses. Usual range: 120–360 mg/day.

Dosage for Renal Impairment

CrCl less than 10 mL/min: Dose reduction (50%–75%) of normal dose recommended.

Dosage in Hepatic Impairment

Dose reduction (20%–50%) of normal dose recommended.

SIDE EFFECTS

Frequent (7%): Constipation. **Occasional (4%–2%):** Dizziness, light-headedness, headache, asthenia, nausea, peripheral edema, hypotension. **Rare (less than 1%):** Bradycardia, dermatitis, rash.

ADVERSE EFFECTS/TOXIC REACTIONS

Rapid ventricular rate in atrial flutter/fibrillation, marked hypotension, extreme bradycardia, HE, asystole, second- or third-degree AV block occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline ECG. Record onset, type (sharp, dull, squeezing), radiation, location, intensity, duration of anginal pain, precipitating factors (exertion, emotional stress). Check B/P for hypotension, pulse for bradycardia immediately before giving medication.

INTERVENTION/EVALUATION

Assess pulse for quality, rate, rhythm. Monitor B/P. Monitor ECG for cardiac changes, particularly prolongation of PR interval. Notify physician of any significant ECG interval changes. Assist with ambulation if dizziness occurs. Assess for peripheral edema. For those taking oral form, monitor daily pattern of bowel activity, stool consistency. **Therapeutic serum level:** 0.08–0.3 mcg/mL; **toxic serum level:** N/A.

PATIENT/FAMILY TEACHING

- Do not abruptly discontinue medication.
- Compliance with therapy regimen is essential to control anginal pain.
- Go from lying to standing slowly.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Limit caffeine.
- Avoid or limit alcohol.
- Report continued, persistent angina pain, irregular heartbeats, shortness of breath, swelling, dizziness, constipation, nausea, hypotension.
- Avoid grapefruit products.

vilazodone

vil-az-oh-done
(Viibryd)

BLACK BOX ALERT Increased risk of suicidal ideation and behavior in children, adolescents, and young adults 18–24 yrs of age with major depressive disorder, other psychiatric disorders.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective serotonin reuptake inhibitor. **CLINICAL:** Antidepressant.

USES

Treatment of major depressive disorder.

PRECAUTIONS

Contraindications: Hypersensitivity to vilazodone. Use of MAOIs intended to treat psychiatric disorders (with or within 14 days of stopping vilazodone or MAOI), starting vilazodone in pts receiving linezolid or methylene blue.

Cautions: Seizure disorder, pts at risk for suicide, hepatic impairment, elderly pts.

ACTION

Enhances serotonergic activity in CNS by selectively inhibiting reuptake of serotonin. **Therapeutic Effect:** Relieves depression.

PHARMACOKINETICS

Readily absorbed from GI tract. Peak concentration: 4–5 hrs. Widely distributed. Protein binding: 96%–99%. Metabolized in liver. **Half-life:** 25 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is excreted in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Alcohol may increase adverse effects. Lithium, MAOIs (e.g., phenelzine, selegiline) may increase serotonergic effect. Aspirin, NSAIDs (e.g., ibuprofen, ketorolac, naproxen), warfarin may increase risk of bleeding. Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole) may increase concentration. BusPIRone, eletriptan, naratriptan, SNRIs (e.g., venlafaxine), SSRIs (e.g., sertraline), traMADol, tryptophan may increase risk of serotonin syndrome. **HERBAL:** Herbals with anticoagulant/antiplatelet properties (e.g., garlic, ginger, ginkgo biloba), glucosamine may increase risk of bleeding. **St. John's**

wort may decrease concentration/effect.

FOOD: None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 10 mg, 20 mg, 40 mg.

ADMINISTRATION/HANDLING

PO

- Give with food (administration without food can result in inadequate drug concentration, may diminish effectiveness).

INDICATIONS/ROUTES/DOSAGE

Depression

PO: ADULTS, ELDERLY: Initially, 10 mg once daily for 7 days, followed by 20 mg once daily. May increase to 40 mg once daily after a minimum of 7 days. **Note:** When discontinuing treatment, reduce dose gradually. From 40 mg/day: taper to 20 mg/day for 4 days, then 10 mg/day for 3 days. From 20 mg/day: taper to 10 mg/day for 7 days.

Concomitant Moderate/Strong CYP3A4 Inhibitors

PO: ADULTS, ELDERLY: 20 mg/day.

Concomitant Strong CYP3A4 Inducers

May increase dose to 80 mg/day when used concomitantly for more than 14 days.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (28%–23%): Diarrhea, nausea.

Occasional (9%–3%): Dizziness, dry mouth, insomnia, vomiting, decreased libido, abnormal dreams, fatigue, sweating. **Rare**

(2%): Dyspepsia, flatulence, paresthesia, restlessness, arthralgia, abnormal orgasm, delayed ejaculation, increased appetite, palpitations, tremor.

ADVERSE EFFECTS/TOXIC REACTIONS

Serotonin syndrome (agitation, confusion, hallucinations, hyperreflexia), neuroleptic

malignant syndrome (fever, muscular rigidity, cognitive changes).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content, risk of suicide.

INTERVENTION/EVALUATION

Monitor B/P, heart rate, weight. Monitor for suicidal ideation (esp. at initiation of therapy or changes in dosage). Assess for therapeutic response (greater interest in surroundings, improved self-care, increased ability to concentrate, relaxed facial expression).

PATIENT/FAMILY TEACHING

- Avoid tasks that may require alertness, motor skills until response to drug is established (may cause dizziness).
- Slowly go from lying to standing.
- Take with food.
- Do not suddenly stop taking medication; withdraw gradually.
- Report suicidal ideation, signs of mania/hypomania. Avoid alcohol.

vinBLAS_tine

HIGH ALERT

vin-**blas**-teen

BLACK BOX ALERT Must be administered by personnel trained in administration/handling of chemotherapeutic agents. For IV use only. Fatal if given intrathecally (ascending paralysis, death). Vesicant; avoid extravasation.

Do not confuse vinBLAS_tine with vinCRIS_tine or vinorelbine.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimitotic tubular. Vinca alkaloid. **CLINICAL:** Antineoplastic.

USES

Treatment of Hodgkin's lymphoma, non-Hodgkin's lymphoma, Langerhans cell histiocytosis, advanced testicular carcinoma, Kaposi's sarcoma, Letterer-Siwe disease, breast carcinoma, resistant choriocarcinoma. **OFF-LABEL:** Treatment of bladder, ovarian cancer; non-small-cell lung cancer; soft tissue sarcoma, melanoma.

PRECAUTIONS

Contraindications: Hypersensitivity to vinBLAS^{Stine}. Bacterial infection, significant granulocytopenia (unless as a result of condition being treated). **Cautions:** Hepatic impairment, severe leukopenia, neurotoxicity, recent exposure to radiation therapy, chemotherapy, ischemic heart disease, preexisting pulmonary disease.

ACTION

Binds to tubulin, inhibiting microtubule formation; may interfere with nucleic acid, protein synthesis. **Therapeutic Effect:** Inhibits cell division by disrupting mitotic spindle.

PHARMACOKINETICS

Does not cross blood-brain barrier. Protein binding: 99%. Metabolized in liver. Primarily excreted in feces. **Half-life:** 24.8 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. during first trimester. Breastfeeding not recommended. Aspermia has been reported in males. **Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease concentration/anti-convulsant effects of **phenytoin**. **Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole)** may increase level/toxicity. **Strong CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin)** may decrease concentration/efficacy. **Bone marrow depressants (e.g.,**

cladribine) may increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** **St. John's wort** may decrease concentration. **Echinacea** may decrease the therapeutic effect. **FOOD:** None known. **LAB VALUES:** May increase serum uric acid.

AVAILABILITY (Rx)

Injection Solution: 1 mg/mL.

ADMINISTRATION/HANDLING

◀ ALERT ▶ May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation and administration. Give by IV injection. Leakage from IV site into surrounding tissue may produce extreme irritation. Avoid eye contact with solution (severe eye irritation, possible corneal ulceration may result). If eye contact occurs, immediately irrigate eye with water.

Note: In order to prevent inadvertent intrathecal administration, dispense as a piggyback (not a syringe).

Reconstitution • Using 1 mg/mL solution, further dilute in 25–50 mL D₅W or 0.9% NaCl.

Rate of administration • Infuse over 5–15 min. Prolonged administration time and/or increased volume may increase risk of vein irritation and extravasation.

Storage • Refrigerate unopened vials. • Solution appears clear, colorless. • Following dilution, solution is stable for up to 21 days if protected from light (consult manufacturer prescribing information). • Discard if solution is discolored or precipitate forms.

IV INCOMPATIBILITIES

Furosemide (Lasix).

IV COMPATIBILITIES

Allopurinol (Aloprim), CISplatin (Platinol AQ), cyclophosphamide (Cytoxan), DOXOrubicin (Adriamycin), etoposide

(VePesid), 5-fluorouracil, gemcitabine (Gemzar), granisetron (Kytril), heparin, leucovorin, methotrexate, ondansetron (Zofran), PACLitaxel (Taxol), vinorelbine (Navelbine).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Dosage individualized based on clinical response, tolerance to adverse effects. When used in combination therapy, consult specific protocols for optimum dosage, sequence of drug administration.

Usual Dosage

IV; ADULTS, ELDERLY: Initially, 3.7 mg/m² (adjust dose q7days based on WBC response) up to 5.5 mg/m² (second wk), 7.4 mg/m² (third wk), 9.25 mg/m² (fourth wk), and 11.1 mg/m² (fifth wk). **Maximum:** 18.5 mg/m². **CHILDREN:** 3–6 mg/m² q7–14days. **Maximum:** 12.5 mg/m²/wk.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Direct serum bilirubin concentration 1.5–3 mg/dL: Reduce dose by 50%. **Greater than 3 mg/dL:** Avoid use.

SIDE EFFECTS

Frequent: Nausea, vomiting, alopecia.

Occasional: Constipation, diarrhea, rectal bleeding, headache, paresthesia (occur 4–6 hrs after administration, persist for 2–10 hrs), malaise, asthenia, dizziness, pain at tumor site, jaw/face pain, depression, dry mouth. **Rare:** Dermatitis, stomatitis, phototoxicity, hyperuricemia.

ADVERSE EFFECTS/TOXIC REACTIONS

Hematologic toxicity manifested most commonly as leukopenia, less frequently as anemia. WBC reaches its nadir 4–10 days after initial therapy, recovers within 7–14 days (high dosage may require 21-day recovery period). Thrombocytopenia

is usually mild and transient, with recovery occurring in a few days. Hepatic insufficiency may increase risk of toxicity. Acute shortness of breath, bronchospasm may occur, particularly when administered concurrently with mitoMYcin.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Nausea, vomiting easily controlled by antiemetics. Discontinue therapy if WBC, platelet counts fall abruptly (unless drug is clearly destroying tumor cells in bone marrow). Obtain CBC wkly or before each dosing. Offer emotional support.

INTERVENTION/EVALUATION

If neutrophils fall below 2,000 cells/mm³, assess diligently for signs of infection. Assess for stomatitis; maintain strict oral hygiene. Monitor for hematologic toxicity: infection (fever, sore throat, signs of local infection), unusual bruising/bleeding from any site, symptoms of anemia (excessive fatigue, weakness). Monitor daily pattern of bowel activity, stool consistency. Avoid constipation. Extravasation may result in cellulitis, phlebitis. Large amount of extravasation may result in tissue sloughing. If extravasation occurs, give local injection of hyaluronidase, apply warm compresses.

PATIENT/FAMILY TEACHING

- Immediately report any pain/burning at injection site during administration.
- Pain at tumor site may occur during or shortly after injection.
- Do not have immunizations without physician approval (drug lowers resistance).
- Avoid crowds, those with infection.
- Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site.
- Hair loss is reversible, but new hair growth may have different color, texture.
- Report persistent nausea/vomiting.
- Avoid constipation by increasing fluids, bulk in diet, exercise as tolerated.

vinCRIS[®]tine

**HIGH
ALERT**

vin-cris-teen
(Marqibo, Vincasar PFS)

■ BLACK BOX ALERT ■ Must be administered by personnel trained in administration/handling of chemotherapeutic agents. For IV use only. Fatal if given intrathecally (ascending paralysis, death). Vesicant; avoid extravasation. Marqibo and Vincasar are not interchangeable.

Do not confuse vinCRIS[®]tine with vinBLAST[®]tine.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimicrotubular. Vinca alkaloid. **CLINICAL:** Antineoplastic.

USES

Vincasar: Treatment of acute lymphocytic leukemia (ALL), Hodgkin's lymphoma, advanced non-Hodgkin's lymphomas, neuroblastoma, rhabdomyosarcoma, Wilms tumor. **Marqibo:** Relapsed Philadelphia chromosome negative (Ph⁻) ALL in adults whose disease has progressed after 2 or more antileukemic therapies. **OFF-LABEL:** **Vincasar:** Treatment of multiple myeloma, chronic lymphocytic leukemia (CLL), brain tumors, small cell lung cancer, ovarian germ cell tumors, Ewing's sarcoma, gestational trophoblastic tumors, retinoblastoma.

PRECAUTIONS

Contraindications: Hypersensitivity to vinCRIS[®]tine. Demyelinating form of Charcot-Marie-Tooth syndrome. Intrathecal administration. **Cautions:** Hepatic impairment, pts receiving radiation therapy through ports (including liver), neurotoxicity, preexisting neuromuscular disease, hepatobiliary dysfunction, elderly.

ACTION

Binds to tubulin, inhibiting microtubule formation; may interfere with nucleic

acid/protein synthesis. **Therapeutic Effect:** Inhibits cell division by disrupting mitotic spindle.

PHARMACOKINETICS

Does not cross blood-brain barrier. Protein binding: 75%. Metabolized in liver. Primarily excreted in feces by biliary system. **Half-life:** 24 hrs. **Marqibo:** 45 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. May cause fetal harm. Breastfeeding not recommended. **Children:** No age-related precautions noted. **Elderly:** More susceptible to neurotoxic effects.

INTERACTIONS

DRUG: May decrease concentration/anticonvulsant effects of **phenytoin**. **Itraconazole** may increase severity of neuromuscular side effects. **Strong CYP3A4 inducers** (e.g., **carbamazepine**, **phenytoin**, **rifampin**) may decrease concentration/effect. **Strong CYP3A4 inhibitors** (e.g., **clarithromycin**, **ketoconazole**) may increase concentration/effect. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** **St. John's wort** may decrease concentration/effect. **Echinacea** may decrease the therapeutic effect. **FOOD:** None known. **LAB VALUES:** May increase serum uric acid.

AVAILABILITY (Rx)

Injection Solution: 1 mg/mL. **Injection Suspension: (Marqibo):** 5 mg/31 mL.

ADMINISTRATION/HANDLING

Note: In order to prevent inadvertent intrathecal administration, dispense as a piggyback. (not a syringe).

◀ ALERT ▶ May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation and administration. Use extreme caution in calculating,

administering vinCRIS[®]tine. Overdose may result in serious or fatal outcome.

Injection Solution

Reconstitution • Dilute in 25–50 mL D₅W or 0.9% NaCl.

Rate of administration • Administer as 5–10 min infusion (preferred). • Do not inject into extremity with impaired, potentially impaired circulation caused by compression or invading neoplasm, phlebitis, varicosity.

Storage • Refrigerate unopened vials. • Solution appears clear, colorless. • Discard if solution is discolored or precipitate forms. • Diluted solutions are stable for 7 days refrigerated or 2 days at room temperature.

Injection Suspension

• Calculate dose of vinCRIS[®]tine and remove volume equal to volume of intended solution from 100 mL 0.9% NaCl or D₅W infusion bag. Inject vinCRIS[®]tine into infusion bag (total volume: 100 mL).

Rate of administration • Administer over 60 min.

Storage • Solution must be administered within 12 hrs of preparation.

IV INCOMPATIBILITIES

Furosemide (Lasix), IDArubicin (Idamycin).

IV COMPATIBILITIES

Allopurinol (Aloprim), CISplatin (Platinol AQ), cyclophosphamide (Cytosan), cytarabine (Ara-C, Cytosar), DOXOrubicin (Adriamycin), etoposide (VePesid), 5-fluorouracil, gemcitabine (Gemzar), granisetron (Kytril), leucovorin, methotrexate, ondansetron (Zofran), PACLitaxel (Taxol), vinorelbine (Navelbine).

INDICATIONS/ROUTES/ DOSAGE

Usual Dosage Injection Solution

IV: ADULTS, ELDERLY: 1.4 mg/m², frequency may vary based on protocol. **CHILDREN WEIGHING MORE THAN 10 KG:** 1.5–2 mg/m², frequency may vary based on protocol. **CHIL-**

DREN WEIGHING LESS THAN 10 KG: 0.05 mg/kg once wkly. **Maximum:** 2 mg.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Bilirubin	Dosage
Bilirubin greater than 3 mg/dL	50% of normal

ALL Injection Suspension

IV: ADULTS, ELDERLY: 2.25 mg/m² q7days. Infuse over 1 hr.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Expected: Peripheral neuropathy (occurs in nearly every pt; first clinical sign is depression of Achilles tendon reflex). **Frequent:** Peripheral paresthesia, alopecia, constipation/obstipation (upper colon impaction with empty rectum), abdominal cramps, headache, jaw pain, hoarseness, diplopia, ptosis/drooping of eyelid, urinary tract disturbances. **Occasional:** Nausea, vomiting, diarrhea, abdominal distention, stomatitis, fever. **Rare:** Mild leukopenia, mild anemia, thrombocytopenia.

ADVERSE EFFECTS/TOXIC REACTIONS

Acute dyspnea, bronchospasm may occur, esp. when administered concurrently with mitoMYcin. Prolonged or high-dose therapy may produce foot/wrist drop, difficulty walking, slapping gait, ataxia, muscle wasting. Acute uric acid nephropathy may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, LFT. Offer emotional support. Question history of

hepatic impairment, neuromuscular disease.

INTERVENTION/EVALUATION

Monitor serum uric acid levels, renal/hepatic function studies, CBC. Assess Achilles tendon reflex. Monitor daily pattern of bowel activity, stool consistency. Monitor for ptosis, diplopia, blurred vision. Question pt regarding urinary changes. Extravasation produces stinging, burning, edema at injection site. Terminate injection immediately, locally inject hyaluronidase, apply heat (disperses drug, minimizes discomfort, cellulitis).

PATIENT/FAMILY TEACHING

- Immediately report any pain/burning at injection site during administration.
- Hair loss is reversible, but new hair growth may have different color/texture.
- Report persistent nausea/vomiting.
- Report signs of peripheral neuropathy (burning/numbness of bottom of feet, palms of hands).
- Report fever, sore throat, unusual bleeding/bruising, shortness of breath.

vinorelbine

HIGH
ALERT

vin-oh-rel-been
(Navelbine)

BLACK BOX ALERT Must be administered by personnel trained in administration/handling of chemotherapeutic agents. Severe myelosuppression, resulting in serious infections, shock, death, may occur.

Do not confuse vinorelbine with vinBLAStine or vinCRIStine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimitotic tubular. Vinca alkaloid. **CLINICAL:** Antineoplastic.

USES

Single agent or in combination with CISplatin for treatment of unresectable, advanced or metastatic, non-small-cell lung cancer (NSCLC). **OFF-LABEL:** Treatment of metastatic breast cancer, cervical carcinoma, ovarian carcinoma, malignant pleural mesothelioma, soft tissue sarcoma, small-cell lung cancer.

PRECAUTIONS

Contraindications: Hypersensitivity to vinorelbine. **Cautions:** Compromised marrow reserve due to prior chemotherapy/radiation therapy; hepatic impairment, neurotoxicity, neuropathy, pulmonary impairment.

ACTION

Binds to tubulin, inhibiting microtubule formation; may interfere with nucleic acid protein synthesis. **Therapeutic Effect:** Prevents cellular division by disrupting formation of mitotic spindle.

PHARMACOKINETICS

Widely distributed after IV administration. Protein binding: 80%–90%. Metabolized in liver. Primarily excreted in feces by biliary system. **Half-life:** 28–43 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. during first trimester. May cause fetal harm. Unknown if distributed in breast milk. Breastfeeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CISplatin may increase risk of granulocytopenia. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **Strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole)** may increase

concentration/effects. **HERBAL:** St. John's wort may decrease concentration. **Echinacea** may decrease the therapeutic effect. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin, alkaline phosphatase, ALT, AST.

AVAILABILITY (Rx)

Injection Solution: 10 mg/mL (1-mL, 5-mL vials).

ADMINISTRATION/HANDLING

◀ALERT▶ IV needle, catheter must be correctly positioned before administration. Leakage into surrounding tissue produces extreme irritation, local tissue necrosis, thrombophlebitis. Handle drug with extreme care during administration; wear protective clothing per protocol. If solution comes in contact with skin/mucosa, immediately wash thoroughly with soap, water.

Reconstitution • Must be diluted and administered via syringe or IV bag.

Syringe Dilution

• Dilute calculated vinorelbine dose with D₅W or 0.9% NaCl to concentration of 1.5–3 mg/mL.

IV Bag Dilution

• Dilute calculated vinorelbine dose with D₅W, 0.45% or 0.9% NaCl, 5% dextrose and 0.45% NaCl, Ringer's or lactated Ringer's to concentration of 0.5–2 mg/mL.

Rate of administration • Administer diluted vinorelbine over 6–10 min into side port of free-flowing IV closest to IV bag followed by flushing with 75–125 mL of one of the solutions. • If extravasation occurs, stop injection immediately; give remaining portion of dose into another vein.

Storage • Refrigerate unopened vials. • Protect from light. • Unopened vials are stable at room temperature for 72 hrs. • Do not administer if particulate has formed. • Diluted vinorelbine may be used for up to 24 hrs under normal room light when stored in polypropylene syringes or polyvinyl chloride bags at room temperature.

IV INCOMPATIBILITIES

Acyclovir (Zovirax), allopurinol (Alloprim), amphotericin B (Fungizone), amphotericin B complex (Abelcet, AmBisome, Amphotec), ampicillin (Omnipen), ceFAZolin (Ancef), ceFTRIAxone (Rocephin), cefuroxime (Zinacef), 5-fluorouracil (5-FU), furosemide (Lasix), ganciclovir (Cytovene), methylPREDNISolone (SOLU-Medrol), sodium bicarbonate.

IV COMPATIBILITIES

Calcium gluconate, CARBOplatin (Paraplatin), CISplatin (Platinol AQ), cyclophosphamide (Cytosan), cytarabine (ARA-C, Cytosar), dacarbazine (DTIC), DAUNOrubicin (Cerubidine), dexamethasone (Decadron), diphenhydrAMINE (Benadryl), DOXOrubicin (Adriamycin), etoposide (VePesid), gemcitabine (Gemzar), granisetron (Kytril), HYDRomorphone (Dilaudid), IDArubicin (Idamycin), methotrexate, morphine, ondansetron (Zofran), vinBLAstine (Velban), vinCRIStine (Oncovin).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Dosage adjustments should be based on granulocyte count obtained on the day of treatment, as follows:

Granulocyte Count

(cells/mm³) on

Day of Treatment **Dosage**

1,500 or higher	100% of starting dose
1,000–1,499	50% of starting dose
Less than 1,000	Do not administer

NSCLC Monotherapy

IV injection: ADULTS, ELDERLY: 30 mg/m² q7 days.

NSCLC Combination Therapy with CISplatin

IV injection: ADULTS, ELDERLY: 25–30 mg/m² q7 days.

Dosage in Renal Impairment

No dose adjustment. **HD:** Decrease dose to 20 mg/m²/wk given post-HD or on non-HD days.

Dosage in Hepatic Impairment

Serum Bilirubin	Dosage
2 mg/dL or less	100% of dose
2.1–3 mg/dL	50% of dose
Greater than 3 mg/dL	25% of dose

SIDE EFFECTS

Frequent (35%–12%): Asthenia, nausea, constipation, erythema, pain, vein discoloration at injection site, fatigue, peripheral neuropathy manifested as paresthesia, hyperesthesia, diarrhea, alopecia. **Occasional (10%–5%):** Phlebitis, dyspnea, loss of deep tendon reflexes. **Rare:** Chest pain, jaw pain, myalgia, arthralgia, rash.

ADVERSE EFFECTS/TOXIC REACTIONS

Bone marrow depression is manifested mainly as granulocytopenia (may be severe). Other hematologic toxicities (neutropenia, thrombocytopenia, leukopenia, anemia) increase risk of infection, bleeding. Acute shortness of breath, severe bronchospasm occur infrequently, particularly in pts with preexisting pulmonary dysfunction. Hepatic toxicity may occur.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Review medication history. Obtain CBC prior to each dose. Granulocyte count should be at least 1,000 cells/mm³ before vinorelbine administration. Granulocyte nadirs occur 7–10 days following dosing. Do not give hematologic growth factors within 24 hrs before administration of chemotherapy or earlier than 24 hrs following cytotoxic chemotherapy. Advise women of childbearing potential to avoid pregnancy during drug therapy. Offer emotional support.

INTERVENTION/EVALUATION

Diligently monitor injection site for swelling, redness, pain. Frequently monitor for myelosuppression during and following therapy (infection [fever, sore throat, signs of local infection], unusual bleeding/bruising, anemia [excessive fatigue, weakness]). Monitor pts developing severe granulocytopenia for evidence of infection, fever. Crackers, dry toast, sips of cola may help relieve nausea. Monitor daily pattern of bowel activity, stool consistency. Question for tingling, burning, numbness of hands/feet (peripheral neuropathy). Pt complaint of “walking on glass” is sign of hyperesthesia.

PATIENT/FAMILY TEACHING

- Immediately report redness, swelling, pain at injection site.
- Avoid crowds, those with infection.
- Do not have immunizations without physician’s approval.
- Promptly report fever, signs of infection, unusual bruising/bleeding from any site, difficulty breathing.
- Avoid pregnancy.
- Hair loss is reversible, but new hair growth may have different color, texture.

vismodegib

vis-moe-deg-ib
(Erivedge)

BLACK BOX ALERT ■ May result in embryo-fetal death or severe birth defects including missing digits, midline defects, irreversible malformations due to embryotoxic and teratogenic properties. Verify pregnancy status prior to initiation. Advise use of effective contraception in female pts. Advise male pts of potential exposure risk through seminal fluid.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Hedgehog pathway inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of adult pts with metastatic basal cell carcinoma, locally advanced basal cell carcinoma with recurrence after surgery, or pts who are not candidates for surgery or radiation.

PRECAUTIONS

◀ALERT▶ Do not donate blood products for at least 7 mos after discontinuation.

Contraindications: Hypersensitivity to vismodegib. **Cautions:** Hepatic/renal impairment. History of significant cardiac disease.

ACTION

An inhibitor of Hedgehog pathway, binding to and inhibiting smoothed, a transmembrane protein involved in Hedgehog signal transduction. **Therapeutic Effect:** Inhibits tumor cell growth and metastasis of basal cell carcinoma.

PHARMACOKINETICS

Metabolized in liver. Protein binding: 99%. Excreted in feces (82%), urine (4%). **Half-life:** 4 days (daily dosing), 12 days (single dose).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Not recommended in nursing mothers. Must either discontinue drug or discontinue breastfeeding. Unknown if distributed in breast milk. Contraception recommended prior to first dose, during treatment and up to 24 mos after discontinuation. During treatment (including interruption) and for 3 mos after treatment, male pts should not donate sperm and should use condoms with spermicide if partner is of childbearing potential. **Children:** Safety and efficacy not established. **Elderly:** Safety and efficacy not established.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease potassium,

sodium, GFR. May increase serum BUN, creatinine.

AVAILABILITY (Rx)

 **Capsules:** 150 mg.

ADMINISTRATION/HANDLING**PO**

• Give without regard to food. • Give whole. Do not break, crush, or open capsule.

INDICATIONS/ROUTES/DOSAGE**Advanced or Metastatic Basal Cell Carcinoma**

PO: ADULTS/ELDERLY: 150 mg once daily. Continue until disease progression or unacceptable toxicity.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (71%–40%): Muscle spasm, alopecia, dysgeusia, weight loss, fatigue. **Occasional (30%–11%):** Nausea, amenorrhea, diarrhea, anorexia, constipation, vomiting, arthralgia, loss of taste.

ADVERSE EFFECTS/TOXIC REACTIONS

May cause spontaneous abortion, fetal demise, birth defects. Azotemia (renal impairment) reported in 2% of pts.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain negative pregnancy test (urine/serum) before initiation, BMP. Question current breastfeeding status. Assess skin, moles for other possible malignancies. Offer emotional support.

INTERVENTION/EVALUATION

Obtain STAT human chorionic gonadotropin (HCG) level if pregnancy suspected, BMP if electrolyte imbalance or renal impairment suspected. Encourage fluid intake if diarrhea occurs. Offer antiemetics for nausea/vomiting. Report oliguria, dark or concentrated urine.

PATIENT/FAMILY TEACHING

- Avoid pregnancy.
- May cause birth defects or miscarriage.
- Do not breastfeed.
- Male pts must use condoms with spermicide during sexual activity, despite history of vasectomy.
- Female pts must use contraception for at least 7 mos after stopping treatment.
- Immediately report suspected pregnancy.
- Do not donate blood for at least 7 mos after stopping treatment.
- Swallow capsules whole; do not break, crush, or open.
- Hair loss is an expected side effect.
- Strictly monitor menstrual cycle.
- Report dark-colored urine or decreased urine output despite hydration.

vitamin D (vitamin D analogues)

calcitriol

kal-si-trye-ole
(Calcijex , Rocaltrol, Vectical)

doxercalciferol

dox-er-kal-sif-e-role
(Hectorol)

ergocalciferol

er-goe-kal-sif-e-role
(Drisdol)

paricalcitol

par-i-kal-si-tol
(Zemplar)

◆ **CLASSIFICATION**

PHARMACOTHERAPEUTIC: Fat-soluble vitamin. **CLINICAL:** Vitamin D analogue.

USES

Calcitriol: Manage hypocalcemia in pts on chronic renal dialysis, secondary hypoparathyroidism in chronic kidney disease (CKD), manage hypocalcemia in hypoparathyroidism. **(Topical):** Treatment of mild to moderate plaque psoriasis. **Doxercalciferol:** Treatment of secondary hyperparathyroidism in CKD. **Ergocalciferol:** Treatment of refractory rickets, hypophosphatemia, hypoparathyroidism, dietary supplement. **Paricalcitol: (Intravenous):** Treatment/prevention of secondary hyperparathyroidism associated with stage 5 CKD. **(PO):** Treatment/prevention of secondary hyperparathyroidism associated with stage 3 and 4 CKD and stage 5 CKD pts on hemodialysis or peritoneal dialysis. **OFF-LABEL: Calcitriol:** Vitamin D-dependent rickets. **Ergocalciferol:** Prevention/treatment of vitamin D deficiency in pts with CKD, osteoporosis prevention.

PRECAUTIONS

Contraindications: Hypersensitivity to cholecalciferol, ergocalciferol. Vitamin D toxicity, hypercalcemia. **Cautions:** Pts with malabsorption syndrome. Concurrent use with digoxin.

ACTION

Calcitriol: Stimulates calcium transport in intestines, resorption in bones, and tubular reabsorption in kidney; suppresses parathyroid hormone (PTH) secretion/synthesis. **Doxercalciferol:** Regulates blood calcium levels, stimulates bone growth, suppresses PTH secretion/synthesis. **Ergocalciferol:** Promotes active absorption of calcium and phosphorus, increasing serum levels to allow bone mineralization; mobilizes calcium and phosphate from bone, increases reabsorption of calcium and phosphate by renal tubules. **Paricalcitol:** Suppresses PTH secretion/synthesis.

V

Therapeutic Effect: Essential for absorption, utilization of calcium, phosphate, control of PTH levels.

PHARMACOKINETICS

Calcitriol: Rapidly absorbed. Protein binding: 99.9%. Metabolized to active metabolite (ergocalciferol). Excreted in feces (49%), urine (16%). **Half-life:** 5–8 hrs. **Doxercalciferol:** Metabolized in liver. **Half-life:** 32–37 hrs. **Ergocalciferol:** Metabolized in liver. **Paricalcitol:** Readily absorbed. Protein binding: 99.8%. Metabolized in liver. Primarily excreted in feces. **Half-life:** 5–7 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta. Infant risk cannot be excluded. **Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Calcium-containing products, concurrent vitamin D (or derivatives) may increase risk of hypercalcemia. May increase **digoxin** toxicity due to hypercalcemia (may cause arrhythmias). May increase concentration/effect of **aluminum hydroxide, sucralfate**. **Bile acid sequestrants** (e.g., **cholestyramine**) may decrease absorption. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum cholesterol, calcium, magnesium, phosphate, ALT, AST, BUN, creatinine.

AVAILABILITY (Rx)

Calcitriol

Capsules, Softgel: (*Rocaltrol*): 0.25 mcg, 0.5 mcg. **Injection Solution:** 1 mcg/mL. **Oral Solution:** (*Rocaltrol*): 1 mcg/mL.

Doxercalciferol

Capsules, Softgel: (*Hectorol*): 0.5 mcg, 1 mcg, 2.5 mcg. **Injection Solution:** (*Hectorol*): 2 mcg/mL.

Ergocalciferol

Capsules: (*Drisdol*): 50,000 units (1.25 mg). **Liquid, Oral:** (*Drisdol*): 8,000 units/mL (200 mcg/mL). **Tablets:** 400 units.

Paricalcitol

Capsules, Gelatin: (*Zemlar*): 1 mcg, 2 mcg, 4 mcg. **Injection Solution:** (*Zemlar*): 2 mcg/mL.

ADMINISTRATION/HANDLING

Calcitriol

PO

- May take without regard to food.

- May give as IV bolus at end of dialysis.

Doxercalciferol

PO

- May take without regard to food.

- May give as IV bolus via catheter at end of dialysis.

Ergocalciferol

PO

- May take without regard to food.

Paricalcitol

PO

- May take without regard to food.
- For 3 times/wk dosing, give no more frequently than every other day.

- Give bolus anytime during dialysis.
- Do not give more frequently than every other day.

INDICATIONS/ROUTES/DOSAGE

Calcitriol

Hypocalcemia on Chronic Renal Dialysis

PO: ADULTS, ELDERLY: (*Rocaltrol*): Initially, 0.25 mcg/day or every other day. May increase by 0.25 mcg/day at 4- to 8-wk intervals. **Range:** 0.5–1 mcg/day.

IV: ADULTS, ELDERLY: 1–2 mcg 3 times/wk. Adjust dose at 2- to 4-wk intervals. **Range:** 0.5–4 mcg 3 times/wk.

Hypocalcemia in Hypoparathyroidism

PO: ADULTS, CHILDREN 6 YRS AND OLDER: (*Rocaltrol*): Initially, 0.25 mcg/day. May increase at 2- to 4-wk intervals. Range: 0.5–2 mcg/day. **CHILDREN 1–5 YRS:** 0.25–0.75 mcg once daily.

Secondary Hyperparathyroidism Associated with Moderate to Severe CKD Not on Dialysis

PO: ADULTS, ELDERLY, CHILDREN 3 YRS AND OLDER: (*Rocaltrol*): Initially, 0.25 mcg/day. May increase to 0.5 mcg/day. **CHILDREN YOUNGER THAN 3 YRS:** Initially, 0.01–0.015 mcg/kg/day.

Doxercalciferol

Secondary Hyperparathyroidism (Dialysis)

PO: ADULTS, ELDERLY: Initial dose (intact parathyroid hormone [iPTH] greater than 400 pg/mL): 10 mcg 3 times/wk at dialysis. Dose titrated to lower iPTH to 150–300 pg/mL, with dosage adjustments made at 8-wk intervals. **Maximum:** 20 mcg 3 times/wk.

IV: ADULTS, ELDERLY: Initial dose (iPTH greater than 400 pg/mL): 4 mcg 3 times/wk after dialysis, given as bolus dose. Dose titrated to lower iPTH to 150–300 pg/mL, with dosage adjustments made at 8-wk intervals. **Maximum:** 18 mcg/wk.

Secondary Hyperparathyroidism (Predialysis)

PO: ADULTS, ELDERLY: Initially, 1 mcg/day. Titrate dose to lower iPTH to 35–70 pg/mL for stage 3 CKD and 70–110 pg/mL for stage 4 CKD. **Maximum:** 3.5 mcg/day.

Ergocalciferol (Dietary Supplement)

PO: ADULTS, ELDERLY, CHILDREN: 10 mcg (400 units)/day. **NEONATES:** 10–20 mcg (400–800 units)/day.

Hypoparathyroidism

PO: ADULTS, ELDERLY: 625 mcg–5 mg (25,000–200,000 units)/day (with calcium supplements). **CHILDREN:** 1.25–5 mg (50,000–200,000 units)/day (with calcium supplements).

Plaque Psoriasis

Topical: ADULTS, ELDERLY: Apply to affected area twice daily.

Paricalcitol

Secondary Hyperparathyroidism in Stage 5 CKD

IV: ADULTS, ELDERLY, CHILDREN 5 YRS AND OLDER: Initially, 0.04–0.1 mcg/kg given as bolus dose no more frequently than every other day at any time during dialysis. May increase by 2–4 mcg every 2–4 wks. Dose is based on serum iPTH levels.

Secondary Hyperparathyroidism in Stages 3 and 4 CKD

Note: Initial dose based on baseline serum iPTH levels. Dose adjusted q2wks based on iPTH levels relative to baseline.

PO: ADULTS, ELDERLY: (iPTH 500 PG/ML OR LESS): 1 mcg/day or 2 mcg 3 times/wk. **(iPTH GREATER THAN 500 PG/ML):** 2 mcg/day or 4 mcg 3 times/wk.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequencies not defined. **Calcitriol:** Cardiac arrhythmias, headache, pruritus, hypercalcemia, polydipsia, abdominal pain, metallic taste, nausea, vomiting, myalgia, soft tissue calcification. **Doxercalciferol:** Edema, pruritus, nausea, vomiting, headache, dizziness, dyspnea, malaise, hypercalcemia. **Ergocalciferol:** Hypercalcemia, hypervitaminosis D, decreased renal function, soft tissue calcification, bone demineralization, nausea, constipation, weight loss. **Paricalcitol:** Edema, nausea, vomiting, hypercalcemia.

ADVERSE EFFECTS/TOXIC REACTIONS

Early signs of overdose manifested as weakness, headache, drowsiness, nausea, vomiting, dry mouth, constipation, muscle/bone pain, metallic taste. Later signs of overdose evidenced by polyuria, polydipsia, anorexia, weight loss, nocturia, photophobia, rhinorrhea,

pruritus, disorientation, hallucinations, hyperthermia, hypertension, cardiac dysrhythmias.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline serum calcium, ionized calcium, phosphorus, alkaline phosphatase, creatinine, PTH.

INTERVENTION/EVALUATION

Monitor serum, urinary calcium levels, serum phosphate, magnesium, BUN, creatine, alkaline phosphatase determinations (therapeutic calcium level: 9–10 mg/dL), PTH measurements. Estimate daily dietary calcium intake. Encourage adequate fluid intake. Monitor for signs/symptoms of vitamin D intoxication.

PATIENT/FAMILY TEACHING

- Adequate calcium intake should be maintained.
- Dietary phosphorus may need to be restricted (foods high in phosphorus include beans, dairy products, nuts, peas, whole-grain products).
- Oral formulations may cause hypersensitivity reactions. Avoid excessive doses.
- Report signs/symptoms of hypercalcemia (headache, weakness, drowsiness, nausea, vomiting, dry mouth, constipation, metallic taste, muscle or bone pain).
- Maintain adequate hydration.
- Avoid changes in diet or supplemental calcium intake (unless directed by health care professional).
- Avoid magnesium-containing antacids in pts with renal failure.

or with active pathological bleeding. Antiplatelet agents increase risk of bleeding, including ICH and fatal bleeding.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Pro-tease-activated receptor-1 (PAR-1) antagonist. **CLINICAL:** Antiplatelet.

USES

To reduce thrombotic cardiovascular events in pts with history of MI or peripheral artery disease (PAD). Reduces rate of a combined endpoint of cardiovascular death, CVA, MI, and urgent coronary revascularization.

PRECAUTIONS

Contraindications: Hypersensitivity to vorapaxar. History of stroke, intracranial hemorrhage, transient ischemic attack; active bleeding. **Cautions:** Hepatic impairment, pts at increased risk of bleeding (anticoagulant use, elderly, low body weight, trauma) or with history of bleeding disorders.

ACTION

Inhibits thrombin-induced and thrombin receptor agonist peptide (TRAP)-induced platelet aggregation. **Therapeutic Effect:** Inhibits platelet aggregation, reduces incidence of thrombus.

PHARMACOKINETICS

Readily absorbed. Widely distributed. Metabolized in liver. Protein binding: greater than 99%. Peak plasma concentration: 1 hr. Steady state reached in 21 days. Excreted in feces (58%), urine (25%). **Half-life:** 5–13 days.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** May have increased risk of bleeding.

vorapaxar

vor-a-pax-ar
(Zontivity)

BLACK BOX ALERT ■ Avoid use in pts with history of CVA, intracranial hemorrhage (ICH), TIA,

INTERACTIONS

DRUG: Aspirin, anticoagulants (e.g., warfarin), NSAIDs (e.g., ibuprofen, ketorolac, naproxen), serotonin norepinephrine reuptake inhibitors (e.g., DULoxetine), SSRIs (e.g., PARoxetine) may increase risk of bleeding. **Strong CYP3A4 inducers** (e.g., carbamazepine, phenytoin, rifampin) may decrease concentration/effect. **Strong CYP3A4 inhibitors** may increase concentration/effect. **HERBAL:** St. John's wort may decrease concentration/effect. **Herbals with anticoagulant/antiplatelet properties** (e.g., garlic, ginger, ginkgo biloba), glucosamine may increase risk of bleeding. **FOOD:** None known. **LAB VALUES:** May decrease Hbg, Hct, serum iron.

AVAILABILITY (Rx)

Tablets: 2.08 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Reduction of Thrombotic Cardiovascular Events (Pts with PAD, MI)

PO: ADULTS, ELDERLY: 2.08 mg once daily (in combination with aspirin and/or clopidogrel).

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Not recommended.

SIDE EFFECTS

Rare (2%): Depression, rash, skin eruptions, exanthemas.

ADVERSE EFFECTS/TOXIC REACTIONS

Hemorrhagic events (25% of pts) including fatal bleeding (less than 1%), GI bleeding (4%), ICH (less than 1%) have been reported. Vorapaxar increases risk of moderate to severe bleeding by 55%.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, PFA level. Question history of CVA, intracranial hemorrhage (ICH), transient ischemic attack (TIA) (therapy contraindicated); anemia, bleeding ulcers, GI/genitourinary (GU) bleeding, recent surgery, spinal punctures, open wounds; hepatic impairment. Receive full medication history including herbal products.

INTERVENTION/EVALUATION

Monitor CBC. Question for increased menstrual bleeding/discharge. Monitor for confusion, headache, hemiparesis, vision change (may indicate ICH); hematuria, GI bleeding. Assess peripheral pulses; skin for ecchymosis, petechiae. Check for excessive bleeding from minor cuts, scratches, skin tears. Consider transfusion of platelets or RBCs if severe bleeding occurs.

PATIENT/FAMILY TEACHING

- It may take longer to stop bleeding.
- Bruising may occur more easily.
- Report unexpected, prolonged, excessive bleeding of any kind, or blood in sputum, stool, urine, or vomitus.
- Avoid alcohol, over-the-counter anti-inflammatories such as aspirin, ibuprofen, or naproxen.
- Consult doctor before any planned surgery, dental work.
- Use electric razor, soft toothbrush to prevent bleeding.
- Report confusion, headache, one-sided weakness, trouble speaking, or vision problems; may indicate life-threatening bleeding of brain.

voriconazole

vor-i-kon-a-zole

(Vfend, Apo-Voriconazole )

Do not confuse voriconazole with fluconazole.

♦ CLASSIFICATION

PHARMACOTHERAPEUTIC: Azole derivative. **CLINICAL:** Antifungal.

USES

Treatment of invasive aspergillosis, esophageal candidiasis. Treatment of serious fungal infections caused by *Scedosporium apiospermum*, *Fusarium* spp. Treatment of candidemia in non-neutropenic pts. Treatment of disseminated *Candida* infections of skin and abdomen, kidney, bladder wall, and wounds. **OFF-LABEL:** Empiric treatment of fungal meningitis or osteoarticular infections, coccidioidomycosis in HIV pts, fungal endophthalmitis, infection prophylaxis of graft-vs-host disease or pts with allogeneic hematopoietic stem cell transplant.

PRECAUTIONS

Contraindications: Hypersensitivity to voriconazole. Concurrent administration of barbiturates (long acting), carbamazepine, efavirenz (400 mg/day or greater), ergot alkaloids, pimozide, quinidine (may cause prolonged QT interval, torsades de pointes), rifabutin, rifampin, ritonavir (800 mg/day or greater), sirolimus, St. John's wort. **Cautions:** Severe renal/hepatic impairment, hypersensitivity to other azole antifungal agents. Pts at risk for acute pancreatitis, pts with fructose intolerance, glucose-galactose malabsorption; concomitant nephrotoxic medications; hypokalemia, hypomagnesemia, hypocalcemia. May prolong QT interval; use caution in pts with history of QT syndrome, concomitant medications that prolong QT interval, electrolyte imbalance.

ACTION

Interferes with fungal cytochrome activity, decreasing ergosterol synthesis, inhibiting fungal cell membrane formation. **Therapeutic Effect:** Damages fungal cell wall membrane.

PHARMACOKINETICS

Rapidly, completely absorbed after PO administration. Widely distributed. Protein binding: 58%. Metabolized in liver. Primarily excreted as metabolite in urine. **Half-life:** Variable, dose dependent.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. **Children:** Safety and efficacy not established in pts younger than 12 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration, risk of toxicity of calcium channel blockers (e.g., diltiazem, verapamil), cyclosporine, ergot alkaloids, HMG-CoA reductase inhibitors (e.g., lovastatin), methadone, sirolimus, tacrolimus, warfarin. Carbamazepine, rifabutin, rifampin may decrease concentration/effect. QT interval-prolonging medications (e.g., amiodarone, azithromycin, haloperidol, moxifloxacin) may increase risk of QT interval prolongation, cardiac arrhythmias. **HERBAL:** St. John's wort may significantly decrease concentration. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST, bilirubin, creatinine. May decrease potassium.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 200 mg. **Powder for Oral Suspension:** 200 mg/5 mL. **Tablets:** 50 mg, 200 mg.

ADMINISTRATION/HANDLING

Reconstitution • Reconstitute 200-mg vial with 19 mL Sterile Water for Injection

to provide concentration of 10 mg/mL. Further dilute with 0.9% NaCl or D₅W to provide concentration of 0.5–5 mg/mL.

Rate of administration • Infuse over 1–2 hrs at a rate not to exceed 3 mg/kg/hr. • Do not infuse concomitantly into same line with other drug infusions. • Do not infuse concomitantly even in separate lines with concentrated electrolyte solutions or blood products.

Storage • Store powder for injection at room temperature. • Use reconstituted solution immediately. • Do not use after 24 hrs when refrigerated.

PO

- Give 1 hr before or 1 hr after a meal.
- Do not mix oral suspension with any other medication or flavoring agent.
- Shake suspension for about 10 sec before use.

IV INCOMPATIBILITIES

Tigecycline (Tygacil).

IV COMPATIBILITIES

Anidulafungin, caspofungin, ceftaroline, doripenem.

INDICATIONS/ROUTES/DOSAGE

Invasive Aspergillosis

IV: ADULTS, ELDERLY, ADOLESCENTS 15 YRS AND OLDER: Initially, 6 mg/kg q12h for 2 doses, then 4 mg/kg q12h. **CHILDREN 12–14 YRS WEIGHING 50 KG OR MORE:** 6 mg/kg q12h for 2 doses, then 4 mg/kg q12h. **WEIGHING LESS THAN 50 KG:** 9 mg/kg q12h for 2 doses, then 8 mg/kg q12h. **CHILDREN 2–11 YRS:** 9 mg/kg q12h for 2 doses, then 8 mg/kg q12h.

PO: ADULTS, ELDERLY, ADOLESCENTS 15 YRS AND OLDER: 200–300 mg q12h or 3–4 mg/kg q12h. **CHILDREN 12–14 YRS WEIGHING 50 KG OR MORE:** 200–300 mg q12h. **WEIGHING LESS THAN 50 KG:** 9 mg/kg q12h. **Maximum:** 350 mg/dose. **CHILDREN 2–11 YRS:** 9 mg/kg q12h. **Maximum:** 350 mg/dose.

Candidemia, Other Deep Tissue Candida Infections

IV: ADULTS, ELDERLY, ADOLESCENTS 15 YRS AND OLDER: Initially, 400 mg (6 mg/kg) q12h for 2 doses, then 200 mg (3 mg/kg) IV or PO q12h. **CHILDREN 12–14 YRS WEIGHING 50 KG OR MORE:** 400 mg (6 mg/kg) q12h for 2 doses, then 4 mg/kg q12h. **WEIGHING LESS THAN 50 KG:** 9 mg/kg q12h for 2 doses, then 8 mg/kg q12h. **CHILDREN 2–11 YRS:** 9 mg/kg q12h for 2 doses, then 8 mg/kg q12h. **PO: ADULTS, ELDERLY, ADOLESCENTS 15 YRS AND OLDER:** See IV. **CHILDREN 12–14 YRS WEIGHING 50 KG OR MORE:** 200 mg (3 mg/kg) q12h. **WEIGHING LESS THAN 50 KG:** 9 mg/kg q12h. **Maximum:** 350 mg/dose. **CHILDREN 2–11 YRS:** 9 mg/kg q12h. **Maximum:** 350 mg/dose.

Esophageal Candidiasis

PO: ADULTS, ELDERLY, ADOLESCENTS 15 YRS AND OLDER WEIGHING 40 KG OR MORE: 200 mg q12h. **Maximum:** 600 mg daily. **WEIGHING LESS THAN 40 KG:** 100 mg q12h. **Maximum:** 300 mg daily. **CHILDREN 12–14 YRS WEIGHING 50 KG OR GREATER:** 200 mg q12h. **WEIGHING LESS THAN 50 KG:** 9 mg/kg q12h. **Maximum:** 350 mg/dose. **CHILDREN 2–11 YRS:** 9 mg/kg q12h. **Maximum:** 350 mg/dose.

Scedosporiosis, Fusariosis

IV: ADULTS, EDLERLY: Initially, 6 mg/kg q12h for 2 doses, then 4 mg/kg q12h for at least 7 days. **PO: WEIGHING 40 KG OR MORE:** 200 mg q12h. **WEIGHING LESS THAN 40 KG:** 100 mg q12h.

Dosage in Pts Receiving Phenytoin

IV: Increase maintenance dose to 5 mg/kg q12h.

PO: Increase 200 mg q12h to 400 mg q12h (pts weighing 40 kg or more) or 100 mg q12h to 200 mg q12h (pts weighing less than 40 kg).

Dosage in Pts Receiving Efavirenz

Increase dose to 400 mg q12h and reduce efavirenz to 300 mg/day.

Dosage in Renal Impairment

No dose adjustment. IV dosing not recommended in pts with CrCl 50 mL/min or less.

Dosage in Hepatic Impairment

Mild to moderate impairment: Reduce maintenance dose by 50%. **Severe impairment:** Use only if benefits outweigh risks. Monitor closely for toxicity.

SIDE EFFECTS

Frequent (20%–6%): Abnormal vision, fever, nausea, rash, vomiting. **Occasional (5%–2%):** Headache, chills, hallucinations, photophobia, tachycardia, hypertension.

ADVERSE EFFECTS/TOXIC REACTIONS

Hepatotoxicity (jaundice, hepatitis, hepatic failure), acute renal failure have occurred in severely ill pts.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Obtain baseline serum hepatic/renal function tests; ECG. Correct electrolyte deficiencies prior to initiating treatment. Receive full medication history and screen for interactions. Question medical history as listed in Precautions.

INTERVENTION/EVALUATION

Monitor serum renal function, LFT. Monitor visual function (visual acuity, visual field, color perception) for drug therapy lasting longer than 28 days.

PATIENT/FAMILY TEACHING

- Take at least 1 hr before or 1 hr after a meal.
- Avoid grapefruit products.
- Avoid driving at night.
- Report visual changes (blurred vision, photophobia, yellowing of skin/eyes).
- Avoid performing hazardous tasks if changes in vision occur.
- Avoid direct sunlight.
- Women of childbearing potential should use effective contraception.

vorinostat

vor-in-o-stat
(Zolinza)

Do not confuse vorinostat with Votrient.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Histone deacetylase (HDAC) inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of cutaneous manifestations in pts with cutaneous T-cell lymphoma (CTCL) with progressive, persistent, or recurrent disease, on or following two systemic therapies.

PRECAUTIONS

Contraindications: Hypersensitivity to vorinostat. **Cautions:** History of deep vein thrombosis (DVT), diabetes mellitus, hepatic impairment, preexisting hypokalemia, hypomagnesemia, pts with history of QT prolongation or medications that prolong QT interval. Use caution during perioperative period in pts requiring bowel surgery.

ACTION

Inhibits activity of histone deacetylase enzymes that catalyze removal of acetyl groups of proteins, causing accumulation of acetylated histones. **Therapeutic Effect:** Terminates cell growth, causes apoptosis.

PHARMACOKINETICS

Protein binding: 71%. Metabolized to inactive metabolites. Excreted in urine. **Half-life:** 2 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase effect of **warfarin**. **Valproic acid** increases risk of GI bleeding, thrombocytopenia. **QT interval–prolonging medications** (e.g., **amiodarone**, **azithromycin**, **haloperidol**, **moxifloxacin**) may increase risk of QT interval prolongation, cardiac arrhythmias. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum calcium, potassium, sodium, phosphate, platelet count. May increase serum glucose, creatinine; urine protein.

AVAILABILITY (Rx)

 **Capsules:** 100 mg.

ADMINISTRATION/HANDLING

PO

- Do not break, crush, dissolve, or divide capsules.
- Give with food.
- Maintain adequate hydration during treatment.

INDICATIONS/ROUTES/DOSAGE

Cutaneous T-Cell Lymphoma (CTCL)

PO: ADULTS, ELDERLY: 400 mg once daily with food. Continue until disease progression or unacceptable toxicity.

Dose Modification

Intolerance or toxicity: Reduce dose to 300 mg once daily. **Unable to tolerate daily dose:** May further reduce to 300 mg once daily for 5 consecutive days per wk (5 out of 7 days).

Dosage in Renal Impairment

Use caution.

Dosage in Hepatic Impairment

Mild to moderate impairment: 300 mg once daily. **Severe impairment:** 100–200 mg once daily.

SIDE EFFECTS

Frequent (50%–24%): Fatigue, diarrhea, nausea, altered taste, anorexia. **Occasional (21%–11%):** Weight decrease, muscle spasms, alopecia, dry mouth,

chills, vomiting, constipation, dizziness, peripheral edema, headache, pruritus, cough, fever.

ADVERSE EFFECTS/TOXIC REACTIONS

Thrombocytopenia occurs in 25% of pts, anemia in 15%. Pulmonary embolism occurs in 4% of pts. Deep vein thrombosis (DVT) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline ECG. Baseline PT, INR, CBC, serum chemistry tests, esp. serum potassium, calcium, magnesium, glucose, creatinine should be obtained prior to therapy and every 2 wks during first 2 mos of therapy and monthly thereafter. Inform women of childbearing potential of risk to fetus if pregnancy occurs.

INTERVENTION/EVALUATION

Monitor CBC, serum electrolytes; PT/INR q2wks for 2 mos, then monthly. Monitor signs/symptoms of DVT. Encourage fluid intake, approximately 2 L/day input. Assess for evidence of dehydration. Provide antiemetics to control nausea/vomiting. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

- Drink at least 2 L/day of fluids to prevent dehydration.
- Report persistent vomiting, diarrhea.
- Report shortness of breath, pain in any extremity.

vortioxetine

vor-tye-ox-e-teen
(Trintellix)

BLACK BOX ALERT Antidepressants have an increased risk of suicidal ideation and behavior in children, adolescents, and young adults. Monitor closely for worsening or emergence of suicidal thoughts and behaviors.

Do not confuse vortioxetine

with **FLUoxetine**, **PARoxetine**, or **venlafaxine**.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective serotonin reuptake inhibitor (SSRI).

CLINICAL: Antidepressant.

USES

Treatment of major depressive disorder.

PRECAUTIONS

Contraindications: Hypersensitivity to vortioxetine. Use of monoamine oxidase inhibitors (MAOIs) intended to treat psychiatric disorders concurrently or within 21 days of stopping vortioxetine; do not use vortioxetine within 14 days of stopping an MAOI. Initiation of vortioxetine in pts receiving linezolid or intravenous methylene blue. **Cautions:** History of angioedema, dehydration, hyponatremia, pts at risk for bleeding, hepatic impairment, seizure disorder, elderly pts, pts at high risk of suicide, family history of bipolar disorder, mania, hypomania.

ACTION

Blocks reuptake of neurotransmitter serotonin at CNS presynaptic membranes, increasing availability at postsynaptic receptor sites. **Therapeutic Effect:** Relieves depression.

PHARMACOKINETICS

Readily absorbed following PO administration. Metabolized in liver, primarily through oxidation. Protein binding: 98%. Peak plasma concentration: 7–11 hrs. Steady state reached within 2 wks. Excreted in urine (59%), feces (26%).

Half-life: 66 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm when administered in third trimester. Unknown if distributed in breast milk. Exposed neonates are at increased risk of apnea, cyanosis, prolonged hospitalization, pulmonary hypertension,

seizures, serotonin syndrome. **Children:** Safety and efficacy not established in pediatric population. **Elderly:** May have increased risk of dehydration, hyponatremia.

INTERACTIONS

DRUG: Strong CYP inducers (e.g., **carbamazepine**, **phenytoin**, **rifampin**) may decrease concentration/effects. Strong CYP2D6 inhibitors (e.g., **buPROPion**, **FLUoxetine**, **PARoxetine**) may increase concentration/effect. **MAOIs** (e.g., **phenelzine**, **selegiline**) contraindicated; may cause malignant hyperthermia, hypertensive crisis, hyperreflexia, seizures, serotonin syndrome. **Alcohol** may increase adverse effects. **Serotonergic drugs** (e.g., **busPIRone**, **linezolid**, **lithium**, **traMADol**) may increase risk of serotonin syndrome. **Anticoagulants**, **antiplatelets**, **NSAIDs** may increase risk of bleeding. **HERBAL:** **St. John's wort** may decrease concentration/effect. **Herbals with anticoagulant/antiplatelet properties** (e.g., **garlic**, **ginger**, **ginkgo biloba**), **glucosamine** may increase risk of bleeding. **FOOD:** None known. **LAB VALUES:** May decrease serum sodium.

AVAILABILITY (Rx)

Tablets: 5 mg, 10 mg, 20 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food. May administer with milk or food if GI upset occurs.

INDICATIONS/ROUTES/DOSAGE

Major Depressive Disorder

PO: ADULTS/ELDERLY: Initially, 10 mg once daily. May increase to 20 mg as tolerated. **Maintenance:** 5–20 mg once daily.

Dose Modification

Concomitant use of strong CYP2D6 inhibitors: Reduce dose by half of intended therapy. **Maximum:** 10 mg once daily. **Concomitant use of strong CYP**

inducers: If coadministered for more than 14 days, consider increasing vortioxetine dose. **Maximum:** Do not exceed more than 3 times original dose. **CYP2D6 poor metabolizers:** **Maximum:** 10 mg once daily.

Discontinuation

Gradually taper dose to minimize incidence of withdrawal symptoms and to allow detection of re-emerging symptoms.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment. **Severe impairment:** Not recommended.

SIDE EFFECTS

Frequent (32%–22%): Nausea, sexual dysfunction. **Occasional (10%–3%):** Diarrhea, dizziness, dry mouth, constipation, vomiting, flatulence, abnormal dreams, pruritus.

ADVERSE EFFECTS/TOXIC REACTIONS

Life-threatening serotonin syndrome may include mental status changes (agitation, hallucinations, delirium, coma), autonomic instability (tachycardia, labile blood pressure, dizziness, sweating, flushing, hyperthermia), neuromuscular symptoms (tremor, rigidity, myoclonus [localized muscle twitching], hyperactive reflexes, incoordination), seizures, GI symptoms (nausea, vomiting, diarrhea). May increase risk of bleeding events such as ecchymosis, hematoma, epistaxis (nosebleed), petechiae. Mania/hypomania may indicate baseline bipolar disorder. Syndrome of inappropriate antidiuretic hormone (SIADH), also known as water intoxication or dilutional hyponatremia, may induce seizures, coma, or death. Angioedema, dyspnea, rash may indicate allergic reaction. May increase risk of suicidal ideation and behavior once treatment is therapeutic. May alter sexual drive, ease of arousal, ease of reaching orgasm, or cause erectile dysfunction in men or decreased lubrication in women.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline electrolytes. Note serum sodium level. Assess appearance, behavior, speech pattern, level of interest, mood. Screen for history of bipolar disorder, bleeding events, SIADH, prior allergic reactions to drug class. Receive full medication history including herbal products.

INTERVENTION/EVALUATION

Monitor serum sodium levels. Screen for signs of SIADH (confusion, seizures). Offer emotional support. Assess mental status for depression, suicidal ideation (esp. during first few mos of therapy or with dosage change), anxiety, social function. Monitor daily pattern of bowel activity, stool consistency. Assist with ambulation if dizziness occurs. Monitor pt for symptoms of serotonin syndrome, mania/hypomania. Offer antiemetic for nausea, vomiting. Monitor for allergic reactions.

PATIENT/FAMILY TEACHING

- Dry mouth may be relieved with sugarless gum, sips of water.
- Report neurologic changes: confusion, excessive talking, hallucinations, headache, hyperactivity, insomnia, racing thoughts, seizure-like activity, tremors; sexual dysfunction; fever; or any type of allergic reaction.
- Avoid tasks that require alertness, motor skills until response to drug is established (may cause dizziness, drowsiness).
- Take with food if nausea occurs.
- Report pregnancy.
- Avoid alcohol.
- Do not take OTC medications such as aspirin or ibuprofen without consulting physician.
- Immediately report thoughts of suicide, self-destructive behavior, or violence.
- Sexual dysfunction such as inability to reach orgasm, difficulty maintaining an erection, or lack of sexual drive may occur.
- Do not suddenly stop treatment. Dose must be gradually reduced over time.

warfarin

**TOP
100** **HIGH
ALERT**

war-far-in

(Coumadin, Jantoven)

BLACK BOX ALERT May cause major or fatal bleeding. Risk factors include history of GI bleeding, hypertension, cerebrovascular disease, heart disease, malignancy, trauma, anemia, renal insufficiency, age 65 yrs and older, high anticoagulation factor (INR greater than 4). Consider cardiac/hepatic function, age, nutritional status, concurrent medications, risk of bleeding when dosing warfarin. Genetic variations have been identified as factors associated with dosage and bleeding risk. Genotyping tests are available.

Do not confuse Coumadin with Kemadrin, or Jantoven with Janumet or Januvia.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Vitamin K antagonist. **CLINICAL:** Anticoagulant.

USES

Prophylaxis, treatment of thromboembolic disorders and embolic complications arising from atrial fibrillation or valve replacement. Risk reduction of systemic embolism following MI (e.g., recurrent MI, stroke). **OFF-LABEL:** Adjunct treatment in transient ischemic attacks.

PRECAUTIONS

Contraindications: Hypersensitivity to warfarin. Hemorrhagic tendencies (e.g., cerebral aneurysms, bleeding from GI tract), recent or potential surgery of eye or CNS, neurosurgical procedures, open wounds, severe uncontrolled or malignant hypertension, spinal puncture procedures, uncontrolled bleeding, ulcers, unreliable or noncompliant pts, unsupervised pts, blood dyscrasias, pericarditis or pericardial effusion, pregnancy (except in women with mechanical heart valves at high risk for thromboembolism), bacterial endocarditis, threatened abortion. Major regional

lumbar block anesthesia or traumatic surgery, eclampsia/preeclampsia. **Cautions:** Active tuberculosis, acute infection, diabetes, heparin-induced thrombocytopenia and deep vein thrombosis, pts at risk for hemorrhage, moderate to severe renal impairment, moderate to severe hypertension, thyroid disease, polycythemia vera, vasculitis, open wound, menstruating and postpartum women, indwelling catheters, trauma, prolonged dietary deficiencies, disruption of GI normal flora, history of peptic ulcer disease, protein C deficiency, elderly.

ACTION

Interferes with hepatic synthesis of vitamin K–dependent clotting factors, resulting in depletion of coagulation factors II, VII, IX, X. **Therapeutic Effect:** Prevents further extension of formed existing clot; prevents new clot formation, secondary thromboembolic complications.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1.5–3 days	5–7 days	2–5 days

Well absorbed from GI tract. Protein binding: 99%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 20–60 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in pregnancy (fetal, neonatal hemorrhage, intrauterine death). Crosses placenta; is not distributed in breast milk. **Children:** More susceptible to effect. **Elderly:** Increased risk of hemorrhage; lower dosage recommended.

INTERACTIONS

DRUG: Amiodarone, azole antifungals (e.g., fluconazole), cimetidine, disulfiram, sulfamethoxazole-trimethoprim, levothyroxine, metroNIDAZOLE, NSAIDs (e.g., ibuprofen, ketorolac, naproxen), omeprazole, platelet aggregation inhibitors (e.g., clopidogrel), salicylates (e.g., aspirin), throm-

bolytic agents (e.g., alteplase), thyroid hormones (e.g., levothyroxine), may increase effect. **CYP3A inducers** (e.g., carbamazepine, phenytoin, rifampin), nafcillin, oral contraceptives, sucralose, vitamin K may decrease effects. **HERBAL:** Herbals with anticoagulant/antiplatelet properties (e.g., garlic, ginger, ginkgo biloba), fenugreek, glucosamine may increase risk of bleeding. **FOOD:** Foods rich in vitamin K (e.g., spinach, brussels sprouts, meat) may decrease effect. **Cranberry juice** may increase effect. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Tablets: (*Coumadin, Jantoven*): 1 mg, 2 mg, 2.5 mg, 3 mg, 4 mg, 5 mg, 6 mg, 7.5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food. Give with food if GI upset occurs.
- Give at same time each day.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Initial dosing must be individualized.

Anticoagulant

PO: **ADULTS, ELDERLY:** Initially, 2–5 mg/daily for 2 days or 5–10 mg daily for 1–2 days, adjusting the dose based on INR results. Usual maintenance dose: 2–10 mg/day, but may vary outside these guidelines. **CHILDREN:** Initially, 0.2 mg/kg/day. **Maximum:** 10 mg. **Maintenance:** Adjust based on INR.

Dosage in Renal/Hepatic Impairment

No dose adjustment. Closely monitor INR.

SIDE EFFECTS

Occasional: GI distress (nausea, anorexia, abdominal cramps, diarrhea). **Rare:** Hypersensitivity reaction (dermatitis, urticaria), esp. in those sensitive to aspirin.

ADVERSE EFFECTS/TOXIC REACTIONS

Bleeding complications ranging from local ecchymoses to major hemorrhage (intracranial hemorrhage, GI/GU/nasal/oral/rectal bleeding) may occur. Hepatotoxicity, blood dyscrasias, necrosis, vasculitis, local thrombosis occur rarely. **Antidote:** Vitamin K. Amount based on INR, significance of bleeding. Range: 2.5–10 mg given orally or slow IV infusion (see Appendix J for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Cross-check dose with co-worker. Obtain CBC, PT/INR before administration and daily following therapy initiation. When stabilized, follow with INR determination q4–6wks. Obtain genotyping prior to initiating therapy if available. Screen for major active bleeding. Question recent history of bleeding, recent trauma, surgical procedures, epidural anesthesia.

INTERVENTION/EVALUATION

Monitor INR diligently. Assess CBC for anemia; urine/stool for occult blood. Be alert to complaints of abdominal/back pain, severe headache, confusion, seizures, hemiparesis, aphasia (may be sign of hemorrhage). Decrease in B/P, increase in pulse rate may be sign of hemorrhage. Question for increase in amount of menstrual discharge. Assess peripheral pulses; skin for ecchymoses, petechiae. Check for excessive bleeding from minor cuts, scratches. Assess gums for erythema, gingival bleeding.

PATIENT/FAMILY TEACHING

- Take medication at same time each day.
- Blood levels will be monitored routinely.
- Do not take, discontinue any other medication except on advice of physician.
- Avoid alcohol, aspirin, drastic dietary changes.
- Consult with physician before surgery, dental work.
- Urine may become red-orange.
- Falls, subtle

injuries, esp. head or abdominal trauma, can be life-threatening. • Report bleeding, bruising, red or brown urine, black stools. • Use electric razor, soft toothbrush to prevent bleeding. • Report coffee-ground vomitus, blood-tinged mucus from cough. • Do not use any OTC

medication without physician approval (may interfere with platelet aggregation). • Seek immediate medical attention for stroke-like symptoms (confusion, difficulty speaking, headache, one-sided weakness); bloody stool or urine.

zafirlukast

za-fir-loo-kast
(Accolate)

Do not confuse Accolate with Accupril, Accutane, or Aclovate.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Leukotriene receptor antagonist. **CLINICAL:** Antiasthma.

USES

Prophylaxis, chronic treatment of bronchial asthma in adults and children 5 yrs and older. **OFF-LABEL:** Chronic urticaria.

PRECAUTIONS

Contraindications: Hypersensitivity to zafirlukast. Hepatic impairment. **Cautions:** Elderly pts. Not approved for acute asthma attacks, status asthmaticus.

ACTION

Competitive antagonist of leukotriene receptor. Leukotriene production and receptor occupation are associated with pathophysiology of asthma. **Therapeutic Effect:** Reduces airway edema, smooth muscle constriction; alters cellular activity associated with inflammatory process. Reduces signs/symptoms of asthma.

PHARMACOKINETICS

Rapidly absorbed after PO administration (food reduces absorption). Protein binding: 99%. Metabolized in liver. Primarily excreted in feces. Unknown if removed by hemodialysis. **Half-life:** 10 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug is distributed in breast milk. Do not administer to breastfeeding women. **Children:** Safety and efficacy not established in pts younger than 5 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Erythromycin, theophylline may decrease concentration/effect. May increase effects of warfarin (increases INR). **HERBAL:** None significant. **FOOD:** Food decreases bioavailability by 40%. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 10 mg, 20 mg.

ADMINISTRATION/HANDLING

PO

- Give 1 hr before or 2 hrs after meals.

INDICATIONS/ROUTES/DOSAGE

Bronchial Asthma

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 20 mg twice daily. **CHILDREN 5–11 YRS:** 10 mg twice daily.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Contraindicated.

SIDE EFFECTS

Frequent (13%): Headache. **Occasional (3%):** Nausea, diarrhea. **Rare (less than 3%):** Generalized pain, asthenia, myalgia, fever, dyspepsia, vomiting, dizziness.

ADVERSE EFFECTS/TOXIC REACTIONS

Concurrent administration of inhaled corticosteroids increases risk of upper respiratory tract infection.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain medication history. Assess LFT. Auscultate lung sounds.

INTERVENTION/EVALUATION

Monitor rate, depth, rhythm, type of respiration; quality, rate of pulse. Assess lung sounds for rhonchi, wheezing, rales. Monitor LFT.

PATIENT/FAMILY TEACHING

- Increase fluid intake (decreases lung secretion viscosity).
- Take as prescribed, even during symptom-free periods.
- Do not use for acute asthma episodes.
- Do not alter, stop other asthma medications.
- Do not breastfeed.
- Report nausea, jaundice, abdominal pain, flu-like symptoms, worsening of asthma.

zanamivir

zan-**am**-i-veer
(Relenza Diskhaler)

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Neuraminidase inhibitor. **CLINICAL:** Antiviral, anti-influenza.

USES

Treatment of uncomplicated acute illness due to influenza virus A and B in adults, children 7 yrs and older who have been symptomatic for less than 2 days. Prevention of influenza A and B in adults and children 5 yrs and older.

PRECAUTIONS

Contraindications: Hypersensitivity to zanamivir. **Cautions:** Not recommended in respiratory disease (e.g., COPD, asthma), renal/hepatic impairment.

ACTION

Inhibits influenza virus enzyme neuraminidase, essential for viral replication.

Therapeutic Effect: Prevents viral release from infected cells.

PHARMACOKINETICS

Systemically absorbed, approximately 4%–17%. Protein binding: less than 10%. Not metabolized. Excreted unchanged in urine. **Half-life:** 2.5–5.1 hrs.

⌚ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established in pts younger than 7 yrs (treatment) or younger than 5 yrs (prevention). **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease levels/effect of influenza virus vaccine. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Powder for Inhalation: 5 mg/blister.

ADMINISTRATION/HANDLING**Inhalation**

- Instruct pt to use Diskhaler device provided, exhale completely; then, holding mouthpiece 1 inch away from lips, inhale and hold breath as long as possible before exhaling.
- Rinse mouth with water immediately after inhalation (prevents mouth/throat dryness).
- Store at room temperature.

INDICATIONS/ROUTES/DOSAGE**Treatment of Influenza Virus**

Inhalation: ADULTS, ELDERLY, CHILDREN 7 YRS AND OLDER: 2 inhalations (one 5-mg blister per inhalation for total dose of 10 mg) twice daily (approximately 12 hrs apart) for 5 days.

Prevention of Influenza Virus

Inhalation: ADULTS, ELDERLY, CHILDREN 5 YRS AND OLDER: 2 inhalations (10 mg) once daily for duration of exposure period (7 days for household exposure, 28 days for community exposure).

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (3%–2%): Diarrhea, sinusitis, nausea, bronchitis, cough, dizziness,

headache. **Rare (less than 1.5%):** Malaise, fatigue, fever, abdominal pain, myalgia, arthralgia, urticaria.

ADVERSE EFFECTS/TOXIC REACTIONS

May produce neutropenia. Bronchospasm may occur in those with history of COPD, bronchial asthma. Neuropsychiatric events (e.g., confusion, seizures, hallucinations) have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pts requiring an inhaled bronchodilator at same time as zanamivir should use the bronchodilator before zanamivir administration.

INTERVENTION/EVALUATION

Provide assistance if dizziness occurs. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

- Follow manufacturer guidelines for use of delivery device.
- Avoid contact with those who are at high risk for influenza.
- Continue treatment for full 5-day course.
- Doses should be evenly spaced.
- In pts with respiratory disease, an inhaled bronchodilator should be readily available.

zidovudine

zye-**doe**-vue-deen
(Retrovir)

BLACK BOX ALERT ■ Neutropenia, severe anemia may occur. Lactic acidosis, severe hepatomegaly with steatosis (fatty liver), including fatalities, have occurred. Symptomatic myopathy, myositis associated with prolonged use.

Do not confuse Retrovir with acyclovir or ritonavir.

FIXED-COMBINATION(S)

Combivir: zidovudine/lamivudine (an antiviral): 300 mg/150 mg. **Trizivir:** zidovudine/lamivudine/abacavir (an antiviral): 300 mg/150 mg/300 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Nucleoside reverse transcriptase inhibitors.
CLINICAL: Antiretroviral.

USES

Treatment of HIV infection in combination with at least two other antiretroviral agents. Prevention of maternal/fetal HIV transmission. **OFF-LABEL:** Prophylaxis in health care workers at risk for acquiring HIV after occupational exposure (part of multidrug regimen).

PRECAUTIONS

Contraindications: Potentially life-threatening allergic reactions to zidovudine or its components. **Cautions:** Bone marrow compromise, renal/hepatic dysfunction. Combination with interferon with or without ribavirin in HIV/hepatitis C virus (HCV) co-infection.

ACTION

Interferes with viral RNA-dependent DNA polymerase, an enzyme necessary for viral HIV replication. **Therapeutic Effect:** Slows HIV replication, reducing progression of HIV infection.

PHARMACOKINETICS

Rapidly, completely absorbed from GI tract. Protein binding: 25%–38%. Metabolized in liver. Crosses blood-brain barrier and is widely distributed, including to CSF. Primarily excreted in urine. Minimal removal by hemodialysis. **Half-life:** 0.5–3 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed

Z

in breast milk. Unknown if fetal harm or effects on fertility can occur. **Children:** No age-related precautions noted. **Elderly:** Information not available.

INTERACTIONS

DRUG: May decrease therapeutic effect of cladribine. **DOXOrubicin, ganciclovir, interferons, valganciclovir** may increase adverse effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase mean corpuscular volume (MCV).

AVAILABILITY (Rx)

Capsules (Retrovir): 100 mg. **Injection Solution (Retrovir):** 10 mg/mL. **Syrup (Retrovir):** 50 mg/5 mL. **Tablets:** 300 mg.

ADMINISTRATION/HANDLING

Reconstitution • Must dilute before administration. • Remove calculated dose from vial and add to D₅W to provide concentration no greater than 4 mg/mL. **Rate of administration** • Infuse over 1 hr. May infuse over 30 min in neonates. **Storage** • After dilution, IV solution is stable for 24 hrs at room temperature; 48 hrs if refrigerated. • Use within 8 hrs if stored at room temperature or 24 hrs if refrigerated to minimize potential for microbial-contaminated solution. • Do not use if solution is discolored or precipitate forms.

PO

• Keep capsules in cool, dry place. Protect from light. • May administer without regard to food. • Space doses evenly around the clock. • Pt should maintain an upright position when given medication to prevent esophageal ulceration.

IV COMPATIBILITIES

Dexamethasone (Decadron), DOBUTamine (Dobutrex), DOPamine (Intropin),

heparin, LORazepam (Ativan), morphine, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

HIV Infection

PO: ADULTS, ELDERLY: 300 mg q12h. **CHILDREN 4 WKS TO 18 YRS WEIGHING 30 KG OR MORE:** 300 mg q12h. **WEIGHING 9–29 KG:** 9 mg/kg q12h. **WEIGHING 4–8 KG:** 12 mg/kg q12h. **PREMATURE NEONATES, GA 35 WKS OR MORE:** 4 mg/kg q12h, increase to 12 mg/kg q12h after 4 wks of age. **GA 30–34 WKS:** 2 mg/kg q12h for 2 wks, then 3 mg/kg q12h, then 12 mg/kg q12h after 6–8 wks. **GA LESS THAN 30 WKS:** 2 mg/kg q12h, then 3 mg/kg q12h at 4 wks of age, then 12 mg/kg q12h after 8–10 wks of age.

IV: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 1 mg/kg/dose q4h around the clock. **CHILDREN 12 YRS AND YOUNGER, FULL-TERM NEONATES:** 3 mg/kg/dose q12h. **OLDER THAN 4 WKS:** Increase to 9 mg/kg/dose q12h. **PREMATURE NEONATES:** 1.5–2.3 mg/kg/dose q12h based on gestation at birth. **6–10 WKS:** Increase to 9 mg/kg/dose q12h.

Prevention of Maternal/Fetal HIV Transmission

Note: Zidovudine should be given IV near delivery regardless of antepartum regimen or mode of delivery in women with HIV RNA level greater than 1,000 copies/mL (or unknown status). Other antiretrovirals should be continued orally. Zidovudine IV is not required in pts receiving HIV therapy with HIV RNA level less than 1,000 copies/mL near delivery.

IV: DURING LABOR AND DELIVERY: 2 mg/kg loading dose, then IV infusion of 1 mg/kg/hr until delivery. For scheduled cesarean section, begin IV zidovudine 3 hrs before surgery. **NEONATAL:** Begin 6–12 hrs after birth and continue for first 6 wks of life. Use IV route only until oral therapy can be administered.

PO: FULL-TERM INFANTS: 4 mg/kg/dose q12h (IV: 3 mg/kg/dose q12h).

INFANTS 30–34 WKS' GESTATION: 2 mg/kg/dose q12h; increase to 3 mg/kg/dose at 2 wks of age (IV: 1.5 mg/kg/dose q12h; increase to 2.3 mg/kg/dose q12h at 2 wks of age). **INFANTS LESS THAN 30 WKS' GESTATION:** 2 mg/kg/dose q12h. (IV: 1.5 mg/kg/dose q12h.)

Dosage in Renal Impairment

ADULTS, ELDERLY: CrCl less than 15 mL/min, including hemodialysis or peritoneal dialysis: **PO:** 100 mg q8h or 300 mg once daily. **IV:** 1 mg/kg q6–8hr. **INFANTS OLDER THAN 6 WKS, CHILDREN, ADOLESCENTS:** GFR 10 mL/min/1.73m² or greater: No adjustment. **GFR less than 10 mL/min/1.73m²:** Administer 50% of dose q8h.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Expected (46%–42%): Nausea, headache. **Frequent (20%–16%):** Abdominal pain, asthenia, rash, fever, acne. **Occasional (12%–8%):** Diarrhea, anorexia, malaise, myalgia, drowsiness. **Rare (6%–5%):** Dizziness, paresthesia, vomiting, insomnia, dyspnea, altered taste.

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia (occurring most commonly after 4–6 wks of therapy), granulocytopenia are particularly significant in pts with pretherapy low baselines. Neurotoxicity (ataxia, fatigue, lethargy, nystagmus, seizures) may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Avoid drugs that are nephrotoxic, cytotoxic, myelosuppressive; may increase risk of toxicity. Obtain specimens for viral diagnostic tests before starting therapy (therapy may begin before results are obtained). Check hematology reports for accurate baseline.

INTERVENTION/EVALUATION

Monitor CBC, reticulocyte count, CD4 cell count, HIV RNA plasma levels. Check for bleeding. Assess for headache, dizziness. Monitor daily pattern of bowel activity, stool consistency. Evaluate skin for acne, rash. Be alert to development of opportunistic infections (fever, chills, cough, myalgia). Monitor I&O, serum renal function, LFT. Check for insomnia.

PATIENT/FAMILY TEACHING

- Doses should be evenly spaced around the clock.
- Zidovudine is not a cure for HIV infection, nor does it reduce risk of transmission to others. Acts to reduce symptoms and slows or arrests progress of disease.
- Do not take any medications without physician's approval.
- Bleeding from gums, nose, rectum may occur and should be reported to physician immediately.
- Blood counts are essential because of bleeding potential.
- Dental work should be done before therapy or after blood counts return to normal (often wks after therapy has stopped).
- Inform physician if muscle weakness, difficulty breathing, headache, inability to sleep, unusual bleeding, rash, signs of infection occur.

ziprasidone

zi-**pras**-i-done
(Geodon, Zeldox )

BLACK BOX ALERT Increased risk of mortality in elderly pts with dementia-related psychosis, mainly due to pneumonia, HF.

Do not confuse ziprasidone with traZODone.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Second-generation (atypical) antipsychotic.
CLINICAL: Antipsychotic.

USES

Treatment of schizophrenia, acute agitation in pts with schizophrenia. Treatment of acute mania or mixed episodes associated with bipolar disorder with or without psychosis. Maintenance treatment of bipolar disorder as adjunct to lithium or valproic acid. **OFF-LABEL:** Major depressive disorder (adjunct to antidepressants).

PRECAUTIONS

Contraindications: Hypersensitivity to ziprasidone. Conditions associated with risk of prolonged QT interval, congenital long QT syndrome, concurrent use of other QT-prolongation medications (e.g., amiodarone, moxifloxacin, tacrolimus, thioridazine). Uncompensated HF. Recent MI. **Cautions:** Pts with bradycardia, hypokalemia, hypomagnesemia may be at greater risk for torsades de pointes. History of MI or unstable heart disease, seizures, cardiac arrhythmias, disorders in which CNS depression is a feature; pts at risk for aspiration pneumonia, hypotension, suicide; elderly, diabetes, hepatic impairment, Parkinson's disease, pts with breast cancer or other prolactin-dependent tumors.

ACTION

Exact mechanism unknown. Antagonizes alpha-adrenergic, DOPamine, histamine, serotonin receptors; inhibits reuptake of serotonin, norepinephrine. **Therapeutic Effect:** Diminishes symptoms of schizophrenia, depression.

PHARMACOKINETICS

Well absorbed after PO administration. Food increases bioavailability. Protein binding: 99%. Metabolized in liver. Excreted in feces. Not removed by hemodialysis. **Half-life:** **PO:** 7 hrs; **IM:** 2–5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed

in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted. Use caution.

INTERACTIONS

DRUG: Alcohol, other CNS depressants (e.g., LORazepam, morphine, zolpidem) may increase CNS depression. **CarBAMazepine** may decrease concentration. **QT interval-prolonging medications** (e.g., amiodarone, azithromycin, haloperidol, moxifloxacin) may increase risk of QT interval prolongation, cardiac arrhythmias. **HERBAL:** Herbs with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **FOOD:** All foods enhance bioavailability. **LAB VALUES:** May prolong QT interval. May increase serum glucose, prolactin levels.

AVAILABILITY (Rx)

Capsules: 20 mg, 40 mg, 60 mg, 80 mg. **Injection, Powder for Reconstitution:** 20 mg.

ADMINISTRATION/HANDLING**IM**

- Store vials at room temperature; protect from light.
- Reconstitute each vial with 1.2 mL Sterile Water for Injection to provide concentration of 20 mg/mL.
- Reconstituted solution stable for 24 hrs at room temperature or 7 days if refrigerated.

PO

- Give with food containing at least 500 calories (increases bioavailability).

INDICATIONS/ROUTES/DOSAGE

⚠ALERT⚠ Dosage greater than 80 mg twice daily is not recommended in most pts. **To discontinue therapy:** Gradually discontinue to avoid withdrawal symptoms, minimize risk of relapses.

Schizophrenia

PO: ADULTS, ELDERLY: Initially, 20 mg twice daily with food. Titrate at intervals

of no less than 2 days based on response and tolerability. **Maintenance:** 40–80 mg twice daily.

Acute Agitation (Schizophrenia)

IM: ADULTS, ELDERLY: 10 mg q2h or 20 mg q4h. **Maximum:** 40 mg/day. Switch to oral therapy as soon as possible.

Bipolar Disorder (Acute and Maintenance as Adjunct to Lithium or Valproate)

PO: ADULTS, ELDERLY (Acute): Initially, 40 mg twice daily. May increase to 60–80 mg twice daily on second day of treatment. **Maintenance:** 40–80 mg twice daily.

Dosage in Renal Impairment

Oral: No dose adjustment. **IM:** Use caution.

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (30%–16%): Headache, drowsiness, dizziness. **Occasional:** Rash, orthostatic hypotension, weight gain, restlessness, constipation, dyspepsia.

Rare: Hyperglycemia, priapism.

ADVERSE EFFECTS/TOXIC REACTIONS

Prolongation of QT interval (as seen on ECG) may produce torsades de pointes, a form of ventricular tachycardia. Pts with bradycardia, hypokalemia, hypomagnesemia are at increased risk.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess pt's behavior, appearance, emotional status, response to environment, speech pattern, thought content. ECG should be obtained to assess for QT prolongation before instituting medication. Blood chemistry for serum magnesium, potassium should be obtained before beginning therapy and routinely thereafter.

INTERVENTION/EVALUATION

Assess for therapeutic response (greater interest in surroundings, improved self-care, increased ability to concentrate, relaxed facial expression). Monitor weight.

PATIENT/FAMILY TEACHING

- Avoid tasks that require alertness, motor skills until response to drug is established.
- Avoid alcohol.
- Report chest pain, shortness of breathing, irregular heartbeats, fainting, palpitations.

ziv-aflibercept

ziv-a-**flib**-er-sept
(Zaltrap)

BLACK BOX ALERT Severe, and sometimes fatal, hemorrhagic events including GI hemorrhage were reported in pts receiving concomitant FOLFIRI therapy. Do not initiate in pts with severe hemorrhage. Fatal GI perforation may occur. Discontinue treatment in pts with impaired wound healing. Withhold treatment for at least 4 wks prior to elective surgery. Do not resume treatment for at least 4 wks after major surgery until wound is fully healed.

Do not confuse ziv-aflibercept with abatacept, Aricept, or etanercept.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Vascular endothelial growth factor (VEGF) inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of metastatic colorectal cancer (mCRC) (in combination with 5-fluorouracil, leucovorin, irinotecan [FOLFIRI]) in pts resistant to or has progressed following an oxaliplatin-containing regimen.

PRECAUTIONS

Contraindications: Hypersensitivity to ziv-aflibercept. **Cautions:** Baseline hematologic cytopenias, (neutropenia, leukopenia, thrombocytopenia), conditions predisposing to infection (e.g., diabetes, renal failure, immunocompromised pts, open wounds), pts at risk for bleeding (e.g., history of intracranial/GI/GU bleeding, coagulation disorders, recent trauma; concomitant use of anticoagulants, antiplatelet medication, NSAIDs), hypertension, elderly pts, history of arterial/venous thrombosis (e.g., CVA, DVT, MI, pulmonary embolism), GI perforation or hemorrhage.

ACTION

A recombinant fusion protein, comprising portions of binding domains of vascular endothelial growth factor (VEGF) receptors. Acts as a decoy receptor that prevents VEGF receptor binding/activation. **Therapeutic Effect:** Produces anti-angiogenesis/tumor regression.

PHARMACOKINETICS

Half-life: 6 days (range: 4–7 days).

 **LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm. Females of reproductive potential and males should use effective contraception during therapy and for at least 3 mos after discontinuation. Unknown if distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** May have increased risk of side effects, esp. diarrhea, dehydration, dizziness, weakness, weight loss.

INTERACTIONS

DRUG: May decrease therapeutic effect of BCG (intravesical). **Anticoagulants** (e.g., heparin, warfarin), **antiplatelets** (e.g., aspirin, clopidogrel), **NSAIDs** (e.g., diclofenac, ibuprofen, naproxen), **thrombolytic therapy** (e.g., alteplase) may increase risk of bleeding in pts with treatment-induced thrombocytopenia. **Cladribine** may increase myelosuppressive effect. **HERBAL:** None significant.

FOOD: None known. **LAB VALUES:** May increase serum ALT, AST, serum creatinine, urine protein. May decrease leukocytes, neutrophils, platelets.

AVAILABILITY (Rx)

Injection Solution: 100 mg/4 mL (25mg/mL), 200 mg/8mL (25 mg/mL).

ADMINISTRATION/HANDLING

Preparation • Visually inspect for particulate matter or discoloration. Solution should appear clear, colorless to pale yellow in color. Discard if solution is cloudy, discolored, or if visible particles are observed. • Withdraw proper dose from vial and dilute in 0.9% NaCl or D₅W to a final concentration of 0.6–8 mg/mL. Use polyvinyl chloride (PVC) infusion bags containing bis (2-ethylhexyl) phthalate (DEHP) or polyolefin. • Mix by gentle inversion. • Do not shake or agitate. • Discard unused portions.

Rate of administration • Infuse over 60 min via dedicated IV line using an in-line 0.2-micron polyethersulfone filter and an infusion set made of one of the following: polypropylene, polyethylene-lined PVC, polyurethane, DEHP-free PVC-containing trioctyl-trimellitate (TOTM), PVC containing DEHP. • Do not use in-line filters made of polyvinylidene fluoride (PVDF) or nylon. • Do not administer as IV push or bolus.

Storage • Refrigerate unused vials. • Do not shake. • Protect from light. • May refrigerate diluted solution for up to 24 hrs or at controlled room temperature for up to 8 hrs.

 **IV INCOMPATIBILITIES**

Do not infuse with other medications or solutions.

INDICATIONS/ROUTES/DOSAGE

Note: Delay treatment until ANC 1,500 cells/mm³ or greater.

Metastatic Colorectal Cancer

IV: ADULTS, ELDERLY: 4 mg/kg q2wks (in combination with 5-fluorouracil,

leucovorin, and irinotecan). Continue until disease progression or unacceptable toxicity.

Dose Modification

Hypertension (Treatment-Induced)

Severe hypertension, recurrent hypertension: Withhold treatment until hypertension is controlled, then permanently reduce to 2 mg/kg q2wks.

Proteinuria

Urine protein greater than or equal to 2 g/24 hrs: Withhold treatment until urine protein less than 2 g/24 hrs, then resume at previous dose. **Recurrent urine protein greater than 2 g/24 hrs:** Withhold treatment until urine protein less than 2 g/24hrs, then resume with a permanent reduction to 2 mg/kg q2wks.

Permanent Discontinuation

Permanently discontinue if severe hemorrhage, GI perforation, impaired wound healing, fistula formation, hypertensive crisis, arterial thromboembolism, nephrotic syndrome, thrombotic microangiopathy, reversible posterior leukoencephalopathy occurs.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (57%–24%): Diarrhea, fatigue, stomatitis, abdominal pain, decreased appetite. **Occasional (13%–9%):** Asthenia, dyspnea, headache. **Rare (3%–2%):** Skin hyperpigmentation, dystonia, oropharyngeal pain, dehydration, rhinorrhea, hemorrhoids, proctalgia.

ADVERSE EFFECTS/TOXIC REACTIONS

Leukopenia, neutropenia, thrombocytopenia are expected responses to therapy, but more severe reactions including bone marrow depression, febrile neutropenia may be life-threatening. Severe, sometimes fatal, hemorrhagic events including intracranial/GI/GU/nasal/postprocedural hemorrhage may occur. GI perforations occurred in less than 1% of pts. May

cause impaired wound healing or wound dehiscence requiring medical intervention, GI or non-GI fistula formation, severe hypertension, severe proteinuria, nephrotic syndrome, severe diarrhea, dehydration. Arterial thromboembolism including CVA, MI, TIA reported in up to 3% of pts. Reversible posterior leukoencephalopathy syndrome (RPLS) may present as aphasia, altered mental status, paralysis, vision loss, weakness. UTI reported in 6% of pts. Palmar-plantar erythrodysesthesia syndrome (PPES), a chemotherapy-induced skin condition that presents with redness, swelling, numbness, skin sloughing of the hands and feet, reported in 4% of pts. Immunogenicity (auto-ziv-aflibercept antibodies) occurred in up to 3% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, BUN, serum creatinine, LFT; urine protein; vital signs. Obtain pregnancy test in females of reproductive potential. Question for recent surgeries, dental procedures. Question history of thromboembolism (CVA, DVT, MI, pulmonary embolism), hypertension, hemorrhagic events. Screen for active infection. Screen for home medications that may increase risk of hemorrhage. Conduct dermatologic exam; assess for open wounds, lesions, surgical incisions. Obtain dietary consult. Assess hydration status. Offer emotional support.

INTERVENTION/EVALUATION

Monitor ANC, CBC for myelosuppression prior to each cycle; renal function test, LFT, urine protein periodically. Monitor B/P at least q2wks. Persistent diastolic hypertension may indicate hypertensive crisis. If urine dipstick proteinuria is greater than or equal to 2+, obtain 24-hr urine protein test. Withhold treatment for at least 4 wks prior to elective surgery or for at least 4 wks after major surgery and until wound is fully healed. Due to high risk for arterial occlusions, be vigilant

when screening for CVA (aphasia, confusion, paresthesia, hemiparesis, seizures), MI (chest pain, diaphoresis, left arm/jaw pain, increased serum troponin, ST segment elevation). RPLS should be considered in pts with altered mental status, confusion, headache, seizures, visual disturbances. Report abdominal pain, fever, hemoptysis, melena (may indicate GI perforation/fistula formation). Monitor skin for impaired wound healing, new skin lesions, rash, sloughing. Monitor for decreased urine output, renal dysfunction, nephrotic syndrome. Encourage fluid intake. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Life-threatening blood clots of the arteries and veins have occurred; report symptoms of heart attack (chest pain, difficulty breathing, jaw pain, nausea, pain that radiates to the left arm, sweating), stroke (blindness, confusion, one-sided weakness, loss of consciousness, trouble speaking, seizures), DVT (swelling, pain, hot feeling in the arms or legs), lung embolism (difficulty breathing, chest pain, rapid heart rate). Report liver problems (abdominal pain, bruising, clay-colored stool, amber or dark-colored urine, yellowing of the skin or eyes); skin changes (sloughing, rash, poor healing of wounds). • Life-threatening bleeding may occur; report bloody stool or urine, rectal bleeding, nosebleeds, vomiting up blood. • Treatment may depress your immune system response and reduce your ability to fight infection. Report symptoms of infection such as body aches, chills, cough, fatigue, fever. Avoid those with active infection. • Avoid pregnancy; treatment may cause birth defects. Females and males of childbearing potential should use effective contraception during treatment and for at least 3 mos after last dose. • Nervous system changes, including altered mental status, seizures, headache, blurry vision, high blood pressure, trouble speaking, one-sided weakness, may indi-

cate stroke, high blood pressure crisis, life-threatening brain dysfunction/swelling. • Notify physician before any planned surgeries/dental procedures. • Severe diarrhea may lead to dehydration; drink plenty of fluids.

zoledronic acid

zoe-le-**dron**-ik as-id

(Aclasta[★], Reclast, Zometa)

Do not confuse Zometa with Zofran or Zoladex.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Bisphosphonate. **CLINICAL:** Calcium regulator, bone resorption inhibitor.

USES

Zometa: Treatment of hypercalcemia of malignancy, bone metastases from solid tumors. Treatment of multiple myeloma osteolytic lesions. **Reclast:** Treatment and prevention of postmenopausal osteoporosis, glucocorticoid-induced osteoporosis, treatment of Paget's disease. Treatment of osteoporosis in men to increase bone mass. **OFF-LABEL:** Prevention of bone loss associated with aromatase inhibitor therapy in postmenopausal women with breast cancer or androgen deprivation therapy in men with prostate cancer. Post-renal transplant bone loss.

PRECAUTIONS

Contraindications: Hypersensitivity to zoledronic acid, other bisphosphonates (e.g., alendronate, risedronate). **Reclast only:** CrCl less than 35 mL/min, acute renal impairment, hypocalcemia. **Cautions:** Elderly. **Oncology indications:** History of aspirin-sensitive asthma, mild to moderate renal impairment. **Non-oncology indications:** Pts with disturbances of calcium and mineral metabolism (e.g., hypoparathyroidism, malabsorption syndrome).

ACTION

Inhibits bone resorption by action on osteoclasts. Inhibits osteoclast activity/skeletal calcium release induced by tumors; inhibits osteoclast-mediated resorption. **Therapeutic Effect:** **Tumor:** Increases urinary calcium, phosphorus excretion; decreases serum calcium, phosphorus levels. **Osteoporosis:** Reduces bone turnover.

 **LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Recommend discontinuation of therapy as early as possible prior to a planned pregnancy. **Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Aminoglycosides (e.g., amikacin, gentamicin), calcitonin may increase hypocalcemic effect. NSAIDs (e.g., ibuprofen, naproxen) may increase adverse effects. Proton pump inhibitors (e.g., lansoprazole, pantoprazole) may decrease therapeutic effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum magnesium, calcium, phosphate.

AVAILABILITY (Rx)

Injection Solution: 4 mg/5 mL vial, 4 mg/100 mL single-use ready-to-use bottle. 5 mg diluted in 100 mL ready-to-infuse solution.

ADMINISTRATION/HANDLING

◀ALERT▶ Pt should be adequately rehydrated before administration of zoledronic acid.

IV (Zometa)

Reconstitution • Further dilute Zometa with 100 mL 0.9% NaCl or D₅W.

Rate of administration • Adequate hydration is essential in conjunction with zoledronic acid. • Administer as IV infusion over not less than 15 min (increases risk of deterioration in renal function).

Storage • Store intact vials at room temperature. • Infusion of solution must be completed within 24 hrs.

IV (Reclast)

• Administer as IV infusion over not less than 15 min. • Follow infusion with a 10-mL 0.9% NaCl flush of IV line.

 **IV INCOMPATIBILITIES**

Do not mix with other medications.

INDICATIONS/ROUTES/DOSAGE**Hypercalcemia Malignancy (Zometa)**

IV infusion: ADULTS, ELDERLY: 4 mg IV infusion given over no less than 15 min. Retreatment may be considered, but at least 7 days should elapse to allow for full response to initial dose.

Multiple Myeloma, Osteolytic Lesions, Bone Metastases from Solid Tumors (Zometa)

IV: ADULTS, ELDERLY: 4 mg q3–4wks.

Paget's Disease (Reclast)

IV: ADULTS, ELDERLY: 5 mg as a single dose. Data about retreatment not available (seldom required within 5 yrs).

Osteoporosis Treatment (Reclast)

IV: ADULTS, ELDERLY: 5 mg once yearly. Consider discontinuing after 3–5 yrs in pts with low risk of fractures.

Treatment/Prevention of Glucocorticoid-Induced Osteoporosis (Reclast)

IV: ADULTS, ELDERLY: 5 mg once yearly.

Prevention of Postmenopausal Osteoporosis (Reclast)

IV: ADULTS, ELDERLY: 5 mg once q2yrs.

Dosage in Renal Impairment

(Reclast): CrCl less than 35 mL/min: Contraindicated.

(Zometa): Multiple myeloma, metastatic bone lesions of solid tumors.

Creatinine Clearance	Dosage
50–60 mL/min	3.5 mg
40–49 mL/min	3.3 mg
30–39 mL/min	3 mg
Less than 30 mL/min	Not recommended

1250 ZOLMitriptan

(Zometa): Hypercalcemia of malignancy.

Mild to moderate impairment: No adjustment. **Severe impairment: (SCr greater than 4.5 mg/dL):** Use caution only after considering risk versus benefit.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (44%–26%): Fever, nausea, vomiting, constipation. **Occasional (15%–10%):** Hypotension, anxiety, insomnia, flu-like symptoms (fever, chills, bone pain, myalgia, arthralgia). **Rare:** Conjunctivitis.

ADVERSE EFFECTS/TOXIC REACTIONS

Renal toxicity may occur if IV infusion is administered in less than 15 min.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Prior to initiation, obtain dental exam for pts at risk for osteonecrosis. Establish baseline serum electrolytes, renal function test.

INTERVENTION/EVALUATION

Monitor serum renal function, CBC. Assess vertebral bone mass (document stabilization, improvement). Monitor serum calcium, phosphate, magnesium, creatinine levels. Assess for fever. Monitor food intake, daily pattern of bowel activity, stool consistency. Check I&O, serum BUN, creatinine in pts with renal impairment.

Z

ZOLMitriptan

zole-mi-trip-tan
(Zomig, Zomig Rapimelt , Zomig-ZMT)

Do not confuse ZOLMitriptan with almotriptan, rizatriptan or SUMatriptan.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin 5-HT₁ receptor agonist. **CLINICAL:** Antimigraine.

USES

Oral: Treatment of acute migraine attack with or without aura in adults. **Nasal:** Treatment of acute migraine with or without aura in adults and children 12 yrs and older. **OFF-LABEL:** Short-term prevention of menstrual migraines.

PRECAUTIONS

Contraindications: Hypersensitivity to ZOLMitriptan. Arrhythmias associated with conduction disorders (e.g., Wolff-Parkinson-White syndrome), basilar or hemiplegic migraine, coronary artery disease, ischemic heart disease (including angina pectoris, history of MI, silent ischemia, Prinzmetal's angina), uncontrolled hypertension, use within 24 hrs of ergotamine-containing preparations or another serotonin receptor agonist, MAOI used within 14 days. **Additional for nasal spray:** Cerebrovascular syndromes (e.g., stroke), peripheral vascular disease. **Cautions:** Hepatic impairment, cardiovascular risks (e.g., hypertension, hypercholesterolemia, smoking, obesity, diabetes), elderly.

ACTION

Binds selectively to serotonin receptors, producing vasoconstrictive effect and reducing inflammation on cranial blood vessels. **Therapeutic Effect:** Relieves migraine headache.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: 25%. Metabolized in liver. Excreted in urine (60%), feces (30%). **Half-life:** 2.8–3.7 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Children:** Safety and efficacy not established

in pts younger than 12 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Ergot derivatives (e.g., ergotamine) may increase vasoconstrictive effect. **MAOIs** (e.g., phenelzine, selegiline) may increase concentration/effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Nasal Spray: (Zomig): 2.5 mg, 5 mg. **Tablets:** 2.5 mg, 5 mg.

 **Tablets, Orally Disintegrating (Zomig-ZMT):** 2.5 mg, 5 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food. Tablets may be broken.

Orally Disintegrating Tablet (ODT)

- Give whole; do not break, crush, cut.
- Place on pt's tongue; allow to dissolve.
- Not necessary to administer with liquid.

Nasal

- Instruct pt to clear nasal passages as much as possible before use.
- With head upright, pt should close one nostril with index finger, breathe out gently through mouth.
- Instruct pt to insert nozzle into open nostril about one-half inch, close mouth, and while taking a breath through nose, release spray dosage by firmly pressing plunger.
- Have pt remove nozzle from nose, gently breathe in through nose and out through mouth for 15–20 sec. Tell pt to avoid breathing in deeply.

INDICATIONS/ROUTES/DOSAGE

Acute Migraine Attack

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 18 YRS: Initially, 1.25–2.5 mg (**Maximum:** 5 mg). If headache returns,

may repeat dose after 2 hrs. **Maximum:** 10 mg/24 hrs.

Orally disintegrating tablet: ADULTS, ELDERLY: Initially, 2.5 mg (**maximum:** 5 mg) at onset of migraine headache. If headache returns, may repeat dose after 2 hrs. **Maximum:** 10 mg/24 hrs.

Intranasal: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Initially, 2.5 mg (**Maximum:** 5 mg). If headache returns, may repeat dose after 2 hrs. **Maximum:** 10 mg/24 hrs.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Nasal/ODT: Mild impairment: No dose adjustment. **Moderate to severe impairment:** Not recommended. **Tablet: Mild:** No dose adjustment. **Moderate to severe impairment:** Initially, 1.25 mg. **Maximum daily dose:** 5 mg in severe impairment.

SIDE EFFECTS

Frequent (8%–6%): PO: Dizziness, paresthesia, neck/throat/jaw pressure, drowsiness. **Nasal:** Altered taste, paresthesia. **Occasional (5%–3%): PO:** Warm/hot sensation, asthenia, chest pressure. **Nasal:** Nausea, drowsiness, nasal discomfort, dizziness, asthenia, dry mouth. **Rare (2%–1%):** Diaphoresis, myalgia.

ADVERSE EFFECTS/TOXIC REACTIONS

Cardiac events (ischemia, coronary artery vasospasm, MI), noncardiac vasospasm-related reactions (hemorrhage, stroke) occur rarely, particularly in pts with hypertension, diabetes, strong family history of coronary artery disease; pts who are obese; smokers; males older than 40 yrs; postmenopausal women.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of peripheral vascular disease, coronary artery disease,

renal/hepatic impairment, MAOI use. Question pt regarding onset, location, duration of migraine, possible precipitating factors.

INTERVENTION/EVALUATION

Monitor for evidence of dizziness. Monitor B/P, esp. in pts with hepatic impairment. Assess for relief of migraine headache, migraine potential for photophobia, phonophobia (sound sensitivity, light sensitivity, nausea, vomiting).

PATIENT/FAMILY TEACHING

- Take single dose as soon as symptoms of actual migraine attack appear.
- Medication is intended to relieve migraine, not to prevent or reduce number of attacks.
- Lie down in dark, quiet room for additional benefit after taking medication.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Report chest pain; palpitations; tightness in throat; edema of face, lips, eyes; rash; easy bruising; blood in urine or stool; pain or numbness in arms or legs.

zolpidem

zole-**pi**-dem

(Ambien, Ambien CR, Edluar, Intermezzo, Sublinox , Zolpimist)

Do not confuse Ambien with ativan, or zolpidem with zaleplon.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Hypnotic, miscellaneous (Schedule IV).

CLINICAL: Sedative-hypnotic.

Z

USES

Ambien, Edluar, Zolpimist: Short-term treatment of insomnia (with difficulty of sleep onset). **Ambien CR:** Treatment of insomnia (with difficulty of sleep onset and/or sleep maintenance). **Intermezzo:** Treatment of insomnia

characterized by middle-of-the-night awakening followed by difficulty returning to sleep in pts with 4 or more hrs of sleep time remaining.

PRECAUTIONS

Contraindications: Hypersensitivity to zolpidem. **Cautions:** Hepatic impairment, pts with depression, history of drug dependence, sleep apnea, COPD, respiratory disease, myasthenia gravis, debilitated pts, elderly.

ACTION

Enhances action of inhibitory neurotransmitter gamma-aminobutyric acid (GABA). **Therapeutic Effect:** Induces sleep with fewer nightly awakenings, improves sleep quality.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30 min	N/A	6–8 hrs

Rapidly absorbed from GI tract. Protein binding: 92%. Metabolized in liver; excreted in urine. Not removed by hemodialysis. **Half-life:** 1.4–4.5 hrs (increased in hepatic impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug crosses placenta and is distributed in breast milk.

Children: Safety and efficacy not established. **Elderly:** More likely to experience falls or confusion; decreased initial doses recommended. Age-related hepatic impairment may require dosage adjustment.

INTERACTIONS

DRUG: Alcohol, other CNS depressants (e.g., gabapentin, LORazepam, morphine) may increase CNS depression. **Strong CYP3A4 inducers** (e.g., carBAMazepine, phenytoin, rifAMPin) may decrease concentration/effect. **Strong CYP3A4 inhibitors** (e.g., clarithromycin, ketoconazole) may increase concentration/effect. **HERBAL:** Herbs with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression.

St. John's wort may decrease concentration/effect. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Oral Solution: (*Zolpimist*): 5 mg/actuation. **Tablets:** 5 mg, 10 mg. **Tablets, Sublingual (*Edluar*):** 5 mg, 10 mg. (*Intermezzo*): 1.75 mg, 3.5 mg.

 **Tablets, Extended-Release:** 6.25 mg, 12.5 mg.

ADMINISTRATION/HANDLING

PO

- For faster sleep onset, do not give with or immediately after a meal.
- Do not break, crush, dissolve, or divide Ambien CR tablets; give whole.
- Edluar sublingual tablets to be placed under tongue and allowed to disintegrate. Do not swallow or administer with water.
- Spray Zolpimist directly into mouth over tongue.

INDICATIONS/ROUTES/DOSAGE

Note: Dosage adjustment is recommended for female pts.

Insomnia

PO, spray, sublingual: (*Edluar, Zolpimist*): **ADULTS:** 10 mg (males), 5 mg (females) immediately before bedtime. **ELDERLY, DEBILITATED:** 5 mg immediately before bedtime. (*Intermezzo*): **ADULTS, ELDERLY:** 3.5 mg (males), 1.75 mg (females), taken once in middle of night with 4 or more hrs of expected sleep yet to come.

PO: (*Extended-Release*): **ADULTS:** 6.25–12.5 mg (males), 6.25 mg (females) immediately before bedtime. **ELDERLY, DEBILITATED:** 6.25 mg immediately before bedtime.

Dosage in Renal Impairment

No dose adjustment; use caution.

Dosage in Hepatic Impairment

Mild to moderate impairment: (*Immediate-Release Tablet, Spray, Sublingual Tablet*): 5 mg. (*Extended-Release Tablet*): 6.25 mg. (*Intermezzo*): 1.75 mg. **Severe impairment:** Avoid use.

SIDE EFFECTS

Occasional (7%): Headache, change in appetite. **Rare (less than 2%):** Dizziness, nausea, diarrhea, muscle pain, sleepwalking.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose may produce severe ataxia (clumsiness, unsteadiness), bradycardia, diplopia, severe drowsiness, nausea, vomiting, difficulty breathing, unconsciousness. Abrupt withdrawal following long-term use may produce weakness, facial flushing, diaphoresis, vomiting, tremor. Drug tolerance/dependence may occur with prolonged use of high dosages. May cause amnesic events that include cooking, sleepwalking, sexual activity, driving.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, pulse, respirations, mental status, sleep patterns. Raise bed rails, provide call light. Provide environment conducive to sleep (back rub, quiet environment, low lighting). Do not give unless a full night of sleep is planned.

INTERVENTION/EVALUATION

Monitor sleep pattern of pt. Evaluate for therapeutic response to insomnia: decrease in number of nocturnal awakenings, increase in length of sleep. Monitor daytime alertness, respiratory rate, behavior profile.

PATIENT/FAMILY TEACHING

- Do not abruptly discontinue medication after long-term use.
- Avoid alcohol and tasks that require alertness, motor skills until response to drug is established.
- Tolerance, dependence may occur with prolonged use of high dosages.
- Do not break, chew, crush, dissolve, or divide Ambien CR tablets; swallow whole.
- Therapy may need to be discontinued if cooking, driving, sleepwalking occurs without recollection.
- Do not take unless a full 8 hrs of sleep is planned.

zonisamide

zoe-nis-a-mide
(Zonegran)

Do not confuse Zonegran with SINEquan, or zonisamide with lacosamide.

◆ CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticonvulsant, miscellaneous. **CLINICAL:** Anticonvulsant.

USES

Adjunctive therapy in treatment of partial seizures in adults, children older than 16 yrs with epilepsy. **OFF-LABEL:** Bipolar disorder.

PRECAUTIONS

Contraindications: Hypersensitivity to zonisamide. Allergy to sulfonamides.

Cautions: Renal/hepatic impairment, pts at high risk for suicide or metabolic acidosis (e.g., severe respiratory disease).

ACTION

Exact mechanism unknown. May stabilize neuronal membranes, suppress neuronal hypersynchronization by blocking sodium, calcium channels. **Therapeutic Effect:** Reduces seizure activity.

PHARMACOKINETICS

Well absorbed after PO administration. Metabolized in liver. Extensively bound to RBCs. Protein binding: 40%. Primarily excreted in urine. **Half-life:** 63 hrs (plasma), 105 hrs (RBCs).

Z**⌚ LIFESPAN CONSIDERATIONS**

Pregnancy/Lactation: Crosses placenta. Unknown if distributed in breast milk. **Children:** Safety and efficacy not established in pts younger than 16 yrs. **Elderly:** No age-related precautions noted, but lower dosages recommended.

INTERACTIONS

DRUG: Alcohol, other CNS depressants (e.g., LORazepam, morphine, zolpidem) may increase sedative effect. **Strong CYP3A4 inducers** (e.g., carbamazepine, phenytoin, rifampin) may increase metabolism, decrease effect. **HERBAL:** Herbals with sedative properties (e.g., chamomile, kava kava, valerian) may increase CNS depression. **St. Johns wort** may decrease concentration/effect. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, creatinine.

AVAILABILITY (Rx)

 **Capsules:** 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING**PO**

• May give with or without food. • Do not crush, break capsules. Give capsules whole. • Do not give to pts allergic to sulfonamides.

INDICATIONS/ROUTES/DOSAGE

Note: Do not use if CrCl is less than 50 mL/min.

Partial Seizures

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 16 YRS: Initially, 100 mg/day. May increase to 200 mg/day after 2 wks. Further increases to 300 mg/day and 400 mg/day can be made with minimum of 2 wks between adjustments. **Range:** 100–600 mg/day.

Dosage in Renal Impairment

Not recommended with CrCl less than 50 mL/min.

Dosage in Hepatic Impairment

Use with caution.

SIDE EFFECTS

Frequent (17%–9%): Drowsiness, dizziness, anorexia, headache, agitation, irritability, nausea. **Occasional (8%–5%):** Fatigue, ataxia, confusion, depression, impaired memory/concentration, insomnia, abdominal pain, diplopia, diarrhea, speech dif-

ficuity. **Rare (4%–3%):** Paresthesia, nystagmus, anxiety, rash, dyspepsia, weight loss.

ADVERSE EFFECTS/TOXIC REACTIONS

Overdose characterized by bradycardia, hypotension, respiratory depression, coma. Leukopenia, anemia, thrombocytopenia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (intensity, frequency, duration, level of consciousness). Initiate seizure precautions. CBC, LFT should be performed before therapy begins and periodically during therapy.

INTERVENTION/EVALUATION

Observe frequently for recurrence of seizure activity. Assess for clinical improvement (decrease in intensity, frequency of seizures). Assist with ambulation if dizziness occurs.

PATIENT/FAMILY TEACHING

- Strict maintenance of drug therapy is essential for seizure control.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Avoid alcohol.
- Report if rash, back/abdominal pain, blood in urine, fever, sore throat, ulcers in mouth, easy bruising occur.
- Report worsening depression, unusual behavior, suicidal ideation.

CALCULATION OF DOSES

Frequently, dosages ordered do not correspond exactly to what is available and must be calculated.

RATIO/PROPORTION:

A pt is to receive 65 mg of a medication. It is available as 80 mg/2 mL. What volume (mL) needs to be administered to the patient?

STEP 1: Set up ratio.

$$\frac{80 \text{ mg}}{2 \text{ mL}} = \frac{65 \text{ mg}}{x \text{ (mL)}}$$

STEP 2: Cross multiply and divide each side by the number with x to determine volume to be administered.

$$\begin{aligned} 80 \text{ mg} \times (x) \text{ mL} &= 65 \text{ mg} \times 2 \text{ mL} \\ 80x &= 130 \\ x &= \frac{130}{80} = 1.625 \text{ mL} \end{aligned}$$

CALCULATIONS IN MICROGRAMS PER KILOGRAM PER MINUTE (mcg/kg/min):

A 63-year-old pt (weight 165 lb) is to receive medication A at a rate of 8 mcg/kg/min. Given a solution containing medication A in a concentration of 500 mg/250 mL, at what rate (mL/hr) would you infuse this medication?

STEP 1: Convert to same units. In this problem, the dose is expressed in mcg/kg; therefore, convert weight to kg (2.2 lb = 1 kg) and drug concentration to mcg/mL (1 mg = 1,000 mcg).

$$165 \text{ lb divided by } 2.2 = 75 \text{ kg}$$

$$\frac{500 \text{ mg}}{250 \text{ mL}} = \frac{2 \text{ mg}}{\text{mL}} = \frac{2,000 \text{ mcg}}{\text{mL}}$$

STEP 2: Number of mcg/hr.

$$(75 \text{ kg}) \times 8 \text{ mcg/kg/min} = 600 \text{ mcg/min or } 36,000 \text{ mcg/hr}$$

STEP 3: Number of mL/hr.

$$36,000 \text{ mcg/hr divided by } 2,000 \text{ mcg/mL} = 18 \text{ mL/hr}$$

Appendix B

CONTROLLED DRUGS (UNITED STATES)

Schedule I: Medications having no legal medical use. These substances may be used for research purposes with proper registration (e.g., heroin, LSD).

Schedule II: Medications having a legitimate medical use but are characterized by a very high abuse potential and/or potential for severe physical and psychic dependency. Emergency telephone orders for limited quantities of these drugs are authorized, but the prescriber must provide a written, signed prescription order (e.g., morphine, amphetamines, HYDROcodone, oxyCODONE).

Schedule III: Medications having significant abuse potential (less than Schedule II). Telephone orders are permitted (e.g., codeine in combination with other substances such as butalbital).

Schedule IV: Medications having a low abuse potential. Telephone orders are permitted (e.g., benzodiazepines, traMADol, zolpidem).

Schedule V: Medications having the lowest abuse potential of the controlled substances. Some Schedule V products may be available without a prescription (e.g., certain cough preparations containing limited amounts of an opiate).

WOUND CARE

A wound is any process that disrupts the normal structure and function of tissues. Wounds can be closed (e.g., bruise, sprain) or open (e.g., abrasion, surgical wound). The most common chronic wounds are nonhealing surgical wounds, pressure ulcers, diabetic foot ulcers, and venous ulcers.

TYPES OF OPEN WOUNDS

Superficial	Damage only to the epithelium; heals rapidly via regeneration of epithelial cells.
Partial thickness	Involves the dermal layer and is associated with blood vessel damage.
Full thickness	Involves subcutaneous fat and deeper layers (e.g., muscle, bone). Requires the longest time to heal. Connective tissue needs to regenerate; contraction occurs during the healing process.

WOUND HEALING

Wound healing is a complex process resulting in restored cell structure and tissue layers after an injury. When skin is damaged, it begins to heal from the bottom layer up and from the outside inward. Wound healing involves cellular, physiologic, biochemical, and molecular processes. They are interdependent and overlapping. An acute wound usually heals within several wks, whereas chronic wounds take 6 wks or longer to heal. Additionally, other factors can delay the healing process. These include trauma/edema, infection, necrosis, lack of oxygen delivery to the tissues, advanced age, obesity, chronic diseases (e.g., diabetes, anemia), vascular insufficiency, immobility, pressure necrosis, and immunodeficiency.

Wound healing can be divided into three phases: inflammation, proliferation, and maturation.

Inflammation	Occurs within seconds of the injury and can last up to 3 days. Associated with redness, heat, swelling, and pain. Immediate vasoconstriction of damaged blood vessels, and coagulation limiting blood loss occurs. Following vasoconstriction, histamine and other chemical mediators are released from damaged cells, causing vasodilation and release of growth factors essential for wound healing (e.g., increased capillary permeability and release of exudate).
Proliferation	Granulation tissue composed of macrophages, fibroblasts, immature collagen, blood vessels, and ground substance is formed. Fibroblasts stimulate production of collagen and elastin, increasing the strength of the wound and stimulating growth of new blood vessels. As granulation fills the wound site, the edges of the wound pull together, decreasing the surface of the wound.

Epithelialization then occurs: Epithelial cells migrate from the wound edge, covering the wound and resulting in scar formation.

This phase usually lasts 2 to 3 wks.

Maturation	Collagen fibers cross link and reorganize, increasing the strength of scar. This process can take anywhere from 3 wks to 2 yrs.
------------	---

WOUND DRESSINGS

Dressings play a major role in wound management. They protect the wound, keeping it moist, and thus promote healing (only diabetic, dry, gangrenous toes require a moisture-free environment for effective healing).

Hydrocolloid, hydrogel, film, and foam dressing can handle large amounts of exudate and promote auto-debridement. Alginate and collagen-based dressings promote granulation of tissue. Silver and iodine dressings are used to avoid infections, which may delay wound healing.

WOUND CARE PRODUCTS

Description	General Uses	Comments
<p>Alginate dressings: Spun fibers of brown seaweed that act as ion exchange mechanisms to absorb serous fluid or exudate, forming a gel-like covering that conforms to the shape of the wound. Facilitate autolytic débridement and maintain a moist wound environment. Products: Algicell, Carra Sorb. Available as ropes, pads.</p>	<p>Abrasions/ lacerations/skin tears Arterial/venous ulcers Deep and tunneling wounds Diabetic ulcers Pressure ulcers Second-degree burns Odorous wounds Contaminated and infected wounds</p>	<p>Good for moderately to heavily exudative wounds and hemorrhagic wounds Can be left in place until soaked with exudate Requires a secondary dressing (e.g., transparent film, foam, hydrocolloids) Do not moisten prior to use Nonadhesive, nonocclusive Contraindicated in third-degree burns; not recommended for dry or minimally exudative wounds</p>
<p>Collagenase ointment: Sterile enzymatic débriding ointment that possesses the ability to digest collagen in necrotic tissue. Products: Santyl.</p>	<p>Débriding chronic dermal ulcers and severely burned areas</p>	<p>Can be used for infected wounds Gauze is used as a secondary dressing Discontinue when granulation tissue is present Optimal pH for enzymatic action is 6–8 Avoid acidic agents for cleansing; avoid detergents and agents containing heavy metal (e.g., mercury or silver), which may adversely affect enzymatic activity</p>

Continued

Description	General Uses	Comments
<p>Trypsin, castor oil, Peru balsam: Trypsin is a mild débriding agent that helps shed damaged skin cells.</p> <p>Castor oil acts as a lubricant to protect tissue.</p> <p>Peru balsam increases blood flow to a wound area, reduces wound odor.</p> <p>Products: Granulex, Xenaderm. Available as gel, ointment, spray.</p>	<p>Promotes healing/treatment of decubitus ulcers, varicose ulcer, and dehiscent wounds</p>	<p>Can be used for infected wounds</p> <p>Avoid concurrent use of silver-containing products (may reduce efficacy)</p> <p>Promotes healing and relieves pain caused by bed sores and other skin ulcers</p>
<p>Hydrophilic polyurethane foam: Also called open cell foam dressings. Sheets of foamed solutions of polymers containing variably sized open cells that can hold wound exudate away from wound bed. Maintains moist wound environment.</p> <p>Products: Curafoam, Lyofoam. Available as sheets in a wide variety of formulations.</p>	<p>Moderate to heavy exudative wounds with or without a clean granular wound bed</p> <p>Diabetic ulcers, pressure ulcers, venous stasis ulcers</p> <p>Draining surgical incisions</p> <p>Superficial burns</p> <p>Tube and drain sites</p>	<p>Contraindicated for use in third-degree burns</p> <p>Not recommended for wounds with little to no exudate or when tunneling is present</p> <p>Good for cavitating wounds</p> <p>Highly absorbent, semioclusive dressing</p> <p>Usual dressing change is up to 3 times/wk</p> <p>Can be worn during bathing</p>
<p>Hydrocolloids: Formulations of elastomeric, adhesive, and gelling agents; the most common absorbent ingredient is carboxymethylcellulose. Most hydrocolloids are backed with a semi-occlusive film layer. The wound side of the dressing is adhesive, adhering to a moist surface as well as to dry skin but not to the moist wound bed. As wound fluid is absorbed, the hydrocolloid forms a viscous gel in the wound bed, enhancing a moist wound environment.</p> <p>Products: Hydrocol, Tegaserb. Available as dressings, granules, patches, paste.</p>	<p>Minimal to moderate exudate in partial and full thickness wounds</p> <p>Cuts and abrasions</p> <p>First- and second-degree burns</p> <p>Pressure ulcers</p> <p>Stasis ulcers</p>	<p>Not for wounds producing heavy exudate, infected wounds, dry eschar-covered wounds</p> <p>May provide pain relief</p> <p>Good for chronic wounds that are epithelializing</p> <p>Can be left in place for up to 7 days</p> <p>Contraindicated for third-degree burns</p> <p>Can shower while wearing</p>

Description	General Uses	Comments
<p>Hydrogels: Glycerin- or water-based dressings designed to hydrate the wound. May absorb small amounts of exudate.</p> <p>Products: Curacel, Duo Derm, Intra Site. Available as gel, sheets, gauze.</p>	<p>Partial and full thickness wounds Dry to minimal exudate Cuts and abrasions First- and second-degree burns Pressure ulcers Stasis ulcers</p>	<p>Not for wounds producing moderate to heavy exudate Not for infected wounds May provide pain relief Good for wounds that are debriding Good for keeping a dry wound moist Can be left in place for 1–3 days</p>
<p>Iodine compounds: Cadexomer iodine: Iodine is complexed with a polymeric cadexomer starch vehicle, forming a topical gel or paste. The cadexomer moiety absorbs exudate and debris and releases iodine for antimicrobial activity.</p> <p>Products: Iodosorb, Iodoflex. Available as gel, dressing, ointment, powder.</p>	<p>Chronic nonhealing, exuding wounds including pressure or leg ulcers and exuding, infected wounds</p>	<p>Requires use of a secondary dressing Contraindicated in pts with iodine sensitivity, Hashimoto’s thyroiditis, nontoxic nodular goiter, children Dressing to be changed when it turns white, indicating that the iodine has been depleted Do not use on dry necrotic tissue</p>
<p>Silver compounds Silver sulfadiazine cream: Silver possesses bactericidal properties. Has been shown to reduce bacterial density, vascular margination, migration of inflammatory cells. Enhances rate of re-epithelialization.</p> <p>Products: Silvadene, SSD, Theramazene.</p>	<p>Prevent infection in second- and third-degree burns Prevent or treat infection in chronic wounds</p>	<p>May have cytotoxic effects that could delay wound healing Allergic reactions may occur Use should be limited to a 2- to 4-wk period Bacteria may become resistant with prolonged use Avoid use with collagenase- or trypsin-containing debriding agents</p>
<p>Transparent film dressings: Polyurethane sheets coated on one side with an adhesive that is inactivated by moisture and will not adhere to a moist surface such as the wound bed. Have no absorbent capacity and are impermeable to fluids and bacteria but are semipermeable to oxygen and water vapor.</p> <p>Products: Bioclusive, CarraFilm, Tegaderm HP. Available in a variety of sizes and features.</p>	<p>Prophylaxis on high-risk intact skin Superficial wounds with minimal or no exudate Wounds on elbows, heels, or flat surfaces; covering of blisters; and retention of primary dressing</p>	<p>Prevents wound desiccation and contamination by bacteria Contraindicated in third-degree burns Promotes autolysis of necrotic tissue in the wound; maintains moist environment Avoid in arterial ulcers and infected wounds requiring frequent monitoring Do not use as primary dressing on wounds with depth or tunneling May provide pain relief Usually changed up to 3 times/wk</p>

Continued

Description	General Uses	Comments
Becaplermin gel: Recombinant formulation of platelet-derived growth factor that promotes cell mitogenesis and proliferation of cells involved in wound repair. Enhances formation of granulation tissue. Products: Regranex.	Diabetic foot ulcers that extend into subcutaneous tissue or beyond and have an adequate blood supply	Usually applied daily Adequate blood supply and absence of necrotic tissue are needed for efficacy Repeated use (3 or more tubes) may increase risk of cancer-related death Use cautiously in pts with known malignancy

Appendix D

DRUGS OF ABUSE

Substance	Brand/ Street Names	Administered	Effects of Intoxication	Potential Health Conse- quences
Amphet- amine	<i>Adderall, Dexedrine;</i> bennies, black beauties, hearts, speed, truck drivers, uppers	Injection, smoked, snorted	Increased heart rate, blood pressure, body temperature, metabolism; increased energy, mental alertness; tremors; reduced appetite; irritability; anxiety; panic; violent behavior; psychosis	Weight loss, insomnia, cardiac or cardiovascular complications, stroke, seizures, addiction, tremor, irritability
Barbitu- rates	<i>Nembutal, Seconal, Phenobarbital;</i> barbs, reds, phennies, yellows, yellow jackets	Injection, oral	Reduction of pain and anxiety; feeling of well-being; lowered inhibitions; slowed pulse/breathing; lowered blood pressure; poor concentration; sedation, drowsiness	Confusion, fatigue; impaired coordination, memory, judgment; respiratory depression or arrest; addiction; depression; unusual excitement; fever; irritability; slurred speech; dizziness
Benzodiaz- epines	<i>Ativan, Librium, Valium, Xanax;</i> candy, downers, tranks, Xannies, Xannie bars	Oral	Reduction of pain and anxiety; feeling of well-being; lowered inhibitions; slowed pulse/breathing; lowered blood pressure; poor concentration; sedation, drowsiness	Confusion, fatigue; impaired coordination, memory, judgment; respiratory depression or arrest; addiction; dizziness

Continued

Substance	Brand/ Street Names	Administered	Effects of Intoxication	Potential Health Conse- quences
Bupropion	<i>Wellbutrin</i> ; poor man's co- caine	Oral	Increased heart rate, B/P, and temperature; mental alertness; feel euphoric, exhilarated, energetic	Seizures, tachycardia, arrhythmias, loss of consci- ousness
Cocaine	Blow, bump, candy, coke, crack, rock, snow, toot	Injection, smoked, snorted	Increased heart rate, blood pressure, body temperature, metabolism; in- creased en- ergy, mental alertness; trem- ors; reduced appetite; irrita- bility; anxiety; panic; violent behavior; psy- chosis	Weight loss, insomnia, cardiac or cardiovas- cular com- plications, stroke, seizures, ad- diction, nasal damage from snorting, rapid or irregular heartbeat, headaches, malnutrition
Codeine	<i>Fiorinal with codeine, Tylenol with codeine</i> ; Captain Cody, schoolboy, loads, pancakes and syrup	Injection, oral	Pain relief, eu- phoria, drowsi- ness	Respiratory depression and arrest, nausea, confusion, constipation, sedation, uncon- sciousness, coma, tolerance, addiction
Dextro- methorphan	Found in some cough and cold medications; poor man's PCP, velvet, Robo, Triple C	Oral	Impaired motor function, feel- ing of being separated from one's body and environment; euphoria; slurred speech; confusion; dizziness; distorted visual perceptions	

Substance	Brand/ Street Names	Administered	Effects of Intoxication	Potential Health Conse- quences
Flunitraze- pam	<i>Rohypnol</i> ; forget-me pill, Mexican Valium, roofies, roofinol, rope, rophies	Oral, snorted	Sedation, mus- cle relaxation, confusion, memory loss, dizziness, impaired coord- ination, reduced pain/ anxiety, feeling of well-being	Addiction; confusion, fatigue, memory loss, respiratory depression
Gabapentin	<i>Neurontin</i> , <i>Lyrica</i> , <i>Lycia</i> ; <i>gabbie</i>	Oral	Self-treatment of alcohol, cocaine, or opioid craving; euphoria, relaxation	Diarrhea, double vision, drowsiness, lethargic, slurred speech
GHB	Georgia home boy, grievous bodily harm, liquid ecstasy, goop, liquid X	Oral	Drowsiness, nausea, head- ache, disorien- tation, loss of coordination, memory loss	Uncon- sciousness, seizures, coma, confu- sion, nausea, vomiting, headache
Heroin	Smack, brown sugar, dope, junk, white horse, China white	Injection, smoked, snorted	Euphoria, drowsiness, impaired coord- ination, dizzi- ness, confusion, nausea, seda- tion, feeling of heaviness in the body, slowed breathing	Constipation, confusion, sedation, respiratory depression, coma, addic- tion
Hydroco- done	<i>Vicodin</i> , <i>Lortab</i> ; <i>vike</i> , watson- 387	Oral	Pain relief, euphoria, drowsiness	Respiratory depression and arrest, nausea, confusion, constipation, sedation, uncon- sciousness, coma, tolerance, addiction

Continued

Substance	Brand/ Street Names	Administered	Effects of Intoxication	Potential Health Conse- quences
Inhalants	Solvents (paint thinner, glues), nitrites (laughing gas, snappers, poppers)	Inhaled through nose or mouth	Stimulation, loss of inhibition, headache, nausea or vomiting, slurred speech, loss of motor coordination, wheezing	Cramps, muscle weakness, depression, memory impairment, damage to cardiovascular and nervous systems, unconsciousness, sudden death
Ketamine	<i>Ketalar</i> ; cat Valium, Special K, kit kat, vitamin K	Injection, snorted, smoked	Increased heart rate and blood pressure, impaired motor function, feelings of being separated from one's body and environment; at high doses: delirium, depression, respiratory depression or arrest; death	Memory loss, numbness, nausea/vomiting, anxiety, tremors, respiratory depression
Loperamide	<i>Imodium</i> ; poor man's methadone	Oral	Reducing symptoms of opioid withdrawal	CNS depression, intestinal blockage
LSD	Acid, cubes, microdot, yellow sunshine, blotter, bloomers	Oral, absorbed through mouth tissues	Altered states of perception and feeling; hallucinations; nausea; increased body temperature, heart rate, blood pressure; loss of appetite; sweating; sleeplessness; numbness; dizziness; weakness; tremors; impulsive behavior; rapid shifts in emotion	Flashbacks, hallucinogen persisting perception disorder

Substance	Brand/ Street Names	Administered	Effects of Intoxication	Potential Health Conse- quences
Marijuana	Blunt, ganja, grass, joint, Mary Jane, pot, reefer, sin-semilla, skunk, weed	Oral, smoked	Euphoria, relaxation, slowed reaction time, impaired balance and coordination, increased heart rate and appetite, impaired learning and memory, anxiety, panic attacks, psychosis	Cough, impaired memory and learning, anxiety, panic attacks, frequent respiratory infections, possible mental health decline, addiction
MDMA	Ecstasy, Adam, clarity, Eve, lover's speed, peace, Molly	Injection, oral, snorted	Mild hallucinogenic effects, increased tactile sensitivity, empathic feelings, lowered inhibition, anxiety, chills, sweating, teeth clenching, muscle cramping	Reduced appetite, irregular heartbeat, heart failure, impaired memory, hyperthermia, addiction
Mescaline	Buttons, cactus, peyote	Oral, smoked	Altered states of perception and feeling; hallucinations; nausea; increased body temperature, heart rate, blood pressure; loss of appetite; sweating; sleeplessness; numbness; dizziness; weakness; tremors; impulsive behavior; rapid shifts in emotion	Loss of appetite, nausea, weakness, chronic mental disorders

Continued

Substance	Brand/ Street Names	Administered	Effects of Intoxication	Potential Health Conse- quences
Methamphetamine	<i>Desoxyn</i> ; meth, ice, crank, crystal, go fast, speed	Oral, injection, smoked, snorted	Increased heart rate, blood pressure, body temperature, metabolism; increased energy, mental alertness; tremors; reduced appetite; irritability; anxiety; panic; violent behavior; psychosis	Weight loss, insomnia, cardiac or cardiovascular complications, stroke, seizures, addiction, severe dental problems, behavior/memory loss, impaired memory and learning, tolerance, addiction
Methylphenidate	<i>Ritalin</i> ; JIF, MPH, Skippy, smart drug, vitamin R	Injection, oral, snorted	Increase or decrease in blood pressure; psychotic episodes	Digestive problems, loss of appetite, weight loss, reduced appetite, rapid irregular heartbeat, heart failure, seizures, stroke
Morphine	<i>Roxanol</i> , <i>Duramorph</i> ; M, Miss Emma, monkey, white stuff	Injection, oral, smoked	Pain relief, euphoria, drowsiness	Respiratory depression and arrest, nausea, confusion, constipation, sedation, unconsciousness, coma, tolerance, addiction
Oxycodone	<i>OxyContin</i> , <i>Percodan</i> ; oxycotton, oxycet, hillbilly heroin, killers, OCs	Injection, oral	Pain relief, euphoria, drowsiness	Respiratory depression and arrest, nausea, confusion, constipation, sedation, unconsciousness, coma, tolerance, addiction

Substance	Brand/ Street Names	Administered	Effects of Intoxication	Potential Health Conse- quences
PCP	<i>Phencyclidine</i> ; angel dust, boat, hog, love boat, peace pill	Injection, oral, smoked	Impaired motor function, feel- ings of being separated from one's body and environment, analgesia, psy- chosis, aggression, violence, slurred speech, loss of coordination, hallucinations	Memory loss, loss of appetite, panic, aggression, violence
Psilocybin	Magic mush- rooms, purple passion, shrooms	Oral	Altered states of perception and feeling, hallucinations, nausea, ner- vousness, para- noia, panic	Chronic mental disorders
Quetiapine	<i>Seroquel</i> ; baby heroin, Suzie-Q, Q-ball	Oral	Reduced anxi- ety, sedation	Arrhythmias, coma, death (with over- dose)

EQUIANALGESIC DOSING

Guidelines for equianalgesic dosing of commonly used analgesics are presented in the following table. The dosages are approximate to 10 mg of morphine intramuscularly. These guidelines are for the management of acute pain in the opioid-naïve pt. Dosages may vary for the opioid-tolerant pt and for the management of chronic pain. Dosing adjustments for renal or hepatic insufficiency may also be necessary. Clinical response is the criterion that must be applied for each pt with titration to desired response.

Name	Equianalgesic Oral Dose	Equianalgesic Parenteral Dose (IV, IM, SQ)
Codeine	200 mg	100–130 mg
FentaNYL	Not available	0.1 mg (100 mcg)
HYDROcodone	30–45 mg	Not available
HYDROmorphine (Dilaudid)	7.5–8 mg	1.5–2 mg
HYDROmorphine (Dilaudid) (Controlled-Release)	7.5 mg	N/A
Meperidine (Demerol)	300 mg	75 mg
Methadone (Dolophine)	10–20 mg	10 mg
Morphine	30 mg	10 mg
OxyCODONE (OxyContin)	20–30 mg	Not available
OxyMORphone	10 mg	1 mg
OxyMORphone (Extended-Release)	10 mg	N/A

Appendix F

HERBALS: COMMON NATURAL MEDICINES

The use of herbal therapies is increasing in the United States. Because of the rise in the use of herbal therapy, the following is presented to provide some basic information on some of the more popular herbs. Please note this is not an all-inclusive list, which is beyond the scope of this handbook.

Name	Uses	Comments
Aloe vera	Orally: osteoarthritis, inflammatory bowel diseases (e.g., ulcerative colitis), fever, itching, inflammation. Topically: burns, wound healing, psoriasis, sunburn, frostbite, cold sores.	Well tolerated. Orally can cause abdominal pain, cramps; topically can cause burning, itching, contact dermatitis. May lower blood glucose levels and have additive effects with antidiabetic medications.
Bilberry	Orally: improve visual acuity (e.g., night vision, cataracts), atherosclerosis, chronic fatigue syndrome, venous insufficiency, varicose veins, hemorrhoids. Topically: mild inflammation of mouth and throat mucous membranes.	Can inhibit platelet aggregation, increase risk of bleeding when combined with antiplatelet or anticoagulant medications (e.g., aspirin, clopidogrel, enoxaparin, warfarin). May lower blood glucose.
Bitter orange	Orally: appetite stimulant, dyspepsia. Topically: inflammation of the eyelid, conjunctiva, retina.	May cause hypertension, cardiovascular toxicity. May increase concentration/effects of midazolam; concurrent use with MAOIs may increase blood pressure (avoid use); combination with caffeine can increase blood pressure, heart rate.
Black cohosh	Orally: symptoms of menopause, premenstrual syndrome (PMS), dysmenorrhea, dyspepsia, inducing labor in pregnant women, anxiety, fever, cough, cardiovascular disease, cognitive function, infertility, osteoarthritis, osteoporosis, rheumatoid arthritis. Topically: acne, mole, and wart removal; improve skin appearance.	Can cause GI upset, rash, headache, dizziness, increased weight, cramping, breast tenderness, vaginal spotting/bleeding. May decrease effects of cisplatin; may increase risk of hepatic damage with hepatotoxic medications.

Continued

Name	Uses	Comments
Capsicum (cayenne pepper)	Orally: dyspepsia, flatulence, diarrhea, cramps, toothache, hyperlipidemia. Topically: pain of shingles, osteoarthritis, rheumatoid arthritis, postherpetic neuralgia, diabetic neuralgia, trigeminal neuralgia.	Orally can cause upper abdominal discomfort (e.g., gas, bloating, nausea, diarrhea, belching); topically can cause burning, stinging, erythema. May increase effects/adverse effects of antiplatelet medications.
Chamomile	Prepared as a tea and used as a mild sedative, relaxant, and sleeping aid; used for indigestion, itching, and inflammation.	Large amounts may cause vomiting.
Chasteberry	Orally: menstrual irregularities (e.g., dysmenorrhea, amenorrhea, metrorrhagia).	Can cause GI upset, headache, diarrhea, nausea, itching, urticaria, rash, insomnia, increased weight, irregular menstrual bleeding. Can interfere with efficacy of oral contraceptives, hormone replacement therapy.
Clove (clove oil)	Orally: dyspepsia, expectorant, diarrhea, halitosis, flatulence, nausea, vomiting. Topically: toothache, mouth and throat inflammation.	Topically can cause tissue irritation, allergic dermatitis.
Co-enzyme Q-10	Heart failure, angina, diabetes, hypertension.	Can cause GI side effects (e.g., nausea, vomiting, diarrhea, appetite suppression, heartburn, epigastric discomfort). Can decrease blood pressure and have an additive effect with antihypertensive medications; may reduce anticoagulant effects of warfarin.
Cranberry	Prevention/treatment of urinary tract infections, neurogenic bladder, urinary deodorizer in incontinence, kidney stones, prevention of urinary catheter blockage.	Usually well tolerated. Large amounts can cause GI upset, diarrhea, nausea, vomiting. Greater than 1,000 mL daily can increase risk of uric acid, kidney stone formation.
DHEA	Slow or reverse aging, weight loss, metabolic syndrome, increase immune and cognitive function.	At high dose can cause acne, hirsutism, hair loss, voice deepening, insulin resistance, altered menstrual pattern. May interfere with antiestrogen effects of anastrozole, letrozole, or other aromatase inhibitors; may overcome estrogen receptor antagonist activity of tamoxifen in estrogen receptor positive cancer cells.

Name	Uses	Comments
Dong quai	Dysmenorrhea, premenstrual syndrome, menopausal symptoms.	May cause photosensitivity and photodermatitis. May increase effect/risk of bleeding with antiplatelet and anticoagulant medications (e.g., aspirin, warfarin).
Echinacea	Treat/prevent common cold, influenza, other upper respiratory tract infections.	Usually well tolerated. Can cause GI effects (e.g., nausea, abdominal pain, diarrhea, vomiting). Stimulates immune function—may exacerbate autoimmune diseases (e.g., multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus).
Eucalyptus	Orally: infections, fever, dyspepsia, expectorant for coughs. Topically: inflammation of respiratory tract mucous membranes, rheumatoid arthritis, nasal stuffiness.	Orally: GI effects (e.g., nausea, vomiting, diarrhea). Topically (prolonged exposure/large amounts): agitation, drowsiness, muscle weakness, ataxia.
Evening primrose oil	Premenstrual syndrome (PMS), endometriosis, symptoms of menopause (e.g., hot flashes).	May increase risk of bruising/bleeding with antiplatelet/anticoagulant medications (e.g., aspirin, clopidogrel, enoxaparin, warfarin).
Feverfew	Orally: fever, headaches, prevention of migraines, menstrual irregularities. Topically: toothaches, antiseptic.	Orally: GI effects (e.g., heartburn, nausea, diarrhea, constipation, abdominal pain, bloating, flatulence). Topically: contact dermatitis. May have additive effects, increase risk of bleeding with antiplatelet medications.
Fish oil	Hyperlipidemia, hypertriglyceridemia, hypertension, stroke, depression, rheumatoid arthritis, osteoporosis, psoriasis, Crohn's disease.	Can cause a fishy aftertaste, halitosis, heartburn, dyspepsia, nausea, loose stools, rash. May have additive effect with antihypertensive medication.
Garlic	Hypertension, hyperlipidemia, age-related vascular changes, atherosclerosis, chronic fatigue syndrome, menstrual disorders, coronary heart disease, peripheral arterial disease.	Dose-related effects including breath/body odor, mouth and GI burning/irritation, heartburn, flatulence, nausea, vomiting, diarrhea. May increase effects of antiplatelets (e.g., aspirin, clopidogrel, enoxaparin), anticoagulants (e.g., warfarin); may decrease effects of oral contraceptives, cyclosporine, protease inhibitors, and non-nucleoside reverse transcriptase inhibitors (NNRTIs).

Continued

Name	Uses	Comments
Ginger	Motion sickness, morning sickness, dyspepsia, rheumatoid arthritis, osteoarthritis, loss of appetite, migraine headache, diarrhea, flatulence, irritable bowel syndrome, dysmenorrhea.	Usually well tolerated. At high doses of 5 g/day may cause abdominal discomfort, heartburn, diarrhea, irritant effect in mouth and throat. May increase risk of bleeding with antiplatelet medications and anticoagulants (e.g., aspirin, clopidogrel, enoxaparin, warfarin).
Ginkgo	Dementia (including Alzheimer's), vascular dementia, mixed dementia.	Mild GI upset, headache, dizziness, constipation, palpitations, allergic skin reactions. Large doses can cause diarrhea, nausea, vomiting, weakness. Decreases platelet aggregation; may increase risk of bleeding with antiplatelet and anticoagulants (e.g., aspirin, clopidogrel, enoxaparin, warfarin).
Ginseng	Increases resistance to environmental stress, improves well-being, boosts energy, diuretic.	May cause insomnia, vaginal bleeding, headache, hypertension, hypotension, decreased appetite, edema. May decrease effectiveness of warfarin.
Glucosamine	Osteoarthritis, glaucoma, temporomandibular joint arthritis.	May cause mild GI effects (e.g., nausea, heartburn, diarrhea, constipation). May increase risk of bleeding with anticoagulants (e.g., warfarin).
Gotu kola	Reduce fatigue, anxiety, depression, improve memory and intelligence.	May cause GI upset, nausea, drowsiness. May cause additive sedative effects/side effects with CNS depressants (e.g., clonazepam, lorazepam, zolpidem).
Grapefruit	Hyperlipidemia, atherosclerosis, weight loss and obesity.	May increase concentrations/effects of benzodiazepines, calcium channel blockers, carbamazepine, carvedilol, clomipramine, cyclosporine, estrogens, lovastatin, simvastatin, atorvastatin.
Green tea	Improves cognitive performance and mental alertness.	Can cause nausea, vomiting, abdominal bloating, dyspepsia, flatulence, diarrhea. Higher doses can cause dizziness, insomnia, fatigue, agitation. May increase effects of amphetamines, caffeine.

Name	Uses	Comments
Hawthorn	Congestive HF, coronary heart disease, angina, arrhythmias.	Generally well tolerated. Can cause vertigo, dizziness, nausea, GI complaints, fatigue, sweating, rash.
Kava kava	Anxiety disorders, stress, attention-deficit hyperactivity disorder (ADHD), insomnia, restlessness.	GI upset, headache, dizziness, drowsiness, enlarged pupils and disturbances of oculomotor equilibrium and accommodation, dry mouth, allergic skin reactions. May increase drowsiness, motor reflex depression with alcohol, benzodiazepines, other CNS depressants.
L-carnitine	Treatment of primary L-carnitine deficiency, acute myocardial infarction, supplement to total parenteral nutrition, L-carnitine deficiency in those requiring hemodialysis.	Can cause nausea, vomiting, abdominal cramps, heartburn, gastritis, diarrhea, body odor, seizures.
Licorice	Gastric and duodenal ulcers, sore throat, bronchitis, dyspepsia, cough, osteoarthritis, chronic gastritis, menopausal symptoms, osteoporosis, bacterial/viral infections.	Excessive ingestion can cause pseudohyperaldosteronism with sodium and water retention, hypokalemia, alkalosis. May lead to hypertension, edema, arrhythmias. May reduce effect of antihypertensive medication therapy, warfarin.
Melatonin	Jet lag, insomnia, shift-work disorder.	Can cause daytime drowsiness, headache, dizziness. May increase effect of antiplatelets, anticoagulants (e.g., aspirin, clopidogrel, enoxaparin, warfarin). May cause additive sedation with CNS depressants (e.g., alcohol, benzodiazepines).
Milk thistle	Liver disorders, chronic inflammatory liver disease, hepatic cirrhosis, chronic hepatitis.	Usually well tolerated. Can cause nausea, diarrhea, dyspepsia, flatulence, abdominal bloating, anorexia.
Nettle	Urinary disorders associated with benign prostatic hyperplasia (e.g., nocturia, frequency, dysuria, urinary retention).	Generally well tolerated. May cause GI complaints, sweating, allergic skin reactions. May decrease effects of warfarin.
Peppermint	Common cold, cough, inflammation of mouth and pharynx, sinusitis, fever, cramps of upper GI tract, dyspepsia, flatulence, irritable bowel syndrome (IBS), fever, tension headache.	Can cause heartburn, nausea, vomiting, allergic reactions including flushing and headache. May increase concentration/effects of cyclosporine.

Continued

Name	Uses	Comments
Red yeast	Maintain desirable cholesterol levels in healthy people; reduce cholesterol in hyperlipidemia; indigestion; diarrhea; improve blood circulation.	Can cause abdominal discomfort, heartburn, flatulence, dizziness. May increase cyclosporine concentration.
SAME	Depression, anxiety, heart disease, fibromyalgia, osteoarthritis, tendonitis, dementia, Alzheimer's disease, Parkinson's disease.	Higher doses can cause flatulence, nausea, vomiting, diarrhea, constipation, headache, mild insomnia, anorexia, sweating, dizziness, nervousness. May have additive adverse effects with MAOIs including hypertension, hyperthermia, agitation, confusion, coma. May have additive serotonergic effects and serotonin syndrome-like effects (e.g., agitation, tremors, tachycardia, diarrhea, hyperreflexia, shivering, diaphoresis) with antidepressants.
Saw palmetto	Symptoms of benign prostatic hyperplasia (BPH).	Can cause dizziness, headache, GI complaints (e.g., nausea, vomiting, constipation, diarrhea). May increase effect of antiplatelets, anticoagulants (e.g., aspirin, clopidogrel, enoxaparin, warfarin). May interfere with contraceptives.
St. John's wort	Depression, anxiety, heart palpitations; mood disturbances associated with menopause, ADHD, obsessive-compulsive disorder (OCD), seasonal affective disorder (SAD), premenstrual syndrome (PMS), social phobia.	Usually well tolerated. Can cause insomnia, vivid dreams, restlessness, agitation, irritability, GI discomfort, diarrhea, fatigue, dry mouth, dizziness, headache. May decrease effect of alprazolam, amitriptyline, oral contraceptives, cyclosporine, imatinib, irinotecan, NNRTIs, phenytoin, protease inhibitors, tacrolimus, warfarin. May cause additive serotonergic effects with antidepressants, paroxetine, sertraline, tramadol.
Turmeric	Osteoarthritis, rheumatoid arthritis, dyspepsia, abdominal pain, Crohn's disease, ulcerative colitis, diarrhea, flatulence, loss of appetite, hepatitis, <i>H. pylori</i> , peptic ulcers, irritable bowel syndrome.	Usually well tolerated. Can cause dyspepsia, diarrhea, distention, GERD, nausea, vomiting. May increase risk of bleeding with antiplatelets/anticoagulants. May increase risk of hypoglycemia with antidiabetic drugs.

Name	Uses	Comments
Valerian	Insomnia, anxiety-associated restlessness, sleeping disorders.	Can cause headache, excitability, insomnia, gastric discomfort, dry mouth, vivid dreams, morning drowsiness. May have additive sedative effects with alcohol, benzodiazepines, other CNS depressants.
Yohimbe	Aphrodisiac, impotence, exhaustion, angina, hypertension, diabetic neuropathy, postural hypotension.	Can cause excitation, tremors, insomnia, anxiety, hypertension, tachycardia, dizziness, irritability, headache, fluid retention, rash, nausea, vomiting. High doses can cause respiratory depression. May have additive effects with MAOIs. Tyramine-containing foods increase risk of hypertensive crisis.

LIFESPAN, CULTURAL ASPECTS, AND PHARMACOGENOMICS OF DRUG THERAPY

LIFESPAN

Drug therapy is unique to pts of different ages. Age-specific competencies involve understanding the development and health needs of the various age groups. Pregnant pts, children, and elderly people represent different age groups with important considerations during drug therapy.

CHILDREN

In pediatric drug therapy, drug administration is guided by the age of the child, weight, level of growth and development, and height. The dosage ordered is to be given either by kilogram of body weight or by square meter of body surface area, which is based on the height and weight of the child. Many dosages based on these calculations must be individualized based on pediatric response.

If the oral route of administration is used, often syrup or chewable tablets are given. Additionally, sometimes medication is added to liquid or mixed with foods. Remember to never force a child to take oral medications because choking or emotional trauma may ensue.

If an intramuscular injection is ordered, the vastus lateralis muscle in the midlateral thigh is used because the gluteus maximus is not developed until walking occurs and the deltoid muscle is too small. For intravenous medications, administer very slowly in children. If given too quickly, high serum drug levels will occur with the potential for toxicity.

PREGNANCY

Women of childbearing years should be asked about the possibility of pregnancy before any drug therapy is initiated. Advise a woman who is either planning a pregnancy or believes she may be pregnant to inform her physician immediately. During pregnancy, medications given to the mother pass to the fetus via the placenta. Teratogenic (fetal abnormalities) effects may occur. Breastfeeding while the mother is taking certain medications may not be recommended due to the potential for adverse effects on the newborn.

The choice of drug ordered for pregnant women is based on the stage of pregnancy because the fetal organs develop during the first trimester. Cautious use of drugs in women of reproductive age who are sexually active and who are not using contraceptives is essential to prevent the potential for teratogenic or embryotoxic effects.

ELDERLY

Elderly people are more likely to experience an adverse drug reaction owing to physiologic changes (e.g., visual, hearing, mobility changes, chronic diseases) and cognitive changes (short-term memory loss or alteration in the thought process) that may lead to multiple medication dosing. In chronic disease states such as hypertension, glaucoma, asthma, or arthritis, the daily ingestion of multiple medications increases the potential for adverse reactions and toxic effects.

Decreased renal or hepatic function may lower the metabolism of medications in the liver and reduce excretion of medications, thus prolonging the half-life of the drug

and the potential for toxicity. Dosages in elderly people should initially be smaller than for the general adult population and then slowly titrated based on pt response and therapeutic effect of the medication.

CULTURE

The term *ethnopharmacology* was first used to describe the study of medicinal plants used by indigenous cultures. More recently, it is being used as a reference to the action and effects of drugs in people from diverse racial, ethnic, and cultural backgrounds. Although there are insufficient data from investigations involving people from diverse backgrounds that would provide reliable information on ethnic-specific responses to all medications, there is growing evidence that modifications in dosages are needed for some members of racial and ethnic groups. There are wide variations in the perception of side effects by pts from diverse cultural backgrounds. These differences may be related to metabolic differences that result in higher or lower levels of the drug, individual differences in the amount of body fat, or cultural differences in the way individuals perceive the meaning of side effects and toxicity. Nurses and other health care providers need to be aware that variations can occur with side effects, adverse reactions, and toxicity so that pts from diverse cultural backgrounds can be monitored.

Some cultural differences in response to medications include the following:

African Americans: Generally, African Americans are less responsive to beta blockers (e.g., propranolol [Inderal]) and angiotensin-converting enzyme (ACE) inhibitors (e.g., enalapril [Vasotec]).

Asian Americans: On average, Asian Americans have a lower percentage of body fat, so dosage adjustments must be made for fat-soluble vitamins and other drugs (e.g., vitamin K used to reverse the anticoagulant effect of warfarin).

Hispanic Americans: Hispanic Americans may require lower dosages and may experience a higher incidence of side effects with tricyclic antidepressants (e.g., amitriptyline).

Native Americans: Alaskan Eskimos may suffer prolonged muscle paralysis with the use of succinylcholine when administered during surgery.

There has been a desire to exert more responsibility over one's health and, as a result, a resurgence of self-care practices. These practices are often influenced by folk remedies and the use of medicinal plants. In the United States, there are several major ethnic population subgroups (white, black, Hispanic, Asian, and Native Americans). Each of these ethnic groups has a wide range of practices that influence beliefs and interventions related to health and illness. At any given time, in any group, treatment may consist of the use of traditional herbal therapy, a combination of ritual and prayer with medicinal plants, customary dietary and environmental practices, or the use of Western medical practices.

AFRICAN AMERICANS

Many African Americans carry the traditional health beliefs of their African heritage. Health denotes harmony with nature of the body, mind, and spirit, whereas illness is seen as disharmony that results from natural causes or divine punishment. Common practices to the art of healing include treatments with herbals and rituals known empirically to restore health. Specific forms of healing include using home remedies, obtaining medical advice from a physician, and seeking spiritual healing.

Examples of healing practices include the use of hot baths and warm compresses for rheumatism, the use of herbal teas for respiratory illnesses, and the use of kitchen condiments in folk remedies. Lemon, vinegar, honey, saltpeter, alum, salt, baking soda,

and Epsom salt are common kitchen ingredients used. Goldenrod, peppermint, saffron, parsley, yarrow, and rabbit tobacco are a few of the herbals used.

HISPANIC AMERICANS

The use of folk healers, medicinal herbs, magic, and religious rituals and ceremonies are included in the rich and varied customs of Hispanic Americans. This ethnic group believes that God is responsible for allowing health or illness to occur. Wellness may be viewed as good luck, a reward for good behavior, or a blessing from God. Praying, using herbals and spices, wearing religious objects such as medals, and maintaining a balance in diet and physical activity are methods considered appropriate in preventing evil or poor health.

Hispanic ethnopharmacology is more complementary to Western medical practices. After the illness is identified, appropriate treatment may consist of home remedies (e.g., use of vegetables and herbs), use of over-the-counter patent medicines, and use of physician-prescribed medications.

ASIAN AMERICANS

For Asian Americans, harmony with nature is essential for physical and spiritual well-being. Universal balance depends on harmony among the elemental forces: fire, water, wood, earth, and metal. Regulating these universal elements are two forces that maintain physical and spiritual harmony in the body: the *yin* and the *yang*. Practices shared by most Asian cultures include meditation, special nutritional programs, herbology, and martial arts.

Therapeutic options available to traditional Chinese physicians include prescribing herbs, meditation, exercise, nutritional changes, and acupuncture.

NATIVE AMERICANS

The theme of total harmony with nature is fundamental to traditional Native American beliefs about health. It is dependent on maintaining a state of equilibrium among the physical body, the mind, and the environment. Health practices reflect this holistic approach. The method of healing is determined traditionally by the medicine man, who diagnoses the ailment and recommends the appropriate intervention.

Treatment may include heat, herbs, sweat baths, massage, exercise, diet changes, and other interventions performed in a curing ceremony.

EUROPEAN AMERICANS

Europeans often use home treatments as the front-line interventions. Traditional remedies practiced are based on the magical or empirically validated experience of ancestors. These cures are often practiced in combination with religious rituals or spiritual ceremonies.

Household products, herbal teas, and patent medicines are familiar preparations used in home treatments (e.g., saltwater gargle for sore throat).

PHARMACOGENOMICS

Traditionally, medications are prescribed using a “one size fits all” philosophy. In general, the genetic makeup is similar in all humans, regardless of race or sex. However, people inherit variations in their genes, which can affect the way a person responds to a medication. A genetic variation may make a medication stay in the body longer, causing serious side effects, or a variation may make the medication less potent.

For example, two people taking the same cancer medication may have very different responses. One may have severe, life-threatening side effects, whereas the second may have few, if any, side effects. The drug may shrink a tumor in one person but not in another.

Pharmacogenomics examines how a person's genetic makeup affects response to medications. Although widespread application still lies in the future, pharmacogenomics has the potential to personalize medical therapies. Physicians eventually will be able to prescribe medications based on an individual's genotype, thereby maximizing effectiveness and minimizing side effects.

Pharmacogenomics is an expanding field that explores the effect of interindividual genetic differences on pharmacokinetics, pharmacodynamics, drug efficiency, and safety of drug treatments. Pharmacogenomic biomarkers (proteins) can provide predictive tools for improving drug response and reducing adverse drug reactions. These biomarkers mainly originate from genes encoding drug-metabolizing enzymes, drug transporters, drug targets, and human leukocyte antigens. Currently, more than 100 drugs contain pharmacogenomic information in the package labeling. The goal is to develop personalized genetic-based strategies that will optimize therapeutic outcomes.

Personalized treatments are especially warranted when prescribing medications with a narrow therapeutic index or when toxicity can be life threatening. Antineoplastics, anticoagulants, and anti-HIV therapies are often administered at maximum tolerated doses. This approach can result in toxicity and/or produce a poor response to therapy. Severe adverse drug reactions are one of the most common reasons for hospital admissions. Genetic testing for drug responses is expected to decrease hospitalizations by as much as 30%.

Carbamazepine (Tegretol) has been linked to dose-dependent side effects and life-threatening adverse effects. It is metabolized by enzymes encoded by the CYP3A4 gene to its active metabolite. An association has been found between the HLA-B*1502 allele and risk of Stevens-Johnson syndrome/toxic epidermal necrolysis, particularly in Asians. Before initiating carbamazepine treatment in high-risk patients, genetic testing for the HLA-B*1502 allele is recommended by the Food and Drug Administration (FDA).

Tumor cells carry the same genetic polymorphisms of normal cells. However, malignant cells are genetically unstable and can produce genetic changes that can alter disposition of active drug at the tumor site. Genetic analysis of tumors can help predict therapeutic benefit (or lack thereof) of targeted biologics such as **trastuzumab (Herceptin)** for ERBB2 (*HER2*)-amplified breast cancers or **erlotinib (Tarceva)** for epidermal growth factor receptor (EGFR)-overexpressing lung cancers.

Genetic mutations in tumors can also predict resistance to treatment, as noted in colorectal cancers, where activating mutations in *KRAS* are known to be a predictive marker for resistance to the EGFR-specific monoclonal antibodies **cetuximab (Erbix)** and **panitumumab (Vectibix)**.

By utilizing the information provided by pharmacogenomic testing, drug therapy is changing to a more individualized approach. Anticipated benefits of pharmacogenomics include creation of better vaccines, safer medications targeted to specific diseases, and more appropriate dosing of medications at the onset of therapy. Ultimately, we may see a decrease in health care costs due to more efficient clinical trials, reduced adverse drug reactions, and less time needed to find effective therapy for patients.

NORMAL LABORATORY VALUES

HEMATOLOGY/COAGULATION

Test	Normal Range
Activated partial thromboplastin time (aPTT)	25–35 sec
Erythrocyte count (RBC count)	M: 4.5–5.5 million cells/mm ³ F: 4.0–4.9 million cells/mm ³
Hematocrit (HCT, Hct)	M: 41%–50% F: 36%–44%
Hemoglobin (Hb, Hgb)	M: 13.5–16.5 g/dL F: 12.0–15.0 g/dL
Leukocyte count (WBC count)	4.5–10.0 thousand cells/mm ³
Leukocyte differential count	
Basophils	0%–0.75%
Eosinophils	1%–3%
Lymphocytes	25%–33%
Monocytes	3%–7%
Neutrophils—bands	3%–5%
Neutrophils—segmented	54%–62%
Mean corpuscular hemoglobin (MCH)	26–34 pg/cell
Mean corpuscular hemoglobin concentration (MCHC)	31%–37% Hb/cell
Mean corpuscular volume (MCV)	80–100 fL
Partial thromboplastin time (PTT)	60–85 sec
Platelet count (thrombocyte count)	100–450 thousand/mm ³
Prothrombin time (PT)	11–13.5 sec
RBC count (see Erythrocyte count)	

CLINICAL CHEMISTRY (SERUM PLASMA, URINE)

Test	Normal Range
Alanine aminotransferase (ALT)	8–36 units/L 8–78 units/L (children 0–2 mos)
Albumin	3.2–5 g/dL
Alkaline phosphatase	33–131 (adults 25–60 yrs) 51–153 (adults older than 60 yrs)
Amylase	30–110 units/L
Aspartate aminotransferase (AST)	5–35 units/L
Bilirubin (direct)	0–0.3 mg/dL
Bilirubin (total)	0.1–1.2 mg/dL
BUN	7–20 mg/dL

Test	Normal Range
Calcium, ionized	2.24–2.46 mEq/L
Calcium (total)	8.6–10.3 mg/dL
Carbon dioxide (CO ₂) total	23–30 mEq/L
Chloride	95–108 mEq/L
Cholesterol (total)	Less than 200 mg/dL
HDL cholesterol	40–60 mg/dL
LDL cholesterol	Less than 160 mg/dL
Creatinine	0.5–1.4 mg/dL
Creatinine clearance	M: 80–125 mL/min/1.73 m ² F: 75–115 mL/min/1.73 m ²
Creatine kinase (CK) isoenzymes	0%
CK-BB	0%–3.9%
CK-MB (cardiac)	96%–100%
CK-MM (muscle)	
Creatine phosphokinase (CPK)	8–150 units/L
Ferritin	13–300 ng/mL
Glucose (preprandial)	Less than 115 mg/dL
Glucose (fasting)	60–110 mg/dL
Glucose (nonfasting, 2 hrs postprandial)	Less than 120 mg/dL
Hemoglobin A1c	Less than 8 mg/dL
Iron	66–150 mcg/dL
Iron-binding capacity, total (TIBC)	250–420 mcg/dL
Lactate dehydrogenase (LDH)	56–194 units/L
Lipase	23–208 units/L
Magnesium	1.6–2.5 mg/dL
Osmolality	289–308 mOsm/kg
Oxygen saturation	90–95 (arterial) 40–70 (venous)
pH	7.35–7.45 (arterial) 7.32–7.42 (venous)
Phosphorus, inorganic	2.8–4.2 mg/dL
Potassium	3.5–5.2 mEq/L
Protein (total)	6.5–7.9 g/dL
Sodium	134–149 mEq/L
Thyroid-stimulating hormone (TSH)	0.7–6.4 milliunits/L (adults 20 yrs or younger) 0.4–4.2 milliunits/L (adults 21–54 yrs) 0.5–8.9 milliunits/L (adults 55–87 yrs)
Transferrin	Greater than 200 mg/dL
Triglycerides (TG)	45–155 mg/dL
Urea nitrogen	7–20 mg/dL
Uric acid	M: 2–8 mg/dL F: 2–7.5 mg/dL

DRUG INTERACTIONS

OVERVIEW

A drug interaction is a situation in which a substance (e.g., another drug, food, or herbal) can affect the activity of a drug when administered together. This action can be synergistic (drug effect is increased) or antagonistic (drug effect is decreased). Drugs that increase the concentration of another drug can lead to an increase in side effects or even a drug overdose. Drugs that decrease the concentration of another drug may decrease the therapeutic effect.

Factors that may contribute to drug interactions include:

- **Old age:** Liver metabolism, renal function, nerve transmission decrease with age. Also a sensory decrease increases the chance of errors in drug administration.
- **Polypharmacy:** As the number of medications taken increases, the potential that some of them will interact is more likely.
- **Genetic factors:** Genes synthesize enzymes that metabolize drugs. Some races have genotypic variations that may decrease or increase the activity of these enzymes. This is seen in variations in the isozymes of cytochrome P450.
- **Hepatic or renal diseases:** Blood concentrations of drugs that are metabolized in the liver and/or eliminated by the kidneys may be altered if these organs are not functioning correctly.

Drug interactions may be the result of various processes. These processes may include alterations in the pharmacokinetics of the drug such as in the absorption, distribution, metabolism, and excretion or the result of pharmacodynamics properties of the drug (e.g., co-administration of a receptor antagonist and an agonist for the same receptor).

PHARMACOKINETIC INTERACTIONS

Modifying the effect of a drug may be caused by differences in absorption, distribution, metabolization, or excretion of one or both of the drugs compared with the expected behavior of each drug when taken individually.

ABSORPTION

Changes in motility: Some drugs such as the prokinetic agents increase the speed that a substance passes through the intestines. If a drug is present in the digestive tract's absorption zone for less time, its blood concentration will decrease. The opposite will occur with drugs that decrease intestinal motility.

Certain drugs require an acid stomach pH for absorption while others require the basic pH of the intestines. Modification in the pH could change this absorption. In the case of antacids, an increase in pH can alter the absorption of other drugs.

Drug solubility—Food: Absorption of some drugs can be reduced if administered together with food (e.g., warfarin and avocado).

Formation of nonabsorbable complexes:

- **Chelation:** The presence of di- or trivalent cations can cause the chelation of certain drugs, making them harder to absorb (e.g., tetracyclines or fluoroquinolones and dairy products).

- Binding with proteins: Some drugs (e.g., sucralfate) bind to proteins and for this reason, sucralfate is contraindicated in enteral feeding.
- Drugs that are retained in the intestinal lumen can form large complexes that impede their absorption. This can occur with cholestyramine if associated with drugs such as digoxin or warfarin.

Action on the P-glycoprotein of the enterocytes appears to be one of the mechanisms promoted by consumption of grapefruit juice in increasing the bioavailability of various drugs.

DISTRIBUTION

The main interaction mechanism is competition for plasma protein transport. The drug that arrives first binds with the plasma protein, leaving the second drug dissolved in plasma, which modifies its concentration (e.g., displacement of bilirubin from albumin binding site by ceftriaxone increases the risk of kernicterus in neonates).

METABOLISM

Most drugs are eliminated from the body, at least in part, by being changed chemically to a less lipid-soluble product (i.e., metabolized) and thus more likely to be excreted from the body via the kidney or bile. Drugs may go through two different metabolic processes: phase 1 and phase 2 metabolism.

In phase 1 metabolism, hepatic microsomal enzymes found in the endothelium of liver cells metabolize drugs via hydrolysis and oxidation and reduction reactions. These chemical reactions make the drug more water soluble. In phase 2 metabolism, large water-soluble substances (e.g., glucuronic acid, sulfate) are attached to the drug, forming inactive, or significantly less active, water-soluble metabolites. Phase 2 processes include glucuronidation, sulfation, conjugation, acetylation, and methylation.

Virtually any of the phase 1 and phase 2 enzymes can be inhibited, and some of these enzymes can be induced by drugs. Inhibiting the activity of metabolic enzymes results in increased concentrations of the drug (substrate), whereas inducing metabolic enzymes results in decreased concentrations of the drug (substrate).

The term “cytochrome P450” (CYP enzymes) refers to a family of more than 100 enzymes in the human body that modulate various physiologic functions. First identified in the 1950s, the CYP enzyme system contains two large subgroups: steroidogenic and xenobiotic enzymes. Only the xenobiotic group is involved in the metabolism of drugs. The xenobiotic group includes four major enzyme families: CYP1, CYP2, CYP3, and CYP4. The primary role of these families is the metabolism of drugs. These families are further subdivided into subfamilies designated by a capital letter and given a specific enzyme number (1, 2, 3, etc.) according to the similarity in amino acid sequence it shares with other enzymes (e.g., CYP1A2).

The key CYP450 enzymes include CYP1A2, CYP2C9, CYP2C19, CYP2D6, and CYP3A4 and may be responsible for metabolism of 75% of all drugs, with the CYP3A subfamily responsible for nearly half of this activity.

The CYP enzymes are found in the endoplasmic reticulum of cells in a variety of human tissue but are primarily concentrated in the liver and intestine. CYP enzymes can be both inhibited and induced, leading to increased or decreased serum concentration of the drug (along with its effects).

The following tables of CYP substrates, inhibitors, and inducers provide a perspective on drugs that are affected by, or affect, cytochrome P450 (CYP) enzymes.

CYP substrate includes drugs reported to be metabolized, at least in part, by one or more CYP enzymes. **CYP inhibitor** includes drugs reported to inhibit one or more CYP enzymes. **CYP inducer** contains drugs reported to induce one or more CYP enzymes.

P450 ENZYMES: SUBSTRATES, INHIBITORS, INDUCERS

CYP1A2 ENZYME

CYP1A2 SUBSTRATES	CYP1A2 INHIBITORS	CYP1A2 INDUCERS
Clozapine (Clozaril)	Cimetidine (Tagamet)	Barbiturates
Mirtazapine (Remeron)	Ciprofloxacin (Cipro)	Carbamazepine (Tegretol)
Olanzapine (Zyprexa)	Fluvoxamine	Rifampin (Rifadin)
Ramelteon (Rozerem)		Smoking
Ropinirole (Requip)		
Tizanidine (Zanaflex)		

- CYP1A2 enzyme is increasingly involved in drug interactions.
- More potent inhibitors include cimetidine, ciprofloxacin, and fluvoxamine.
- Smoking is the most important inducer, but rifampin and barbiturates also can increase enzyme activity.
- Example of reaction: Tizanidine plasma concentrations increased more than 30-fold when the inhibitor fluvoxamine was given concurrently.

CYP2C9 ENZYME

CYP2C9 SUBSTRATES	CYP2C9 INHIBITORS	CYP2C9 INDUCERS
Candesartan (Atacand)	Amiodarone (Cordarone)	Barbiturates
Celecoxib (Celebrex)	Clopidogrel (Plavix)	Carbamazepine (Tegretol)
Diclofenac (Voltaren)	Fluconazole (Diflucan)	Rifampin (Rifadin)
Glipizide (Glucotrol)	Metronidazole (Flagyl)	St. John's wort
Glyburide (DiaBeta)	Sulfamethoxazole	
Ibuprofen (Advil, Motrin)	Valproic acid (Depakote)	
Irbesartan (Avapro)		
Meloxicam (Mobic)		
Warfarin (Coumadin)		

- More potent inhibitors include amiodarone, metronidazole, and sulfamethoxazole.
- All of the inducers can substantially increase enzyme activity.
- Both warfarin and oral hypoglycemics are of serious concern with regard to drug interactions. Substrates warranting attention include warfarin and oral hypoglycemics.

CYP2C19 ENZYME

CYP2C19 SUBSTRATES	CYP2C19 INHIBITORS	CYP2C19 INDUCERS
Citalopram (Celexa)	Cimetidine (Tagamet)	Barbiturates
Diazepam (Valium)	Clopidogrel (Plavix)	Carbamazepine (Tegretol)
Escitalopram (Lexapro)	Esomeprazole (Nexium)	Rifampin (Rifadin)
Omeprazole (Prilosec)	Fluconazole (Diflucan)	St. John's wort
Pantoprazole (Protonix)	Fluvoxamine	
Sertraline (Zoloft)	Modafinil (Provigil)	

- Inhibition by itself does not frequently cause adverse effects compared with other CYP enzymes because many of the substrates do not have serious toxicity.
- Inhibition or induction of the enzyme nonetheless may result in an adverse drug interaction.
- Racial background is important in the likelihood of being deficient in this enzyme (e.g., 3%–5% of Caucasians and 12%–23% of Asians are poor metabolizers of this enzyme).

CYP2D6 ENZYME

CYP2D6 SUBSTRATES	CYP2D6 INHIBITORS	CYP2D6 INDUCERS
Amitriptyline (Elavil)	Amiodarone (Cordarone)	See comment below
Duloxetine (Cymbalta)	Bupropion (Wellbutrin)	
Fluoxetine (Prozac)	Fluoxetine (Prozac)	
Metoclopramide (Reglan)	Paroxetine (Paxil)	
Metoprolol (Lopressor)		
Paroxetine (Paxil)		
Risperidone (Risperdal)		
Tamoxifen (Nolvadex)		
Tolterodine (Detrol)		
Tramadol (Ultram)		
Venlafaxine (Effexor)		

- Potent inhibitors include fluoxetine and paroxetine.
- Evidence suggests that this enzyme is not very susceptible to enzyme induction.
- Genetics, rather than drug therapy, account for most ultra-rapid metabolizers (e.g., Greeks, Portuguese, Saudis, and Ethiopians have high enzyme activity).

CYP3A4 ENZYME

CYP3A4 SUBSTRATES	CYP3A4 INHIBITORS	CYP3A4 INDUCERS
Alfuzosin (Uroxatral)	Amiodarone (Cordarone)	Carbamazepine (Tegretol)
Alprazolam (Xanax)	Clarithromycin (Biaxin)	Efavirenz (Sustiva)
Budesonide (Entocort EC)	Diltiazem (Cardizem)	Phenobarbital
Carbamazepine (Tegretol)	Fluconazole (Diflucan)	Rifampin (Rifadin)
Cyclosporine (Neoral)	Fluoxetine (Prozac)	St. John's wort
Fluticasone (Flovent)	Itraconazole (Sporanox)	
Lovastatin (Mevacor)	Ketoconazole (Nizoral)	
Sildenafil (Viagra)	Verapamil (Calan, Isoptin)	
Simvastatin (Zocor)		

- This enzyme metabolizes about half of all medications on the market.
- Drug toxicity of CYP3A4 substrates due to inhibition of CYP3A4 is relatively common.
- This enzyme is very sensitive to induction, tending to lower plasma concentrations of substrates, resulting in reduced efficacy of the substrate.
- Most potent inhibitors include clarithromycin, itraconazole, and ketoconazole.

- Rifampin is a potent inducer and may reduce serum concentrations of substrates by as much as 90%.

EXCRETION

RENAL EXCRETION

Only the free fraction of a drug that is dissolved in the blood is removed via the kidneys. Drugs that are tightly bound to proteins are not available for renal excretion, as long as they are not metabolized when they may be excreted as metabolites. Creatinine clearance is used as a measure of kidney function.

BILE EXCRETION

Bile excretion always involves energy in active transport across the epithelium of the bile duct against a concentration gradient. Bile excretion of drugs mainly occurs when their molecular weight is greater than 300 and contain both polar and lipophilic groups. Glucuronidation of the drug in the kidney will also enhance bile excretion.

PHARMACODYNAMIC INTERACTIONS

PHARMACOLOGIC RECEPTORS

- **Pure agonists:** Drugs bind to the main locus of the receptor, causing a similar effect to that of the main drug. For example, fentanyl and midazolam can lead to increased sedation, or vancomycin and an aminoglycoside can lead to increased potential for nephrotoxicity.
- **Partial agonists:** Drugs bind to one of the receptor's secondary loci, having the same effect to that of the main drug but with lower intensity.
- **Antagonists:** Drugs bind directly to the receptor's main locus but their effect is opposite to that of the main drug. For example, an opioid and naloxone cause a decreased effect of the opioid, reversal of sedation, respiratory depression, and hypotension.

SIGNAL TRANSDUCTION MECHANISMS

These are processes that commence after the interaction of the drug with the receptor. For example, hypoglycemia produces a release of catecholamines, which triggers compensation mechanisms that increase blood glucose levels. For example, if a patient is taking both insulin (which reduces glucose) and also a beta blocker for heart disease, the beta blocker will block the catecholamine receptors. This will block the reaction triggered by the catecholamines if hypoglycemia occurs, with an increased risk of a serious reaction.

Appendix J

ANTIDOTE/REVERSAL AGENTS

Agent	Antidote/ Reversal Agents	Dosage
Acetaminophen	Acetylcysteine (Acetadote, Mucomyst)	PO: ADULTS, CHILDREN: Loading dose: 140 mg/kg, then 70 mg/kg q4h for a total of 18 doses. Total dose delivered: 1,330 mg/kg. IV: ADULTS, CHILDREN: Loading dose: 150 mg/kg over 60 min, then 50 mg/kg over 4 hrs, then 100 mg/kg over 16 hrs. Total dose delivered: 300 mg/kg.
Anticholinergic agents (e.g., atropine)	Physostigmine	IM/IV/SQ: ADULTS: Initially, 0.5–2 mg, then repeat q20min until response occurs or adverse effects occur. Repeat 1–4 mg q30–60min as life-threatening symptoms recur. IV: CHILDREN (Reserve for life-threatening situation only): 0.01–0.03 mg/kg/dose. May repeat after 15–20 min to maximum total dose of 2 mg, or until response occurs or adverse cholinergic effects occur.
Apixaban (Eliquis)	Kcentra Prothrombin Complex concentrate (Factors II, VII, IX, X, Protein C, Protein S)	Dose based on pre-dose INR, expressed in units of factor IX activity. (Give with Vitamin K) INR 2 to <4: 25 units/kg. Maximum: 2,500 units. INR 4–6: 35 units/kg. Maximum: 3,500 units. INR >6: 50 units/kg. Maximum: 5,000 units.
Apixaban (Eliquis)/rivaroxaban (Xarelto)	Andexanet alfa (Andexxa)	Apixaban (5 mg or less)/rivaroxaban (10 mg or less): 4 mg IV bolus, then 4 mg/min for up to 120 min. Apixaban (more than 5 mg)/rivaroxaban (more than 10 mg): 800 mg IV bolus, then 8 mg/min for up to 120 min.
Arsenic	Dimercaprol (BAL in oil)	Mild Poisoning IM: ADULTS, CHILDREN: 2.5 mg/kg/dose q6h for 2 days, then q12h for 1 day, then once daily for 10 days. Severe Poisoning IM: ADULTS, CHILDREN: 3 mg/kg/dose q4h for 2 days, then q6h for 1 day, then q12h for 10 days.
Benzodiazepines (e.g., midazolam)	Flumazenil (Romazicon)	IV: ADULTS: 0.2 mg over 30 sec. May give 0.3-mg dose after 30 sec if desired LOC not obtained. Additional doses of 0.5 mg can be given over 30 sec at 1-min intervals up to cumulative dose of 3 mg. CHILDREN: 0.01 mg/kg (maximum: 0.2 mg) with repeat doses of 0.01 mg/kg (maximum: 0.2 mg) given every minute to maximum total cumulative dose of 1 mg.
Beta blockers (e.g., propranolol)	Glucagon	IV: ADULTS: 5–10 mg over 1 min, followed by infusion of 1–10 mg/hr.

Continued

Agent	Antidote/ Reversal Agents	Dosage
Calcium channel blockers (e.g., verapamil)	Glucagon	IV: ADULTS: 5–10 mg over 1 min, followed by infusion of 1–10 mg/hr.
Carbamate pesticides	Atropine	IV: ADULTS: Initially, 1–5 mg doubled q5min until signs of muscarinic excess abate. IV INFUSION: ADULTS: 0.5–1 mg/hr. IM: ADULTS (Mild symptoms): 2 mg. If severe symptoms develop after first dose, 2 additional doses should be repeated in 10 min. (Severe symptoms): Immediately administer three 2-mg doses. IV: CHILDREN: 0.02–0.05 mg/kg q10-20min until atropine effect observed, then q1–4h for at least 24 hrs. IM: 0.5–2 mg/dose based on weight (0.5 mg: 15–40 lb, 1 mg: 41–90 lb, 2 mg: greater than 90 lb). (Mild symptoms): 1 injection. (Severe symptoms): 2 additional injections given in rapid succession 10 min after receiving first injection.
Dabigatran (Pradaxa)	Idarucizumab (Praxbind)	IV: 5 g (give as 2 separate 2.5 g doses no more than 15 minutes apart).
Digoxin (Lanoxin)	Digoxin immune FAB (Digibind)	ADULTS Unknown amount of ingestion: 800 mg IV infusion if acute ingestion, 240 mg IV infusion if chronic ingestion. Dosing for Ingestion of Single Large Dose Dose (in no. of vials) = (Total digitalis body load in mg)/(0.5 mg of digitalis bound per vial). Total digitalis body load in mg = (No. of tablets/capsules ingested) × (mg strength of tablet/capsule) × (bioavailability of tablet/capsule). Digoxin tablets and elixir are 80% bioavailable. Digoxin capsules and injection are 100% bioavailable. Dosing Based on Serum Level Digoxin: Dose (in no. of vials) = (Serum digoxin level in ng/mL) × (weight in kg)/(100). Digitoxin: Dose (in no. of vials) = (Serum digitoxin level in ng/mL) × (weight in kg)/(1,000). CHILDREN Dosing for Ingestion of Single Large Dose Dose (in no. of vials) = (Total digitalis body load in mg)/(0.5 mg of digitalis bound per vial). Total digitalis body load in mg = (No. of tablets/capsules ingested) × (mg strength of tablet/capsule) × (bioavailability of tablet/capsule). Digoxin tablets and elixir are 80% bioavailable. Digoxin capsules and injection are 100% bioavailable. WEIGHING 20 kg or less: Dilution of reconstituted vial to 1 mg/mL may be desirable for doses of 3 mg or less. Dose (in no. of mg) = Dose (in no. of vials) × 38 mg/vial. Dose (in no. of vials) = (Serum digoxin level in ng/mL) × (weight in kg)/(100).

Agent	Antidote/ Reversal Agents	Dosage
Edoxaban (Savaysa)	see apixaban (Eliquis)	see apixaban (Eliquis)
Ethylene glycol	Fomepizole (Antizol)	IV: ADULTS, CHILDREN: Loading dose 15 mg/kg, then 10 mg/kg q12h for 4 doses, then 15 mg/kg q12h thereafter until ethylene glycol levels reduced to less than 20 mg/dL and patient is asymptomatic with normal pH.
Extravasation vasoconstrictive agents (e.g., dopamine)	Phentolamine (Regitine)	ADULTS, CHILDREN: Infiltrate area with small amount of solution made by diluting 5–10 mg in 10 mL 0.9% NaCl within 12 hrs of extravasation. In general, do not exceed 0.1–0.2 mg/kg (5 mg total).
Heparin	Protamine	IV: ADULTS, CHILDREN: Dosage is determined by most recent dosage of heparin or low molecular weight heparin (LMWH): 1 mg protamine neutralizes 90–115 units of heparin and 1 mg (100 units) of LMWH. Maximum: 50 mg.
Hyperkalemia	Sodium polystyrene sulfonate (Kayexalate, SPS)	PO: ADULTS, ELDERLY: 15 g 1–4 times/day. CHILDREN: 1g/kg q6h.
Hypoglycemia	Glucagon	IM/IV/SQ: ADULTS, ELDERLY, CHILDREN: 1 mg, may repeat in 15 min as needed. If pt fails to respond, IV dextrose must be given.
Iron	Deferoxamine (Desferal)	Acute IM: ADULTS: Initially, 1,000 mg, then 500 mg q4h for 2 doses. Additional doses of 0.5 g q4–12h. Maximum: 6 g/24 hrs. CHILDREN 3 YRS AND OLDER: 90 mg/kg/dose q8h (not to exceed 1 g/dose). Maximum: 6 g/24 hrs. IV: ADULTS, CHILDREN: 15 mg/kg/hr. Maximum: 6 g/24 hrs. Chronic IM: ADULTS: 500–1,000 mg/day. IV: ADULTS, CHILDREN: 15 mg/kg/hr. Maximum: 12 g/24 hrs.
Isoniazid	Pyridoxine (vitamin B ₆)	IV: ADULTS, CHILDREN: Total dose of pyridoxine equal to amount of isoniazid ingested as first dose of 1–4 g IV, then 1 g IM q30min until total dose completed. If not known, give 5 g at rate of 1 g/min. May repeat q5–10min.

Continued

Agent	Antidote/ Reversal Agents	Dosage
Lead	Calcium EDTA	<p>Symptomatic Treat for 3–5 days; give in conjunction with dimercaprol. IM: ADULTS, CHILDREN: 167 mg/m² q4h. IV: ADULTS, CHILDREN: 1 g/m² as 8- to 24-hr infusion or divided q12h.</p> <p>Lead Encephalopathy Treat for 5 days; give concurrently with dimercaprol. IM: ADULTS, CHILDREN: 250 mg/m² q4h. IV: ADULTS, CHILDREN: 50 mg/kg/day as 24-hr continuous infusion.</p>
Lead	Dimercaprol (BAL in oil)	<p>Mild IM: ADULTS, CHILDREN: Loading dose 4 mg/kg, then 3 mg/kg/dose q4h for 2–7 days. Begin calcium EDTA with second dose.</p> <p>Severe and Lead Encephalopathy IM: ADULTS, CHILDREN: 4 mg/kg/dose q4h for 3–5 days. Begin calcium EDTA with second dose.</p>
Lead	Succimer (Chemet)	<p>PO: ADULTS, CHILDREN: 10 mg/kg/dose q8h for 5 days, then q12h for 14 days. Maximum: 500 mg/dose. Note: For children younger than 5 yrs, dose based on mg/m².</p>
Methanol	Fomepizole (Antizol)	<p>IV: ADULTS, CHILDREN: Loading dose 15 mg/kg, then 10 mg/kg q12h for 4 doses, then 15 mg/kg q12h thereafter until ethylene glycol levels reduced to less than 20 mg/dL and patient is asymptomatic with normal pH.</p>
Opioids (e.g., morphine)	Naloxone (Narcan)	<p>IV/IM/SQ: ADULTS: 0.4–2 mg/dose. May repeat every 2–3 min as needed. Therapy may need to be reassessed if no response is seen after cumulative dose of 10 mg. CHILDREN (5 YRS OR OLDER or WEIGHING 20 KG OR GREATER): 2 mg/dose IV/IM/SQ. May repeat every 2–3 min as needed. Therapy may need to be reassessed if no response is seen after cumulative dose of 10 mg. CHILDREN (WEIGHING LESS THAN 20 KG): 0.1 mg/kg/dose. May repeat every 2–3 min as needed.</p>

Agent	Antidote/ Reversal Agents	Dosage
Organophosphate pesticides	Atropine	<p>IV: ADULTS: Initially, 1–5 mg doubled q5min until signs of muscarinic excess abate.</p> <p>IV INFUSION: ADULTS: 0.5–1 mg/hr.</p> <p>IM: ADULTS (Mild symptoms): 2 mg. If severe symptoms develop after first dose, 2 additional doses should be repeated in 10 min. (Severe symptoms): Immediately administer three 2-mg doses.</p> <p>IV: CHILDREN: 0.02–0.05 mg/kg q10–20min until atropine effect observed, then q1–4h for at least 24 hrs.</p> <p>IM: 0.5–2 mg/dose based on weight (0.5 mg: 15–40 lb, 1 mg: 41–90 lb, 2 mg: greater than 90 lb). (Mild symptoms): 1 injection. (Severe symptoms): 2 additional injections given in rapid succession 10 min after receiving first injection.</p>
Organophosphate pesticides	Pralidoxime (Protopam)	<p>IM/IV: ADULTS: 1–2 g. Repeat in 1–2 hrs if muscle weakness has not been relieved, then at 10- to 12-hr intervals if cholinergic signs recur.</p> <p>CHILDREN: 20–50 mg/kg/dose. Repeat in 1–2 hrs if muscle weakness is not relieved, then at 10- to 12-hr intervals if cholinergic signs recur.</p>
Rivaroxaban (Xarelto)	See apixaban (Eliquis)	see apixaban (Eliquis)
Warfarin (Coumadin)	Phytonadione (vitamin K)	<p>PO/IV/SQ: ADULTS: 2.5–10 mg/dose. May repeat in 12–48 hrs if given PO, 6–8 hrs if given by IV or SQ route.</p> <p>CHILDREN: 0.5–5 mg depending on need for further anticoagulation, severity of bleeding.</p>

PREVENTING MEDICATION ERRORS AND IMPROVING MEDICATION SAFETY

Medication safety is a high priority for the health care professional. Prevention of medication errors and improved safety for the pt are important, esp. in today's health care environment when today's pt is older and sometimes sicker and the drug therapy regimen can be more sophisticated and complex.

A medication error is defined by the National Coordinating Council for Medication Error Reporting and Prevention (NCC MERP) as “any preventable event that may cause or lead to inappropriate medication use or pt harm while the medication is in the control of the health care professional, pt, or consumer.”

Most medication errors occur as a result of multiple, compounding events as opposed to a single act by a single individual.

Use of the wrong medication, strength, or dose; confusion over sound-alike or look-alike drugs; administration of medications by the wrong route; miscalculations (esp. when used in pediatric pts or when administering medications intravenously); and errors in prescribing and transcription all can contribute to compromising the safety of the pt. The potential for adverse events and medication errors is definitely a reality and is potentially tragic and costly in both human and economic terms.

Health care professionals must take the initiative to create and implement procedures to prevent medication errors from occurring and implement methods to reduce medication errors. The first priority in preventing medication errors is to establish a multidisciplinary team to improve medication use. The goal for this team would be to assess medication safety and implement changes that would make it difficult or impossible for mistakes to occur. Some important criteria in making improved medication safety successful include the following:

- Promote a nonpunitive approach to reducing medication errors.
- Increase the detection and the reporting of medication errors, near misses, and potentially hazardous situations that may result in medication errors.
- Determine root causes of medication errors.
- Educate about the causes of medication errors and ways to prevent these errors.
- Make recommendations to allow organization-wide, system-based changes to prevent medication errors.
- Learn from errors that occur in other organizations and take measures to prevent similar errors.

Some common causes and ways to prevent medication errors and improve safety include the following:

Handwriting: Poor handwriting can make it difficult to distinguish between two medications with similar names. Also, many drug names sound similar, esp. when the names are spoken over the telephone, poorly enunciated, or mispronounced.

- Take time to write legibly.
- Keep phone or verbal orders to a minimum to prevent misinterpretation.

- Repeat back orders taken over the telephone.
- When ordering a new or rarely used medication, print the name.
- Always specify the drug strength, even if only one strength exists.
- Express dosages for oral liquids only in metric weights or volumes (e.g., mg or mL), not by teaspoon or tablespoon.
- Print generic and brand names of look-alike or sound-alike medications.

Zeros and decimal points: Hastily written orders can present problems even if the name of the medication is clear.

- Never leave a decimal point “naked.” Place a zero before a decimal point when the number is less than a whole unit (e.g., use 0.25 mg or 250 mcg, **not** .25 mg).
- Never have a trailing zero following a decimal point (e.g., use 2 mg, **not** 2.0 mg).

Abbreviations: Errors can occur because of a failure to standardize abbreviations. Establishing a list of abbreviations that should never be used is recommended.

- Never abbreviate unit as “U”; spell out “unit.”
- Do not abbreviate “once daily” as OD or QD or “every other day” as QOD; spell it out.
- Do not use D/C, as this may be misinterpreted as either discharge or discontinue.
- Do not abbreviate drug names; spell out the generic and/or brand names.

Ambiguous or incomplete orders: These types of orders can cause confusion or misinterpretation of the writer’s intention. Examples include situations when the route of administration, dose, or dosage form has not been specified.

- Do not use slash marks—they may be read as the number one (1).
- When reviewing an unusual order, verify the order with the person writing the order to prevent any misunderstanding.
- Read over orders after writing.
- Encourage that the drug’s indication for use be provided on medication orders.
- Provide complete medication orders—do not use “resume preop” or “continue previous meds.”
- Provide the age and, when appropriate, the weight of the pt.

High-alert medications: Medications in this category have an increased risk of causing significant pt harm when used in error. Mistakes with these medications may or may not be more common but may be more devastating to the pt if an error occurs. A list of high-alert medications can be obtained from the Institute for Safe Medication Practices (ISMP) at www.ismp.org.

Technology available today that can be used to address and help solve potential medication problems or errors includes the following:

- Electronic prescribing systems—This refers to computerized prescriber order entry systems. Within these systems is the capability to incorporate medication safety alerts (e.g., maximum dose alerts, allergy screening). Additionally, these systems should be integrated or interfaced with pharmacy and laboratory systems to provide drug-drug and drug-disease interactions alerts and include clinical order screening capability.
- Bar codes—These systems are designed to use bar-code scanning devices to validate identity of pts, verify medications administered, document administration, and provide safety alerts.

- “Smart” infusion pumps—These pumps allow users to enter drug infusion protocols into a drug library along with predefined dosage limits. If a dosage is outside the limits established, an alarm is sounded and drug delivery is halted, informing the clinician that the dose is outside the recommended range.
- Automated dispensing systems; point-of-use dispensing system—These systems should be integrated with information systems, esp. pharmacy systems.
- Pharmacy order entry system—This should be fully integrated with an electronic prescribing system with the capability of producing medication safety alerts. Additionally, the system should generate a computerized medication administration record (MAR), which would be used by the nursing staff while administering medications.

Medication reconciliation: Medication errors generally occur at transition points in the pt’s care (admission, transfer from one level of care to another [e.g., critical care to general care area], and discharge). Incomplete documentation can account for up to 60% of potential medication errors. Therefore, it becomes necessary to accurately and completely reconcile medication across the continuum of care. This includes the name, dosage, frequency, and route of medication administration.

Medication reconciliation programs are a process of identifying the most accurate list of all medications a pt is taking and using this list to provide correct medications anywhere within the health care system. The focus is on not only compiling a list but using the list to reduce medication errors and provide quality pt care.

Additional Strategies to Reduce Medication Errors

The ISMP, Food and Drug Administration (FDA), and other agencies have identified high-risk areas associated with medication errors. They include the following:

At-risk population: At-risk populations primarily include pediatric and geriatric pts. For both, this risk is due to altered pharmacokinetic parameters with little published information regarding medication use in these groups. Additionally, in the pediatric population, the risk is due to the need for calculating doses based on age and weight, lack of available dosage forms, and concentrations for smaller children.

In a USP report, more than one-third of medication errors reaching the pt occurred in pts 65 yrs of age and older. Almost 40% of people 60 yrs and older take at least five medications. More than 50% of fatal hospital medication errors involve seniors. In the senior population, age-related physiologic changes (e.g., decreased renal function, reduced muscle mass) increase the risk for adverse events.

Avoid abbreviations and nomenclature: The confusion caused by abbreviations has prompted the ISMP to develop a list of abbreviations that should be avoided (see back cover of handbook).

Recognize prescription look-alike and sound-alike medications: The ISMP has developed an extensive list of confused drug names (see www.jointcommission.org). See individual monographs for **DO NOT CONFUSE** information.

Focus on high-alert medications: High-alert medications are medications that bear a heightened risk of causing significant pt harm if incorrectly used. High-alert medications in the handbook have a colored background for the entire monograph.

Look for duplicate therapies and interactions: Drug interactions and duplicate therapies can increase risk of adverse reactions. Refer to individual monographs for significant interaction information (drug, herbal, food).

Report errors to improve process: This action plays an important role in preventing further errors. The intent is to identify system failures that can be altered to prevent further errors.

PARENTERAL FLUID ADMINISTRATION

Replacing fluids in the body is based on body fluid needs. Water comprises approximately 60% of the adult body. Approximately 40% is intracellular fluid and 20% is extracellular fluid, of which 15% is interstitial (tissues) and 5% is intravascular. The walls separating these compartments are porous, allowing water to move freely between them. Small particles such as sodium and chloride can pass through the walls, but larger molecules such as proteins and starches usually are unable to pass through the walls.

Hydrostatic and osmotic pressures are forces that move water and regulate the body's water. Intravenous fluid manipulates these two pressures. Hydrostatic pressure reflects the weight and volume of water. The greater the volume, the higher the blood pressure.

Effects of Osmotic Pressure: *Osmosis* is the diffusion of water across a semipermeable membrane from an area of high concentration to an area of low concentration (water moves into the compartment of higher concentration of particles, or solute). This is similar to the action of a sponge soaking up water. This pull is referred to as *osmotic pressure*. It is the number of particles in each compartment that keeps water where it is supposed to be. By administering fluids with more (or fewer) particles than blood plasma, fluid is pulled into the compartment where it is needed the most.

How do we know where the water is needed? To assess water balance, measure the *osmolality* of blood plasma (number of particles [osmoles] in a kilogram of fluid). *Osmolarity* is the number of particles in a liter of fluid. Normal serum osmolality is approximately 300 milliosmoles (mOsm) per liter.

Crystalloids are made of substances that form crystals (e.g., sodium chloride) and are small, so easy movement between compartments is possible. Crystalloids are categorized by their tonicity (a synonym for osmolality). An isotonic solution has the same number of particles (osmolality) as plasma and will not promote a shift of fluids into or out of cells. Examples of isotonic crystalloid solutions are 0.9% sodium chloride and lactated Ringer's solution. Dextrose 5% in water is another isotonic crystalloid. However, it is quickly metabolized, and the fluid quickly becomes hypotonic. Hypotonic solutions (e.g., D₅W, 0.45% sodium chloride) are a good source of free water, causing a shift out of the vascular bed and into cells by way of osmosis. Hypotonic solutions are given to correct cellular dehydration and hyponatremia. Hypertonic solutions have more particles than body water and pull water back into the circulation, which can shrink cells.

SODIUM CHLORIDE

USES

- Extracellular fluid replacement when chloride loss is greater than or equal to sodium loss
- Treatment of metabolic alkalosis in the presence of fluid loss; chloride ions cause a compensatory decrease of bicarbonate ions
- Sodium depletion, extracellular fluid volume deficit with sodium deficit
- Initiation and termination of blood transfusion, preventing hemolysis of RBCs (occurs with Dextrose in Water solutions)

SIDE EFFECTS/ABNORMALITIES

- Hyponatremia
- **Acidosis:** 0.9% sodium chloride contains one-third more chloride ions than is present in extracellular fluid; excess chloride ions cause loss of bicarbonate, resulting in acidosis
- **Hypokalemia:** Increased potassium excretion at the same time extracellular fluid is increasing, which further decreases potassium concentration in extracellular fluid
- Circulatory overload

DEXTROSE (GLUCOSE)**EFFECTS**

- Provides calories for essential energy
- Improves hepatic function because it is converted into glycogen
- Sparing body protein, preventing unnecessary breakdown of protein tissue
- Prevents ketosis
- Stored in the liver as glycogen, causing a shift of potassium from extracellular to intracellular fluid compartment

USES

- Dehydration
- Hyponatremia
- Hyperkalemia
- Vehicle of drug delivery and nutrition

Note: Once infused, dextrose is rapidly metabolized to water and carbon dioxide, becoming hypotonic rather than isotonic.

SIDE EFFECTS/ABNORMALITIES

- Dehydration: Osmotic diuresis occurs if dextrose is given faster than the pt's ability to metabolize it
- Hypokalemia (see Effects)
- Hyperinsulinism due to rapid infusion of hypertonic solution
- Water intoxication due to an imbalance based on increase in extracellular fluid volume from water alone

SELECTED PARENTERAL FLUIDS

Solution	Comments
Dextrose 5% in Water (D ₅ W)	Supplies approximately 170 cal/L and free water to aid in renal excretion of solutes Avoid excessive volumes in pts with increased antidiuretic hormone activity or to replace fluids in hypovolemic pts
0.9% Sodium chloride (0.9% NaCl)	Isotonic fluid commonly used to expand extracellular fluid in presence of hypovolemia Can be used to treat mild metabolic alkalosis

1300 Appendix L Parenteral Fluid Administration

Solution	Comments
0.45% Sodium chloride (0.45% NaCl)	Hypotonic solution that provides sodium, chloride, and free water; sodium and chloride allow kidneys to select and retain needed amounts Free water is desirable as aid to kidneys in elimination of solutes
3% Sodium chloride	Used only to treat severe hyponatremia
Lactated Ringer's solution	Isotonic solution that contains sodium, potassium, calcium, and chloride in approximately the same concentrations as found in plasma Used to treat hypovolemia, burns, and fluid loss as bile or diarrhea

Appendix M

COMMON TERMINOLOGY CRITERIA FOR ADVERSE EVENTS (CTCAE)

The Common Terminology Criteria for Adverse Events (CTCAE) is descriptive terminology used for reporting an adverse event (AE) in a concise and standardized manner. It is supported by the U.S. Department of Health and Human Services, National Institutes of Health, and National Cancer Institute. An AE term is a unique representation of a specific event that can be used for medical documentation and scientific analyses. Along with cancer medications, other drugs may use the CTCAE system for dose and treatment modifications.

CTCAE terms are grouped by system organ classes, such as *Blood/Lymphatic*, *GI*, *Nervous*, *Renal*, and *Respiratory* disorders. Within each system organ class, AEs are listed and accompanied by a brief description. A grading scale is then provided for each AE term, and each grade refers to a specific severity.

The CTCAE grading scale displays grades 1–5 with particular descriptions and/or recommendations. The severity for each AE is based on the following generalized guidelines: **Grade 1:** Asymptomatic or mild symptoms; clinical or diagnostic observations only; intervention not indicated. **Grade 2:** Moderate; minimal, local, or noninvasive intervention indicated; limiting age-appropriate instrumental activity of daily living (ADL). **Grade 3:** Severe or medically significant but not immediately life threatening; hospitalization or prolonged hospitalization indicated; disabling; limiting self-care ADL. **Grade 4:** Life-threatening consequences; urgent intervention indicated. **Grade 5:** Death related to AE.

CTCAE EXAMPLES

Adverse Event	Grade				
	1	2	3	4	5
<i>Blood/Lymphatic</i> Anemia	Hgb < lower limit of normal–10 g/dL	Hgb 8–10 g/dL	Hgb <8 g/dL; transfusion indicated	Life-threatening consequences Urgent intervention indicated	Death
<i>Gastrointestinal</i> Diarrhea	Increase of <4 stools/day over baseline Mild ostomy output	Increase of 4–6 stools/day over baseline Moderate ostomy output	Increase of 7 stools/day over baseline Severe ostomy output Hospitalization required	Life-threatening consequences Urgent intervention indicated	Death
<i>General</i> Fever	38–39°C (100.4–102.2°F)	>39–40°C (102.3–104°F)	> 40°C (>104° F) for less than 24 hrs	> 40°C (>104°F) for more than 24 hrs	Death

Adverse Event	Grade				
	1	2	3	4	5
<i>Infections</i> UTI	N/A	Localized; local intervention indicated (topical, antifungal, antiviral)	IV antibiotic, antifungal, antiviral intervention indicated. Radiologic or surgical intervention indicated	Life-threatening consequences Urgent intervention indicated	Death
<i>Investigations</i> Lipase increased	>ULN–1.5 times ULN	> 1.5–2 times ULN	>2–5 times ULN	> 5 times ULN	N/A
<i>Metabolism/Nutrition</i> Hyperkalemia	> ULN–5.5 mmol/L	> 5.5–6 mmol/L	> 6–7 mmol/L	> 7 mmol/L; life-threatening consequences	Death

ULN, Upper limit of normal.

Evolve[®]

YOU'VE JUST PURCHASED MORE THAN A TEXTBOOK!

Enhance your learning with Evolve Student Resources.

These online study tools and exercises can help deepen your understanding of textbook content so you can be more prepared for class, perform better on exams, and succeed in your course.

Activate the complete learning experience that comes with each NEW textbook purchase by registering with your scratch-off access code at

<http://evolve.elsevier.com/SaundersNDH/>

If your school uses its own Learning Management System, your resources may be delivered on that platform. Consult with your instructor.

If you rented or purchased a used book and the scratch-off code at right has already been revealed, the code may have been used and cannot be re-used for registration. To purchase a new code to access these valuable study resources, simply follow the link above.

2019v1.0

Black Box Alerts advise about the increased risks of a particular drug.

Interactions identify potential herbal, drug, and food interactions with a particular drug.

Uses section in each monograph notes the standard and off-label uses for a particular drug.

IV Incompatibilities present important information for IV drugs.

Lifespan Considerations in each monograph note factors to be considered for geriatric, pediatric, pregnant, or nursing populations. Appendix G provides additional resources.

2 panitumumab

panitumumab

pan-i-**toom**-ue-mab
(Vectibix)

BLACK BOX ALERT 90% of pts experience dermatologic toxicities (dermatitis acneiform, pruritus, erythema, rash, skin exfoliation, skin fissures, abscess). Severe infusion reactions (anaphylaxis, bronchospasm, fever, chills, hypotension), fatal reactions have occurred.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Epidermal growth factor receptor (EGFR) inhibitor, monoclonal antibody.
CLINICAL: Antineoplastic.

USES

Treatment of wild-type RAS metastatic colorectal cancer either as first-line therapy in combination with FOLFOX or as monotherapy following disease progression after prior treatment with fluoropyrimidine-, oxaliplatin-, or irinotecan-based regimens.

PRECAUTIONS

Contraindications: Hypersensitivity to panitumumab. **Cautions:** Interstitial pneumonitis, pulmonary fibrosis, pulmonary infiltrates, renal impairment, baseline electrolyte imbalance. Not indicated in pts with RAS-mutant metastatic colorectal cancer or for whom RAS mutation status is unknown.

ACTION

Binds specifically to epidermal growth factor receptor (EGFR) and competitively inhibits binding of epidermal growth factor. Blocks activation of intracellular tyrosine kinase. **Therapeutic Effect:** Inhibits tumor cell growth, survival, and proliferation.

PHARMACOKINETICS

Clearance varies by body weight, gender, tumor burden. **Half-life:** 3–10 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. May impair fertility. May decrease fetal body weight, increase risk of skeletal fetal abnormalities. Use effective contraception during and for at least 6 mos after treatment. Breast-feeding not recommended. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum magnesium, calcium.

AVAILABILITY (RX)

Injection Solution: 20 mg/mL vial (5-mL, 20-mL vials).

ADMINISTRATION/HANDLING

ALERT Do not give by IV push or bolus. Use low protein-binding 0.2- or 0.22-micron in-line filter. Flush IV line before and after chemotherapy administration with 0.9% NaCl.

Reconstitution • Dilute in 100–150 mL 0.9% NaCl to provide concentration of 10 mg/mL or less. • Do not shake solution. Invert gently to mix. • Discard any unused portion.

Rate of Administration • Give as IV infusion over 60 min. • Infuse doses greater than 1,000 mg over 90 min.

Storage • Refrigerate vials. • After dilution, solution may be stored for up to 6 hrs at room temperature, up to 24 hrs if refrigerated. • Discard if discolored, but solution may contain visible, translucent-to-white particulates (will be removed by in-line filter).

IV INCOMPATIBILITIES

Do not mix with dextrose solutions or any other medications.

panitumumab – top prescribed drug

Top prescribed drugs are underlined.

INDICATIONS/ROUTES/DOSAGE

ALERT Stop infusion immediately in pts experiencing severe infusion reactions.

Metastatic Colorectal Cancer

IV Infusion: ADULTS, ELDERLY: 6 mg/kg once q14 days as a single agent or in combination with FOLFOX (fluorouracil, leucovorin and oxaliplatin). Continue until disease progression or unacceptable toxicity.

Dose Modification**Infusion Reactions**

Mild to moderate reactions: Reduce infusion rate by 50% for remainder of infusion.

Severe reactions: Discontinue infusion. Depending on severity, consider permanent discontinuation.

Skin Toxicity

For all CTCAE grade 3 skin toxicities, withhold treatment for 1–2 doses until improved to better than grade 3. Then, reduce dose as follows:

First occurrence of CTCAE grade 3: Resume at same dose. **Second occurrence of CTCAE grade 3:** Reduce dose to 80% of initial dose. **Third occurrence of CTCAE grade 3:** Reduce dose to 60% of initial dose. **Fourth occurrence of CTCAE grade 3:** Permanently discontinue.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Common (65%–57%): Erythema, acneiform dermatitis, pruritus. **Frequent (26%–20%):** Fatigue, abdominal pain, skin exfoliation, paronychia (soft tissue infection around nailbed), nausea, rash, diarrhea, constipation, skin fissures. **Occasional (19%–10%):** Vomiting, acne, cough, peripheral edema, dry skin. **Rare (7%–2%):** Stomatitis, mucosal inflammation, eyelash growth, conjunctivitis, increased lacrimation.

ADVERSE EFFECTS/TOXIC REACTIONS

Pulmonary fibrosis, severe dermatologic toxicity (complicated by infectious sequelae) occur

rarely. Severe infusion reactions manifested as bronchospasm, fever, chills, hypotension occur rarely. Hypomagnesemia occurs in 39% of pts. Life-threatening and/or fatal bullous fasciitis, abscess, sepsis were reported. Severe dehydration and diarrhea may increase risk of acute renal failure. Exposure to sunlight may exacerbate skin toxicities. May cause ocular toxicities including keratitis, ulcerative keratitis, corneal ulceration.

NURSING CONSIDERATIONS**BASELINE ASSESSMENT**

Assess serum magnesium, calcium prior to therapy, periodically during therapy, and for 8 wks after completion of therapy. Assess *KRAS* mutational status in colorectal tumors and confirm the absence of a *RAS* mutation.

INTERVENTION/EVALUATION

Assess for skin, ocular, mucosal, pulmonary toxicity; report effects. Median time to development of skin/ocular toxicity is 14–15 days; resolution after last dosing is 84 days. Monitor serum electrolytes for hypomagnesemia, hypocalcemia. Offer antiemetic if nausea/vomiting occurs. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

- Do not have immunizations without physician's approval (drug lowers resistance).
- Avoid contact with those who have recently received a live virus vaccine.
- Avoid crowds, those with infection.
- There is a potential risk for development of fetal abnormalities if pregnancy occurs; take measures to prevent pregnancy.
- Report skin reactions, including rash, sloughing, blisters, erosions.
- Report difficulty breathing, fever with cough, lung pain; may indicate life-threatening lung inflammation.
- Limit sun, UV exposure. Wear protective sunscreen, hats, and clothing while outdoors.

Side Effects section in each drug monograph specifies the frequency of particular side effects.

Adverse Reactions highlight the particularly dangerous side effects.

Canadian trade name

Non-Crushable Drug

High Alert drug

High Alert drugs are shaded in blue for easy identification.

COMMONLY USED ABBREVIATIONS

ABG(s) —arterial blood gas(es)	IM —intramuscular
ACE —angiotensin-converting enzyme	IOP —intraocular pressure
ADHD —attention-deficit hyperactivity disorder	IV —intravenous
AIDS —acquired immunodeficiency syndrome	K —potassium
ALT —alanine aminotransferase, serum	kg —kilogram
ANC —absolute neutrophil count	LDH —lactate dehydrogenase
aPTT —activated partial thromboplastin time	LDL —low-density lipoprotein
AST —aspartate aminotransferase, serum	LFT —liver function test
AV —atrioventricular	LOC —level of consciousness
bid —twice per day	MAC — <i>Mycobacterium avium</i> complex
BMP —basic metabolic panel	MAOI —monoamine oxidase inhibitor
B/P —blood pressure	mcg —microgram
BSA —body surface area	mEq —milliequivalent
BUN —blood urea nitrogen	mg —milligram
CBC —complete blood count	MI —myocardial infarction
Ccr —creatinine clearance	min —minute(s)
CNS —central nervous system	mo/mos —month/months
CO —cardiac output	N/A —not applicable
COPD —chronic obstructive pulmonary disease	Na —sodium
CPK —creatine phosphokinase	NaCl —sodium chloride
CSF —cerebrospinal fluid	NG —nasogastric
CT —computed tomography	NSAID(s) —nonsteroidal anti-inflammatory drug(s)
CVA —cerebrovascular accident	OD —right eye
D₅W —dextrose 5% in water	OS —left eye
dl —deciliter	OTC —over the counter
DNA —deoxyribonucleic acid	OU —both eyes
DVT —deep vein thrombosis	PCP —Pneumocystis jiroveci pneumonia
ECG —electrocardiogram	PO —orally, by mouth
EEG —electroencephalogram	prn —as needed
esp. —especially	PSA —prostate-specific antigen
g —gram	pt/pts —patient/patients
GGT —gamma glutamyl transpeptidase	PT —prothrombin time
GI —gastrointestinal	PTCA —percutaneous transluminal coronary angiography
GU —genitourinary	q —every
H₂ —histamine	RBC —red blood cell count
Hct —hematocrit	REM —rapid eye movement
HDL —high-density lipoprotein	RNA —ribonucleic acid
HF —heart failure	SA —sinoatrial node
Hgb —hemoglobin	sec —second(s)
HIV —human immunodeficiency virus	SSRI —selective serotonin reuptake inhibitor
HMG-CoA —3-hydroxy-3-methylglutaryl-coenzyme A (HMG-CoA) reductase inhibitors (statins)	tbsp —tablespoon
hr/hrs —hour/hours	tid —three times daily
HTN —hypertension	TNF —tumor necrosis factor
I&O —intake and output	tsp —teaspoon
ICP —intracranial pressure	UTI —urinary tract infection
ID —intra-dermal	VLDL —very-low-density lipoprotein
IgA —immunoglobulin A	WBC —white blood cell count
	wk/wks —week/weeks
	yr/yrs —year/years

DANGEROUS ABBREVIATIONS

The 2004 National Patient Safety Goals of The Joint Commission (TJC) requires the elimination of dangerous abbreviations in an effort to promote patient safety by reducing medication errors. To achieve this goal, TJC developed a list of abbreviations, acronyms, and symbols that health care organizations must include in their “do not use” list. An abbreviation on the “do not use” list should not be used in any of its forms—uppercase or lowercase, with or without periods. For example, if Q.D. is on the organization’s list, health care organizations cannot use QD or qd because any of those variations are confusing and can be misinterpreted.

Abbreviation	Potential Problem	Preferred Term
U (for unit) IU (for international unit)	Mistaken as zero, four, or cc Mistaken as IV (intravenous) or 10 (ten)	Write “unit” Write “international unit”
Q.D., QD, q.d., qd (daily) Q.O.D., QOD, q.o.d., qod (every other day)	Mistaken for each other Period after “Q” mistaken for “I” and the “O” mistaken for “1”	Write “daily” Write “every other day”
Trailing zero (e.g., 5.0 mg); lack of leading zero (e.g., .5 mg)	Decimal point is missed	Always write a zero before a decimal point (0.5 mg) and never write a zero by itself after a decimal point (5 mg)
MS, MSO ₄ , MgSO ₄	Confused for one another; can mean morphine sulfate or magnesium sulfate	Write “morphine sulfate” or “magnesium sulfate”

In addition, TJC requires an organization to identify and apply at least another three “do not use” abbreviations, acronyms, or symbols of its own choosing. The following list was developed by TJC for organizations to consider including on their list.

µg (for micrograms)	Mistaken for mg (milligrams) resulting in one thousand-fold-dosing overdose	Write “mcg”
H.S. (for half-strength or Latin abbreviation for bedtime)	Mistaken for either half-strength or hour of sleep (at bedtime); q.H.S. mistaken for every hour; all can result in dosing error	Write “half-strength” or “at bedtime”
T.I.W. (for three times per week)	Mistaken for three times per day or twice weekly, resulting in an overdose	Write “3 times weekly” or “three times weekly”
S.C. or S.Q. (for subcutaneous) D/C (for discharge)	Mistaken as SL for sublingual, or “5 every” Interpreted as discontinue whatever medications follow (typically discharge meds)	Write “Sub-Q,” “subQ,” or “subcutaneously” Write “discharge”
c.c. (for cubic centimeter)	Mistaken for U (units) when poorly written	Write “ml” for milliliters
A.S., A.D., A.U. (Latin abbreviation for left, right, or both ears)	Mistaken for OS, OD, OU, etc.	Write “left ear,” “right ear,” or “both ears”
> (greater than) < (less than)	Misinterpreted as number 7 or letter “L”	Write “greater than” or “less than”
Abbreviations for drug names	Misinterpreted due to similar abbreviations for multiple drugs	Write drug names in full
